 [2014]

This guidance provides a recommended list of Volatile Organic Compound (VOC) parameters for landfills whose plan of operation requires landfill gas monitoring for VOCs. Typically, landfill plan of operation approvals have not included a specific list of VOC parameters. Certain approvals have specified EPA Test Method TO-14A or TO-15, or similar methods as approved by the Department. However, a review of the VOC data in the GEMS database indicates inconsistencies in the parameters being reported.

The intent of providing this parameter list is to maintain consistency among landfills that are required to monitor for VOC parameters in landfill gas. A standard list of parameters will allow for more effective data review by Department staff. The Department expects this list of parameters can continue to be obtained using current monitoring procedures and either EPA Test Method TO-14A or TO-15. Individual plan of operation approvals or the landfill's air permit may still require additional parameters beyond this standard list depending on site specific circumstances.
