Eau Claire, WI 54701

Subject: 2017 Second Quarterly Report - Wauleco, Inc., Wausau, Wisconsin
BRRTS #02-37-000006

Dear Mr. Thompson:

On behalf of Wauleco, Inc., TRC is submitting a copy (enclosed) of the 2017 Second Quarterly Report for the Wauleco, Inc., site in Wausau, Wisconsin.

If you have any questions or comments regarding this information, please call me at (608) 826-3644.

Sincerely,

TRC Environmental Corporation

Bruce Iverson (for)
Project Manager

Attachments: 2017 Second Quarterly Report

cc: Evan Schreiner – Wauleco, Inc. (2 copies)
David Crass – Michael Best & Friedrich, LLP (1 copy)
Tom Dushek – TRC Wauleco (1 copy)
Ken Quinn – TRC (1 copy)

Wauleco, Inc. - Wausau, Wisconsin
Quarterly Report
Submitted July 2017

Summary of 2017 Second Quarter Activities

Groundwater Extraction and Treatment System Operation

Tables 1a, b, and c summarize the extraction and treatment system performance data for this reporting period. The results of the water discharged to the municipal sewer during the second quarter of 2017 are summarized as follows:

- During early April, 2017 the groundwater treatment system was shut down during the first portion of the month for maintenance. The granular activated carbon was removed and replaced with regenerated carbon, process tanks were cleaned, and piping was replaced and cleaned.
- Pentachlorophenol (PCP) screening (on-site gas chromatograph) results for the system effluent samples, which represent the water discharged to the municipal sanitary sewer, averaged 2.57 µg/L in April, 1.13 µg/L in May, and 1.27 µg/L in June.
- Laboratory results for the sampling event conducted this quarter are included in Tables 1a, b, and c for each month. The laboratory results for PCP in the system effluent was <3.0 µg/L on April 19, <3.0 µg/L on May 17, and <3.0 µg/L June 22, 2017.
- Both laboratory and on-site screening results indicate that the effluent PCP concentrations were below the monthly average permit level of 150 µg/L and the daily maximum concentration of 300 µg/L.
- Total treatment system efficiency (including carbon polishing units) removed more than 99 percent of the PCP between the influent and the effluent.

On-site screening PCP influent concentrations ranged from 3,160 µg/L to 7,713 µg/L during the quarter (Tables 1a, b, and c). PCP influent and effluent concentrations in the fluidized bed reactor (FBR) are presented graphically, both as individual data points and as moving averages, on Figure 1. FBR results included the following:

- As shown on Figure 1 and in Tables 1a, b, and c, PCP concentrations in the FBR influent fluctuated during the quarter, and generally remain within normal concentrations.
- The average PCP removal efficiency for the biological portion (*i.e.*, FBR influent to the fixed film reactor [FFR] effluent) of the system during this quarter is compared to the following:

MONTH	AVERAGE PCP REMOVAL (%)	PREVIOUS 12 MONTH AVERAGE (%)	AVERAGE 1 YEAR AGO (%)
April 2017	55	39	38
May 2017	76	42	39
June 2017	93	48	36

- The dissolved oxygen concentration in the influent to the FBR averaged 6.3 mg/L in April, 4.4 mg/L in May, and 2.8 mg/L in June 2017.

Laboratory results for the mercury analysis of the system effluent samples are included in Tables 1a, b, and c. The mercury concentration in the system effluent sample (discharged to the sanitary sewer) was <0.02 µg/L on April 19, <0.02 µg/L on May 17, and 0.099 µg/L June 22, which are below the permit discharge limit of 1.6 µg/L. The mass loading for mercury in April and May was calculated using half the detection limit of 0.01 µg/L, at 0.000003 lb/24 hours in April, and 0.00000274 lb/24 hours in May, which are below the permit discharge limit of 0.00048 lb/24 hours. In June the mass loading for mercury was calculated at 0.0000267 lb/24 hours, which is below the permit discharge limit of 0.00048 lb/24 hours.

The daily groundwater flow of the effluent to the Wausau Wastewater Treatment Plant averaged 24.98 gpm for April, 22.81 gpm for May, and 22.41 gpm for June, 2017 (Tables 2a, b, and c). The April average was calculated using only the days the treatment system was in operation. A new effluent flow meter was installed on April 4, 2017 during system shutdown. Since June, 2012 the pumping rate has been operated at approximately 22 gpm.

Figure 2 shows the average groundwater flow extracted and the average daily flow discharged to the Wausau Wastewater Treatment Plant.

Groundwater Monitoring

Water table elevations for the month of April 2017 are included in Table 3. Monthly water table elevations have been discontinued, with only quarterly elevations being measured, and semi-annual preparation of water table maps as discussed in the 2014 Annual Groundwater Monitoring Report dated April 16, 2015.

The product thickness data for April 2017 are summarized in Table 4. Measurements show small amounts of product present in April, most likely the result of low water levels following the Lake Wausau drawdown event in October-November 2016. Three monitoring wells measured had free product: W07 had 0.70 ft, W35 had 0.08 ft, and W40 had 0.63 ft. No production wells measured had free product.

4/30/2017	22.16	22.85	53016466
Monthly Average (4/11/17 to 4/30/17)	24.09	24.98	
Total ⁽²⁾ :			729,852

Footnotes:

- ⁽¹⁾ Influent and POTW discharge flow rates are daily averages. These may not be equal due to balancing in the treatment system and calibration of individual flowmeters. The influent groundwater flow rate is calculated by adding the instantaneous flow rate from each pumping well (i.e., 16 meters). The POTW discharge flow rate is recorded directly from the effluent meter.
- ⁽²⁾ Total is the cumulative gallons discharged to the POTW during the reporting period. This number is calculated by subtracting the total of the previous month's last day from the total of the current month's last day, see previous month's report for the number used. The total from the first day of the current month is not used in the calculation.
- ⁽³⁾ Totalizers were reset to 0 on August 23, 2012 during the system shutdown for maintenance.

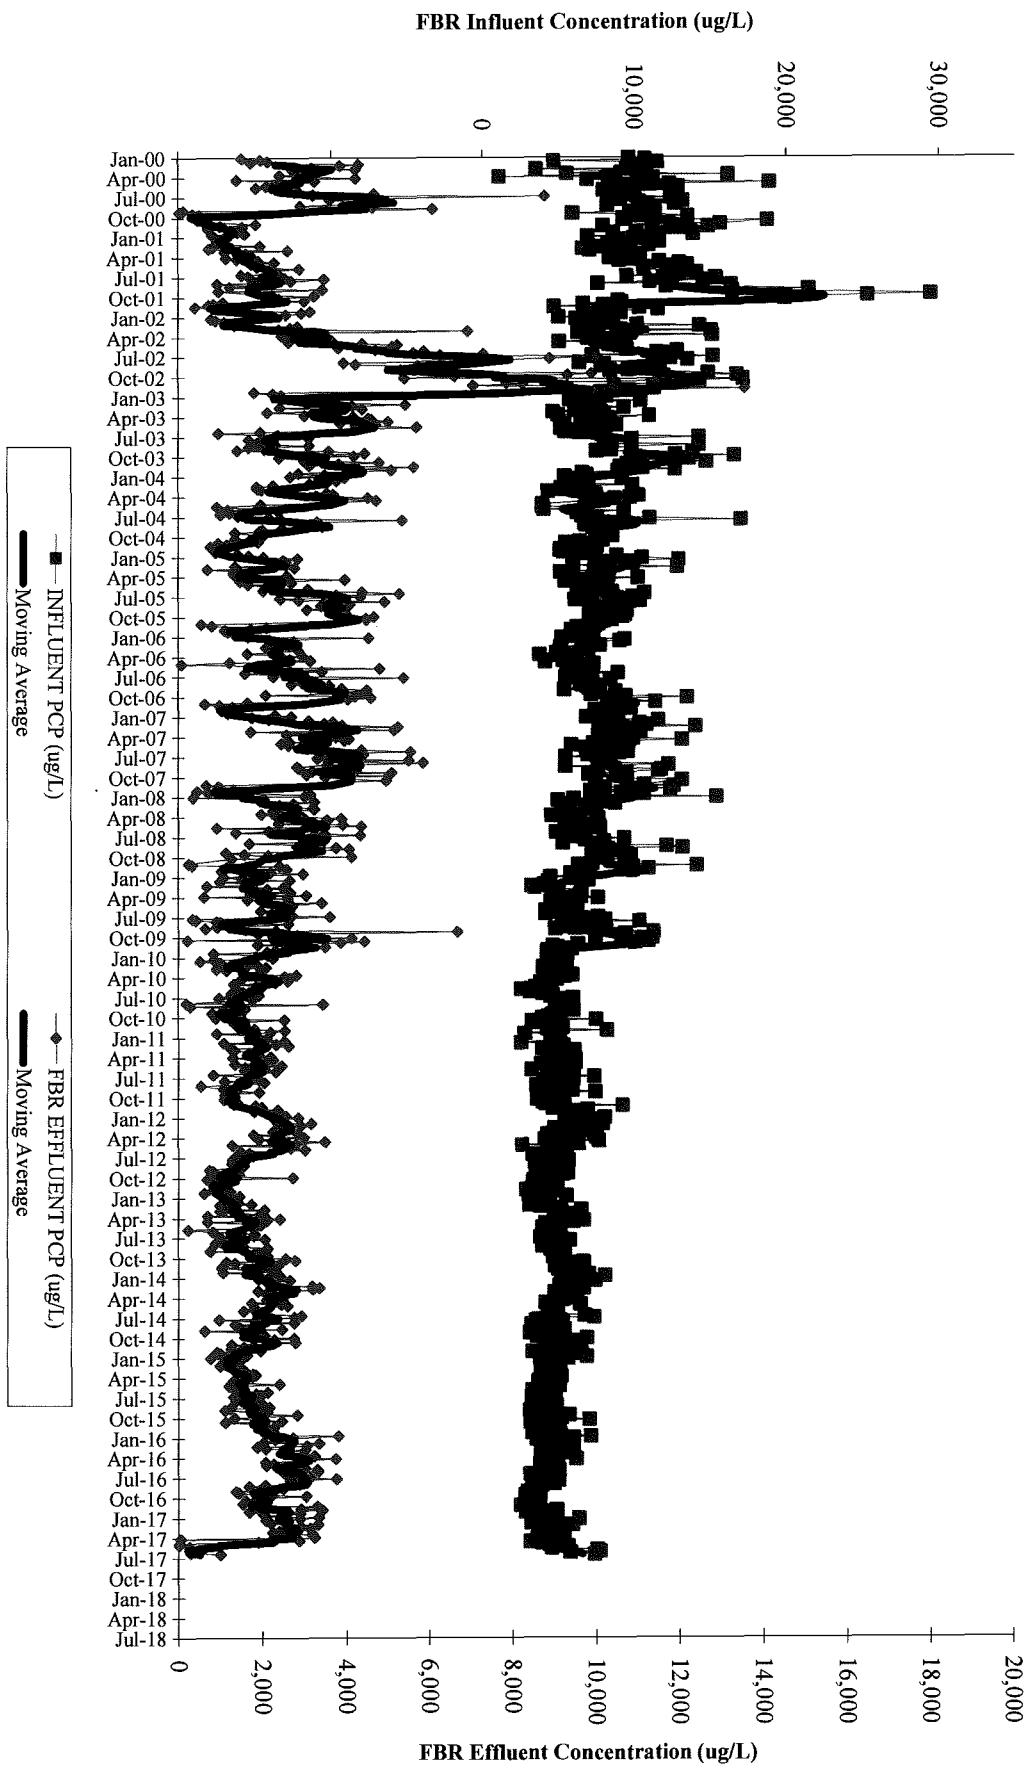

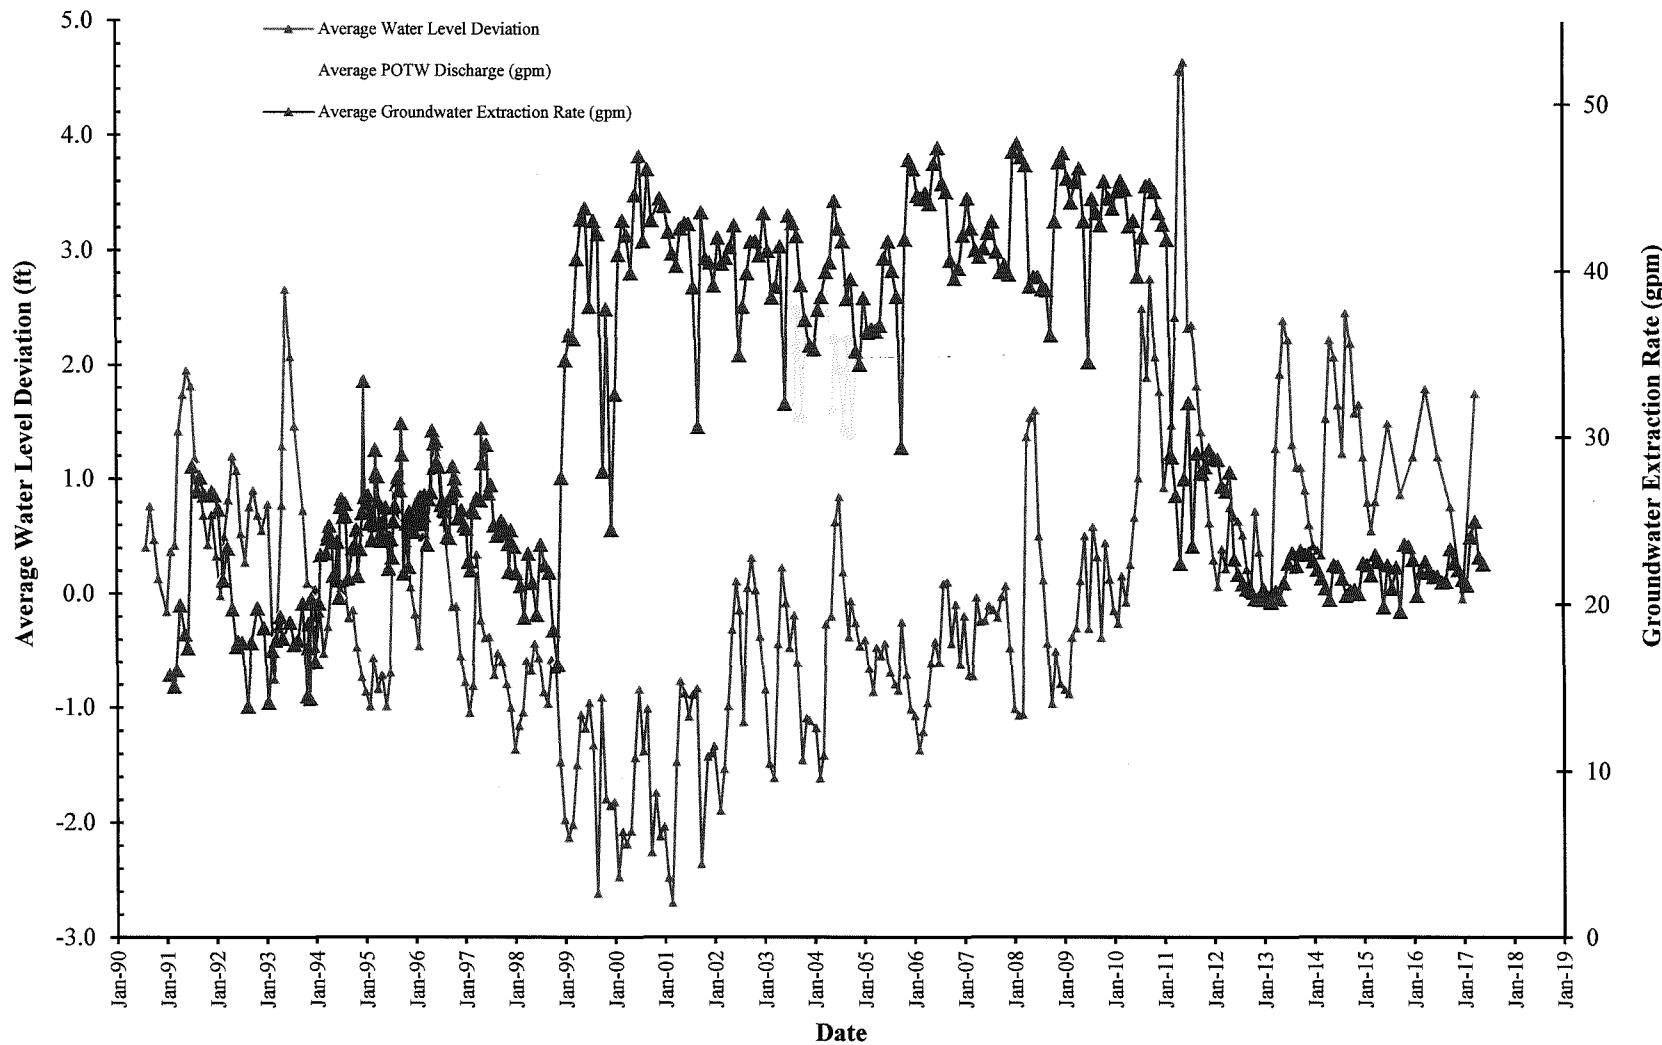

FIGURE 2

Average Groundwater Extraction Rates and Water Level Deviation Versus Time

Wauleco, Inc.

Wausau, WI

Note: The Average Groundwater Extraction Rate is a monthly average of the flow into the treatment system. The monthly average POTW discharge is less than the total extraction rate during the PPT pilot test due to the injection of treated water into IW01.
