WISCONSIN DNR
FISHERIES INFORMATION SHEET

LAKE: LONG LAKE  COUNTY: ASHLAND  YEAR: 2018

Long Lake is a 111-acre drainage lake with stained water and a maximum depth of 13 feet. In 2018, the Wisconsin DNR conducted a late-spring electrofishing survey to assess bass and panfish populations.

Bluegill
During this targeted survey, crews sampled a total of 23 bluegills at a high rate of 110.0/mile. Bluegills ranged in length from 3.3”- 8.8” and averaged 5.4”. These results suggest that bluegills are currently relatively abundant, and while most individuals are relatively small, some quality fish are present.

Black Crappie
During this survey, crews sampled a total of 16 black crappies at a moderate rate of 34.0/mile. Black crappies ranged in length from 4.4”- 9.4” and averaged 6.9”.

Yellow Perch
During this survey, crews sampled a total of 118 yellow perch at a high rate of 236.0/mile. Yellow perch ranged in length from 2.9”- 9.1” and averaged 4.0”.
Northern Pike

During this survey, crews sampled a total of 20 northern pike at a moderate rate of 9.5/mile. Northern pike ranged in length from 12.7”- 29.2” and averaged 18.9”.
