Quick Guide Outline for Aquatic Plant Management (APM) Permit Applications

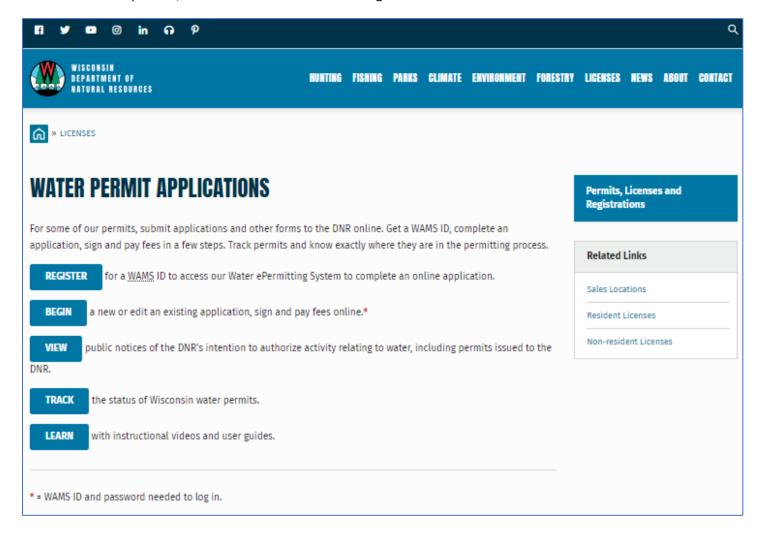

Below are the steps to complete and submit an Aquatic Plant Management permit using the ePermitting system. More details, including screen shots are included starting on page 2.

Need Assistance?	ePermitting system questions: Please email DNRAPMProgram@wi.gov or call 608-438-9919.
	Technical support : ASK FOR HELP link on your Welcome page in the ePermitting System for technical user support
Website Information	Go to the Water Portal web Page, either type in "Water Permits" in the search bar on the DNR home page, or go to https://dnr.wisconsin.gov/permits/water .
WAMS ID & Logging in to the ePermitting System	 Choose Register for a WAMS ID, unless you already have a WAMS ID. Return to the Water Portal webpage, choose Begin to log into the ePermitting system. Login using your WAMS ID and password You will be redirected to the "My Permit Applications" webpage. Here you can either start a new permit or edit an existing application. Start new application: choose Aquatic Plant Management from the list of Permit Categories along the left and move on to the Permit Application Section. Resume editing an existing application: choose the project name under either Items Awaiting Completion or Completed Items Awaiting Signature Confirmation.
Permit Application	 Enter a project name and select your project activity. Select either Chemical Control Application for the appropriate waterbody type or Mechanical Control Application to start a new permit application. Select Chemical Treatment Record or Manual/Mechanical Control Reporting Form if you already have an approved permit and are submitting a treatment record or a NR109 control report. Using the Application, Attachments, Payment, and Sign & Submit buttons, navigate through the application process. These buttons appear just above the Project Name box. Once the Application and required Attachments are completed, select Payment.
Payment Completion	 Choose Complete Payment at US Bank button. Payment is done through US Bank and we accept credit card, e-check, or debit card: When payment has been submitted to US Bank, US Bank will email a confirmation code to the email address provided in your payment information. Copy the confirmation code provided in the email from US Bank and paste it into the area on the Payment screen.
Sign and Submit the Application	 Choose the Sign and Submit button. Read the Terms and Conditions and select the check box next to the signature area. This will fill in a digital signature using your WAMS ID information. Choose the Sign and Submit to DNR button to submit the permit application to DNR.
After Submitting the Application	A confirmation email is sent to the email address provided in the WAMS ID, acknowledging the application has successfully been submitted to the DNR. The DNR has 5 business days for our Intake staff to review the permit application for completeness before assigning to a DNR employee. After the initial 5 day Intake review you may track the status of permit applications at: https://permits.dnr.wi.gov/water/SitePages/Permit%20Search.aspx. Private pond permits do not follow this same procedure. Your private pond permit may not be visible until day 15.

Getting Started with the ePermitting System

1. To get to the Water Permit Water Portal Page, go to: https://dnr.wisconsin.gov/permits/water

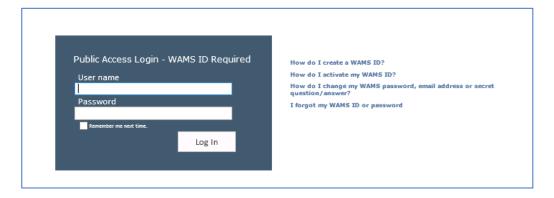

At this page you can: **REGISTER** for a WAMS ID, **BEGIN** a new or edit an existing application, **VIEW** public notices of the DNR's intention to authorize activity relating to water, including permits issued to the DNR, **TRACK** the status of Wisconsin's water permits, and **WATCH** instructional training videos.

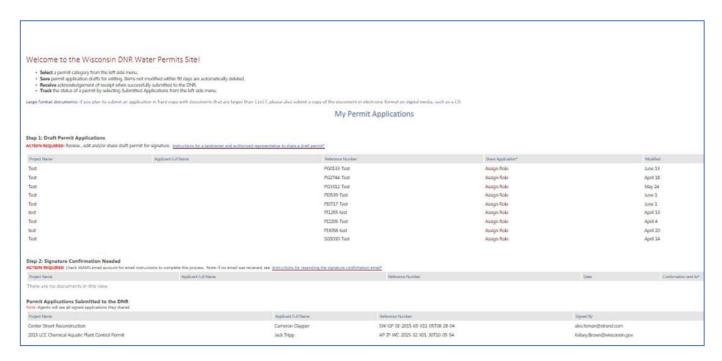

If you need more information about the APM (Aquatic Plant Management) Program before getting started, please visit our webpage here: https://dnr.wisconsin.gov/topic/lakes/plants.

- 2. Choose **REGISTER** to get a WAMS ID. Then navigate back to the **Water Portal Page** to start a new permit application or work on an existing one. A WAMS ID is required for applying for permits using the ePermitting System, but it is not required to view Public Notices, or Track the status of water permits. The WAMS ID is a secure login for all State of Wisconsin programs.
- 3. Choose **BEGIN** to log into the ePermitting system so that you can either start a new permit application or resume editing an existing one.

4. Login using your WAMS ID by clicking the **Public Access (WAMS ID Required) – Apply for WDNR Water Permit Applications** and filling in your WAMS ID and password

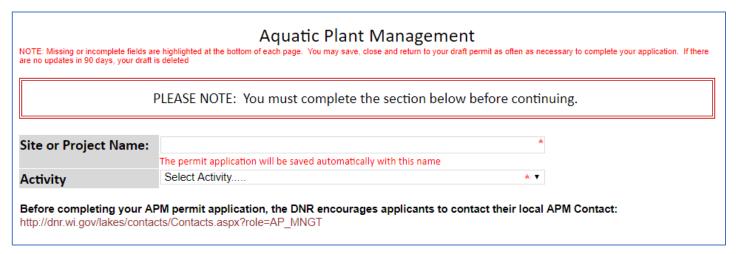

- 5. Then you will be redirected to the **My Permit Applications** webpage. Here you can either start a new application or continue editing an existing application.
 - a. To start new application: click **Aquatic Plant Management** from the list of Permit Categories along the left and move on to Step 6.
 - b. The existing permit applications will be listed under 3 categories. These categories are: **Step 1: Draft Permit Applications, Step 2: Signature Confirmation Needed**, and **Items Submitted to the DNR**.
 - c. To open an existing permit application and resume editing it, click the link under the Project Name heading under either **Step 1: Draft Permit Applications** or **Step 2: Signature Confirmation Needed.**
 - d. **Items Submitted to the DNR** is where applications that have been submitted to DNR will appear.

Chemical Permit Application for Non-Private Sites – Lake, Pond, River (3200-004)

Navigate to the <u>ePermitting site</u> and select the Aquatic Plant Management permit category on the left side. The following screen will appear:

Home Tab

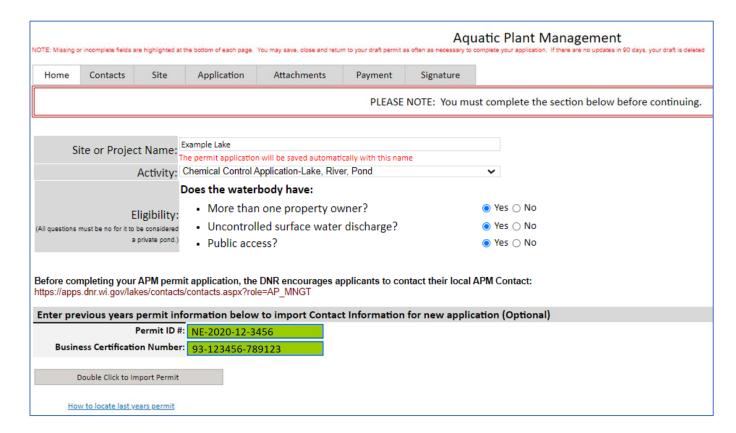

Site or Project Name:

Enter name of the waterbody site where you plan to control plants.

Activity:

Select Chemical Control Application – Lake, River, Pond

The permit is now saved under your drafts and the following screen will appear:

Eligibility:

Answer questions based on the proposed control site. You must answer the questions before proceeding. Make sure you are answering the questions based on the <u>waterbody</u>, not the specific control site. For more information, please see Help Section: Determining Permit Type.

Note: If all answers are "no", the site is considered private and you will be automatically directed to the private pond form. Please see Instructions for Chemical Permit Application Private Sites (3200-155)

Enter previous years information (Optional)

To autofill the administrative information from a previous permit, enter previous permit number and your business certification number (aka business license number) and double click *Import Permit*. When the two fields turn **GREEN**, the import was successful.

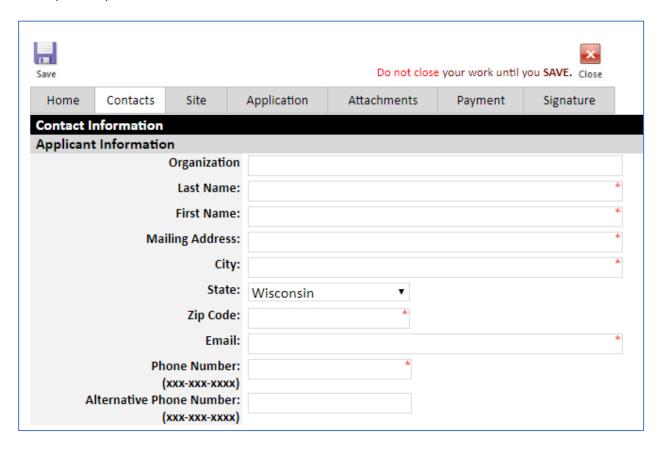

Important Note: This is case sensitive (use capital letters) and may be sensitive to extra spaces/characters before or after the number. See <u>Troubleshooting Permit Import</u> if you have issues.

Click *Contacts* Tab at the top to proceed.

Contacts Tab

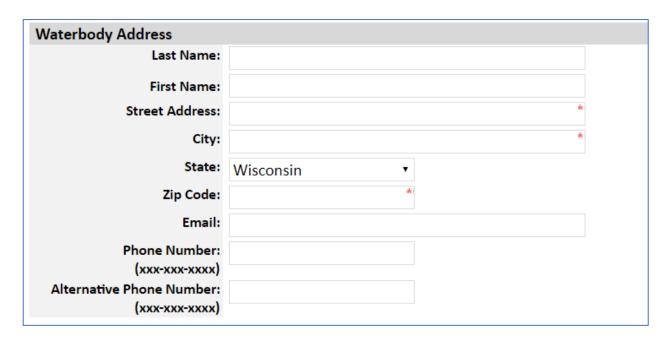

Contact Information

NOTE: If you used the permit import feature, please check to ensure the information autopopulated accurately and correct any errors you find.

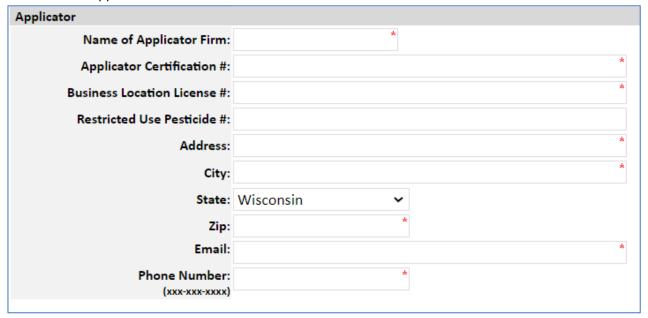

Applicant Information

Fill out contact information for the landowner/sponsoring organization/sponsor as accurately as possible. This section should not contain any applicator company/employee information. The application will not be considered complete unless a phone and/or email address for the applicant is provided. This information is stored in our internal staff database only, so those 2 fields will appear blank on the final PDF that is visible to the public. Fields marked with red * are required.

Waterbody Address

Enter waterbody contact information. Enter the most accurate address you can find for the site. If you cannot find a specific street address, enter the nearest road name/intersection or fire number. The other fields should be filled in if they differ from the applicant contact information above.

Applicator

Enter applicator contact information. Valid <u>Applicator Certification</u> numbers must be entered for all people who will be handling pesticides (loading unsealed herbicide containers, mixing, or applying). Enter more than 1 certification number separated by commas. Enter the <u>Business Location License</u> number for the business that will conduct the control. The number typically begins with 93-XXXX-XXXX.

If you do not know the numbers, you can search by last name of the applicator here www.kellysolutions.com/WI/Applicators/index.asp and by business name here http://www.kellysolutions.com/WI/Business/index.asp.

On the rare occasion a field does not apply for your project, please enter "NA".

	Adjacent Riparian Property Own	ers

	John Smith	123 Example Road	123-456-7891	example@example.com	
	*	*			8
E	Add Contact				

Adjacent Riparian Property Owners

If you checked Yes to the previous question "Does the waterbody have more than one property owner?" you are required to enter their name(s) and address(es). Phone and email will be stored in our internal database only and hidden on the final PDF that is visible to the public. This section is also needed if there are riparian property owners within 150' of the control site.

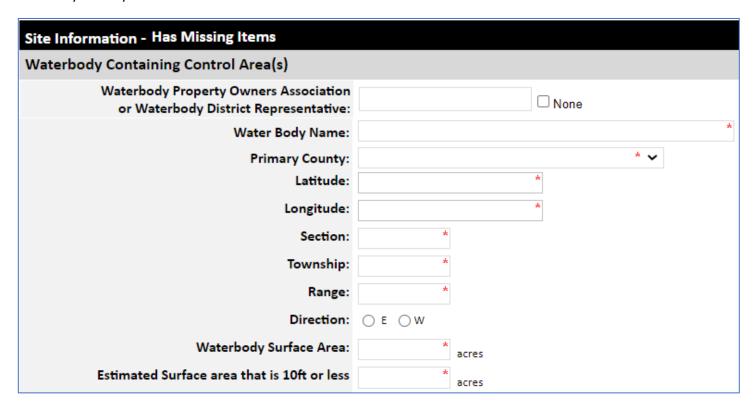

Check the *Uploaded riparian owners to attachment tab* box and upload a list of names and addresses as a separate file in a later tab OR fill in blanks in this section. Use the *Add Contact* button to add more fields as needed and use the red X button to delete rows.

If there are no riparian property owners within 150' of the control site, you may check the box *Riparian Owners information is not applicable for this application*.

Click *Press to Refresh Missing Fields* to ensure you completed the requirements. Click *Continue to Next Tab*

Site Tab

NOTE: If you used the permit import feature, please check to ensure the information autopopulated accurately and correct any errors you find.

Waterbody Containing Control Area(s)

Waterbody Property Owners' Association or Waterbody District Representative: Enter name or check the None box.

Waterbody Name and County:

Enter the most accurate name and primary county corresponding to the site. If not a specific waterbody, you may enter property name, wildlife area name, etc.

Latitude/Longitude:

Select a point near the center of your project that best represents the lat/long. Ensure enough digits are used for lat/long to specifically locate the site and please use Decimal Degrees. See Help section for assistance.

Township-Range-Section (TRS):

Select the TRS parcel that best represents the site, such as the one closest to the center. Use 2-digit numbers (01, 02, etc.) for TRS and make sure either E (east) or W (west) is selected. See Help section for assistance.

Waterbody Surface Area:

Supply the total area of contiguous lake, pond, etc. within which you are proposing to control plants. If in doubt about what can be included in a single permit, check with your APM coordinator.

Estimated Surface Area that is 10 Feet or Less in Depth:

Enter best estimate.

Area(s) Proposed for Contro Site Name	Treatme	_	Treat	ment Width	<u>Es</u>	timated Acre	age	Avera	age Depth	Calc	ulated Volume
(<u>Optional)</u>	<u>Length</u>			40.500.02							
Site A	100	ft. x	100	_{ft.} + 43,560 ft. ²			ac	5	ft =	1.15	ac-ft
Site B	200	ft. x	400	ft. + 43,560 ft. ²	=	1.84	ac	10	ft =	18.37	ac-ft🛭
■ Insert item											
				Estimated Acreage		2	.07 ac		Calculated	19.51	ac-ft
				Grand Total				Vol	ume Grand Tota		
	a consitive	area o	lesignated	by the Department	of N	latural Resour	ces. <u>M</u>	ore Info	ormation		

Proposed Control Area(s)

Area(s) Proposed for Control:

Determine the acreage of the waterbody in which you wish to control plants. If planning to control plants in polygons within a larger waterbody, make a best effort to enter **length**, **width**, and **depth** for each polygon and the form will calculate the acreage and provide a grand total. Use the **Insert Item** button to add more rows and use the red **X** to delete rows. Using the **Site Name** fields to give a unique name to each control area and using the same names for the polygons when creating your site map is ideal to clearly communicate your plans to the permit reviewer.

Sites such as Google Earth, WISFIRS, or the surface water data viewer (<u>SWDV</u>) have area measurement tools that can help you to delineate the areas within which you want to control plants. Sometimes this may include getting a best estimate of scattered control areas within a larger waterbody area.

In cases where entering the dimensions for each polygon is not feasible, enter an **estimated acreage** and leave the length and width fields blank.

If the Grand Total is more than 10 acres, or more than 10% of the **Estimated Surface Area that is 10 Feet or Less in Depth above, this is considered a large-scale treatment. (See below for additional requirements for large-scale treatments, and ensure Public Notice is uploaded under the **Attachments** Tab).

Is this area within or adjacent to a sensitive area designated by the Department of Natural Resources?

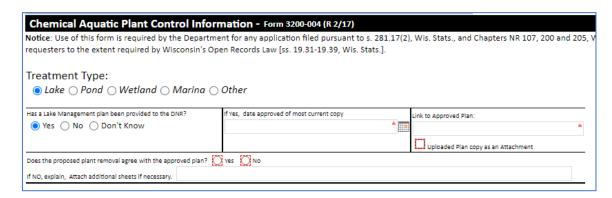

Answer yes or no. If uncertain, you can click the More Information link, use SWDV to check using the "Critical Habitat Areas" layer feature, or contact your local APM Coordinator.

Click *Press to Refresh Missing Fields* to ensure you completed the requirements. Click *Continue to Next Tab*

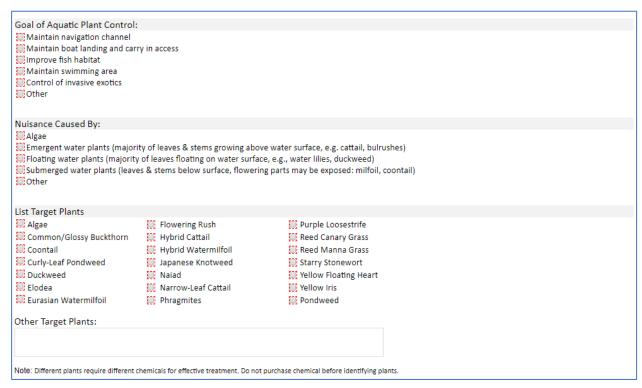

Application Tab

Chemical Aquatic Plant Control Information

Most questions are self-explanatory and are required fields. Please ensure answers are as accurate as possible.

If proposing plant control in a Lake, you will need to answer questions about Lake Management Plans, which includes providing either a link or a copy uploaded to the Attachment section, if applicable.

Make sure you include all species you intend to control using herbicide on the site. Use the **Other Target Plants** box to enter additional species. Please use specific plant names, entries such as "All shoreline plants" or "Any invasive species" are not acceptable.

Chemical Control							
Full Trade Name of Proposed	Chemical(s)						
Agristar 2,4-D Amine	Clipper	K-Tea	SCI-62				
Algimycin PWF	Clipper SC	Littora	Sculpin G

Method of Application: Sele	ect pre-defined or type in an oth	er value	* •				
Other Method of Application			*				

Chemical Control

Full Trade Name(s) of Proposed Chemicals:

Use the checkboxes to select the herbicide(s) you plan to use. Any herbicide selected should be appropriate for the main goals of control, intended target species, and treatment scale. Applications with inaccurate/lengthy herbicide selections lacking specificity may be flagged for revision.

If a chemical is not listed, enter the full trade name under "Other" if it is registered for aquatic use in Wisconsin and that its use at the site is consistent with the site type(s) listed on the label. For instance, if a label lists canals (and that is the only wet site listed), the chemical cannot be used in a lake. Herbicides registered for use in Wisconsin can be searched here, including the labels: http://www.kellysolutions.com/WI/pesticideindex.asp.

Method of Application and past results:

Describe how the herbicides will be applied by choosing from the dropdown or entering a custom explanation in the Other box. Describe any past results if the site was permitted in prior years.

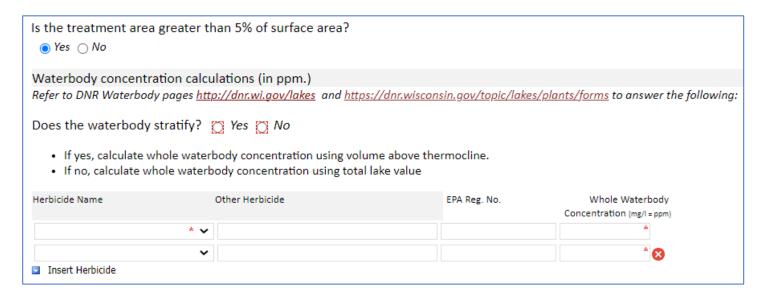

Alternatives to Chemical Contro	l: Feasible?	If No, Why Not?				
1. Mechanical harvesting	Yes No					
2. Manual removal	🔘 Yes 🔘 No					
3. Sediment screens/covers	Yes No					
4. Dredging	Yes No					
5. Waterbody drawdown	Yes No					
6. Nutrient controls in watershed	Yes No					
7. Other:	○ Yes ○ No					
Note: If proposed treatment involves multiple properties	<u>, consider feasibility of I</u>	ACH alternative for EACH property owner.				
Will surface water outflow and/or overflow be controlled to prevent chemical loss?						
O Yes O No						

Alternatives to Chemical Control:

Answer these appropriately and be sure to enter a reason if that alternative was not considered.

Surface water outflow be controlled?

Answer this appropriately.

Is the treatment area greater than 5% of surface area?

Answer appropriately. If yes and your application is for control in a lake, you must calculate the whole waterbody concentration for each proposed herbicide. Use the **Insert Herbicide** button to add more rows and use the red X to delete rows. See Help Section: Whole Waterbody Concentration Calculations for assistance.

WPDES Permit Request Is WPDES coverage being requested? Refer to http://dnr.wi.gov/topic/wastewater/aquaticpesticides.html for more information
Yes - complete section VII with signature.
 No Already have WPDES WPDES coverage not needed
WPDES Detail
Select which permit you are requesting: WI-0064556-1 Aquatic Plants, Algae & Bacteria WI-0064564-1 Aquatic Animals WI-0064581-1 Mosquitoes & other Flying Insects
Indicate WPDES permittee responsible for the pollutant discharge: Applicator Sponsor
Do you expect the pest control activity will result in a detectable pollutant discharge to waters of the state beyond the treatment area boundary or a pollutant residual in waters of the state after the treatment project is completed? [Signature 1] Yes [Signature 2] No
If yes, identify the pollutant(s):
Are you planning to incorporate integrated pest management principles, as specified in the WPDES permit, into your pest control activity to minimize any pollutant residual or pollutant discharge beyond the treatment area? Yes No
Type of WPDES coverage being requested: One Treatment Site Statewide Coverage
For informational purposes, select areas of WI for most of your aquatic treatments: NE NE NW MSW MSE
Is WPDES coverage being requested for more than 1 year? SYPON SYNO
If yes, the permittee will remain in "active" WPDES status until a Notice of Termination is submitted

WPDES Permit Request

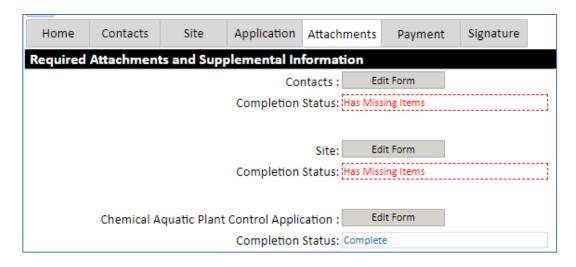

WPDES permits must comply with the Clean Water Act. Therefore, it is separate from the DNR required NR 107 permit. It has been included in this form to minimize paperwork. Chemicals applied to "waters of the state" – which includes any public or private surface water including wet sites with saturated soils – are considered a point source pollution and require permission to discharge.

It is the responsibility of the person who applies for a permit that someone involved in the treatment has WPDES coverage for their business. There is no cost for WPDES permits, and it would be valid for a period of 5 years.

WPDES permits are administered by the Wastewater Bureau. Jennifer Jerich oversees this WPDES permit for the Wisconsin DNR. See detailed information here: https://dnr.wi.gov/topic/wastewater/aquaticpesticides.html

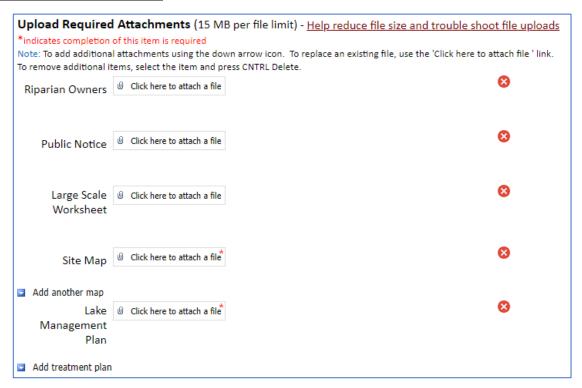

Fill out the appropriate responses and click **Press to Refresh Missing Fields** to ensure you completed the requirements. Click **Attachments**.

Attachments Tab

Check that Contacts, Site, and Chemical Aquatic Plant Control Application are marked *Complete* on this tab. If marked *Has Missing Items* as shown here, go back to the tab and enter the required fields.

Upload Required Attachments

Riparian Owners:

If you checked the box from the *Contacts Tab*, you must upload a file containing the owners list, which should include names and addresses of everyone living with 150' of the site.

Public Notice and Large-Scale Worksheet:

Required if the estimated acreage is greater than 10 OR if the estimated acreage is greater than 10% of the waterbody area that is 10 feet or less in depth. Many Non-private Ponds will need this. See <u>Public Notice Examples</u> for help.

Site Map:

Outline the proposed treatment area and ensure that the map includes some landmarks such as roads and access points. Indicate the direction of surface water flow out of the unit if applicable. If there is a river or creek, draw an arrow and label it as "flow". The tools used for calculating acreage can help you generate a map (e.g., https://dnrmaps.wi.gov/H5/?Viewer=SWDV).

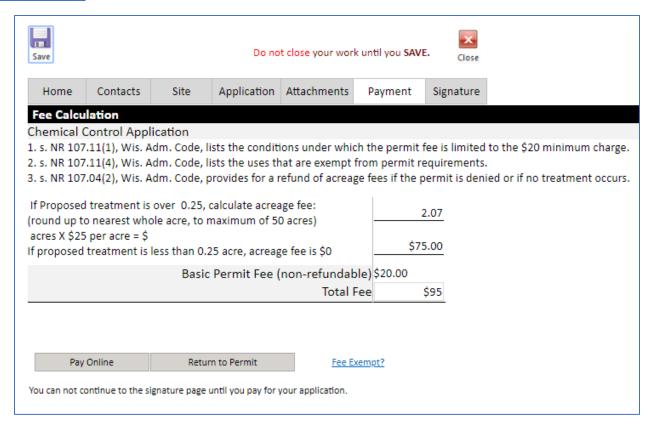

Use the *Add another map* or *Add treatment plan* button to add any other documents you need to submit with the application. Sometimes it may be useful to include a cover letter or additional supporting documents depending on the treatment you are proposing. See <u>Site Map Examples</u> for help.

Lake Management Plan:

If you checked the box associated with this question from the *Application Tab*, you must upload a file containing the lake management plan.

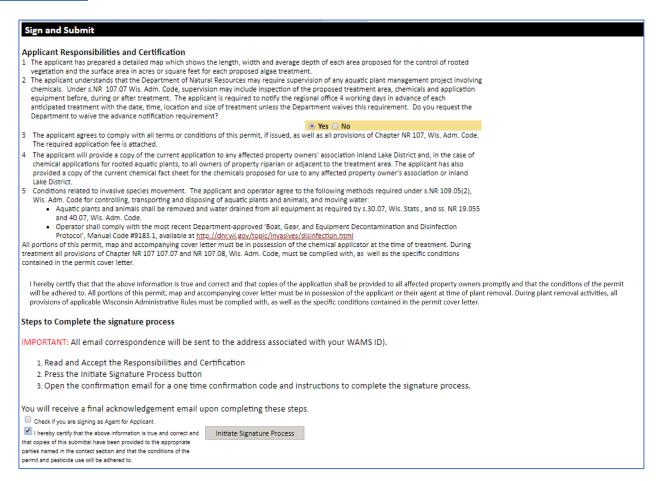

Click the **Payment** tab at the top of the page.

Payment Tab

The fee is calculated from the acreage information entered on the Site tab. Click **Pay Online** to begin the payment process and follow the instructions. Then click the **Signature** tab.

Signature Tab

Review Applicant Responsibilities and Certification items 1-5 before starting the signature process. You are agreeing with these statements or signifying you will/have completed them. Under item 2, you may request that APM staff not supervise the treatment, but the program may require it, in which case you would need to give notice to the regional APM staff of any application at least 4 business days before the treatment. If this is the case, your permit cover letter will specify this.

If there were one or more property owners adjacent to your treatment area, or a lake organization representative listed in section II, signing your permit indicates you have provided a copy of this permit to them. You can mail via postal service, email, or hand-deliver a copy. You can also mail a postcard containing a link to a live website where a copy of the permit application can be read in full.

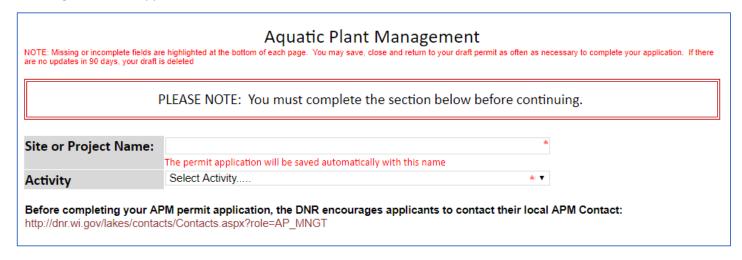

The signature process has two steps. Please read the instructions carefully.

[OPTIONAL] Check the first box ONLY if you are "agent for applicant," and see the <u>Assign Role Feature</u> section if you require a two-person signature process.

Check the "I hereby certify..." box and click Initiate Signature Process. Follow prompts and you will receive an email. You will need to click the link there to finalize the signature process.

Chemical Control Application – Wetland (3200-012)

Navigate to the <u>ePermitting site</u> and select the Aquatic Plant Management permit category on the left side. The following screen will appear:

Home Tab

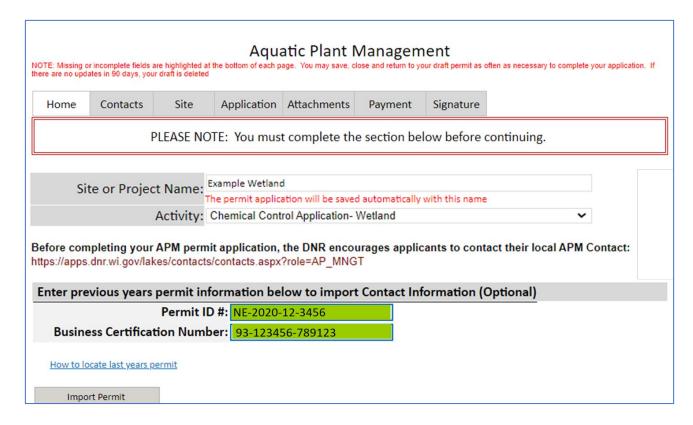

Site or Project Name:

Enter name of the wetland site where you plan to control plants.

Activity:

Select Chemical Control Application - Wetland

The permit is now saved under your drafts and the following screen will appear:

Enter previous years information (Optional)

To autofill the administrative information from a previous permit, enter previous permit number and your business certification number (aka business license number) and double click *Import Permit*. When the two fields turn **GREEN**, the import was successful.

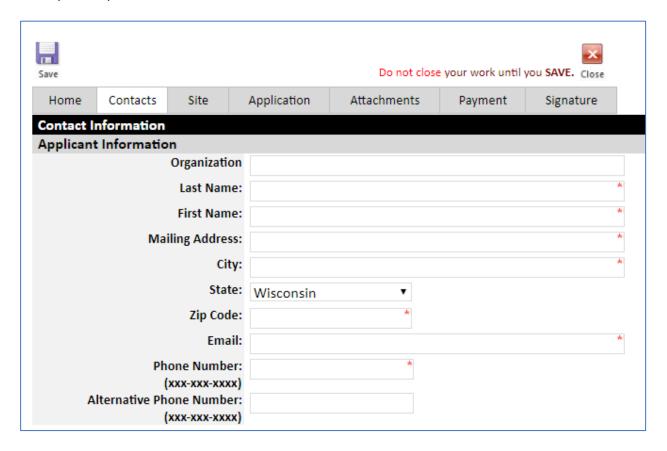

Important Note: This is case sensitive (use capital letters) and may be sensitive to extra spaces/characters before or after the number. See <u>Troubleshooting Permit Import</u> if you have issues.

Click *Contacts* Tab at the top to proceed.

Contacts Tab

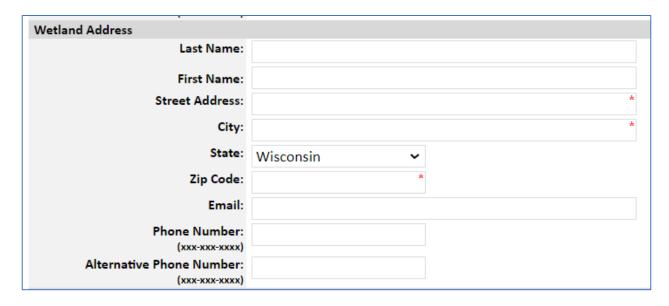

Contact Information

NOTE: If you used the permit import feature, please check to ensure the information autopopulated accurately and correct any errors you find.

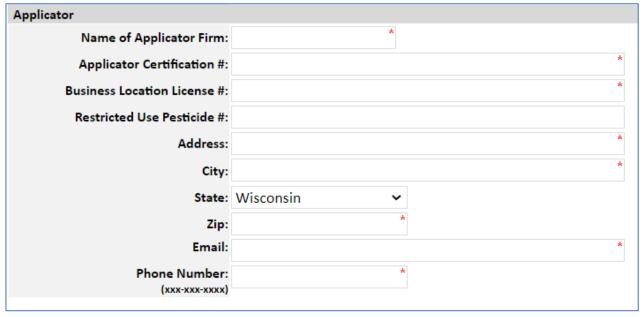

Applicant Information

Fill out contact information for the landowner/sponsoring organization/sponsor as accurately as possible. This section should not contain any applicator company/employee information. The application will not be considered complete unless a phone and/or email address for the applicant is provided. This information is stored in our internal staff database only, so those 2 fields will appear blank on the final PDF that is visible to the public. Fields marked with red * are required.

Wetland Address

Enter wetland contact information. Enter the most accurate address you can find for the site. If you cannot find a specific street address, enter the nearest road name/intersection or fire number. The other fields should be filled in if they differ from the applicant contact information above.

Applicator

Enter applicator contact information. Valid <u>Applicator Certification</u> numbers must be entered for all people who will be handling pesticides (loading unsealed herbicide containers, mixing, or applying). Enter more than 1 certification number separated by commas. Enter the <u>Business Location License</u> number for the business that will conduct the control. The number typically begins with 93-XXXX-XXXX.

If you do not know the numbers, you can search by last name of the applicator here www.kellysolutions.com/WI/Applicators/index.asp and by business name here http://www.kellysolutions.com/WI/Business/index.asp.

On the rare occasion a field does not apply for your project, please enter "NA".

Proposed Control Area(s)

Area(s) Proposed for Control:

Determine the acreage of the wetland in which you wish to control plants. If planning to control plants in polygons within a larger wetland, make a best effort to enter **length** and **width** for each polygon and the form will calculate the acreage and provide a grand total. Use the **Insert Item** button to add more rows and use the red **X** to delete rows. Using the **Site Name** fields to give a unique name to each control area and using the same names for the polygons when creating your site map is ideal to clearly communicate your plans to the permit reviewer.

Sites such as Google Earth, WISFIRS, or the surface water data viewer (<u>SWDV</u>) have area measurement tools that can help you to delineate the wet area within which you want to control plants. Sometimes this may include getting a best estimate of scattered treatment areas within a larger wet area. Enabling the Wetland layer can help for certain wetland sites, and high ground does not need to be included since that area would not be wet.

In cases where entering the dimensions for each polygon is not feasible, enter an **estimated acreage** and leave the length and width fields blank.

If your wetland project spans multiple adjacent counties, enter the corresponding county near to each site using the dropdown menu.

If the Grand Total is more than 10 acres, this is considered a large-scale treatment. (See below for additional requirements for large-scale treatments, and ensure Public Notice is uploaded under the **Attachments Tab).

Is this area within or adjacent to a sensitive area designated by the Department of Natural Resources?

Answer yes or no. If uncertain, you can click the More Information link, use SWDV to check using the "Critical Habitat

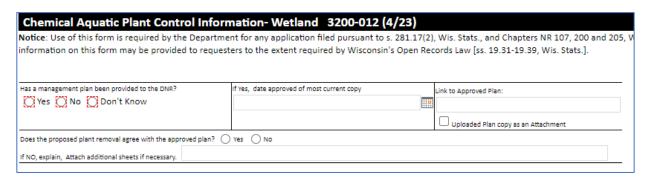

Click **Press to Refresh Missing Fields** to ensure you completed the requirements. Click **Continue to Next Tab**

Areas" layer feature, or contact your local APM Coordinator.

Application Tab

Chemical Aquatic Plant Control Information

Most questions are self-explanatory and are required fields. Please ensure answers are as accurate as possible.

You will need to answer questions about Management Plans, which includes providing either a link or a copy uploaded to the Attachment section, if applicable.

Goal of Aquatic Plant Control:		
Maintain navigation channel		
Maintain boat landing and car	ry in access	
Improve fish habitat		
Control of invasive exotics		
Improve game habitat		
Improve non-game habitat		
Other		
Nuisance Caused By:		
·	ty of leaves & stems growing ah	ove water surface, e.g. cattail, bulrushes)
Floating water plants (majority		
	_	ring parts may be exposed: milfoil, coontail)

Other Method of Application			*

Chemical Control

Full Trade Name(s) of Proposed Chemicals:

Use the checkboxes to select the herbicide(s) you plan to use. Any herbicide selected should be appropriate for the main goals of control, intended target species, and treatment scale. Applications with inaccurate/lengthy herbicide selections lacking specificity may be flagged for revision.

If a chemical is not listed, enter the full trade name under "Other" if it is registered for aquatic use in Wisconsin and that its use at the site is consistent with the site type(s) listed on the label. For instance, if a label lists canals (and that is the only wet site listed), the chemical cannot be used in a wetland. Herbicides registered for use in Wisconsin can be searched here, including the labels: http://www.kellysolutions.com/WI/pesticideindex.asp.

Method of Application and past results:

Describe how the herbicides will be applied by choosing from the dropdown or entering a custom explanation in the Other box. Describe any past results if the site was permitted in prior years.

Alternatives to Chemical Control:	Feasible?	If No, Why Not?
1. Mechanical harvesting	Yes No	
2. Manual removal	Yes 🔘 No	
3. Sediment screens/covers	Yes No	
4. Dredging	Yes 🔘 No	
5. Waterbody drawdown	Yes No	
6. Nutrient controls in watershed	Yes 🔘 No	
7. Prescribed burning	Yes No	
Waterbody manipulation to promote drowning	Yes No	
9. Solarizing (tarping)	Yes 🔘 No	
7. Other:	Yes 🔘 No	
Note: If proposed treatment involves multiple properties, consider feasibility of EACH alternative for EACH property owner.		
Will surface water outflow and/or overflow be controlled to prevent chemical loss? ☐ Yes ☐ No		

Alternatives to Chemical Control:

Answer these appropriately and be sure to enter a reason if that alternative was not considered.

Surface water outflow be controlled?

For wetlands, answer No.

WPDES Permit Request

If yes, identify the pollutant(s):
in yes, identify the poliutalitys).
Are you planning to incorporate integrated pest management principles, as specified in the WPDES permit, into your pest control activity to minimize any pollutant residual or pollutant discharge beyond the treatment area? **ENO** **Pos** **Pos
Type of WPDES coverage being requested: One Treatment Site Statewide Coverage
For informational purposes, select areas of WI for most of your aquatic treatments: NE NE NE NE SE
Is WPDES coverage being requested for more than 1 year? [Signal Yes Signal No
If yes, the permittee will remain in "active" WPDES status until a Notice of Termination is submitted

WPDES Permit Request

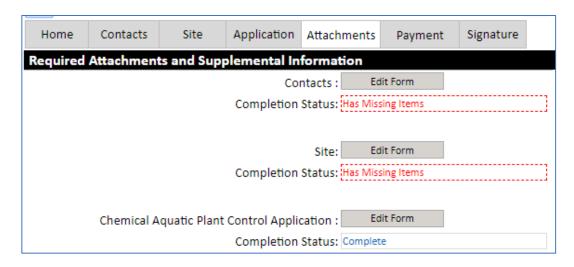

WPDES permits must comply with the Clean Water Act. Therefore, it is separate from the DNR required NR 107 permit. It has been included in this form to minimize paperwork. Chemicals applied to "waters of the state" – which includes any public or private surface water including wet sites with saturated soils – are considered a point source pollution and require permission to discharge.

It is the responsibility of the person who applies for a permit that someone involved in the treatment has WPDES coverage for their business. There is no cost for WPDES permits, and it would be valid for a period of 5 years.

WPDES permits are administered by the Wastewater Bureau. Jennifer Jerich oversees this WPDES permit for the Wisconsin DNR. See detailed information here: https://dnr.wi.gov/topic/wastewater/aquaticpesticides.html

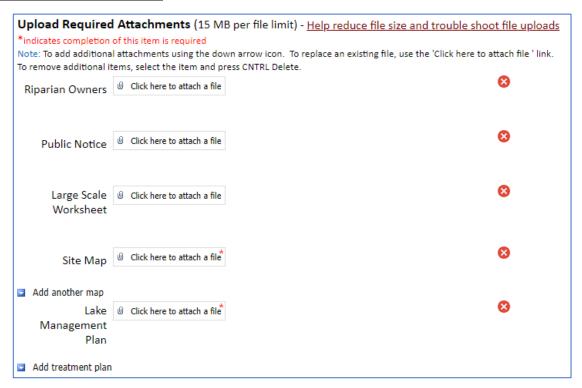

Fill out the appropriate responses and click **Press to Refresh Missing Fields** to ensure you completed the requirements. Click **Attachments**.

Attachments Tab

Check that Contacts, Site, and Chemical Aquatic Plant Control Application are marked *Complete* on this tab. If marked *Has Missing Items* as shown here, go back to the tab and enter the required fields.

Upload Required Attachments

Riparian Owners:

If you checked the box from the *Contacts Tab*, you are required to upload a file containing the owners list, which should include names and addresses of everyone living with 150' of the site.

Public Notice and Large-Scale Worksheet:

Required if the estimated acreage is greater than 10. See Public Notice Examples for help.

Site Map:

Outline the proposed treatment area and ensure that the map includes some landmarks such as roads and access points. Indicate the direction of surface water flow out of the unit if applicable. If there is a river or creek, draw an arrow and label it as "flow". The tools used for calculating acreage can help you generate a map (e.g., https://dnrmaps.wi.gov/H5/?Viewer=SWDV).

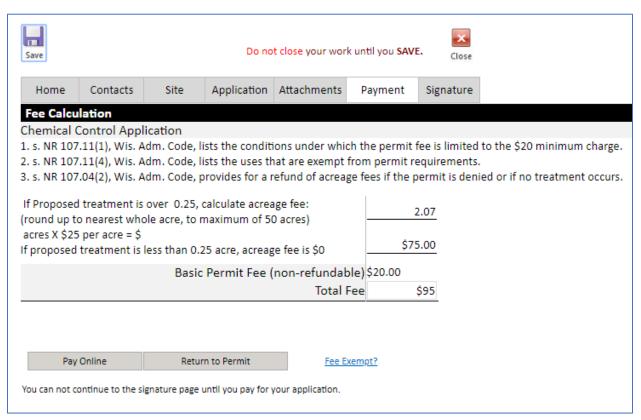

Use the *Add another map* or *Add treatment plan* button to add any other documents you need to submit with the application. Sometimes it may be useful to include a cover letter or additional supporting documents depending on the treatment you are proposing. See <u>Site Map Examples</u> for help.

Management Plan:

If you checked the box associated with this question from the *Application Tab*, you are required to upload a file containing the management plan.

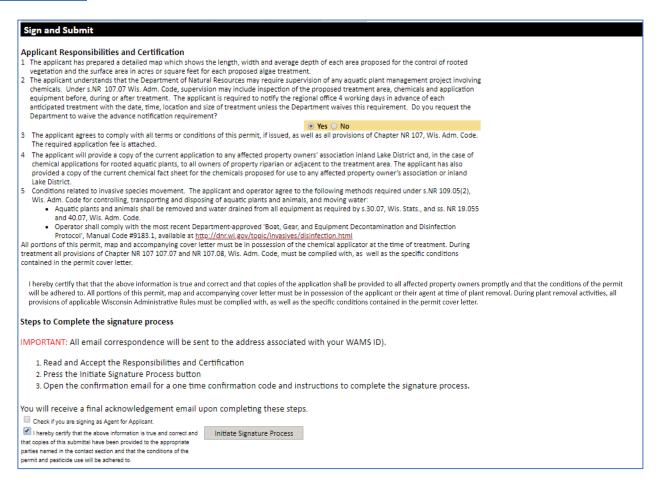

Click the **Payment** tab at the top of the page.

Payment Tab

The fee is calculated from the acreage information entered on the Site tab. Click **Pay Online** to begin the payment process and follow the instructions. Then click the **Signature** tab.

Signature Tab

Review Applicant Responsibilities and Certification items 1-5 before starting the signature process. You are agreeing with these statements or signifying you will/have completed them. Under item 2, you may request that APM staff not supervise the treatment, but the program may require it, in which case you would need to give notice to the regional APM staff of any application at least 4 business days before the treatment. If this is the case, your permit cover letter will specify this.

If there were one or more property owners adjacent to your treatment area, or a lake organization representative listed in section II, signing your permit indicates you have provided a copy of this permit to them. You can mail via postal service, email, or hand-deliver a copy. You can also mail a post-card containing a link to a live website where a copy of the permit application can be read in full.

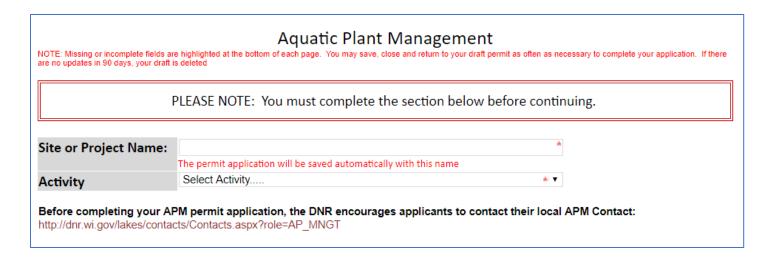

The signature process has two steps. Please read the instructions carefully.

[OPTIONAL] Check the first box ONLY if you are "agent for applicant," and see the <u>Assign Role Feature</u> section if you require a two-person signature process.

Check the "I hereby certify..." box and click Initiate Signature Process. Follow prompts and you will receive an email. You will need to click the link there to finalize the signature process.

Chemical Permit Application for Private Ponds (3200-155)

Navigate to the <u>ePermitting site</u> and select the Aquatic Plant Management permit category on the left side. The following screen will appear:

Home Tab

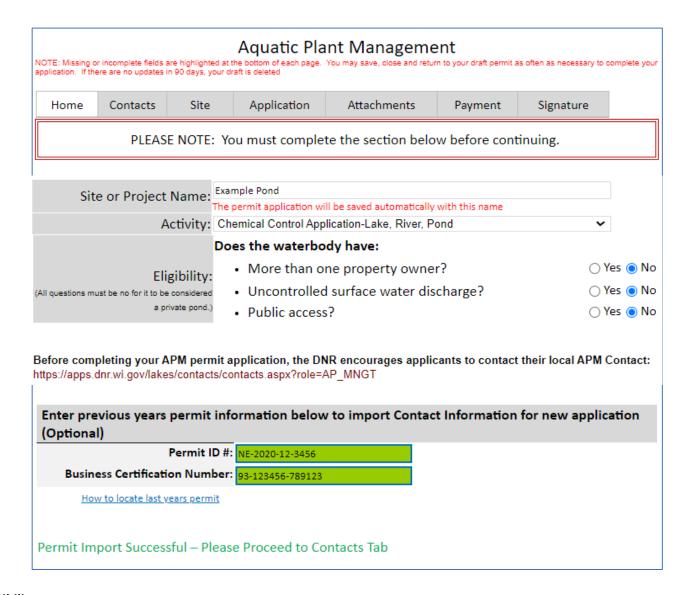

Site or Project Name:

Enter name of the waterbody where you plan to control plants. It is best to use the pond owner's name here.

Activity:

Select Chemical Control Application – Lake, River, Pond.

The permit is now saved under your drafts and the following screen will appear:

Eligibility:

Answer questions based on the proposed control site. You must answer the questions before proceeding. Make sure you are answering the questions based on the <u>waterbody</u>, not the specific control site. For more information, please see <u>Help Section: Determining Permit Type</u>.

Note: These must be "no" for all ponds you plan to list on the permit in order to fit the definition of a private site. If any are "yes", the application is considered non-private and you will be automatically directed to the non-private form.

Please see Instructions for Chemical Permit Application Non-Private Sites (3200-004)

Enter previous years information (Optional)

To autofill the administrative information from a previous permit, enter previous permit number and your business certification number (aka business license number) and double click *Import Permit*. When the two fields turn **GREEN**, the import was successful.

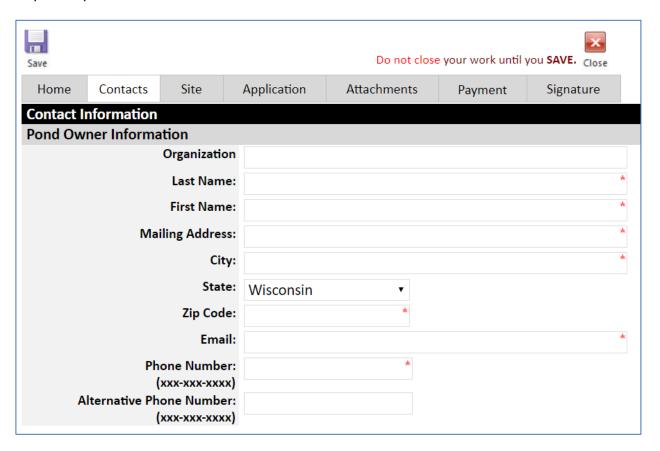

Important Note: This is case sensitive (use capital letters) and may be sensitive to extra spaces/characters before or after the number. See Troubleshooting Permit Import if you have issues.

Click *Contacts* Tab at the top to proceed.

Contacts Tab

Contact Information

NOTE: If you used the permit import feature, please check to ensure the information autopopulated accurately and correct any errors you find.

Pond Owner Information

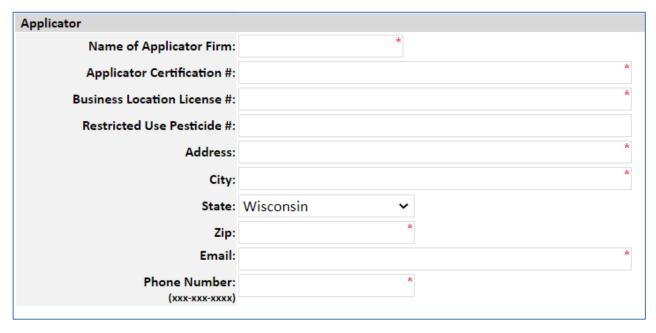

Fill out contact information for the <u>pond owner</u> as accurately as possible. This section should not contain any applicator company/employee information. The application will not be considered complete unless a phone and/or email address for the pond owner is provided. This information is stored in our internal staff database only, so those 2 fields will appear blank on the final PDF that is visible to the public.

Fields marked with red * are required.

Additional Contact Informat	ion	
Last Name:		
First Name:		
Street Address:		
City:		
State:	Wisconsin ▼	
Zip Code:		
Email:		
Phone Number:		
(xxx-xxx-xxxx)		
Alternative Phone Number:		
(xxx-xxx-xxxx)		

Additional Contact Information

Enter additional contact information if it differs from the applicant contact information above.

Applicator

Enter applicator contact information. Valid <u>Applicator Certification</u> numbers must be entered for all people who will be handling pesticides (loading unsealed herbicide containers, mixing, or applying). Enter more than 1 certification number separated by commas. Enter the <u>Business Location License</u> number for the business that will conduct the control. The number typically begins with 93-XXXX-XXXX.

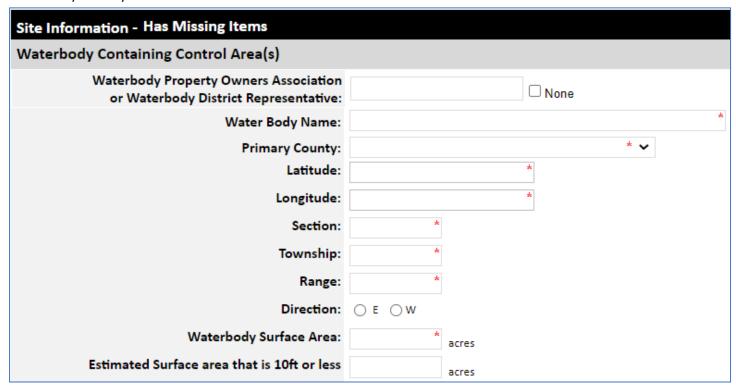

If you do not know the numbers, you can search by last name of the applicator here www.kellysolutions.com/WI/Applicators/index.asp and by business name here http://www.kellysolutions.com/WI/Business/index.asp.

On the rare occasion a field does not apply for your project, please enter "NA".

Click *Press to Refresh Missing Fields* to ensure you completed the requirements. Click *Continue to Next Tab*

Site Tab

NOTE: If you used the permit import feature, please check to ensure the information autopopulated accurately and correct any errors you find.

Waterbody Containing Control Area(s)

Waterbody Name and County:

Enter the owner's name/property name and county corresponding to the site.

Latitude/Longitude:

Enter coordinates for the center of the pond. If permitting multiple ponds, enter a lat/long for the largest pond or for a centroid point that best represents project area. Ensure enough digits are used to specifically locate the site and please use Decimal Degrees. See Help section for assistance.

Township-Range-Section (TRS):

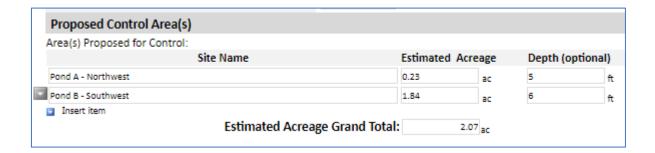

Select the TRS parcel that best represents the site, such as the one closest to the center. Use 2-digit numbers (01, 02, etc.) for TRS and make sure either E (east) or W (west) is selected. See <u>Help</u> section for assistance.

Waterbody Surface Area:

Supply the total area of contiguous pond within which you are proposing to control plants.

Estimated Surface Area that is 10 Feet or Less in Depth:

Enter best estimate.

Proposed Control Area(s)

Area(s) Proposed for Control:

Determine the entire acreage of the pond(s) in which you wish to control plants. Use the *Insert Item* button to add more sites if there is more than one pond. The form with automatically calculate a sum. Use the gray down-arrow button on the left side to delete rows. Using the **Site Name** fields to give a unique name to each pond and using the same names for ponds when creating your site map is ideal to clearly communicate your plans to the permit reviewer.

Sites such as Google Earth, WISFIRS, or the surface water data viewer (<u>SWDV</u>) have area measurement tools that can help you to delineate the pond area(s) and determine an estimated acreage for each.

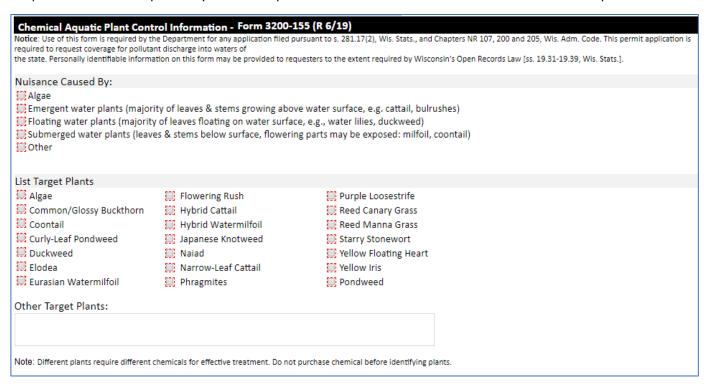

Depth is an optional field that can be filled out if you choose.

Click *Press to Refresh Missing Fields* to ensure you completed the requirements. Click *Continue to Next Tab*

Application Tab

Chemical Aquatic Plant Control Information

Most questions are self-explanatory and are required fields. Please ensure answers are as accurate as possible.

Make sure you include all species you intend to control using herbicide on the site. Use the **Other Target Plants** box to enter additional species. Please use specific plant names, entries such as "All shoreline plants" or "Any invasive species" are not acceptable. If you are unsure about the species that will be found in the area, we recommend a site visit prior to submitting a permit.

Check the *Uploaded riparian owners to attachment tab* box and upload a list of names and addresses as a separate file in a later tab OR fill in blanks in this section. Use the *Add Contact* button to add more fields as needed and use the red X button to delete rows.

If there are no riparian property owners within 150' of the control site, you may check the box *Riparian Owners information is not applicable for this application*.

Click *Press to Refresh Missing Fields* to ensure you completed the requirements. Click *Continue to Next Tab*

Site Tab

NOTE: If you used the permit import feature, please check to ensure the information autopopulated accurately and correct any errors you find.

Waterbody Containing Control Area(s)

Waterbody Property Owners' Association or Waterbody District Representative: Enter name or check the None box.

Waterbody Name and Primary County:

Enter the most accurate name and primary county corresponding to the site. If not a specific waterbody, you may enter property name, wildlife area name, etc.

Latitude/Longitude:

Select a point near the center of your project that best represents the lat/long. Ensure enough digits are used for lat/long to specifically locate the site and please use Decimal Degrees. See Help section for assistance.

Township-Range-Section (TRS):

Select the TRS parcel that best represents the site, such as the one closest to the center. Use 2-digit numbers (01, 02, etc.) for TRS and make sure either E (east) or W (west) is selected. See <u>Help</u> section for assistance.

Waterbody Surface Area:

Supply the total area of contiguous lake, pond, etc. within which you are proposing to control plants. If in doubt about what can be included in a single permit, check with your APM coordinator.

Estimated Surface Area that is 10 Feet or Less in Depth:

Enter best estimate.

Proposed Control Area(s)				
Length of project area 1,0 ft. x Shoreline or area width 500	ft. /43,560= 11.478	Estimated Acreage	Avg. Depth 5	ft.
Length of project area 150 ft. x Shoreline or area width 500	ft. /43,560= 1.722	Estimated Acreage	Avg. Depth 5	ft. 🔕
■ Insert item				
TOTAL ESTIMATED ACREAGE 13.2001836547292				

Proposed Control Area(s)

Area(s) Proposed for Control:

Determine the acreage of the waterbody in which you wish to control plants. If planning to control plants in polygons/lanes within a larger waterbody, make a best effort to enter **length**, **width**, and **depth** for each area and the form will calculate the acreage and provide a grand total. Use the **Insert Item** button to add more rows and use the red **X** to delete rows.

Sites such as Google Earth, WISFIRS, or the surface water data viewer (<u>SWDV</u>) have area measurement tools that can help you to delineate the areas within which you want to control plants. Sometimes this may include getting a best estimate of scattered control areas within a larger waterbody area.

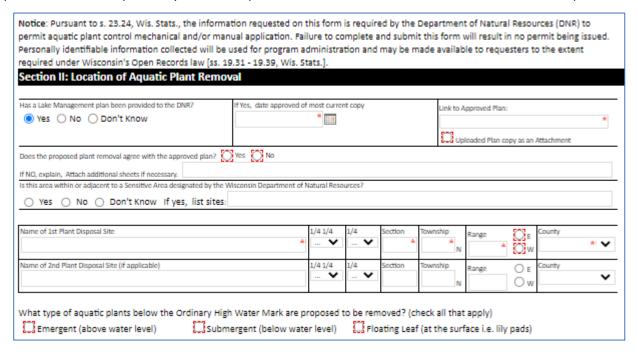

In cases where entering the dimensions for each polygon is not feasible, enter an **estimated acreage** and leave the length and width fields blank.

In cases where entering the dimensions for each polygon is not feasible, enter an **estimated acreage** and leave the length and width fields blank.

Click *Press to Refresh Missing Fields* to ensure you completed the requirements. Click *Continue to Next Tab*

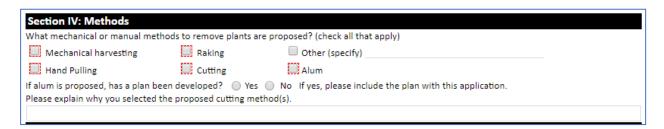

Application Tab

Most questions are self-explanatory and are required fields. Please ensure answers are as accurate as possible.

Section II: Location of Aquatic Plant Removal

Fill out fields as accurately and completely as possible. You will need to answer questions about Lake Management Plans, which includes providing either a link or a copy uploaded to the Attachment section, if applicable. For "attach additional sheets if necessary", files can be uploaded in addition to a map in the **Attachments** tab.

Section IV: Methods

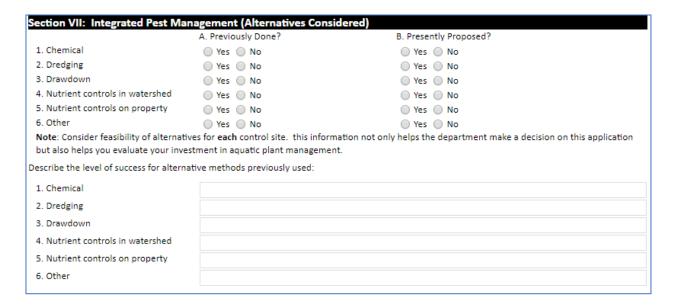

Fill out fields as accurately and completely as possible.

^{*}Alum is no longer permitted through aquatic plant management, do not use this form to apply for a permit. Alum is permitted via the Low-Impact Discharge (WI-0066575-01-0) permit in Wastewater program. For more information, please go here: Wastewater General Permits | Wisconsin DNR

Section VI: Reasons for Aquatic Plant Removal						
Purpose of Aquatic Plant Removal:	Nuisance Caused By:					
Maintain navigational channel for common use	Emergent water plants					
Maintain private boat access	Submergent water plants					
Maintain private access for fishing	Floating water plants					
Improve Swimming	Other_					
Other						
Name of plants, if known						

Section VI: Reasons for Aquatic Plant Control

Fill out fields as accurately and completely as possible. Be sure to name any plant species you can identify.

Section VII: Integrated Pest Management (Alternatives Considered)

Fill out fields as accurately and completely as possible. Remember that it is important to consider the feasibility of alternative for each control site. It helps the department decide on the application and helps you evaluate your investment in aquatic plant management.

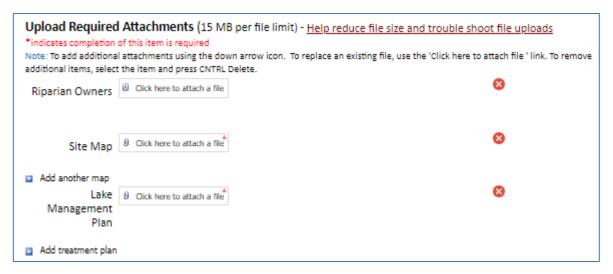

Fill out the appropriate responses and click **Press to Refresh Missing Fields** to ensure you completed the requirements. Click **Attachments**.

Applicant Responsibilities and Certification

- 1. The applicant has prepared a detailed map, which shows the length, width and average depth of each area proposed for the control of rooted vegetation.
- 2. The applicant understands that the Department of Natural Resources may require supervision of any aquatic plant management project involving removal. Supervision may include inspection of the proposed treatment area and/or equipment, before, during, or after removal. The applicant is required to notify the regional office 4 working days in advance of each anticipated date of plant removal with the date, time, location and size of plant removal unless the Department waives this requirement. The advance notification may be specified in your permit.
- 3. The applicant agrees to inform all operators of harvesting equipment of the conditions and terms of this permit and to insure that all operators understand and abide by those terms and conditions.
- 4. The applicant agrees to comply with all terms and conditions of this permit, if used, as well as applicable Wisconsin Administrative Rules. The required fee is attached.
- 5. Conditions related to invasive species movement. The applicant and operator agree to the following methods required under s. NR 109.05(2), Wis. Adm. Code for controlling, transporting and disposing of aquatic plants and animals, and moving water:
 - Aquatic plants and animals shall be removed and water drained from all equipment as required by s. 30.07, Wis. Stats., and ss. NR 19.055 and 40.07, Wis. Adm. Code.
 - Operator shall comply with the most recent Department-approved 'Boat, Gear, and Equipment Decontamination and Disinfection Protocol', Manual Code # 9183.1, available at http://dnr.wi.gov/topic/invasives/disinfection.html

I hereby certify that the above information is true and correct and that copies of the application have been provided to the appropriate parties name in Section II and that the conditions of the permit will be adhered to. All portions of this permit, map and accompanying cover letter must be in possession of the applicant or their agent at time of plant removal. During plant removal activities, all provisions of applicable Wisconsin Administrative Rules must be complied with, as well as the specific conditions contained in the permit cover letter

Review Applicant Responsibilities and Certification items 1-5 before starting the signature process. You are agreeing with these statements or signifying you have/will complete them.

The signature process has two steps. Please read the instructions carefully.

[OPTIONAL] Check the first box ONLY if you are "agent for applicant," and see the <u>Assign Role Feature</u> section if you require a two-person signature process.

Check the "I hereby certify..." box and click Initiate Signature Process. Follow prompts and you will receive an email. You will need to click the link there to finalize the signature process.

Mechanical/Manual Permit Application (3200-113) - Pay Renewal Fee

Please note - - Under NR 109.05(5), the renewal feature shall only be used in the following situations:

You are paying the annual renewal fee as part of your request for renewal of a previous permit. This may be
done annually for up to a total of 3 years in succession provided no modifications or changes are made from
the original permit.

If neither applies, please see the Mechanical/Manual Permit Application (3200-113) – New Application section.

If proceeding with renewal, navigate to the <u>ePermitting site</u> and select the Aquatic Plant Management permit category on the left side. The following screen will appear:

Aquatic Plant Management NOTE: Missing or incomplete fields are highlighted at the bottom of each page. You may save, close and return to your draft permit as often as necessary to complete your application. If there are no updates in 90 days, your draft is deleted							
PLEASE NOTE: You must complete the section below before continuing.							
Site or Project Name:		k					
	The permit application will be saved automatically with this name						
Activity	Select Activity ★ ▼						
Before completing your APM permit application, the DNR encourages applicants to contact their local APM Contact: http://dnr.wi.gov/lakes/contacts/Contacts.aspx?role=AP_MNGT							

<u>Site or Project Name:</u> Enter name of your current NR109 permit.

Activity: Select *Mechanical Control Application*.

Enter previous years information to pay Renewal Fee Select the Pay Renewal Fee radio button.

In the **Permit ID #** box, enter the permit number of the NR109 permit you are paying the renewal fee for and

click **Double Click to Import Permit.** When the field turns **GREEN**, the import was successful. You will see Permit Name, Waterbody Name, Permit Holder Name, and Renewal Fee. Please verify this is the correct information for the permit you are renewing. The screenshot to the above right shows an example of what it will look like.

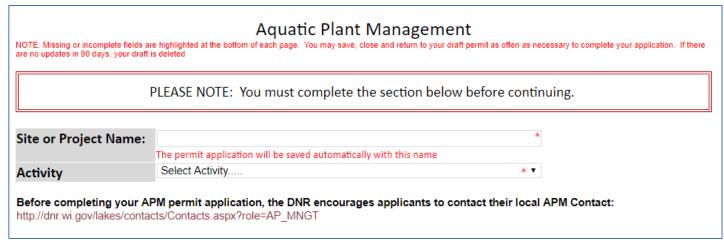

If the information is correct, click **Pay for renewal** at the bottom of the page. It will take you to US Bank where you can follow the instructions and complete payment, then return to the ePermitting system to sign and submit the renewal.

The signature process has two steps. Please read the on-screen instructions carefully. Follow prompts and you will receive an email. You will need to click the link there to **finalize** the signature process.

Important Note: Permit number is case sensitive (use capital letters) and may be sensitive to extra spaces/characters before or after the number. See <u>Troubleshooting Permit Import</u> if you have issue.

Chemical Treatment Record (3200-111)

Navigate to the <u>ePermitting site</u> and select the Aquatic Plant Management permit category on the left side. The following screen will appear:

Home Tab

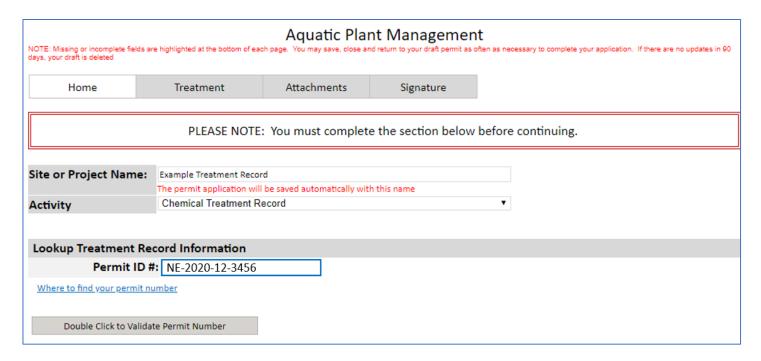

Site or Project Name:

Enter name of the waterbody/wetland site that you treated.

Activity:

Select Chemical Treatment Record.

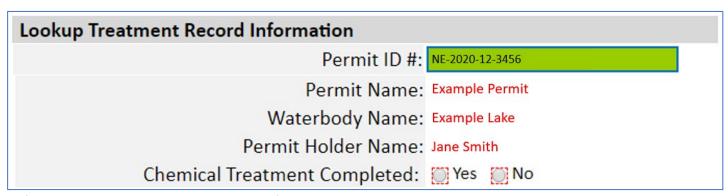

The treatment record is now saved under your drafts and the following screen will appear:

Lookup Treatment Record information

Enter the permit number for the treatment record you are submitting and click **Double Click to Validate Permit Number**.

Important Note: This is case sensitive (use capital letters) and may be sensitive to extra spaces/characters before or after the number. Please make sure the number is entered exactly as shown on your permit.

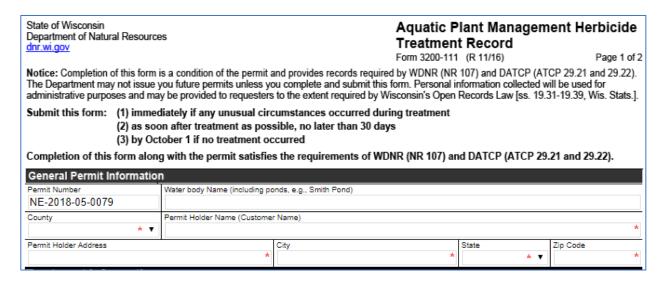

After your permit number validates successfully, the box will turn green and you will see Permit Name, Waterbody Name, and Permit Holder Name information below it. Please verify you are submitting the treatment record under the correct permit.

If you completed treatment for the permit – Select **Yes** for Chemical Treatment Completed. Click **Treatment** Tab to proceed.

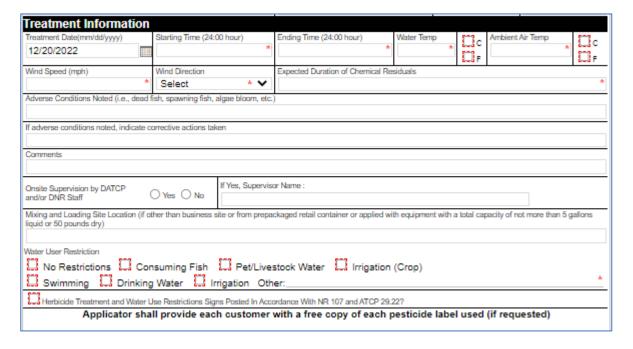

If you <u>did not</u> complete treatment for the permit – Select **No** for Chemical Treatment Completed. Click **Submit "no treatment" treatment record.** This will take you directly to the Signature Tab to sign and submit.

Treatment Tab

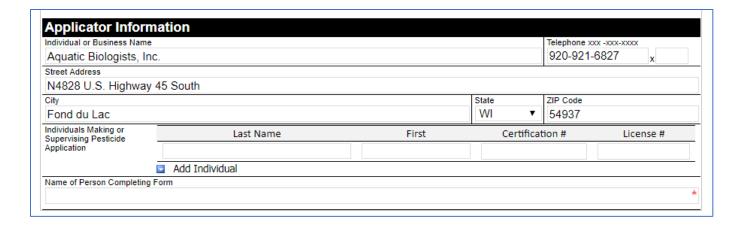

General Permit Information

Fill out fields as accurately and completely as possible. Many fields will autopopulate, but please check them over for correctness.

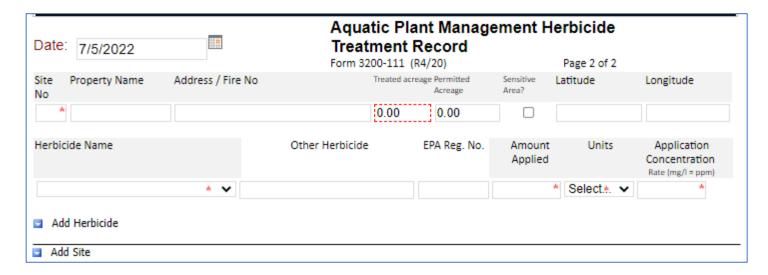

Treatment Information

Fill out fields as accurately and completely as possible. For Treatment Date, please only enter one date. If you treated on a second date, please submit that as a separate treatment record. Note that Treatment Date will default to the current date – please change as needed.

Applicator Information

Fill out fields as accurately and completely as possible. All fields are required. Check that business information autopopulated correctly. Use the *Add Individual* button to add names, certification numbers, and license numbers for everyone who was part of the treatment.

Control Site(s) and Chemical Information

Fill out fields as accurately and completely as possible. Include an accurate lat/long for each site treated using decimal degrees. Use the *Insert Herbicide* and *Insert Site* buttons to add additional information.

If selecting from the *Herbicide* Name dropdown, the EPA Reg No. will autofill for you. Use the *Other* box to add chemicals not listed in the dropdown menu and manually enter the associated EPA Reg No. You can find the number by searching for the Product Name here: http://www.kellysolutions.com/WI/searchbyproductname.asp.

 Read and Accept the Responsibilities and Certification Press the Initiate Signature Process button Open the confirmation email for a one time confirmation code and instructions to complete the signature process. 	
You will receive a final acknowledgement email upon completing these steps. Check if you are signing as Agent for Applicant.	
☐ I hereby certify that the above information is true and correct and that	Initiate Signature Process
copies of this submittal shall be provided to the appropriate parties named in the contact section and that the conditions of the permit and pesticide use will be adhered to.	

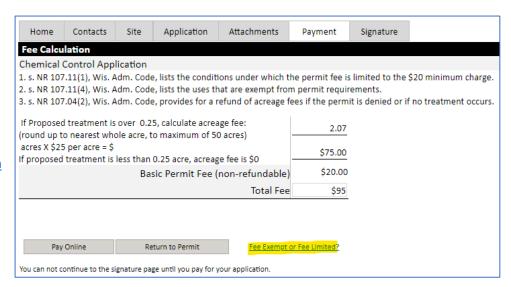

The signature process has two steps. Please read the instructions carefully.

[OPTIONAL] Check the first box ONLY if you are "agent for applicant," and see the <u>Assign Role Feature</u> section if you require a two-person signature process.

Check the "I hereby certify..." box and click Initiate Signature Process. Follow prompts and you will receive an email. You will need to click the link there to finalize the signature process.

Fee Exempt and Fee-Limited Projects

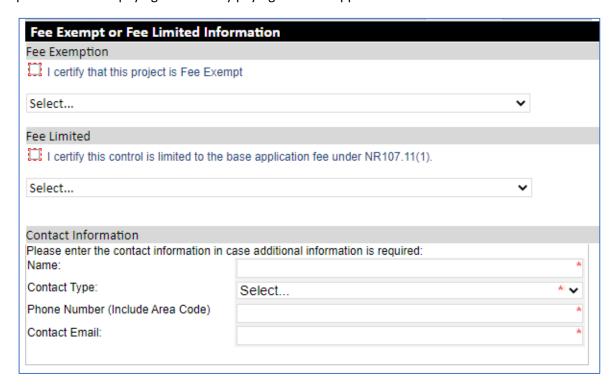

Projects that are only proposing to control for Purple Loosestrife are exempt from paying an application fee according to NR 107.11(2). Projects where the DNR itself is the applicant and will be the permittee are also fee exempt. An application can be started by a non-DNR individual and the Assign Role Feature can be used to allow the DNR representative to access the draft application and complete this section along with their signature portion.

The permit fee is limited to the basic

application fee of \$20 under NR107.11(1) for the following projects: the treatment is made for the control of bacteria on swimming beaches with chlorine or chlorinated lime, the treatment is intended to control algae or other aquatic nuisances that interfere with the use of the water for potable purposes, or the treatment is necessary for the protection of public health, such as the control of disease carrying organisms in sanitary sewers, storm sewers, or marshes, and is sponsored by a governmental agency.

On the Payment tab, click the blue text "Fee Exempt or Fee Limited?" highlighted in yellow to open a menu that will enable you to proceed without paying or with only paying the base application fee.

Click "Continue as Fee Exempt or Fee Limited" and fill in the Information fields as shown above. All fields are required after selecting either Exempt of Limited. Click the Signature Tab to proceed to signing the application when finished.

Assign Role Feature (Optional)

Using the **Assign Role** feature, you also can start a permit application and then share it with someone else. This feature is commonly used by consultants to start a permit application and get the attachments added to the permit application packet and then they will send the application to the landowner/lake organization to review and then complete the payment and signature areas. Please note that if you use this feature, the permit application may not appear under the appropriate category area as described above.

If desired, you can also send the application to another person, i.e. the landowner or lake organization, so that they can review it, complete the payment portion of the application and sign & submit the application to DNR. This is done through the **Assign Role** feature on the "My Permit Applications" webpage discussed under #5 here. The person you are sharing it with needs to have a WAMS ID set up already, and you need to know the email associated with it to send the application to them.

IMPORTANT NOTE: Do not use this process if you are the applicant and are trying to complete the signature confirmation process. The steps below are for a two-person signature process. Each signer must have their own WAMS ID to complete the steps.

If you are an Authorized Representative, you may create, update and review the application and then assign it to the applicant.

If you are the applicant, you may create, update and review an application and then assign it to an authorized representative for review. Upon completion of the review process the authorized representative must reassign it back to you for final submittal.

In both cases, please do not share your WAMS credentials with others. The process to assign an application is done by selecting the email address associated with a WAMS ID. This process does not delegate access to any additional document beyond the application being assigned.

To assign to an Authorized Representative or Landowner for their review or signature:

- 1. Select an application from "Draft Permit Applications" list that require a second signature.
- 2. In the 'Share Application' column select 'Assign Role' link. If an email address already appears in this column, you have already shared the application. You can re-share it with other users selecting this same link.
- 3. Enter the email address associated with the WAMS ID for person you wish to share the permit application in the 'Signatory Email' field. Important: A matching email address will display the user's WAMS ID instead of their email address, this is intentional.
- 4. Use the drop down for the 'New Signatory Role'. If you are the applicant, choose **authorized representative**. If you are the authorized representative, choose **applicant**.
- 5. Read the certification text.
- 6. Press 'Continue'. This action routes an email to the selected individual WAMS email account to complete the second signature process. Please contact this individual ahead of time to remind them to check 'junk email' or 'Spam' folders in case the email is bounced.

NOTE: The application is not submitted to the DNR until the signature process is complete. The application may be edited until it is signed and submitted.

Determining Permit Type

Starting in 2024 a wetland permit form is available. If you are conducting control on a wetland, please select Chemical Control Application – Wetland, and go ahead as normal from there. If you are conducting tertiary wetland control along a lake or pond which is being controlled, those species may still be lumped in with the rest of the permit application.

If you have selected Chemical Control Application – Lake, River or Pond, there are three questions used to determine what type of permit is needed:

Does the waterbody have:

- 1. More than one property owner?
- 2. Uncontrolled surface water discharge?
- 3. Public access?

Non-Private Water (Lake, reservoir, river, stream, wetland)

If any one of the answers is "yes" it is considered a non-private waterbody.

Private Pond

If all three are "no" then the waterbody is a private pond.

However, wetlands are the exception. You may think a wetland is "private" based on the control area, but the determination of a private pond is based on the waterbody itself. Please see the wetland section below for more information.

A Note About Wetlands

In almost all instances, wetlands are not considered private ponds. The definition of private pond is a body of water completely on the land of one applicant, with no surface water discharge or a discharge that can be controlled to prevent chemical loss, with no public access (NR 107.11 (3) (a)). Wetlands are defined separately as an area where water is at, near, or above the land surface long enough to be capable of supporting aquatic or hydrophytic vegetation and which has soils indicative of wet conditions (s. 23.32 (1), Wis. Stats.).

If you have questions about this, you may reach out to Madi Johansen, madison.johansen@wisconsin.gov.

Whole Waterbody Concentration Calculations

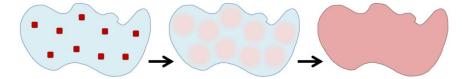

GUIDELINES FOR CALCULATING THE WHOLE WATERBODY CONCENTRATION OF LARGE-SCALE TREATMENTS

When discussing chemical management of aquatic plants in lakes, management activities are generally divided into two spatial scales. Small-scale treatments are those where the herbicide product will be applied at a concentration rate and scale where dissipation of the herbicide is not anticipated to result in significant lakewide concentrations, and effects to the plant community are anticipated to occur on a localized scale. In contrast, large-scale treatments are those in which the herbicide will be applied at a concentration rate and scale where dissipation will result in significant lakewide concentrations, and impacts to the plant community are anticipated to occur on a whole waterbody scale. When planning an herbicide treatment, it is important to calculate the whole waterbody concentration of the proposed herbicide to fully assess the potential for lakewide impacts to plants from the chemical application.

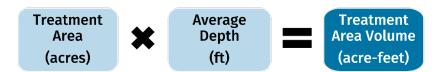

Small-Scale Use Pattern

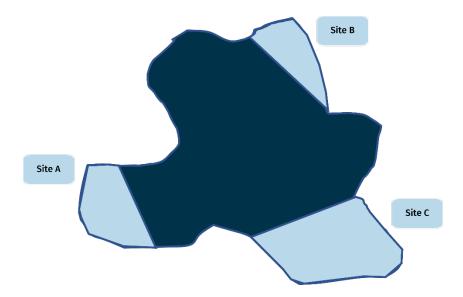

Large-Scale Use Pattern

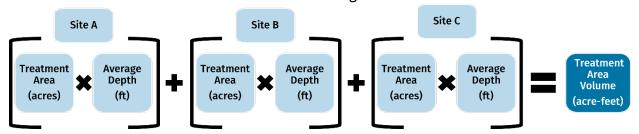

STEP 1: CALCULATE VOLUME OF TREATMENT AREA

The treatment area volume (in acre-feet) can be calculated by multiplying the area of the lake where treatment will occur (in acres) by the average mean depth of the treatment area (in feet).

If there are multiple treatment sites (as shown in the above map), the treatment area volume will need to be calculated for each individual site and added together to obtain the total treatment area volume.

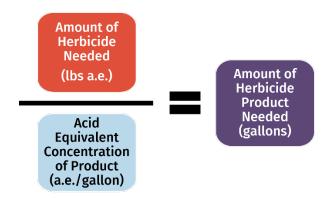

STEP 2: CALCULATE AMOUNT OF HERBICIDE NEEDED FOR TREATMENT

Multiplying the treatment area volume (in acre-feet) calculated in Step 1 by the target herbicide concentration (in ppm) and then by 2.7^1 will yield the total amount of herbicide acid equivalent (in pounds acid equivalent, or lbs a.e.) needed to reach the target herbicide concentration in the treatment area. Ensure that herbicide units are in ppm when using this equation; target herbicide concentrations in other units will need to first be converted to ppm (e.g., 1 ppm = 1000 ppb). For ProcellaCORTM EC, an application rate of 1 PDU/ac-ft is equivalent to 0.001926 ppm.

¹2.7 (in millions of lbs) is the weight of water in 1 acre-foot

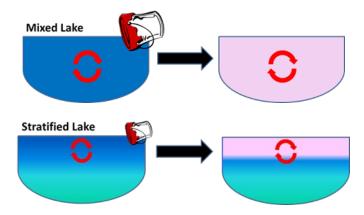

Although not necessary for calculating the whole waterbody concentration, the gallons of herbicide product needed to reach the target concentration can be calculated by dividing the amount of herbicide needed (in lbs a.e.) by the acid equivalent concentration of the product. The acid equivalent concentration can usually be found on the first page of the product label. The Wisconsin Department of Agriculture, Trade and Consumer Protection maintains a <u>database</u> with current label information for all the herbicides registered for use in Wisconsin.

STEP 3: CALCULATE THE WHOLE WATERBODY CONCENTRATION

The volume of the waterbody proposed to be treated is needed to calculate the whole waterbody concentration of a chemical application. The volume used in the equation is dependent on whether the lake is likely to be stratified (separated into distinct thermal layers) or mixed at the proposed time of treatment. If the lake is not stratified (i.e., mixed), the herbicide is anticipated to move throughout the entire water column, so the entire lake volume should be used to calculate the whole waterbody concentration. However, if the lake is stratified, the herbicide is anticipated to primarily stay within the epilimnion (the upper thermal layer of a stratified lake), so only the volume of the epilimnion should be used to calculate the waterbody concentration.

The term "whole waterbody concentration" will be used to refer to both whole-lake concentrations and epilimnion concentrations throughout the remainder of this guide. Keep in mind that the "whole waterbody concentration" entered on permitting forms for stratified lakes should only account for the epilimnetic water volume and not the entire waterbody volume.

3.1 Determining Stratification

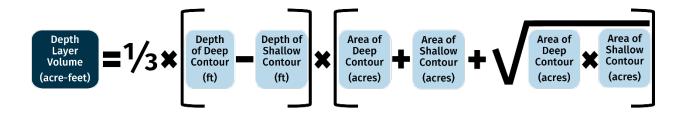

A recent temperature profile is needed to determine whether a lake is likely to be stratified during the proposed treatment and determine the maximum treatment volume. A temperature profile should be

collected as close to the treatment date as possible (if not the day of treatment) to re-evaluate stratification and adjust dosing rates if necessary. However, for the purposes of estimating the whole waterbody concentration for the permit submission process, the following methods can be used for estimating stratification. Temperature profiles for many Wisconsin lakes can be found on the Wisconsin DNR's Lake Water Quality Data page. Lake monitoring reports from sites labeled "Deep Hole" are generally from the deepest portions of the lake and are most likely to contain a full temperature profile if data is available. If there are multiple temperature profiles available from different months, use the temperature profile from the month closest to when the chemical treatment is proposed. If there is no existing data available, it is recommended that a temperature profile be collected in the field prior to submitting a permit so that the potential for stratification can be accurately assessed. Temperature profile data can be collected by measuring the water temperature at intervals of at least every meter (or approximately every three feet) from the surface to the bottom of the lake.

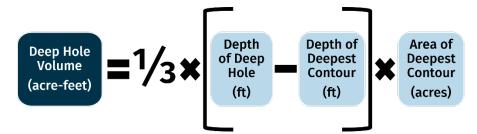

To determine whether a lake is stratified, look for the thermocline (the transition area between the warmer, top layer and the cooler, bottom layer) in the temperature profile. The thermocline is approximately at the depth(s) in the temperature profile where the temperature changes by more than one degree Celsius per meter of depth (or roughly one degree Fahrenheit per two feet of depth). If the temperature profile does not change by more than one degree Celsius per meter at any depth, the lake may not have been stratified at the time the profile was taken or the profile was not deep enough to capture the thermocline.

3.2 Estimating Whole Lake Volume

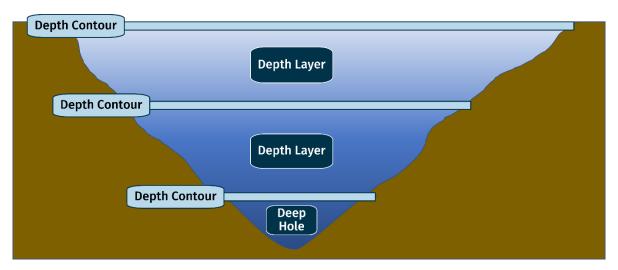

If the lake is not anticipated to be stratified at the time of the proposed treatment, the volume of the entire lake should be used to calculate the whole waterbody concentration. The whole lake volume of many Wisconsin lakes can be found in the bathymetry maps on the Wisconsin DNR's Wisconsin Lake Maps page. When available, the volume is generally listed in a corner of the map. The lake volume will likely be listed in acre-feet, but pay close attention to the units, as it may need to be converted to acre-feet if not.

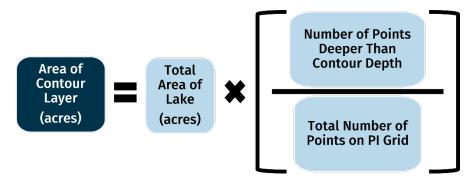

If the whole lake volume is not readily available, it can be estimated by dividing the lake into depth strata and calculating the volume separately for each layer using the above equation, which is the equation for the volume of a frustum (a cone or pyramid with the top and/or bottom cut off by a plane parallel to the base). The area for each depth layer can be derived using depths from an aquatic plant point-intercept (PI) survey, planimeter, GIS software, or based on the areas of individual depth contours within the bathymetric map. Add the depth layer volumes together to yield the whole lake volume.

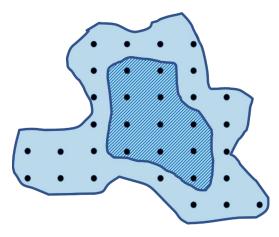

The above simplified equation can be used for calculating the volume from the deepest layer to a deep hole. It is the equation for the volume of a pyramid, so it is most accurate if the deep hole has a relatively small area, as the deep hole forms the narrow end of the pyramid.

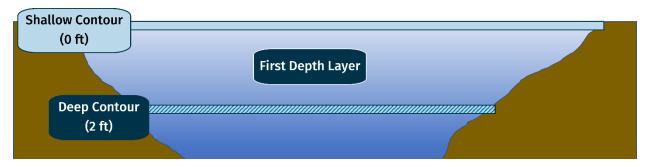

The above diagram demonstrates how the depth layers and contours would look in a cross-section of a lake.

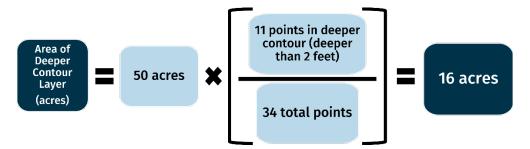

If using water depths collected during a point-intercept survey to estimate lake volume, the area of each contour layer can be found by multiplying the percentage of points surveyed in each contour layer by the total surface area of the lake, as illustrated in the above equation. The contour layers will need to be manually delineated. The number of points used in the equation should reflect all points on the grid, not just the points that were sampled (e.g., "Number of Points Deeper Than Contour Depth" should include unsampled deep sites, and any unsampled non-navigable or shallow sites should be binned appropriately). This method may not work well for lakes with many unsampled deep points, especially if there is a large difference between the maximum depth of plant colonization and maximum lake depth.

As a conceptual example, the volume of the above lake needs to be determined using a previous PI survey. PI sampling points are represented by the black dots. The dots in the light blue section range in depth from 0-2 feet, and the dots in the darker blue section are greater than 2 feet deep. The total area of the lake is 50 acres. If the first depth layer is delineated as 0-2 feet deep, the area of the darker blue section would form the bottom of the frustum, and the area of the lighter blue AND the darker blue section together would form the top of the frustum, as illustrated in the below cross-section diagram.

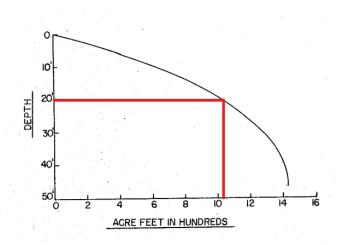

The area of the shallow contour in this example (i.e., the top of the frustum) would then be equal to 50 acres, since it is the entire surface area of the lake. The area of the deeper contour would be:

3.3 Estimating Epilimnetic Volume

If the lake is likely to be stratified at the time of the proposed treatment, the volume of the epilimnion should be used as the lake volume in the whole waterbody concentration equation. The methods for calculating the epilimnetic volume use a single value for the thermocline depth, however the thermocline may be several meters wide. For the purposes of estimating the whole waterbody concentration for the permit submission process, the middle depth of the thermocline should be used. A temperature profile collected immediately prior to treatment should be collected and the thermocline re-evaluated to determine final dosing rates. Using the top depth of the thermocline in final dosing calculations will be more protective against exceeding the targeted lakewide rate, and may be appropriate depending on the strength of the waterbody's stratification pattern at the time of treatment.

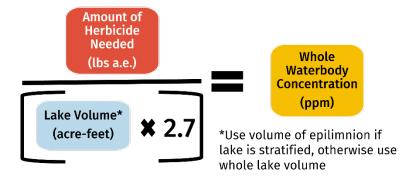

The volume of the epilimnion can be found using a hypsographic curve, which shows the cumulative volume of a lake at depth. Hypsographic curves are specific to each individual waterbody and are often available in the bathymetry maps on the Wisconsin DNR's Wisconsin Lake Maps page.

The above example shows how to calculate the epilimnion volume for a lake using its hypsographic curve. In this case, if the thermocline depth were at 20 feet, the epilimnion volume would be approximately 1,050 acre-feet.

If a hypsographic curve is not available, the epilimnion volume can be estimated by using the equations in Step 3.2 ("Estimating Whole Lake Volume"). The same methods for calculating the volume of each depth layer can be used, but the volume should only be calculated from the surface down to the thermocline depth. As such, the depth layers should be defined in a way so that the epilimnion is estimated as accurately as possible in the calculated volume (e.g., if the bathymetric contours for a lake were manually defined at every 5 feet but the thermocline is at 3 feet, calculating the volume of the depth layer from 0-5 feet would overestimate the volume of the epilimnion).

3.4 Calculating Whole Waterbody Concentration

Finally, the whole waterbody concentration, which is the value required to be entered on permitting forms, can be found by dividing the amount of herbicide needed (calculated in Step 2) by the lake volume multiplied by 2.7.

EXAMPLE CALCULATION

Treatment Area	Estimated Acreage	Average Depth (ft)
А	3.75	3.5
В	2.10	4.0
С	4.7	3.0
D	5.3	3.0
E	0.7	3.0
F	2.1	2.5

Multiple "spots" of Eurasian watermilfoil (see above map) are proposed to be treated with 2,4-D at the maximum label rate (4.0 ppm a.e.). Treatment depth varies within each area (see above table). The surface area of the lake is 76 acres, the maximum depth is 47 feet, and it is anticipated to be thermally stratified at ~15 ft at time of treatment. A bathymetry map and a hypsographic curve are available. What is the estimated whole waterbody 2,4-D concentration (in ppm)?

First, calculate the volume of the treatment area using the equations in Step 1:

Treatment Area	Estimated Acreage	Average Depth (ft)	Treatment Area Volume (acre-feet)	
А	3.75	3.5	3.75 * 3.5 = 13.125 acre-feet	
В	2.10	4.0	2.10 * 4.0 = 8.4 acre-feet	
С	4.7	3.0	4.7 * 3.0 = 14.1 acre-feet	
D	5.3	3.0	5.3 * 3.0 = 15.9 acre-feet	
E	0.7	3.0	0.7 * 3.0 = 2.1 acre-feet	
F	2.1	2.5	2.1 * 2.5 = 5.25 acre-feet	
TOTAL TREATMENT AREA VOLUME			58.875 acre-feet	

Next, calculate the amount of herbicide needed for the

application using the calculated treatment area volume inserted into the equations in Step 2:

58.875 acre-feet

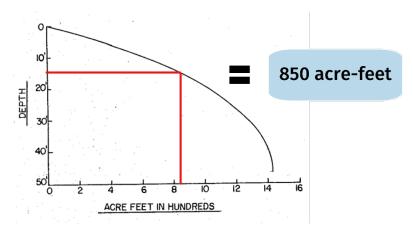

4.0 ppm a.e.

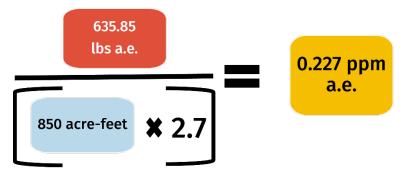

2.7

635.85 lbs a.e. Then, use the hypsographic curve and anticipated thermocline depth (15 feet) to calculate the volume of the epilimnion:

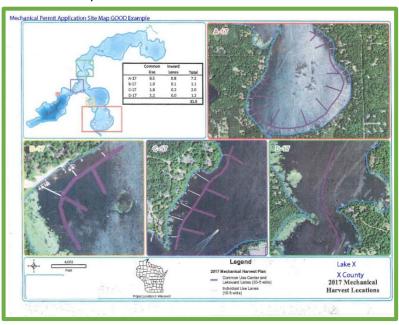

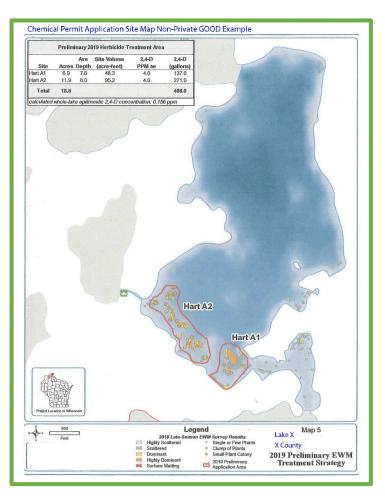

Finally, enter the lake volume (in acre-feet) and amount of herbicide needed (in lbs a.e.) into the equation from Step 3 to yield the whole waterbody concentration (in ppm).

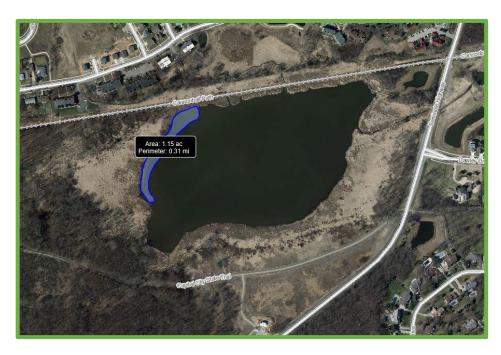

Site Map Examples

Good site maps show clearly outlined polygons of proposed control areas with labels and acreage measurements corresponding to the permit application Site Tab rows. For harvesting permits, the lanes are delineated with insets showing zoomed-in views of each area. For non-private pond permits, recent aerial imagery is used with the control area outlined and street labels are present to help locate the waterbody.

For private pond permits:

- Site maps should use recent aerial imagery, accurately show the proposed control area(s), and correspond to area(s) listed on application. We should be able to easily tell what you're proposing.
- Use labels if there is more than one waterbody.
- Mismatches between the ponds listed on the permit and the ponds shown in the map are not acceptable.
- If a waterbody's size/shape has completely changed, a new map is needed.
- Drawn-in polygons are not acceptable if imagery of the waterbody exists.
- Inset maps showing context of the site's location can be helpful.

Public Notice Examples

NR107.04(3)(f) states that public notice "shall be given in 2 inch x 4 inch advertising format in the newspaper which has the largest circulation in the area affected by the application. The notice shall state the size of the proposed treatment, the approximate treatment dates, and that the public may request within 5 days of the notice that the applicant hold a public informational meeting on the proposed application." Acceptable evidence of this includes signed affidavits with notice text included, picture of public notice from the newspaper with newspaper name included, or receipt of ad purchase with the notice text, running dates, and newspaper name included. PDFs are preferred, but you may also submit Word Documents or photos.

AQUATIC PLANT TREATMENT

Affidavit of Publication

STATE OF WISCONSIN) SS COUNTY OF ADAMS?

Elizabeth Sutcliffe, being duly sworn, says:

That she is an authorized representative of the Adams-Friendship Times-Reporter, a weekly newspaper of general circulation, printed and published in Adams, Adams County, Wisconsin; that the publication, a copy of which is attached hereto, was published in the said newspaper on the following dates:

4/13/2022

That said newspaper was regularly issued and circulated on those dates.

SIGNED:

Subscribed to sworn to me this 4/4/2022

A. L. Henning Schlingen, Notary Public, State of Wisconsin.

JORDAN LAKE R&P DISTRICT

1859 OLD OAKS COURT ROCKFORD, IL 61008

Public Notice

The Jordan Lake Rehabilitation and Protection District proposes to treat 34-51 acres of Jordan Lake in Adams County for selective control of the invasive aquatic plant species Eurasian watermilfoll. Cason & Associates, LLC will perform the treatment(s) in the spring-summer of 2022. The proposed herbicide for treatment of Eurasian watermilfoll is ProcellaCOR. Water-use restrictions will be posted on treatment warning signs prior to treatment. The warning signs will be posted at all boat landings and all individual properties adjacent to treatment areas. The applicant will hold a public informational meeting on the proposed treatment if five or more individuals, organizations, special units of government, or local units of government request one. The person or entity requesting the meeting shall state a specific agenda of topics including problems and alternatives to be discussed. The request for the public informational meeting must be sent in writing to the Wisconsin Department of Natural Resources 473 Griffith Avenue, Wisconsin Replds WI 54494 within five days after the public notice is made.

Troubleshooting Permit Import

If you are having trouble finding your previous permit number - Search for it by name here:

https://permits.dnr.wi.gov/water/SitePages/Permit%20Search.aspx

Type applicant, waterbody name, or permit name into the search box. It may help to filter by Type using the dropdown menu and selecting Aquatic Plant Management. Click the link under the "Application" column to access all the permit documents.

Department of Natural Resources Water Permit Application						
Application Files						
File Name	File Size	Created	Modified	File Link		
1 🗟 AP-IP-SC-2020-14-X01-24T09-18-07.pdf	205K	3/9/2020	3/9/2020	Download Item		
2 🗟 Example Lake SC-2020-12-3456 Letter.pdf	205K	1/14/2021	1/14/2021	Download Item		
3 🗟 Example Lake SC-2020-12-3456.pdf	205K	1/14/2021	1/14/2021	Download Item

Both the permit and cover letter file names contain the permit number (highlighted in yellow above). You may also view the permit number inside the letter itself by clicking "Download Item" and opening the PDF.

If you are having trouble finding your previous business license number — Search for your previous permit documents using the steps above. In the permit PDF, find the number under Applicator — Business Location License #. You can also use this site to search for the business name and find the correct number.

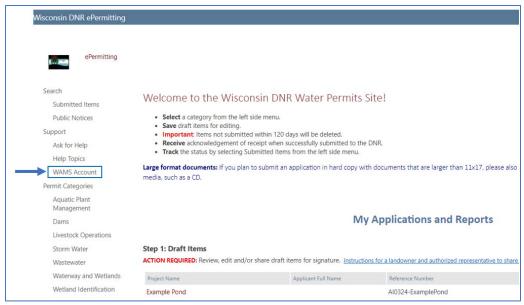

If you have your permit/business license number, but it is not validating – Make sure you are entering it exactly. It is case-sensitive and may be sensitive to special characters or extra spaces. If you are trying to use copy and paste, try manually typing it in instead. If the business license number was filled out incorrectly or missing on the permit form, it may have been corrected manually in our database. Check this site to find the correct number.

If you are sure you are entering it correctly, but it still does not validate – Email <u>DNRAPMProgram@wi.gov</u> or call 608-438-9919 for assistance. Please provide the number(s) you are attempting to enter. You may also proceed without using the autopopulate feature when filling out a permit application since it is optional.

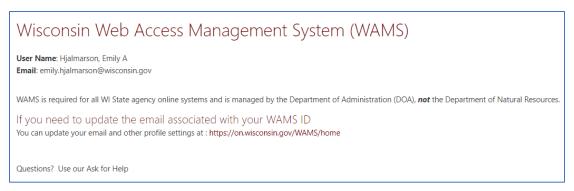

If you are entering a previous permit number to pay a renewal fee and the fee amount is incorrect - Email DNRAPMProgram@wi.gov or call 608-438-9919 for assistance. Please provide the number you are attempting to enter and documentation of the correct fee amount.

Troubleshooting Signature Issues

Check that the email address associated with your WAMS account is current and correct.

Go to the Welcome Page and click WAMS Account under the Support section of the menu on the left hand side.

You should see your WAMS information and a link to update your email if necessary.

After verifying your email, check your Junk and Spam folders in case the signature email went there.

Try resending the email by following these steps:

- 1. On the Welcome Page, locate the "Step 2: Signature Confirmation Needed" section (see example below).
- 2. Locate the project name for the desired application.
- 3. Click the email address under the "Confirmation sent to" column.
- 4. The system will open a confirmation screen, and you must click Continue to proceed.
- 5. Open your WAMS account email and open the new confirmation email.
- 6. Complete the instructions in the confirmation email

If the email still does not arrive, please contact DNRAPMProgram@wisconsin.gov or call 608-438-9919.
