

Line 5 Wisconsin Segment Relocation Project

Request for approval of Wetland and Waterway Permits

I ask that the DNR promptly process and approve the permits needed for the Line 5 Project to move forward.

- The relocation of a segment of Line 5 is needed in order to remove the pipeline from the Bad River Reservation while maintaining the safe transportation of essential energy used by northern Wisconsin and the region.
- The project has been designed to minimize impacts on wetlands and waterbodies.
- Enbridge's proposed route maintains service of Line 5 in a corridor that avoids sensitive resources that other routes would impact such as Copper Falls State Park, Chequamegon-Nicolet National Forest, and a crossing of the Namekagon River.

Line 5 Comments

DNR (EA/7)
101 South Webster Street
Madison, WI 53707

Name Amanda Knight
Address 325 S Lake St
City / State / ZIP Montello WI 53549

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Name William LUCAS

Address 1947 VARNON AVE.

City / State / ZIP Beloit WI 53511

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Name Trent Kapinus

Address 62639 CTY K

City/State/ZIP Prace Du Chien 53821

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Name Vickie Degn

Address 734 S. GAMMAN #7

City / State / ZIP Madison, WI 53719

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Name Mark Gauß
Address 46 Harrison Lane
City / State / ZIP Reedsburg, WI 53959

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Name Mindy Mulryan
Address 315 Edward Street
City / State / ZIP Verona, WI 53593

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Name Joe BARBian

Address 8040 CTW K

City / State / ZIP CROSS Plains WI 53528

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Name Jaynell Gulseth

Address 5402 Dennis Dr.

City / State / ZIP McFarland WI.

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Name SCOTT SANDS

Address 1735 BROADWAY Rd

City / State / ZIP SUN Prairie WI 53590

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion-control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Name Patrick Borskie

Address W 8737 Walnut Rd

City / State / ZIP Delevon WI 53115

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Name Keith A Poer

Address 135 Boedl ct

City / State / ZIP Beaver Dam wi 53916

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Address 4578 Windfall St

City/State/ZIP Wausau, WI 54566

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Name Randy Blakeman
Address 4135 Bosin Rd. Marengo
City / State / ZIP Marengo WI 54855

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
