**Subject: Groundwater Profiling Sampling Results
Enbridge Line 13 MP 312, Blackhawk Island Rd Valve Site, Ft. Atkinson, WI
WDNR BRRTS #02-28-586199**

Dear Mr. Beaster:

WSP USA Inc. (WSP) is pleased to submit the following summary of results for groundwater profiling samples collected between July 28 and 30, 2021 at the Line 13 Milepost (MP) 312 Valve Site located at the intersection of Blackhawk Island Road and Westphal Lane near Fort Atkinson, Wisconsin (Site). The groundwater samples were collected in accordance with the Supplemental Site Investigation Work Plan, dated May 4, 2021, which was approved by the Wisconsin Department of Natural Resources (WDNR) in a letter dated May 26, 2021. This summary of results is provided to fulfill the reporting requirements of NR 716.14, Wis. Adm. Code. A thorough presentation of the sampling procedures and results will be included in the Supplemental Site Investigation Report.

Between July 28 and 30, 2021, WSP oversaw the advancement of soil borings at the MW-01 and MW-09 locations for the collection of groundwater profiling samples between 35 and 62.5 feet below ground surface (ft bgs). The borings were advanced using rotosonic drilling methods and nominal 6-inch diameter drill casing. Groundwater profiling samples were collected using a discrete interval groundwater sampler attached to 2-inch diameter drill rods, which was advanced 2.5 feet beyond the drill casing for each sample interval, after which the screened interval was exposed to allow groundwater to enter the sampler. The depth to water was measured inside the sampler rods to determine the target purge volume, which was three rod volumes. Groundwater was purged from each sample interval using an electric submersible pump. For several sample intervals, the sampler purged dry prior to removing three rod volumes, and the groundwater sample was collected after allowing the interval to recharge sufficiently for sample collection.

Samples were analyzed by Pace Analytical of Green Bay, Wisconsin for volatile organic compounds (VOCs) by EPA Method 8260. Quality Assurance / Quality Control (QA/QC) samples included one duplicate sample (DUP072921) collected at MW-09 profiling location in the interval 35 to 37.5 ft bgs, and three trip blank samples (TRIP BLANK), which were submitted with the groundwater profiling samples.

wsp.com

Table 1 includes the laboratory analytical results, and Enclosure A includes the laboratory reports. Results were compared to the WDNR Enforcement Standards (ES) or Preventative Action Limits (PAL). Benzene was detected at concentrations above both the ES (5 µg/l) and PAL (0.5 µg/l) in the MW-01 profiling samples from the shallowest three intervals: 35 to 37.5 ft bgs (137 micrograms per liter [µg/l]), 40 to 42.5 ft bgs (262 µg/l), and 45 to 47.5 ft bgs (82 µg/l). Benzene was detected at concentrations above the PAL in the MW-01 profiling samples from the deepest three intervals: 50 to 52.5 ft bgs (2 µg/l), 55 to 57.5 ft bgs (2.8 µg/l), and 60 to 62.5 ft bgs (3.6 µg/l). Benzene was not detected in the MW-09 profiling samples. Other petroleum compounds associated with the released diluent material were detected in the shallow profiling samples from MW-01 at concentrations below the ES and PAL (e.g. ethylbenzene, toluene, total xylenes, cyclohexane). Bromoform, chloromethane, or bromodichloromethane were detected in several profiling samples at concentrations above the ES or PAL. These three compounds are not associated with the diluent material and are common disinfection byproducts of chlorinated tap water, which was used during drilling to control flowing sand. As a result, they are likely an artifact of the drilling process and not a reflection of groundwater conditions.

Results for the duplicate sample were consistent with the associated primary sample, and no VOCs were detected in the trip blank samples.

The groundwater profiling results were used to select screened intervals for deep monitoring wells installed at the Site, which are shown on Figure 1 (e.g. MW-01-63, screened from 58 to 63 ft bgs; MW-05-60, MW-06-60, MW-07-60, and MW-09-60; screened from 55 to 60 ft bgs).

In accordance with NR 712, Wis. Adm. Code., the certification of a hydrogeologist for this sampling results submittal is included in Enclosure B.

Please do not hesitate to contact me if you have questions.

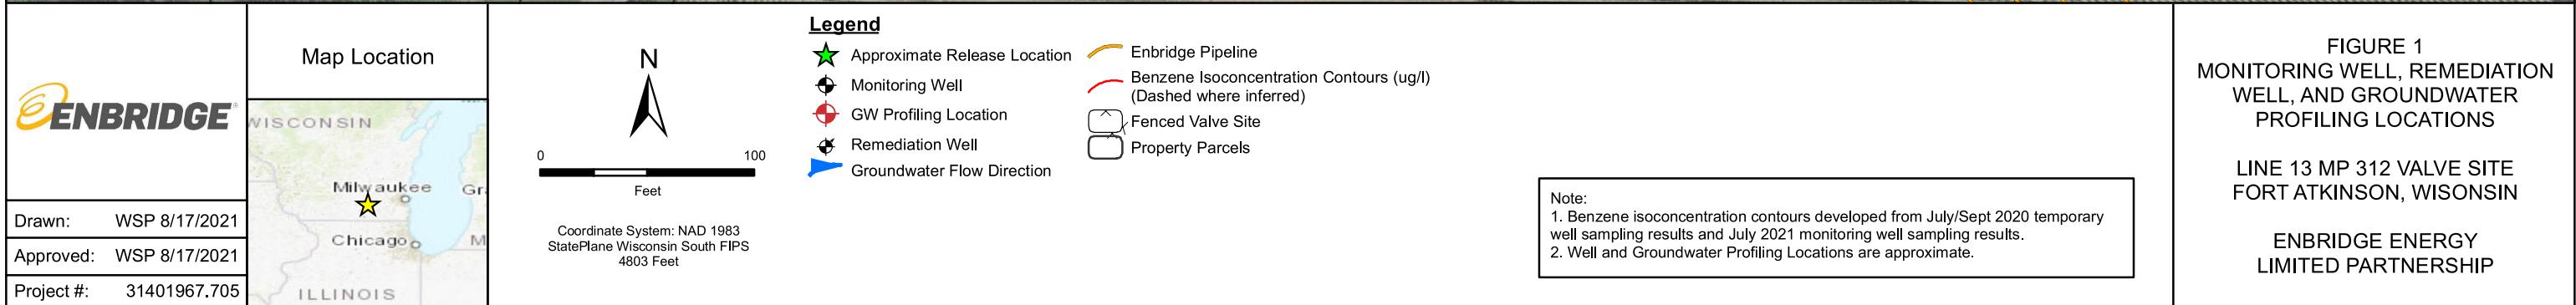

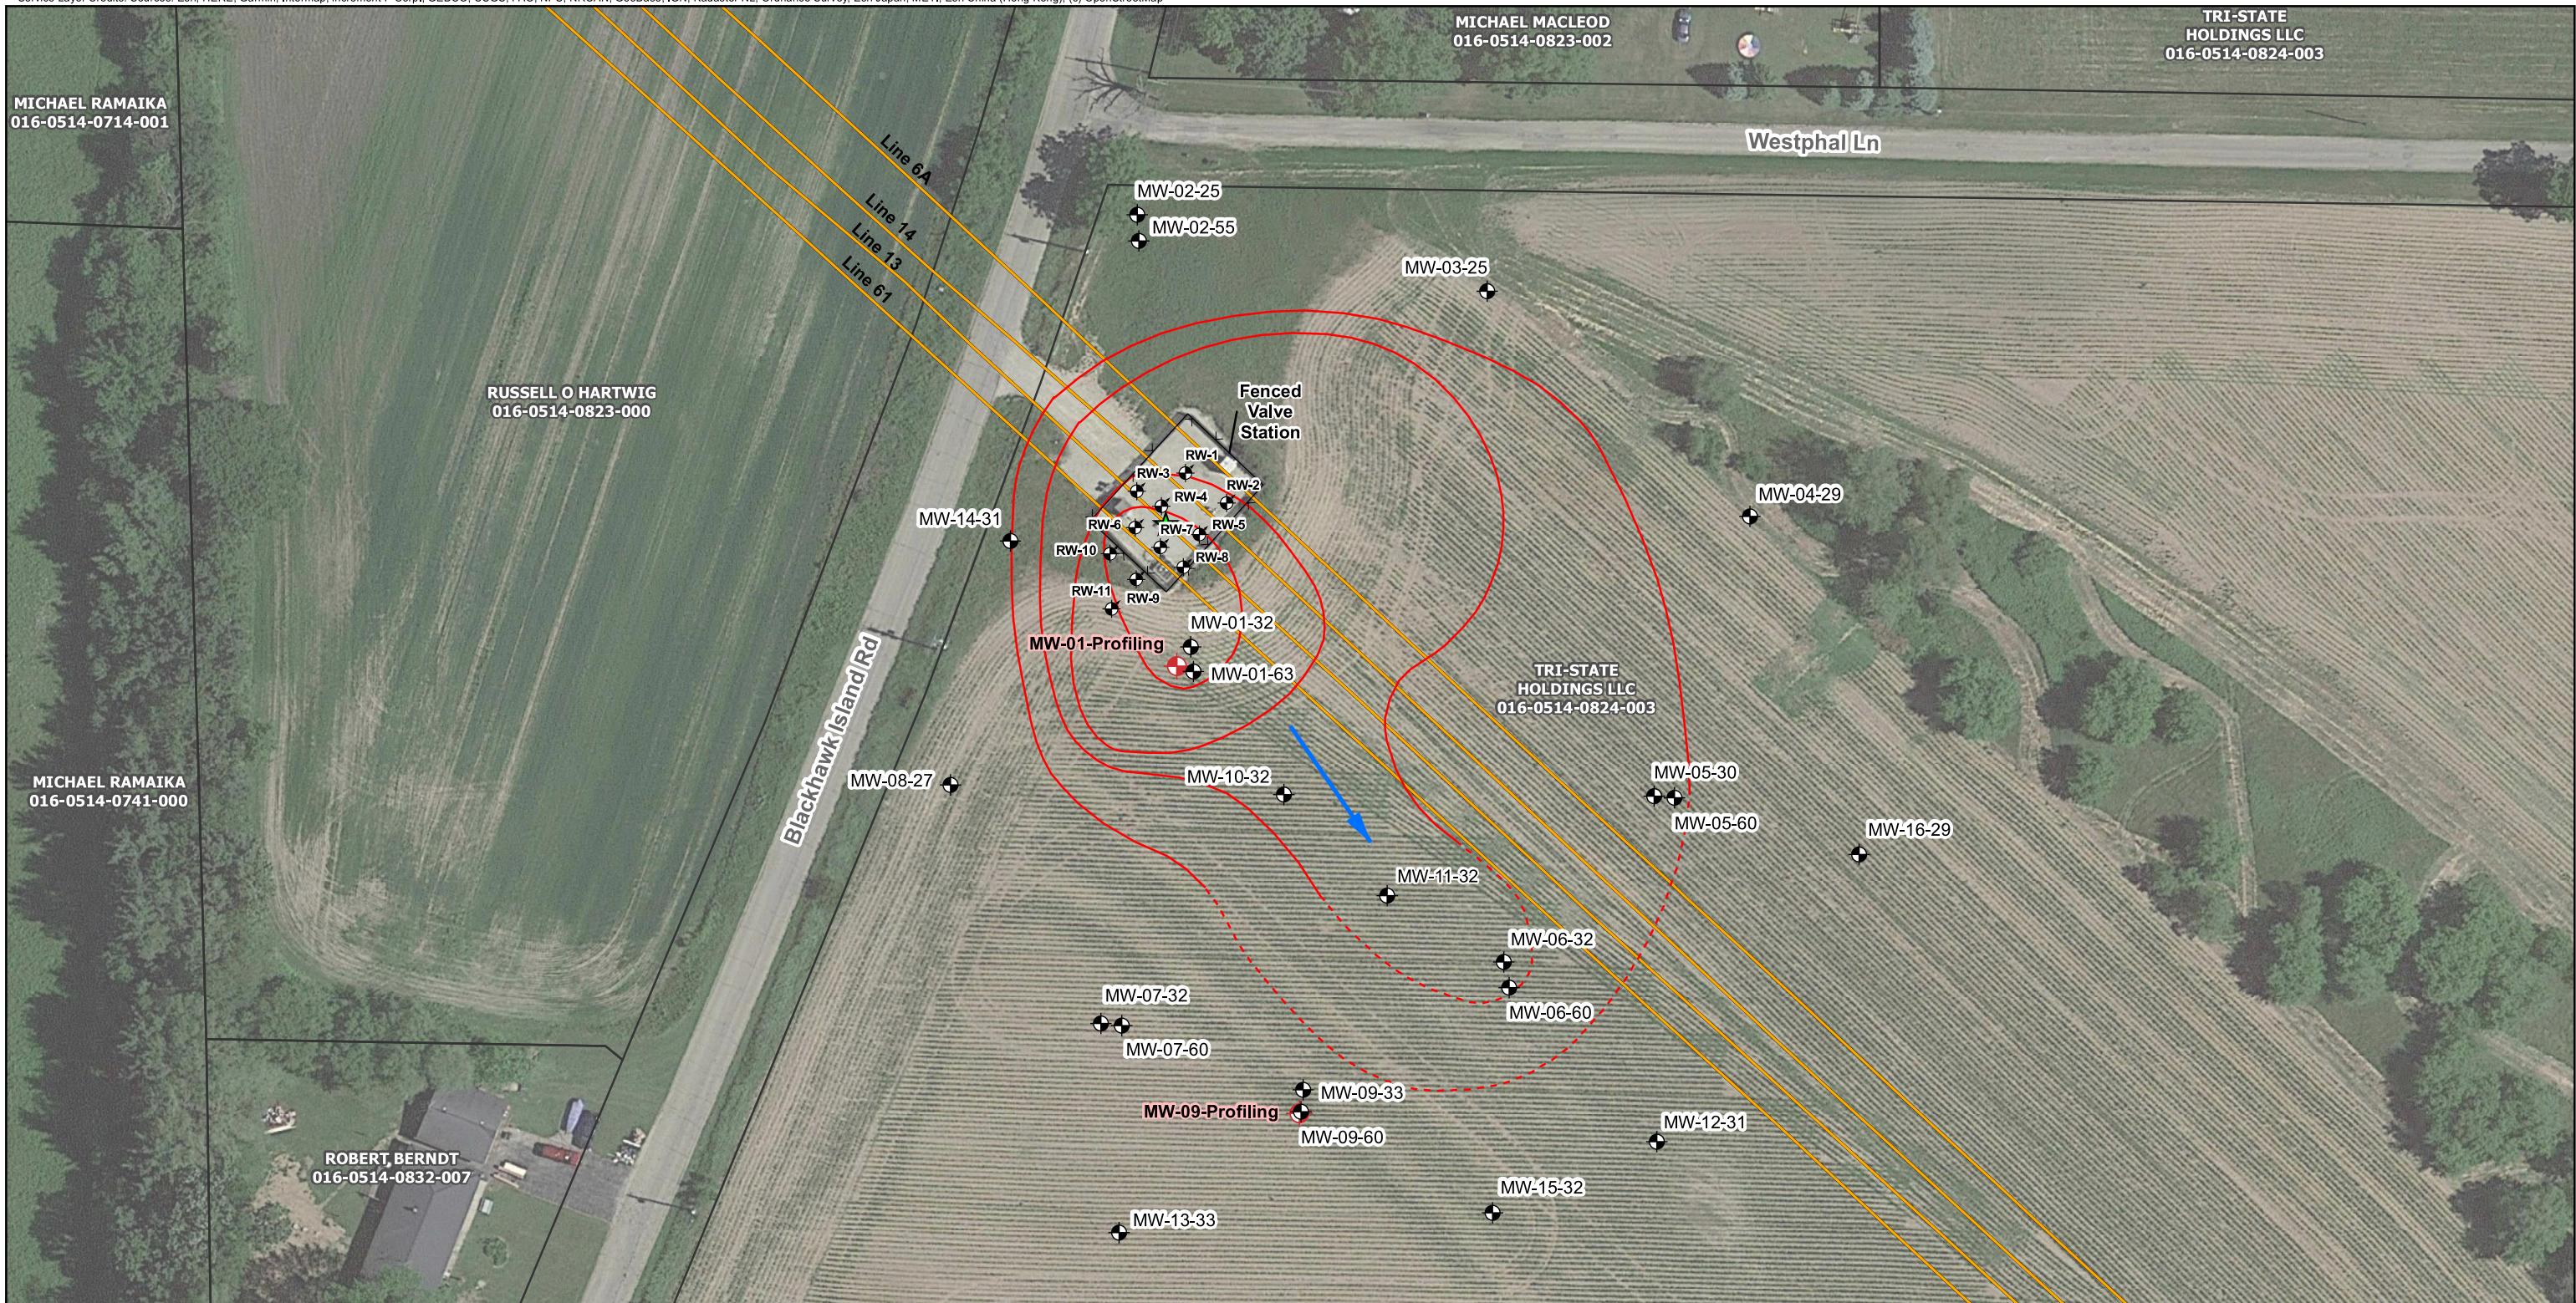

Kind regards,

Timothy A. Huff
Senior Lead Geologist

RE: Project: 31401967.705 L13 MP312 VALVE S
Pace Project No.: 40230766

Dear Timothy Huff:

Enclosed are the analytical results for sample(s) received by the laboratory on July 29, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky

QUALIFIERS

Project: 31401967.705 L13 MP312 VALVE S

Pace Project No.: 40230766

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

HS Results are from sample aliquot taken from VOA vial with headspace (air bubble greater than 6 mm diameter).

pH Post-analysis pH measurement indicates insufficient VOA sample preservation.

RE: Project: LN13 MP312 VALVE SITE
Pace Project No.: 40230843

Dear Timothy Huff:

Enclosed are the analytical results for sample(s) received by the laboratory on July 30, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky
dan.milewsky@pacelabs.com

QUALIFIERS

Project: LN13 MP312 VALVE SITE

Pace Project No.: 40230843

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

HS Results are from sample aliquot taken from VOA vial with headspace (air bubble greater than 6 mm diameter).

pH Post-analysis pH measurement indicates insufficient VOA sample preservation.

RE: Project: 31401967.705 LN13 MP312
Pace Project No.: 40230923

Dear Timothy Huff:

Enclosed are the analytical results for sample(s) received by the laboratory on July 31, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky
dan.milewsky@pacelabs.com

QUALIFIERS

Project: 31401967.705 LN13 MP312

Pace Project No.: 40230923

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.
