Subject: Review of Supplemental Site Investigation Report
Enbridge Line 13 Blackhawk Valve
Jefferson County, Wisconsin
BRRTS# 02-28-586199

Dear Mr. Beaster:

On March 30, 2022, the Wisconsin Department of Natural Resources (Department) received the Supplemental Site Investigation Report (Report) for Enbridge Line 13 Blackhawk Valve, in Jefferson County, Wisconsin. The Report was submitted with the appropriate fee for Department review and response, per Wis. Admin. Code § NR 749.04(1). The Department has reviewed the Report for compliance with Wis. Admin. Code ch. NR 716 and provides the following comments.

Review

The investigative work completed to date has further characterized the impacts of the release and the hydrogeologic setting of the site. The Department has identified two areas where additional investigation is needed.

1. Additional groundwater investigation is needed to evaluate the vertical extent of trichloroethene (TCE) near monitoring well MW-6. The Department recommends you install and sample a deeper piezometer near monitoring well MW-6. Collect soil samples during the associated drilling.
2. Additional investigation is needed to evaluate the extent of non-aqueous phase liquid (NAPL) around soil boring IS-36. The Department recommends a shallow monitoring well be installed and sampled to evaluate if there is recoverable NAPL.

Groundwater shall be sampled quarterly. Select private wells (listed below) shall be sampled annually. The sampling schedule and selection of private wells will be periodically re-evaluated by the Department. All sampling results shall be reported to the Department within 10 business days of receiving the results, per Wis. Admin. Code ch. NR 716.14. Water supply well sampling results shall be reported to the well owner and occupant within 10 business days of receiving sampling results, per Wis. Admin. Code ch. NR 716.14(1).
