Dear Ms. Dorman:

On behalf of the Community Within the Corridor Limited Partnership (CWC), K. Singh & Associates, Inc. (KSingh) is pleased to submit the results of a third round of groundwater results of the above referenced site. A site location map is on Figure 1 and the monitoring well locations are presented on Figure 2.

### **Additional Site Investigation**

The additional site investigation activities included the following activities:

- Advancing one (1) soil probe on the exterior of the building to the west of WB-RTS-6, named WB-RTS-6B;
- Reinstalling WB-MW-2 which was damaged during construction, named WB-MW-2R. This well was damaged when a courtyard area was being redeveloped which broke off the stick-up protective pipe and cracked the PVC pipe.
- Reinstalling WB-MW-3 which was damaged during construction, named WB-MW-3R. This well was damaged during the winter by snow plowing which bent the stick-up protective pipe and cracked the PVC pipe.
- Converting WB-MW-4 from a stickup pipe to a flush-mount cover.
- Installing a monitoring well downgradient from the hot spot area within Building 7, named WB-MW-6.

The environmental drilling was performed by Soils & Engineering Services, Inc. located in Madison, Wisconsin utilizing a Geoprobe 7822 DT rig. The soil samples collected on July 20, 2022, were submitted to Eurofins - Test America, Inc., University Park, Illinois using proper chain-of-custody procedures. The soil parameters tested were Volatile Organic Compounds (VOCs), Polycyclic Aromatic Hydrocarbons (PAHs), Polychlorinated Biphenyls (PCBs) and metals. The soil analytical testing results are presented as Attachment A and the results can be seen on Table 1. A survey of the elevations of the new wells and modification of MW-4 was performed by KSingh. Survey information is presented in Tables 2A and 2B.

Soil samples were collected from WB-RTS-6B at a depth of 1 to 2 feet which was recommended in a WDNR letter dated November 22, 2021. At this location the only VOC parameter methylene chloride (0.32 ug/kg) and PAH parameter chrysene (0.26 ug/kg) were exceeding the NR 720 protection to groundwater standards of 0.0026 ug/kg and 0.1442 ug/kg, respectively. There were no PCBs detected exceeding the laboratory's method detection limits, therefore, the extent of PCBs has been delineated to the west of WB-RTS-6. There were no metals detected above the NR 720 Residual Contaminant Levels (RCLs) or Background Threshold Values (BTVs).

Monitoring wells, WB-MW-2 and WB-MW-3 were both damaged during construction as mentioned in the bullets above. WB-MW-3 was abandoned in accordance with NR 141 of the Wisconsin Administrative Code (WAC); however, WB-MW-2 could not be found due to the redevelopment landscaping of the courtyard area. The soil boring logs and the monitoring well abandonment form is presented in Attachment B and the monitoring well construction and development forms are presented as Attachment C.

Both WB-MW-2R (installed July 20, 2022) and WB-MW-3R (installed July 18, 2022) were blind drilled to 24 feet then logged thereafter. These monitoring wells were drilled adjacent to the original well locations. The soil conditions were, silty clay to clayey silts, gray, moist to wet, hard to very soft, with some to trace of gravel and a little to trace of sand. WB-MW-6 had fill (silty clay to clayey sand) from the surface to approximately 11 feet bgs. Then silty clay from 11 to 35 feet bgs with occasional silt seams, and some gravel and traces of sand.

A new well WB-MW-6 was installed on July 20, 2022, down-gradient of Building 7 within the eastern parking area of the west Block which was recommended in a WDNR letter dated November 22, 2021. Two soil samples were collected from WB-MW-6 at 1-2 feet and 10.5 to 12 feet bgs. Of the VOCs, only Methylene Chloride (MC) was detected above the NR 720 RCLs for the protection to groundwater pathway of 0.0026 ug/kg at 0.37 ug/kg and 0.33 ug/kg, respectively. MC is a laboratory contaminant and is not representable of field conditions (B = Compound was found in the blank and sample). No CVOCs were detected at this location thus delineating the CVOCs to the east of the building. There were no PAHs, PCBs, and metals detected that were above the NR 720 RCLs or BTVs.

The final grade at WB-MW-4 was lowered approximately three feet and the stickup well was too tall to sample easily, so it was converted to a flush-mount well at the new redevelopment landscaping grade.

## **Groundwater Sampling & Results**

Groundwater sampling was conducted for five (5) of the six (6) monitoring wells on August 3, 2022 (WB-MW-1, WB-MW-2R, WB-MW-4, WB-MW-5 and WB-MW-6), for VOCs and PCBs. WB-MW-3R was dry; however, saturated conditions were encountered from approximately 28.5 to 35 feet below the ground surface (bgs) within clayey silts (this well is recharging slowly or perhaps smearing of the fine-grained soils has occurred around the cylinder of the borehole). Prior to groundwater sampling, depth to water was measured in each monitoring well using a water level indicator and measuring from top of PVC casing. Groundwater elevation data is summarized in Table 2A and 2B and the groundwater flow direction is presented on Figure 3. Groundwater flow direction appears to be to the southeast which was the same as the other groundwater sampling events. WB-MW-6 is a new well for the site which is downgradient of Building 7 (former source area of CVOCs).

Groundwater samples were collected in accordance with the WDNR's Groundwater Field Sampling Manual following purging and preserved on ice. The groundwater samples were submitted to Eurofins - Test America, Inc., University Park, Illinois using proper chain-of-custody procedures. Groundwater samples were analyzed for VOCs in accordance with EPA Method 8260B and PCBs in accordance with EPA Method 8082A. Chain of Custody records and laboratory groundwater quality analytical results are included in Attachment A. Groundwater quality test results are summarized in Table 3.

On the August 3, 2022 sampling event, NR 140 Enforcement Standards (ES) exceedances (0.20 ug/kg standard) included Vinyl Chloride (VC) in monitoring well WB-MW-4 (0.68 J ug/kg) which is downgradient from the source area in Building 7. The VC concentration had a "J" flagged value. The result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value. The remainder of VOC groundwater results were below the laboratory method detection limits or below the NR 140 Preventative Action Limits (PALs); therefore, the groundwater plume appears to be an isolated location at WB-MW-4 that is delineated. The groundwater results of the East Block (BRRTS #: 02-41-263675) also demonstrate that the groundwater plume is delineated with no detects of chlorinated organic compounds (CVOCs) within the southern half of the block. The remainder of groundwater results for PCBs were below the laboratory method detection limits.

## Conclusions

In summary, based on three groundwater sampling events the CVOCs in the near-surface soils have not impacted the groundwater. WB-MW-4 detected VC at concentrations over the ES which will require additional monitoring. Soil samples did not detect CVOCs or PCBs; therefore, these contaminants are delineated within the former building footprint. Please contact us if you have any questions.

#### Narrative

#### Job Narrative 500-219774-1

#### Comments

No additional comments.

#### Receipt

The samples were received on 7/22/2022 10:15 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.4° C.

#### GC/MS VOA

Methods 8260B, 8260D: Methylene chloride was detected in the following items: WB-RTS-6B, 1-2' (500-219774-1), WB-MW-6, 1-2' (500-219774-2), WB-MW-6, 10.5-12' (500-219774-3) and Trip Blank (500-219774-4). Methylene chloride is a known lab contaminant; therefore all low level detects for this compound could be suspected as lab contamination.

Method 8260B: The laboratory control sample (LCS) recovered outside control limits for the following analytes: Bromomethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported. WB-RTS-6B, 1-2' (500-219774-1), WB-MW-6, 1-2' (500-219774-2), WB-MW-6, 10.5-12' (500-219774-3) and Trip Blank (500-219774-4)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC/MS Semi VOA

Method 8270D: The method blank for preparation batch 500-668233 and analytical batch 500-668959 contained Benzo[a]anthracene, Fluoranthene, Phenanthrene and Pyrene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method 8270D: The following samples were diluted due to the nature of the sample matrix: WB-RTS-6B, 1-2' (500-219774-1). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC Semi VOA

Method 8082A: Surrogate recovery for the following samples were outside the upper control limit: WB-RTS-6B, 1-2' (500-219774-1) and WB-MW-6, 1-2' (500-219774-2). This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

Method 8082A: Surrogate DCB Decachlorobiphenyl recovery for the following samples were outside control limits: (LCS 500-667844/3-A) and (MB 500-667844/1-A). The other surrogate was within limits; therefore, re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### Narrative

#### Job Narrative 500-220496-2

#### Comments

No additional comments.

#### Receipt

The samples were received on 8/6/2022 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 3.2° C and 3.6° C.

#### GC/MS VOA

Method 8260B: The method requirement for no headspace was not met. The following volatile sample was analyzed with headspace in the sample container(s): WB-MW-2R (500-220496-1).

Method 8260B: The following sample(s) was collected in a properly preserved vial; however, the pH was outside the required criteria when verified by the laboratory. The samples were analyzed within the 14-day holding time specified for preserved samples: WB-MW-2R (500-220496-1), WB-MW-6 (500-220496-3), DUPLICATE 1 (500-220496-6) and WB-MW-1 (500-220496-10).

Method 8260B: Reanalysis of the following sample(s) was performed outside of the analytical holding time. Upon review, sample had likely carryover from high sample before it. Sample was reanalyzed after hold time, and only compounds with carryover the first time have H flag. : DUPLICATE 1 (500-220496-6).

Method 8260B: The method blank for analytical batch 500-669702 contained several compounds above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.(MB 500-669702/6)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC Semi VOA

Method 8082A: Surrogate DCB Decachlorobiphenyl recovery for the following sample was outside control limits: WB-MW-6 (500-220496-3). The other surrogate was within limits; therefore, re-analysis was not performed.

Method 8082A: Surrogate recovery for the following sample was outside control limits: WB-MW-2R (500-220496-1). Re-extraction and/or re-analysis was performed and surrogate recovery was outside control limits. Data with the highest surrogate recovery has been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.
