WISCONSIN DEPARTMENT OF NATURAL RESOURCES
CREEL SURVEY REPORT

Mamie Lake
(Cisco Chain)
Vilas County

2008-09

Treaty Fisheries Publication
Compiled by Tim Tobias
Treaty Fisheries Technician
INTRODUCTION

Fish populations can fluctuate due to natural forces (weather, predation, competition), management actions (stocking, regulations, habitat improvement), inappropriate development (habitat degradation), and harvest impacts. Wisconsin Department of Natural Resources fisheries crews regularly conduct fishery surveys on area lakes and reservoirs to gather the information needed to monitor changes, identify concerns, evaluate past management actions, and to prescribe good fishery management strategies. Netting and electrofishing surveys are used to gather data on the status of fish populations and communities (species composition, population size, reproductive success, size/age distribution, and growth rates). But the other key component of the fishery that we often need to measure is the harvest.

On many lakes in the Ceded Territory of northern Wisconsin, harvest of fish is divided between sport anglers and the six Chippewa tribes who harvest fish under rights granted by federal treaties. The tribes harvest fish mostly using a highly efficient method, spearing, during a relatively short time period in the spring. Every fish in the spear harvest is counted – a complete “census” of the harvest.

We also measure the sport harvest to assess its impact on the fishery. But because it would be highly impractical and very costly to conduct a complete census of every angler who fishes on a lake, we conduct creel surveys.

A creel survey is an assessment tool used to sample the fishing activities of anglers on a body of water and make projections of harvest and other fishery parameters. Creel survey clerks work on randomly-selected days and shifts, forty hours per week during the open season for gamefish from the first Saturday in May through the first Sunday in March, except during the month of November when fishing effort is low and ice conditions are often unsafe. The survey is run during daylight hours, and shift times change from month to month as day length changes.

Creel survey clerks travel their lakes using a boat or snowmobile to count numbers of anglers on a lake at predetermined times, and to interview anglers who have completed their fishing trip to collect data on what species they fished for, catch, harvest, lengths of fish harvested, marks (finclops or tags), and hours of fishing effort. Collecting completed-trip data provides the most accurate assessment of angling activities, and it avoids the need to disturb anglers while they are fishing.

A computer program is used to make projections of total catch and harvest of each species, catch and harvest rates, and total fishing effort, by month and for the year in total. Keep in mind that these are only projections based on the best information available, and not a complete accounting of effort, catch, and harvest. Accurate projections require that we sample a sufficient and representative portion of the angling activity on a lake. The accuracy of creel survey results, therefore, depends on good cooperation and truthful responses by anglers when a creel clerk interviews them.

You may have encountered a DNR creel survey clerk on a recent fishing trip. We appreciate your cooperation during an interview. The survey only takes a moment of your time and it gives the Department valuable information needed for management of the fishery.
This report provides projections of:
1. Overall fishing pressure
2. Fishing effort directed at each species
3. Catch and harvest rates
4. Numbers of fish caught and harvested.

Also included are a physical description of Mamie Lake; discussion of results of the survey; and detailed summaries, by species of fishing effort, catch and harvest.

**GENERAL LAKE INFORMATION**

**Location**
Mamie Lake is located in northern Vilas County approximately 8 miles west of the town of Land O’Lakes.

**Physical Characteristics**
Mamie Lake is a 360-acre Drainage Lake of high fertility, clear water of moderate transparency, and a maximum depth of 21 feet. Littoral substrate consists primarily of sand, with gravel and some rock and muck.

**Seasons Surveyed**
The period referred to in this report as the 2008-09 fishing season ran from May 3, 2008 through March 1, 2009. The open water creel survey ran from May 3 through October 31, 2008 and the ice fishing creel survey ran from December 1, 2008 through March 1, 2009.

**Weather**
Ice-out on Mamie Lake was around April 30. Spring, summer and fall weather were cool and dry. Fishable-ice formed on Mamie Lake in December.

**Sportfishing Regulations**
The following seasons, daily bag limits, and length limits were in place on Mamie Lake during the 2008-fishing season:

**SPECIES CATCH AND HARVEST INFORMATION**

Angling information is summarized for each species (Figures 1-10) with effort and/or catch information. Information presented about species whose fishing season extends beyond March 1 should be considered minimum estimates. Each species page has up to five graphs depicting the following:

1. **PROJECTED FISHING EFFORT**
   Total calculated number of hours during each month that anglers spent fishing for a species.

2. **PROJECTED SPECIFIC CATCH AND HARVEST RATES**
   Calculated number of hours it takes an angler to catch or harvest a fish of the indicated species. Only information from anglers who were specifically targeting that species is reported.
3. PROJECTED CATCH AND HARVEST
Calculated number of fish of the indicated species caught or harvested by all anglers, regardless of targeted species.

4. LENGTH DISTRIBUTION OF HARVESTED FISH
All fish of a species that were measured by the clerk during the entire creel survey season.

5. LARGEST AND AVERAGE LENGTH OF HARVESTED FISH
Monthly largest and average length of harvested fish of a species. Only those fish measured by the creel survey clerk are reported.

CREEL SURVEY RESULTS AND DISCUSSION

Survey Logistics
The creel survey went well. We encountered no unusual problems conducting the survey or calculating the projections contained in the report.

General Angler Information
Anglers spent 8,387 hours or 21.0 hours per acre fishing Mamie Lake during the 2008 season (Table 1). That was less than the Vilas County average of 35.2 hours per acre. May was the most heavily fished month (4.8 hours per acre). Fishing effort was lightest in January (0.6 hours per acre).

SPECIES INFORMATION

Walleye (Table 2, Figure 1)
Fishing effort targeted at walleye was 4,496 hours. Walleye fishing effort was greatest in May (1,168 hours). October had the least amount of fishing effort (167 hours). Catch was 1,661 fish with a harvest of 262 fish. Highest catch (673 fish) and harvest (189 fish) occurred in May. Anglers fished 2.8 hours to catch a walleye and 17.2 hours to harvest during 2008.

The mean length of harvested walleye was 17.7 inches and the largest walleye measured was a 25.5-inch fish harvested in May.

Northern Pike (Table 2, Figure 2)
There were 941 hours of directed effort for northern pike on Mamie Lake during the 2008 season.

Catch was 548 fish with a harvest of 245 fish. Highest catch (161 fish) occurred in May. Anglers fished 4.0 hours to catch a northern pike during the 2008 season.

The mean length of harvested northern pike was 23.7 inches and the largest pike measured was a 32.1-inch fish harvested in December.

Muskellunge (Table 2, Figure 3)
There was 1,330 hours of directed effort for muskellunge on Mamie Lake during the 2008 season.

Catch was 46 fish with a harvest of 0. Anglers fished 31.5 hours to catch a muskellunge during the 2008 season.

Smallmouth Bass (Table 2, Figure 4)
There were 310 hours of directed effort for smallmouth bass Mamie Lake during the 2008 season.

Catch was 364 with a harvest of 25 fish. Highest catch (144 fish) occurred in July. Anglers fished 4.3 hours to catch a smallmouth bass during the 2008 season.
**Largemouth Bass** (Table 2, Figure 5)
There were only 7 hours directed effort for Largemouth Bass on Mamie Lake during the 2008 season.

**Panfish** (Table 2, Figures 6-10)
Panfish accounted for 47% of the total directed effort or 6,414 hours during the 2008 season.

**Yellow Perch** (Table 2, Figure 6)
Yellow perch was the second most sought after fish species with 28.5 percent of the directed effort. Yellow perch fishing effort was greatest in September (856 hours). February had the least amount effort (96 hours).

Yellow perch catch was 6,220 fish with a harvest of 3,808 fish. Highest catch (2,132 fish) occurred in May. Anglers fished 36 minutes to catch a yellow perch and 1.0 hours to harvest during the 2008 season.

The mean length of harvested yellow perch was 8.8 inches and the largest yellow perch measured was a 13.1 inch fish harvested in October.

**Bluegill** (Table 2, Figure 7)
Bluegill was the second most sought after panfish species with about 9 percent of the directed fishing effort. Bluegill directed effort peaked in July (541 hours) and was lowest in February (4.0 hours).

The total estimated catch of bluegill was 782 with an estimated harvest of 325 fish.

The mean length of harvested bluegill was 7.6 inches and the largest measured was 9.2 inches caught in December.

**Black Crappie** (Table 2, Figure 10)
Black crappie directed effort accounted for 8 percent of the total fishing effort on Mamie Lake. Black crappie effort peaked in September (483 hours).

The total estimated catch of black crappie was 417 with an estimated harvest of 268 fish.

The mean length of harvested black crappie was 9.8 inches and the largest measured was 13.2 inches caught in May.

Pumpkinseed and rock bass were also caught, but in lower numbers.

**ACKNOWLEDGMENTS**

John Logan and Mike Rynski were the creel clerks on Mamie Lake during the survey period.

The Department thanks the cooperators, Gail Glass (summer) and Paul & Lisa Steaman, who generously allowed the Department to keep a boat and snowmobile on their property during this survey.

We also thank all the anglers who took the time to offer information about their fishing trip to the survey clerk. Without their cooperation the survey would not have been possible.

This creel survey report was reviewed by Mike Coshun, Steven Gilbert and Dennis Scholl of the Wisconsin Department of Natural Resources, Woodruff, Wisconsin.

Additional copies of this report and those covering other local lakes can be obtained from the Woodruff DNR. Requests should be directed to:

**"Summer" is May-October; "Winter" is December-March

**Too few lakes have been surveyed in March to give a meaningful statewide average.

**Total Angler Hours** is the estimated total number of hours that anglers spent fishing on Mamie Lake during each month surveyed.

**Total Angler Hours/Acre** is the total angler hours divided by the area of the lake in acres. This is useful if you wish to compare effort on Mamie Lake to other lakes.

**County Average Hours/Acre** is the average angler effort in hours per acre for county lakes that have been surveyed since 1990. This value can be useful in comparisons as well.

**Statewide Average Hours/Acre** is the average angler effort in hours per acre for inland lakes in the state surveyed between 1990 and 1995. This value can be used to compare Mamie Lake to other lakes statewide.
