REGION 5 RAC2

REMEDIAL ACTION CONTRACT FOR

Remedial, Enforcement Oversight, and
Non-Time Critical Removal Activities at Sites of Release
or Threatened Release of Hazardous Substances in Region 5

BASIS OF DESIGN REPORT
APPENDIX A—DESIGN SPECIFICATIONS
Lincoln Park/Milwaukee River Channel Sediments Site
Milwaukee, Wisconsin
Final Remedial Design (Phase I)

WA No. 065-RDRD-2508/Contract No. EP-S5-06-01

March 2011

PREPARED FOR
U.S. Environmental Protection Agency

PREPARED BY

CH2M HILL
Ecology and Environment, Inc.
Environmental Design International, Inc.
Teska Associates, Inc.

FOR OFFICIAL USE ONLY

END OF SECTION
SECTION 01 11 00
SUMMARY OF WORK

PART 1   GENERAL

1.01 WORK COVERED BY CONTRACT DOCUMENTS

A. The main components of the sediment excavation are presented below:

1. Mobilization including preparation of the staging areas, decontamination areas, a TSCA dewatering pad, and temporary facilities.
2. Pre- and Post-excavation surveying.
3. Design and installation of temporary earthen and sheet pile cut-off structures.
4. Design, installation and maintenance of a temporary bypass system for Lincoln Creek.
5. Mechanical excavation, including sediment dewatering – mechanically mixed in place with a drying agent, if needed.
6. Water quality monitoring and control.
8. TSCA-sediment staging and equipment decontamination.
9. Design, installation, operation and maintenance of two water treatment systems.
10. Water treatment and process monitoring.
11. Offsite disposal.
12. Streambank restoration.
13. Decontamination of personnel and equipment.
14. Restoration of temporary staging areas and demobilization.
15. Specific tasks not mentioned or not completely describes that are necessary to perform tasks describes as “Work” shall also be considered part of the work.

1.02 WORK HOURS

A. Work will be performed onsite seven days a week, 24 hours per day. Alternative work hours must be communicated and approved by the Contractor.

PART 2   PRODUCTS (NOT USED)

PART 3   EXECUTION (NOT USED)

END OF SECTION
PART 1 GENERAL

1.01 SUBMITTALS

A. Informational Submittals:

1. Schedule of Values: Submit on Subcontractor’s standard form.
2. Schedule of Estimated Progress Payments:
   a. Submit with initially acceptable Schedule of Values.
   b. Submit adjustments thereto with Application for Payment.
3. Application for Payment.
4. Final Application for Payment.

1.02 SCHEDULE OF VALUES

A. Prepare a separate Schedule of Values for each schedule of the Work under the Agreement.

B. Upon request of Contractor, provide documentation to support the accuracy of the Schedule of Values.

C. Unit Price Work: Reflect unit price quantity and price breakdown from conformed Bid Form.

D. Lump Sum Work:

1. Reflect schedule of values format included in conformed compensation schedule, specified allowances and alternates as applicable.
2. List bonds and insurance premiums, mobilization, demobilization, preliminary and detailed progress schedule preparation, equipment testing, facility startup, and contract closeout separately.
3. Break down by Division 2 through 49 with appropriate subdivision of each Specification for each Project facility.

E. An unbalanced or front-end loaded schedule will not be acceptable.

F. Summation of the complete Schedule of Values representing all the Work shall equal the Subcontract Price.

1.03 SCHEDULE OF ESTIMATED PROGRESS PAYMENTS

A. Show estimated payment requests throughout Subcontract Times aggregating initial Subcontract Price.
B. Base estimated progress payments on initially acceptable progress schedule. Adjust to reflect subsequent adjustments in progress schedule and Subcontract Price as reflected by modifications to the Subcontract Documents.

1.04 APPLICATION FOR PAYMENT

A. Transmittal Summary Form: Attach one Transmittal Summary Form (provided in Section 01 33 00, Submittal Procedures) with each detailed Application for Payment for each schedule and include Request for Payment of Materials and Equipment on Hand as applicable. Execute certification by authorized officer of Contractor. Submit to address provided in Subcontract Agreement.

B. Use detailed Payment Application and Certificate Form provided by Contractor (Exhibit 1).

C. Provide separate form for each schedule as applicable.

D. Include accepted Schedule of Values for each schedule or portion of lump sum Work and the unit price breakdown for the Work to be paid on a unit priced basis.

E. Include separate line item for each Change Order and Work Change Directive executed prior to date of submission. Provide further breakdown of such as requested by Contractor.

F. Preparation:
   1. Round values to nearest dollar.
   2. Submit Application for Payment, including a Transmittal Summary Form and detailed Application for Payment Form(s) for each schedule as applicable, a listing of materials on hand for each schedule as applicable, and such supporting data as may be requested by Contractor.

1.05 MEASUREMENT—GENERAL

A. Weighing, measuring, and metering devices used to measure quantity of materials for Work shall be suitable for purpose intended and conform to tolerances and specifications as specified in National Institute of Standards and Technology, Handbook 44.

B. Whenever pay quantities of material are determined by weight, material shall be weighed on scales furnished by Subcontractor and certified accurate by state agency responsible. Weight or load slip shall be obtained from weigher and delivered to Contractor at point of delivery of material.
C. If material is shipped by rail, car weights will be accepted provided that actual weight of material only will be paid for and not minimum car weight used for assessing freight tariff, and provided further that car weights will not be acceptable for material to be passed through mixing plants.

D. Vehicles used to haul material being paid for by weight shall be weighed empty daily and at such additional times as required by Contractor. Each vehicle shall bear a plainly legible identification mark.

E. Materials that are specified for measurement by the cubic yard measured in the vehicle shall be hauled in vehicles of such type and size that actual contents may be readily and accurately determined. Unless all vehicles are of uniform capacity, each vehicle must bear a plainly legible identification mark indicating its water level capacity. Vehicles shall be loaded to at least their water level capacity. Loads hauled in vehicles not meeting above requirements or loads of a quantity less than the capacity of the vehicle, measured after being leveled off as above provided, will be subject to rejection, and no compensation will be allowed for such material.

F. Where measurement of quantities depends on elevation of existing ground, elevations obtained during construction will be compared with those shown on Drawings. Variations of 1 foot or less will be ignored, and profiles shown on Drawings will be used for determining quantities.

G. Units of measure shown on Bid Form shall be as follows, unless specified otherwise.

1.06 PAYMENT

A. Payment for Lump Sum Work covers all Work specified or shown within the limits or Specification sections as shown in Table 1 – Lump Sum Items, attached as a supplement to this section.

B. Payment for Unit Price Items covers all the labor, materials and services necessary to furnish and install the items shown in Table 2 – Unit Price Items, attached as a supplement to this section.

1.07 NONPAYMENT FOR REJECTED OR UNUSED PRODUCTS

A. Payment will not be made for following:

1. Loading, hauling, and disposing of rejected material.
2. Quantities of material wasted or disposed of in manner not called for under Subcontract Documents.
3. Rejected loads of material, including material rejected after it has been placed by reason of failure of Subcontractor to conform to provisions of Subcontract Documents.
4. Material not unloaded from transporting vehicle.
5. Defective Work not accepted by Contractor or USEPA.
6. Material remaining on hand after completion of Work.

1.08 PARTIAL PAYMENT FOR STORED MATERIALS AND EQUIPMENT

A. Partial Payment: No partial payments will be made for materials and equipment delivered or stored unless Shop Drawings and preliminary operation and maintenance data is acceptable to Contractor.

B. Final Payment: Will be made only for products incorporated in Work; remaining products, for which partial payments have been made, shall revert to Subcontractor unless otherwise agreed, and partial payments made for those items will be deducted from final payment.

1.09 SUPPLEMENTS

A. The supplements listed below, following “End of Section”, are part of this Specification.

1. Table 1 – Lump Sum Price Items.
2. Table 2 – Unit Price Items.
3. Exhibit 1 – Payment Application Certificate.
<table>

I hereby acknowledge that the material and labor involved on the above estimate is correct to the best of my knowledge, information and belief, and payment on same is due Subcontractor.

CH2M HILL __________________________

Date __________________________
PART 1 GENERAL

1.01 SUBMITTALS

A. Informational:

1. Statement of Qualification (SOQ) for land surveyor.
2. Photographs:
   a. Digital Images: Submit on compact disc within 5 days of being taken.
3. Video Recordings: Submit one copy, including updated copy of project video log, within 5 days of being taken.

1.02 UTILITY NOTIFICATION AND COORDINATION

A. Coordinate the Work with various utilities within Project limits. Notify applicable utilities prior to commencing Work, if damage occurs, or if conflicts or emergencies arise during Work.

1. Digger’s Hotline:
2. Electricity Company: WE Energies.
3. Water Department:
4. Gas Company:
5. MKE County Utility Locate:
   a. Contact Person: Gene Andrzejak.
6. AT&T Contact
   a. Contact Person: Carol Ann Couillard.
   b. Telephone: 414-536-2992

1.03 ADJACENT FACILITIES AND PROPERTIES

A. Examination:

1. After Effective Date of the Agreement and before Work at Site is started, Subcontractor, Contractor and affected property owners and utility owners shall make a thorough examination of pre-existing conditions including existing buildings, structures, and other
improvements in vicinity of Work, as applicable, which could be damaged by construction operations.

2. Periodic reexamination shall be jointly performed to include, but not limited to, cracks in structures, settlement, leakage, and similar conditions.

B. Documentation:

1. Record and submit documentation of observations made on examination inspections. Contractor will photo document pre-construction conditions.

2. Upon receipt, Contractor will review, sign, and return one record copy of documentation to Subcontractor to be kept on file in field office.

3. Such documentation shall be used as indisputable evidence in ascertaining whether and to what extent damage occurred as a result of Subcontractor’s operations, and is for the protection of adjacent property owners, Contractor, and USEPA.

1.04 CONSTRUCTION PHOTOGRAPHS

A. Photographically document all phases of the project including preconstruction, construction progress, and post-construction.

B. Contractor shall have the right to select the subject matter and vantage point from which photographs are to be taken.

C. Preconstruction and Post-Construction:

1. After Effective Date of the Agreement and before Work at Site is started, and again upon issuance of Substantial Completion, take a minimum of 48 exposures of Construction Site and property adjacent to perimeter of Construction Site.

2. Particular emphasis shall be directed to structures both inside and outside the Site.

3. Format: Digital, minimum resolution of 756 by 504 pixels and 24 bit, millions of color.

D. Construction Progress Photos:

1. Photographically demonstrate progress of construction, showing every aspect of Site and adjacent properties as well as interior and exterior of new or impacted structures.

2. Weekly: Take 48 exposures using Digital, minimum resolution of 756 by 504 pixels and 24 bit, millions of color.
E. Digital Images:
   1. Archive using a commercially available photo management system.
   2. Label each disk with Project and Contractor’s name, and week and year images were produced.

1.05 AUDIO-VIDEO RECORDINGS

A. Prior to beginning Work on Construction Site or of a particular area of the Work, and again within 10 days following date of Substantial Completion, videograph Construction Site and property adjacent to Construction Site.

B. In the case of preconstruction recording, no Work shall begin in the area prior to Contractor’s review and approval of content and quality of video for that area.

C. Particular emphasis shall be directed to physical condition of existing vegetation, structures, and pavements within the work area and areas adjacent to and within the right-of-way or easement, and on Subcontractor storage and staging areas.

D. Contractor shall have right to select subject matter and vantage point from which videos are to be taken.

E. Video Format and Quality:
   1. DVD format, with sound.
   2. Video:
      a. Produce bright, sharp, and clear images with accurate colors, free of distortion and other forms of picture imperfections.
      b. Electronically, and accurately display the month, day, year, and time of day of the recording.
   3. Audio:
      a. Audio documentation shall be done clearly, precisely, and at a moderate pace.
      b. Indicate date, project name, and a brief description of the location of taping, including:
         1) Facility name.
         2) Street names or easements.
         3) Addresses of private property.
         4) Direction of coverage, including engineering stationing, if applicable.
F. Documentation:

1. DVD Label:
   a. DVD number (numbered sequentially, beginning with 001).
   b. Project name.
   c. Applicable location by engineering stationing.
   d. Date and time of coverage.

2. Project Video Log: Maintain an ongoing log that incorporates above noted label information for video on Project.

1.06 REFERENCE POINTS AND SURVEYS

A. Contractor’s Responsibilities:

1. Establish bench marks convenient to Work and at least every 500 feet on pipelines and roads.
2. Establish horizontal reference points or coordinate system with bench marks and reference points for Subcontractor’s use as necessary to lay out Work.

B. Location and elevation of bench marks are shown on Drawings.

C. Subcontractor’s Responsibilities:

1. Provide additional survey and layout required to layout the Work.
2. Notify Contractor at least 3 working days in advance of time when grade and line to be provided by Contractor will be needed.
3. Check and establish exact location of existing facilities prior to construction of new facilities and any connections thereto.
4. In event of discrepancy in data or staking provided by Contractor, request clarification before proceeding with Work.
5. Retain professional land surveyor or civil engineer registered in state of Project who shall perform or supervise engineering surveying necessary for additional construction staking and layout.
6. Maintain complete accurate log of survey Work as it progresses as a Record Document.
7. On request of Contractor, submit documentation.
8. Provide competent employee(s), tools, stakes, and other equipment and materials as Contractor may require to:
   a. Establish control points, lines, and easement boundaries.
   b. Check layout, survey, and measurement Work performed by others.
   c. Measure quantities for payment purposes.
PART 2  PRODUCTS (NOT USED)

PART 3  EXECUTION (NOT USED)

END OF SECTION
PART 1  GENERAL

1.01  GENERAL

A.  Contractor will schedule physical arrangements for meetings throughout progress of the Work, prepare meeting agenda with regular participant input and distribute with written notice of each meeting, preside at meetings, record minutes to include significant proceedings and decisions, and reproduce and distribute copies of minutes within 24 hours after each meeting to participants and parties affected by meeting decisions.

1.02  PRECONSTRUCTION CONFERENCE

A.  Subcontractor shall be prepared to discuss the following subjects, as a minimum:

1.  Subcontractor’s safety plan and representative.
2.  Required schedules.
4.  Sequencing of critical path work items.
5.  Progress payment procedures.
6.  Project changes and clarification procedures.
7.  Use of Site, access, office and storage areas, security and temporary facilities.
8.  Major product delivery and priorities.

B.  Attendees will include:

1.  USEPA’s representatives.
2.  WDNR’s representatives.
3.  Milwaukee County representatives.
4.  MMSD’s representatives.
5.  City of Milwaukee’s representatives.
6.  City of Glendale’s representatives.
7.  Subcontractor’s office representative.
8.  Subcontractor’s resident superintendent.
9.  Subcontractor’s quality control representative.
10. Subcontractors’ representatives whom Subcontractor may desire or Contractor may request to attend.
11. Contractor’s representatives.
12. Others as appropriate.
1.03 PRELIMINARY SCHEDULES REVIEW MEETING
A. As set forth in General Conditions and Section 01 32 00, Construction Progress Documentation.

1.04 PROGRESS MEETINGS
A. Contractor will schedule regular progress meetings at Site, conducted weekly to review the Work progress, Progress Schedule, Schedule of Submittals, Application for Payment, contract modifications, and other matters needing discussion and resolution.

B. Attendees will include:
   1. USEPA’s representative(s), as appropriate.
   2. WDNR’s representatives.
   3. Milwaukee County representatives.
   4. Subcontractor, Sub-Subcontractors, and Suppliers, as appropriate.
   5. Contractor’s representative(s).
   6. Others as appropriate.

1.05 QUALITY CONTROL MEETINGS
A. Scheduled by Contractor on regular basis and as necessary to review test and inspection reports, and other matters relating to quality control of the Work and work of other Contractors.

B. Attendees will include:
   1. Contractor’s representatives.
   2. USEPA’s representative(s), as appropriate.
   3. WDNR’s representatives.
   4. Milwaukee County representatives.
   5. Subcontractor.
   6. Subcontractor’s designated quality control representative.
   7. Sub-Subcontractors and Suppliers, as necessary.

1.06 OTHER MEETINGS
A. In accordance with Contract Documents and as may be required by USEPA, WDNR, Milwaukee County, and Contractor.
PART 2  PRODUCTS (NOT USED)

PART 3  EXECUTION (NOT USED)

END OF SECTION
SECTION 01 32 00
CONSTRUCTION PROGRESS DOCUMENTATION

PART 1  GENERAL

1.01  SUBMITTALS

A.  Informational Submittals:

   1.  Preliminary Progress Schedule: Submit at least 7 days prior to
       preconstruction conference.
   2.  Detailed Progress Schedule:
       a.  Submit initial Detailed Progress Schedule within 30 days after
           Effective Date of the Agreement.
       b.  Submit an Updated Progress Schedule at each update, in
           accordance with Article Detailed Progress Schedule.
   3.  Submit with Each Progress Schedule Submission:
       a.  Subcontractor’s certification that Progress Schedule submission is
           actual schedule being utilized for execution of the Work.
       b.  Progress Schedule: One legible copy.
       c.  Narrative Progress Report: Same number of copies as specified
           for Progress Schedule.
   4.  Prior to final payment, submit a final Updated Progress Schedule.

1.02  PRELIMINARY PROGRESS SCHEDULE

A.  In addition to basic requirements outlined in General Conditions, show a
detailed schedule, beginning with Notice to Proceed, for minimum duration of
90 days, and a summary of balance of Project through Final Completion.

B.  Show activities including, but not limited to the following:

   1.  Notice to Proceed.
   2.  Permits.
   3.  Submittals, with review time. Subcontractor may use Schedule of
       Submittals specified in Section 01 33 00, Submittal Procedures.
   4.  Early procurement activities for long lead equipment and materials.
   5.  Initial Site work.
   7.  Specified Work sequences and construction constraints.
   9.  Owner-furnished products delivery dates or ranges of dates.
  10.  Major structural, mechanical, equipment, electrical, architectural, and
       instrumentation and control Work.
  11.  System startup summary.
12. Project close-out summary.

C. Update Preliminary Progress Schedule monthly as part of progress payment process. Failure to do so may result in the Owner withholding all or part of the monthly progress payment until the Preliminary Progress Schedule is updated in a manner acceptable to Contractor.

D. Format: In accordance with Article Progress Schedule—Bar Chart.

1.03 DETAILED PROGRESS SCHEDULE

A. In addition to requirements of General Conditions, submit Detailed Progress Schedule beginning with Notice to Proceed and continuing through Final Completion.

B. Show the duration and sequences of activities required for complete performance of the Work reflecting means and methods chosen by Subcontractor.

C. When accepted by Contractor, Detailed Progress Schedule will replace Preliminary Progress Schedule and become Baseline Schedule. Subsequent revisions will be considered as Updated Progress Schedules.

D. Format: In accordance with Article Progress Schedule—Bar Chart.

E. Update biweekly to reflect actual progress and occurrences to date, including weather delays.

1.04 PROGRESS SCHEDULE—BAR CHART

A. General: Comprehensive bar chart schedule, generally as outlined in Associated General Contractors of America (AGC) 580, “Construction Project Planning and Scheduling Guidelines.” If a conflict occurs between the AGC publication and this Specification, this Specification shall govern.

B. Format:

1. Unless otherwise approved, white paper, 11-inch by 17-inch sheet size.
2. Title Block: Show name of project and USEPA, date submitted, revision or update number, and name of scheduler.
3. Identify horizontally, across the top of the schedule, the time frame by year, month, and day.
4. Identify each activity with a unique number and a brief description of the Work associated with that activity.
5. Legend: Describe standard and special symbols used.
C. Contents: Identify, in chronological order, those activities reasonably required to complete the Work, including as applicable, but not limited to:

1. Obtaining permits, submittals for early product procurement, and long lead time items.
2. Mobilization and other preliminary activities.
3. Initial Site work.
4. Specified Work sequences, constraints, and Milestones, including Substantial Completion date(s).
5. Subcontract Work.
6. Major equipment design, fabrication, factory testing, and delivery dates.
7. Sitework.
8. Concrete Work.
10. Architectural features Work.
15. Instrumentation and control Work.
16. Other important Work for each major facility.
17. Equipment and system startup and test activities.
18. Project closeout and cleanup.
19. Demobilization.

1.05 PROGRESS OF THE WORK

A. Updated Progress Schedule shall reflect:

1. Progress of Work to within 5 working days prior to submission.
2. Approved changes in Work scope and activities modified since submission.
3. Delays in Submittals or resubmittals, deliveries, or Work.
4. Adjusted or modified sequences of Work.
5. Other identifiable changes.
6. Revised projections of progress and completion.

B. Produce detailed sub-schedules during Project, upon request of USEPA or Contractor, to further define critical portions of the Work such as facility shutdowns.

C. If Subcontractor fails to complete activity by its latest scheduled completion date and this Failure is anticipated to extend Contract Times (or Milestones), Subcontractor shall, within 7 days of such failure, submit a written statement
as to how Subcontractor intends to correct nonperformance and return to acceptable current Progress Schedule. Actions by Subcontractor to complete the Work within Contract Times (or Milestones) will not be justification for adjustment to Contract Price or Contract Times.

D. Contractor may order Subcontractor to increase plant, equipment, labor force or working hours if Subcontractor fails to:

1. Complete a Milestone activity by its completion date.
2. Satisfactorily execute Work as necessary to prevent delay to overall completion of Project, at no additional cost to Contractor.

1.06 NARRATIVE PROGRESS REPORT

A. Format:

1. Organize same as Progress Schedule.
2. Identify, on a cover letter, reporting period, date submitted, and name of author of report.

B. Contents:

1. Number of days worked over the period, work force on hand, construction equipment on hand (including utility vehicles such as pickup trucks, maintenance vehicles, stake trucks).
2. General progress of Work, including a listing of activities started and completed over the reporting period, mobilization/demobilization of subcontractors, and major milestones achieved.
3. Subcontractor’s plan for management of Site (e.g., lay down and staging areas, construction traffic), utilization of construction equipment, buildup of trade labor, and identification of potential Contract changes.
4. Identification of new activities and sequences as a result of executed Contract changes.
5. Documentation of weather conditions over the reporting period, and any resulting impacts to the work.
6. Description of actual or potential delays, including related causes, and the steps taken or anticipated to mitigate their impact.
7. Changes to activity logic.
8. Changes to the critical path.
9. Identification of, and accompanying reason for, any activities added or deleted since the last report.
10. Steps taken to recover the schedule from Subcontractor-caused delays.
1.07 SCHEDULE ACCEPTANCE

A. Contractor’s acceptance will demonstrate agreement that:

1. Proposed schedule is accepted with respect to:
   a. Contract Times, including Final Completion and all intermediate
      Milestones are within the specified times.
   b. Specified Work sequences and constraints are shown as specified.
   c. Specified Owner-furnished Equipment or Material arrival dates,
      or range of dates, are included.
   d. Access restrictions are accurately reflected.
   e. Startup and testing times are as specified.
   f. Submittal review times are as specified.

2. In all other respects, Contractor’s acceptance of Subcontractor’s
   schedule indicates that, in Contractor’s judgment, schedule represents
   reasonable plan for constructing Project in accordance with the Contract
   Documents. Contractor’s review will not make any change in Contract
   requirements. Lack of comment on any aspect of schedule that is not in
   accordance with the Contract Documents will not thereby indicate
   acceptance of that change, unless Subcontractor has explicitly called the
   nonconformance to Contractor’s attention in submittal. Schedule
   remains Subcontractor’s responsibility and Subcontractor retains
   responsibility for performing all activities, for activity durations, and for
   activity sequences required to construct Project in accordance with the
   Contract Documents.

B. Unacceptable Preliminary Progress Schedule:

1. Make requested corrections; resubmit within 10 days.
2. Until acceptable to Contractor as Baseline Progress Schedule, continue
   review and revision process, during which time Subcontractor shall
   update schedule on a monthly basis to reflect actual progress and
   occurrences to date.

C. Unacceptable Detailed Progress Schedule:

1. Make requested corrections; resubmit within 10 days.
2. Until acceptable to Contractor as Baseline Progress Schedule, continue
   review and revision process.

D. Narrative Report: All changes to activity duration and sequences, including
   addition or deletion of activities subsequent to Contractor’s acceptance of
   Baseline Progress Schedule, shall be delineated in Narrative Report current
   with proposed Updated Progress Schedule.
SECTION 01 33 00
SUBMITTAL PROCEDURES

PART 1 GENERAL

1.01 DEFINITIONS

A. Action Submittal: Written and graphic information submitted by Subcontractor that requires Contractor’s approval.

B. Informational Submittal: Information submitted by Subcontractor that requires Contractor’s review and determination that submitted information is in accordance with the Conditions of the Contract.

1.02 PROCEDURES

A. Direct submittals, except samples, in electronic format to Contractor at SharePoint website to be supplied by Contractor.

B. Direct sample submittals to the Contractor at the following, unless specified otherwise.

1. CH2M HILL
   135 South 84th Street, Suite 400
   Milwaukee, WI 53214
   Attn: Margaret Dombrowski

C. Transmittal of Submittal:

1. Subcontractor shall:
   a. Review each submittal and check for compliance with Contract Documents.
   b. Stamp each submittal with uniform approval stamp before submitting to Contractor.
      1) Stamp to include Project name, submittal number, Specification number, Subcontractor’s reviewer name, date of Subcontractor’s approval, and statement certifying submittal has been reviewed, checked, and approved for compliance with Contract Documents.
      2) Contractor will not review submittals that do not bear Subcontractor’s approval stamp and will return them without action.
   2. Complete, sign, and transmit with each submittal package, one Transmittal of Subcontractor’s Submittal form attached at end of this section.
3. Identify each submittal with the following:
   a. Numbering and Tracking System:
      1) Sequentially number each submittal.
      2) Resubmission of submittal shall have original number with sequential alphabetic suffix.
   b. Specification section and paragraph to which submittal applies.
   c. Project title and Contractor’s project number.
   d. Date of transmittal.
   e. Names of Subcontractor or Supplier, and manufacturer as appropriate.

4. Identify and describe each deviation or variation from Contract Documents.

5. All action and information submittals will be submitted electronically on a SharePoint site. SharePoint site address will be provided by Contractor.

D. Format:

   1. Do not base Shop Drawings on reproductions of Contract Documents.
   2. Package submittal information by individual Specification section. Do not combine different Specification sections together in submittal package, unless otherwise directed in Specification.
   3. Present in a clear and thorough manner and in sufficient detail to show kind, size, arrangement, and function of components, materials, and devices, and compliance with Contract Documents.
   4. Index with labeled tab dividers in orderly manner.

E. Timeliness: Schedule and submit in accordance Schedule of Submittals, and requirements of individual Specification sections.

F. Processing Time:

   1. Time for review shall commence on Contractor’s receipt of submittal.
   2. Contractor will act upon Subcontractor’s submittal and transmit response to Subcontractor not later than 30 days after receipt, unless otherwise specified.
   3. Resubmittals will be subject to same review time.
   4. No adjustment of Contract Times or Price will be allowed due to delays in progress of Work caused by rejection and subsequent resubmittals.

G. Resubmittals: Clearly identify each correction or change made.
H. Incomplete Submittals:

1. Contractor will return entire submittal for Subcontractor’s revision if preliminary review deems it incomplete.
2. When any of the following are missing, submittal will be deemed incomplete:
   a. Subcontractor’s review stamp; completed and signed.
   b. Transmittal of Subcontractor’s Submittal; completed and signed.
   c. Insufficient number of copies.

I. Submittals not required by Contract Documents:

1. Will not be reviewed and will be returned stamped “Not Subject to Review.”
2. Contractor will keep one copy and return submittal to Subcontractor.

1.03 ACTION SUBMITTALS

A. Prepare and submit Action Submittals required by individual Specification sections.

B. Shop Drawings:

1. Identify and Indicate:
   a. Applicable Contract Drawing and Detail number, products, units and assemblies, and system or equipment identification or tag numbers.
   b. Equipment and Component Title: Identical to title shown on Drawings.
   c. Critical field dimensions and relationships to other critical features of Work. Note dimensions established by field measurement.
   d. Project-specific information drawn accurately to scale.
2. Manufacturer’s standard schematic drawings and diagrams as follows:
   a. Modify to delete information that is not applicable to the Work.
   b. Supplement standard information to provide information specifically applicable to the Work.
3. Product Data: Provide as specified in individual Specifications.
4. Foreign Manufacturers: When proposed, include following additional information:
   a. Names and addresses of at least two companies that maintain technical service representatives close to Project.
   b. Complete list of spare parts and accessories for each piece of equipment.
C. Samples:

1. Copies: Two, unless otherwise specified in individual Specifications.
2. Preparation: Mount, display, or package Samples in manner specified to facilitate review of quality. Attach label on unexposed side that includes the following:
   a. Manufacturer name.
   b. Model number.
   c. Material.
   d. Sample source.
3. Manufacturer’s Color Chart: Units or sections of units showing full range of colors, textures, and patterns available.
4. Full-size Samples:
   a. Size as indicated in individual Specification section.
   b. Prepared from same materials to be used for the Work.
   c. Cured and finished in manner specified.
   d. Physically identical with product proposed for use.

D. Action Submittal Dispositions: Contractor will review, mark, stamp, and distribute as noted:

1. Approved:
   a. Subcontractor may incorporate product(s) or implement Work covered by submittal.
   b. Distribution:
      1) One file retained by Contractor.
      2) One file furnished to Contractor’s onsite Representative.
      3) One file returned to Subcontractor appropriately annotated.
2. Approved as Noted:
   a. Subcontractor may incorporate product(s) or implement Work covered by submittal, in accordance with Contractor’s notations.
   b. Distribution:
      1) One file retained by Contractor.
      2) One file furnished to Contractor’s onsite Representative.
      3) One file returned to Subcontractor appropriately annotated.
3. Partial Approval, Resubmit as Noted:
   a. Make corrections or obtain missing portions, and resubmit.
   b. Except for portions indicated, Subcontractor may begin to incorporate product(s) or implement Work covered by submittal, in accordance with Contractor’s notations.
   c. Distribution:
      1) One file retained by Contractor.
      2) One file furnished to Contractor’s onsite Representative.
      3) One file returned to Subcontractor appropriately annotated.
4. Revise and Resubmit:
   a. Subcontractor may not incorporate product(s) or implement Work covered by submittal.
   b. Distribution:
      1) One file retained by Contractor.
      2) One file furnished to Contractor’s onsite Representative.
      3) One file returned to Subcontractor appropriately annotated.

1.04 INFORMATIONAL SUBMITTALS

A. General:
   1. Refer to individual Specification sections for specific submittal requirements.
   2. Contractor will review each submittal. If submittal meets conditions of the Contract, Contractor will forward copy to appropriate parties. If Contractor determines submittal does not meet conditions of the Contract and is therefore considered unacceptable, Contractor will retain one file and return one file with review comments to Subcontractor, and require that submittal be corrected and resubmitted.

B. Application for Payment: In accordance with Section 01 29 00, Payment Procedures.

C. Certificates:
   1. General:
      a. Provide notarized statement that includes signature of entity responsible for preparing certification.
      b. Signed by officer or other individual authorized to sign documents on behalf of that entity.
   2. Welding: In accordance with individual Specification sections.
   3. Installer: Prepare written statements on manufacturer’s letterhead certifying installer complies with requirements as specified in individual Specification section.
   4. Material Test: Prepared by qualified testing agency, on testing agency’s standard form, indicating and interpreting test results of material for compliance with requirements.
   5. Certificates of Successful Testing or Inspection: Submit when testing or inspection is required by Laws and Regulations or governing agency or specified in individual Specification sections.

D. Construction Photographs: In accordance with Section 01 31 13, Project Coordination, and as may otherwise be required in Contract Documents.
E. Closeout Submittals: In accordance with Section 01 77 00, Closeout Procedures.

F. Subcontractor-design Data (related to temporary construction):
   1. Written and graphic information.
   2. List of assumptions.
   3. List of performance and design criteria.
   4. Summary of loads or load diagram, if applicable.
   5. Calculations.
   6. List of applicable codes and regulations.
   7. Name and version of software.
   8. Information requested in individual Specification section.

G. Manufacturer’s Instructions: Written or published information that documents manufacturer’s recommendations, guidelines, and procedures in accordance with individual Specification section.

H. Schedules:
   1. Schedule of Submittals: Prepare separately or in combination with Progress Schedule as specified in Section 01 32 00, Construction Progress Documentation.
      a. Show for each, at a minimum, the following:
         1) Specification section number.
         2) Identification by numbering and tracking system as specified under Paragraph Transmittal of Submittal.
         3) Estimated date of submission to Contractor, including reviewing and processing time.
      b. On a weekly and monthly basis, submit updated schedule to Contractor if changes have occurred or resubmittals are required.
   2. Schedule of Values: In accordance with Section 01 29 00, Payment Procedures.
   3. Schedule of Estimated Progress Payments: In accordance with Section 01 29 00, Payment Procedures.

I. Special Guarantee: Supplier’s written guarantee as required in individual Specification sections.

J. Statement of Qualification: Evidence of qualification, certification, or registration as required in Contract Documents to verify qualifications of professional land surveyor, engineer, materials testing laboratory, specialty Subcontractor, trade, Specialist, consultant, installer, and other professionals.
K. Submittals Required by Laws, Regulations, and Governing Agencies:

1. Promptly submit promptly notifications, reports, certifications, payrolls, and otherwise as may be required, directly to the applicable federal, state, or local governing agency or their representative.
2. Transmit to Contractor one copy of correspondence and transmittals (to include enclosures and attachments) between Subcontractor and governing agency.

L. Test, Evaluation, and Inspection Reports:

1. General: Shall contain signature of person responsible for test or report.
2. Factory:
   a. Identification of product and Specification section, type of inspection or test with referenced standard or code.
   b. Date of test, Project title and number, and name and signature of authorized person.
   c. Test results.
   d. If test or inspection deems material or equipment not in compliance with Contract Documents, identify corrective action necessary to bring into compliance.
   e. Provide interpretation of test results, when requested by Contractor.
   f. Other items as identified in individual Specification sections.
3. Field:
   a. As a minimum, include the following:
      1) Project title and number.
      2) Date and time.
      3) Record of temperature and weather conditions.
      4) Identification of product and Specification section.
      5) Type and location of test, Sample, or inspection, including referenced standard or code.
      6) Date issued, testing laboratory name, address, and telephone number, and name and signature of laboratory inspector.
      7) If test or inspection deems material or equipment not in compliance with Contract Documents, identify corrective action necessary to bring into compliance.
      8) Provide interpretation of test results, when requested by Contractor.
      9) Other items as identified in individual Specification sections.
1.05 SUPPLEMENTS

A. The supplements listed below, following “End of Section”, are part of this Specification.

1. Form: Transmittal of Subcontractor’s Submittal.

Subcontractor (Authorized Signature)
PART 1  GENERAL

1.01  REFERENCE TO STANDARDS AND SPECIFICATIONS OF TECHNICAL SOCIETIES

A.  Reference to standards and specifications of technical societies and reporting and resolving discrepancies associated therewith shall be as provided in Article 3 of the General Conditions, and as may otherwise be required herein and in the individual Specification sections.

B.  Work specified by reference to published standard or specification of government agency, technical association, trade association, professional society or institute, testing agency, or other organization shall meet requirements or surpass minimum standards of quality for materials and workmanship established by designated standard or specification.

C.  Where so specified, products or workmanship shall also meet or exceed additional prescriptive or performance requirements included within Contract Documents to establish a higher or more stringent standard of quality than required by referenced standard.

D.  Where two or more standards are specified to establish quality, product and workmanship shall meet or exceed requirements of most stringent.

E.  Where both a standard and a brand name are specified for a product in Contract Documents, proprietary product named shall meet or exceed requirements of specified reference standard.

F.  Copies of standards and specifications of technical societies:

   1.  Copies of applicable referenced standards have not been bound in these Contract Documents.
   2.  Where copies of standards are needed by Subcontractor, obtain a copy or copies directly from publication source and maintain in an orderly manner at the Site as Work Site records, available to Contractor’s personnel, Subcontractors, and Owner.
1.02 ABBREVIATIONS

A. Following is a list of abbreviations to which references may be made in the Contract Documents.

1. AA  Aluminum Association
2. AABC  Associated Air Balance Council
3. AAMA  American Architectural Manufacturers Association
4. AASHTO  American Association of State Highway and Transportation Officials
5. ABMA  American Bearing Manufacturers’ Association
6. ACI  American Concrete Institute
7. AEIC  Association of Edison Illuminating Companies
8. AGA  American Gas Association
9. AGMA  American Gear Manufacturers’ Association
10. AI  Asphalt Institute
11. AISC  American Institute of Steel Construction
12. AISI  American Iron and Steel Institute
13. AITC  American Institute of Timber Construction
14. ALS  American Lumber Standards
15. AMCA  Air Movement and Control Association
16. ANSI  American National Standards Institute
17. APA  APA – The Engineered Wood Association
18. API  American Petroleum Institute
19. APWA  American Public Works Association
20. AHRI  Air-Conditioning, Heating, and Refrigeration Institute
21. ASA  Acoustical Society of America
22. ASABE  American Society of Agricultural and Biological Engineers
23. ASCE  American Society of Civil Engineers
25. ASME  American Society of Mechanical Engineers
26. ASNT  American Society for Nondestructive Testing
27. ASSE  American Society of Sanitary Engineering
28. ASTM  ASTM International
29. AWI  Architectural Woodwork Institute
30. AWPA  American Wood Preservers’ Association
31. AWPI  American Wood Preservers’ Institute
32. AWS  American Welding Society
33. AWWA  American Water Works Association
34. BHMA  Builders Hardware Manufacturers’ Association

PART 3  EXECUTION (NOT USED)

END OF SECTION
SECTION 01 43 33
MANUFACTURERS’ FIELD SERVICES

PART 1 GENERAL

1.01 DEFINITIONS

A. Person-Day: One person for 8 hours within regular Subcontractor working hours.

1.02 SUBMITTALS

A. Informational Submittals:

1. Training Schedule: Submit, in accordance with requirements of this Specification, not less than 21 days prior to start of equipment installation and revise as necessary for acceptance.

2. Lesson Plan: Submit, in accordance with requirements of this Specification, proposed lesson plan not less than 21 days prior to scheduled training and revise as necessary for acceptance.

3. Training Session Recordings: Furnish Contractor with two complete sets of recordings fully indexed and cataloged with printed label stating session and date recorded.

1.03 QUALIFICATION OF MANUFACTURER’S REPRESENTATIVE

A. Authorized representative of the manufacturer, factory trained, and experienced in the technical applications, installation, operation, and maintenance of respective equipment, subsystem, or system, with full authority by the equipment manufacturer to issue the certifications required of the manufacturer. Additional qualifications may be specified in the individual specification section.

B. Representative subject to acceptance by Contractor. No substitute representatives will be allowed unless prior written approval by such has been given.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 FULFILLMENT OF SPECIFIED MINIMUM SERVICES

A. Furnish manufacturers’ services, when required by an individual specification section, to meet the requirements of this section.
B. Where time is necessary in excess of that stated in the Specifications for manufacturers’ services, or when a minimum time is not specified, time required to perform specified services shall be considered incidental.

C. Schedule manufacturer’s services to avoid conflict with other onsite testing or other manufacturers’ onsite services.

D. Determine, before scheduling services, that conditions necessary to allow successful testing have been met.

E. Only those days of service approved by Contractor will be credited to fulfill specified minimum services.

F. When specified in individual specification sections, manufacturer’s onsite services shall include:

1. Assistance during product (system, subsystem, or component) installation to include observation, guidance, instruction of Subcontractor’s assembly, erection, installation or application procedures.
2. Inspection, checking, and adjustment as required for product (system, subsystem, or component) to function as warranted by manufacturer and necessary to furnish Manufacturer’s Certificate of Proper Installation.
3. Providing, on a daily basis, copies of manufacturers’ representatives field notes and data to Contractor.
4. Revisiting the Site as required to correct problems and until installation and operation are acceptable to Contractor.
5. Resolution of assembly or installation problems attributable to or associated with respective manufacturer’s products and systems.
6. Assistance during functional and performance testing, and facility startup and evaluation.
7. Training of Subcontractor’s personnel in the operation and maintenance of respective product as required.

3.02 MANUFACTURER’S CERTIFICATE OF COMPLIANCE

A. When so specified, a Manufacturer’s Certificate of Compliance, a copy of which is attached to this section, shall be completed in full, signed by entity supplying the product, material, or service, and submitted prior to shipment of product or material or execution of the services.

B. Contractor may permit use of certain materials or assemblies prior to sampling and testing if accompanied by accepted certification of compliance.
C. Such form shall certify proposed product, material, or service complies with that specified. Attach supporting reference data, affidavits, and certifications as appropriate.

D. May reflect recent or previous test results on material or product, if acceptable to Contractor.

3.03 MANUFACTURER’S CERTIFICATE OF PROPER INSTALLATION

A. When so specified, a Manufacturer’s Certificate of Proper Installation form, a copy of which is attached to this section, shall be completed and signed by equipment manufacturer’s representative.

B. Such form shall certify signing party is a duly authorized representative of manufacturer, is empowered by manufacturer to inspect, approve, and operate their equipment and is authorized to make recommendations required to ensure equipment is complete and operational.

3.04 TRAINING

A. General:

1. Furnish manufacturers’ representatives for detailed classroom and hands-on training to Contractor’s personnel on operation and maintenance of specified product (system, subsystem, component) and as may be required in applicable Specifications.

2. Furnish trained, articulate personnel to coordinate and expedite training, to be present during training coordination meetings with Subcontractor, and familiar with operation and maintenance.

3. Manufacturer’s representative shall be familiar with facility operation and maintenance requirements as well as with specified equipment.

4. Furnish complete training materials, to include operation and maintenance data, to be retained by each trainee.

B. Training Schedule:

1. List specified equipment and systems that require training services and show:
   a. Respective manufacturer.
   b. Estimated dates for installation completion.
   c. Estimated training dates.

2. Allow for multiple sessions when several shifts are involved.
3. Adjust schedule to ensure training of appropriate personnel as deemed necessary by Contractor, and to allow full participation by manufacturers’ representatives. Adjust schedule for interruptions in operability of equipment.

C. Prestartup Training:

1. Coordinate training sessions with Contractor and Manufacturer’s Representatives, and with submission of operation and maintenance manuals.
2. Complete at least 14 days prior to beginning of facility startup.

D. Post-startup Training: If required in the Specifications, furnish and coordinate training of Contractor’s operating personnel by respective manufacturer’s representatives.

3.05 SUPPLEMENTS

A. The supplements listed below, following “End of Section”, are part of this Specification.

1. Form: Manufacturer’s Certificate of Compliance.
2. Form: Manufacturer’s Certificate of Proper Installation.

END OF SECTION
MANUFACTURER'S CERTIFICATE OF COMPLIANCE

OWNER: USEPA
PRODUCT, MATERIAL, OR SERVICE SUBMITTED: 
PROJECT NAME:
PROJECT NO:

Comments:

I hereby certify that the above-referenced product, material, or service called for by the Contract for the named Project will be furnished in accordance with all applicable requirements. I further certify that the product, material, or service are of the quality specified and conform in all respects with the Contract requirements, and are in the quantity shown.

Date of Execution: ________________, 20___

Manufacturer's Authorized Representative (print): ________________________________

(Authorized Signature)
MANUFACTURER’S CERTIFICATE OF PROPER INSTALLATION

OWNER: USEPA _______________  EQPT SERIAL NO: _______________
EQPT TAG NO: _______________  EQPT/SYSTEM: _______________
PROJECT NO: _______________  SPEC. SECTION: _______________

I hereby certify that the above-referenced equipment/system has been:

☐ Installed in accordance with Manufacturer’s recommendations.
☐ Inspected, checked, and adjusted.
☐ Serviced with proper initial lubricants.
☐ Electrical and mechanical connections meet quality and safety standards.
☐ All applicable safety equipment has been properly installed.
☐ Functional tests.
☐ System has been performance tested, and meets or exceeds specified performance requirements. (When complete system of one manufacturer)

Note: Attach any performance test documentation from manufacturer.

Comments: ____________________________________________________________

______________________________________________________________

I, the undersigned Manufacturer’s Representative, hereby certify that I am (i) a duly authorized representative of the manufacturer, (ii) empowered by the manufacturer to inspect, approve, and operate their equipment and (iii) authorized to make recommendations required to ensure equipment furnished by the manufacturer is complete and operational, except as may be otherwise indicated herein. I further certify that all information contained herein is true and accurate.

Date: __________________________, 20___

SECTION 01 45 16.13
SUBCONTRACTOR QUALITY CONTROL

PART 1 GENERAL

1.01 REFERENCES

A. The following is a list of standards which may be referenced in this Section:

   1. ASTM International (ASTM):

1.02 DEFINITIONS

A. Subcontractor Quality Control (SQC): The means by which Subcontractor ensures that the construction, to include that performed by subcontractors and suppliers, complies with the requirements of the Contract.

1.03 SUBMITTALS

A. Informational Submittals:

   1. SQC Plan: Submit, not later than 30 days after receipt of Notice to Proceed.
   2. SQC Report: Submit, weekly, an original and one copy in report form.

1.04 CONTRACTOR’S QUALITY ASSURANCE

A. All Work is subject to Contractor’s quality assurance inspection and testing at all locations and at all reasonable times before acceptance to ensure strict compliance with the terms of the Contract Documents.

B. Contractor’s quality assurance inspections and tests are for the sole benefit of Contractor and do not:

   1. Relieve Subcontractor of responsibility for providing adequate quality control measures;
   2. Relieve Subcontractor of responsibility for damage to or loss of the material before acceptance;
   3. Constitute or imply acceptance; or
   4. Affect the continuing rights of USEPA after acceptance of the completed Work.
C. The presence or absence of a quality assurance inspector does not relieve Subcontractor from any Contract requirement.

D. Promptly furnish all facilities, labor, and material reasonably needed for performing such safe and convenient inspections and tests as may be required by Contractor.

E. Contractor may charge Subcontractor for any additional cost of inspection or test when Work is not ready at the time specified by Subcontractor for inspection or test, or when prior rejection makes re-inspection or retest necessary. Quality assurance inspections and tests will be performed in a manner that will not unnecessarily delay the Work.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 GENERAL

A. Maintain an adequate inspection system and perform such inspections as will ensure that the Work conforms to the Contract Documents.

B. Maintain complete inspection records and make them available at all times to USEPA, WDNR, Milwaukee County and Contractor.

C. The quality control system shall consist of plans, procedures, and organization necessary to produce an end product that complies with the Contract Documents. The system shall cover all construction and demolition operations, both onsite and offsite, including Work by subcontractors, fabricators, suppliers and purchasing agents, and shall be keyed to the proposed construction sequence.

3.02 COORDINATION MEETING

A. After the Preconstruction Conference, but before start of construction, and prior to acceptance of the SQC Plan, schedule a meeting with USEPA, WDNR, Milwaukee County and Contractor to discuss the quality control system.

B. Develop a mutual understanding of the system details, including the forms for recording the SQC operations, control activities, testing, administration of the system for both onsite and offsite Work, and the interrelationship of Subcontractor’s management and control with the Contractor’s Quality Assurance.
C. There may be occasions when subsequent conferences may be called by either party to reconfirm mutual understandings and/or address deficiencies in the SQC system or procedures that may require corrective action by Subcontractor.

3.03 QUALITY CONTROL ORGANIZATION

A. SQC System Manager:
   1. Designate an individual within Subcontractor’s organization who will be responsible for overall management of SQC and have the authority to act in SQC matters for the Subcontractor.
   2. SQC System Manager may perform other duties on the Project.
   3. SQC System Manager shall be an experienced construction person, with a minimum of 3 years construction experience on similar type Work.
   4. SQC System Manager shall report to the Subcontractor’s project manager or someone higher in the organization. Project manager in this context shall mean the individual with responsibility for the overall quality and production management of the Project.
   5. SQC System Manager shall be onsite during construction; periods of absence may not exceed 2 weeks at any one time.
   6. Identify an alternate for SQC System Manager to serve with full authority during the System Manager’s absence. The requirements for the alternate will be the same as for designated SQC System Manager.

B. SQC Staff:
   1. Designate a SQC staff, available at the Site at all times during progress, with complete authority to take any action necessary to ensure compliance with the Contract. SQC staff members shall be subject to acceptance by Contractor.
   2. SQC staff shall take direction from SQC System Manager in matters pertaining to QC.
   3. SQC staff must be of sufficient size to ensure adequate QC coverage of Work phases, work shifts, and work crews involved in the construction. These personnel may perform other duties, but must be fully qualified by experience and technical training to perform their assigned QC responsibilities and must be allowed sufficient time to carry out these responsibilities.
   4. The actual strength of the SQC staff may vary during any specific Work period to cover the needs of the Project. Add additional staff when necessary for a proper SQC organization.
C. Organizational Changes: Obtain Contractor’s acceptance before replacing any member of the SQC staff. Requests for changes shall include name, qualifications, duties, and responsibilities of the proposed replacement.

3.04 QUALITY CONTROL PHASING

A. SQC shall include at least three phases of control to be conducted by SQC System Manager for all definable features of Work, as follows:

1. Preparatory Phase:
   a. Notify Contractor at least 48 hours in advance of beginning any of the required action of the preparatory phase.
   b. This phase shall include a meeting conducted by the SQC System Manager and attended by the superintendent, other SQC personnel (as applicable), and the foreman responsible for the definable feature. The SQC System Manager shall instruct applicable SQC staff as to the acceptable level of workmanship required in order to meet Contract requirements.
   c. Document the results of the preparatory phase meeting by separate minutes prepared by the SQC System Manager and attached to the QC report.
   d. Perform prior to beginning Work on each definable feature of Work:
      1) Review applicable Contract Specifications.
      2) Review applicable Contract Drawings.
      3) Verify that all materials and/or equipment have been tested, submitted, and approved.
      4) Verify that provisions have been made to provide required control inspection and testing.
      5) Examine the Work area to verify that all required preliminary Work has been completed and is in compliance with the Contract.
      6) Perform a physical examination of required materials, equipment, and sample Work to verify that they are on hand, conform to approved Shop Drawing or submitted data, and are properly stored.
      7) Review the appropriate activity hazard analysis to verify safety requirements are met.
      8) Review procedures for constructing the Work, including repetitive deficiencies.
      9) Document construction tolerances and workmanship standards for that phase of the Work.
     10) Check to verify that the plan for the Work to be performed, if so required, has been accepted by Contractor.
2. Initial Phase:
   a. Accomplish at the beginning of a definable feature of Work:
      1) Notify Contractor at least 48 hours in advance of beginning the initial phase.
      2) Perform prior to beginning Work on each definable feature of Work:
         a) Review minutes of the preparatory meeting.
         b) Check preliminary Work to verify compliance with Contract requirements.
         c) Verify required control inspection and testing.
         d) Establish level of workmanship and verify that it meets minimum acceptable workmanship standards. Comparison with sample panels is appropriate.
         e) Resolve all differences.
         f) Check safety to include compliance with and upgrading of the safety plan and activity hazard analysis. Review the activity analysis with each worker.
      3) Separate minutes of this phase shall be prepared by the SQC System Manager and attached to the QC report. Exact location of initial phase shall be indicated for future reference and comparison with follow-up phases.
      4) The initial phase should be repeated for each new crew to work onsite, or any time acceptable specified quality standards are not being met.

3. Follow-up Phase:
   a. Perform daily checks to verify continuing compliance with Contract requirements, including control testing, until completion of the particular feature of Work.
   b. Daily checks shall be made a matter of record in the SQC documentation and shall document specific results of inspections for all features of Work for the day or shift.
   c. Conduct final follow-up checks and correct all deficiencies prior to the start of additional features of Work that will be affected by the deficient Work. Constructing upon or concealing nonconforming Work will not be allowed.

4. Additional Preparatory and Initial Phases: Additional preparatory and initial phases may be conducted on the same definable features of Work as determined by Contractor if the quality of ongoing Work is unacceptable; or if there are changes in the applicable QC staff or in the onsite production supervision or work crew; or if work on a definable feature is resumed after a substantial period of inactivity, or if other problems develop.
3.05 CONTRACTOR QUALITY CONTROL PLAN

A. General:

1. Plan shall identify personnel, procedures, control, instructions, test, records, and forms to be used.
2. An interim plan for the first 30 days of operation will be considered.
3. Construction will be permitted to begin only after acceptance of the SQC Plan or acceptance of an interim plan applicable to the particular feature of Work to be started.
4. Work outside of the features of Work included in an accepted interim plan will not be permitted to begin until acceptance of a SQC Plan or another interim plan containing the additional features of Work to be started.

B. Content:

1. Plan shall cover the intended SQC organization for the entire Contract and shall include the following, as a minimum:
   a. Organization: Description of the quality control organization, including a chart showing lines of authority and acknowledgment that the SQC staff will implement the three-phase control system (see Paragraph QC Phasing) for all aspects of the Work specified.
   b. SQC Staff: The name, qualifications (in resume format), duties, responsibilities, and authorities of each person assigned a QC function.
   c. Letters of Authority: A copy of a letter to the SQC System Manager signed by an authorized official of the firm, describing the responsibilities and delegating sufficient authorities to adequately perform the functions of the SQC System Manager, including authority to stop Work which is not in compliance with the Contract. The SQC System Manager shall issue letters of direction to all other various quality control representatives outlining duties, authorities and responsibilities. Copies of these letters will also be furnished to Contractor.
   d. Submittals: Procedures for scheduling, reviewing, certifying, and managing submittals, including those of subcontractors, offsite fabricators, suppliers and purchasing agents.
   e. Testing: Control, verification and acceptance testing procedures for each specific test to include the test name, frequency, specification paragraph containing the test requirements, the personnel and laboratory responsible for each type of test, and an estimate of the number of tests required.
f. Procedures for tracking preparatory, initial, and follow-up control phases and control, verification, and acceptance tests, including documentation.

g. Procedures for tracking deficiencies from identification through acceptable corrective action. These procedures will establish verification that identified deficiencies have been corrected.

h. Reporting procedures, including proposed reporting formats; include a copy of the SQC report form.

C. Acceptance of Plans: Acceptance of the Subcontractor’s basic and addendum SQC plans is required prior to the start of construction. Acceptance is conditional and will be predicated on satisfactory performance during the construction. Contractor reserves the right to require Subcontractor to make changes in the SQC plan and operations including removal of personnel, as necessary, to obtain the quality specified.

D. Notification of Changes: After acceptance of the SQC plan, Subcontractor shall notify Contractor, in writing, a minimum of 7 calendar days prior to any proposed change. Proposed changes are subject to acceptance by Contractor.

3.06 SUBCONTRACTOR QUALITY CONTROL REPORT

A. As a minimum, prepare a SQC report for every 7 calendar days. Account for all days throughout the life of the Contract. Reports shall be signed and dated by SQC System Manager. Include copies of test reports and copies of reports prepared by QC staff.

B. Maintain current records of quality control operations, activities, and tests performed, including the Work of subcontractors and suppliers.

C. Records shall be on an acceptable form and shall be a complete description of inspections, the results of inspections, daily activities, tests, and other items, including but not limited to the following:

1. Subcontractor/sub-subcontractor and their areas of responsibility.
2. Operating plant/equipment with hours worked, idle, or down for repair.
3. Work performed today, giving location, description, and by whom. When a network schedule is used, identify each phase of Work performed each day by activity number.
4. Test and/or control activities performed with results and references to specifications/plan requirements. The control phase should be identified (Preparatory, Initial, Follow-up). List deficiencies noted along with corrective action.
5. Material received with statement as to its acceptability and storage.
6. Identify submittals reviewed, with Contract reference, by whom, and action taken.
7. Offsite surveillance activities, including actions taken.
8. Job safety evaluations stating what was checked, results, and instructions or corrective actions.
9. List instructions given/received and conflicts in Drawings and/or Specifications.
10. Contractor’s verification statement.
11. Indicate a description of trades working on the Project; the number of personnel working; weather conditions encountered; and any delays encountered.
12. These records shall cover both conforming and deficient features and shall include a statement that equipment and materials incorporated in file work and workmanship comply with the Contract.

3.07 SUBMITTAL QUALITY CONTROL

A. Submittals shall be as specified in Section 01 33 00, Submittal Procedures. The SQC organization shall be responsible for certifying that all submittals are in compliance with the Contract requirements. Contractor will furnish copies of test report forms upon request by Subcontractor. Subcontractor may use other forms as approved.

3.08 TESTING QUALITY CONTROL

A. Testing Procedure:

1. Perform tests specified or required to verify that control measures are adequate to provide a product which conforms to Contract requirements. Perform the following activities and record the following data:
   a. Verify testing procedures comply with contract requirements.
   b. Verify facilities and testing equipment are available and comply with testing standards.
   c. Check test instrument calibration data against certified standards.
   d. Verify recording forms and test identification control number system, including all of the test documentation requirements, have been prepared.
   e. Documentation:
      1) Record results of all tests taken, both passing and failing, on the SQC report for the date taken.
      2) Include specification paragraph reference, location where tests were taken, and the sequential control number identifying the test.
      3) Actual test reports may be submitted later, if approved by Contractor, with a reference to the test number and date taken.
4) Provide directly to Contractor an information copy of tests performed by an offsite or commercial test facility. Test results shall be signed by an engineer registered in the state where the tests are performed.

5) Failure to submit timely test reports, as stated, may result in nonpayment for related Work performed and disapproval of the test facility for this Contract.

B. Testing Laboratories: Laboratory facilities, including personnel and equipment, utilized for testing soils, concrete, asphalt and steel shall meet criteria detailed in ASTM D3740 and ASTM E329, and be accredited by the American Association of Laboratory Accreditation (AALA), National Institute of Standards and Technology (NIST), National Voluntary Laboratory Accreditation Program (NVLAP), the American Association of State Highway and Transportation Officials (AASHTO), or other approved national accreditation authority. Personnel performing concrete testing shall be certified by the American Concrete Institute (ACI).

3.09 COMPLETION INSPECTION

A. SQC System Manager shall conduct an inspection of the Work at the completion of all Work or any milestone established by a completion time stated in the Contract.

B. Punchlist:

1. SQC System Manager shall develop a punchlist of items which do not conform to the Contract requirements.
2. Include punchlist in the SQC report, indicating the estimated date by which the deficiencies will be corrected.
3. SQC System Manager or staff shall make a second inspection to ascertain that all deficiencies have been corrected and so notify the Contractor.
4. These inspections and any deficiency corrections required will be accomplished within the time stated for completion of the entire Work or any particular increment thereof if the Project is divided into increments by separate completion dates.

END OF SECTION
SECTION 01 50 00
TEMPORARY FACILITIES AND CONTROLS

PART 1 GENERAL

1.01 REFERENCES

A. The following is a list of standards which may be referenced in this section:

1.02 SUBMITTALS

A. Informational Submittals:

1. Copies of permits and approvals for construction as required by Laws and Regulations and governing agencies. Permits to be obtained by Contractor include:
   a. USACE Section 404/401.
   b. WDNR Chapter 30.
   c. WDNR WPDES Individual Wastewater Permit.
   d. WDNR WPDES General Stormwater Permit.
   e. City of Milwaukee Stormwater Permit.
   f. City of Glendale Stormwater Permit.
   g. Milwaukee County Construction / Right of Entry Permit.

2. Temporary Utility Submittals: Electric power supply and distribution plans.

3. Temporary Construction Submittals:
   a. Access Roads: Routes, cross-sections, and drainage facilities.
   b. Parking area plans.
   c. Subcontractor’s field office, storage yard, and storage building plans, including gravel surfaced area.
   d. Fencing and protective barrier locations and details.
e. Staging and a contamination area location plan.
f. Traffic and Routing Plan: As specified herein, and proposed revisions thereto.

4. Temporary Control Submittals:
   a. Dust control plan.
   b. Noise control plan.
   c. Plan for disposal of waste materials and intended haul routes.

1.03 MOBILIZATION

A. Mobilization shall include, but not be limited to, these principal items:

1. Obtaining required permits.
2. Moving Subcontractor’s field office and equipment required for first month operations onto Site.
3. Installing temporary construction power, wiring, and lighting facilities.
4. Providing onsite communication facilities, including telephones.
5. Providing onsite sanitary facilities and potable water facilities as specified and as required by Laws and Regulations, and governing agencies.
6. Arranging for and erection of Subcontractor’s work and staging areas.
7. Posting OSHA required notices and establishing safety programs and procedures.
8. Having Subcontractor’s superintendent at Site full time.

B. Use area designated for Subcontractor’s temporary facilities as shown on Drawings.

1.04 PROTECTION OF WORK AND PROPERTY

A. Keep Contractor informed of serious onsite accidents and related claims.

B. Use of Explosives: No blasting or use of explosives will be allowed onsite.

C. Subcontractor shall provide 24-hour site security.

1.05 VEHICULAR TRAFFIC

A. Traffic Routing Plan: Show sequences of construction affecting use of roadways, time required for each phase of the Work, provisions for decking over excavations and phasing of operations to provide necessary access, and plans for signing, barricading, and striping to provide passages for pedestrians and vehicles.
PART 2      PRODUCTS

2.01 CONTRACTOR’S FIELD OFFICE

A. Furnish equipment specified for exclusive use of Contractor and its representatives.

B. Ownership of equipment furnished under this article will remain, unless otherwise specified, that of Subcontractor.

C. Equipment furnished shall be new or like new in appearance and function.

D. Minimum Features:

1. 110-volt lighting and wall plugs.
2. Fluorescent ceiling lights.
3. Electric heating and self-contained air conditioning unit, properly sized for Project locale and conditions. Provide ample electric power to operate installed systems.
4. Railed stairways and landings at entrances.
5. Sign on entrance door reading CH2M HILL, INC., letter height 4 inches minimum.
6. Exterior Door(s):
   a. Number: Two.
   b. Type: Solid core.
   c. Lock(s): Cylindrical; keyed alike.
7. Number of Windows: At least seven.
8. Minimum Interior Height: 8 feet.

E. Trailer Type Mobile Structure: One.

F. Floor Space: Minimum 720 square feet.

G. All-metal frame; all-metal exterior, sides, and roof; and insulated double walls, floor, and roof.

H. Security guard screens on windows.

I. Number of Private Offices: Two, 12 feet by 12 feet.

J. Storage Room: One, 6 feet by 8 feet, with door with cylinder lock, keyed differently than exterior door locks. Provide two sets of keys.

K. Shelving in Storage Room: 72 linear feet, 18 inches deep.

L. Blinds or drapes on windows.
M. Work Surface: Two, one in each office, 30 inches by 12 feet at desk height of 29 inches from floor.

N. Office Equipment—General:

1. Bottled Water Service: One, with cooler capable of producing cold water.
2. Paper Towel Dispenser with Towels: One.
3. Desk Chair: Six, with the following characteristics:
   a. Five castor base.
   b. Adjustable height.
   c. Swivels.
   d. Locking Back.
   e. Adjustable seat back for height and angle.
   f. Adjustable arms.
4. Folding Table: Two, 36 inches by 96 inches.
5. Steel Folding Chairs: Ten.
6. Drafting Table: One, 3 feet by 6 feet.
7. Drafting Stool: One, swivel, with back support.
9. Dry Erase Whiteboard: One, 48 inches wide by 72 inches long.
10. Dry Erase Markers: Twelve, various colors with two erasers.
11. First-Aid Kit: One.
12. Tri-Class (ABC), Dry Chemical Fire Extinguisher, 10-Pound: Three.
13. Telephone: Two, with one intercom line and two incoming/outgoing lines, Touch-Tone, with conference speaker, and 12-foot coiled handset cord.
15. Facsimile (Fax) Machine: Brother 1030E with connecting cables.
16. Konica Minolta Bizhub 420 Digital Copier System (b/w only):
   b. Image Controller.
   c. 50-Sheet Stapling/Sorting Finisher.
   d. Large Capacity Paper Tray.
   e. Super G3 Fax Kit.
   f. Power Line/Fax Line Surge Protection.
   g. Include 2 Black Toners.

2.02 USEPA/WDNR’S FIELD OFFICE

A. Furnish equipment specified for exclusive use of Contractor and its representatives.

B. Ownership of equipment furnished under this article will remain, unless otherwise specified, that of Subcontractor.
C. Equipment furnished shall be new or like new in appearance and function.

D. Minimum Features:
   1. 110-volt lighting and wall plugs.
   2. Fluorescent ceiling lights.
   3. Electric heating and self-contained air conditioning unit, properly sized for Project locale and conditions. Provide ample electric power to operate installed systems.
   4. Railed stairways and landings at entrances.
   5. Sign on entrance door reading CH2M HILL, INC., letter height 4 inches minimum.
   6. Exterior Door(s):
      a. Number: Two.
      b. Type: Solid core.
      c. Lock(s): Cylindrical; keyed alike.
   7. Number of Windows: At least seven.
   8. Minimum Interior Height: 8 feet.

E. Trailer Type Mobile Structure: One.

F. Floor Space: Minimum 720 square feet.

G. All-metal frame; all-metal exterior, sides, and roof; and insulated double walls, floor, and roof.

H. Security guard screens on windows.

I. Number of Private Offices: Two, 12 feet by 12 feet.

J. Storage Room: One, 6 feet by 8 feet, with door with cylinder lock, keyed differently than exterior door locks. Provide two sets of keys.

K. Shelving in Storage Room: 72 linear feet, 18 inches deep.

L. Blinds or drapes on windows.

M. Work Surface: Two, one in each office, 30 inches by 12 feet at desk height of 29 inches from floor.

N. Office Equipment—General:
   1. Bottled Water Service: One, with cooler capable of producing cold water.
   2. Paper Towel Dispenser with Towels: One.
   3. Desk Chair: Six, with the following characteristics:
a. Five castor base.
b. Adjustable height.
c. Swivels.
d. Locking Back.
e. Adjustable seat back for height and angle.
f. Adjustable arms.
4. Folding Table: Two, 36 inches by 96 inches.
5. Steel Folding Chairs: Ten.
6. Drafting Table: One, 3 feet by 6 feet.
7. Drafting Stool: One, swivel, with back support.
9. Dry Erase Whiteboard: One, 48 inches wide by 72 inches long.
10. Dry Erase Markers: Twelve, various colors with two erasers.
11. First-Aid Kit: One.
12. Tri-Class (ABC), Dry Chemical Fire Extinguisher, 10-Pound: Three.
13. Telephone: Two, with one intercom line and two incoming/outgoing lines, Touch-Tone, with conference speaker, and 12-foot coiled handset cord.

2.03 PROJECT SIGN

   A. Provide and maintain one, 8-foot-wide by 4-foot-high sign constructed of 3/4-inch exterior high density overlaid plywood. Sign shall bear name of Project, Owner, Subcontractor, Contractor, and other participating agencies. Lettering shall be blue applied on a white background by an experienced sign painter. Paint shall be exterior type enamel. Information to be included will be provided by Contractor.

PART 3 EXECUTION

3.01 CONTRACTOR’S AND USEPA/WDNR’S FIELD OFFICE

   A. Locate where directed by Contractor; level, block, tie down, skirt, provide stairways, and relocate when necessary and approved. Construct on proper foundations, and provide proper surface drainage and connections for utility services.

   B. Provide minimum 100 square feet of gravel or crushed rock base, minimum depth of 4 inches, at each entrance.

   C. Raise grade under field office, as necessary, to elevation adequate to avoid flooding.
D. Provide sanitary facilities in compliance with state and local health authorities.

E. Exterior Door Keys: Furnish two sets of keys.

F. Telephone:
   1. Provide number of incoming lines equal to that specified for telephone type.
   2. Provide separate analog fax line.
   3. Provide appropriate jacks; locate as directed by Contractor.
   4. Provide wiring necessary for complete telephone system.

G. Telecommunications:
   1. Provide broad band internet connection with minimum of five live portable computer (PC) ports.
   2. Provide appropriate jacks, CAT-5 patch cords, wiring, and equipment required for a complete telecommunications system.
   3. Arrange and provide for telecommunication service for use during construction. Pay costs of installation, maintenance, and monthly service of internet connection until contract closeout.

H. Maintain in good repair and appearance, and provide weekly cleaning service and replenishment, as required, of paper towels, paper cups, hand soap, toilet paper, first-aid kit supplies, and bottled water.

I. Replenish, as needed, facsimile paper, duplicator paper and toner, computer paper, and printer toner.

J. Setup and provide monthly electric, telephone and internet service to Contractor’s trailer for the duration of the contract period. Telephone service shall include local and long distance.

3.02 TEMPORARY UTILITIES

A. Power:
   1. No electric power is available at Site. Make arrangements to obtain and pay for electrical power used until final payment and acceptance by Contractor, unless otherwise recommended by Contractor at Substantial Completion.
   2. Cost of electric power will be borne by Subcontractor.
B. Lighting: Provide temporary lighting to meet applicable safety requirements to allow erection, application, or installation of materials and equipment, and observation or inspection of the Work.

C. Water:
   1. No construction or potable water is available at Site. Make arrangements for and bear costs of providing water required for construction purposes and for drinking by construction personnel during construction.
   2. Hydrant Water:
      a. Is available from nearby hydrants. Secure written permission for connection and use from water department and meet requirements for use. Notify fire department before obtaining water from fire hydrants.
      b. Use only special hydrant-operating wrenches to open hydrants. Make certain hydrant valve is open full, since cracking valve causes damage to hydrant. Repair damaged hydrants and notify appropriate agency as quickly as possible. Hydrants shall be completely accessible to fire department at all times.
      c. Include costs to connect and transport water to construction areas in Contract Price.

D. Sanitary and Personnel Facilities:
   1. Provide and maintain facilities for Contractor’s employees, Subcontractors, and other onsite employers’ employees. Service, clean, and maintain facilities and enclosures.
   2. Provide in Compliance with State and Local Health Authorities: Sanitary facilities to include a portable hand-wash station.

E. Electric, Telephone and Internet Service:
   1. Subcontractor: Arrange and provide onsite electric, telephone and internet service for Owner and Contractor use during construction. Pay costs of installation and removal and monthly bills until contract closeout.

F. Fire Protection: Furnish and maintain on Site adequate firefighting equipment capable of extinguishing incipient fires. Comply with applicable parts of NFPA 241.

3.03 PROTECTION OF WORK AND PROPERTY

   A. General:
1. Perform Work within right-of-way and easements in a systematic manner that minimizes inconvenience to property owners and the public.

2. Maintain in continuous service existing oil and gas pipelines, underground power, telephone or communication cable, water mains, irrigation lines, sewers, poles and overhead power, and other utilities encountered a long line of the Work, unless other arrangements satisfactory to owners of said utilities have been made.

3. Where completion of the Work requires temporary or permanent removal or relocation of existing utility, coordinate activities with owner of said utility and perform work to their satisfaction.

4. Protect, shore, brace, support, and maintain underground pipes, conduits, drains, and other underground utility construction uncovered or otherwise affected by construction operations.

5. Keep fire hydrants and water control valves free from obstruction and available for use at all times.

6. In areas where Subcontractor’s operations are adjacent to or near a utility, such as gas, telephone, television, electric power, water, sewer, or irrigation system, and such operations may cause damage or inconvenience, suspend operations until arrangements necessary for protection have been made by Subcontractor.

7. Notify property owners and utility offices that may be affected by construction operation at least 2 days in advance: Before exposing a utility, obtain utility owner’s permission. Should service of utility be interrupted due to Subcontractor’s operation, notify proper authority immediately. Cooperate with said authority in restoring service as promptly as possible and bear costs incurred.

8. Do not impair operation of existing sewer system. Prevent construction material, pavement, concrete, earth, volatile and corrosive wastes, and other debris from entering sewers, pump stations, or other sewer structures.

B. Site Security:

1. Erect a temporary security (plastic orange safety) fence at locations shown on Drawings.

2. 24-hour site security shall patrol entire project area.

C. Barricades and Lights:

1. Provided by the City of Glendale and to be maintained by the Subcontractor for closure of Milwaukee River Parkway during construction activities.

2. Maintain as necessary to prevent unauthorized entry to construction areas and affected roads, streets, and alleyways, inside and outside of
fenced area, and as required to ensure public safety and the safety of Subcontractor’s employees, other employer’s employees, and others who may be affected by the Work.

3. Protect streets, roads, highways, and other public thoroughfares that are closed to traffic by effective barricades with acceptable warning signs.

4. Locate barricades at the nearest intersecting public thoroughfare on each side of blocked section.

5. Illuminate barricades and obstructions with warning lights from sunset to sunrise.

D. Existing Structures:

1. Where Subcontractor contemplates removal of small structures such as mailboxes, signposts, and culverts that interfere with Subcontractor’s operations, obtain approval of property owner and Contractor.

2. Replace items removed in their original location and a condition equal to or better than original.

E. Archaeological Finds:

1. General: Should finds of an archaeological or paleontological nature be made within Site limits, immediately notify Contractor and proceed in accordance with General Conditions. Continue the Work in other areas without interruption.

3. Paleontological Finds: Evidence of prehistoric plant or animal life, such as skeletons, bones, fossils, or casts and other indications such as pictographs.

4. Contractor may order the Work stopped in other areas if, in Contractor’s opinion, find is more extensive than may appear from uncovered material.

5. Protection of Finds:
   a. Cover, fence, or otherwise protect finds until notice to resume the Work is given.
   b. Cover finds with plastic film held in place by earth, rocks, or other weights placed outside the find. Should additional backfilling be necessary for safety or to prevent caving, place backfill material loosely over plastic film.
   c. Sheet or shore as necessary to protect excavations underway. Place temporary fence to prevent unauthorized access.
   d. Dewater finds made below water table as necessary to protect construction Work underway. Divert groundwater or surface runoff away from find by ditching or other acceptable means.

6. Removal of Finds:
a. Finds are property of Milwaukee County. Do not remove or disturb finds without Contractor’s written authorization.
b. Should Milwaukee County elect to have a find removed, provide equipment, labor, and material to permit safe removal of find without damage. Provide transportation for delivery to individuals, institutions, or other places as Milwaukee County may find desirable, expedient, or required by law.

3.04 TEMPORARY CONTROLS

A. Actions for Protecting Butler’s Garter Snake Habitat: Install trenched-in silt fencing just outside the wetland boundary to prevent snakes from entering the project site once snakes emerge from hibernation (March 16). The fence shall encompass the construction site on all sides up to 300 feet from any snake overwintering wetlands in order to avoid snake mortality. The fence should be installed with loop-arounds at the ends and at openings in order to redirect the snakes away from them. Fences should be maintained throughout the snake’s entire active period (Mar. 16 – Nov. 5).

B. Air Pollution Control:
   1. Minimize air pollution from construction operations.
   2. Burning: Of waste materials, rubbish, or other debris will not be permitted on or adjacent to Site.
   3. Conduct operations of dumping rock and of carrying rock away in trucks to cause a minimum of dust. Give unpaved streets, roads, detours, or haul roads used in construction area a dust-preventive treatment or periodically water to prevent dust. Strictly adhere to applicable environmental regulations for dust prevention.
   4. Provide and maintain temporary dust-tight partitions, bulkheads, or other protective devices during construction to permit normal operation of existing facilities. Construct partitions of plywood, insulating board, plastic sheets, or similar material. Construct partitions in such a manner that dust and dirt from demolition and cutting will not enter other parts of existing building or facilities. Remove temporary partitions as soon as need no longer exists.
   5. Minimize dust from construction operations.
   6. Comply with local dust control ordinances.
   7. Implement mitigation methods and equipment outlined in Dust Control Plan.

C. Noise Control:
   1. Minimize noise from construction operations.
   2. Comply with local noise control ordinances.
3. Implement mitigation methods and equipment outlined in Noise Control Plan.

D. Water Pollution Control:

1. Prior to commencing excavation and construction, obtain Contractor’s agreement with detailed plans showing procedures intended to handle and dispose of storm water, groundwater, and dewatering pump discharges.
2. Comply with Section 01 57 13, Temporary Erosion and Sedimentation Control, for stormwater flow and surface runoff.
3. Water pollution control methods shall be in compliance with applicable permits.
4. Do not dispose of volatile wastes such as mineral spirits, oil, chemicals, or paint thinner in storm or sanitary drains. Disposal of wastes into streams or waterways is prohibited. Provide acceptable containers for collection and disposal of waste materials, debris, and rubbish.

E. Erosion, Sediment, and Flood Control: Provide, maintain, and operate temporary facilities as specified in Section 01 57 13, Temporary Erosion and Sedimentation Control, to control erosion and sediment releases, and to protect the Work and existing facilities from flooding during construction period.

F. Diesel Emission Control Technology:

1. Diesel Onroad Vehicles: All diesel onroad vehicles used on the project for more than 10 total days must have either (1) engines that meet U.S. Environmental Protection Agency (EPA) 2007 onroad emissions standards or (2) emission control technology verified by EPA or the California Air Resources Board (CARB) to reduce PM emissions by a minimum of 85 percent.
2. Diesel Generators: Beginning January 1, 2010, all diesel generators on site for more than 10 total days must be equipped with emission control technology verified by EPA or CARB to reduce PM emissions by a minimum of 85 percent.
3. Diesel Nonroad Construction Equipment:
   a. Until December 31, 2012, all diesel nonroad construction equipment with engines 75hp and greater on site more than 10 total days must have either (1) engines that meet EPA Tier 4 nonroad emissions standards, or (2) emission control technology verified by EPA or CARB for use with nonroad engines to reduce PM emissions by a minimum of 20 percent.
b. Beginning January 1, 2013, all diesel nonroad construction equipment on site for more than 10 total days must have either (1) engines meeting EPA Tier 4 nonroad emission standards or (2) emission control technology verified by EPA or CARB for use with nonroad engines to reduce PM emissions by a minimum of 85 percent for engines 75 hp and greater and by a minimum of 20 percent for engines between 25 and 75 hp.

c. Tier 0 engines are not allowed on site and must be upgraded to Tier 1 and then retrofit with an emission control device achieving the required reduction.

4. Upon confirming that the diesel vehicle, construction equipment, or generator has either a Tier 4 engine or pollution control technology installed and functioning, the developer will issue a compliance sticker indicating the level of emission control. All diesel vehicles, construction equipment, and generators on site shall display the compliance sticker in the designated location.

5. Pollution control technology shall be operated, maintained, and serviced as recommended by the manufacturer.

6. All diesel vehicles, construction equipment, and generators on site shall be fueled with ultra-low sulfur diesel fuel (ULSD) or a ULSD blend with sulfur content of 15 ppm or less.

G. Additional Diesel Requirements:

1. Construction shall not proceed until the Subcontractor submits a certified list of all diesel vehicles, construction equipment, and generators to be used on site. The list shall include the following:
   a. Subcontractor and sub-subcontractor name and address, plus contact person responsible for the vehicles or equipment.
   b. Equipment type, manufacturer, engine model year, engine certification (Tier rating), horsepower, plate, serial number, and expected fuel usage and/or hours of operation.
   c. For the pollution control technology installed: Technology type, serial number, make, model, manufacturer, EPA/CARB verification number/level, and installation date.

2. If the Subcontractor subsequently needs to bring on site equipment not on the list, the Subcontractor shall submit written notification within 24 hours that attests the equipment complies with all contract conditions.

3. All diesel equipment shall comply with all pertinent local, state, and federal regulations relative to exhaust emission controls and safety.

4. The Subcontractor shall establish generator sites and truck-staging zones for vehicles waiting to load or unload material on site. Such zones shall be located where diesel emissions have the least impact on abutters, the general public, and especially sensitive receptors such as
hospitals, schools, daycare facilities, elderly housing, and convalescent facilities.

5. During periods of inactivity, idling of diesel onroad vehicles and nonroad equipment shall be minimized and shall not exceed the time allowed under state and local laws. In the absence of state or local idling regulations, idling shall not exceed three minutes in any sixty-minute period.

H. Exemptions:

1. Onroad diesel vehicles, nonroad construction equipment, and generators on site for 10 working days or less over the life of the project need not install pollution control technology. This equipment must be included on the equipment list submitted by the Subcontractor and approved by the Contractor.

2. If the Subcontractor can prove to the Contractor’s satisfaction that for a particular class of onroad diesel vehicle, nonroad construction equipment, or generator, (1) no alternative equipment with a Tier 4 engine is available, or (2) it is not technically feasible to meet the control level specified above, or (3) installing the control device would create a safety hazard or impaired visibility for the operator, then the Subcontractor may, with the Contractor’s written approval, drop down to a lower level of control.

3. The Contractor may create an exemption when there is a compelling emergency need to use diesel vehicles or engines that do not meet the contract conditions for emission controls. An example would be the need for rescue vehicles or other equipment to prevent or remedy harm to human beings or nearby property. Meeting contract deadlines is not considered a compelling emergency.

4. Exemptions, if any, from state or local idling laws are specified by those laws, which shall be enforced on site. In locations without prevailing state or local idling regulations, idling for more than three minutes over a sixty-minute period is permitted only under the following circumstances:
   a. When an onroad diesel vehicle or nonroad construction equipment is forced to remain motionless because of traffic conditions or mechanical difficulties over which the operator has no control;
   b. To bring the onroad diesel vehicle, nonroad construction equipment, or generator to the manufacturer’s recommended operating temperature;
   c. When there are regulations requiring temperature control for driver or passenger comfort and there are no auxiliary power sources available to provide temperature control;
d. When it is necessary to operate auxiliary equipment that is located in or on the diesel vehicle or construction equipment, to accomplish the intended use of the vehicle or equipment (for example, cranes and cement mixers);

e. When the onroad diesel vehicle, nonroad construction equipment, or generator is being repaired, if idling is necessary for such repair; and/or;

f. When the onroad diesel vehicle, nonroad construction equipment, or generator is queued for inspection, if idling is necessary for such inspection.

I. Reporting:

1. The Subcontractor shall submit to the developer’s representative a monthly report that, for each onroad diesel vehicle, nonroad construction equipment, or generator, includes:
   a. Number of hours of engine operation.
   b. Any problems with the equipment or emission controls.

2. In addition, the monthly report shall contain certified copies of fuel deliveries for the time period that identify:
   a. Source of supply.
   b. Quantity of fuel.
   c. Quality of fuel, including sulfur content (percent by weight).

J. Compliance: All onroad diesel vehicles, nonroad construction equipment, and generators must be compliant with these provisions whenever they are present on the project site. The Subcontractor’s compliance with this notice shall not be grounds for claims as outlined in the Contract General Terms and Conditions.

K. Non-Compliance:

1. If any onroad diesel vehicle, nonroad construction equipment, or generator is found to be in non-compliance with the contract terms, then Subcontractor shall make the necessary corrections to bring the equipment into compliance at no cost to the Contractor.

2. Once the Subcontractor has brought previously non-compliant machinery into compliance, the Contractor shall promptly issue the Subcontractor a written acknowledgment of compliance.

3.05 ACCESS ROADS

A. Construct access roads within easements, rights-of-way, or Project limits. Utilize existing roads where shown.
B. Maintain drainage ways. Install and maintain culverts to allow water to flow beneath access roads. Provide corrosion-resistant culvert pipe of adequate strength to resist construction loads.

C. Provide gravel, crushed rock, or other stabilization material to permit access by all motor vehicles at all times.

D. Maintain road grade and crown to eliminate potholes, rutting, and other irregularities that restrict access.

E. Coordinate with Contractor detours and other operations affecting traffic and access. Provide at least 72 hours’ notice to Contractor of operations that will alter access to Site.

F. Upon completion of construction, restore ground surface disturbed by access road construction to original grade.

3.06 PARKING AREAS

A. Control vehicular parking to preclude interference with public traffic or parking, access by emergency vehicles or construction operations.

B. Provide parking facilities for personnel working on Project.

3.07 VEHICULAR TRAFFIC

A. Comply with Laws and Regulations regarding closing or restricting use of public streets or highways. No public or private road shall be closed, except by written permission of proper authority. Ensure the least possible obstruction to traffic and normal commercial pursuits.

B. Conduct the Work to interfere as little as possible with public travel, whether vehicular or pedestrian.

C. Whenever it is necessary to cross, close, or obstruct roads, driveways, and walks, whether public or private, provide and maintain suitable and safe bridges, detours, or other temporary expedients for accommodation of public and private travel.

D. Road Closures: Maintain satisfactory means of exit for persons residing or having occasion to transact business along route of the Work. If it is necessary to close off roadway or alley providing sole vehicular access to property for periods greater than 2 hours, provide written notice to each owner so affected 3 days prior to such closure. In such cases, closings of up to 4 hours may be allowed. Closures of up to 10 hours may be allowed if a week’s written notice is given and undue hardship does not result.
E. Maintenance of traffic is not required if Subcontractor obtains written permission from authority having jurisdiction over public property involved, to obstruct traffic at designated point.

F. In making street crossings, do not block more than one-half the street at a time. Whenever possible, widen shoulder on opposite side to facilitate traffic flow. Provide temporary surfacing on shoulders as necessary.

G. Maintain top of backfilled trenches before they are paved, to allow normal vehicular traffic to pass over. Provide temporary access driveways where required. Cleanup operations shall follow immediately behind backfilling.

H. When flaggers and guards are required by regulation or when deemed necessary for safety, furnish them with approved orange wearing apparel and other regulation traffic control devices.

I. Provide snow removal to facilitate normal vehicular traffic on public or private roads affected by construction. Perform snow removal promptly and efficiently by means of suitable equipment whenever necessary for safety, and as may be directed by proper authority.

J. Notify fire department and police department before closing street or portion thereof. Notify said departments when streets are again passable for emergency vehicles. Do not block off emergency vehicle access to consecutive arterial crossings or dead-end streets, in excess of 300 linear feet, without written permission from fire department. Conduct operations with the least interference to fire equipment access, and at no time prevent such access. Furnish Contractor’s night emergency telephone numbers to police department.

K. Temporary Bridges:
   1. Construct temporary bridges at points where maintenance of traffic across pipeline construction is necessary.
   2. Make bridges over public streets, roads, and highways acceptable to authority having jurisdiction thereover.
   3. Bridges erected over private roads and driveways shall be adequate for service to which they will be subjected.
   4. Provide substantial guardrails and suitably protected approaches.
   5. Provide footbridges not less than 4 feet wide with handrails and uprights of dressed lumber.
   6. Maintain bridges in place as long as conditions of the Work require their use for safety of public, except that when necessary for proper prosecution of the Work in immediate vicinity of bridge. Bridge may be
relocated or temporarily removed for such period as Engineer may permit.

3.08 CLEANING DURING CONSTRUCTION

A. In accordance with General Conditions, as may be specified in other Specification sections, and as required herein.

B. Wet down exterior surfaces prior to sweeping to prevent blowing of dust and debris. At least weekly, sweep floors (basins, tunnels, platforms, walkways, roof surfaces), and pick up and dispose of debris.

C. Provide approved containers for collection and disposal of waste materials, debris, and rubbish. At least weekly, dispose of such waste materials, debris, and rubbish offsite.

D. At least weekly, brush sweep entry drive, roadways, and other streets and walkways affected by the Work and where adjacent to the Work.

END OF SECTION
SECTION 01 57 13
TEMPORARY EROSION AND SEDIMENT CONTROL

PART 1  GENERAL

1.01 WORK OF THIS SECTION

A. This section covers work necessary for stabilization of soil to prevent erosion during and after construction and land disturbing activities. The work shall include the furnishing of all labor, materials, tools, and equipment to perform the work and services necessary as herein specified and as indicated on the Drawings. This shall include installation, maintenance, and final removal of all temporary soil erosion and sediment control measures.

B. The minimum areas requiring soil erosion and sediment control measures are indicated on the Drawings. The right is reserved to modify the use, location, and quantities of soil erosion and sediment control measures based on activities of the Subcontractor and as the Contractor considers to be to the best interest of the USEPA.

C. See additional information noted on the Drawings.

1.02 GENERAL

A. See Conditions of the Contract and Division 1, General Requirements, which contain information and requirements that apply to the Work specified herein and are mandatory for this project.

B. All activities shall conform to the Wisconsin Department of Natural Resources (WDNR) Construction Standards, the specifications, and the Drawings. In the event of a conflict, the more stringent requirement shall apply.

C. The sections of the Erosion and Sediment Control Standards referenced include, but are not limited to:

</table>
D. Soil erosion stabilization and sedimentation control consist of the following elements:

1. Maintenance of existing permanent or temporary storm drainage piping and channel systems, as necessary.
2. Construction of new permanent and temporary storm drainage piping and channel systems, as necessary.
3. Construction of temporary erosion control facilities such as silt fences, check dams, etc.
4. Topsoil and Seeding:
   a. Placement and maintenance of Temporary Seeding on all areas disturbed by construction.
   b. Placement of permanent topsoil, fertilizer, and seed, etc., in all areas not occupied by structures or pavement, unless shown otherwise.
5. Soil Stabilization Seeding: Placement of fertilizer and seed, etc., in areas as specified hereinafter.

E. The Subcontractor shall be responsible for phasing Work in areas allocated for his exclusive use during this Project, including any proposed stockpile areas, to restrict sediment transport. This will include installation of any temporary erosion control devices, ditches, or other facilities.

F. The areas set aside for the Subcontractor’s use during the Project may be temporarily developed to provide satisfactory working, staging, and administrative areas for his exclusive use. Preparation of these areas shall be in accordance with other requirements contained within these Specifications and shall be done in a manner to both control all sediment transport away from the area.

G. All permanent stockpiles shall be seeded with soil stabilization seed and protected by construction of silt fences and permanent 2-foot, minimum depth, ditches, completely surrounding stockpiles and located within 10 feet of the toes of the stockpile slopes.

H. Sediment transport and erosion from working stockpiles shall be controlled and restricted from moving beyond the immediate stockpile area by construction of temporary toe-of-slope ditches and accompanying silt fences, as necessary. The Subcontractor shall keep these temporary facilities in operational condition by regular cleaning, regrading, and maintenance. Stockpiles remaining in place longer than 14 calendar days shall be considered permanent stockpiles for purposes of erosion and sediment control.
I. The Subcontractor shall maintain all elements of the Soil Erosion Stabilization and Sedimentation Control systems and facilities to be constructed during this Project for the duration of his activities on this Project. Formal inspections made jointly by the Subcontractor and the Contractor shall be conducted every 2 weeks to evaluate the Subcontractor’s conformance to the requirements of both these Specifications and WDNR Regulations.

J. All silt traps shall be cleaned of collected sediment after every rainfall or as determined from the biweekly inspections. Cleaning shall be done in a manner that will not direct the sediment into the storm drain piping system. Removed sediment shall be taken to an area selected by the Contractor where it can be cleaned of sticks and debris, then allowed to dry. Final sediment and debris disposal shall be onsite as designated by Contractor.

K. Replacement or repair of failed or overloaded silt fences, check dams, or other temporary erosion control devices shall be accomplished by the Subcontractor within 24 hours after receiving written notice from the Contractor.

L. Unpaved earth drainage ditches shall be regraded as needed to maintain original grade and remove sediment buildup. If a ditch becomes difficult to maintain, the Subcontractor shall cooperate with the Engineer and install additional erosion control devices such as check dams, temporary paving, or silt fences as directed by the Engineer.

M. If the Subcontractor has not complied with any of the above maintenance efforts to the satisfaction of the Contractor within 2 working days after receiving written notification from the Contractor, the USEPA shall have the prerogative of engaging others to perform any needed maintenance or cleanup, including removal of accumulated sediment at constructed erosion control facilities, and deduct from the Subcontractor’s monthly partial payment the costs for such efforts plus a $500 administration fee.

1.03 SUBMITTALS

A. Submittals shall be made in accordance with Section 01 33 00, Submittal Procedures.

B. In addition, the Contractor shall provide the following specific information:
   1. Certificates of inspection of seed by state or federal authorities and copies of delivery invoices or other proof of quantities of fertilizer.
   2. Manufacturer’s certificate of compliance attesting that the geotextile meets the requirements of these Specifications.
PART 2 PRODUCTS

2.01 PERMANENT SEED
   A. Seed for those areas where topsoil is to be applied shall be in accordance with WDNR Standard 1059.

2.02 SOIL STABILIZATION AND TEMPORARY SEED
   A. Summer seed mix shall be in accordance with WDNR Standard 1059.
   B. Winter seed mix shall be in accordance with WDNR Standard 1059.

2.03 TOPSOIL
   A. Topsoil shall be as specified under Section 31 23 23, Fill and Backfill.

2.04 FERTILIZER
   A. Fertilizer shall be commercial, chemical type, uniform in composition, free-flowing, conforming to state and federal laws, and suitable for application with equipment designed for that purpose.
   B. Fertilizer shall have a minimum percentage of plant food by weight for the following: Permanent fertilizer mix shall be 10 percent nitrogen, 10 percent phosphoric acid, and 10 percent potash.

2.05 LIME
   A. Ground dolomitic limestone not less than 85 percent total carbonates and magnesium, ground so that 50 percent passes through a 100-mesh sieve and 90 percent passes a 20-mesh sieve. Coarser material will be acceptable provided the specified rates of application are increased proportionately on the basis of quantities passing the 100-mesh sieve.

2.06 STRAW MULCH
   A. Threshed straw of oats, wheat, barley, or rye, free from seed of noxious weeds, or clean salt hay.

PART 3 EXECUTION

3.01 GENERAL
   A. The Subcontractor shall install erosion and sediment control measures and maintain in accordance with the Drawings. The sequence of construction shown on the Drawings is made a part of these Contract Documents.
B. The Subcontractor shall provide and maintain Temporary Seeding at all times.

3.02 SUPER SILT FENCE

A. The Subcontractor shall construct silt fence in accordance with WDNR Standard 1059.

3.03 SEEDING

A. General:

1. The Subcontractor shall give at least 3 days notice to the Engineer prior to seeding to allow the Contractor to inspect the prepared areas. The Subcontractor shall rework any areas not approved for seeding to the Contractor’s satisfaction.
2. The Subcontractor shall keep the Contractor advised of schedule of operations.
3. Seed shall be clean, delivered in original unopened packages and bearing an analysis of the contents, guaranteed 95 percent pure with minimum germination rate of 85 percent.

B. Schedules:

1. Seeding shall be performed in accordance with the following schedule:
   a. Summer Seeding: Between March 15 and June 15, or September 1 to November 15.
   b. Winter Seeding: All other times of year, except when weather conditions prohibit further construction operations as determined by the Contractor.

C. Soil Stabilization and Temporary Seeding:

1. Soil stabilization seeding shall consist of the application of the following materials in quantities as further described herein for stockpiles and disturbed areas left inactive for more than 14 days.
   a. Lime.
   b. Fertilizer.
   c. Seed.
   d. Mulch.
   e. Maintenance.
2. Hydroteeeding will be permitted as an alternative method of applying seed and associated soil conditioning agents described above. Should the Contractor elect to apply soil stabilization seeding by hydroteeding methods, he shall submit his operational plan and methods to the Engineer.
3. Temporary Seeding is to be placed and maintained over all disturbed areas prior to Permanent Seeding. Maintain Temporary Seeding until such time as areas are approved for Permanent Seeding. As a minimum, maintenance shall include the following:
   a. Fix-up and reseeding of bare areas or redisturbed areas.
   b. Mowing for stands of grass or weeds exceeding 6 inches in height.

D. Topsoil and Permanent Seeding:

1. Topsoil and Permanent Seeding shall consist of the application of the following materials in quantities as further described herein:
   a. 4-inch depth of topsoil.
   b. Lime.
   c. Fertilizer.
   d. Permanent seed mix.
   e. Mulch.
2. Topsoil is to be placed over all disturbed areas that are not surfaced with concrete, asphalt, or pavers.
3. Preparation:
   a. After rough grading is completed and reviewed by the Contractor, Subcontractor shall spread topsoil as hereinbefore specified over all areas to receive Permanent Seeding to a minimum compacted depth of 6 inches with surface elevations as shown. Loosen the finished surface to a depth of 2 inches and leave in smooth condition, free from depressions or humps, ready for seeding.
   b. Finish Grading:
      1) Subcontractor shall rake the topsoiled area to a uniform grade, so that all areas drain as indicated on the grading plan.
      2) Subcontractor shall remove all trash and stones exceeding 1 inch in diameter from area to a depth of 2 inches.
4. Permanent Seed:
   a. After soil has been scarified, apply seed and other products at the rate and proportion specified below:
      1) Seed Mix: 150 pounds per acre.
      2) 10-10-10 Fertilizer: 1,000 pounds per acre.
      3) Lime: 3 tons per acre.
      4) Water: As necessary.
5. Maintenance:
   a. Maintenance Period: Subcontractor shall begin maintenance immediately after each portion of permanent grass is planted and continue for 8 weeks after all planting is completed.
   b. Maintenance Operations: Subcontractor shall water to keep surface soil moist. Repair washed out areas by filling with topsoil, liming, fertilizing, and seeding. Replace mulch on banks when
washed or blown away. Mow to 2 inches after grass reaches 3 inches in height, and mow frequently enough to keep grass from exceeding 3-1/2 inches. Weed by local spot application of selective herbicide only after first planting season when grass is established.

6. Guarantee:
   a. If, at the end of the 8-week maintenance period, a satisfactory stand of grass has not been produced, the Subcontractor shall renovate and reseed the grass or unsatisfactory portions thereof immediately, or, if after October 15 during the next planting season. If a satisfactory stand of grass develops by July 1 of the following year, it will be accepted. If it is not accepted, a complete replanting will be required during the planting season meeting all of the requirements specified under paragraph Permanent Seed.
   b. A satisfactory stand is defined as grass or section of grass that has a substantial establishment of new grass, strongly rooted, and uniformly green in appearance from a distance of 50 feet. No noticeable thin or bare areas as determined by the Contractor.

END OF SECTION
1.01 GENERAL

A. Onsite decontamination stations as shown on the drawings, large enough to accommodate the largest piece of construction equipment to be used at the site, shall be provided by the Subcontractor in conformance with this section and the Site Health and Safety Plan. The Subcontractor will be responsible for providing the appropriate decontamination tools, equipment, solutions, liquids, containers, and supplies.

B. All water generated during decontamination activities shall be collected, contained, and transported to the TSCA Dewatering Pad for treatment prior to discharge.

C. All personnel shall be decontaminated before leaving the site, as specified in the Site Health and Safety Plan. “Leaving the site” is defined as leaving the exclusion area and entering the contamination reduction area. Decontamination shall be required prior to breaks, when picking up tools, equipment, or materials in the support zone, or any other activities where the potential exists for contaminant transfer.

D. Equipment shall be cleaned and decontaminated prior to use onsite, and prior to leaving the site.

E. All equipment shall be washed and cleaned under Level D requirements or as specified by the Site Safety Officer prior to initiation of work at the site.

F. All decontamination operations shall be conducted by Subcontractor personnel wearing Level D protective equipment and a face shield or additional protection as specified by the Site Safety Officer.

1.02 SUBMITTALS

A. Action Submittals:

1. Subcontractor shall prepare and submit a decontamination station design for approval.
PART 2 PRODUCTS

2.01 GENERAL

A. The Subcontractor shall furnish all equipment and supplies necessary for the decontamination process such as clean water supply tank, trisodium phosphate detergent, a mobile steam cleaner or hot water high pressure washer, buckets, brushes, etc, as required.

B. The Subcontractor shall furnish sealable United States Department of Transportation (U.S. DOT)-approved containers (55-gallon drums) having watertight lids stored in a containment area as required, or poly tank for the storage of decontamination water.

C. Tanks or drums shall be stored in a lined containment area or on a containment pad.

D. The Subcontractor shall also supply labeling materials.

PART 3 EXECUTION

3.01 GENERAL

A. The Subcontractor shall follow the general decontamination plans, as specified in the Site Health and Safety Plan. Prior to mobilization, the Subcontractor shall finalize all personnel decontamination needs, equipment, and procedures with the Contractor. A decontamination station, meeting specifications and equipped with a means of catching all water, shall be constructed by the Subcontractor at the locations shown on the drawings.

3.02 EQUIPMENT DECONTAMINATION

A. The Subcontractor shall decontaminate the equipment after use in the following manner:

1. Scrape and remove all earthen materials from the equipment.
2. Hose down equipment with a portable high-pressure, hot-water washer (steam cleaner).
3. Collect rinsate and scrapings. Place rinsate in approved tanks or drums, and transport to the TSCA Dewatering Pad for treatment prior to discharge.
4. Scrapings shall be stored on-site and covered until it can be disposed of at an approved offsite disposal facility.
5. Subcontractor is responsible for management and treatment of all decontamination water and discharge to the Milwaukee River in accordance with the WPDES permit.
6. Subcontractor is responsible for management of all scrapings and disposal at an approved offsite disposal facility.

3.03 PERSONNEL DECONTAMINATION

A. Personnel decontamination procedures to be used shall be performed prior to leaving the excavation location. The Subcontractor shall provide all protective clothing and the equipment necessary for its own personnel to comply with the decontamination procedures as specified in the Site Health and Safety Plan.

END OF SECTION
SECTION 01 77 00
CLOSEOUT PROCEDURES

PART 1 GENERAL

1.01 SUBMITTALS

A. Informational Submittals:

1. Submit prior to application for final payment.
   a. Record Documents: As required in General Conditions.
   b. Approved Shop Drawings and Samples: As required in the General Conditions.
   c. Special bonds, Special Guarantees, and Service Agreements.
   d. Consent of Surety to Final Payment: As required in General Conditions.
   e. Releases or Waivers of Liens and Claims: As required in General Conditions.
   f. Releases from Agreements.
   g. Final Application for Payment: Submit in accordance with procedures and requirements stated in Section 01 29 00, Payment Procedures.
   h. Extra Materials: As required by individual Specification sections.

1.02 RECORD DOCUMENTS

A. Quality Assurance:

1. Furnish qualified and experienced person, whose duty and responsibility shall be to maintain record documents.
2. Accuracy of Records:
   a. Coordinate changes within record documents, making legible and accurate entries on each sheet of Drawings and other documents where such entry is required to show change.
   b. Purpose of Project record documents is to document factual information regarding aspects of the Work, both concealed and visible, to enable future modification of the Work to proceed without lengthy and expensive Site measurement, investigation, and examination.
3. Make entries within 24 hours after receipt of information that a change in the Work has occurred.
4. Prior to submitting each request for progress payment, request Contractor’s review and approval of current status of record documents. Failure to properly maintain, update, and submit record documents may
result in a deferral by Contractor to recommend whole or any part of Subcontractor’s Application for Payment, either partial or final.

1.03 RELEASES FROM AGREEMENTS

A. Furnish USEPA written releases from property owners or public agencies where side agreements or special easements have been made, or where Subcontractor’s operations have not been kept within the USEPA’s construction right-of-way.

B. In the event Subcontractor is unable to secure written releases:

1. Inform USEPA of the reasons.
2. USEPA or its representatives will examine the Site, and USEPA will direct Subcontractor to complete the Work that may be necessary to satisfy terms of the side agreement or special easement.
3. Should Subcontractor refuse to perform this Work, USEPA reserves right to have it done by separate contract and deduct cost of same from Contract Price, or require Subcontractor to furnish a satisfactory bond in a sum to cover legal Claims for damages.
4. When USEPA is satisfied that the Work has been completed in agreement with Contract Documents and terms of side agreement or special easement, right is reserved to waive requirement for written release if: (i) Subcontractor’s failure to obtain such statement is due to grantor’s refusal to sign, and this refusal is not based upon any legitimate Claims that Subcontractor has failed to fulfill terms of side agreement or special easement, or (ii) Subcontractor is unable to contact or has had undue hardship in contacting grantor.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 MAINTENANCE OF RECORD DOCUMENTS

A. General:

1. Promptly following commencement of Contract Times, secure from Engineer at no cost to Subcontractor, one complete set of Contract Documents.
2. Label or stamp each record document with title, “RECORD DOCUMENTS,” in neat large printed letters.
3. Record information concurrently with construction progress and within 24 hours after receipt of information that change has occurred. Do not cover or conceal Work until required information is recorded.
B. Preservation:

1. Maintain documents in a clean, dry, legible condition and in good order. Do not use record documents for construction purposes.
2. Make documents and Samples available at all times for observation by Contractor.

C. Making Entries on Drawings:

1. Using an erasable colored pencil (not ink or indelible pencil), clearly describe change by graphic line and note as required.
   a. Color Coding:
      1) Green when showing information deleted from Drawings.
      2) Red when showing information added to Drawings.
      3) Blue and circled in blue to show notes.
2. Date entries.
3. Call attention to entry by “cloud” drawn around area or areas affected.
4. Legibly mark to record actual changes made during construction, including, but not limited to:
   a. Depths of various elements of foundation in relation to finished first floor data if not shown or where depth differs from that shown.
   b. Horizontal and vertical locations of existing and new Underground Facilities and appurtenances, and other underground structures, equipment, or Work. Reference to at least two measurements to permanent surface improvements.
   c. Location of internal utilities and appurtenances concealed in the construction referenced to visible and accessible features of the structure.
   d. Locate existing facilities, piping, equipment, and items critical to the interface between existing physical conditions or construction and new construction.
   e. Changes made by Addenda and Field Orders, Work Change Directive, Change Order, and Engineer’s written interpretation and clarification using consistent symbols for each and showing appropriate document tracking number.
5. Dimensions on Schematic Layouts: Show on record drawings, by dimension, the centerline of each run of items such as are described in previous subparagraph above.
   a. Clearly identify the item by accurate note such as “cast iron drain,” “galv. water,” and the like.
   b. Show, by symbol or note, vertical location of item (“under slab,” “in ceiling plenum,” “exposed,” and the like).
3.02 FINAL CLEANING

A. At completion of the Work or of a part thereof and immediately prior to Subcontractor’s request for certificate of Substantial Completion; or if no certificate is issued, immediately prior to Subcontractor’s notice of completion, clean entire Site or parts thereof, as applicable.

1. Leave the Work and adjacent areas affected in a cleaned condition satisfactory to USEPA and Contractor.
2. Remove grease, dirt, dust, paint or plaster splatter, stains, labels, fingerprints, and other foreign materials from exposed surfaces.
3. Repair, patch, and touch up marred surfaces to specified finish and match adjacent surfaces.
4. Clean all windows.
5. Clean and wax wood, vinyl, or painted floors.
6. Broom clean exterior paved driveways and parking areas.
7. Hose clean sidewalks, loading areas, and others contiguous with principal structures.
8. Rake clean all other surfaces.
9. Remove snow and ice from access to buildings.
10. Replace air-handling filters and clean ducts, blowers, and coils of ventilation units operated during construction.
11. Leave water courses, gutters, and ditches open and clean.

B. Use only cleaning materials recommended by manufacturer of surfaces to be cleaned.

END OF SECTION
PART 1 GENERAL

1.01 DEFINITIONS

A. Facility: Entire Project, or an agreed-upon portion, including all of its unit processes.

B. Functional Test: Test or tests in presence of Contractor to demonstrate that installed equipment meets manufacturer’s installation, calibration, and adjustment requirements and other requirements as specified.

C. Performance Test: Test or tests performed after any required functional test in presence of Contractor to demonstrate and confirm individual equipment meets performance requirements specified in individual sections.

D. Unit Process: As used in this section, a unit process is a portion of the facility that performs a specific process function, such as clarifier, sand filter, and granular activated carbon system.

E. Facility Performance Demonstration:

1. A demonstration, conducted by Subcontractor, with assistance of Contractor, to demonstrate and document the performance of the entire operating facility, both manually and automatically (if required), based on criteria developed in conjunction with USEPA and as accepted by Contractor.

2. Such demonstration is for the purposes of (i) verifying to Contractor entire facility performs as a whole, and (ii) documenting performance characteristics of completed facility for Contractor’s records. Neither the demonstration nor the evaluation is intended in any way to make performance of a unit process or entire facility the responsibility of Subcontractor, unless such performance is otherwise specified.

1.02 SUBMITTALS

A. Informational Submittals:

1. Facility Startup and Performance Demonstration Plan.

2. Functional and performance test results.

3. Completed Unit Process Startup Form for each unit process.

1.03 FACILITY STARTUP AND PERFORMANCE DEMONSTRATION PLAN

A. Develop a written plan, in conjunction with operations personnel; to include the following:

1. Step-by-step instructions for startup of each unit process and the complete facility.
2. Unit Process Startup Form (sample attached), to minimally include the following:
   a. Description of the unit process, including equipment numbers/nomenclature of each item of equipment and all included devices.
   b. Detailed procedure for startup of the unit process, including valves to be opened/closed, order of equipment startup, etc.
   c. Startup requirements for each unit process, including water, power, chemicals, etc.
   d. Space for evaluation comments.
3. Facility Performance Demonstration/Certification Form (sample attached), to minimally include the following:
   a. Description of unit processes included in the facility startup.
   b. Sequence of unit process startup to achieve facility startup.
   c. Description of computerized operations, if any, included in the facility.
   d. Subcontractor certification facility is capable of performing its intended function(s), including fully automatic operation.
   e. Signature spaces for Subcontractor and Contractor.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 GENERAL

A. Facility Startup Meetings: Schedule, in accordance with requirements of Section 01 31 19, Project Meetings, to discuss test schedule, test methods, materials, chemicals and liquids required, facilities operations interface, and USEPA involvement.

B. Subcontractor’s Testing and Startup Representative:

1. Designate and furnish one or more personnel to coordinate and expedite testing and facility startup.
2. Representative(s) shall be present during startup meetings and shall be available at all times during testing and startup.
C. Provide temporary valves, gauges, piping, test equipment and other materials and equipment required for testing and startup.

D. Provide other subcontractors’ and equipment manufacturers’ staff adequate to prevent delays. Schedule ongoing work so as not to interfere with or delay testing and startup.

E. Others will:
   1. Provide water, power, chemicals, and other items as required for startup, unless otherwise indicated.
   2. Water hoses from fire hydrant shown on the Drawings to be provided by Subcontractor.
   3. Operate process units and facility with support of Subcontractor.
   4. Provide labor and materials as required for laboratory analyses.

3.02 EQUIPMENT TESTING

A. Preparation:
   1. Complete installation before testing.
   2. Furnish qualified manufacturers’ representatives, when required by individual Specification sections.
   3. Obtain and submit from equipment manufacturer’s representative Manufacturer’s Certificate of Proper Installation Form.
   4. Equipment Test Report Form: Provide written test report for each item of equipment to be tested, to include the minimum information:
      a. Owner/Project Name.
      b. Equipment or item tested.
      c. Date and time of test.
      d. Type of test performed (Functional or Performance).
      e. Test method.
      f. Test conditions.
      g. Test results.
      h. Signature spaces for Subcontractor and Contractor as witness.
   5. Cleaning and Checking: Prior to beginning functional testing:
      a. Calibrate testing equipment in accordance with manufacturer’s instructions.
      b. Inspect and clean equipment, devices, connected piping, and structures to ensure they are free of foreign material.
      c. Lubricate equipment in accordance with manufacturer’s instructions.
      d. Turn rotating equipment by hand when possible to confirm that equipment is not bound.
e. Open and close valves by hand and operate other devices to check for binding, interference, or improper functioning.
f. Check power supply to electric-powered equipment for correct voltage.
g. Adjust clearances and torque.
h. Test piping for leaks.

6. Ready-to-test determination will be by Contractor based at least on the following:
   a. Acceptable Operation and Maintenance Data.
   b. Notification by Subcontractor of equipment readiness for testing.
   c. Receipt of Manufacturer’s Certificate of Proper Installation, if so specified.
   d. Adequate completion of work adjacent to, or interfacing with, equipment to be tested.
   e. Availability and acceptability of manufacturer’s representative, when specified, to assist in testing of respective equipment.
   f. Satisfactory fulfillment of other specified manufacturer’s responsibilities.
   g. Equipment and electrical tagging complete.
   h. Delivery of all spare parts and special tools.

B. Functional Testing:

   1. Conduct as specified in individual Specification sections using fire hydrant water.
   2. Notify USEPA and Contractor in writing at least 10 days prior to scheduled date of testing.
   4. When, in Contractor’s opinion, equipment meets functional requirements specified, such equipment will be accepted for purposes of advancing to performance testing phase, if so required by individual Specification sections. Such acceptance will be evidenced by Contractor/USEPA’s signature as witness on Equipment Test Report.

C. Performance Testing:

   1. Conduct as specified in individual Specification sections.
   2. Notify Contractor and USEPA in writing at least 10 days prior to scheduled date of test.
   3. Performance testing shall not commence until equipment has been accepted by Contractor as having satisfied functional test requirements specified.
   4. Type of fluid, gas, or solid for testing shall be as specified.
   5. Unless otherwise indicated, furnish labor, materials, and supplies for conducting the test and taking samples and performance measurements.
7. When, in Contractor’s opinion, equipment meets performance requirements specified, such equipment will be accepted as to conforming to Contract requirements. Such acceptance will be evidenced by Contractor’s signature on Equipment Test Report.

3.03 STARTUP OF UNIT PROCESSES

A. Prior to unit process startup, equipment within unit process shall be accepted by Contractor as having met functional and performance testing requirements specified.
B. Make adjustments, repairs, and corrections necessary to complete unit process startup.
C. Startup shall be done with river water if available or if directed by Contractor, Subcontractor shall use fire hydrant water.
D. Startup shall be considered complete when, in opinion of Contractor, unit process has operated in manner intended for 7 continuous days without significant interruption. This period is in addition to functional or performance test periods specified elsewhere.
E. Significant Interruption: May include any of the following events:
   1. Failure of Subcontractor to provide and maintain qualified onsite startup personnel as scheduled.
   2. Failure to meet specified functional operation for more than 2 consecutive hours.
   3. Failure of any critical equipment or unit process that is not satisfactorily corrected within 5 hours after failure.
   4. Failure of any noncritical equipment or unit process that is not satisfactorily corrected within 8 hours after failure.
   5. As determined by Contractor.
F. A significant interruption will require startup then in progress to be stopped. After corrections are made, startup test period to start from beginning again.

3.04 FACILITY PERFORMANCE DEMONSTRATION

A. When, in the opinion of Contractor, startup of all unit processes has been achieved, sequence each unit process to the point that facility is operational.
B. Demonstrate proper operation of required interfaces within and between individual unit processes.
C. After facility is operating, complete performance testing of equipment and systems not previously tested.

D. Document, as defined in Facility Startup and Performance Demonstration Plan, the performance of the facility including its computer system, until all unit processes are operable and under control of computer system.

E. Certify, on the Facility Performance Demonstration/Certification Form, that facility is capable of performing its intended function(s), including fully automatic and computerized operation.

3.05 FACILITY STATUS AFTER TESTING

A. After successful testing, and with the agreement of the Contractor, drain all outside equipment and piping to prevent freezing.

3.06 SUPPLEMENTS

A. Supplements listed below, following “End of Section,” are a part of this Specification:

1. Unit Process Startup Form.
2. Facility Performance Demonstration/Certification Form.

END OF SECTION
UNIT PROCESS STARTUP FORM

PROJECT: Lincoln Park/Milwaukee River Channel Sediment Site

Unit Process Description: (Include description and equipment number of all equipment and devices):

____________________________________________________________________________________

____________________________________________________________________________________

____________________________________________________________________________________

Startup Procedure (Describe procedure for sequential startup and evaluation, including valves to be opened/closed, order of equipment startup, etc.):

____________________________________________________________________________________

____________________________________________________________________________________

____________________________________________________________________________________

Startup Requirements (Water, power, chemicals, etc.):

____________________________________________________________________________________

____________________________________________________________________________________

Evaluation Comments:

____________________________________________________________________________________

____________________________________________________________________________________

____________________________________________________________________________________
FACILITY PERFORMANCE DEMONSTRATION/CERTIFICATION FORM

PROJECT: Lincoln Park/Milwaukee River Channel Sediment Site

Unit Processes Description (List unit processes involved in facility startup):
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________

Unit Processes Startup Sequence (Describe sequence for startup, including computerized operations, if any):
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
________________________________________________________________________

Subcontractor Certification that Facility is capable of performing its intended function(s), including fully automatic operation:

Subcontractor: _______________________________ Date: ________________________, 20__

Contractor: ________________________________ Date: ________________________, 20__

(Authorized Signature)
PART 1 GENERAL

1.01 SUMMARY

A. This section describes the work involved in the site management and sequencing of construction at the site.

1.02 DEFINITIONS

A. Project Limits: Areas, as shown or specified, within which Work is to be performed.

B. Interfering of Objectionable Material: Trash, rubbish, and junk; vegetation and other organic matter, whether alive, dead, or decaying; topsoil.

1.03 ACTION SUBMITTALS

A. Construction Sequencing Plan. Develop a construction sequencing plan that reflects the following:

1. Site Preparation.
   a. Office Trailer Area.
   b. TSCA Dewatering Pad.
   c. Site Clearing.
   d. Access Points and Decon Pads.
2. Lincoln Creek Bypass.
3. Temporary Cut Off Structures.
4. Sediment Excavation.
   a. Working Surface within Creek Bed.
   b. Equipment.
   c. Sequence.
5. Staging, Decon, and Disposal.
6. Restoration.
7. Demobilization.

B. Site Management Plan. Develop a site management plan to include but not be limited to:

1. Temporary controls for preventing and minimizing air pollution.
2. Waste Management and Disposal (TSCA and Non-TSCA solids).
3. Compliance with WDNR Chapter 30 and NR216 site specific permits.
1.04 REGULATIONS

A. Comply with all applicable federal, state, and local site-specific permit requirements.

B. Subcontractor shall have copies of the applicable federal, state, and local site-specific permits onsite.

C. If conditions outside the scope of these specifications are encountered, all federal, state and local requirements shall apply. Notify the USEPA and the Contractor immediately if conditions outside the scope of these specifications are encountered.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 STORAGE YARDS AND BUILDINGS

A. Temporary Storage Yards: Construct temporary storage yards for storage of products that are not subject to damage by weather conditions.

B. Temporary Storage Buildings:

1. Provide environmental control systems that meet recommendations of manufacturers of equipment and materials stored.
2. Arrange or partition to provide security of contents and ready access for inspection and inventory.
3. Store combustible materials (paints, solvents, fuels) in a well-ventilated and remote building meeting safety standards.

3.02 FLAMMABLE AND COMBUSTIBLE LIQUIDS

A. Storage of all flammable and combustible liquids shall meet all applicable Laws and Regulations, including 29 CFR 1926.152.

B. The use of burning at the Site for the disposal of refuse and debris will not be permitted.
LINCOLN PARK/MILWAUKEE RIVER CHANNEL SEDIMENT SITE

3.03 WELDING, CUTTING AND BRAZING

A. Any welding, cutting and brazing work and storage of equipment shall meet all applicable Laws and Regulations, including 29 CFR 1910 Subpart Q.

3.04 HANDLING AND DISPOSAL OF WASTE (SOLIDS)

A. Excavated Sediment:
   1. General demolition debris and unsalvageable material shall be disposed of at an approved offsite disposal facility.
   2. Hazardous wastes shall be disposed of in accordance with applicable regulations and as specified in the Subcontractor’s Site Management Plan.
   3. Dispose of material upon approval from the Contractor.

3.05 CONSTRUCTION BYPASS AND DEWATERING

A. General:
   1. Continuously control water during course of construction, including weekends and holidays and during periods of work stoppages, and provide adequate backup systems to maintain control of water.
   2. Remove and control water during periods when necessary to properly accomplish Work.

B. Bypass and Dewatering Systems:
   1. Provide, operate, and maintain bypass and dewatering systems in accordance with Section 31 23 19.01, Lincoln Creek Bypass and Dewatering.
   2. Bypass and dewatering system shall be of sufficient size and capacity to permit excavation and subsequent construction in dry conditions. Continuously maintain area free of water, regardless of source, and until backfilled to final grade.
   3. Design and Operate Dewatering Systems:
      a. To avoid inducing settlement or damage to existing facilities, completed Work, or adjacent property.
      b. To relieve artesian pressures and resultant uplift of excavation bottom.
   4. Provide sufficient redundancy in each system to keep the area free of water in event of component failure.
   5. Provide 100 percent emergency power backup with automatic startup and switchover in event of electrical power failure.
C. Monitoring Flows: Monitor volume of water pumped per calendar day, as Work progresses. Also monitor volume of water introduced each day for performance of Work. Monitor flows using measuring devices acceptable to USEPA.

D. Disposal of Water: Pump water collected by dewatering operations to Milwaukee River.

3.06 PERIMETER FENCE

A. Install orange safety fence as perimeter fence as shown on Drawings.

B. Repair fencing as necessary to maintain security.

END OF SECTION
SECTION 31 10 00
SITE CLEARING

PART 1 GENERAL

1.01 DEFINITIONS

A. Interfering or Objectionable Material: Trash, rubbish, and junk; vegetation and other organic matter, whether alive, dead, or decaying; topsoil.

B. Clearing: Removal of interfering or objectionable material lying on or protruding above ground surface.

C. Grubbing: Removal of vegetation and other organic matter including stumps, buried logs, and roots greater than 2-inch caliper to a depth of 6 inches below subgrade.

D. Scalping: Removal of sod without removing more than upper 3 inches of topsoil.

E. Stripping: Removal of topsoil remaining after applicable scalping is completed.

F. Project Limits: Areas, as shown or specified, within which Work is to be performed.

1.02 SUBMITTALS

A. Action Submittals: Drawings clearly showing clearing, grubbing, and stripping limits.

1.03 QUALITY ASSURANCE

A. Obtain Contractor’s approval of staked clearing, grubbing, and stripping limits prior to commencing clearing, grubbing, and stripping.

1.04 SCHEDULING AND SEQUENCING

A. Prepare Site only after adequate erosion and sediment controls are in place. Limit areas exposed uncontrolled to erosion during installation of temporary erosion and sediment controls to maximum of 5 acres.
PART 2  PRODUCTS (NOT USED)

PART 3  EXECUTION

3.01  GENERAL
A. Clear, grub, and strip areas actually needed for waste disposal, borrow, or Site improvements within limits shown or specified.
B. Do not injure or deface vegetation that is not designated for removal.

3.02  LIMITS
A. As follows, but not to extend beyond Project limits.
   1. Excavation 5 feet beyond top of cut slopes.
   2. Waste Disposal:
      a. Clearing: 5 feet beyond perimeter.
      b. Scalping and Stripping: Not required.
      c. Grubbing: Around perimeter as necessary for neat finished appearance.
B. Remove rubbish, trash, and junk from entire area within Project limits.

3.03  CLEARING
A. Clear areas within limits shown or specified.
B. Fell trees so that they fall away from facilities and vegetation not designated for removal.
C. Cut stumps not designated for grubbing flush with ground surface.
D. Cut off shrubs, brush, weeds, and grasses to within 2 inches of ground surface.

3.04  GRUBBING
A. Grub areas within limits shown or specified.

3.05  SCALPING
A. Do not remove sod until after clearing and grubbing is completed and resulting debris is removed.
B. Scalp areas within limits shown or specified.
3.06 STRIPPING

A. Do not remove topsoil until after scalping is completed.

B. Strip areas within limits to minimum depths shown or specified. Do not remove subsoil with topsoil.

C. Stockpile strippings to be used for topsoil, separately from other excavated material.

3.07 TREE REMOVAL OUTSIDE CLEARING LIMITS

A. Remove Within Project Limits:

1. Dead, dying, leaning, or otherwise unsound trees that may strike and damage Project facilities in falling.
2. Trees designated by Contractor.

B. Cut stumps off flush with ground, remove debris, and if disturbed, restore surrounding area to its original condition.

3.08 SALVAGE

A. Saleable log timber may be sold to Subcontractor’s benefit. Promptly remove from Project Site.

3.09 DISPOSAL

A. Clearing and Grubbing Debris:

1. Dispose of debris offsite.
2. Burning of debris onsite will not be allowed.
3. Dispose of unburned and noncombustible debris offsite.
4. Woody debris may be chipped. Chips may be sold to Subcontractor’s benefit or used for landscaping onsite as mulch or uniformly mixed with topsoil, provided that resulting mix will be fertile and not support combustion. Maximum dimensions of chipped material used onsite shall be 1/4 inch by 2 inches. Dispose of chips that are unsaleable or unsuitable for landscaping or other uses with unchipped debris.
5. Limit offsite disposal of clearing and grubbing debris to locations that are approved by federal, state, and local authorities, and that will not be visible from Project.

B. Scalpings: As specified for clearing and grubbing debris.
C. Strippings:

1. Dispose of strippings that are unsuitable for topsoil or that exceed quantity required for topsoil offsite.
2. Stockpile topsoil in sufficient quantity to meet Project needs. Dispose of excess strippings as specified for clearing and grubbing.

END OF SECTION
SECTION 31 23 00
STREAM BANK CONSTRUCTION

PART 1  GENERAL

1.01  REFERENCES

A. The following is a list of standards which may be referenced in this section:

   a. D698, Test Method for Laboratory Compaction Characteristics of Soil using Standard Effort (12,400 ft-lbf/ft³ (600 kN-m/m³)).

1.02  DEFINITIONS

A. Bankfull or Bankfull Stage: Defined as the elevation on the bank where flooding begins (incipient point of flooding).

B. Thalweg: Defined as the "flowline" or deepest point of the channel cross section.

C. Top of Bank (Top of Cut/Fill Slope): The point at which the proposed channel cross section intercepts the existing ground. Any land disturbance beyond this point is covered under 31 01 00, Site Management and Construction Sequencing, Article 3.10, Site Preparation.

D. The terms "Geotextile" or "Geotextile-Encapsulated" when used to describe materials shown on the details for Stream Bank Surface Stabilization and Stream Bank Reconstruction (both bank height <10') shall refer to Woven Coir Fabric.

E. Refer to applicable definitions in Section 31 32 00, Woven Mattress Coir Fabric Blanket (Coir Fabric).

F. Refer to applicable definitions in Section 31 37 01, Buffer and Riparian Plantings.

G. Stream Bank Stabilization: The application of coir fabric and soil bio-engineering techniques to the surface face of undisturbed banks per the details shown on the plans.

H. Stream Bank Reconstruction: The application of coir fabric and soil bio-engineering to the surface face and/or subsurface of "over excavated" banks per the details shown on the plans.
I. Imported Material: Materials obtained from sources offsite, suitable for specified use and tested and certified clean by Contractor.

J. General Fill: Imported materials required to raise existing grade from the rough grade, to the Final Grade.

1.03 ACTION SUBMITTALS

A. Written plans for the sequencing, excavation, and disposal of materials removed from the existing stream banks shall refer to applicable submittals in Section 31 01 00, Site Management and Construction Sequencing.

B. Written Borrow Excavation Plan, Detailing:
   1. Methods and sequencing of borrow excavation.
   2. Proposed offsite borrow sites.
   3. Copy of applicable permits or property owner agreements.
   4. Proposed locations and extents of onsite stockpiled borrow material.
   5. Quantity, types and sizes of equipment proposed to perform the Work.

C. Written Bank Stabilization Plan, Detailing:
   1. Methods and sequencing of fabric installation.
   2. Sequencing of bio-engineering.
   3. Copy of manufacturer's/supplier's product tag.
   4. Proposed staging area.
   5. Quantity, types and sizes of equipment proposed to perform the Work.

D. Written Bank Reconstruction Plan, Detailing:
   1. Methods and sequencing of borrow installation.
   5. Proposed staging area.
   6. Quantity, types and sizes of equipment proposed to perform the Work.

1.04 QUALITY ASSURANCE

A. Survey Control: The Subcontractor shall have onsite, at all times work is performed, an instrument capable of measuring elevations (survey level), survey rod, and personnel competent of confirming and recording spot elevations and grades. Control points shall be installed along the entire length of the project to assist with the confirmation of elevations and grades.
1.05 SCHEDULING AND SEQUENCING

A. The Subcontractor shall perform all excavation activities covered under Section 31 23 16, Excavation, prior to performing bank stabilization/reconstruction work.

B. The Contractor will field review the existing erosion control measures at each individual location prior to the start of Bank Stabilization/Reconstruction work.

C. The Subcontractor shall make repairs to erosion control measures which have failed or add additional measures based on the Contractor's recommendation.

D. The Subcontractor shall make their own determination as to which bank stabilization/reconstruction method is applicable at each location. The written plan shall be submitted in accordance with Article 1.2 and approved by the Contractor prior to proceeding with the Work.

E. The Subcontractor shall provide an as-built survey of the Work to the Contractor.

PART 2 PRODUCTS

2.01 SOURCE QUALITY CONTROL

A. All imported general fill material shall be tested and certified clean by the Subcontractor.

B. Testing to certify that the imported material is clean will be performed by the Subcontractor or the supplier, at a frequency not to exceed 1 sample per 1,000 cubic yards of imported material. The constituents to be analyzed will be at the discretion of the Contractor, and will depend on the location of the borrow source(s) and previous land uses at the borrow source.

2.02 GENERAL FILL

A. As defined in Section 31 23 23, Fill and Backfill.

PART 3 EXECUTION

3.01 STRIPPING

A. Do not remove topsoil until after scalping is completed.

3.02 GENERAL

A. It is recommended that the installation equipment have a hydraulic thumb.
B. The Subcontractor shall provide an as-built survey of the constructed channel, verifying points and elevations shown on the Drawings, prior to acceptance of the work for payment.

1. The survey shall include elevations and benchmark tied references to the following channel cross section points:
   a. Thalweg.
   b. Top and Bottom (toe) of Bank.

C. Excavate to lines, grades and dimensions shown and as necessary to accomplish the Work. Excavate to within tolerances of plus or minus 0.1 foot, except where the dimensions or grades are shown or specified as maximum or minimum.

3.03 INSTALLATION OF BANK SURFACE STABILIZATION

A. Surface stabilization will only be performed in areas of bank disturbance which did not include excavation of bank material. Areas would include ingress and egress points for equipment performing "in-stream" work.

B. Existing vegetation outside of the access areas is to remain.

C. Existing vegetation inside of the access areas shall be cut flush with the ground (plus or minus 0.2 foot) using hand or mechanical means and methods which do not disturb the surface of the ground.

3.04 INSTALLATION OF BANK RECONSTRUCTION (BANK HEIGHT <= 10')

A. Reconstruction will be performed in areas of bank disturbance which include excavation of bank material. Areas would also include ingress and egress points for equipment performing "in-stream" work.

B. Existing vegetation outside of the excavation areas is to remain.

C. The Subcontractor shall key coir fabric per the detail prior to applying borrow material.

D. General fill material shall be applied in maximum 12-inch lifts and compacted to 95 percent Standard Proctor above the water line. General fill material applied below the water line shall be compacted using the bucket of the excavator. (Minimum Excavator HP 325.)

E. Seeding mixtures and mulch shall be applied to the bank surface prior to installation of the coir fabric. Fabric installation shall be per the details and in accordance with Section 31 32 01, Woven Mattress Coir Fabric Blanket (Coir Fabric).
LINCOLN PARK/MILWAUKEE RIVER CHANNEL SEDIMENT SITE

F. The top of the bank fabric anchor shall be installed per the details.

G. Soil Bio-Engineering shall be applied in accordance with the details shown on the plans.

3.05 INSTALLATION OF BANK RECONSTRUCTION (BANK HEIGHT >10')

A. Reconstruction will be performed in areas of bank disturbance which include excavation of bank material. Areas would include ingress and egress points for equipment performing "in-stream" work as well as excavation for remediation.

B. Existing vegetation outside of the excavation areas is to remain.

C. The Subcontractor is required to excavate a minimum of 5 feet into the bank beyond the original and/or adjacent bank surface.

D. The Subcontractor shall install rip rap per the detail prior to installing the coir fabric.

E. The Subcontractor shall key coir fabric per the detail prior to applying borrow material.

F. General fill material shall be applied in maximum 12-inch lifts and compacted to 95 percent Standard Proctor above the water line. Borrow material applied below the water line shall be compacted using the bucket of the excavator (Minimum Excavator HP 325.).

G. After compacting the soil the coir fabric is pulled tight over the lift surface and anchored per the detail shown on the plans.

H. Brushlayer is then applied to the top of the fabric from the previous coir lift.

I. The fabric is then folded over the dead stout stakes and the brushlayer. Steps F-I are repeated.

J. The top of the bank fabric anchor shall be installed per the details.

K. Soil Bio-Engineering shall be applied in accordance with the details shown on the plans.

3.06 STOCKPILING OF EXCAVATED MATERIAL

A. Stockpile excavated material that is suitable for use as fill or backfill material as needed.

B. Confine stockpile areas to within the easements and approved Work areas.
C. Subcontractor shall maintain erosion control measures at all stockpile areas.

D. Do not stockpile excavated material adjacent to trenches and other excavations.

E. Do not stockpile materials over existing utilities.

3.07 DISPOSAL OF SPOIL

A. Dispose of excavated materials which are unsuitable or exceed quantity needed for restoration (larger rock), as directed by the Contractor.

B. Dispose of debris resulting from the removal of organic matter, trash, refuse and junk as specified in Section 31 01 00, Site Management and Construction Sequencing, for clearing and grubbing debris.

3.08 SITE TESTING

A. In-Place Density Tests: In accordance with ASTM D2922. During Placement of General Fill, test as follows:

1. General Fill: One test per each 2,500 square feet, with a minimum of 1 test per lift.

END OF SECTION
SECTION 31 23 13
SUBGRADE PREPARATION

PART 1 GENERAL

1.01 REFERENCES
   A. The following is a list of standards which may be referenced in this section:
      1. ASTM International (ASTM):
         a. D698, Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lb/ft³ (600 kN-m/m³))
         b. D1557, Test Method for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft³ (2,700 kN-m/m³)).

1.02 DEFINITIONS
   A. Optimum Moisture Content: As defined in Section 31 23 23, Fill and Backfill.
   B. Prepared Ground Surface: Ground surface after completion of clearing and grubbing, scalping of sod, stripping of topsoil, excavation to grade, and scarification and compaction of subgrade.
   C. Relative Compaction: As defined in Section 31 23 23, Fill and Backfill.
   D. Relative Density: As defined in Section 31 23 23, Fill and Backfill.
   E. Subgrade: Layer of existing soil after completion of clearing, grubbing, scalping of topsoil prior to placement of fill, roadway structure or base for floor slab.
   F. Proof-Rolling: Testing of subgrade by compactive effort to identify areas that will not support the future loading without excessive settlement.

1.03 INFORMATIONAL SUBMITTALS
   A. The subcontractor shall submit the proposed proof-rolling equipment specifications to the Contractor.

1.04 SEQUENCING AND SCHEDULING
   A. Complete applicable Work specified in Sections 31 10 00, Site Clearing and 31 23 16, Excavation, prior to subgrade preparation.
1.05 QUALITY ASSURANCE

A. Notify Contractor when subgrade is ready for compaction or proof-rolling or whenever compaction or proof-rolling is resumed after a period of extended inactivity.

1.06 ENVIRONMENTAL REQUIREMENTS

A. Prepare subgrade when unfrozen and free of ice and snow.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 GENERAL

A. Keep subgrade free of water, debris, and foreign matter during compaction or proof-rolling.

B. Bring subgrade to proper grade and cross-section and uniformly compact surface.

C. Do not use sections of prepared ground surface as haul roads. Protect prepared subgrade from traffic.

D. Maintain prepared ground surface in finished condition until next course is placed.

3.02 PROOF ROLLING

A. After overexcavating and replacing unsuitable material and removing debris, proof-roll the entire subgrade to locate any soft/loose soils or potentially unsuitable conditions. Proof-rolling shall be performed with a loaded tandem dump truck having a minimum weight of 25,000 pounds and exerting a minimum uniform average pressure of 40 psi.

B. Overexcavate only as directed by the Contractor any rutted areas, wet, unsuitable, or soft or loose subgrade material (as specified in Article 3.06 of this Section), as directed by Contractor. Replace overexcavated soft or loose subgrade material as specified in Article 3.06 of this Section, and compact as specified in Section 31 23 23, Fill and Backfill.

C. At the direction of the Contractor, perform additional proof-rolling after subgrade soil has been compacted to confirm firm and unyielding conditions.
3.03 COMPACTION

A. After proof-rolling, compact all subgrade soils to minimum 95 percent relative compaction as determined in accordance with ASTM D698. This compaction must be achieved throughout the top 1 foot of the prepared subgrade. Where overexcavation and replacement of unsuitable, soft or loose materials is required, compact as specified in Section 31 23 23, Fill and Backfill.

B. If any two of the four most recent tests fall below 95 percent relative compaction, or any one of the tests falls below 92 percent, additional compaction effort will be required.

C. As necessary, modify the moisture content of subgrade soils to achieve the required relative compaction.

3.04 MOISTURE CONDITIONING

A. Dry Subgrade: Add water, then mix to make moisture content uniform throughout.

B. Wet Subgrade: Aerate material by blading, discing, harrowing, or other methods, to hasten drying process.

3.05 TESTING

A. The Contractor may require additional testing of soft or loose subgrade material prior to subgrade preparation.

B. In-Place Density Tests: In accordance with ASTM D2922. Test top 1 foot of subgrade at a frequency of one test every 5,000 square feet.

3.06 CORRECTION

A. Soft or Loose Subgrade:
   1. Adjust moisture content and recompact, or
   2. Over excavate as specified in Section 31 23 16, Excavation, and replace with suitable material from the excavation, as specified in Section 31 23 23, Fill and Backfill.

B. Unsuitable Material: Over excavate as specified in Section 31 23 16, Excavation, and replace with suitable material from the excavation, as specified in Section 31 23 23, Fill and Backfill.

END OF SECTION
SECTION 31 23 16
EXCAVATION

PART 1 GENERAL

1.01 DESCRIPTION

A. This section applies to all types of excavation including contaminated sediment, TSCA-contaminated sediment, and common excavation to achieve a PCB concentration in the sediment of less than 1 mg/kg.

1.02 DEFINITIONS

A. Contaminated Sediment Excavation: Removal of any contaminated sediment (PCBs >1 and <50 mg/kg) from Lincoln Creek and the Western Oxbow in the Milwaukee River. Approximate extent of contaminated sediment excavation is shown on the Drawings, but actual extent will be determined by confirmation sampling in the field.

B. TSCA-Contaminated Sediment Excavation: Removal of any contaminated sediment (PCBs >50 mg/kg) from Lincoln Creek and the Western Oxbow in the Milwaukee River. Approximate extent of TSCA-contaminated sediment excavation is shown on the Drawings, but actual extent will be determined by confirmation sampling in the field.

C. Common Excavation: Removal of any non-contaminated, non-rock soils.

1.03 INFORMATIONAL SUBMITTALS

A. Excavation Plan, Detailing:

1. Methods and sequencing of excavation.
2. Shoring design detailing how sides of excavations will be supported, detrimental settlement prevented, and lateral movement of existing facilities, adjacent property, and completed Work protected.
3. Proposed locations of stockpiled excavated material.
4. Anticipated difficulties and proposed resolutions.
5. Proposed contaminated and TSCA sediment disposal facilities.
6. Proposed common excavation disposal location.
7. Excavation Plan shall be sealed by a WI P.E.
B. Survey Plan, Detailing:

1. Within 7 days after Notice of Award, Subcontractor shall submit a Survey Plan that is consistent with the Specifications provided. The submittal will consist of:
   a. Type of survey to be used.
   b. Proposed Surveyor’s relevant qualifications and experience.
   c. Approximate number of survey points within a given area.
   d. Precision of the equipment.
   e. Accuracy of the survey.
   f. The reporting format to meet the Specifications.

C. Daily Excavation Reports:

1. Subcontractor shall submit a daily report to the Contractor describing each calendar day’s activities (12 am to 11:59 pm) beginning with mobilization to the site and ending with demobilization from the site. The report shall be submitted no later than 5:00 p.m. following the reported day.

2. The Daily Work Report shall include the following:
   a. Project name, day, and date.
   b. Weather conditions for the site, including high and low temperature, precipitation levels, maximum and average wind velocity and direction, sky conditions and minimum/maximum water depth fluctuations.
   c. Location of excavation performed for the day with figure indicating excavation area.
   d. The day’s activities shall be reported to include active excavation times, time when excavation was not conducted due to mechanical failure, time when excavation was not conducted due to maintenance of equipment, time and reason for excavation downtime due to delays by others.
   e. Approximate volume (cubic yards) excavated.
   f. Debris type, approximate volume, location encountered, and location placed.
   g. Health and Safety reporting to include accidents, spills, and near-misses, and actions taken to contain and correct each incident with the name of the individual reporting the event.
   h. Description of all monitoring performed by the Subcontractor, including surveys.
   i. Safety topics, images of day’s activities, meeting or inspections with applicable decisions, and/or miscellaneous notes appropriate to the day’s activities.
D. Weekly Progress Report:

1. Subcontractor shall submit a weekly progress report to the Contractor describing each week’s activities beginning with mobilization to the site and ending with demobilization from the site. The report shall be submitted no later than Monday at 5:00 p.m. following the reported week.

2. The Weekly Progress Report shall include the following:
   a. Project name and reported week.
   b. Weekly Survey data and report.
   c. Total volume excavated during the week based on the survey results.
   d. Equipment repairs and maintenance performed.
   e. Next week’s expected activities.

3. The following shall be included in each weekly survey report:
   a. Documentation of the surveyor, equipment, and methods used in the survey.
   b. Survey map of Lincoln Creek and Western Oxbow at 1 inch equals 50 feet, 1-foot contour interval in paper copy and MicroStation format.
   c. The survey of the reporting period shall be compared with the previous reporting period and the pre-excavation survey to determine volume excavated to date.
   d. Subcontractor shall furnish one set of the final soundings, plan and sections, and quantity calculations.
   e. Subcontractor shall furnish electronic files of the mapping and profiling results. This shall include raw and post processed survey data. Data format shall be delivered in ASCII and InRoads DTM compatible format.
   f. The survey data shall be Wisconsin State Plane Coordinate (SPC) NAD 1927, South, U.S. Survey Feet.

E. Project Closeout Report:

1. At the end of each stream zone (1, 2A, 2B, and 3A), a closeout report shall be completed and delivered to the Contractor no later than 30 days following completion of dredging for the subject work window. The report shall include the follow sections:
   a. Introduction:
      1) Remediation overview.
      2) Project background.
   b. Excavation Operations:
      1) Overview of excavation operations.
      2) Summary of work window operations.
      3) Schedule.
4) Production.
5) Debris.
6) Dewatering activities.
7) Overview.
8) System improvements.
9) Communications.

c. Debris removal.
d. QA/QC Operations:
   1) Survey.
   2) Equipment and personnel.
   3) QA Survey methods.
   4) QC Survey methods.

1.04 QUALITY ASSURANCE

A. Provide adequate survey control to avoid unauthorized over excavation.

1.05 WEATHER LIMITATIONS

A. Material excavated when frozen or when air temperature is less than 32 degrees F shall not be used as fill or backfill until material completely thaws.

B. Material excavated during inclement weather shall not be used as fill or backfill until after material drains and dries sufficiently for proper compaction.

1.06 SEQUENCING AND SCHEDULING

A. Clearing, Grubbing, and Stripping: Complete applicable Work specified in Section 31 10 00, Site Clearing, prior to excavating.

B. Dewatering: Conform to applicable requirements of Section 31 23 19.01, Lincoln Park Bypass and Dewatering, prior to initiating excavation.

C. Excavation Support: Install and maintain as necessary to support sides of excavations and prevent detrimental settlement and lateral movement of existing facilities, adjacent property, and completed Work.

1.07 PRE-EXCAVATION, PROGRESS, AND POST-EXCAVATION SURVEYS

A. Subcontractor shall engage a registered Surveyor licensed in Wisconsin and experienced in stream and stream bank surveying to perform a pre-excavation survey before excavation operations commence, weekly surveys to track progress, and post-excavation bathymetric surveys to document conditions at completion for each creek section. Subcontractor shall submit a Survey Plan.
(as described in Article Submittals) with the proposed Surveyor’s relevant qualifications and experience described in sufficient detail to provide a clear demonstration of their competency to perform the work as required by the Contract.

B. Subcontractor shall perform a pre-excavation survey within 21 days after Notice of Award.

C. Subcontractor shall make a specific effort to include the creek bed in the areas where the earthen berms will be placed in the pre- and post-construction surveys.

D. Subcontractor shall perform progress surveys on a weekly basis during the dredging work window and provide results to the Contractor.

E. Subcontractor shall perform a survey within 7 days after the excavation is complete for each creek section. Subcontractor shall report the survey in the weekly progress report and propose to use the survey as a post-excavation survey for the reported pile. If conditions are satisfactory to the Contractor, the survey will be deemed as the post-excavation survey for the reported creek section.

F. Subcontractor shall attempt to use the same Surveyor to complete all surveys. In the event a different Surveyor is required, the Subcontractor shall submit a modified Survey Plan with the proposed Surveyor. Subcontractor shall receive approval from Contractor prior to using the proposed Surveyor to perform surveys.

G. Survey accuracy shall meet the following requirements:

1. Site Control Points:
   a. CH2M HILL will furnish up to two site control point locations as determined by the Subcontractor.
   b. The site control points will be based on the horizontal datum of NAD-27, Wisconsin State Plane Coordinate System South, U.S. Survey Feet (Grid), and the Vertical Datum of NGVD 1929.

2. Accuracy and Tolerances: The Surveyor shall have equipment that is capable of measuring and recording the vertical and horizontal location of the top of sediment in Lincoln Creek and the Western Oxbow. The survey equipment shall provide a permanent record of the positions referenced to the Project coordinate system. The location of the top of sediment shall be measured and recorded with equipment capable of producing one-foot surface contours at a 95 percent confidence level.
   a. Horizontal Accuracy: Plus or minus 0.1 ft.
   b. Vertical Accuracy: Plus or minus 0.01 ft (0.1 for unpaved ground surface elevations).
H. The vertical datum used for the dredging Work in the river shall be National Geodetic Vertical Datum (NGVD) 1929. The plane coordinate datum used for excavation Work shall be Wisconsin State Plane Coordinate (SPC) NAD 1927, South, U.S. survey feet.

I. Survey methods and means for verifying dredged elevations shall be by electronic means, calibrated to Project datum prior to the beginning of the Work.

J. Horizontal positioning for depth measurements shall use electronic positioning modes or systems, or hybrid combinations of instrumental and electronic data measurement and recording systems to measure, adjust, correlate, print, plot, and record horizontal and vertical observations.

K. The USEPA, Contractor, or designated representative will be permitted to have an observer present during all survey events, if desired.

L. The Surveyor shall be responsible for computing the volume of material dredged in cubic yards, for acceptance or payment purposes based on the before and after dredge soundings. In the event that the post-excavation completion survey discloses that the excavation is not satisfactorily completed, the Subcontractor shall resume dredging until the Work is deemed complete.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 GENERAL

A. Excavate to lines, grades, and dimensions shown and as necessary to accomplish Work. Excavate to within tolerance of plus or minus 0.1 foot, except where dimensions or grades are shown or specified as maximum or minimum. Allow for forms, working space, granular base, topsoil, and similar items, wherever applicable.

B. Excavation and transportation activities within Lincoln Creek and the Western Oxbow shall be performed on mats to prevent equipment tracks and wheels from contacting sediment.

C. Do not over excavate without written authorization of Contractor.

D. Remove or protect obstructions as shown and as specified in Section 01 50 00, Temporary Facilities and Controls, Article Protection of Work and Property.
3.02 CLASSIFIED EXCAVATION

A. Excavation is classified; see Article Definitions for classifications.

3.03 CONTAMINATED SOIL EXCAVATION

A. The Contractor will determine the extent of contaminated soil excavation in a preconstruction sediment investigation.

B. Do not begin contaminated or TSCA-contaminated sediment excavation without approval of the Contractor. The Contractor will be present during excavation activities.

C. Conduct contaminated and TSCA-contaminated sediment excavation in horizontal stages no deeper than 1 foot each. Do not excavate another stage from any area until approved by the Contractor. Continue contaminated sediment and TSCA-contaminated excavation in this manner until excavation is complete, as directed by the Contractor.

D. Contractor will collect confirmation samples within the excavation area when the excavation has reached the extents identified by the preconstruction soils investigation. Analysis of the samples will be performed by a mobile laboratory. If test results indicate soils remain with PCB concentrations greater than 1 mg/kg, additional soil will be removed, as directed by the Contractor.

E. If stockpiling excavated contaminated soil is necessary prior to offsite disposal, stage excavated contaminated soil as specified in Part 3.05.

F. Subcontractor shall perform air monitoring in accordance with their health and safety plan.

3.04 EMBANKMENT AND CUT SLOPES

A. Shape, trim, and finish cut slopes to conform with lines, grades, and cross-sections shown, with proper allowance for topsoil or slope protection, where shown.

B. Remove stones and rock that exceed 3-inch diameter and that are loose and may roll down slope. Remove exposed roots from cut slopes.

C. Round tops of cut slopes in soil to not less than a 6-foot radius, provided such rounding does not extend offsite or outside easements and rights-of-way, or adversely impacts existing facilities, adjacent property, or completed Work.
3.05 STOCKPILING EXCAVATED MATERIAL

A. Stockpile excavated material that is suitable for use as fill or backfill until material is needed.

B. Stockpile excavated TSCA-contaminated sediment on dewatering pad out of creek bank to prevent contact with flood water. If stockpiling excavated contaminated sediment, the Subcontractor must place excavated contaminated sediment on a liner located outside the 100-year floodplain to prevent contact with flood waters, cover with a UV stable geomembrane and anchor to prevent erosion of the stockpile or release of contaminated soils.

C. Post signs indicating proposed use of material stockpiled. Post signs that are readable from all directions of approach to each stockpile. Signs should be clearly worded and readable by equipment operators from their normal seated position.

D. Confine stockpiles to within easements, rights-of-way, and approved work areas. Do not obstruct roads or streets.

E. Do not stockpile excavated material in Lincoln Creek or Western Oxbow, or adjacent to trenches and other excavations, unless excavation side slopes and excavation support systems are designed, constructed, and maintained for stockpile loads.

F. Do not stockpile excavated materials near or over existing facilities, adjacent property, or completed Work, if weight of stockpiled material could induce excessive settlement.

3.06 DISPOSAL OF SPOIL

A. Common excavated materials, which are unsuitable or exceed quantity needed for fill or backfill, shall be left onsite by working into final grade under the supervision of the Contractor.

B. Dispose of excavated TSCA-contaminated sediment at TSCA disposal facility approved by USEPA and Contractor.

C. Dispose of contaminated sediment at a disposal facility approved by USEPA and Contractor.

D. Dispose of debris resulting from removal of organic matter, trash, refuse, and junk as specified in Section 31 10 00, Site Clearing, for clearing and grubbing debris.

END OF SECTION
SECTION 31 23 19.01
LINCOLN CREEK BYPASS AND DEWATERING

PART 1    GENERAL

1.01  DEFINITIONS

A. Temporary Earthen Cut-Off Structure: Earthen structure to be constructed of material compatible with the restoration materials and does not have grain sizes less than a representative D50 in the Lincoln Creek channel. Maximum height of earthen structure shall be 6-feet.

B. Temporary Sheet Pile Cut-Off Structure: Steel sheet pile system designed and installed in the locations shown on the drawings. These structures shall be designed and drawings sealed by a P.E. licensed in Wisconsin.

C. Surface Water from Undisturbed Areas (Chapter 30): Water associated with initial dewatering of the site. Includes the Lincoln Creek upstream bypass around disturbed areas, precipitation on undisturbed areas, and storm sewer outfall discharges on undisturbed areas.

D. Surface Water from Disturbed Areas (WPDES Wastewater): Water associated with major precipitation events that overtop the cut-off structures, precipitation collected on active excavation areas, and storm sewer outfall discharges on active excavation areas.

E. Groundwater from Disturbed Areas (WPDES Wastewater): Water associated with excavations below the normal water table, excavations during removal of contaminated sediment, and restoration after the removal of contaminated sediment.

F. Exhibit 1 provides further detail on the types of water and handling procedures.

1.02  ACTION SUBMITTALS

A. Detailed Bypass and Dewatering Plan.

B. Detailed Water Treatment Plan.
1.03 BYPASS AND DEWATERING PLAN

A. As a minimum, include:

1. Description of proposed temporary cutoff structures including, but not limited to, equipment, materials, installation, and removal methods.
   a. Elevation height of proposed temporary cutoff structures shall not exceed the elevations shown in Exhibit 2.
2. Description of proposed Lincoln Creek bypass system including, but not limited to, equipment; methods; standby equipment and power supply, means of measuring flow to discharge locations to be utilized. The bypass system must convey a minimum of 100 cubic feet of water per second.
3. Description of proposed management of outfall discharges. Subcontractor may use diversions or pump bypass systems. The outfall management descriptions shall include but is not limited to, equipment; methods; standby equipment and power supply, means of measuring flow, and discharge locations to be utilized.
4. Descriptions of proposed dewatering systems including, but not limited to, equipment; methods; standby equipment and power supply, means of measuring flow, and discharge locations to be utilized.
5. Drawings showing locations, dimensions, and relationships of elements of each system.
6. Design calculations demonstrating adequacy of proposed bypass and dewatering systems and components.
7. If system is modified during installation or operation revise or amend and resubmit Bypass and Dewatering Plan.
8. Compliance with WDNR Chapter 30 site specific permit.
9. Leak test piping in accordance with Section 40.80.01-Process Piping Leakage Testing.

B. All structures and systems presented in the Bypass and Dewatering Plan will be designed and sealed by a P.E. licensed in Wisconsin.

C. USGS Gage 040869416 information for Lincoln Creek at Sherman Boulevard in Milwaukee, WI can be found on the internet at the following location:

D. USGS Gage 04087000 information for the Milwaukee River in Milwaukee, WI can be found on the internet at the following location:
1.04 WATER TREATMENT PLAN

A. Two water treatment systems will be required:

   a. 2,000 gpm capacity minimum.

2. WPDES System for TSS and PCB treatment.
   a. 500 gpm capacity minimum.

B. To include but not be limited to:

1. Description of proposed water treatment systems including, but not limited to, equipment; methods; standby equipment and power supply, means of measuring flow to discharge locations to be utilized.

2. Compliance with WDNR Chapter 30 and WPDES site specific permits

3. Size of the electrical power supply and distribution plans.

4. System drawings including:
   a. Flow diagrams.
   b. Water treatment plan layout.

5. The Chapter 30 water treatment system must be capable of meeting the following at a minimum:
   a. Minimum flow of 2,000 gallons per minute (gpm).
   b. Reducing the influent TSS to the required discharge limit of 40 mg/L.

6. The WPDES water treatment system must be capable of meeting the following at a minimum:
   a. Minimum flow of 500 gallons per minute (gpm).
   b. Reducing the influent TSS to the required discharge limit of 40 mg/L and the discharge limit of less than 0.1 µg/L for PCBs.

7. Leak test piping in accordance with Section 40 80 01, Process Piping Leakage Testing.

8. Test water treatment systems in accordance with Section 01 91 14, Equipment Testing and Facility Startup.

9. Sampling Plan to monitor for compliance.

10. Operation and Maintenance plan.

11. Preventive Maintenance Plan: Upon Notice of Award, the Subcontractor shall submit for review and approval a PMP per the minimum requirements presented in this specification.

12. Project Organization and Responsibility Plan: Upon Notice of Award, the Subcontractor shall submit for review and approval a Project Organization and Responsibility Plan. The plan shall discuss the proposed staff for operating and maintaining the water treatment systems.

13. Records and Reports: The Subcontractor shall maintain management, operation, and maintenance records and prepare management, operation, and maintenance reports. All records and copies of reports shall be turned over to Contractor within 5 days after subcontract completion.
PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 GENERAL

A. Continuously control water during course of construction, including weekends and holidays and during periods of work stoppages, and provide adequate backup systems to maintain control of water.

B. Remove and control water during periods when necessary to properly accomplish Work.

3.02 SURFACE WATER CONTROL

A. See Section 01 50 00, Temporary Facilities and Controls, Article Temporary Controls.

B. Remove surface runoff controls when no longer needed.

3.03 LINCOLN CREEK BYPASS

A. Design, provide, operate, and maintain bypass system of sufficient size and capacity to prevent water from entering work area to permit excavation and subsequent construction in dry. Continuously maintain excavations free of water, regardless of source, and until backfilled to final grade.

B. Route bypass on property available for Subcontractor’s use as shown on the drawings.

C. Provide sufficient redundancy in each system to keep excavation free of water in event of component failure.

D. If pumps are used, provide 100 percent emergency power backup with automatic startup and switchover in event of electrical power failure or redundant diesel powered pumps.

3.04 CUT-OFF STRUCTURES

A. Design, provide, operate, and maintain cut-off structures of sufficient size and capacity to prevent water from entering work area to permit excavation and subsequent construction in dry. Continuously maintain excavations free of water, regardless of source, and until backfilled to final grade.

B. Cut-off structures shall be designed to meet the elevation requirements listed in Exhibit 2.
C. Earthen cut-off structures shall be constructed of material compatible with the restoration materials and shall not have grain sizes less than a representative D50 in the Lincoln Creek channel. Maximum height of earthen structure shall be 6-feet.

D. Earthen cut-off structures shall be designed to wash away and not cause the flooding out upstream vegetation above the historic Estabrook Dam pool (Elevation 617).

E. Subcontractor shall survey the channel up to and including the earthen cut-off structures location pre- and post-project to verify that the earthen cut-off structure has been removed and that any material wash-out has been removed.

3.05 DEWATERING SYSTEMS

A. Provide, operate, and maintain dewatering systems of sufficient size and capacity to permit excavation and subsequent construction in dry and to lower and maintain water level so excavation can occur in the dry. Continuously maintain excavations free of water, regardless of source, and until backfilled to final grade.

B. Design and Operate Dewatering Systems:

1. To prevent loss of ground as water is removed.
2. To avoid inducing settlement or damage to existing facilities, completed Work, or adjacent property.

C. Provide sufficient redundancy in each system to keep excavation free of water in event of component failure.

D. Provide supplemental ditches and sumps only as necessary to collect water from local seeps. Do not use ditches and sumps as primary means of dewatering.

3.06 MONITORING FLOWS

A. Monitor volume of water pumped per calendar day from excavations, as Work progresses. Also monitor volume of water introduced each day into excavations for performance of Work. Monitor flows using measuring devices acceptable to Contractor.

3.07 OPERATION OF WATER TREATMENT SYSTEMS

A. The Subcontractor shall be responsible for the operation and maintenance of the water treatment systems. The Subcontractor shall operate the water treatment systems so treated water meets the discharge requirements.
B. The Subcontractor shall furnish an operator with a valid Wisconsin operator’s license who shall act as the person responsible for plant operation and who shall be available for consultation with the Contractor or with pertinent regulatory agencies as needed. The operator shall also fill out forms documenting work accomplished. The Subcontractor shall develop recording and reporting forms specific to the maintenance of the individual systems and submit the appropriate forms to Contractor for approval.

C. Sample Collection Points:

1. Sample collection points for performance measurements as determined by the Contractor.
2. The Subcontractor shall maintain the collection points in a clean and fully operational condition. Repair as needed if leaks develop.

D. Maintenance of the Water Treatment System: The Subcontractor shall perform all preventive and corrective maintenance, within limits specified herein, needed to keep the water treatment system equipment in operational condition.

E. Preventive Maintenance:

1. The Subcontractor shall prepare a Preventive Maintenance Plan (PMP). The PMP shall describe the type of maintenance to be performed and the date for which performance is scheduled.
2. The Subcontractor shall submit a draft PMP to the Contractor no later than 21 days after the subcontract award. Upon Contractor approval, the PMP shall become part of this document and the Subcontractor shall perform preventive maintenance in accordance therewith.
3. The submitted plan shall include components to be inspected and maintained, inspection and maintenance techniques, and frequencies, and reporting methodology.
4. The Subcontractor may, at the Subcontractor’s discretion, perform preventive maintenance on equipment not included in the PMP in order to avoid potential corrective maintenance costs.
5. When the results of PM indicate that defective parts or components need to be repaired or replaced, the Subcontractor shall be responsible for such repairs, if within the scope of corrective maintenance.

3.08 DISPOSAL OF WATER

A. Comply with discharge permits for water disposal from authorities having jurisdiction.

B. Treat water collected by dewatering operations, as required by regulatory agencies, prior to discharge.
C. Discharge water as required by discharge permit and in manner that will not cause erosion or flooding, or otherwise damage existing facilities, completed Work, or adjacent property.

1. Diffuser: Diffuser shall be a 60-ft or 80-ft circumference geotextile tube anchored in the Milwaukee River and protected from washing downriver.

D. Remove solids from treatment facilities and perform other maintenance of treatment facilities as necessary to maintain their efficiency.

3.09 PROTECTION OF PROPERTY

A. Make assessment of potential for dewatering induced settlement. Provide and operate devices or systems, including but not limited to reinjection wells, infiltration trenches and cutoff walls, necessary to prevent damage to existing facilities, completed Work, and adjacent property.

B. Securely support existing facilities, completed Work, and adjacent property vulnerable to settlement due to dewatering operations. Support shall include, but not be limited to, bracing, underpinning, or compaction grouting.

3.10 SUPPLEMENTS

A. The supplements listed below, following “End of Section”, are part of this Specification.

1. Exhibit 1 – Lincoln Park/Milwaukee River Wastewater Management Flow Chart.
2. Exhibit 2 - Summary of Temporary Cut-off Structure Requirements.

END OF SECTION
1. **SW Undisturbed Areas**
   - Examples:
     - Initial Dewatering
     - Lincoln Creek Upstream Diversion Around Disturbed Areas
     - Precipitation on Undisturbed Areas
     - Storm Sewer Outfall on Undisturbed Areas
     - Major Precipitation Event Overtops Diversion Devices and is Not Collected in Work Area

2. **SW Disturbed Areas**
   - Examples:
     - Major Precipitation Event Overtops Diversion Devices and is Collected in Work Area
     - Precipitation Collected on Disturbed Areas
     - Storm Sewer Outfall on Disturbed Areas

3. **GW Disturbed Areas**
   - Examples:
     - In Excavation Below Normal Water Table
     - During Removal of Contaminated Sediment
     - Restoration After Removal of Contaminated Sediment

4. **Decon Water**
   - Examples:
     - Collected from Cleaning Trucks and Equipment on Decon Pads
     - Dewatering on TSCA Staging Pad

---

**SECTION 31 23 19.01 – EXHIBIT 1
Lincoln Park/Milwaukee River Wastewater Management Flow Chart**

**Surface Water**

- **1. SW Undisturbed Areas**
  - Examples:
    - Initial Dewatering
    - Lincoln Creek Upstream Diversion Around Disturbed Areas
    - Precipitation on Undisturbed Areas
    - Storm Sewer Outfall on Undisturbed Areas
    - Major Precipitation Event Overtops Diversion Devices and is Not Collected in Work Area

- **2. SW Disturbed Areas**
  - Examples:
    - Major Precipitation Event Overtops Diversion Devices and is Collected in Work Area
    - Precipitation Collected on Disturbed Areas
    - Storm Sewer Outfall on Disturbed Areas

**Groundwater**

- **3. GW Disturbed Areas**
  - Examples:
    - In Excavation Below Normal Water Table
    - During Removal of Contaminated Sediment
    - Restoration After Removal of Contaminated Sediment

**Decon Water**

- **4. Decon Water**
  - Examples:
    - Collected from Cleaning Trucks and Equipment on Decon Pads
    - Dewatering on TSCA Staging Pad

---

**Flow Chart Diagram Details**

- **Is it Pumped?**
  - Yes
  - No

- **Is it Pumped Before Entering Limits of Work?**
  - Yes
  - No

- **Does the Disturbed Area in Question Have Sediment >1ppm PCBs (Based on RI Data or Conf. Samples)?**
  - Yes
  - No

- **Is There More Than 12 Inches of Water Above the Disturbed Surface?**
  - Yes
  - No

- **Pump Water That Is >12 Inches Above the Disturbed Surface**
  - Outfalls 001 (North Bridge) & 002 (South Bridge)
  - Treat to Remove TSS; Discharge to River With Energy Dissipation
  - (Ch. 30 Requirement Incorporated Into WPDES Wastewater Permit)

- **Pump Water That Is <12 Inches Above the Disturbed Surface**
  - Outfall 003
  - Treat to Remove TSS and PCBs; Discharge to River With Energy Dissipation (WPDES Wastewater Permit TSS/PCB Treatment Requirement)

---

**Yes/No Decision Points**

- **No Treatment Required; Discharge Directly to River With Energy Dissipation**
- **Energy Dissipation**
**EXHIBIT 2**

### SUMMARY OF TEMPORARY CUT-OFF STRUCTURE REQUIREMENTS

<table>
<thead>
<tr>
<th>Stage</th>
<th>Type of Cut-off</th>
<th>Recommended Maximum Cut-off Elevation</th>
</tr>
</thead>
</table>
| 1 – Lincoln Creek cut-offs 1A and 1C (Upstream of Green Bay Avenue Bridge and at Confluence with Milwaukee River western oxbow) | Earthen | 1A: 617.0 feet  
1C: 617.0 feet |
| 1 – Milwaukee River western oxbow cut-offs 1B and 1D | Sheet Pile | 1B: 620.0 feet  
1D: 620.0 feet |
| 2 – Milwaukee River western oxbow cut-offs 2A and 2B | Sheet Pile | 2A: 620.0 feet  
2B: 620.0 feet |
| 2 – Lincoln Creek re-routing | None (Re-routing of Lincoln Creek) | N/A |

* Earthen cut-off to wash away with less than 100-year return period storm event.*
PART 1    GENERAL

1.01 SCOPE

A. This section applies to placement and compaction of most earthen materials, except for topsoil and trench backfill.

1.02 REFERENCES

A. The following is a list of standards which may be referenced in this section:

1. ASTM International (ASTM):
   d. D698, Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft³ (600 kN-m/m³)).
   e. D1556, Standard Test Method for Density and Unit Weight of Soil in Place by the Sand-Cone Method.
   f. D1557, Test Method for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft³ (2,700 kN-m/m³)).
   g. D2922, Standard Test Methods for Density of Soil and Soil-Aggregate in Place by Nuclear Methods (Shallow Depth).
   h. D4253, Standard Test Methods for Maximum Index Density and Unit Weight of Soils Using a Vibratory Table.

1.03 DEFINITIONS

A. Relative Compaction:

1. Ratio, in percent, of as-compacted field dry density to laboratory maximum dry density as determined in accordance with ASTM D698.
2. Apply corrections for oversize material to either as-compacted field dry density or maximum dry density, as determined by Contractor.
B. Optimum Moisture Content:
   1. Determined in accordance with ASTM Standard specified to determine maximum dry density for relative compaction.
   2. Determine field moisture content on basis of fraction passing 3/4-inch sieve.

C. Relative Density: Calculated in accordance with ASTM D4254 based on maximum index density determined in accordance with ASTM D4253 and minimum index density determined in accordance with ASTM D4254.

D. Prepared Ground Surface: Ground surface after completion of required demolition, clearing and grubbing, scalping of sod, stripping of topsoil, excavation to grade, and subgrade preparation.

E. Completed Course: A course or layer that is ready for next layer or next phase of Work.

F. Lift: Loose (uncompacted) layer of material.

G. Geosynthetics: Geotextiles, geogrids, or geomembranes.

H. Well-Graded:
   1. A mixture of particle sizes with no specific concentration or lack thereof of one or more sizes.
   2. Does not define numerical value that must be placed on coefficient of uniformity, coefficient of curvature, or other specific grain size distribution parameters.
   3. Used to define material type that, when compacted, produces a strong and relatively incompressible soil mass free from detrimental voids.

I. Influence Area: Area within planes sloped downward and outward at 60-degree angle from horizontal measured from:
   1. 1 foot outside outermost edge at base of foundations or slabs.
   2. 1 foot outside outermost edge at surface of roadways or shoulder.
   3. 0.5 foot outside exterior at spring line of pipes or culverts.

J. Borrow Material: Material from required excavations on or near site.

K. Imported Material: Materials obtained from sources offsite, suitable for specified use and tested and certified clean by Subcontractor.

L. Structural Fill: Fill materials as required under structures, pavements, and other facilities.
M. General Fill: Fill materials required to raise existing grade in areas other than under structures. Includes perimeter berm construction material and overexcavation correction material.

1.04 SUBMITTALS

A. Samples:
   1. Each imported material taken at source, prior to construction.
   2. Structural fill.

B. Quality Control Submittals:
   1. Catalog and manufacturer’s data sheets for compaction equipment.
   2. Certified test results from independent testing agency.
      a. Certified gradation test results in accordance with ASTM D422, for imported materials.
      b. Certified modified Proctor compaction test results in accordance with ASTM D698, for structural fill, and general fill (up to 12 test samples).
   3. Contract with an independent testing laboratory to provide testing services required. Contractor shall be responsible for the cost of all testing.
   4. Provide manufacture’s data sheet for proposed geotextile.

1.05 QUALITY ASSURANCE

A. Notify Contractor when:
   1. Ready for backfilling, and whenever backfilling operations are resumed after a period of inactivity.
   2. Soft or loose subgrade materials are encountered wherever embankment or site fill is to be placed.
   3. Fill material appears to be deviating from Specifications.

1.06 SEQUENCING AND SCHEDULING

A. Complete applicable Work specified in Section 31 10 00, Site Clearing; Section 31 23 16, Excavation; and Section 31 23 13, Subgrade Preparation, prior to placing fill or backfill.

B. Do not place any fill material until after subgrade has been prepared as specified in Section 31 23 13, Subgrade Preparation.
PART 2 PRODUCTS

2.01 SOURCE QUALITY CONTROL

A. All imported borrow, backfill, structural, and general fill material shall be tested and certified clean by the Subcontractor.

B. Testing to certify that the imported material is clean will be performed by the Subcontractor or the supplier, at a frequency not to exceed 1 sample per 3,000 cubic yards of imported material. The constituents to be analyzed will be at the discretion of the Contractor, and will depend on the location of the borrow source(s) and previous land uses at the borrow source.

C. Gradation Tests:

1. As necessary to locate acceptable sources of imported material.
2. During production of imported material, perform gradation tests in accordance with ASTM C117 and ASTM C136, and provide samples to the Contractor, as follows:
   a. General Fill: One test from every 5,000 cubic yards of material.
   b. Structural Fill: one per source.
3. Include a description of grain angularity with the reported test results.
4. Clearly mark each sample, and show source of material and intended use.

2.02 GENERAL FILL

A. Soil material from stockpiles located at Moss American site. Three separate stockpiles are available for potential material reuse and consist of the Leon stockpile (9,500 cubic yards), Calumet access road (1,900 cubic yards), and Calumet soil stockpile (16,800 cubic yards). Subcontractor shall use this material first before importing other general fill.

B. Any natural soil material, excluding organic soils, debris, or other deleterious materials.

C. Maximum particle size of 4 inches.

2.03 STRUCTURAL FILL

A. 1-inch minus crushed gravel or crushed rock.

B. Free from dirt, clay balls, and organic material.
LINCOLN PARK/MILWAUKEE RIVER CHANNEL SEDIMENT SITE

C. Well-graded from coarse to fine and containing sufficient fines to bind material when compacted, but with maximum 8 percent by weight passing No. 200 sieve.

2.04 SAND

A. Free from clay, organic matter, or other deleterious material.

B. Gradation as determined in accordance with ASTM C117 and ASTM C136:

<table>
<thead>
<tr>
<th>Sieve Size</th>
<th>Percent Passing by Weight</th>
</tr>
</thead>
<tbody>
<tr>
<td>1/4-inch</td>

<td>95 - 100</td>
</tr>
<tr>
<td>No. 200</td>
<td>0 – 8</td>
</tr>
</tbody>
</table>

2.05 WATER FOR MOISTURE CONDITIONING

A. Free of hazardous or toxic contaminants, or contaminants deleterious to proper compaction.

PART 3 EXECUTION

3.01 GENERAL

A. Keep placement surfaces free of water, debris, and foreign material during placement and compaction of fill and backfill materials.

B. Place and spread fill and backfill materials in horizontal lifts of uniform thickness no greater than 1 foot, in a manner that avoids segregation, and compact each lift to specified densities prior to placing succeeding lifts. Slope lifts only where necessary to conform to final grades or as necessary to keep placement surfaces drained of water.

C. During filling and backfilling, keep level of fill and backfill around each structure even.

D. Do not place fill or backfill, if fill or backfill material is frozen, or if surface upon which fill or backfill is to be placed is frozen.

E. Tolerances:

1. Final Lines and Grades: Within a tolerance of 0.1 foot unless dimensions or grades are shown or a minimum is specified otherwise.

2. Grade to establish and maintain slopes and drainage as shown. Reverse slopes are not permitted.
F. Settlement: Correct and repair any subsequent damage to structures, pavements, curbs, slabs, piping, and other facilities, caused by settlement of fill or backfill material.

3.02 BACKFILL UNDER AND AROUND STRUCTURES

A. Under Facilities: Within influence area beneath structures, slabs, pavements, curbs, piping, conduits, duct banks, and other facilities, backfill with structural fill, unless otherwise shown. Place structural fill in lifts of 8-inch maximum thickness and compact each lift to minimum of 100 percent relative compaction as determined in accordance with ASTM D698, Method.

3.03 BACKFILL OF OVEREXCAVATION

A. All overexcavations left after removal of unsuitable, soft, or loose soils from the subgrade, as specified in Section 31 23 13, Subgrade Preparation, shall be backfilled with general fill.

B. Place general fill in lifts no greater than 1 foot thick and compact each lift to a minimum of 95 percent relative compaction as determined in accordance with ASTM D698.

3.04 FILL

A. Outside Influence Areas beneath Structures, Tanks, Pavements, Curbs, Slabs, Piping, and Other Facilities: Unless otherwise shown, place general fill as follows:

1. Allow for 6-inch thickness of topsoil where required.
2. Maximum 8-inch thick lifts.
3. Place and compact fill across full width of embankment.
4. Compact to minimum 95 percent relative compaction as determined in accordance with ASTM D698, Method.
5. Dress completed embankment with allowance for topsoil, crest surfacing, and slope protection, where applicable.

3.05 PLACING FILL OVER GEOSYNTHETICS

A. General:

1. Place fill over geosynthetics with sufficient care so as not to damage them.
2. Place fill only by back dumping and spreading.
3. Dump fill only on previously placed fill.
4. While operating equipment, avoid sharp turns, sudden starts or stops that could damage geosynthetics.
5. Place fill during cooler early morning hours to minimize wrinkles in the geosynthetic material.

B. Hauling: Utilize low ground pressure equipment.

C. Spreading:
   1. Spreading equipment shall be track mounted, with a low ground pressure, less than 4.5 psi contact pressure.
   2. Operate spreading equipment on minimum of 18 inches of fill over geosynthetics.
   3. Spread fill in same direction as unseamed overlaps to avoid separation of seams and joints.
   4. Never push fill downslope. Spread fill over sideslopes by pushing up from slope bottom.
   5. Flatten wrinkles of geosynthetics in direction of spreading. Correct wrinkles in geotextiles.
   7. Avoid overstressing geosynthetics and seams.

D. Geosynthetic Damage:
   1. Mark punctures, tears, or other damage to geosynthetics, so repairs may be made.
   2. Clear overlying fill as necessary to repair damage.
   3. Repairs to geosynthetics shall be made by respective installers as specified in respective specification section for each geosynthetic.

3.06 SITE TESTING

A. A qualified independent testing agency shall provide site testing. The Contractor will be responsible for removing any material that does not meet the Specification requirements at no additional cost to the Owner.

B. Gradation:
   1. One sample from each 1,500 tons of finished product or more often as determined by Contractor, if variation in gradation is occurring, or if material appears to depart from Specifications.
   2. Include description of grain angularity in test results.
   3. If test results indicate material does not meet Specification requirements, terminate material placement until corrective measures are taken.
   4. Remove material placed in Work that does not meet Specification requirements.
C. In-Place Density Tests: In accordance with ASTM D2922. During placement of materials, test as follows:

1. Structural Fill: Minimum of four tests per lift below structures and minimum of two tests per lift around structures.
2. General Fill: One test per each 5,000 square feet, with a minimum of 1 test per lift.
3. Additional tests shall be performed if requested by the Contractor. The frequency and location of testing shall be determined solely by the Contractor. The Contractor may require a test on any lift of fill at any time, location, or elevation.

END OF SECTION
PART 1 GENERAL

1.01 REFERENCES

A. The following is a list of standards that may be referenced in this Section:

1. ASTM International (ASTM):
   b. D3776, Standard Test Methods for Mass Per Unit Area (Weight) of Fabric.

1.02 DEFINITIONS

A. Fabric: Coir blanket, 100 percent natural, organic blanket woven from spun mattress coir yarns.

B. Overlap: Distance measured perpendicular from overlapping edge of one sheet to underlying edge of adjacent sheet.

C. Dead Stout Stake: Wooden stake used to permanently secure fabric as shown on Drawings and defined in Section 31 37 01, Buffer and Riparian Plantings.

1.03 SUBMITTALS

A. Action Submittals:

1. Shop Drawings:
   a. Manufacturer material specifications and product literature.
   b. Description of proposed method of geotextile deployment, and provisions for holding fabric in-place and permanently secured.
2. Samples:
   a. Fabric: One-piece, minimum 18-inches long, taken across full width of roll of each type and weight of fabric furnished for Project. Label each with brand name and furnish documentation of lot and roll number from which each Sample was obtained.

   B. Informational Submittals: Certifications from each fabric manufacturer that furnished products have specified property values. Certified property values shall be either minimum or maximum average roll values, as appropriate, for fabrics furnished.

1.04 DELIVERY, STORAGE, AND HANDLING

   A. Deliver each roll with sufficient information attached to identify it for inventory and quality control.

   B. Handle products in manner that maintains undamaged condition.

   C. Do not store products directly on ground. Ship and store fabric with suitable wrapping for protection against moisture and ultraviolet exposure. Store fabric in way that protects it from elements. If stored outdoors, elevate and protect fabric with waterproof cover.

1.05 SCHEDULING AND SEQUENCING

   A. Prior to fabric installation, prepare ground surface as specified in Section 31 37 01, Buffer and Riparian Plantings.

   B. Notify Contractor whenever fabrics are to be placed. Do not place fabric without Contractor’s approval of underlying materials.

PART 2 PRODUCTS

2.01 FABRIC

   A. Composed of 100 percent natural, spun mattress coir yarn interlaced to form woven mat with uniform weave pattern.

   B. Calendared or finished so yarns will retain their relative position with respect to each other.

   C. Unseamed Sheet Width: Minimum 8-feet.

   D. Equivalent substitute products to those shown on the Drawings will be acceptable only with approval from Contractor.
2.02 SECURING STAKES
   A. Dead Stout Stakes:
      1. Spacing as shown on the Drawings.
      2. Dimensions as shown on the Drawings.
      3. Length as shown on the Drawings.

PART 3 EXECUTION

3.01 LAYING COIR FABRIC
   A. Lay and maintain fabric smooth and free of tension, folds, wrinkles, or creases.
   B. Lay fabric pieces from downstream to upstream (overlap downstream end of fabric over the top of upstream end of previously installed downstream fabric piece), from bottom of bank slope to top of slope.

3.02 SHEET ORIENTATION ON SLOPES
   A. Orient fabric with long dimension of each sheet perpendicular to the direction of flow in the channel.

3.03 JOINTS
   A. Unseamed Joints: Overlap minimum of 9-inches, unless otherwise shown on the Drawings.

3.04 SECURING FABRIC
   A. Secure fabric during installation as shown on the Drawings, using trenches and stakes at the top and bottom of slopes.
   B. Roll out and install fabric from bottom of bank slope to top of slope.
   C. Install additional stakes at the break in bank slope at the back of the bankfull bench.

3.05 REPAIRING FABRIC
   A. Repair or replace torn, punctured, flawed, deteriorated, or otherwise damaged fabric with new unused fabric.

MKE/405068
MARCH 3, 2011
COPYRIGHT 2011 CH2M HILL

WOVEN MATTRESS COIR BLANKET
(COIR FABRIC) FOR STREAM
CHANNEL BANKS
B. Repair Procedure:

1. Place patch of undamaged fabric over damaged area and at least 18-inches in all directions beyond damaged area, minimum of 4 square feet of fabric.
2. Remove interfering material as necessary to expose damaged fabric for repair.

END OF SECTION
SECTION 31 32 19.16
GEOTEXTILE

PART 1   GENERAL

1.01 SCOPE

A. The Work includes manufacture, fabrication (if needed), supply, and installation of geotextiles associated with the applications as shown on the Drawings.

1.02 REFERENCES

A. The following is a list of standards that may be referenced in this section:

1. ASTM International (ASTM):

1.03 DEFINITIONS

A. Fabric: Geotextile, a permeable geosynthetic comprised solely of textiles.

B. Maximum Average Roll Value (MaxARV): Maximum of series of average roll values representative of geotextile furnished.
C. Minimum Average Roll Value (MinARV): Minimum of series of average roll values representative of geotextile furnished.

D. Nondestructive Sample: Sample representative of finished Work, prepared for testing without destruction of Work.

E. Overlap: Distance measured perpendicular from overlapping edge of one sheet to underlying edge of adjacent sheet.

F. Seam Efficiency: Ratio of tensile strength across seam to strength of intact geotextile, when tested according to ASTM D4884.

1.04 SUBMITTALS

A. Action Submittals:

1. Shop Drawings:
   a. Manufacturer material specifications and product literature.
   b. Installation drawings showing geotextile sheet layout, location of seams, direction of overlap, and sewn seams.
   c. Description of proposed method of geotextile deployment, sewing equipment, sewing methods, and provisions for holding geotextile temporarily in place until permanently secured.

2. Samples:
   a. Geotextile: One-piece, minimum 18 inches long, taken across full width of roll of each type and weight of geotextile furnished for Project. Label each with brand name and furnish documentation of lot and roll number from which each Sample was obtained.
   b. Field Sewn Seam: 5-foot length of seam, 12 inches wide with seam along center, for each type and weight of geotextile.
   c. Securing Pin and Washer: One each.

B. Informational Submittals:

1. Certifications from each geotextile manufacturer that furnished products have specified property values. Certified property values shall be either minimum or maximum average roll values, as appropriate, for geotextiles furnished.

2. Manufacturer's QC test results for every 250,000 square feet of material supplied.

3. Field seam efficiency test results.

1.05 DELIVERY, STORAGE, AND HANDLING

A. No material shall be delivered to the site without having the roll certification data submitted and approved by the Contractor.
B. Deliver each roll with sufficient information attached to identify it for inventory and quality control.

C. Handle products in manner that maintains undamaged condition. Adhere to manufacturer’s guidelines for handling.

D. Do not store products directly on ground. Ship and store geotextile with suitable wrapping for protection against moisture and ultraviolet exposure. Store geotextile in way that protects it from elements. If stored outdoors, elevate and protect geotextile with waterproof cover.

1.06 SCHEDULING AND SEQUENCING

A. Where geotextile is to be laid directly upon ground surface, prepare subgrade as specified in Section 31 23 13, Subgrade Preparation, first.

B. Notify Contractor whenever geotextiles are to be placed. Do not place geotextile without Contractor’s approval of underlying materials.

PART 2 PRODUCTS

2.01 GENERAL

A. Geotextile shall be nonwoven and have a nominal weight per area of 0.27 kg/m² (8 oz/yd²) per ASTM D5261.

B. Geotextile shall be used for cushioning of geomembranes and at other locations as shown on the Drawings.

2.02 NONWOVEN GEOTEXTILE

A. Pervious sheet of polyester, polypropylene, or polyethylene fabricated into stable network of fibers that retain their relative position with respect to each other. Nonwoven geotextile shall be composed of continuous or discontinuous (staple) fibers held together through needle-punching, spun-bonding, thermal-bonding, or resin-bonding.

B. Geotextile Edges: Salvaged or otherwise finished to prevent outer material from pulling away from geotextile.

C. Unseamed Sheet Width: Minimum 12 feet.
2.03 REQUIRED PROPERTIES

A. Property Values:
   1. Geotextile properties shall meet or exceed the values specified in Table 1, Required Geotextile Properties, contained in this section of the Specifications.
   2. The manufacturer shall provide test results for all properties listed in Table 1.
   3. The manufacturer shall certify that the materials supplied meet the requirements of this Part.

B. Integrity: Geotextiles shall retain their structure during handling, placement, and long-term service.

2.04 CONFORMANCE TESTING

A. Prior to deployment of the rolls of geotextile, the Subcontractor will obtain samples at a frequency of one per production lot or one per 250,000 square feet of each material type, whichever results in the greater number of tests. The Subcontractor will test the samples to determine conformance with both the design specifications and the list of certified properties.

B. As a minimum, the following tests will be performed on geotextiles (each type, except as noted):
   1. Mass per Unit Area: ASTM D5261.
   2. Grab Strength: ASTM D4632.
   3. Tear Strength: ASTM D4533.
   5. Puncture Strength: ASTM D4833.

2.05 TRANSPORTATION, HANDLING, AND STORAGE

A. Geotextiles shall be supplied in rolls wrapped in protective dust-proof covers and marked or tagged with all of the following information:
   1. Manufacturer’s name.
   2. Product identification.
   3. Lot number.
   4. Roll number.
   5. Roll dimensions.
B. Transportation of the geotextiles to the site and all handling on site shall be the responsibility of the Subcontractor.

C. During shipment and storage, the geotextile shall be protected from mud, dirt, UV exposure, dust, puncture, cutting, or other damaging or deleterious conditions. Protective wrappings which are damaged shall be repaired or replaced, as necessary.

D. The Subcontractor shall be responsible for on-site storage of the geotextiles. The Subcontractor shall protect storage area(s) from theft, vandalism, passage of vehicles, etc.

2.06 SEWING THREAD

A. Polypropylene, polyester, or Kevlar thread.

B. Durability: Equal to or greater than durability of geotextile sewn.

PART 3 EXECUTION

3.01 GENERAL

A. Unacceptable Materials and Work: Materials and Work which fail to meet the requirements of these Specifications shall be removed and disposed of at the Subcontractor’s expense. This includes geotextile rolls that are not labeled or where the label has deteriorated to the point of being illegible.

3.02 HANDLING AND PLACEMENT

A. At a minimum, geotextiles shall be placed according to the specifications and recommendations of the manufacturer.

B. The Subcontractor shall handle all geotextiles in such a manner as to ensure that they are not damaged. Do not drag the geotextile across textured geomembrane. If necessary, use a smooth slip sheet under the textile. Position the geotextile after deployment and remove the slip sheet, if used.

C. Orient geotextile with the long dimension of each sheet perpendicular to the direction of slope.

D. Place geotextiles in a manner that prevents folds and wrinkles. Folds or wrinkles shall be pulled smooth prior to seaming.

E. In the presence of wind, all exposed geotextiles shall be weighted with sandbags or equivalent. Geotextile shall not be installed during wind speeds, sustained or gusts, exceeding 25 miles per hour. Sandbags shall be installed
during placement and shall remain until replaced with cover material. Do not use securing pins or staples.

F. Geotextiles shall be cut using an approved geotextile cutter only. Special care shall be taken to protect underlying geosynthetic materials from damage during cutting.

G. During geotextile placement, care shall be taken not to entrap stones, excessive dust, or moisture that could damage the geomembrane, clog drains or filters, or hamper subsequent seaming.

H. After installation and immediately prior to placing overlying materials, the geotextile shall be examined over its entire surface to ensure that no potentially harmful foreign objects, such as needles, are present. Any foreign objects encountered shall be removed, or the geotextile shall be replaced.

I. If light colored geotextile is used, precautions shall be taken against “snowblindness” of personnel.

J. After deployment, all geotextile intended to be covered shall be covered to prevent exposure to ultraviolet (UV) radiation (sunlight) within a period of 48 hours. If required due to construction constraints, a maximum exposure period of 7 days may be allowed at the Contractor’s discretion. Any geotextile that is not covered within 7 days shall be removed and replaced at the Subcontractor’s expense, except geomembrane that is not intended to be covered, as shown on the Drawings.

3.03 SEAMING

A. Geotextiles shall be overlapped 3 inches prior to seaming.

B. All geotextiles shall be continuously sewn (i.e., spot sewing is not allowed). The strength of field seams shall not be less than 50 percent of that of the un-aged fabric material in any principal direction, when tested in accordance with ASTM D 4884 at a rate of strain of 12 inches per minute. The Subcontractor shall submit details of his proposed sewing (e.g., type of seam, number of stitches per inch, number of stitching rows, etc.) and typical samples of the seam for approval by the Contractor prior to installation. Thermal bonding of polypropylene fabrics will only be allowed if the Subcontractor can demonstrate consistency and uniformity of the seam, as well as compliance with the seam strength criterion of no less than 50 percent of that of the un-aged fabric material in any principal direction (when the seam is tested in accordance with ASTM D 4884). If thermal joining is used, the minimum overlap between sheets shall be increased to 12 inches. Leister welding (spot or continuous) will not be accepted as a replacement for sewing.
C. Areas to be seamed shall be clean and free of foreign material.

D. Sewing shall be done using polymeric thread with chemical resistance properties equal to or exceeding those of the geotextile, or as approved by the Contractor.

E. All sewing shall be done using a sewing machine which creates a chain stitch. When entering and exiting a seam, the stitches shall be overlapped to prevent unraveling.

3.04 REPAIR

A. Any holes or tears in the geotextile shall be repaired as follows:

1. Remove any soil or other material which may have penetrated the torn geotextile.
2. A patch made from the same geotextile shall be double seamed into place with the seams 1/4 inch to 3/4 inch apart and no closer than 1 inch from any edge. The patch shall extend at least 12 inches beyond the edges of the damaged area. Seaming shall be in accordance with Article SEAMING of this section.

3.05 MATERIALS IN CONTACT WITH GEOTEXTILES

A. Before placing material over geotextile, notify Contractor. Do not cover installed geotextile until after Contractor provides authorization to proceed.

B. The Subcontractor shall place all soil materials located on top of a geotextile in such a manner as to ensure that the following conditions are satisfied:

1. No damage to the geotextile.
2. Minimal slippage of the geotextile on underlying layers.
3. No excess tensile stresses in the geotextile.

3.06 SUPPLEMENTS

A. The supplements listed below, following “END OF SECTION,” are part of this Specification.

PART 1 GENERAL

1.01 DEFINITIONS

A. Amelioration: The addition of soil, soil conditioners, fertilizer, or other soil additives that may be necessary to meet the requirements for seeding and mulching. Intent is to ensure establishment of healthy growing medium for pioneer plant materials.

B. Basal Cut Ends: Bottom ends of live branches that are intended to produce root development.

C. Brushlayer (Composed of Live Cutting Whips): A live cutting from trees/shrubs no younger than two growing seasons and no older than five growing seasons.

D. Dead Blow Hammer: Mallet that has sand or lead shot in the head.

E. Dead Stout Stakes: Stakes shall be of a length shown on the Drawings and Details. These are referred to as “dead stout stakes” and are cut to the appropriate length from untreated 2-inch by 4-inch (nominal) boards. In fabricating these units, each board of the select length shall be cut again diagonally across the 2-inch face to make two stakes from each length. The diagonal cut will begin and end 1/8 inch to 1/4 inch from the edge of the piece so the finished stake will have a 1/8-inch to 1/4-inch tip. Only new, sound, unused material shall be used. The stakes are to be used to secure woven coir fiber mat in-place. Two-foot long, 1/2-inch hooked rebar may be substituted when it is necessary to secure materials in rocky areas, as approved by Contractor.

F. Dormant Season: Time of year when plant materials are not actively growing.

G. Growing Tips: Top ends of live cut branches that are intended to produce leaf development.

H. Harvesting Site: Source area of native, live cut plant material branches.

I. Live Cuttings: Branches or stems from 1/2- to 1-inch in diameter and of a minimum length of 3 feet that have been cut and pruned from living plant material belonging to defined vegetative species. All side branches are trimmed. They are intended to take root and grow.
J. Live Stake: Live cutting from trees/shrubs no younger than two growing seasons and no older than five growing seasons.

K. Property Owner: Entity owning identified property or possessing rights to sign written agreement allowing harvesting of live cuttings for Project.

L. Soil Bioengineering: Use of live plant materials to provide erosion control, slope and stream bank stabilization, landscape restoration, and wildlife habitat.

M. Seeding: Refers to the grass on native seed mixture (depending on planting zone) that is to be installed under the woven coir fiber mat, in between soil bioengineering systems, and on all construction disturbance areas.

N. Straw Mulch (Mulching): Refers to long straw or hay that is to be used as mulching material under the woven coir fiber mat, in between soil bioengineering systems, and on all construction disturbance areas. Long straw mulch shall consist of dry straw or hay, free of noxious weeds. The mulch shall be reasonably bright in color and shall not be musty, moldy, caked, decayed, or dusty. This mulch shall be installed along with appropriate soil amelioration and seeding under the coir, on all open seeded soil slope face areas, and seeded construction disturbance areas.

O. Water: Water, which may be required for storage of plant materials during the live construction, shall contain no toxic elements that could be harmful to plant growth.

P. Woven Coir Fiber Mat: Refer to Section 31 32 01, Woven Mattress Coir Blanket for Stream Channel Banks.

1.02 SUBMITTALS

A. Action Submittals:

1. State of Wisconsin Department of Agriculture, Trade and Consumer Protection commercial aquatic applicator license.
2. Product data for pesticides.
3. List of live cutting harvest sites, 1 week prior to beginning the Work.
4. Subcontractor Planting Plan:
   a. Must provide a list of proposed plants to be used, including those listed and not listed in the Drawings.
   b. Must be reviewed by Contractor.
5. Copy of signed written agreement and applicable correspondence between harvest site property owner and Subcontractor, 1 week prior to beginning the Work. At a minimum the signed agreement shall:
   a. Grant permission to harvest.
   b. Specify the requirements of access/egress.
   c. Specify the use and condition that the harvesting site is to be left in.
   d. Acknowledge that the Subcontractor shall be solely responsible for activities on the harvesting site and shall hold the Contractor and USEPA harmless.

6. Copy of permits from regulatory agencies.

7. The Subcontractor may use a third party supplier to provide harvest materials. Suppliers must provide all of the written information required of the Subcontractor.

8. Copy of identification tags used to identify cuttings after harvest and during transport.

1.03 QUALITY ASSURANCE

A. Live Stakes:

1. Prior to leaving the harvest site (including commercial source), all live branch cuttings shall be inspected for acceptability by the Contractor, as described hereinafter.
   a. They shall be healthy, freshly cut, living material.
   b. No invasive vines or plant materials will be permitted to be mixed in with the cuttings.
   c. The cuttings shall be free from insect infestation and disease.

B. Trees, Shrubs, Balled and Burlapped Containerized Plants:

1. Trees, shrubs, balled and burlapped, containerized plants shall be inspected onsite prior to installation for acceptability by the Contractor, as described hereinafter.
   a. Trees, shrubs, balled and burlapped, containerized plants shall either be containerized (10 cubic inch plugs or 1 gallon containers) or dormant bare root seedlings, properly packaged to prevent drying or mildew of roots.
   b. All trees, shrubs, balled and burlapped, containerized plants shall be labeled.
   c. They shall be healthy and free from insect infestation and disease.
C. Grass and Seed Mixtures: The Subcontractor shall provide the bag identification tags to the Contractor for each bag of seed used on the site, prior to installation. All seed shall be certified weed free. Seeding rates are based on pure live seed (PLS). PLS analysis results shall be provided on each seed tag.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Delivery:

1. Transport live cuttings in enclosed trailer or covered with a tarpaulin during transportation from harvesting site to Project Site.
2. Place live cut branch bundles on transport vehicles in an orderly fashion, with growing tips toward cab of vehicle to prevent damage and to facilitate handling.
3. All cut plant material shall arrive on the jobsite within 8 hours of cutting or as approved by the Contractor if a commercial supplier is used. The Subcontractor shall schedule the cutting and delivery of the live cuttings to the site so that the materials can be installed a maximum of 2 days after they arrive.
4. Trees and shrubs shall be kept moist. Containerized plants shall be transported in a manner to prevent disturbance of potting soil.
5. Grasses and seed mixtures shall be transported in an enclosed cool and dry trailer.

B. Storage:

1. Live Cuttings: Store and protect live cuttings not installed on day of arrival at Project Site.
   a. Store in water or heeled-in in moist soil for a maximum of 2 days without refrigeration.
   b. Outside storage locations shall be continually shaded and protected from wind.
   c. Protect from drying at all times.
   d. When temperature reaches 50 degrees F and above on day material is harvested, live cut branches shall not be stored, but shall be installed on day of harvesting.
   e. Live cut branches that have been fabricated into live stakes must be used on the day of fabrication and may not be stored.
   f. If live stakes are not installed on the same day they are harvested, they shall be soaked in a root hormone solution overnight for next-day installation. This includes live cuttings from commercial suppliers, if the cuttings are not installed on the Project the same day they are harvested by the supplier.
2. Trees, Shrubs, Balled and Burlapped, Containerized Plants: Store and protect trees, shrubs, containerized plants not installed on day of arrival at Project Site.
   a. Outside storage locations shall be continually shaded and protected from wind.
   b. Protect from drying at all times.
   c. Refrigerate bare root plants when temperature reaches 50 degrees F and above.

3. Grass and Seed Mixtures: Store and protect grass and seed mixtures not installed on day of arrival at Project Site.
   a. Outside storage shall be shaded and dry.
   b. Bags shall be stored off of the ground at all times.

C. Handling:

1. All plant material shall be handled with care to limit stress and damage.
2. Damaged plants will be rejected.

1.05 ENVIRONMENTAL REQUIREMENTS

A. The individual conducting herbicide applications must have a state of Wisconsin Department of Agriculture, Trade and Consumer Protection commercial aquatic applicator license.

B. Live stakes, trees, shrubs, balled and burlapped, containerized plants and seed mixtures shall be planted during their individual dormant seasons as directed in the planting schedule or as advised by a commercial plant supplier. Trees, shrubs, balled and burlapped, containerized plants shall be installed per the recommendations shown on the individual labels and as directed in the planting schedule or as advised by a commercial plant supplier.

C. Grass and seed mixtures shall be applied per supplier tag and as directed in the planting schedule or as advised by a commercial plant supplier.

D. After seeding, planting and/or installing, water all of the seeded areas and plantings. Original plant installations shall continue to be watered as needed for the duration of the Project and throughout the warranty period.

E. Fertilize according to soil test results (use of 25 pound low nitrogen 5-10-15 per 1,000 square feet is recommended) unless otherwise directed in the planting schedule or as advised by a commercial plant supplier.
1.06 PERFORMANCE REQUIREMENTS

A. General:

1. The Subcontractor shall warranty all plant material under this Contract for a period of 2 full growing seasons from the date of Final Acceptance. Original plants which die after final acceptance and during the warranty period shall be removed and replaced under the original Specifications, no later than the following planting season, at the Subcontractor’s expense; provided, however, the Subcontractor shall be responsible for providing no more than the original plant and one replacement under the warranty. All replacement plants shall be maintained as specified for new plants for 1 year after the time of their installation and acceptance as replacements.

2. The end of the original warranty period does not release the Subcontractor from his responsibility to maintain the replacement plants for such additional year.

B. Soil Bioengineering:

1. Only living systems of the soil bioengineering (without open dead areas), of cut branches alive and healthy and properly installed, or of seed and mulch properly installed, at the time of final inspection will be accepted. For this Project the soil bioengineering systems include:
   a. Livestakes.
   b. Brushlayer.
   c. Grass seeding (with coir fabric).

2. The Subcontractor shall be responsible for the replacement of any nonliving systems before and immediately after the end of the first growing season.

3. Soil bioengineering system acceptance shall be as follows for branch rooting or ground cover (in percent) based on inspections after the first growing season (late Summer/early Fall) and at the beginning of the second growing season (late Spring/early Summer):
   a. Live Stakes: 10 percent cuttings rooting.
   b. Brushlayer: 90 percent cuttings rooting.
   c. Grass Seeding: 80 percent ground (no bare spots larger than 1 foot by 1 foot).

4. Replaced soil bioengineering systems shall be under warranty for an additional year.

C. Buffer Plantings:

1. Only living systems of the buffer plantings alive and healthy and properly installed, or of seed and mulch properly installed, at the time of
final inspection will be accepted. For this Project, the buffer plantings systems include:

a. Trees.
b. Shrubs.

2. The Subcontractor shall be responsible for the replacement of any nonliving systems before and immediately after the end of the first growing season.

3. Buffer planting acceptance shall be as follows for sprouting, leaf growth, or ground cover (in percent) based on inspections after the first growing season (late Summer/early Fall) and at the beginning of the second growing season (late Spring/early Summer):

a. Trees: 100 percent survival (75 percent of the plant showing sprouting and/or leaf production).
b. Shrubs: 100 percent survival (75 percent of the plant showing sprouting and/or leaf production).
c. Grass Seeding: 90 percent coverage (no bare spots larger than 1 foot by 1 foot).

4. Replaced buffer plantings shall be under warranty for an additional year.

1.07 MAINTENANCE

A. Soil Bioengineering:

1. Maintenance shall begin immediately after each method has been installed, continue throughout construction and the warranty period, and continue after installation as to any replacement methods. The following are maintenance requirements:

a. Maintenance of installations shall begin immediately after installation and consists of spraying for insects and diseases, weeding, watering, and inspecting to see that the live plant materials are healthy, and performing adequately in protecting the slope. The Subcontractor shall be responsible for any permits related to pesticides. Report concerns to the Contractor.
b. Soil bioengineering installations shall be protected at all times against trespassing and damage of any kind for the duration of construction and until acceptance of the work by the Contractor. Soil bioengineering work shall be done in the dormant season, including all living repairs.
c. The Subcontractor shall be responsible for keeping all installations and work incidental thereto in good condition by performing all other necessary operations during the construction period to care for promotion of healthy root and leaf growth and plant life so that all work is in satisfactory and acceptable condition to the Contractor.

d. All drainage systems shall be kept in good working order by the Subcontractor so that they do not negatively impact installed soil bioengineering systems.

e. All installation and plant material required by this Contract shall be in a satisfactory and acceptable condition when the Subcontractor applies for payment.

f. Maintenance for and in conjunction with the soil bioengineering shall be incidental to the work. Consisting of work furnished, installed and accepted (including all materials, i.e., labor, machinery, and maintenance care necessary to complete the work in a high quality workmanship-like manner).

B. Buffer Plantings:

1. Maintenance shall begin immediately after each method has been installed, continue throughout construction and the warranty period, and continue for after installation as to any replacement methods. The following are maintenance requirements:

a. Maintenance of installations shall begin immediately after installation and consists of spraying for insects and diseases, weeding, watering, and inspecting to see that the live plant materials are healthy. The Subcontractor shall be responsible for any permits related to pesticides. Report concerns to the Contractor.

b. Buffer planting installations shall be protected at all times against trespassing and damage of any kind for the duration of construction and until acceptance of the work by the Contractor.

c. The Subcontractor shall be responsible for keeping all installations and work incidental thereto in good condition by performing all other necessary operations during the construction period to care for promotion of healthy root and leaf growth and plant life so that all work is in satisfactory and acceptable condition to the Contractor.

d. All drainage systems and erosion control measures shall be kept in good working order by the Subcontractor so that they do not negatively impact installed buffer planting systems.
e. All installation and plant material required by this Contract shall be in a satisfactory and acceptable condition when the Subcontractor applies for payment.

f. Maintenance for and in conjunction with the buffer planting shall be incidental to the work. Consisting of work furnished, installed and accepted (including all materials, i.e., labor, machinery, and maintenance care necessary to complete the work in a high quality workmanship-like manner).

**PART 2 PRODUCTS**

**2.01 BIOENGINEERING**

**A. Live Stakes:**

1. Use live cuttings as specified in definitions trimmed of side branches and fashioned into live stakes.
2. The Subcontractor may use local harvest sites or a commercial supplier to supply live cuttings for the soil bioengineering items on the Project.
3. The Subcontractor is encouraged to locate local harvest sites for plant material sources. Coordinate with Milwaukee County for possible local harvest sites for plant material sources. Suitable species found on the project site, are preferred if available.
4. All harvested live cut native plant materials shall be taken from source locations within 50 miles of the Project Site. Source locations outside of this limit may be used, upon approval by the Contractor.
5. The Subcontractor may use other plant species than those shown on the plant schedules in the Plans, upon approval by the Contractor.
6. A list of commercial living material suppliers is available in this Specification.
7. Fabrication:
   a. Cut to length shown on Drawings.
   b. Minimum diameter shown on Drawings.
   c. Cut at a 45-degree angle at the basal end and cut flat on the other end.
8. Basal end is intended as the end to take root and shall be the end installed in ground.

**B. Brushlayer:**

1. Use live cuttings as specified in Definitions trimmed of side branches and fashioned into brushlayer cuttings.
2. The Subcontractor may use local harvest sites or a commercial supplier to supply live cuttings for the soil bioengineering items on the Project.
3. The Subcontractor is encouraged to locate local harvest sites for plant material sources. Suitable species found on the Project Site, are preferred if available.

4. All harvested live cut native plant materials shall be taken from source locations within 50 miles of the Project Site. Source locations outside of this limit may be used, upon approval by the Contractor.

5. The Subcontractor may use other plant species than those shown on the plant schedules in the Drawings, upon approval by the Contractor.

6. A list of commercial living material suppliers is available in this Specification.

7. Fabrication:
   a. Cut to length shown on Drawings.
   b. Minimum diameter of 1/2 inch (0.5 inch) and a maximum diameter of 1 inch.
   c. Cut flat on both ends.

8. Basal end is intended as the end to take root and shall be the end installed away from the stream bank face, in between the soil lifts.

C. Grass and Seed Mixtures (with Coir Fabric):

1. The seeding mixture shall conform to the Seeding Schedules as shown on the Drawings and Details. Special seed mixtures may be required as directed by the Contractor and shall be installed under this Section.

2. Seed species shall be those shown in the Plant Schedules on the Drawings. Alternate seed species may be used by the Subcontractor, at the request of the Property Owner and/or the Subcontractor upon approval by the Contractor.

D. Straw Mulch (Mulching): Refers to long straw or hay that is to be used as mulching material under the woven coir fiber mat, in between soil bioengineering systems, and on all construction disturbance areas. Long straw mulch shall consist of dry straw or hay, free of noxious weeds. The mulch shall be reasonably bright in color and shall not be musty, moldy, caked, decayed, or dusty. This mulch shall be installed along with appropriate soil amelioration and seeding under the coir, on all open seeded soil slope face areas, and seeded construction disturbance areas.

E. Water: Water, which may be required for storage of plant materials during the live construction, shall contain no toxic elements that could be harmful to plant growth. A nearby shaded pond or other area approved by the Contractor may be utilized for storage purposes.

F. Woven Coir Fiber Mat: Refer to Section 31 32 01, Woven Mattress Coir Blanket for Stream Channel Banks.
2.02 BUFFER PLANTINGS

A. Trees and Shrubs:
   1. Plants shall be at least bare root, containerized seedlings, or balled and burlapped.
   2. Tree and shrub species shall be those shown in the Plant Schedules on the Drawings. Alternate plant species may be used by the Subcontractor, at the request of the Property Owner and/or the Subcontractor upon approval by the Contractor.

B. Grass and Seed Mixtures (Without Coir Fabric):
   1. The seeding mixture shall conform to the Seeding Schedules as shown on the Drawings and Details. Special seed mixtures may be required as directed by the Contractor and shall be installed under this Section.
   2. Seed species shall be those shown in the Plant Schedules on the Drawings. Alternate seed species may be used by the Subcontractor, at the request of the Property Owner and/or the Subcontractor upon approval by the Contractor. The following is a list of seed suppliers. This list is given for information only and does not intend to endorse the use of any company appearing on the list. Local suppliers of seed are preferred.

C. Straw Mulch (Mulching): Refers to long straw or hay that is to be used as mulching material under the woven coir fiber mat, in between soil bioengineering systems, and on all construction disturbance areas. Long straw mulch shall consist of dry straw or hay, free of noxious weeds. The mulch shall be reasonably bright in color and shall not be musty, moldy, caked, decayed, or dusty. This mulch shall be installed along with appropriate soil amelioration and seeding under the coir, on all open seeded soil slope face areas, and seeded construction disturbance areas.

D. Water: Water, which may be required for storage of plant materials during the live construction, shall contain no toxic elements that could be harmful to plant growth. A nearby shaded pond or other area approved by the Contractor may be utilized for storage purposes.

E. Woven Coir Fiber Mat: Refer to Section 31 32 01, Woven Mattress Coir Blanket for Stream Channel Banks.
PART 3 EXECUTION

3.01 BIOENGINEERING

A. General:

1. Harvesting (by Subcontractor or Commercial Supplier):
   a. General: Plant materials may be harvested from sites located by
      the Subcontractor and approved by the Contractor. Only healthy,
      well-branched, and disease-free stock from species approved by
      the Contractor shall be acceptable. The Subcontractor is
      responsible for providing harvested material. The Contractor must
      approve harvest sites found by the Subcontractor 1 week prior to
      onsite work. The harvesting sites shall be left in a condition that
      meets the written satisfaction of the Property Owner. Larger log
      material shall be cut into 16-inch firewood lengths and neatly
      stacked where directed by the harvest site property owner.
      Alternatively, the property owner may want to have the unused
      material placed in brush piles for habitat enhancement or removed
      from the harvest site and disposed of in a lawful manner at the
      Subcontractor’s cost.
   b. Cutting: Equipment such as chain saws, bush axes, loppers, and
      pruners may be used for harvesting, provided that they are used in
      such a manner that they leave clean cuts. Live growing plant
      material at the harvesting site shall be handled with care to avoid
      bark stripping and splitting of stems. Cuts shall be made 6 inches
      to 12 inches from the ground or as required by the harvest site
      Property Owner. Cuts shall be made flat or at a slight or blunt
      angle to ensure that the source sites will regenerate rapidly.
   c. Binding: Twine or hoisting belts shall be used to bind the live
      cuttings securely into bundles at the harvesting site for handling
      and for protection during transport. Live cuttings shall be grouped
      in such a manner that they stay together when handled. Side
      branches and brushy limbs shall be kept intact at this time and all
      growing tips shall be placed in the same direction.
   d. Identification: Prior to leaving the harvesting site (including a
      commercial source), all live branch cuttings shall be properly
      labeled by the Subcontractor or commercial supplier. Labels shall
      be securely attached to the bundles of live cuttings and shall
      indicate the species of the cuttings, the collection date, the
      location of harvesting, and the temperature at the time of harvest.
2. Fabrication: All live system preparation shall be done on the Project site and may not be done at the harvesting or other remote staging sites. Preparation includes cutting of live stakes and brushlayer and trimming of branches or other activities required in construction.

B. Live Stakes:

1. In all areas where coir fabric is to be used, the area shall first be ameliorated, seeded, lightly raked-in to 0.25-inch depth, and covered with 1.5 inches to 2 inches of long straw mulch; seed shall be broadcast by hand; then the coir fabric shall be placed. The seed mixture shall be as defined in the Seeding Schedules included on the Drawings.

2. Coir fabric shall be installed on the face and over the top of the bank. The coir material shall be secured with dead stout stakes in accordance with the Drawings and details. Overlap of the fabric shall be a minimum of 9 inches. Coir shall be securely fastened at the toe of each treated area and over the crown of the bank, as shown on the Drawings. At the top, the coir will line a trench 12 inches wide by 12 inches deep, staked in-place and backfilled. Material must be within 1 percent below and 3 percent above the optimum moisture content when placed.

3. The covered banks shall be smooth and neatly finished. The fabric shall not be in tension, but shall be neatly placed against the surface. At no time shall there be loose ends or unsecured coir fabric on the Project.

4. Live stakes shall be tamped into the ground using a dead blow hammer. They shall protrude from the finished ground elevation a length as shown on the Drawings and Details. On the sloped areas, they shall be placed at right angles to the slope face. In cases where the ground is hard, a pilot hole may be made to assist in inserting the live stake. The Subcontractor may use a 0.5-inch metal rod or other means acceptable to the Contractor for this purpose. The intent of this requirement is to maintain firm soil/stake contact after the live stake is installed. The rod must be removed carefully and may not be rotated to enlarge the hole.

5. Live stakes shall be installed on prepared areas at a rate designated on the Drawings in the Planting Schedule.

6. Shrub live stake applications must use at least three species, with a 30 percent, 30 percent, 40 percent mix of species. Tree live stake applications must use at least two species, with a 50 percent, 50 percent mix of species. All species, as well as, final locations and configurations shall be approved by the Contractor.

7. After installing, water all of the plantings. Plant installations shall continuously be watered as needed.
C. Brushlayer (Composed of Live Cutting Whips):

1. Brushlayer cuttings shall be placed in between the coir fabric wrapped soil lifts. They shall protrude from the finished ground elevation a minimum length of 24 inches.
2. Brushlayer shall be installed on prepared areas as designated on the Drawings.
3. Brushlayer cuttings shall be installed at a rate of at least 6 per linear foot in between each soil lift.
4. Shrub brushlayer applications must use at least three species, with a 30 percent, 30 percent, 40 percent mix of species, unless as specified on the Drawings. Tree brushlayer applications must use at least two species, with a 50 percent, 50 percent mix of species. All species, unless as specified on the Drawings, as well as, final locations and configurations shall be approved by the Contractor.
5. After installing, water all of the plantings. Plant installations shall continuously be watered as needed.

D. Grass and Seed Mixtures (with Coir Fabric):

1. Seed shall be installed at the rate shown on the Drawing Planting Schedule or as advised by a commercial plant supplier. Some species may be available as plugs and may be used as an alternate to seeding on this Project with the approval of the Contractor. The spacing of plugs shall be per the supplier’s recommendation.
2. In all areas where coir fabric is to be used, the area shall first be ameliorated, seeded, lightly raked-in to 0.25-inch depth, and covered with 1.5 inches to 2 inches of long straw mulch; seed shall be broadcast by hand; then the coir fabric shall be placed. The seed mixture shall be as defined in the Seeding Schedules included on the Drawings.
3. Coir fabric shall be installed on the face and over the top of the bank. The coir material shall be secured with dead stout stakes in accordance with the Drawings. Overlap of the fabric shall be a minimum of 9 inches. Coir Fabric shall be securely fastened at the toe of each treated area and over the crown of the bank, as shown on the Drawings. At the top, the coir will line a trench 12 inches wide by 12 inches deep, staked in-place and backfilled. Material must be within 1 percent below and 3 percent above the optimum moisture content when placed.
4. The covered banks shall be smooth and neatly finished. The fabric shall not be in tension, but shall be neatly placed against the surface. At no time shall there be loose ends or unsecured coir fabric on the Project.
5. After installation of coir fabric, seed with species mix and seeding rate specified in the Drawings for each soil bioengineer zone. The Subcontractor must coordinate with the Contractor prior to seeding overtop coir fabric.

6. After seeding, water all of the plantings. Plant installations shall continuously be watered as needed.

3.02 BUFFER PLANTINGS

A. Trees and Shrubs:
   
   1. Plant Spacing:
      a. The trees and shrubs shall be installed at the spacing shown on the Drawing Planting Schedule or as advised by a commercial plant supplier (whichever is closer).
      b. The minimum number of trees to be planted per acre shall be per the Planting Schedule shown on the Drawings.
      c. The density of shrubs to be planted per acre shall be per the Planting Schedule shown on the Drawings.
      d. Installation instructions shall be in accordance with plant labels or as advised by a commercial plant supplier.
   
   2. Plant Protection:
      a. Tree shelters shall be used to protect all seedlings.
      b. Six inches of well-aged hardwood mulch, weed control fabrics, or pre-emergent herbicide shall be used around the base of each installed tree or shrub to control competition from the herbaceous layer. The perimeter shall be no less than eighteen inches in diameter.
   
   3. After planting, water all of the plantings. Plant installations shall be watered as needed.

B. Grass and Seed Mixtures (Without Coir Fabric):

   1. Seed shall be installed at the rate shown on the Drawing Planting Schedule or as advised by a commercial plant supplier. Some species may be available as plugs and may be used as an alternate to seeding on this Project with the approval of the Contractor. The spacing of plugs shall be per the supplier’s recommendation.
   
   2. The area shall first be ameliorated, seeded, lightly raked-in to 0.25-inch depth, and covered with 1.5-inches to 2-inches of long straw mulch. Seed shall be broadcast by hand. The seed mixture shall be as defined in the Seeding Schedules included on the Drawings.

   3. After seeding, water all of the plantings. Plant installations shall continuously be watered as needed. Water may be obtained from the creek.
END OF SECTION
SECTION 32 91 13
SOIL PREPARATION

PART 1 GENERAL

1.01 REFERENCES

A. The following is a list of standards which may be referenced in this section:

2. U.S. Bureau of Reclamation (USBR):
   a. 514.4.4, Reclamation Instructions, Series 510—Land Classification Techniques and Standards, Part 514—Laboratory Procedures, Chapter 4—Particle-Size Analyses.
   b. 514.8.7, Reclamation Instructions, Series 510—Land Classification Techniques and Standards, Part 514—Laboratory Procedures, Chapter 8—Soil Chemical Tests.

1.02 SUBMITTALS

A. Shop Drawings: Product labels/data sheets.

B. Samples: Representative of stockpiled or imported topsoil.

C. Quality Control Submittals:

   1. Certified Topsoil Analysis Reports:
      a. Indicate quantities of materials necessary to bring topsoil into compliance with textural/gradation requirements.
      b. Indicate quantity of lime, and quantity and analysis of fertilizer.

1.03 SEQUENCING AND SCHEDULING

A. Rough grade areas to be planted or seeded prior to performing Work specified under this section.

B. Install turf reinforcement mat prior to seeding.
PART 2 PRODUCTS

2.01 TOPSOIL

A. Topsoil removed during site preparation activities and stockpiled at location shown on Drawings.

B. General: Natural, friable, sandy loam, obtained from well-drained areas, free from objects larger than 1-1/2 inches maximum dimension, and free of subsoil, roots, grass, other foreign matter, hazardous or toxic substances, and deleterious material that may be harmful to plant growth or may hinder grading, planting, or maintenance.

C. Composition: As determined in accordance with USBR 514.4.4:
   1. Gravel-Sized Fraction: Maximum 5 percent by weight retained on a No. 10 sieve.
   2. Sand-Sized Fraction: Maximum 65 percent passing No. 10 sieve and retained on No. 270 sieve.
   3. Silt-Sized Fraction: Maximum 50 percent passing No. 270 sieve and larger than 0.002 millimeter.
   4. Clay-Sized Fraction: Maximum 25 percent smaller than 0.002 millimeter.

D. Organic Matter: Minimum 1.5 percent by dry weight as determined in accordance with USBR 514.8.7.

E. pH: Range 6.0 to 7.2.

F. Textural Amendments: Amend as necessary to conform to required composition by incorporating sand, peat, manure, or sawdust.

G. Source: Stockpile material onsite, in accordance with Section 32 91 13, Site Preparation. Import topsoil if onsite material fails to meet specified requirements or is insufficient in quantity.

2.02 LIME

A. Composition: Ground limestone with not less than 85 percent total carbonates, ASTM C602.

B. Gradation:
   1. Minimum 50 percent passing No. 100 sieve.
   2. Minimum 90 percent passing No. 20 sieve.
3. Coarser material acceptable provided rates of application are increased proportionately on basis of quantities passing No. 100 sieve.

2.03 SAWDUST OR GROUND BARK

A. Nontoxic, of uniform texture, and subject to slow decomposition when mixed with soil. Nitrogen-treated, or if untreated mix with minimum 0.15 pounds of ammonium nitrate or 0.25 pounds of ammonium sulfate per cubic foot of loose material.

2.04 PEAT

A. Composition: Natural residue formed by decomposition of reeds, sedges, or mosses in a freshwater environment, free from lumps, roots, and stones.
   1. Organic Matter: Not less than 90 percent on a dry weight basis as determined by USBR 514.8.7.
   2. Moisture Content: Maximum 65 percent by weight at time of delivery.

2.05 FERTILIZER

A. Manure: Well-rotted, stable or cattle manure, free from weed seed and refuse. Maximum 50 percent sawdust or shavings by volume.
   1. Age: Minimum 4 months; maximum 2 years.

2.06 SAND

A. Fine Aggregate: Clean, coarse, well-graded, ASTM C33.

2.07 SOURCE QUALITY CONTROL

A. Topsoil Analysis/Testing: Performed by county or state soil testing service or approved certified independent testing laboratory.

PART 3 EXECUTION

3.01 SUBGRADE PREPARATION

A. Apply lime to subgrade before tilling if pH is determined low.
B. Scarify subgrade to minimum depth of 6 inches where topsoil is to be placed.
C. Remove stones over 2-1/2 inches in any dimension, sticks, roots, rubbish, and other extraneous material.
D. Limit preparation to areas which will receive topsoil within 2 days after preparation.

3.02 TOPSOIL PLACEMENT

A. Do not place topsoil when subsoil or topsoil is frozen, excessively wet, or otherwise detrimental to the Work.

B. Mix soil amendments, lime, and fertilizer with topsoil before placement or spread on topsoil surface and mix thoroughly into entire depth of topsoil before planting or seeding. Delay mixing of fertilizer if planting or seeding will not occur within 3 days.

C. Uniformly distribute to within 1/2-inch of final grades. Fine grade topsoil eliminating rough or low areas and maintaining levels, profiles, and contours of subgrade.

D. Remove stones exceeding 1-1/2 inches, roots, sticks, debris, and foreign matter during and after topsoil placement.

E. Remove surplus subsoil and topsoil from site. Grade stockpile area as necessary and place in condition acceptable for planting or seeding.

END OF SECTION
PART 1 GENERAL

1.01 DEFINITIONS

A. Maintenance Period: Begin maintenance immediately after each area is planted and continue for a period of 8 weeks after all planting under this section is completed.

B. Satisfactory Stand: Grass of 10,000 square feet or larger that has:

1. No bare spots larger than 3 square feet.
2. Not more than 10 percent of total area with bare spots larger than 1 square foot.
3. Not more than 15 percent of total area with bare spots larger than 6 square inches.

1.02 SUBMITTALS

A. Shop Drawings: Product labels/data sheets.

B. Quality Control Submittals:

1. Seed: Certification of seed analysis, germination rate, and inoculation:
   a. Certify that each lot of seed has been tested by a testing laboratory certified in seed testing, within 6 months of date of delivery. Include with certification:
      1) Name and address of laboratory.
      2) Date of test.
      3) Lot number for each seed specified.
      4) Test Results: (i) name, (ii) percentages of purity and of germination, and (iii) weed content for each kind of seed furnished.
   b. Mixtures: Proportions of each kind of seed.

2. Seed Inoculant Certification: Bacteria was prepared specifically for legume species to be inoculated.

C. Contract Closeout Submittals: Description of required maintenance activities and activity frequency.
1.03 DELIVERY, STORAGE, AND PROTECTION

A. Seed:
   1. Furnish in standard containers with seed name, lot number, net weight, percentages of purity, germination, and hard seed and maximum weed seed content, clearly marked for each container of seed.
   2. Keep dry during storage.

B. Hydroseeding Mulch: Mark package of wood fiber mulch to show air dry weight.

1.04 WEATHER RESTRICTIONS

A. Perform Work under favorable weather and soil moisture conditions as determined by accepted local practice.

1.05 SEQUENCING AND SCHEDULING

A. Complete Work under this section within 10 days following completion of soil preparation.

B. Notify Contractor at least 3 days in advance of:
   1. Each material delivery.
   2. Start of planting activity.

C. Planting Season: Those times of year that are normal for such Work as determined by accepted local practice.

1.06 MAINTENANCE SERVICE

A. Subcontractor: Perform maintenance operations during maintenance period to include:
   1. Watering: Keep surface moist.
   2. Washouts: Repair by filling with approved fill material, fertilizing, seeding, and mulching.
   3. Mowing: Mow to 2 inches after grass height reaches 3 inches, and mow to maintain grass height from exceeding 3 1/2 inches.
   4. Fences: Repair and maintain until satisfactory stand of grass is established.
   5. Reseed unsatisfactory areas or portions thereof immediately at the end of the maintenance period if a satisfactory stand has not been produced.
   6. Reseed/replant during next planting season if scheduled end of maintenance period falls after September 15.
7. Reseed/replant entire area if satisfactory stand does not develop by July 1 of the following year.

PART 2 PRODUCTS

2.01 FERTILIZER

A. Commercial, uniform in composition, free-flowing, suitable for application with equipment designed for that purpose. Minimum percentage of plant food by weight.

B. Application Rates: Determined by soil analysis results.

C. Mix:

2. Phosphoric Acid: 10.

2.02 SEED

A. Fresh, clean new-crop seed that complies with the tolerance for purity and germination established by Official Seed Analysts of North America.

B. Seed mixture shall be mowed turf grass listed in Schedule 6 as shown in the Drawings.

C. Seeds of Legumes: Inoculated with pure culture of nitrogen-fixing bacteria prepared specifically for legume species in accordance with inoculant manufacturer's instructions.

2.03 WATER

A. Any water used to moisten surface soils or in hydroseeding operation shall be from a potable source or a source approved by the Contractor.

2.04 HYDROSEEDING MULCH

A. Wood Cellulose Fiber Mulch:

1. Specially processed wood fiber containing no growth or germination inhibiting factors.
2. Dyed a suitable color to facilitate inspection of material placement.
3. Manufactured such that after addition and agitation in slurry tanks with water, the material fibers will become uniformly suspended to form a homogenous slurry.
4. When hydraulically sprayed on ground, material will allow absorption and percolation of moisture.

PART 3  EXECUTION

3.01 PREPARATION

A. Grade areas to smooth, even surface with loose, uniformly fine texture.
   1. Roll and rake, remove ridges, fill depressions to meet finish grades.
   2. Limit such Work to areas to be planted within immediate future.
   3. Remove debris, and stones larger than 1-1/2 inches diameter, and other objects that may interfere with planting and maintenance operations.

B. Moisten prepared areas before planting if soil is dry. Water thoroughly and allow surface to dry off before seeding. Do not create muddy soil.

C. Restore prepared areas to specified condition if eroded or otherwise disturbed after preparation and before planting.

3.02 FERTILIZER

A. As described in Section T-901 of the Standard Specifications.

3.03 SEEDING

A. As described in Section T-901 of the Standard Specifications.

B. Hydroseeding:
   1. Application Rate: Based on manufacturer's recommendations.
   2. Apply on moist soil, only after free surface water has drained away.
   3. Prevent drift and displacement of mixture into other areas.
   4. Upon application, allow absorption and percolation of moisture into ground.
   5. Mixtures: Seed and fertilizer may be mixed together, apply within 30 minutes of mixing to prevent fertilizer from burning seed.

3.04 FIELD QUALITY CONTROL

A. Eight (8) weeks after seeding is complete and on written notice from Subcontractor, Contractor will, within 15 days of receipt, determine if a satisfactory stand has been established.
B. If a satisfactory stand has not been established, Contractor will make another
determination after written notice from Subcontractor following the next
growing season.

END OF SECTION
PART 1 GENERAL

1.01 REFERENCES

A. The following is a list of standards which may be referenced in this section:

1. ASTM International (ASTM):
   b. A194/A194M, Standard Specification for Carbon and Alloy Steel Nuts for Bolts for High Pressure and High Temperature Service, or both.
   m. D1004, Standard Test Method for Tear Resistance (Graves Tear) of Plastic Film and Sheeting.
1.02 DEFINITIONS

A. Boot: Watertight collar fabricated from geomembrane sheet for sealing geomembrane to pipes and other objects that penetrate geomembrane.

B. Film Tearing Bond: Failure in ductile mode of one bonded sheet, by testing, prior to complete separation of bonded area.

C. Geomembrane: Essentially impermeable geosynthetic composed of one or more layers of polyolefin materials fusion bonded into single-ply integral sheet.

D. Panel: Piece of geomembrane composed of two or more sheets seamed together.

E. Sheet: Seamless piece of geomembrane.

F. Watertight: Geomembrane installation free of flaws and defects that will allow passage of water and gases, liquids, and solids to be contained under anticipated service conditions.

1.03 SUBMITTALS

A. Action Submittals:

1. Shop Drawings:
   a. Manufacturer’s specifications, literature for each geomembrane furnished, and products used to complete installation.
   b. Compensation allowance calculation and numerical values for temperature induced geomembrane expansion and contraction.
   c. Polymer Resin: Product identification and Supplier.
   d. Geomembrane sheet layout with proposed size, number, position, and sequence of sheet placement, and location of field seams.
e. Proposed equipment for material placement.
f. Procedures for material installation.

B. Informational Submittals:

1. Qualifications:
   a. Manufacturer.
   b. Installer.
   c. Independent testing agency.
2. Quality Assurance Program: Written description of geomembrane manufacturer’s and installer’s formal programs for manufacturing, fabricating, handling, installing, seaming, testing, and repairing geomembrane.
3. Manufacturer’s Certificate of Compliance, in accordance with Section 01 43 33, Manufacturers’ Field Services.
4. Production dates for geomembrane.
5. Testing:
   a. Factory QC test results for supplied geomembrane.
   b. Rough-surfaced geomembrane coefficient of interface friction test results.
   c. Certified Field seam test results.
   d. Laboratory Testing Equipment: Certified calibrations, manufacturer’s product data, and test procedures.
6. Geomembrane Installer’s Certification of Subsurface Acceptability: Form attached at end of this section.
7. Manufacturer’s Certificate of Proper Installation, in accordance with Section 01 43 33, Manufacturers’ Field Services.
8. Special guarantee.

1.04 QUALIFICATIONS

A. Independent Testing Agency: Minimum 5 years’ experience in field of geomembrane testing. Laboratory shall maintain calibrated instruments, equipment, and documented standard procedures for performing specified testing.

B. Manufacturer: Successfully manufactured a minimum of 10 million square feet of each type of geomembrane material specified.

C. Installer: Successfully installed a minimum of 1 million square feet and 10 projects of each type of geomembrane product specified in applications similar to the Project. Installer shall be the manufacturer, approved manufacturer installer, or Subcontractor approved by the Contractor to install the geomembrane.
D. Minimum qualifications stated above will be deemed met if the firm or cumulative experience of key personnel (supervisors and trained installation/testing technicians) proposed for this Project has minimum experience specified. If key personnel provision is used to qualify the firm, submit letter stating key personnel meet the minimum experience requirements and those individuals are available for and will be committed to this Project.

1.05 COORDINATION MEETINGS

A. A geomembrane preconstruction meeting shall be held at the site prior to installation of the geomembrane.

B. Attendees (at a Minimum):
   1. Subcontractor’s designated quality control representative.
   2. Contractor.
   3. Representatives of geomembrane installer.
   4. Others requested by Contractor.

C. Topics:
   1. Specifications and Drawings.
   2. Submittal requirements and procedures.
   3. Schedule for beginning and completing geomembrane installation.
   4. Training for installation personnel.
   5. Installation crew size.
   6. Establishing geomembrane marking system, to include sheet identification, defects, and satisfactory repairs, to be used throughout Work.
   7. Lines of authority and communication.
   8. Health and safety.
   9. Temperature and weather limitations.

D. Seam Installation and Testing Demonstration: Performed by geomembrane installer, for each type of seam required.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Geomembrane:
   1. Individually package each sheet and protect from damage during shipment.
   2. Mark each package with identification of material type, size, and weight.
B. Epoxy Adhesive:

1. Storage Temperature:
   a. Control temperature above 60 degrees F and dispose of cartridges if shelf life has expired.
   b. If stored at temperatures below 60 degrees F, test adhesive prior to use to determine if adhesive meets specified requirements.

1.07 ENVIRONMENTAL REQUIREMENTS

A. Do not install geomembrane or perform seaming under the following conditions, unless it can be demonstrated to satisfaction of Contractor that performance requirements can be met under these conditions:

1. Air temperature is less than 35 degrees F or more than 85 degrees F.
2. Relative humidity is more than 90 percent.
3. Raining, snowing, frost is in ground, in the presence of standing water, or wind is excessive.

B. Do not place granular materials on geomembrane when ambient temperature is less than 35 degrees F, unless it can be demonstrated to satisfaction of Contractor that materials can be placed without damage.

1.08 SEQUENCING AND SCHEDULING

A. Factory test results for supplied geomembrane materials shall be acceptable to Contractor prior to shipment of geomembrane.

B. Before placing geomembrane on soil surfaces, prepare subgrade as specified in Section 31 23 13, Subgrade Preparation.

1.09 SPECIAL GUARANTEE

A. Provide manufacturer’s extended guarantee or warranty, with USEPA named as beneficiary, in writing, as special guarantee. Special guarantee shall provide for correction, or at option of USEPA, removal and replacement of Work specified in this Specification section found defective during periods below, commencing on date of Substantial Completion. Duties and obligations for correction or removal and replacement of defective Work as specified in General Conditions.

1. Guaranty geomembrane against manufacturing defects, deterioration due to ozone, ultraviolet, and other exposure to elements for period of 20 years on pro rata basis.
2. Guaranty geomembrane against defects in material and factory seams for period of 2 years commencing with the Date of Final Acceptance.
3. Guaranty geomembrane against defects resulting from installation for period of 2 years commencing with the Date of Final Acceptance.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Geomembrane:
   1. GSE Lining Technology, Inc., Houston, TX.
   2. Poly-Flex, Inc., Grand Prairie, TX.
   3. AGRU America, Georgetown, SC.

2.02 GEOMEMBRANE

A. Composition: High density polyethylene (HDPE) containing no plasticizers, fillers, extenders, reclaimed polymers, or chemical additives, except following:
   1. Approximately 2 percent by weight of carbon black to resin for ultraviolet resistance.
   2. Antioxidants and heat stabilizers, not to exceed 1.5 percent total by weight, may be added as required for manufacturing.

B. Furnish in rolled single-ply continuous sheets with no factory seams.

C. Sheet Thickness: 60 mils.

D. Sheet Width: Minimum 15 feet.

E. Roll Length: Longest that will be manageable and reduce field seams.

F. Manufactured with rough textured sides (both sides). Manufactured so that surface irregularities that produce specified friction are adequately fused into sheet or are extruded with sheet, on both sides of sheet. Texture is to be in addition to base thickness specified for sheet.

G. Meet manufacturer’s most recent published specifications and required minimum HDPE geomembrane values in this table.
### Minimum Physical Properties for HDPE Geomembrane

<table>
<thead>
<tr>

</tbody>
</table>

**Notes:**
1. Commercially available micrometers may be used that have a 60-degree taper to a point with a radius of 1/32 inch. Contractor shall make enough measurements of thinner areas of textured sheet to develop statistical basis for thickness.

**H.** Extrudate for Fusion Welding of HDPE Geomembranes: Formulated from the same resin as geomembrane and shall meet applicable physical property requirements.
2.03 SEALANT CAULKING

A. Two-component sealant formulated of 100 percent polyurethane elastomer, such as Elastuff 120 Mastic as supplied by United Paint and Coatings, Greenacre, WA.

B. Butyl rubber sealant such as Butylgrip Sealant, supplied by the Biddle Company, St. Louis, MO.

PART 3 EXECUTION

3.01 PREPARATION

A. Geomembrane Inspection: During unwrapping visually inspect and mark each imperfection for repair.

B. Do not place geomembrane until condition of subgrade or geosynthetics installed is acceptable to Contractor.

C. Subgrade: Maintain in smooth, uniform, and compacted condition as specified in Section 31 23 13, Subgrade Preparation, during installation of geotextile and geomembrane.

3.02 WELDING UNITS

A. Single or double hot-wedge fusion seam welding.

B. Extrusion welding systems.

C. Hot-air welding is not acceptable.

3.03 GEOMEMBRANE INSTALLATION

A. Do not install geomembrane or seam unless Subcontractor can demonstrate successful performance and test results showing seams meet strength specifications.

B. Protection:

1. Do not use geomembrane surfaces as work area for preparing patches, storing tools and supplies, or other uses. Use protective cover as work surface, if necessary.

2. Instruct workers about requirements for protection of geomembrane, such as, handling geomembrane material in high winds, handling of equipment, and walking on geomembrane surfaces. Shoes of personnel walking on geomembrane shall be smooth bonded sole or be covered with smooth type of overboot. Prohibit smoking, eating, or drinking in...
vicinity of geomembrane, placing heated equipment directly on geomembrane, or other activities that may damage geomembrane.

3. Do not operate equipment without spark arrestors in vicinity of geomembrane material nor place generators or containers of flammable liquid on geomembranes.

4. Protect from vehicle traffic and other hazards.

5. Keep free of debris during placement.

6. Prevent uplift, displacement, and damage by wind.

7. Only small rubber-tired equipment, with maximum tire inflation pressure of 5 pounds per square inch, shall be allowed directly on geomembrane, unless otherwise approved by Contractor. Demonstrate that equipment can be operated without damaging geomembrane.

C. Placement:

1. Miscellaneous products required for completion of geomembrane installation shall be in accordance with this specification and geomembrane manufacturer’s recommendations.

2. Reduce field seaming to the minimum amount possible. Horizontal seams on slopes will not be acceptable. Seams parallel to toe shall be at least 5 feet from toe. Align rough-sided sheets in manner that maximizes their frictional capabilities along slope.

3. Prevent wrinkles, folds, or other distress that can result in damage or prevent satisfactory alignment or seaming. Provide for factors such as expansion, contraction, overlap at seams, anchorage requirements, seaming progress, and drainage.

4. Temporarily weight sheets with sandbags to anchor or hold them in position during installation. Use continuous holddowns along edges to prevent wind flow under sheet.
   a. Bag Fabric: Sufficiently close knit to preclude fines from working through bags.
   b. Bags: Contain not less than 40 pounds nor more than 60 pounds of sand having 100 percent passing No. 8 screen and shall be securely closed after filling to prevent sand loss.
   c. Do not use tires or paper bags, whether or not lined with plastic. Burlap bags, if used, shall be lined with plastic.
   d. Immediately remove damaged or improperly sealed bags from work area, and clean up spills.

5. Anchor perimeter of geomembrane as shown or as otherwise approved by Contractor. Anchor and seal geomembrane to structures, pipes, and other types of penetrations as shown or as approved by Contractor.

6. Place overlying geotextile immediately following completion of geomembrane installation and field testing as acceptable to Contractor.
D. Field Seams:

1. Wipe sheet contact surfaces clean to remove dirt, dust, moisture, and other foreign materials and prepare contact surfaces in accordance with seaming method accepted by Contractor.
2. Lap sheet edges to form seams. Adjust edges to be seamed and temporarily anchor to prevent wrinkling and shrinkage.
3. Seams shall not go through a boot. Locate seams minimum of 2 feet from boot.
4. Avoid seam intersections involving more than three thicknesses of geomembrane material. Offset seam intersections at least 2 feet. Extend seams through anchor trench to sheet edges.
5. Seal seam “T” intersections by removing excess material and extrusion welding lap joint.
6. Seam sheets together, using fusion-extrusion or hot-wedge welding system, equipment, and techniques.
7. Capping of Field Seams: Use 8-inch wide (minimum) cover strip of same thickness as geomembrane (and from same roll, if available). Position strip over center of field seam and weld to geomembrane using fillet weld each side, including copper wire as described above for spark testing.

3.04 PLACING PRODUCTS OVER GEOMEMBRANE

A. Prior to placing material over geomembrane, notify Contractor. Do not cover installed geomembrane until after Contractor provides authorization to proceed.

B. Do not place granular materials on geomembrane where typical height of wrinkles is greater than 2 inches and spacing between wrinkles is less than 10 feet.

C. Do not place soil materials in manner that will cause wrinkles to fold over or become confined to form a vertical ridge.

D. Place soil materials when geomembrane is cool and contracted and wrinkles are minimized.

E. If tears, punctures, or other geomembrane damage occurs during placement of overlying products, remove overlying products as necessary to expose damaged geomembrane, and repair damage as specified in Article Repairing Geomembrane.

F. Geomembrane installer shall remain available during placement of overlying products to repair geomembrane if damaged.
3.05 REPAIRING GEOMEMBRANE

A. Any geomembrane surface showing injury because of scuffing, penetration by foreign objects, or distress from rough subgrade shall be replaced or covered and sealed with an additional layer of geomembrane material of proper size.

B. Repair damage or rejected seams with pieces of flat and unwrinkled geomembrane material free from defects and seams. Patches shall be tightly bonded on completion of repair work.

C. Patch shall be neat in appearance and of size 4 inches larger in all directions than area to be repaired. Round corners of patch to minimum 1-inch radius.

D. Prepare contact surfaces and seam patch in accordance with paragraph Field Seams.

1. Pull and hold flat receiving surface in area to be patched.
2. Seal each patch by extrusion welding continuous bead along edge, with no free edge remaining.
   a. Vacuum box test each patch on completion.

3.06 FIELD QUALITY CONTROL

A. Prior to starting geomembrane installation and daily thereafter for installation on subgrade, geomembrane installer shall certify in duplicate that surface upon which geomembrane shall be installed is acceptable, on form located at end of section.

B. Identify each test by date of sample, date of test, sample location, name of individual who performed test, standard test method used, list of departures from standard test methods, at minimum.

C. In-Place Observation and Testing:

1. Visually inspect geomembrane sheets, seams, anchors, seals, and repairs for defects as installation progresses and again on completion.
2. Depending on seam welding equipment used, test each seam and repair using vacuum testing device, spark testing device, or air channel pressure test for double wedge welded seams.
3. Perform testing in presence of Contractor.
D. Field Testing Equipment:

1. Tensiometer:
   a. Motor driven portable tensile tester with jaws capable of traveling at measured rate of 2 inches per minute (for HDPE) and 20 inches per minute (for LLDPE).
   b. Equip with gauge which measures force in unit pounds exerted between jaws.
   c. Minimum capacity of 500 pounds.

2. Vacuum Box: Conform to ASTM D5641.

3. High Voltage Spark Detector: Tinker and Rasor Holiday Detector, Model AP-W, set at 20,000 volts.

E. Field Seam Sampling:

1. Verify that seaming equipment and operators are performing adequately. Produce test seam samples at beginning of each shift for each seaming crew. In addition, if seaming has been suspended for more than 1/2 hour, or if breakdown of seaming equipment occurs, produce test seam samples prior to resuming seaming.

2. Sample Size: 12 inches wide plus seam width, and 30 inches long.

3. Nondestructive Sampling (Test Seams):
   a. For boots and seams that cannot be otherwise tested, insert copper wire for spark test at edge of overlapping sheet in extrudate of weld prior to filet welding. Position to within 1/8 inch of sheet edge.
   b. Frequency: Minimum one Sample per 500 feet of field seam or portion thereof, and minimum one Sample per seaming crew per 5-hour work period.
   c. Produce Samples using same materials, equipment, personnel, and procedures as field seams made at time of work in progress and under same conditions.

4. Destructive Sampling:
   a. Frequency: Minimum one sample per 500 linear feet of field seem. Contractor reserves the right to reduce this testing requirement if other seam tests appear adequate for assuring seam quality.
   b. Remove Samples from field seams at locations selected by Contractor.
   c. Repair field seams in accordance with repair procedures specified in these Specifications.

5. Sample Identification:
   a. Number, date, and identify each sample as to personnel making seam and location of sample or location of field seam Work in progress at time Sample is made.
b. Mark location of Sample, or location of field seam in progress at time sample is made, on panel/sheet layout drawing.

6. Subcontractor shall conform to the following testing requirements for nondestructive and destructive seam tests used to define quality of field seams:
   a. Perform shear and peel testing on portion of sample as specified hereinafter using approved field tensiometer.
   b. Send portion of sample by overnight service to approved Independent Testing Agency for verification of field test results.
   c. Archive a portion of sample for potential verification testing later.
   d. Independent Testing Agency shall provide preliminary test results by facsimile or other means no later than 24 hours after Samples have been received from Subcontractor, unless otherwise approved by Contractor. Certified test results shall be provided no more than 7 days after Samples have been received from Subcontractor.

7. Conform to ASTM D6392 and this specification.
   a. Seam testing for geomembrane includes strength tests, vacuum box testing, high voltage spark tests, air channel pressure tests, and probing.
   b. Leak testing includes water level leakage testing, electrical resistivity testing, and tracer dye leakage testing.

F. Field Seam Strength Sample Testing:

1. General:
   a. Test each sample for seam peel and tensile strength.
   b. Save test samples, including specimens tested, until notified by Contractor relative to their disposal.
   c. Each sample that fails under test shall be shipped immediately by express delivery to Contractor for determination of corrective measures required.

2. Field Seam Acceptance Criteria: Per table under Article 2.02, Geomembrane.
   a. Bonded Shear Strength of HDPE:
      1) In Shear: Minimum 2 pounds per inch width per mil thickness as determined in accordance with ASTM D6392.
      2) In Peel: Minimum 1.2 pounds per inch width per mil thickness as determined in accordance with ASTM D6392.

3. Test Failure: If sample fails, entire field seam from which it was taken shall be considered a failure and shall be rejected as a result of nonconformance with specification requirements. Comply with following corrective measures:
   a. Nondestructive Sample Failure: Rerun field weld test using same sample. If that test passes, Contractor may assume error was made
in first test and accept field seam. If second test fails, cap each field seam represented by failed sample and submit new test Sample made during capping procedure.

b. Destructive Sample Failure: Rerun field weld test using new sample from same seam. If that test passes, Contractor may assume error was made in first test and accept field seam. If second test fails, either cap field seam between two previous passed seam test locations that include failed seam or take another sample on each side of failed seam location (10 feet minimum), and test both. If both pass, cap field seam between two locations. If either fails, repeat process of taking samples for test. Each field seam shall be bounded by two passed test locations prior to acceptance.

G. Vacuum Box Testing of Geomembrane Welds:
   1. Vacuum box test each of these types of welds: Fillet, extrusion lap, and single hot-wedge fusion lap.

H. High-Voltage Spark Testing of Fillet Welds:
   1. Provide each seam to be tested with copper wires properly embedded in seam as shown and with provisions for electrical grounding to test equipment.
   2. Pass spark tester along length of seam containing copper wire.
   3. Presence of a visible spark along tested seam shall be evidence of a faulty seam.

I. Air Channel Pressure Testing of Double Hot-Wedge Seam:
   1. Insert a needle with gauge in air space between welds. Pump air into space to 30 psi and hold for 5 minutes.
   2. At end of 5 minutes, depressurize seam by placing needle hole in air space between welds at opposite end of seam and observe gauge.
   3. Seam is acceptable if seam maintains at least 27 psi during 5-minute hold and pressure drops within 30 second of depressurization.
   4. Seam is acceptable if seam maintains a minimum of 27 psi. If pressure drops below 27 psi during test period, or does not drop during 30-second depressurization period, repair needle holes and retest seam by same procedure or vacuum box test along entire length of seam.
   5. Vacuum box test entire length of seam if second air pressure test fails.
      a. If no bubbles appear in vacuum box, lower weld will be considered defective and upper seam is acceptable.
b. If bubbles appear in vacuum box, repair each defective area by extrusion welding and test again by vacuum box.

6. As alternative to vacuum box testing, apply soap solution to exposed seam edge while maintaining required air channel test pressure.
   a. If bubbles appear, mark, trim unbonded edge, and extrusion weld defective areas.
   b. If no bubbles appear and test pressure cannot be maintained, leak is judged to be in bottom or second seam.

7. If leak is judged to be in bottom seam, cap strip length of seam tested will be accepted.

8. Mark and repair needle holes.

J. Documentation:

1. Record Documents, include the following:
   a. Panel and sheet numbers.
   b. Seaming equipment and operator identification.
   c. Temperature and speed setting of equipment.
   d. Date seamed.
   e. Identity and location of each repair, cap strip, penetration, boot and sample taken from installed geomembrane for testing.

3.07 MANUFACTURER’S SERVICES

A. Provide authorized representative of geomembrane manufacturer onsite for technical supervision and assistance during the following:

1. Preparation and inspection of surfaces on which geomembrane is to be placed.
2. Inspection of geomembrane prior to installation.
3. Installation of geomembrane.
4. Placement of cover over installed geomembrane.
5. Certification of Proper Installation.

3.08 CLEANUP

A. Clean up work area as the Work proceeds. Take particular care to ensure that no trash, tools, and other unwanted materials are trapped beneath geomembrane and that scraps of geomembrane material are removed from the work area prior to completion of installation.
3.09 SUPPLEMENT

A. The supplement listed below, following “End of Section,” are a part of this Specification.

1. Geomembrane Installer’s Certification of Subsurface Acceptability.

END OF SECTION
Geomembrane installer,
for the Lincoln Park/Milwaukee River Channel Sediment Site, hereby certify that supporting surfaces are acceptable for installation of geomembrane, undersigned having personally inspected condition of constructed surfaces. This certification is for areas shown on Attachment or defined as follows:

Condition of supporting surfaces in defined area meets or exceeds minimum requirements for installation of geomembrane.

Signed: ____________________________________________
(Representative of Geomembrane Installer)

(Position)

Date: ____________________________________________

Witness: ____________________________________________
PART 1   GENERAL

1.01   SUBMITTALS

A. Informational Submittals:
   1. Testing Plan: Submit prior to testing and include at least the information that follows.
      a. Testing dates.
      b. Piping systems and section(s) to be tested.
      c. Test type.
      d. Method of isolation.
      e. Method of filling and draining pipe to be tested using harbor water.
      f. Calculation of maximum allowable leakage for piping section(s) to be tested.

PART 2   PRODUCTS (NOT USED)

PART 3   EXECUTION

3.01   PREPARATION

A. Notify Contractor in writing 5 days in advance of testing. Perform testing in presence of Contractor.

B. Pressure Piping:
   1. Install temporary thrust blocking or other restraint as necessary to protect adjacent piping or equipment and make taps in piping prior to testing.
   2. Wait 5 days minimum after concrete thrust blocking is installed to perform pressure tests. If high-early strength cement is used for thrust blocking, wait may be reduced to 2 days.
   3. Prior to test, remove or suitably isolate appurtenant instruments or devices that could be damaged by pressure testing.
   4. New Piping Connected to Existing Piping:
      a. Isolate new piping with grooved-end pipe caps, spectacle blinds, blind flanges, or as acceptable to Contractor.
5. Test Pressure: 1.5 times the system design pressure at the lowest elevation in the section under test

C. Test section may be filled with water and allowed to stand under low pressure prior to testing.

D. Gravity Piping:
   1. Perform testing after service connections, manholes, and backfilling have been completed between stations to be tested.
   2. Determine groundwater level at time of testing by exploratory holes or other method acceptable to Contractor.
   3. Pipe 42 Inches Diameter and Larger: Joint testing device may be used to isolate and test individual joints.

3.02 HYDROSTATIC TEST FOR PRESSURE PIPING

A. Fluid: Clean water of such quality to prevent corrosion of materials in piping system.

B. Exposed Piping:
   1. Perform testing on installed piping prior to application of insulation.
   2. Maximum Filling Velocity: 0.25 foot per second, applied over full area of pipe.
   3. Vent piping during filling. Open vents at high points of piping system or loosen flanges, using at least four bolts, or use equipment vents to purge air pockets.
   4. Maintain hydrostatic test pressure continuously for 30 minutes, minimum, and for such additional time as necessary to conduct examinations for leakage.
   5. Examine joints and connections for leakage.
   6. Correct visible leakage and retest as specified.

C. Buried Piping:
   1. Test after backfilling has been completed.
   2. Expel air from piping system during filling.
   3. Apply and maintain specified test pressure with hydraulic force pump. Valve off piping system when test pressure is reached.
   4. Maintain hydrostatic test pressure continuously for 2 hours minimum, reopening isolation valve only as necessary to restore test pressure.
   5. Determine actual leakage by measuring quantity of water necessary to maintain specified test pressure for duration of test.
6. **Maximum Allowable Leakage:**

   \[ L = \frac{SD(P)^{1/2}}{133,200} \]

   where:

   \[ L = \text{Allowable leakage, in gallons per hour.} \]
   \[ S = \text{Length of pipe tested, in feet.} \]
   \[ D = \text{Nominal diameter of pipe, in inches.} \]
   \[ P = \text{Test pressure during leakage test, in pounds per square inch.} \]

7. Correct leakage greater than allowable, and retest as specified.

3.03 **HYDROSTATIC TEST FOR GRAVITY PIPING**

   A. **Testing Equipment Accuracy:** Plus or minus 1/2-gallon water leakage under specified conditions.

   B. **Maximum Allowable Leakage:** 0.16 gallons per hour per inch diameter per 100 feet. Include service connection footage in test section, subjected to minimum head specified.

   C. **Gravity Sanitary and Roof Drain Piping:** Test with 15 feet of water to include highest horizontal vent in filled piping. Where vertical drain and vent systems exceed 15 feet in height, test systems in 15-foot vertical sections as piping is installed.

   D. **Defective Piping Sections:** Replace or test and seal individual joints, and retest as specified.

3.04 **FIELD QUALITY CONTROL**

   A. **Test Report Documentation:**

   1. Test date.
   2. Description and identification of piping tested.
   3. Test fluid.
   4. Test pressure.
   5. Remarks, including:
      a. Leaks (type, location).
      b. Repair/replacement performed to remedy excessive leakage.
   6. Signed by Subcontractor and Contractor to represent that test has been satisfactorily completed.
