

PFAS

PUBLIC LISTENING SESSIONS

PFAS contamination has been detected in the Marinette and Peshtigo area in soil, sediment, groundwater, surface water, private drinking water wells and biosolids.

Under the oversight of the DNR, Johnson Controls, Inc.—Tyco Fire Products (JCI/Tyco) began conducting a site investigation for PFAS contamination in Fall 2017. This investigation resulted in additional sites being identified where investigation work must be conducted.

The DNR has scheduled a series of listening sessions to ensure the public receives timely information and has ample opportunity to ask questions about PFAS contamination in the Marinette-Peshtigo area.

NOVEMBER 20, 2019

» Noon – 1:30pm

» 6:00 – 7:30pm

DECEMBER 18, 2019
