

Exercise 3. Site Assessment: Survey Considerations

Unnamed Tributary to Rountree at W Main Street

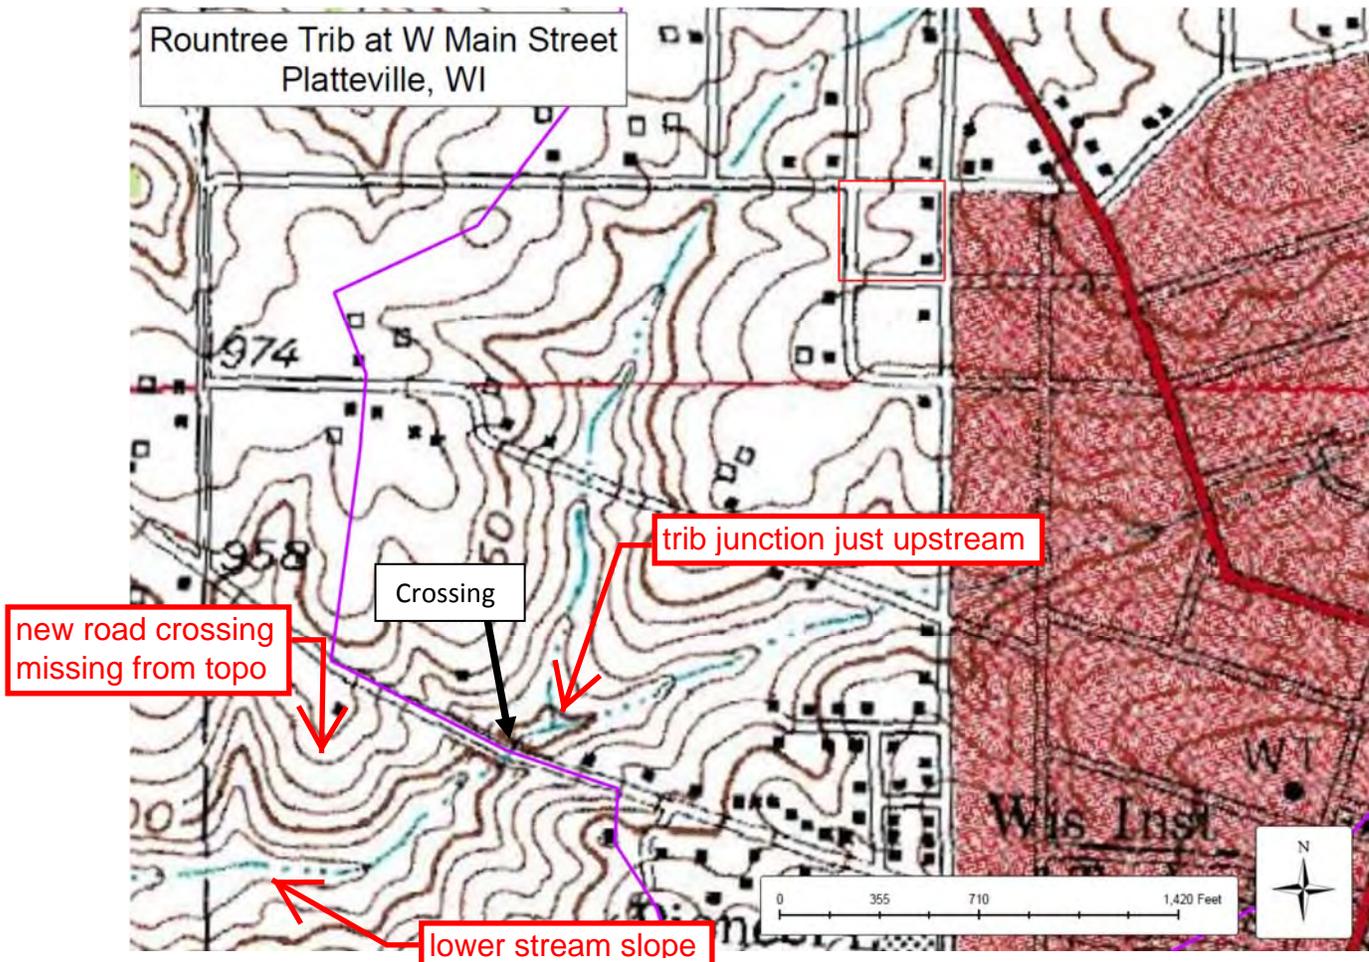

For Unnamed Tributary to Roundtree at W Main Street, use the aerial photo and topographic map provided below to help plan the site survey and identify any important site considerations that these resources provide. Although final determinations can be made in the field, where might you locate a reference reach and why? Identify one or more locations on the map or photo. What length would you survey for the profile and where might you locate cross-sections? Draw the approximate locations on the photo or map. Are there any connectivity issues or other considerations?

Potential location for reference reach: **downstream but above influence of downstream crossing**

Reference considerations: **can't be upstream with trib junction,**

Survey considerations: **slope less through lower xing, short distance to tribs, pvt lands**

Connectivity considerations: **only 1 xing below on trib and 1 on Rountree, numerous xings upstream on both tribs**

Exercise 3. Site Assessment: Survey Considerations
