| UPL spp. <u>40</u> | x 5 = | <u>200</u> |
| Total <u>160</u> (A) | | <u>680</u> (B) |
| Prevalence Index = B/A = | | <u>4.250</u> |

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is not hydrophytic.**

SUMMARY OF FINDINGS

| | |
|-----------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| Hydrophytic Vegetation Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Hydic Soils Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |
| Wetland Hydrology Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Is This Sampling Point Within A Wetland? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |

Remarks: **The sample plot is located in a wet meadow within the growing season. WETS analysis determined that the antecedent precipitation conditions were normal. 2.30 inches of rainfall was recorded near the Project 2 weeks prior of the wetland delineation. Standing water six feet to the east of this wetland point.**

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the prevalence index. Vegetation at the sample plot is hydrophytic.**

| Prevalence Index = B/A = | | <u>1.876</u> |

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is hydrophytic.**

Additional Remarks:

SUMMARY OF FINDINGS

Hydrophytic Vegetation Present? Yes No Hydric Soils Present? Yes No

Wetland Hydrology Present? Yes No **Is This Sampling Point Within A Wetland?** Yes No

Remarks: **Sample plot is located in on an upland ridge. WETS analysis determined that the antecedent precipitation conditions were drier than normal. 0.33 inches of rainfall was recorded near the Project 2 weeks prior of the wetland delineation.**

HYDROLOGY

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is not hydrophytic.**

Additional Remarks:

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is hydrophytic.**

Dominance Test Worksheet

Number of Dominant Species that are OBL, FACW, or FAC: 0 (A)

Total Number of Dominant Species Across All Strata: 2 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 0.0% (A/B)

Prevalence Index Worksheet

| Total % Cover of: | Multiply by: | |
|-----------------------------|--------------|----------------|
| OBL spp. <u>2</u> | x 1 = | <u>2</u> |
| FACW spp. <u>2</u> | x 2 = | <u>4</u> |
| FAC spp. <u>0</u> | x 3 = | <u>0</u> |
| FACU spp. <u>80</u> | x 4 = | <u>320</u> |
| UPL spp. <u>55</u> | x 5 = | <u>275</u> |
| Total <u>139</u> (A) | | <u>601</u> (B) |
| Prevalence Index = B/A = | | <u>4.324</u> |

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is not hydrophytic.**

Additional Remarks:

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

- Tree** - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.
- Sapling/Shrub** - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.
- Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.
- Woody Vines** - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is hydrophytic.**

SUMMARY OF FINDINGS

| | |
|-----------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| Hydrophytic Vegetation Present? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No | Hydic Soils Present? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No |
| Wetland Hydrology Present? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No | Is This Sampling Point Within A Wetland? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |

Remarks: **Sample plot is located in on an upland ridge. WETS analysis determined that the antecedent precipitation conditions were drier than normal. 0.33 inches of rainfall was recorded near the Project 2 weeks prior of the wetland delineation.**

- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is not hydrophytic.**

Additional Remarks:

Dominance Test Worksheet

Number of Dominant Species that are OBL, FACW, or FAC: 0 (A)

Total Number of Dominant Species Across All Strata: 7 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 0.0% (A/B)

Prevalence Index Worksheet

| Total % Cover of: | Multiply by: | |
|--------------------------|--------------|----------------|
| OBL spp. <u>0</u> | x 1 = | <u>0</u> |
| FACW spp. <u>0</u> | x 2 = | <u>0</u> |
| FAC spp. <u>0</u> | x 3 = | <u>0</u> |
| FACU spp. <u>105</u> | x 4 = | <u>420</u> |
| UPL spp. <u>15</u> | x 5 = | <u>75</u> |
| Total <u>120</u> (A) | | <u>495</u> (B) |
| Prevalence Index = B/A = | | <u>4.125</u> |

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is not hydrophytic.**

Additional Remarks:

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is not hydrophytic.**

Additional Remarks:

- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is hydrophytic.

Additional Remarks:

SUMMARY OF FINDINGS

Hydrophytic Vegetation Present? Yes No Hydric Soils Present? Yes No

Wetland Hydrology Present? Yes No **Is This Sampling Point Within A Wetland?** Yes No

Remarks: Sample plot is located in a seasonally inundated or saturated interdunal swale. The hydrology of this sample plot is naturally problematic due to lack of primary hydrology indicators during the normal dry season. WETS analysis determined that the antecedent precipitation conditions were drier than normal. 0.33 inches of rainfall was recorded near the Project 2 weeks prior of the wetland delineation.

| Prevalence Index = B/A = | | <u>2.556</u> |

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is hydrophytic.**

Additional Remarks:

SUMMARY OF FINDINGS

Hydrophytic Vegetation Present? Yes No Hydric Soils Present? Yes No

Wetland Hydrology Present? Yes No **Is This Sampling Point Within A Wetland?** Yes No

Remarks: Sample plot is located in a seasonally inundated or saturated interdunal swale. The hydrology of this sample plot is naturally problematic due to lack of primary hydrology indicators during the normal dry season. WETS analysis determined that the antecedent precipitation conditions were drier than normal. 0.33 inches of rainfall was recorded near the Project 2 weeks prior of the wetland delineation.

HYDROLOGY

Field Observations:

| | | |
|--------------------------------------------------------------------------------------------|----------------------------|-------------------------------------------------------------------------------------------------------|
| Surface Water Present? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No | Depth: (in.) | Wetland Hydrology Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |
| Water Table Present? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No | Depth: >24 (in.) | |
| Saturation Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Depth: 20 (in.) | |

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: **N/A**

Remarks: The presence of 3 secondary indicators at the sample plot provides evidence of wetland hydrology. Field observations of high water table (16 inches) and saturation (12 inches) were found during Excel Engineering field investigation in May. The sample plot is located approximately 3 to 5 feet lower in elevation than surrounding upland.

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is not hydrophytic.**

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is hydrophytic.**

SUMMARY OF FINDINGS

Hydrophytic Vegetation Present? Yes No Hydric Soils Present? Yes No

Wetland Hydrology Present? Yes No **Is This Sampling Point Within A Wetland?** Yes No

Remarks: Sample plot is located in a seasonally inundated or saturated interdunal swale. The hydrology of this sample plot is naturally problematic due to lack of primary hydrology indicators during the normal dry season. WETS analysis determined that the antecedent precipitation conditions were drier than normal. 0.33 inches of rainfall was recorded near the Project 2 weeks prior of the wetland delineation.

HYDROLOGY

Field Observations:

| | | |
|--------------------------------------------------------------------------------------------|----------------------------|-------------------------------------------------------------------------------------------------------|
| Surface Water Present? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No | Depth: (in.) | Wetland Hydrology Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |
| Water Table Present? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No | Depth: >24 (in.) | |
| Saturation Present? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No | Depth: >24 (in.) | |

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: **N/A**

Remarks: The presence of 1 primary and 2 secondary indicators at the sample plot provides evidence of wetland hydrology. Field observations of high water table (16 inches) and saturation (10 inches) were found during Excel Engineering field investigation in May. The sample plot is located approximately 3 to 5 feet lower in elevation than surrounding upland.

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is hydrophytic.**

Additional Remarks:

SUMMARY OF FINDINGS

| | |
|-----------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| Hydrophytic Vegetation Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Hydic Soils Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |
| Wetland Hydrology Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Is This Sampling Point Within A Wetland? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |

Remarks: Sample plot is located in a seasonally inundated or saturated interdunal swale. The hydrology of this sample plot is naturally problematic due to lack of primary hydrology indicators during the normal dry season. WETS analysis determined that the antecedent precipitation conditions were drier than normal. 0.33 inches of rainfall was recorded near the Project 2 weeks prior of the wetland delineation.

HYDROLOGY

SUMMARY OF FINDINGS

Hydrophytic Vegetation Present? Yes No Hydric Soils Present? Yes No

Wetland Hydrology Present? Yes No **Is This Sampling Point Within A Wetland?** Yes No

Remarks: Sample plot is located in on an upland swale. WETS analysis determined that the antecedent precipitation conditions were drier than normal. 0.33 inches of rainfall was recorded near the Project 2 weeks prior of the wetland delineation. Although hydric soil is present at the sample plot, the lack of hydrophytic vegetation and wetland hydrology indicate the sample plot is located in an upland.

|--------------------------------------------------------------------------------------------|------------------------|-------------------------------------------------------------------------------------------------------|
| Surface Water Present? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No | Depth: (in.) | Wetland Hydrology Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |
| Water Table Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Depth: 24 (in.) | |
| Saturation Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Depth: 20 (in.) | |

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: **N/A**

Remarks: The presence of 3 secondary indicators at the sample plot provides evidence of wetland hydrology. Field observations of high water table (10 inches) and saturation (8 inches) were found during Excel Engineering field investigation in May. The sample plot is located approximately 3 to 5 feet lower in elevation than surrounding upland.

Field Observations:

| | | |
|--------------------------------------------------------------------------------------------|------------------------|-------------------------------------------------------------------------------------------------------|
| Surface Water Present? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No | Depth: (in.) | Wetland Hydrology Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |
| Water Table Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Depth: 24 (in.) | |
| Saturation Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Depth: 20 (in.) | |

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: **N/A**

Remarks: The presence of 3 secondary indicators at the sample plot provides evidence of wetland hydrology. Field observations of high water table (10 inches) and saturation (6 inches) were found during Excel Engineering field investigation in May. The sample plot is located approximately 3 to 5 feet lower in elevation than surrounding upland.

Dominance Test Worksheet

Number of Dominant Species that are OBL, FACW, or FAC: 3 (A)

Total Number of Dominant Species Across All Strata: 3 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 100.0% (A/B)

Prevalence Index Worksheet

| Total % Cover of: | Multiply by: | |
|--------------------------|--------------|----------------------|
| OBL spp. <u>60</u> | x 1 = | <u>60</u> |
| FACW spp. <u>0</u> | x 2 = | <u>0</u> |
| FAC spp. <u>0</u> | x 3 = | <u>0</u> |
| FACU spp. <u>0</u> | x 4 = | <u>0</u> |
| UPL spp. <u>0</u> | x 5 = | <u>0</u> |
| Total <u>60</u> | (A) | <u>60</u> (B) |
| Prevalence Index = B/A = | | <u>1.000</u> |

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is hydrophytic.**

SUMMARY OF FINDINGS

Hydrophytic Vegetation Present? Yes No Hydric Soils Present? Yes No

Wetland Hydrology Present? Yes No **Is This Sampling Point Within A Wetland?** Yes No

Remarks: Sample plot is located in a seasonally inundated or saturated interdunal swale. The hydrology of this sample plot is naturally problematic due to lack of primary hydrology indicators during the normal dry season. WETS analysis determined that the antecedent precipitation conditions were drier than normal. 0.33 inches of rainfall was recorded near the Project 2 weeks prior of the wetland delineation.

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is hydrophytic.**

SUMMARY OF FINDINGS

Hydrophytic Vegetation Present? Yes No Hydric Soils Present? Yes No

Wetland Hydrology Present? Yes No **Is This Sampling Point Within A Wetland?** Yes No

Remarks: Sample plot is located in a seasonally inundated or saturated interdunal swale. The hydrology of this sample plot is naturally problematic due to lack of primary hydrology indicators during the normal dry season. WETS analysis determined that the antecedent precipitation conditions were drier than normal. 0.18 inches of rainfall was recorded near the Project 2 weeks prior of the wetland delineation.

| Total <u>60</u> (A) | | <u>88</u> (B) |
| Prevalence Index = B/A = | | <u>1.467</u> |

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is hydrophytic.**

Additional Remarks:

SUMMARY OF FINDINGS

| | |
|-----------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| Hydrophytic Vegetation Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Hydic Soils Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |
| Wetland Hydrology Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Is This Sampling Point Within A Wetland? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |

Remarks: Sample plot is located in a seasonally inundated or saturated interdunal swale. The hydrology of this sample plot is naturally problematic due to lack of primary hydrology indicators during the normal dry season. WETS analysis determined that the antecedent precipitation conditions were normal. 0.85 inches of rainfall was recorded near the Project 2 weeks prior of the wetland delineation.

HYDROLOGY

Wetland Hydrology Indicators (Check here if indicators are not present):

|--------------------------------------------------------------------------------------------|----------------------------|-------------------------------------------------------------------------------------------------------|
| Surface Water Present? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No | Depth: (in.) | Wetland Hydrology Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |
| Water Table Present? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No | Depth: >20 (in.) | |
| Saturation Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Depth: 18 (in.) | |

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: **N/A**

Remarks: The presence of 3 secondary indicators at the sample plot provides evidence of wetland hydrology. Primary indicators of high water table (12 in.) and saturation (8 in.) were found during Excel Engineering field investigation in May. The sample plot is located approximately 3 to 5 feet lower in elevation than surrounding upland.

SUMMARY OF FINDINGS

Hydrophytic Vegetation Present? Yes No Hydric Soils Present? Yes No

Wetland Hydrology Present? Yes No Is This Sampling Point Within A Wetland? Yes No

Remarks: Sample plot is located in a seasonally inundated or saturated interdunal swale. The hydrology of this sample plot is naturally problematic due to lack of primary hydrology indicators during the normal dry season. WETS analysis determined that the antecedent precipitation conditions were drier than normal. 0.18 inches of rainfall was recorded near the Project 2 weeks prior of the wetland delineation.

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the prevalence index. Vegetation at the sample plot is hydrophytic.**

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is hydrophytic.**

Field Observations:

| | | |
|--------------------------------------------------------------------------------------------|------------------------|-------------------------------------------------------------------------------------------------------|
| Surface Water Present? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No | Depth: (in.) | Wetland Hydrology Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |
| Water Table Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Depth: 24 (in.) | |
| Saturation Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Depth: 20 (in.) | |

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: **N/A**

Remarks: The presence 3 secondary indicators at the sample plot provides evidence of wetland hydrology. Field observations of high water table (16 inches) and saturation (12 inches) were found during Excel Engineering field investigation in May. The sample plot is located approximately 3 to 5 feet lower in elevation than surrounding upland.

Field Observations:

| | | |
|--------------------------------------------------------------------------------------------|------------------------|-------------------------------------------------------------------------------------------------------|
| Surface Water Present? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No | Depth: (in.) | Wetland Hydrology Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |
| Water Table Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Depth: 24 (in.) | |
| Saturation Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Depth: 20 (in.) | |

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: **N/A**

Remarks: The presence 3 secondary indicators at the sample plot provides evidence of wetland hydrology. Field observations of high water table (12 inches) and saturation (6 inches) were found during Excel Engineering field investigation in May. The sample plot is located approximately 3 to 5 feet lower in elevation than surrounding upland.

| UPL spp. <u>0</u> | x 5 = | <u>0</u> |
| Total <u>51</u> (A) | | <u>103</u> (B) |
| Prevalence Index = B/A = | | <u>2.020</u> |

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is hydrophytic.**

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is hydrophytic.**

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is hydrophytic.**

SUMMARY OF FINDINGS

Hydrophytic Vegetation Present? Yes No Hydric Soils Present? Yes No

Wetland Hydrology Present? Yes No **Is This Sampling Point Within A Wetland?** Yes No

Remarks: Sample plot is located in a seasonally inundated or saturated interdunal swale. The hydrology of this sample plot is naturally problematic due to lack of primary hydrology indicators during the normal dry season. WETS analysis determined that the antecedent precipitation conditions were normal. 0.85 inches of rainfall was recorded near the Project 2 weeks prior of the wetland delineation.

HYDROLOGY

| Surface Water Present? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No | Depth: (in.) | Wetland Hydrology Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |
| Water Table Present? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No | Depth: >24 (in.) | |
| Saturation Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Depth: 24 (in.) | |

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: **N/A**

Remarks: The presence of 3 secondary indicators at the sample plot provides evidence of wetland hydrology. Field observations of saturation (16 inches) was found during Excel Engineering field investigation in May. The sample plot is located approximately 3 to 5 feet lower in elevation than surrounding upland.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: **N/A**

Remarks: **The presence of 2 primary and 3 secondary indicators at the sample plot provides evidence of wetland hydrology. The sample plot is located approximately 3 to 5 feet lower in elevation than surrounding upland.**

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

SUMMARY OF FINDINGS

Hydrophytic Vegetation Present? Yes No Hydric Soils Present? Yes No

Wetland Hydrology Present? Yes No **Is This Sampling Point Within A Wetland?** Yes No

Remarks: Sample plot is located in an upland swale. WETS analysis determined that the antecedent precipitation conditions were normal. 0.85 inches of rainfall was recorded near the Project 2 weeks prior of the wetland delineation. According to the Army Corps of Engineers NC/NE Supplement, three parameters are required to meet jurisdictional wetland requirements. Although hydric soil is present at the sample plot, the lack of hydrophytic vegetation and wetland hydrology indicate the sample plot is located in an upland.

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is not hydrophytic.**

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

- Tree** - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.
- Sapling/Shrub** - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.
- Herb** - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.
- Woody Vines** - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is not hydrophytic.**

SUMMARY OF FINDINGS

| | |
|-----------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| Hydrophytic Vegetation Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Hydric Soils Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |
| Wetland Hydrology Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Is This Sampling Point Within A Wetland? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |

Remarks: Sample plot is located in a seasonally inundated or saturated interdunal swale. The hydrology of this sample plot is naturally problematic due to lack of primary hydrology indicators during the normal dry season. WETS analysis determined that the antecedent precipitation conditions were normal. 1.13 inches of rainfall was recorded near the Project 2 weeks prior of the wetland delineation.

SUMMARY OF FINDINGS

Hydrophytic Vegetation Present? Yes No Hydric Soils Present? Yes No

Wetland Hydrology Present? Yes No **Is This Sampling Point Within A Wetland?** Yes No

Remarks: Sample plot is located in a seasonally inundated or saturated interdunal swale. WETS analysis determined that the antecedent precipitation conditions were normal. 1.13 inches of rainfall was recorded near the Project 2 weeks prior of the wetland delineation. Although hydrophytic vegetation is not present at the sample plot, the presence of hydric soils and wetland hydrology indicate the sample plot is located in a seasonally flooded basin.

SUMMARY OF FINDINGS

Hydrophytic Vegetation Present? Yes No Hydric Soils Present? Yes No

Wetland Hydrology Present? Yes No Is This Sampling Point Within A Wetland? Yes No

Remarks: **Sample plot is located in a seasonally inundated or saturated interdunal swale. WETS analysis determined that the antecedent precipitation conditions were normal. 0.85 inches of rainfall was recorded near the Project 2 weeks prior of the wetland delineation.**

HYDROLOGY

Field Observations:

| | | |
|--------------------------------------------------------------------------------------------|------------------------|-------------------------------------------------------------------------------------------------------|
| Surface Water Present? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No | Depth: (in.) | Wetland Hydrology Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |
| Water Table Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Depth: 16 (in.) | |
| Saturation Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Depth: 12 (in.) | |

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: **N/A**

Remarks: **The presence of 1 primary and 3 secondary indicators at the sample plot provides evidence of wetland hydrology. Primary indicator of saturation (10 in.) was found in May field investigation. The sample plot is located approximately 3 to 5 feet lower in elevation than surrounding upland.**

Remarks: Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is not hydrophytic.

Dominance Test Worksheet

Number of Dominant Species that are OBL, FACW, or FAC: 0 (A)

Total Number of Dominant Species Across All Strata: 5 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 0.0% (A/B)

Prevalence Index Worksheet

| Total % Cover of: | Multiply by: | |
|----------------------|--------------|------------|
| OBL spp. <u>5</u> | x 1 = | <u>5</u> |
| FACW spp. <u>0</u> | x 2 = | <u>0</u> |
| FAC spp. <u>10</u> | x 3 = | <u>30</u> |
| FACU spp. <u>105</u> | x 4 = | <u>420</u> |
| UPL spp. <u>35</u> | x 5 = | <u>175</u> |

Total 155 (A) 630 (B)

Prevalence Index = B/A = 4.065

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Dominance Test Worksheet

Number of Dominant Species that are OBL, FACW, or FAC: 4 (A)

Total Number of Dominant Species Across All Strata: 4 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 100.0% (A/B)

Prevalence Index Worksheet

| Total % Cover of: | Multiply by: | |
|--------------------------|--------------|----------------|
| OBL spp. <u>95</u> | x 1 = | <u>95</u> |
| FACW spp. <u>60</u> | x 2 = | <u>120</u> |
| FAC spp. <u>15</u> | x 3 = | <u>45</u> |
| FACU spp. <u>0</u> | x 4 = | <u>0</u> |
| UPL spp. <u>0</u> | x 5 = | <u>0</u> |
| Total <u>170</u> (A) | | <u>260</u> (B) |
| Prevalence Index = B/A = | | <u>1.529</u> |

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is hydrophytic.**

Additional Remarks:

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is hydrophytic.**

| Prevalence Index = B/A = | | <u>1.726</u> |

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: Hydrophytic vegetation not dominant based on 50/20 rule however prevalence index is 1.726. Based on presence of hydric soils, observed dry season water table, other hydrology indicators, and prevalence of OBL plant species, area was identified as wetland. It is likely that spring ephemeral wetland plant species are present earlier in the growing season.

SUMMARY OF FINDINGS

Hydrophytic Vegetation Present? Yes No

Wetland Hydrology Present? Yes No

Hydric Soils Present? Yes No

Is This Sampling Point Within A Wetland? Yes No

Remarks: Sample plot is located in a seasonally inundated or saturated intertidal swale. The hydrology of this sample plot is naturally problematic due to lack of primary hydrology indicators during the normal dry season. WETS analysis determined that the antecedent precipitation conditions were normal. 1.13 inches of rainfall was recorded near the Project 2 weeks prior of the wetland delineation. Atypical situations require the use of professional judgement. Based on landscape position, hydric soils present, and the timing of the delineation, this area appears it may be inundated or saturated for longer periods of time during the early growing season.

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is not hydrophytic. Wetland spring ephemeral plants mostly likely would be observed within the seasonally flooded basin in early growing season.

Additional Remarks:

SUMMARY OF FINDINGS

Hydrophytic Vegetation Present? Yes No

Wetland Hydrology Present? Yes No

Hydric Soils Present? Yes No

Is This Sampling Point Within A Wetland? Yes No

Remarks: Sample plot is located in a seasonally inundated or saturated intertidal swale. The hydrology of this sample plot is naturally problematic due to lack of primary hydrology indicators during the normal dry season. WETS analysis determined that the antecedent precipitation conditions were normal. 1.13 inches of rainfall was recorded near the Project 2 weeks prior of the wetland delineation. Atypical situations require the use of professional judgment. Based on landscape position, hydric soils present, and the timing of the delineation, this area appears it may be inundated or saturated for longer periods of time during the early growing season.

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is not hydrophytic. Wetland spring ephemeral plants mostly I kely dominate the seasonally flooded basin in early growing season.

| Total <u>125</u> | (A) | <u>210</u> (B) |
| Prevalence Index = B/A = | | <u>1.680</u> |

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is hydrophytic.**

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is not hydrophytic.**

Additional Remarks:

SUMMARY OF FINDINGS

| | |
|-----------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| Hydrophytic Vegetation Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Hydric Soils Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |
| Wetland Hydrology Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Is This Sampling Point Within A Wetland? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |

Remarks: Sample plot is located in a seasonally inundated or saturated interdunal swale. The hydrology of this sample plot is naturally problematic due to lack of primary hydrology indicators during the normal dry season. WETS analysis determined that the antecedent precipitation conditions were normal. 0.85 inches of rainfall was recorded near the Project 2 weeks prior of the wetland delineation.

HYDROLOGY

| Surface Water Present? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No | Depth: (in.) | Wetland Hydrology Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |
| Water Table Present? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No | Depth: >20 (in.) | |
| Saturation Present? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No | Depth: 18 (in.) | |

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available: **N/A**

Remarks: The presence of 3 secondary indicators at the sample plot provides evidence of wetland hydrology. Primary indicators of high water table (10 in.) and saturation (6 in.) were found during Excel Engineering field investigation in May. The sample plot is located approximately 3 to 5 feet lower in elevation than surrounding upland.

Dominance Test Worksheet

Number of Dominant Species that are OBL, FACW, or FAC: 4 (A)

Total Number of Dominant Species Across All Strata: 4 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 100.0% (A/B)

Prevalence Index Worksheet

| Total % Cover of: | Multiply by: | |
|--------------------------|--------------|----------------|
| OBL spp. <u>65</u> | x 1 = | <u>65</u> |
| FACW spp. <u>30</u> | x 2 = | <u>60</u> |
| FAC spp. <u>22</u> | x 3 = | <u>66</u> |
| FACU spp. <u>7</u> | x 4 = | <u>28</u> |
| UPL spp. <u>0</u> | x 5 = | <u>0</u> |
| Total <u>124</u> (A) | | <u>219</u> (B) |
| Prevalence Index = B/A = | | <u>1.766</u> |

Hydrophytic Vegetation Indicators:

- Yes No Rapid Test for Hydrophytic Vegetation
- Yes No Dominance Test is > 50%
- Yes No Prevalence Index is ≤ 3.0 *
- Yes No Morphological Adaptations (Explain) *
- Yes No Problem Hydrophytic Vegetation (Explain) *

* Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft. tall.

Herb - All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft. tall.

Woody Vines - All woody vines greater than 3.28 ft. in height.

Hydrophytic Vegetation Present Yes No

Remarks: **Dominant vegetation was determined through use of the 50/20 rule. Vegetation at the sample plot is hydrophytic.**

Additional Remarks:

SUMMARY OF FINDINGS

Hydrophytic Vegetation Present? Yes No Hydric Soils Present? Yes No

Wetland Hydrology Present? Yes No **Is This Sampling Point Within A Wetland?** Yes No

Remarks: Sample plot is located in a seasonally inundated or saturated interdunal swale. The hydrology of this sample plot is naturally problematic due to lack of primary hydrology indicators during the normal dry season. WETS analysis determined that the antecedent precipitation conditions were normal. 1.13 inches of rainfall was recorded near the Project 2 weeks prior of the wetland delineation.
