

## MEMORANDUM

---

DATE : July 22, 2023

TO : Shane LaFave / Roers Companies, LLC

FROM : Pratap Singh, Ph.D., PE / KSingh

SUBJECT : Weekly Progress Report for Week Ending 07/22/2023  
Community Within the Corridor - East Block

COPY TO : Que El-Amin / Scott Crawford, Inc., Robert Reineke, PE, Robert Fedorchak, PE  
Project #40441B

---

The purpose of this memorandum is to summarize the work performed as a part of the emergency response for the referenced project for the week ending 07/22/2023. This document is intended to serve two purposes:

1. Summarizing the tasks performed during the past week, and
2. The action items for the following week.

The month of July continues to show significant improvements toward depressurization throughout the building, and reduction of TCE concentrations both inside the residential units as well as beneath the concrete slab. The three primary goals of acceptable indoor air quality standards, effective depressurization, and sub-slab TCE detections have shown dramatic improvements based on the corrective actions implemented in June 2023.

There are isolated areas which will require additional remediation. Efforts moving forward will focus on these areas and will include source removal, Biochar application, and supplemental fan installation. With the proposed improvements, we are confident that the Vapor Mitigation System's performance will be protective of public health and the environment.

Please see below for the tasks that were performed this week:

1. Task #1 – GC Testing by KSingh

KSingh continues to work on conducting gas chromatograph (GC) testing for measurement of TCE in various units of the East Block focused on the residential units that are occupied by tenants. Attachment A is comprised of Figure 1, a floor plan for reference of Unit locations, vapor pins, and blowers, with the test results of TCE shown in Tables 1 to 5.

A comprehensive data table of Indoor Air Monitoring Data for TCE is provided in Attachment C. Note that highlighted cell values in green indicate levels that are **lower** than the vapor risk screening levels for **residential** facilities. Graphs showing comprehensive data can be found in Attachment D. The findings of portable continuous and discrete testing for TCE are as follows:

- TCE detections ranged from 1.27 µg/m<sup>3</sup> to 1.94 µg/m<sup>3</sup> in Unit 1045 with an average of **1.57 µg/m<sup>3</sup>**.
  - TCE detections ranged from 0.43 µg/m<sup>3</sup> to 1.77 µg/m<sup>3</sup> in Unit 1050 with an average of **0.91 µg/m<sup>3</sup>**.
  - Continuous monitoring results in Units 1045 and 1050 are displayed in Figure 3. The continuous monitoring data shows a direct correlation with the barometric pressure and ambient temperature with the values of TCE. Overall, there was a **significant decline** in the indoor air concentrations in all the residential units on the 1<sup>st</sup>, 2<sup>nd</sup>, and 3<sup>rd</sup> floor of buildings 1B-W, 1B-SW, and 1B-S. **All units continue to comply to the Vapor Action Levels (VAL) set forth by WDNR.**
  - The continuous monitoring was discontinued on July 18 after observing a continuous declining trend below VAL.
2. Task #2 – Sub-Slab TCE Concentration Distribution  
Weekly readings of sub-slab vapor concentrations were recorded from the vapor pin installations to evaluate the magnitude and variation of sub-slab vapor contamination in the soil. Results include:
- Sub-slab vapor concentrations taken from various locations show a similar trend to previous weeks data.
  - About 85% (up from 75% last week) of the residential units/common areas tested demonstrated lower values than the Vapor Risk Screening Level (VRSR) set forth by WDNR.
  - The values of sub-slab TCE can be observed in Appendix D (Table 8). A major hotspot can be observed in the areas between Units 1044 – 1050, extending to the Laundry, which will require additional action.
  - The south-west section of the garage continues to indicate a high value of sub-slab TCE coupled with no vacuum making it another area of concern. Soil borings were conducted at the locations shown in Figure 1 to evaluate the plume delineation in that region. The results from the borings are awaited and will be shared in the next weekly report.
3. Task #3 – VMS Operations  
Blowers 1 – 7 continue to operate at the intended capacity resulting in depressurization in most areas. Blower 7 has been out of service due to a mechanical fault since last week. The GBR 89 from Blower 6 was moved to Blower 7 and a new GBR 123 was commissioned in place of the Blower 6 on 7/21/2023 resulting in an improved vacuum in the area as evident in Table 6.
4. Task #4 – Depressurization  
The results of vacuum measurements are shown in Table 6. Please note the following:
- The operational issues of Blower 7 resulted in low vacuum readings in Building 1B – S for most of the week but was restored later.
  - A Radon Fan was installed in the inspection port in the SW Garage to aid the vacuum in the area. The addition of this fan made a significant difference in parking spots 11 and 19 but did not generate the expected vacuum in spaces 2 and 6.
  - Figure 7 in Attachment E shows the correlation between sub-slab vapor TCE values and the corresponding vacuum levels at all the vapor pin installations. A positive correlation

coefficient indicates that presence of higher vacuum would result in lower sub-slab TCE levels giving evidence of the efficient functioning of the VMS system (vacuum readings and sub-slab TCE levels are inversely proportional).

- The decrease in the correlation coefficient can be treated as a temporary skew pending restored functioning of the blowers.

## 5. Task #5 – Biochar Study

- A pilot study was conducted with various proportions of biochar and soil to investigate the optimum quantity of biochar to be added to soil to adsorb the TCE. In addition to this, a novel mixture of biochar and alginate as a caulking mixture to seal the cracks in the wooden columns and floors was also devised. The details of the study along with the results can be found in Attachment F.
- The results from the soil interaction study demonstrated that addition of biochar did not conclusively affect the uptake of TCE. Since TCE was subject to volatilization, the biochar had two medias of adsorption: soil and air. The reduction of TCE in air because of addition of soil is shown in Figure 8.
- The data from the air samples show a trend that is similar to that of the TCE in soil. This shows the highest interaction of biochar-TCE taking place at 15% concentration. Since this is an ongoing study, the results of the air sample analyses at the end of the 15-day period will be shared in the next weekly report.
- Biochar was also investigated for its swelling characteristics due to uptake of water. In a 3.5-gallon bucket, 2 inches of biochar was topped with about 1.5 ft of pea gravel to simulate the fill in the excavated area. Water was added to pea gravel to simulate flooding conditions. Despite being known to have a high-water retention capacity upon saturated with water, the biochar did not demonstrate any swelling.
- The biochar-alginate mix in the cracks of the wooden columns resulted in minor changes in the TCE concentrations in the area of the crack. It is likely due to the influence of the ambient air in the residential unit. An extension of this study in a smaller confined space would be done to further evaluate the efficacy of this option.
- The pictures from the different components of the biochar study are shared in Attachment F.

### Action Items for Week of July 23, 2023 – July 29, 2023

KSingh plans to perform the following tasks in the upcoming week:

1. Coordinate with Horner Plumbing, Roman Electric, and OBAR for installation of replacement GBR fans at the South blower location.
2. Conduct discrete sampling for units being vacated by residents.
3. Continue discrete sampling in various units and common areas and add results to comprehensive data table.
4. Conduct vacuum measurements at strategic locations within the buildings daily.
5. Continue to measure sub-slab TCE concentrations on a weekly basis to evaluate the performance of the VMS.

### Attachments

KSingh has included the following attachments, figures and tables for reference:

- Attachment A: Floor Plan and Summary of Monitoring Results by Date
  - Figure 1 – Floor Plan and Unit Location Map
  - Tables 1-5 – Indoor Air Monitoring Results by Date
- Attachment B/Table 6: Comprehensive Vacuum Measurements (inches H<sub>2</sub>O)
- Attachment C/Table 7: Comprehensive Data Table – Indoor Air
- Attachment D/Table 8: Comprehensive Data Table – Sub-Slab Vapor TCE
- Attachment E: Figures 2-7 of TCE Levels through July 21, 2023
- Attachment F: Biochar Study Design, Results and Photos

## Attachment F

### Biochar Study

#### CWC East Block Biochar Testing Plan

##### A. Biochar – Soil Interaction

Objective – To optimize the adsorption of TCE on biochar from the sub-slab contaminated soil.

Sample Location – Unit 1048 – Laundry Room

Dosage Settings – 0% (Control), 5%, 10%, 15%, 20% w/w

Sample weight – 50 gm

Sample No.	Dosage (% w/w)	Soil Weight (gm)	Biochar Weight (gm)
1	0	50	0
2	5	47.5	2.5
3	10	45	5
4	15	42.5	7.5
5	20	40	10

##### B. Biochar – Alginate Mix

Objective – To optimize the biochar-alginate mix to form a dense gel to seal cracks in wooden columns.

Volume of water – 1 L Deionized Water

Alginate – 3% (w/v) = 30 gm in 1 L DI Water

Grounded Biochar – 150 gm in 1 L DI Water

Calcium Chloride – 6% (w/v) = 60 gm CaCl<sub>2</sub> in 1 L of DI Water

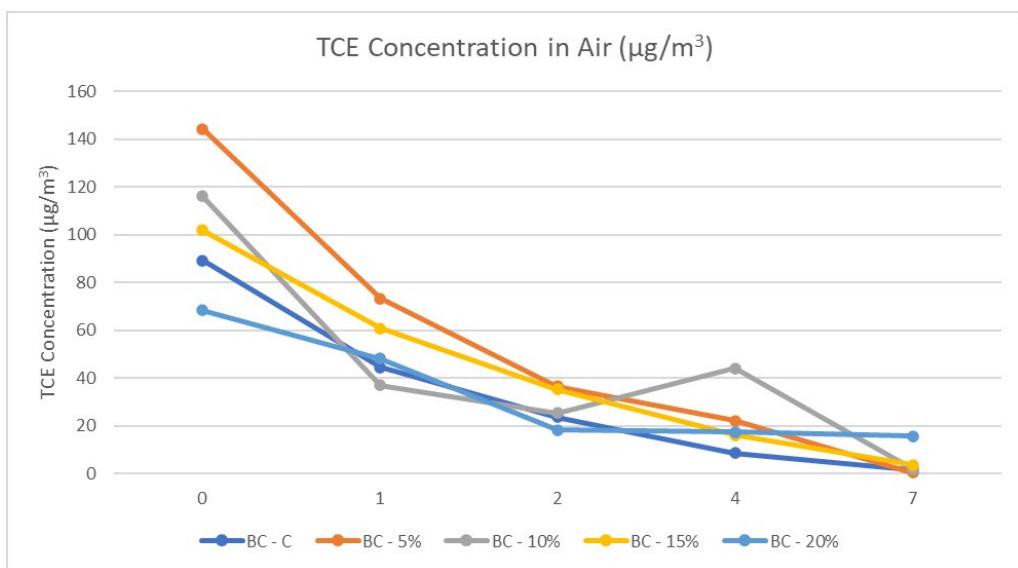

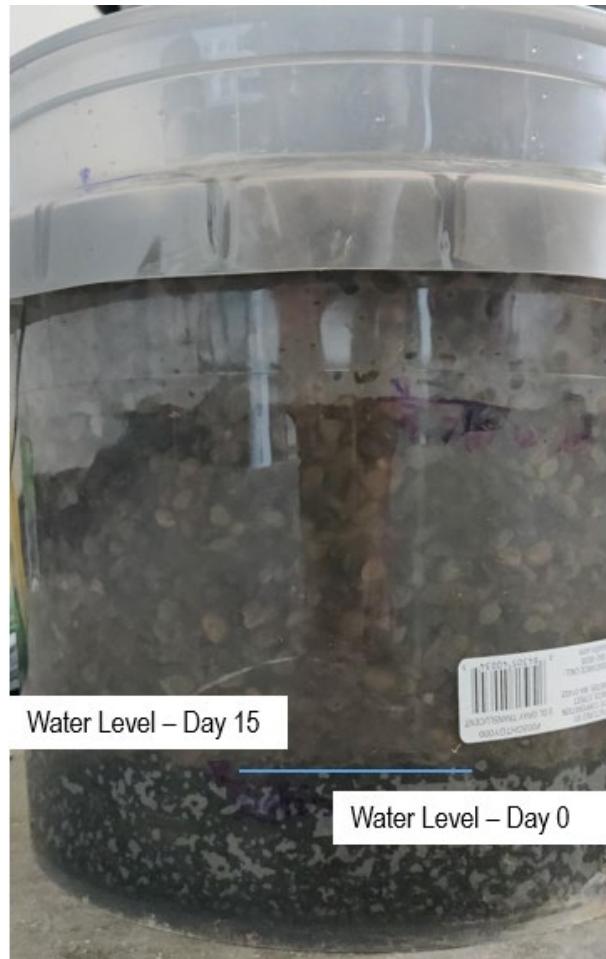

Figure 8 – Biochar – Soil Interaction Study

## JOB DESCRIPTION

Community Within The Corridor (CWC) - 40441B

## JOB NUMBER

500-236519-1

# Eurofins Chicago

## Job Notes

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of Eurofins Environment Testing North Central, LLC and its client. All questions regarding this report should be directed to the Eurofins Environment Testing North Central, LLC Project Manager who has signed this report.

Results relate only to the items tested and the sample(s) as received by the laboratory. The results, detection limits (LOD) and Quantitation Limits (LOQ) have been adjusted for sample dilutions and/or solids content.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Chicago Project Manager.

## Case Narrative

Client: K. Singh & Associates, Inc

Project/Site: Community Within The Corridor (CWC) - 40441B

Job ID: 500-236519-1

### Job ID: 500-236519-1

#### Laboratory: Eurofins Chicago

##### Narrative

##### Job Narrative 500-236519-1

##### Receipt

The samples were received on 7/13/2023 10:15 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.8° C.

##### GC/MS VOA

Method 5035: sample vial has < 8 grams of soil in 10 ml of methanol. BC-5% (500-236519-2), BC-10% (500-236519-3) and BC-20% (500-236519-5)

Method 8260B: Methylene chloride was detected in the following items: BC-15% (500-236519-4). Methylene chloride is a known lab contaminant; therefore all low level detects for this compound could be suspected as lab contamination.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

##### General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

## Qualifiers

### GC/MS VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
D	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count
