Eureka is a 39-acre drainage lake with stained water and a maximum depth of 28 feet. In 2018, the Wisconsin DNR conducted a late-spring electrofishing survey to assess bass and panfish populations.

**Largemouth Bass**
During this targeted survey, crews sampled a total of 8 largemouth bass at a low rate of 7.0/mile. Bass ranged in length from 8.0" - 18.7" and averaged 16.0". These results suggest that largemouth bass are currently at low densities but exhibit a quality size structure.

**Bluegill**
During this targeted survey, crews sampled a total of 55 bluegills at a high rate of 110.0/mile. Bluegills ranged in length from 3.2" - 7.8" and averaged 5.0". These results suggest that bluegills are currently relatively abundant, but most individuals are relatively small.

**Black Crappie**
During this survey, crews sampled a total of 16 black crappies at a moderate rate of 32.0/mile. Black crappies ranged in length from 5.4" - 9.4" and averaged 7.0".
Yellow Perch
During this survey, crews sampled a total of 29 yellow perch at a high rate of 58.0/mile. Yellow perch ranged in length from 2.9"- 9.5" and averaged 4.5".
