Subject:

Construction Documentation and Post-Closure Modification
Former Fong Family, LLC
360 & 372 Grand Avenue
Wausau, WI 54401
Closed BRRTS #02-37-587441
FID #737254760

Dear Mr. Thompson:

The following letter and enclosed information will summarize the redevelopment of the above referenced site. The site location is shown on Figure 1.

LOCATION

The new Community Partners Campus is located in the Southeast Quarter (SE ¼) of the Northwest Quarter (NW ¼) of Section Thirty-Six (36), Township Twenty-nine North (29N), Range Seven East (7E), Marathon County, Wisconsin. The property is approximately 1.65 acres in size. Community Partners purchased the property in October 2021. The site address of the Community Partners Campus is 360 Grand Avenue, Wausau, WI.

BACKGROUND

Based on historic Sanborn Fire Insurance Maps and aerial photographs the subject property appears to have been developed prior to 1891. Between 1891 and 1974 the eastern portion of the property along Grand Avenue contained multiple small, conjoined structures which varied in use from private residences, stores, and grocery stores. The structure located in the southeast corner of the property was associated with a larger facility to the south that was used as a brewing company, rubber products manufacturer, and electrical repair. Fill appears to have been placed on the property by 1950. Between 1951 and 1974, aerial photographs show additional fill being placed on the subject property and properties to the north and south. The 1980 aerial photograph appears to depict current site elevations present.

The majority of the current site structure was constructed in 1992 with an addition added during site redevelopment in 2022. Prior to redevelopment the subject property had been utilized as office space but was vacant when acquired by the current property owner. Following redevelopment, the property is utilized by multiple local nonprofit organizations.

RESPONSIVE. EFFICIENT. INNOVATIVE.

4080 N. 20th Avenue Wausau, WI 54401
715-675-9784 REIengineering.com

American Engineering Testing, Inc. (AET) conducted Geotechnical soil borings on the subject property on March 23rd and April 2nd, 2021. Four (4) soil borings were completed. During the completion of the soil borings, REI personnel collected soil samples from two (2) of the completed soil borings, as part of a limited Phase II Environmental Site Assessment (ESA). Based on findings in the Geotech Report prepared by AET (dated April 7, 2021), fill material was encountered in all four (4) borings advanced at the property ranging from 12 to 48 feet bls. Fill thickness appears to increase across the property from east to west. The source of the fill material is unknown. Laboratory analytical results identified contamination within the unsaturated soils exceeding the WAC Chapter NR720 state soil standards.

The WDNR was notified of the identified contamination on April 6, 2021. On April 26, 2021, the WDNR issued a Responsible Party (RP) letter identifying the property owners' responsibilities in relation to the identified contamination. An Environmental Repair Program (ERP) site listing was opened for the property on the WDNR's BRRTS database. On May 5, 2021, REI submitted a Site Investigation Workplan on behalf of the responsible party.

An Environmental Repair Program (ERP) investigation (BRRTS #02-37-587441) was performed between May & June 2021. The site was closed by WDNR with Continuing Obligations for residual soil contamination and soil cover/cap maintenance requirement on August 27, 2021. The area of soil and groundwater contamination listed at the time of closure is shown on the attached site map (Figure 2).

PROPERTY ACQUISITION

Community Partners Campus, Inc. acquired the subject property from Fong Family, LLC in October 2021.

CONTINUING OBLIGATIONS

The Case Closure with Continuing Obligations letter for Fong Family, LLC (BRRTS #02-37-587441) listed the following continuing obligations:

1. Residual Soil Contamination: Soil contamination remains as indicated on the enclosed maps (Figures B.2.b.1, B.2.b.2, and B.2.b.3, Residual Soil Contamination, 7/6/2021). If soil in the location(s) shown on the map is excavated in the future, the property owner or right of way holder at the time of excavation must sample and analyze the excavated soil. If sampling confirms that contamination is present, the property owner or right of way holder at the time of excavation will need to determine if the material is considered solid waste and ensure that any storage, treatment or disposal complies with applicable standards and rules. Contaminated soil may be managed under Wis. Admin. Code ch. NR 718 with prior DNR approval.

In addition, all current and future property owners, occupants and right of way holders need to be aware that excavation of the contaminated soil may impose an inhalation and direct contact hazard; special precautions may be needed to prevent a threat to human health.

2. Cover for soil (cap maintenance): The pavement shown on the enclosed map (Figure D.2.d, Location Map, 7/13/2021) shall be maintained in compliance with the enclosed maintenance plan, dated July 14, 2021. The purpose of the cover is to minimize infiltration of water through contaminated soil and prevent direct contact with residual soil contamination that might otherwise pose a threat to human health.

To modify or replace a cover, the property owner must submit a request to the DNR under WAC ch. NR 727. The DNR approval must be obtained before implementation. The replacement or modified cover must be a structure of similar permeability or be protective of the revised use of the property until contaminant levels no longer exceed WAC ch. NR 720 groundwater pathway residual contaminant levels and/or direct contact residual contaminant levels (RCLs).

The following activities are limited on any portion of this property where the cover (exists), without prior WDNR approval:

- Removal of the existing barrier.
- Replacement with another barrier.
- Excavating or grading of the land surface.
- Filling on capped or paved areas.
- Plowing or agricultural cultivation.
- Construction or placement of a building or other structure.
- Changing the use or occupancy of the property to a residential exposure setting, which may include certain uses, such as single or multiple family residences, a school, day care, senior center, hospital, or similar residential exposure settings.

Post Closure Modification Request

On January 31, 2022, REI submitted a Post-Closure Modification Request to the WDNR on behalf of the current property owner. The Post-Closure Modification Request provided notification of the site redevelopment and included planned soil management actions and modifications to the onsite impenetrable surfaces included as part of the approved maintenance plan.

CONSTRUCTION

Construction began at the subject property in May 2022. The following bulleted timeline represents construction events at the subject property relevant to managing contaminated soil. All contaminated soil removed from the property was transported to Marathon County Landfill in Ringle, WI for final treatment and disposal.

- August 11, 2022 – Total of 158.12 tons of contaminated soil transported to landfill for disposal
- September 6, 2022 – Total of 220.49 tons of contaminated soil transported to landfill for disposal
- September 7, 2022 – Total of 339.89 tons of contaminated soil transported to landfill for disposal
- October 11, 2022 – Total of 349.38 tons of contaminated soil transported to landfill for disposal
- October 12, 2022 – Total of 353.77 tons of contaminated soil transported to landfill for disposal
- October 18, 2022 – Total of 450.84 tons of contaminated soil transported to landfill for disposal

A total of 1,872.49 tons of contaminated soil was removed due to construction at the Former Fong Family, LLC site and transported for disposal. REI was onsite as Owner Representative

for each of the hauling. Soil was excavated from areas identified on the attached Figure 3. Disposal documentation is included as Attachment A. Construction photographs are included as Attachment B.

CONCLUSIONS & RECOMMENDATIONS

Contamination identified at the Former Fong Family, LLC site appears to be the result of a previous, historically documented release that occurred at the subject property (further documented in WDNR BRRTS# #02-37-587441). Soil displaced during redevelopment in the area of known contamination was exported for final disposal at Marathon County Landfill. Residual soil and groundwater contamination remain at the subject property and are addressed through the existing Continuing Obligations that were as a condition of Case Closure with WDNR. No additional actions are recommended at this time. An updated Cover/Barrier Maintenance Plan is included as Attachment C.

Thank you for your assistance with this project. Please contact me with questions or to discuss further at (715) 675-9784 or MMichalski@REIengineering.com.

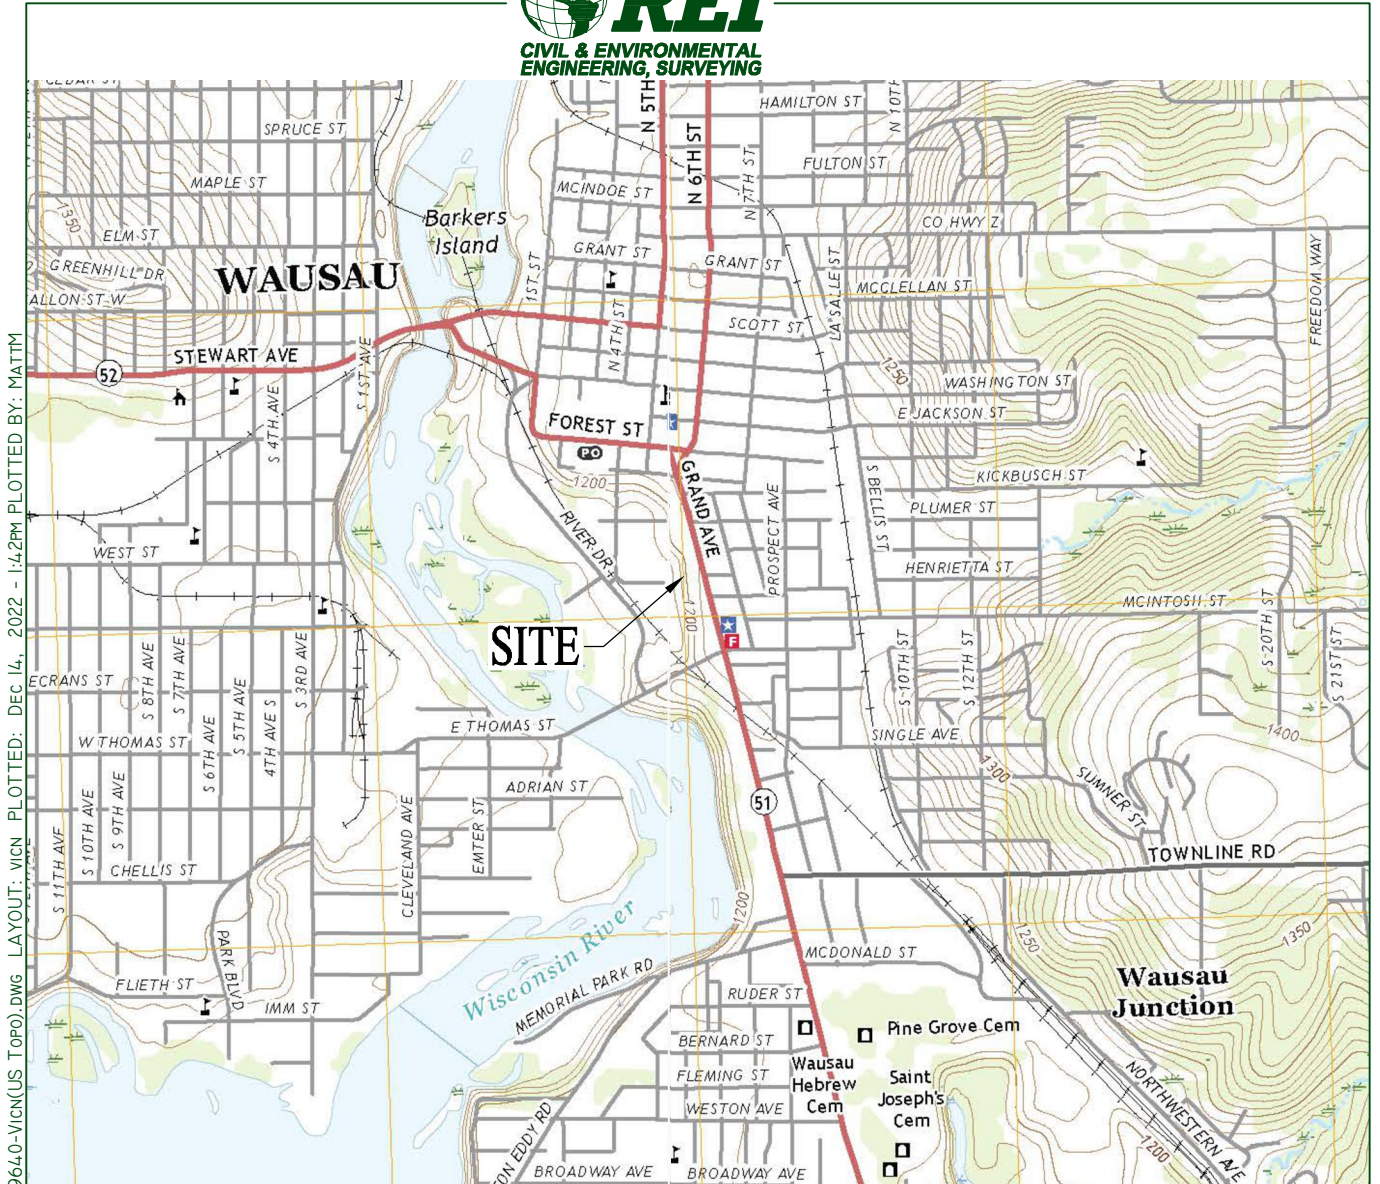

"I, Matthew C. Michalski, hereby certify that I am a hydrogeologist as that term is defined in s. NR 712.03 (1), Wis. Adm. Code, am registered in accordance with the requirements of ch. GHSS 2, Wis. Adm. Code, or licensed in accordance with the requirements of ch. GHSS 3, Wis. Admn. Code, and that to the best of my knowledge, all of the information contained in this document is correct and the document was prepared in compliance with all applicable requirements in chs. NR 700 to 726, Wis. Adm. Code."

COVER/BARRIER MAINTENANCE PLAN

COVER/BARRIER MAINTENANCE PLAN

December 14, 2022

Property Located at:
Former Fong Family, LLC
360 & 372 Grand Avenue
Wausau, WI 54403

FID #: 737254760

WDNR BRRTS #: 02-37-587441

Parcel Identification #: 291-2907-362-0511

Introduction

This document is the Maintenance Plan for a barrier at the above-referenced property in accordance with the requirements of s. NR 724.13 (2), Wis. Adm. Code. The maintenance activities relate to the existing asphalt, concrete and building foundation which addresses or occupies the area over the contaminated soil.

More site-specific information about this property/site may be found in:

- The case file in the DNR West Central Region office.
- At <http://dnr.wi.gov/topic/Brownfields/wrrd.html>, which includes:
 - BRRTS on the Web (DNR's internet-based data base of contaminated sites) for the link to a PDF for site-specific information at the time of closure and on continuing obligations.
 - RR Sites Map for a map view of the site.
- The DNR project manager for Marathon County.

Description of Contamination

Unsaturated soil contamination exceeding the WAC Chapter NR720 state soil standards and dissolved phase groundwater contamination exceeding the WAC Chapter NR140 PAL at this property appear to be associated with historic fill placed on the property between approximately 1950 and 1980. Fill materials appear to have been placed along the Grand Avenue corridor to the north and south of this property around the same period and were likely from the same source. Soil contaminated with volatile organic compounds (VOC), polycyclic aromatic hydrocarbons (PAH), and metals is located at depths ranging from at least two (2) feet below land surface (bls) and extending to depths ranging from eight (8) to

COVER/BARRIER MAINTENANCE PLAN

seventeen (17) feet bls on the eastern portion of the property and extending up to forty-eight (48) feet bls on the central and western portions of the property. The extent of the soil contamination is shown on the attached Figure 1.

Description of the Barrier to be Maintained

The barrier consists of the existing asphalt and concrete ground surface covers along with the foundation of the slab on-grade structure located on the property. It is located entirely on the subject property as shown on the attached Figure 1.

Cover/Building/Slab/Barrier Purpose

The existing asphalt, concrete and building foundation over the contaminated soil serve as a barrier to prevent direct human contact with residual soil contamination that might otherwise pose a threat to human health. The barrier also acts as a partial infiltration barrier to minimize future soil-to-groundwater contamination migration that would violate the groundwater standards in ch. NR 140, Wisconsin Administrative Code. Based on the current use of the property, commercial, the barrier should function as intended unless disturbed.

Annual Inspection

The barrier overlying the soil and as depicted in Figure 1 will be inspected once a year, normally in the spring after all snow and ice is gone, for deterioration, cracks and other potential problems that can cause exposure to or additional infiltration into the underlying soils. The inspections will be performed by the property owner or their designated representative. The inspections will be performed to evaluate damage due to settling, exposure to the weather, wear from traffic, increasing age and other factors. Any area where soils have become or are likely to become exposed or where infiltration from the surface will not be effectively minimized will be documented.

A log of the inspections and any repairs will be maintained by the property owner and is included as D.4, Form 4400-305, Continuing Obligations Inspection and Maintenance Log. The log will include recommendations for necessary repair of any areas where underlying soils are exposed and where infiltration from the surface will not be effectively minimized. Once repairs are completed, they will be documented in the inspection log. A copy of the maintenance plan and inspection log will be kept at the site; or, if there is no acceptable place (for example, no building is present) to keep it at the site, at the address of the property owner and available for submittal or inspection by Wisconsin Department of Natural Resources

COVER/BARRIER MAINTENANCE PLAN

(WDNR) representatives upon their request.

Maintenance Activities

If problems are noted during the annual inspections or at any other time during the year, repairs will be scheduled as soon as practical. Repairs can include patching and filling or larger resurfacing or construction operations. In the event that necessary maintenance activities expose the underlying soil, the owner must inform maintenance workers of the direct contact exposure hazard and provide them with appropriate personal protection equipment (PPE). The owner must also sample any soil that is excavated from the site prior to disposal to ascertain if contamination remains. The soil must be treated, stored, and disposed of by the owner in accordance with applicable local, state, and federal law.

In the event the barrier or part of the barrier overlying the contaminated soil is removed or replaced, the replacement barrier must be equally impervious. Any replacement barrier will be subject to the same maintenance and inspection guidelines as outlined in this Maintenance Plan unless indicated otherwise by the DNR or its successor.

The property owner, in order to maintain the integrity of the barrier, will maintain a copy of this Maintenance Plan at the site; or, if there is no acceptable place to keep it at the site (for example, no building is present), at the address of the property owner and make it available to all interested parties (i.e. on-site employees, contractors, future property owners, etc.) for viewing.

Prohibition of Activities and Notification of DNR Prior to Actions Affecting a Cover/Barrier

The following activities are prohibited on any portion of the property where [pavement, a building foundation, soil cover, engineered cap or other barrier] is required as shown on the attached map, unless prior written approval has been obtained from the Wisconsin Department of Natural Resources:

- 1) removal of the existing barrier.
- 2) replacement with another barrier.
- 3) excavating or grading of the land surface.
- 4) filling on capped or paved areas.
- 5) plowing for agricultural cultivation.

COVER/BARRIER MAINTENANCE PLAN

6) construction or placement of a building or other structure.

7) changing the use or occupancy of the property to a residential exposure setting, which may include certain uses, such as single or multiple family residences, a school, day care, senior center, hospital, or similar residential exposure settings.

If removal, replacement or other changes to a cover, or a building which is acting as a cover, are considered, the property owner will contact DNR at least 45 days before taking such an action, to determine whether further action may be necessary to protect human health, safety, or welfare or the environment, in accordance with s. NR 727.07, Wis. Adm. Code.

Amendment or Withdrawal of Maintenance Plan

This Maintenance Plan can be amended or withdrawn by the property owner and its successors with the written approval of DNR.

REI Engineering, INC.

Directions: In accordance with s. NR 727.05 (1) (b) 3., Wis. Adm. Code, use of this form for documenting the inspections and maintenance of certain continuing obligations is required. Personal information collected will be used for administrative purposes and may be provided to requesters to the extent required by Wisconsin's Open Records law [ss. 19.31-19.39, Wis. Stats.]. When using this form, identify the condition that is being inspected. See the closure approval letter for this site for requirements regarding the submittal of this form to the Department of Natural Resources. A copy of this inspection log is required to be maintained either on the property, or at a location specified in the closure approval letter. Do NOT delete previous inspection results. This form was developed to provide a continuous history of site inspection results. The Department of Natural Resources project manager is identified in the closure letter. The project manager may also be identified from the database, BRRTS on the Web, at <http://dnr.wi.gov/botw/SetUpBasicSearchForm.do>, by searching for the site using the BRRTS ID number, and then looking in the "Who" section.
