Thanks Carrie. It has been a nursery for either the National Forest System, or the WI DNR since late 30s. Large and heavy use by WDNR from mid-40s to 1960; they leased the land from NFS back then.

I'm assuming they used a lot of herbicides and pesticides, but I do not know what kind.

I doubt PFASs would be in those materials?

Respectfully,

Deahn

Thanks Deahn for the quick response. To answer your question below, the history of the site should include any past or present uses of the property where PFAS substances may have been used. You may need to go back to before the property was developed. Also, thanks for being proactive by testing your well. I was not sure if the property was on municipal water. If you would be willing to share those results with myself and Mark Pauli-Supervisor, Drinking and Groundwater Program, that would be appreciated. Mark was copied on this email. If you have any future questions, please feel free to contact me. Have a good day, Carrie

Hi Carrie –

We received your letter today informing us of a contaminated well, and request for information on history of owners, occupants and land uses of our property.

We will pull this information together as soon as possible.

To help us address your concerns, how far back in time should we go?

We are also initiating the testing of our well for the same type of contamination in hopes that it would be useful to your efforts to find the source of the contamination.

If you have any other concerns, please contact Bill or I.

Respectfully,

Deahn
