

# Line 5 Wisconsin Segment Relocation Project

## Request for approval of Wetland and Waterway Permits

I ask that the DNR promptly process and approve the permits needed for the Line 5 Project to move forward.

- The relocation of a segment of Line 5 is needed in order to remove the pipeline from the Bad River Reservation while maintaining the safe transportation of essential energy used by northern Wisconsin and the region.
- The project has been designed to minimize impacts on wetlands and waterbodies.
- Enbridge's proposed route maintains service of Line 5 in a corridor that avoids sensitive resources that other routes would impact such as Copper Falls State Park, Chequamegon-Nicolet National Forest, and a crossing of the Namekagon River.

### Line 5 Comments

DNR (EA/7)  
101 South Webster Street  
Madison, WI 53707

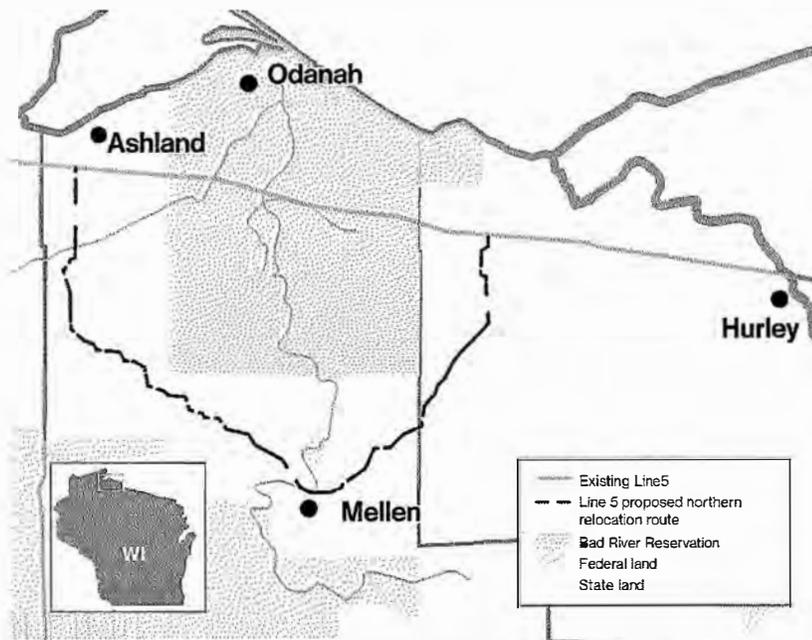

Name TIM MCKINNEY  
Address 620 W. MAIN ST. APT #2  
City / State / ZIP WINNECONNE WI 54986

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

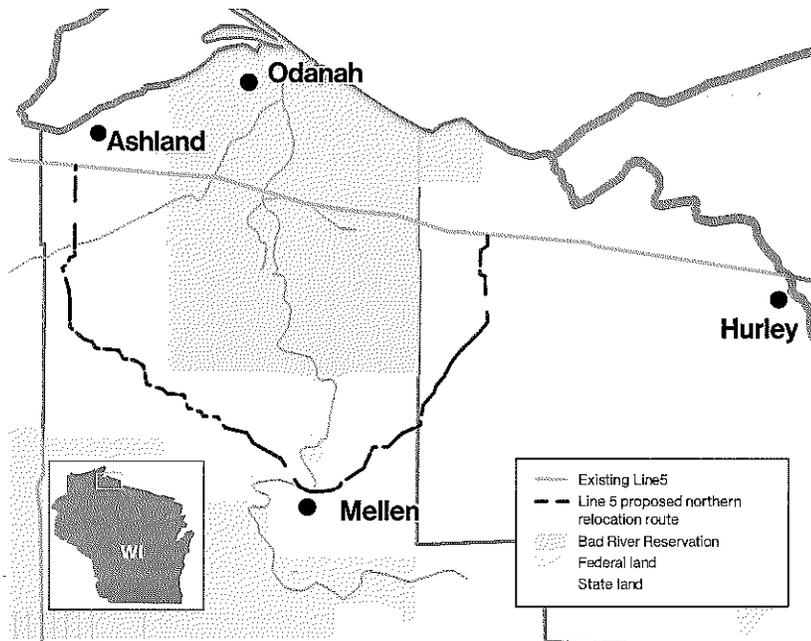

Name LANC E OLSEN  
Address 26807 Lily LAKE INN Rd  
City / State / ZIP WEBSTER WI 54893

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

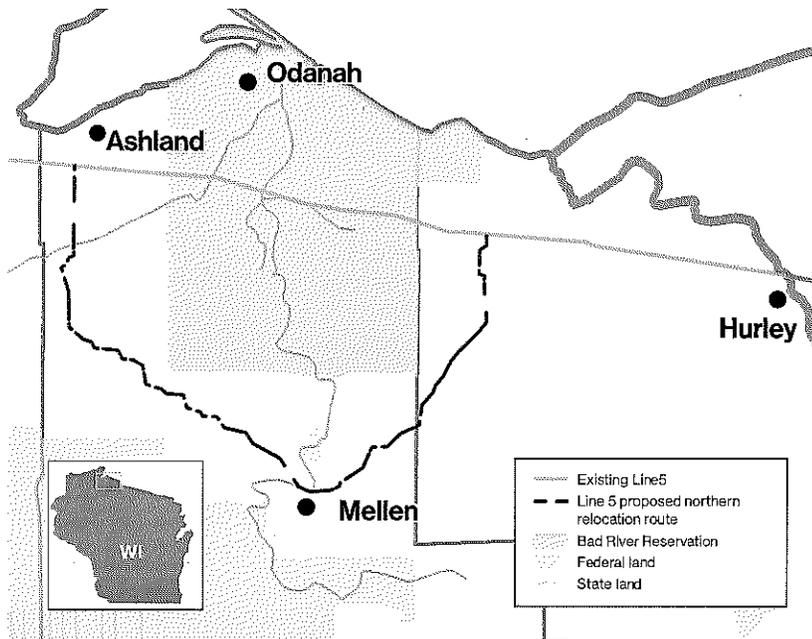

Name Kim Folta  
Address W 9780 Hwy G  
City / State / ZIP Merrill WI 54452

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

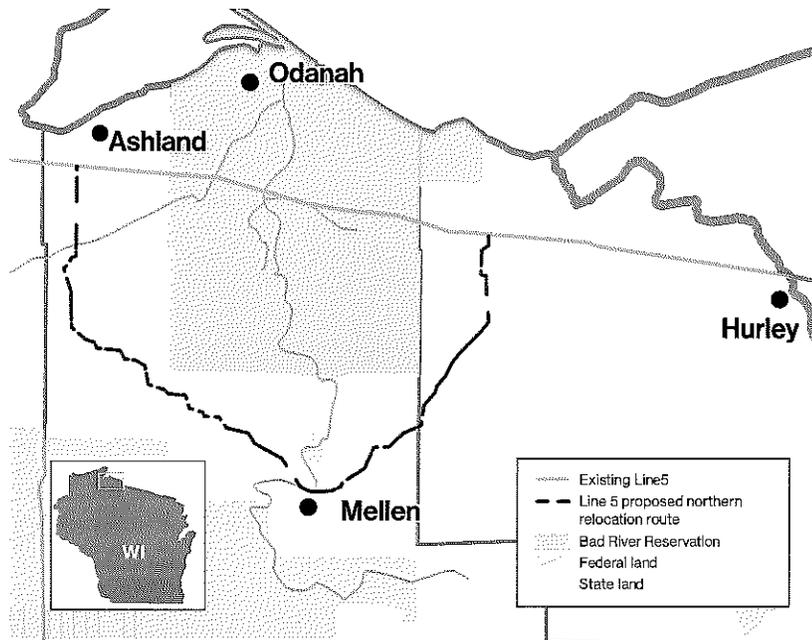

Name Eric Wendt  
Address 8317 N. Edgewood Dr.  
City / State / ZIP Brown Deer, WI 53223

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Name

Juli Latnow

Address

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Name

**D** Dan Warren

Address

1425 Church St

City / State / ZIP

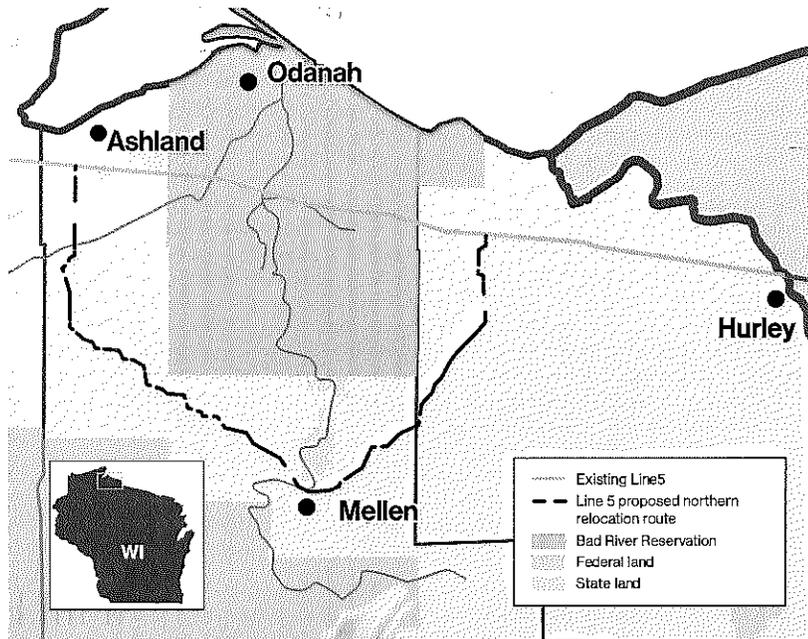

Burlington WI 53105

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

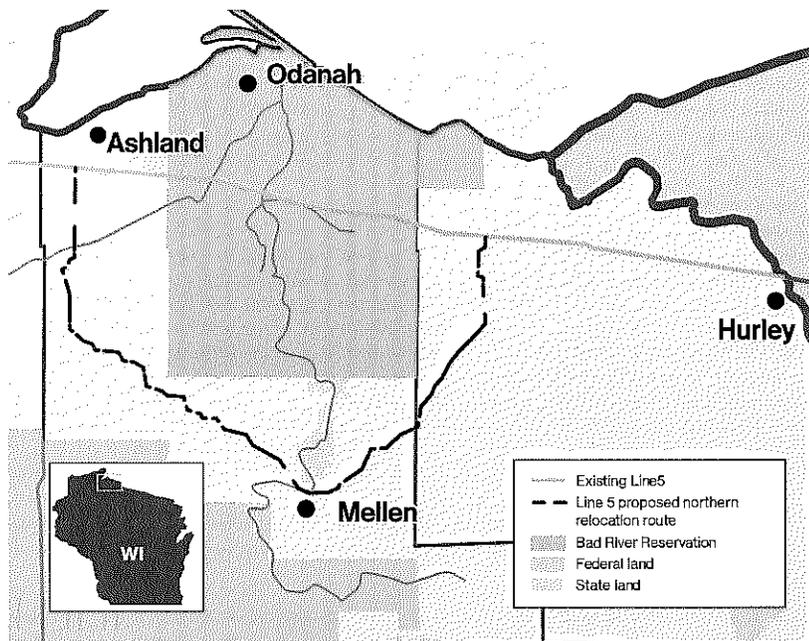

Name Wick Nagel  
Address 40709 101st Street  
City / State / ZIP Genoa City WI 53128

PICKETT WI 54964

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

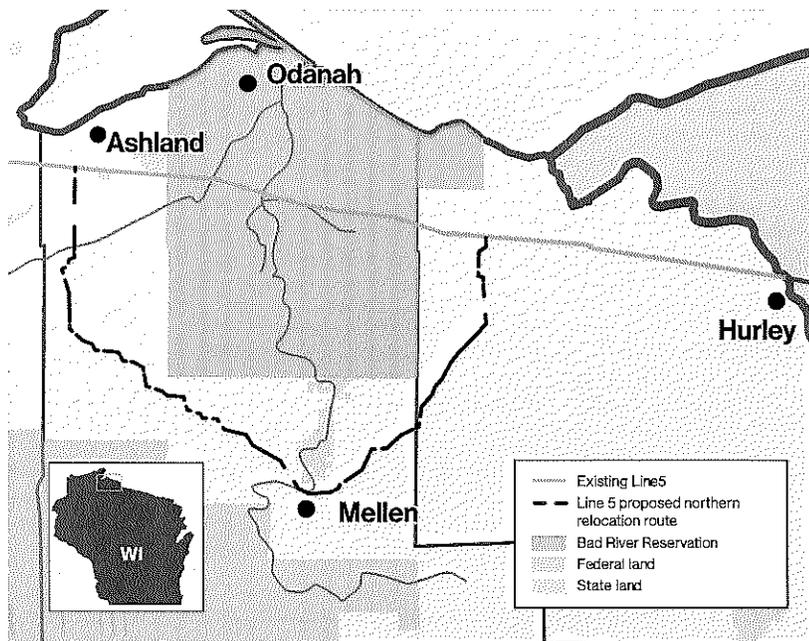

Name Kevin Stanton  
Address 602 Prairie St.  
City / State / ZIP Reeseville WI 53579

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using **timber mats** to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific **waterbody** crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Name

Bob Schwartz

Address

N9760 Highland Park Rd

City / State / ZIP

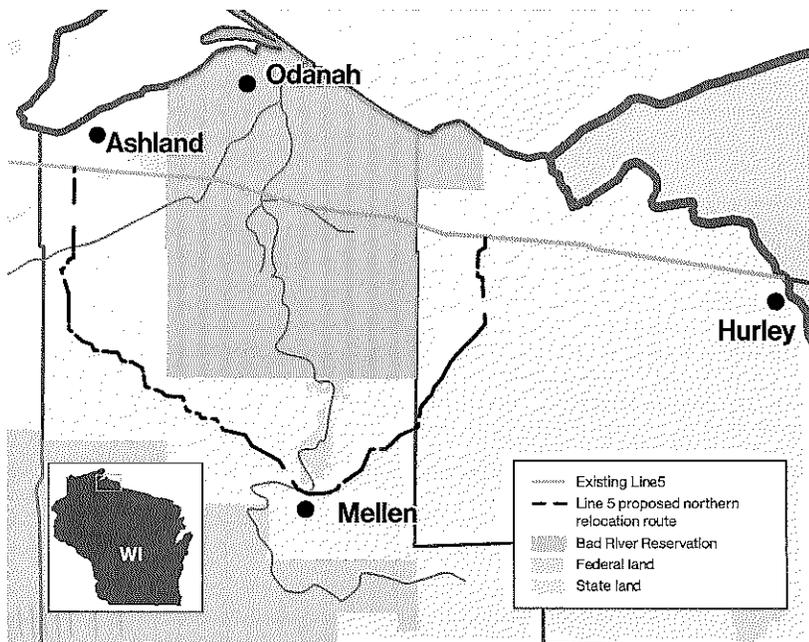

Malone WI 53049

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Name Christine Pattermann  
Address W5388 Mud Creek Rd.  
City/State/ZIP Chilton WI 53014

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Name David Turkowitch

Address W1886 North St.

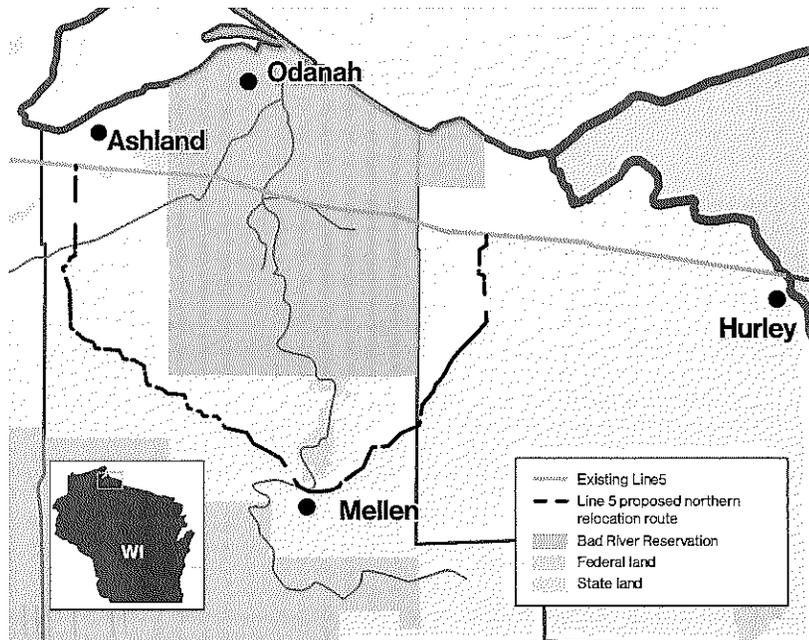

City / State / ZIP Sullivan WI 53178

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Name John McArdums

Address 8735 W. Hawthorne Ct.

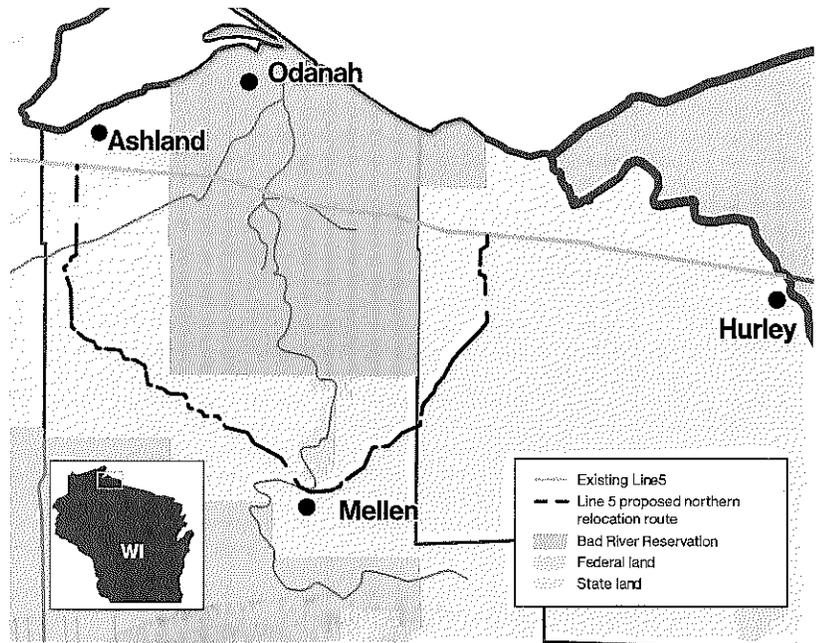

City / State / ZIP Franklin, WI 53132

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

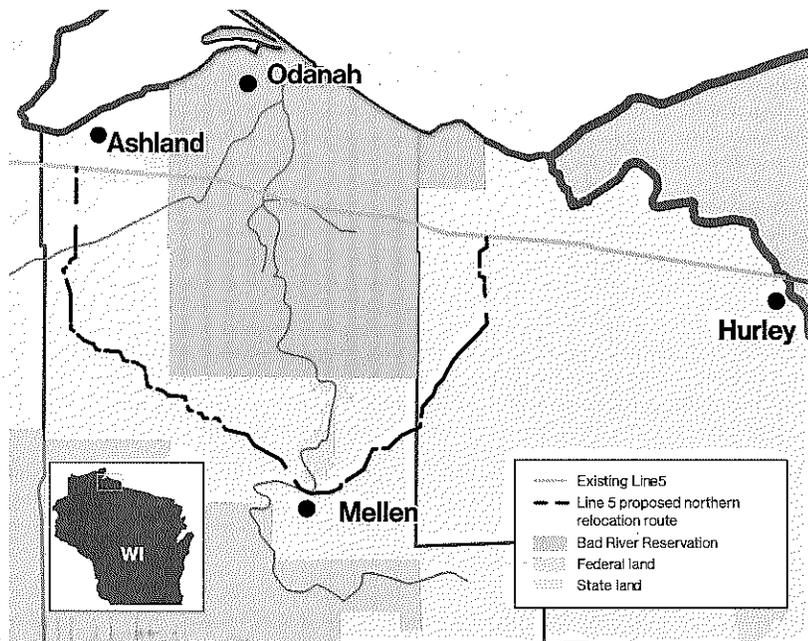

Name Scott Wesher  
Address P.O. Box 622  
City / State / ZIP Crivitz WI 54114

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using ~~timber mats~~ to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Name Ethan Hommerding

Address N2591 Airport RD

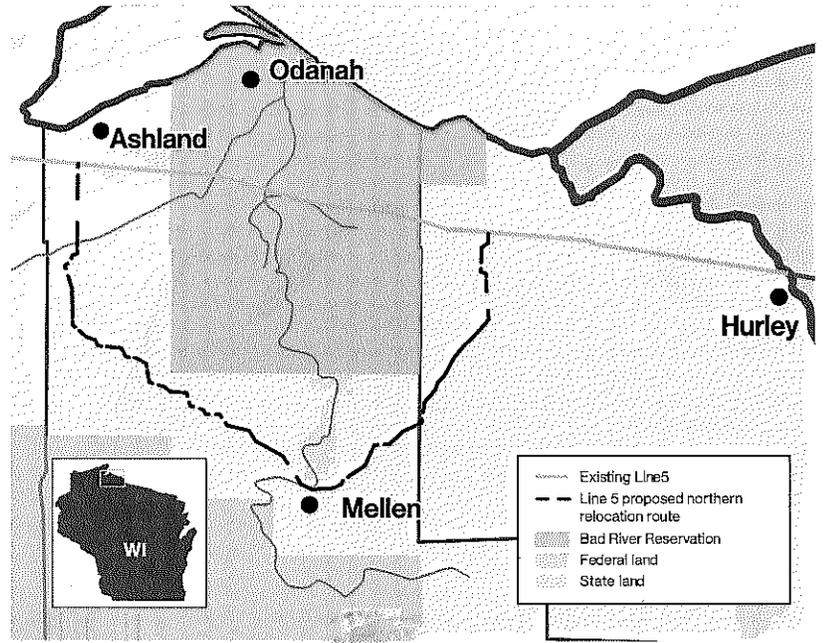

City / State / ZIP Merrill WI 54452

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Practices include:

- Using time needs to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Name Trevor Peterson

Address W2165 L90 Rd

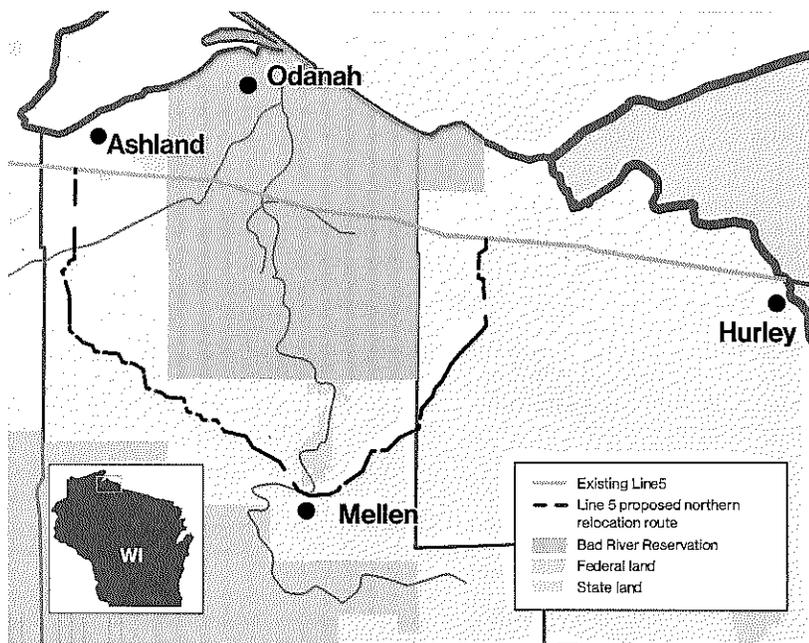

City / State / ZIP Freedom / WI / 54130

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Name Chris Andrews

Address 2702 Beechwood Ct.

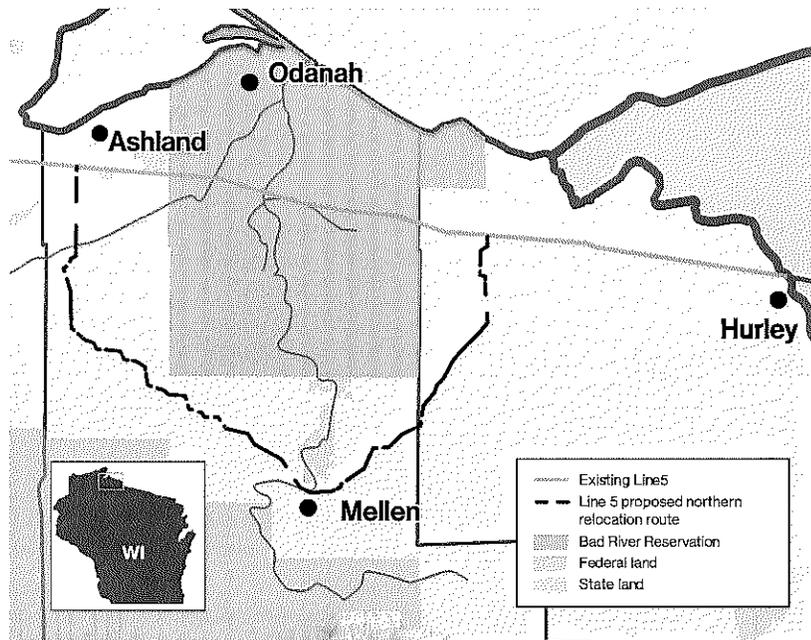

City / State / ZIP Appleton, WI 54911

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Practices include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

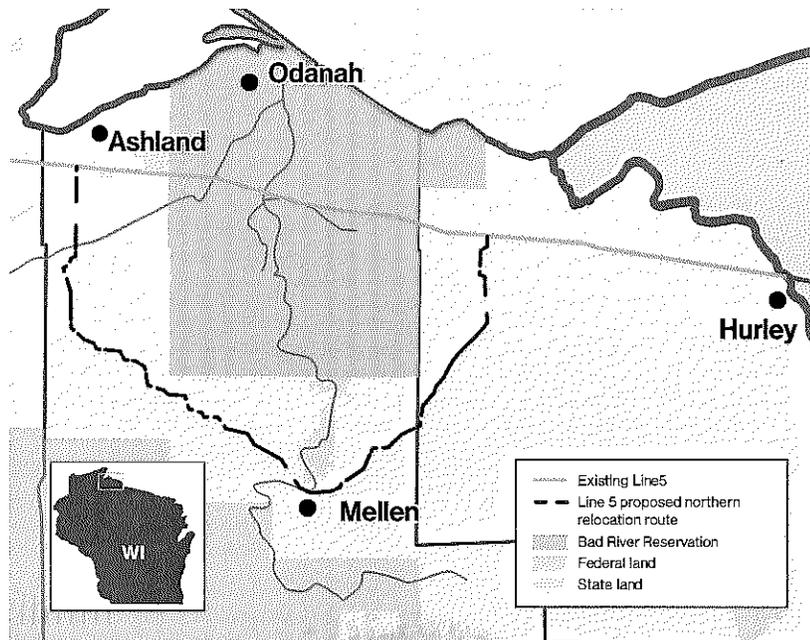

Name Tyler Sellnow  
Address N918 County T  
City / State / ZIP Waterloo, WI 53594

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

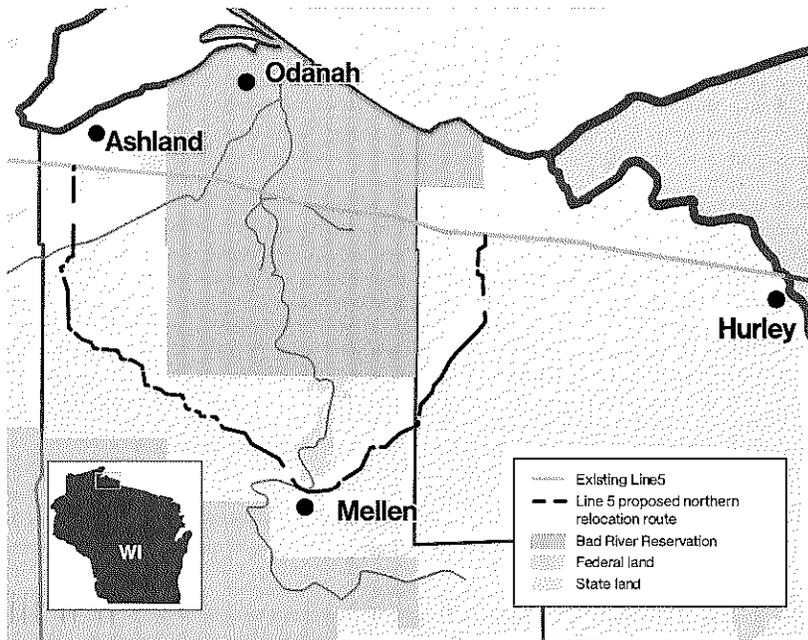

Name TJ Goetz  
Address 513 Chad Court  
City / State / ZIP North Prairie WI 53153

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

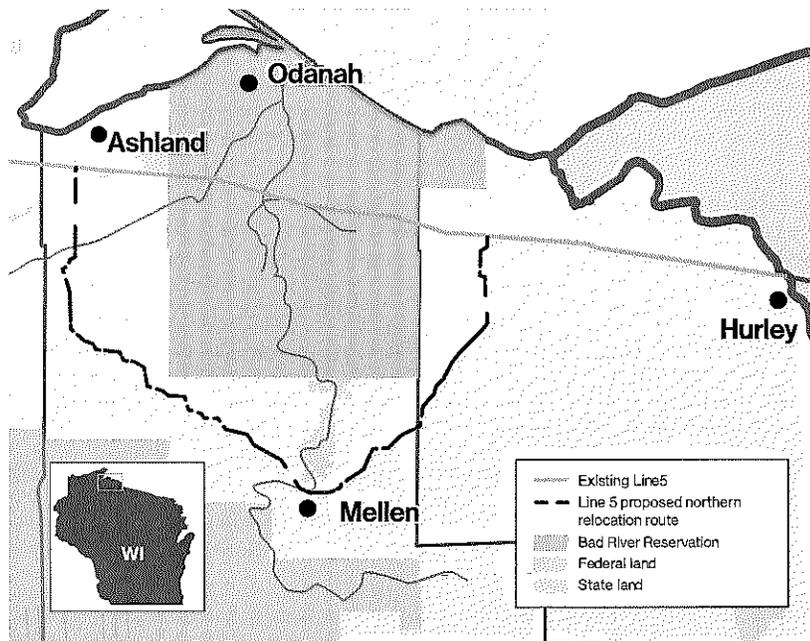

Name Jenna Koney  
Address 3015 S 53RD ST  
City / State / ZIP MILW WI 53219

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and

- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Name \_\_\_\_\_

Jay S. Appleton

Address \_\_\_\_\_

1700 Debra Rd.

City / State / ZIP \_\_\_\_\_

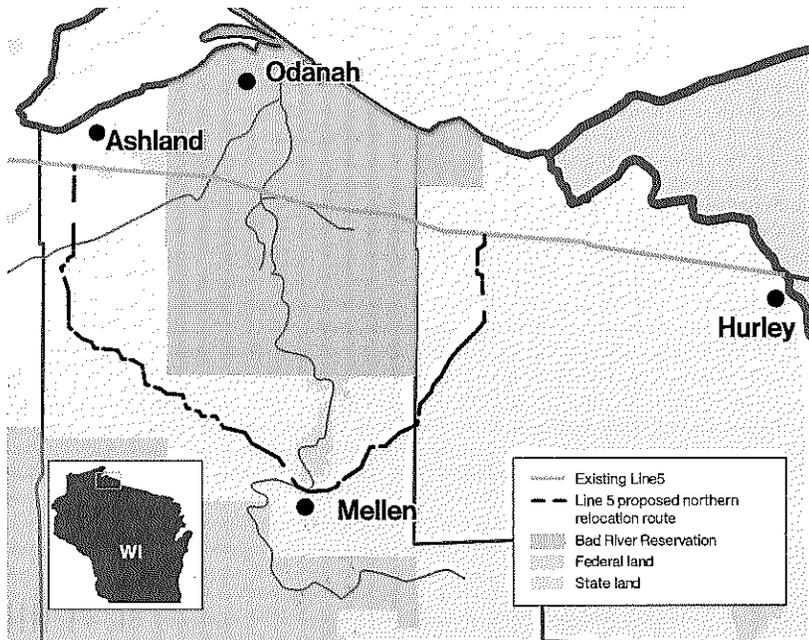

Kaukauna, WI, 54130

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Name Robert Brady

Address 1700 Chestnut St

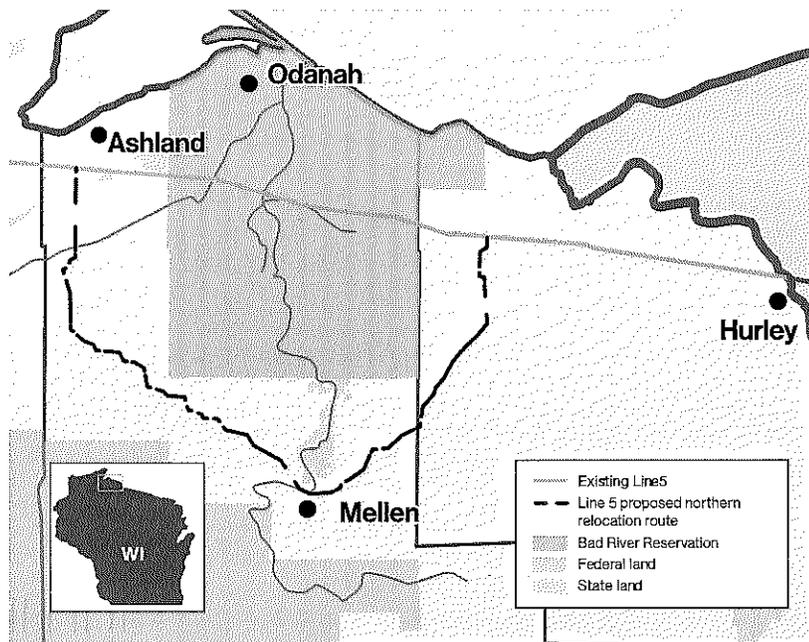

City / State / ZIP W. Rapids, WI 54494

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Name BILL PRINCE

Address 2213 E. 6th St.

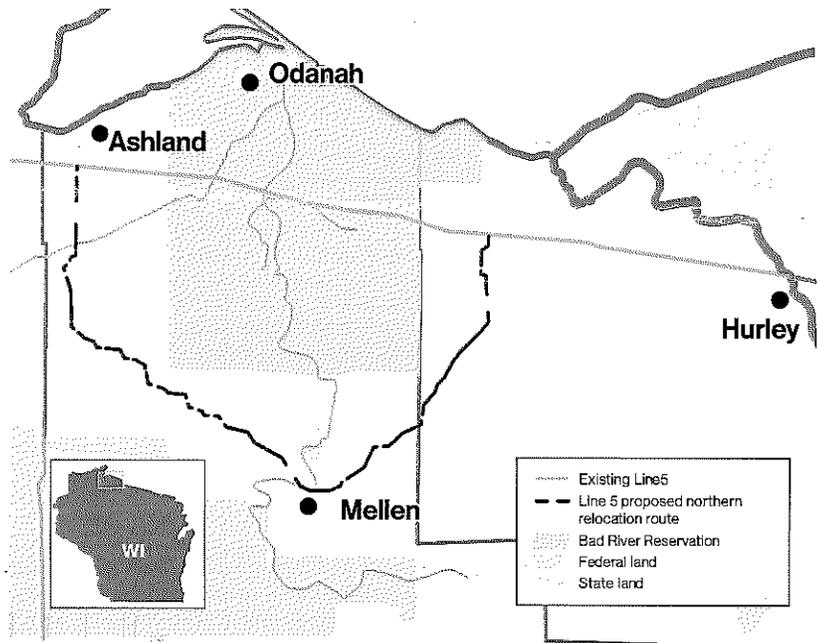

City / State / ZIP Superior WI 54880

The Line 5 Wisconsin Segment Relocation Project has been designed to minimize impacts on wetlands and waterbodies. Nearly all of the wetland impacts are temporary, and the wetlands will be restored following construction.

Enbridge has developed multiple plans and procedures that detail best management practices to be used during construction to minimize impacts. Examples include:

- Using timber mats to limit wetland disturbance,
- Installing erosion control devices, and
- Utilizing site-specific waterbody crossing methods.

Line 5 has been safely transporting essential fuels across Wisconsin since 1953. Moving a segment of the pipeline off the Bad River Band of Lake Superior Tribe of Chippewa Indians to the route Enbridge has proposed will ensure uninterrupted service of this critical energy supply.

Name

Jeffrey T. Polson

Address

3015 Hughitt Ave
