I think the number of ag tags is ridiculous. Does the DNR even do research on crop damage from deer...?! Or investigate the losses of cerain farms.?! Raccoons n turkeys do way more damage then deer so where is all the extra tags givin for those species.?! I am extremely concerned for the heard in my area due to the extreme high number of ag tags givin to neighboring farms. The amount of deer they have shot is disgusting and our sighting numbers are waaaaaaaay down. These people brag about the number of deer they have slaughtered over a years time n something needs to be done about it.!!!!

In the CDAC minutes there was concern that in the 2019 season hunters reported seeing fewer deer. That unfortunately was the case for myself as well, however what people have to remember is the 2019 fall was not favorable for getting crops harvested. That being said there was a lot more crop cover, particularly corn, where deer were not as exposed nor were they in the woods as much to be pressured out. As a farmer as well I see first hand the damage that deer do to the crops and the number of deer I see throughout the year seems to be increasing despite my experiences while hunting.

My opinion is that if you want to decrease the herd, you need to provide opportunities to the hunters to do so. There is no reason not to extend the archery season. There were 27 deer killed during that season, which isn't many but they did decrease the herd and that's the objective. Some hunters enjoy that time of year and I don't believe we should tell them they can't hunt at that time. Rarely is there enough snow during this season for snow machines so I can't believe that's a real concern with the farmers and associations. ps, I’m not an archery hunter.
Deer numbers in certain areas are high but that’s large tracts of private land and very few hunters. Don’t assume deer populations are the same all over. When hunters see fewer deer than they used to Why do you think they’re lying. It’s not the weather or the corn or date of season there’s fewer deer where the majority of people get to hunt so please don’t punish the majority because the few and wealthy have high deer numbers. I don’t have to harvest a deer to have a successful hunt but seeing deer is very enjoyable. License sales fund the dnr if you lose that then what?

I have hunted the same farm in Iowa county off and on the past 20 years. I feel the numbers are in check if not low. I hardly see any doe during season and through my trail cams feel the ration of Buck to doe is 1-2 or even 1-1. The farms I hunt in Sauk county have far more doe probably 1-5. In addition I bowhunt a probably 15 days a year on average and have seen far less deer during bow season than after the crops are off usually by firearm season. This past year I saw more deer in 2 hours opening morning than I did in the majority of my bow season!

If you decide to do an antlerless only hunt or change the crossbow season in any way, that is different from the regular archery season, I have decided to shut all the land I control down. I only have control of 740 acres but I feel hunting should be equal to all. You shouldn’t let people insist on them getting the first chance at shooting a deer. All hunters can buy a license for all seasons if they would like, so why make so many changes and make it more complicated. This is what I hear from many hunters, that this is getting to complicated!!!

Thank you for this opportunity to input on the direction of this DMU. I am glad our unit is considering the recommendation to hold a Holiday Hunt. I have taken part in this opportunity for several years and am thankful that I harvested during it. I would like you to also consider extending the archery season through January. I think this is a valuable hunting opportunity that has been successfully conducted in previous years. This is the final year our DMU will be tested on its goal to decrease deer population numbers, how is the progress?

Deer “farms” in this area are out of control ie landowners who only allow a few deer to be taken off of their property And try to generate higher deer populations in the area just to shoot 1 buck off the property..then the deer come to my farm and destroy my crops. And I thought baiting in cwd areas was illegal? Aren’t food plots and small man made watering holes the same as baiting? The Dnr should provide daily bag limits for whitetail deer for landowners until the herd is back to a healthy sustainable heard.

If any county was antlerless only, I would not hunt that county and there would not be any antlerless deer shot by our group of hunters. We have a group of 3 to 4 hunters and shoot on average 1 buck and 4 does per year. The issue is not tags the issue is access. Also a idea would be to start the gun season the Saturday after November 15 and close the Sunday after Thanksgiving. Some years would be two weeks some one week and always during the tailend of the rut. It would lead to more bucks and does shot.

I feel appreciate the ability to have hunter feedback. I think all to often the DNR in the past would set numbers for deer harvest, and if the majority of hunters didn’t agree with that they would manage the deer their own way, by not taking as many deer anyways. I feel an antlerless only season would lower the harvest at many a deer may choose to hunt in an antered area. As well as many hunters just want meat, and often while deciding if a deer has antlers or not the deer could get away.

Post 9-day seasons would be much more effective if buck harvest were allowed as well as antlerless harvest. Many more hunters would participate if they were allowed to shoot a buck (assuming they had a valid tag to do so). The simple fact that more hunters would be in the woods under such a harvest structure would result in significantly more antlerless deer being harvested and would not pose any sort of over harvest of bucks. More hunters would participate, more antlerless deer would be killed.
The deer numbers that my family have been observing on private land in Iowa/Grant County have been slowly declining over the past ten years. Extending the bow/crossbow season is a bad idea and no holiday hunt should be instituted until overall numbers rebound. YOU CANNOT STOP THE SPREAD OF CWD BY TRYING TO KILL ALL OF THE DEER! IT’S BEEN HERE AND WILL CONTINUE TO BE HERE. WANNA START VACCINATING DEER NEXT? START USING SOME COMMON-SENSE APPROACHES TO DEER MANAGEMENT AND STOP WASTING OUR MONEY!

My primary concern is reducing the incidences of CWD infected deer. Although unpopular I would favor going back to Earn a Buck for a season or two and I would say that the 10 other hunters in our group feel the same way. Since the first case of CWD we have averaged about 5 deer a year killed on our property. We had two positive. In the last two years we have killed 8 deer. Only 3 have been negative. 5 positive! Something needs to be done. People will stop killing deer that they will not eat.

We have been seeing very low number of deer year after year. For gun season, 10-15 years ago, we’d see 20-30 plus deer opening weekend. The average we’ve seen over the last 5+ years is maybe 3-4 deer. Our camp has 3 hunters and the 3-4 deer is total for all 3 hunters. Please please consider not issuing so many antlerless permits. One would be plenty or go back to needing to apply for an antlerless permit and not giving them out automatically when licenses are purchased.

Wisconsin needs to decrease the wolf population. I do not care if thats done by hunting or other means but my hunting partners and me are considering not hunting in the very near future if the deer population does not rebound. We used to lease land by Tomah and saw a 90% drop in the amount of deer saw in 5 years after the wolves moved in. Maybe with the judges President Trump has put in place we could have a hunting season or other means to cull the wolf population.

I think the CDAC is doing a good job with the tools that they have. I do believe the DEER NUMBERS way over estimated, as everyone I’m speaking to is seeing LESS DEER, NOT MORE!!!!!!!!!!!! I would recommend to MAINTAIN starting in 2021. We have certainly not seen the mortality rate from CWD as was stated by the DNR 20 years ago, when they stated the herd would be decimated!!!!! Sportsmen view CWD as something they will have to live with for sometime in the future.

I harvested 3 CWD positive deer last year. In addition to being a beautiful time of year to hunt, the holiday hunt provided me with a much needed opportunity to harvest some clean venison. The proposed rule changes by the NRB are foolish at best and pose a real threat to deer hunting at worst. Please tell them to listen more to successful deer hunters and less to whiny guys at bars. -one of Wisconsins many happy and successful deer hunters.

With the deer season starting in mid September and has ing opportunity till around jan1st. That is almost 3 1/2 months of a deer season. Why do we need a January deer hunt? Other people also like to use the woods and lands for winter recreation. Thus I am against the January bow hunt. Remember archery gear is allowed thru all of deer season and for the minute amount of deer that where harvested in that January hunt is it really worth having.

I understand how all tools should be looked at if the goal is to reduce the deer pop but having a extended archery season is easily not worth landowner and warden burden. Maybe the goal should be pop maintenance rather than reduction. Lack of fawns due to predators is obvious. A bounty might help. County or club money to fund the bounty. Higher trappers maybe. Recommend reducing the crossbow harvest so that message gets sent up.

First year hunting our lease south and east of Dodgeville, Doe to Buck ratio witnessed while archery and gun hunting during the pre-rut though post rut seems to be heavily lopsided. Saw approx 8 to 1 bucks to does on trail cameras and while stand hunting full days. In speaking with the neighbors and sharing information, that was the general consensus between all. This had influence with my answers on the CDAC questions above.
We have young hunters in our group and have trouble keeping them excited about hunting when they see very few deer. Was the deer population really too high 10 or 15 years ago? We certainly have less deer now than back then! You have increased license sales and kept older people hunting by allowing cross bows to be used by anyone. Has decreasing the deer population had any effect on CWD? Or just discouraged young hunters?

Fields are full of deer in the morning and evenings. The population needs to be reduced not only for the damage they do to crops and woodlands, but to slow the spread of CWD. We can not be selfish and think about how it is for us, we need to think about the future generations. Please consider the extended January season. It gives more opportunities. This is a decrease unit, so you need to use all available tools.

Open archery seasons at governor dodge and other state parks when the rest of state opens up. Open up more of governor dodge for archery hunters. It is too crowded with small game hunters and it is very unsafe. Open up more of the park. There is plenty of room there. Allow tree stands on public lands during hunting seasons as long as they are not fastened to trees and/or harm the trees in any way. Thank you

Please stop hunting 5 days prior to the gun season, this will give the deer a chance to start to move. I use to see alot more deer during gun season when there was a 5 day period where no one could hunt. I would also like to see any early season gun hunts stopped. Once guns are fired the deer are alot more spooked which makes bow hunting tougher and I think that is why deer numbers are down.

I feel the deer numbers are not as high as thought. Keep the season structure the same as in previous years. We don’t need a extended rifle season. Let the crossbow hunters hunt the same amount of time that compound bows get too. You will lose even more hunters if you limit crossbow use in this state! Compound bows are just as accurate and deadly as a crossbow. Thank you for your time.

CWD is a definite problem and needs attention and solutions. However, there are too many deer tags for one hunter, And there are too many gun seasons. It doesn’t seem to be an effective way to manage deer health problems, is more dangerous, interferes with other hunting, etc. we need encouragement of hunting from the broader population and a focus on alternative mitigation practices for CWD

The best deer management I’ve personally witnessed was earn a buck and having the doe tags flow over to the next year. In my personal experience that was some of the best rut activity and deer numbers, and I’ve heard the same thing from a number of taxidermist in the area. I also think extended seasons is hard on deer especially after the rut when there bodies are trying to recover

I strongly suggest to implement earn a buck to achieve the goal of doe harvest, properties I hunt have way too many deer and many neighbors don’t allow hunting or will not shoot doe, this hurts herd health in many ways. Having longer seasons also hurts as people will not get out and hunt because they always have another weekend to go and leaves less hunters afield at a time.

I think that a population objective of decrease warrants a holiday hunt which provides additional opportunities to harvest antlerless deer especially considering the quota is not met during the 9-day gun season. I support recommending an antlerless only season framework to attempt to decrease the negative impacts of Iowa County’s deer herd by decreasing its size.

In my area of northern Iowa county the deer numbers seem very low.I would like to see limited doe tags issued and no doe only seasons at all.If a holiday hunt is recommended then make it either sex not just doe.I think it's hard to manage Iowa county as a whole unit with the same quotas.The southern half seems to have a higher deer density then the north.

I think all holiday and antlerless only hunts should be ended. There are plenty of opportunities during archery, gun, and muzzleloader seasons to harvest antlerless deer. I also think you should get 1 buck license per weapon type meaning if you bought both gun and archery licenses you could fill both buck tags with archery equipment during archery season.
We need to stop trying to kill all of the deer in Iowa county. We used to be a great county for deer numbers and deer quality. Now our extended seasons and extra tags have destroyed our age structure. Allow the population to get back to where it should be. It would make hunting more enjoyable for the next generation.

I agree with the recommendations to hold the Holiday Hunt, as well as offer 3 free tags/license. Please recommend an extended archery season. Last year while in my stand, I saw on average 2 deer/hr!!!! There are too many deer where I live. Let me and my neighbors have the tools to control the herd! Thank you.

Just do not think we need holiday hunt since the numbers do not change with and without the holiday hunt. Same with extended season. We all have plenty of chances through the season to harvest deer if we find it a priority we do not need another month. I would like to no holiday hunt no extended late season.

Seeing deer decline every deer season for many years. Didnt hunt at all in 2018 because of lack of seeing deer. I went last year and wish I didn’t. I saw 1 deer the whole season. Sad to say my days of deer hunting in Wisconsin are over. Btw. Raccoon and Turkey do way more damage to crops than deer do.

Without does there is no way for repopulation of the deer herd. 1 buck can breed 3 or 4 does. I honestly would like this see the earn a buck program make a comeback. There has to be an even amount of does and bucks harvested otherwise there will be not be enough reproduction to keep the deer herd alive.

With the rise of CWD, if I shoot a deer in gun season and it tests positive; I would like to get the opportunity to hunt for another deer during the Holiday Hunt. I don’t support the extended bow season. This is too late to harvest a doe that is already a couple months along in the gestation process.

Appreciate what you are trying to accomplish. I oppose the holiday hunt only because most people don’t doe hunt that week, we can shoot an fatherless deer during archery or gun season, no need to shoot one over Christmas. And, it is harder to take in testing sample after gun season ends.

as long as big deer numbers remain on private land that does not let hunters on the cwd problems will remain. I talked with others hunting on these lands and they all saw large numbers. We need programs or incentives to aid in getting access where the large numbers are on private land.

Eliminate the private and public antlerless designations. I hunt too many variations based on ability to access private lands. Reopen accesses into large track of public hunting lands. You assume people will walk in. Yet they are the at most 300 yds from a road or open trail.

We need an earlier and longer gun season, as they are not moving like they used to. Start two weekends before Thanksgiving and end the usual weekend right after for a 16 day season. Also if it goes to an antlerless hunt, I will not be hunting. That’s part of the thrill.

Non resident licenses far to expensive. I'm the out of state owner of a 1890's farm. I've hunted for 25 plus years. The state is greedy. Property owners should receive a more inexpensive license based on the fact that i pay property taxes on the property.

Extend the gun season to include the weekend before the scheduled season of deer hunting. Would give an opportunity to see more deer because the rut would probably still be going strong. I wouldn't add an additional full week, only an additional weekend.

Overall, I think we are doing a decent job with deer management. There are no easy answers and it can change from year to year depending on weather and other variables. Keep up the good work and open the State Parks again so I can go fishing again.

Given the prevalence of CDW in Iowa county, why not consider some type of earn a buck to reward the harvesting of a doe? The addition of extra antlerless tags is a great bonus, but why not further encourage their use by rewarding a bonus buck tag?
We do not see deer period. I would like to see gun and bow season to run side by side. Give everyone the same fair right to see deer during the rut. Less people are hunting, my only chance to see deer around me are when they move naturally.

The increase in CWD is concerning. Unfortunately we missed the window to suppress the disease in this area. It may be better to remove more deer before they are all infected so people can at least consume the meat for a couple more years.

Do not accept a 19 day gun deer season. Deer numbers are low do to two horrible winters where we had ice covering deer food sources and lack of food. I realize you have matrix you rely on but those are way off on actual population.

There are too many deer in NW Iowa County. I am a homeowner, landowner and farmer in this zone. Deer damage is excessive. I would support having a bounty paid of $20-$50 by the State or DNR or each antlerless deer harvested.

I participated in the first Iowa County CDAC conference call and do agree with most of the recommendations. They have a very tough job and can't please everyone. Thank-you for all of your hard work and tough decision making.

Myself and many others may not participate in a anterless season. If earn a buck becomes a option, it should allow primary tag to still be either sex. The high percentage of standing corn was a huge impact on the area we hunt.

I think that the holiday hunt should include bucks as well. I see way more bucks then than I do during 9 day hunt. I also think the out of state license fee should be lowered and the in state fee should be increased slightly.

Give the hunter we have the opportunity to fill tags by combining the public and private LIC again to many newer rules simplify the hunting rules many hunter have a small privite land and like to suplimente with public land.

With the dramatic over abundance of deer herds you need to increase options to further reduce the number of deer. When coupled with the Covid issues provide harvest authorizations to help feed the poor and disadvantaged.

Pop. Is way to low i have hunted this area for 5 decades i have seen alot never have i seen it like this muzzle loader hunt only were spectacular in Gov Dodge. Wish i could have my grand kids exsperance it. Just very sad.

We need to continue to work to keep the herd in Iowa county from growing, both to battle CWD and to help forest regeneration for future generations. Hopefully earn-a-buck will be again be a tool and one the CDAC will use.

Keep supporting Youth Hunting Seasons with strict enforcement of adults who violate the youth only hunting. Add a Disabled American Veteran Licence Fee, like other states, regardless of residency, they deserve it!!!

As you know already the crossbow season has had negative reactions from true bowhunters and gun hunters. They should not be allowed during the rut period. My brother calls them X-guns because they really are a gun.

The Deer numbers are way to low! There should be no antlerless tags issued. Hunting all day on opening day of gun season, to see 3 Deer, is not right! My neighbors and friends saw similar or even less than I did!

I am NOT in favor of extending the framework of either the Gun, muzzleloader, or archery season. I would support an entire doe only season framework in this county if the objective is to reduce deer numbers.

I think the gun season shouldn't change as that's the easiest way to kill a deer. The bow season should be both sex till January 31st though to keep hunters out watching for predators and deer with cwd

I greatly appreciate the committee's preliminary recommendation for having a holiday hunt this coming season. The holiday hunt has been providing an important recreational opportunity for my family.
The deer numbers overall are very low and the herd does not look strong. There is an over abundance of predators. I have seen multiple bobcats while in stand and coyotes are very overpopulated.

I think that having a no buck harvest year would not be a good idea at all. If anything extend the doe only hunt at the end of the year and kill more doe if high numbers is that big of an issue.

No Special Hunts other than youth. no extending gun season. need more bucks to shoot and higher deer population in southern Iowa county like highland and the lake as low numbers seen.

I still cannot understand why we do not have a bounty for deer testing positive for CWD. A simple $200 check and re-issue of the tag would do far more than the current use of those funds.

I'll own private land and will not hunt antlerless deer. And do not want the crossbow season shortened. I have limited time and the longer season gives me more of a chance to actually hunt.

I strongly oppose shortening the crossbow season. I have shoulder issues that prevent me from using a compound bow so If the crossbow season is shortened, I will be unable to hunt.

If you want more deer killed go to two 3 day hunts. Hunters wait till the last minute to shoot the big one and end up shooting nothing. More hunting seasons is not the answer.

CWD mitigation and control should be the over-riding concern in Iowa county. We're lost too much time and it is an existential threat to Wisconsin's rich hunting traditions.

It just seems the population of deer in sw Wisconsin is very very high. I've heard of multiple farmers that would like a lot of antlerless deer shot on their property.

We have harvested/cdw tested (since 2002) many deer on this property since 1980 without any positives for cwd. In 2018-19 we had 3 test positive. It's a very concerning.

Farmers who receive agricultural damage tags to omit deer for reasons of reducing crop damage should not be allowed to rent their lands out for recreational hunting.

The biggest problem with deer hunting are there are too many santuaries. The deer just go to land where the owners don't hunt. This causes older deer and more CWD.

If you truly want to reduce the population you will never do it with holiday hunts or 19 day seasons. there is but one solution and it is very simple. EARN A BUCK.

Deer, numbers South of Hwy. 18 -151, are extremely high. Travel and hunt that area, in the townships of Brigham and Ridgeway. Do, not own any land. Thank You!

I would like to see more weekend hunting. For example, I would like it if hunting were concentrated on the weekends of the 7th and 8th, 14th & 15th of November

I think everything is going well. I would like to see a few more deer. The only thing I would like to see come back is, tags and in person registration.

It has been my observations over the 2018 and 2019 gun and archery seasons, there are a lot more bucks than does. We are not getting them on camera either.

Continue to offer land management tags for farmers who are concerned with the crop damage. Push predator hunting. It's starting to be more popular.

Faster testing techniques are needed.

Thank you for your hard work

I think we need earn a buck

Dump crossbow season
Iron, Northern Forest

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

277 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 106
   - I visit this unit for non-hunting purposes: 90
   - I hunt in this unit: 247
   - General interest in this unit: 71

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 231
   - Bow: 101
   - Crossbow: 93
   - Muzzleloader: 67

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 24.88
   - Maximum: 70

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 60
   - Mostly Private Land: 40
   - Public and Private Land About Equally: 69
   - Mostly Public Land: 33
   - Exclusively Public Land: 43
   - I did not hunt in this unit last year: 2

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 4
   - Not too crowded: 18
   - Neither crowded nor un-crowded: 29
   - Somewhat crowded: 41
   - Very crowded: 91
   - Not applicable: 2

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 63
   - Fewer: 73
   - Same: 81
   - More: 32
   - Many More: 26
   - Unsure: 2

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

Bonus Harv. Auth. - METRO Public: Not applicable in this DMU

9. In your opinion, how would you rate the number of FREE Antlerless Harv. Auth. recommended by the CDAC to be issued with each license for 2020 season in this unit?

Note: Farmland Zone and Metro Subunits only.

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...

- Implement an ANTLERLESS HOLIDAY HUNT: Not applicable in this DMU

If a Holiday Hunt is held in a Farmland unit...

- EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: Not applicable in this DMU

If the Population Objective is not "Increase"...

- Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: Not applicable in this DMU

If a Zero Quota (buck only season) is adopted...

- Should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? 126 VALID, 127 NOT VALID, 24 Unsure

11. How important were each of the following concerns in forming your opinion about the CDAC's recommendations for this unit?

I would first like to express my support for the opinions shared by Jeff Wilson in his April 18, 2020 letter to the Iron County CDAC committee members. I especially agree with his comments about the loss of in-person registration. I have my property enrolled in the DMAP program for the sole purpose of obtaining assistance with reducing the number of deer on my land. The browse damage is significant and interferes with my efforts to repair the damage that has been done by over 100 years of high grading. I want to leave the land in a better state than when I bought it, but this is proving difficult to do with a high deer population that is concentrated around deer feeders and the reduction in hunters. For personal reasons, I rely on others to hunt my land and do not benefit personally from the DMAP antlerless tags I am issued in any way other than reducing the browse damage in my forest. Issuing 200 antlerless tags isn't going to have a significant effect on overall population, but it will keep hunters in the woods this year who would otherwise decide it's not worth the effort. I know several other landowners in my area who have similar (or worse) problems with browse damage, and who find it almost impossible to find anyone interested in hunting their land because the does roam around in herds all day but the bucks only appear at 3am on camera... With respect to the harvest data we are generating. I just looked at the harvest results for my DMAP tags and discovered that two of the entries recorded the sex of the harvested deer as "M" (male). I looked at the harvest entry form and it is ambiguous as to who's sex is being requested, the deer or the hunter. I fixed the records, but I can only imagine how many incorrect entries have been made across the state. Individual citizens are not trained in data entry and their submissions aren't verified. I can't see how the data can be used to make reliable decisions. I doubt that these kinds of clerical mistakes were very common when we had in-person registration.

Iron county is a large county that has very different habitats and deer severity indexes from one end to the other. The northern part of iron county has a predatory problem to go along with a harsh winter problem. The northern part of iron county has been ruined for quality deer hunting by poor management and the reckless idea that we need wolf packs to infest our winter deer yards. To fix our herd, we need zero doe harvest, a point restriction, management of our predators and less days for hunters in the woods. You keep adding more efficient weapons and longer seasons and you wonder why the herd is dwindling. Crossbows are not for archery season, and archery seasons were not designed for crossbows. Age or proven disabilities were a great requirement for using that weapon. But we all know that you don’t listen to any ideas that you don’t agree with and you will continue to ruin a once great tradition. As a kid I had 9 days to bag a deer in gun season. That made deer season very special. Special beyond words. Now there are youth hunts and perpetual deer seasons. And then someone had the brilliant idea to not require any accountability for registration. Every violator loved that decision. When you add all of these decisions together and look at the complete picture, maybe you can understand why hunting is not the sport it used to be. The Wisconsin DNR ruined it, and neglected every step of the way, to listen to the actual true sportsmen. You are not interested in balancing our deer herd, you are only interested in balancing a checkbook. Our deer herd hardly ever gets to enjoy a peaceful night sleep in northern iron county. There is perpetually someone or something chasing them around every corner. Your lack of ability to fix this is becoming astoundingly hard to deny at this point. Like all bureaucracies, you are just too arrogant to admit that you may be wrong.
I have noticed throughout iron and ashland counties the number of deer around houses or areas with humans are higher than areas that there are no houses present. I believe the areas especially in Iron county were wolves are known to be present we have seen very few if any deer running the trails or roads. This is concerning and would not like to see the wolves move into populated by people areas that presently have very few wolf sightings. We ride snowmobiles, atv's and hike throughout iron county year round and have noticed this throughout the years. I have witnessed wolf packs on trude lake take down a deer and it was very disturbing on the ice as well as road kill deer on county ff being eatin by wolves and not moving as i approach with my vehicle.

Thank you for this opportunity to comment. Deer management in Iron County is a difficult task and I feel that the public and scientific data need to be considered. First of all the data shows a growing herd of deer. The 2019 gun harvest data does nothing to show us the accuracy of the herd. All you have to do is look all over the state to see that the 9-day gun harvest data is not a good benchmark to evaluate the herd size. The late opener and weather was definitely the cause of low harvest data. If you look at the bow harvest data all over the state you will see that the herd has increased. This is a much better matrix to see trends. The bow harvest time frame has not changed and therefor it shows the harvest with the rut included. I feel that Iron County can have a antlerless quota of 100. It is my hope that the CDAC committee reverse it's decision and have a 100 deer harvest quota. This will be a good thing for many reasons. 1). Tourism (good for local businesses 2). Antlerless harvest will take pressure off of the young bucks 3). Antlerless harvest allow people to put food on their table 4). Antlerless harvest will help keep a tradition alive 5). The more deer heads turned in to the DNR the more information they will have to check for CWD. Thank you.

A "0" quota for antlerless deer in Iron County is the right choice. During the DNR sponsored meeting in Mercer before the 2019 season the assembled group recommended NO antlerless permits be issued for Iron County - aligned with the "0" permits issued for the 2018 season. The DNR went ahead and issued 125 permits anyway - CONTRARY to the wishes of the residents/hunters who attended the meeting. That was a bad idea - not just because the permits' issuance flouted the wishes of the folks offering their input at the meeting. It was a bad idea because the deer herd was still at a very low ebb and still struggling to recover. The DNR "experts" obviously knew "better" than the people who lived/hunted in the county. That was an arrogant move and worked to alienate many residents who would normally support viable DNR regulations to rebuild our herd. As a result the DNR is now facing a dual rebuilding challenge in Iron County: 1) Rebuilding the deer herd in the face of predators and weather and, 2) Rebuilding the confidence of the residents in the trustworthiness of the DNR "experts." Please note: if you believe you can achieve reasonable herd-building goals (or anything else) without the support of local folks you are mistaken. It's your turn at bat - don't foul out!

I am in favor of an antlerless harvest in 2020 and always will be if the science supports it, as it does this year. I would like to see the same stucture as last year - a quota of 100, 250 tags, evenly split between public and private land. The harvest last year was 103 total antlerless which I believe includes the youth harvest. Though it is true that our goal is to grow the herd, the number of antlerless deer taken is small compared to the benefit derived from these tags in the form of added interest in Iron County deer hunting. Plus, I am a big believer that a little more venison in hunter's freezers might mean just a little less winter kill, road kill, and predator kill. The lower buck kill really makes the numbers look bad. However, Jenna does a good job of documenting how important the date of Opening Day is. In addition, the Tuesday night snowstorm effectively ended the season in the northern half of county. I think this is important. Hunting pressure in the county is so light, chances of success are nomally higher later in the week than in other areas of the state. We really did not get that chance last year.
If the state really wanted to accurately measure the deer in each unit they could do so. The deer czar did not feel that was possible but it is. Drones could easily and accurately do the job. Further, it is in the best interests of the state to grow massive bucks. This is good for tourism, hunters, and out of state hunters. As a long time hunter I recommend handling the season just like bear. STATEWIDE..Everyone has to buy a license and 50,000 harvest permits will be issued. No more. A lot of low information sportsmen will scream like stuffed pigs but within 2 years you would have the best deer hunting in America right here in Wisconsin. I do not think for a New York second you’d even consider such a program like this which is just one reason why the DNR as an entity has such a poor image. It would take real balls to propose such a thing and so I doubt if anyone in your department has any but I think that is what should be done with the deer season.

I do not see how the deer can make a come back with the number of wolves and bears killing and eating the deer in this area. Until the predators are reduced, their will not be enough deer to survive and provide a quality hunt. We had 6 hunters in our camp last year, hunted hard, where in the woods from dawn to sunset, we saw 3 does, total, all season and they were very spooky. This is very sad for me personally, as the camp is made up of 3 of my sons and 2 grandsons. We still go to camp as it is our history/tradition, and we make the most of it, but the only deer stories are the ones I tell around the dinner table, about how it was years ago. We enjoy being out in the woods, but it gets to be a long day without seeing anything, especially for the young hunters. Years ago, before the wolves moved in, we had excellent hunting and success. The terrain and feed/browse available in plentiful. I know you have heard this before, but that is the way it is. I hope something can be done.

I have a concern about resident/non-resident tags. I have always been a loyal Wisconsinite. I own land in Iron Co WI, I was born and raised in the state of WI, I enlisted in the military in the state of WI and I have been paying my WI property taxes every year and contributing to the local economies. I am now a firefighter in MN and can no longer apply for resident tags. That having been said, I believe it is unfair for one to have to pay for non-resident tags to hunt on the land that they are paying taxes on. I think a fair compromise would be if someone owns land in WI and they are up to date their taxes, then they can purchase a resident tag if they only hunt on their land. If they plan on hunting on public land or someone else's private land then it would be fair to pay non-resident prices. I am willing to discuss this further with whomever is willing to discuss this with me. Thank you!

The fact that no antlerless tags should be offered for the 2020 deer season should be a "no brainer". No tags should have been offered in 2019, either! The fact that the DNR representative on your council is recommending offering tags for the 2020 season is INSANE!! The only rational explanation is that the DNR is only interested in the money that selling the tags will bring in. I’ve hunted the same private and public land in both the Kimball and Saxon townships every year for more than 25 years. Weather permitting, our hunting party hunts the entire 9 day gun season, plus some November bow hunting. We’ve seen fewer deer, by far, during the last 3 or 4 years than in previous years. You have to build the herd, and to do that, you have to STOP SHOOTING DOES!! In addition, there needs to be a crackdown on: 1. Excessive pre-gun season bait piles on private and public land 2. Poaching 3. Wolves Thanks for considering my comments!

Thank you for all of your work. Although I use to hunt the area, I do not anymore. Deer hunting could be better, but without serious predator control, and poor habitat, it is pretty hard, to build a herd. also consider the weather that the county gets. The many years of fine deer hunting, was simply because little to no wolves, better Forest mgt from the Feds, and a real commitment from the DNR deer team, that lack the passion and interest compared to the old school members of the DNR. I have friends who have homes and camps in the County frustrated, is to say the least. As far as the amount of vehicle kills, the number you showed, is nothing, to even be concerned about. Create good habitat, good deer yards, control the wolves, and your county will be filled with a lot of hunters, who really want to hunt the big woods, but have left, for areas, where there are a lot more deer.

Good luck to all of you.
4253 Basically, I feel the deer numbers match having a limited number of antlerless permits for the 2020 season. (much like last year) My experience last fall all the way through the winter season is deer numbers up actually a fair amount, and the main reason for low registration is lack of hunters. Individually, we as a family enjoy the ability to harvest a doe or two so yes my opinion does benefit us, but it does get tiring listening to people talk of low numbers when you know they aren't putting the time in to make a honest decision. Northern wood is greatly different than anywhere else in wi and this area can be more difficult with lack of obvious food sources ect. to use as areas to scout. The best numbers example I can give from winter is counting a group of 28 deer on the flowage while still have multiply other smaller groups visible also. The numbers are much stronger than 5 years ago.

4254 The northern forest deer herd goals should be set below 50% of biological carrying capacity (overwinter deer density below 15 deer per square mile). To maintain this level will require harvesting a quarter of the population every hunting season with at least half of the harvest consisting of does. This would allow for maximum sustained yield while maintaining a stable population. As a hunter, gardener, commuter, AND someone concerned about the long term conservation of Wisconsin’s northern forest I support harvesting MORE and BIGGER deer rather than SEEING an over abundance of “wood rats” on the landscape (which is currently the case under the existing management regime). Keeping deer densities below 12-15 deer per square will prevent the spread of brainworm to Iron counties remnant moose herd. Iron counties other NATIVE ungulate (i.e. moose NOT elk) deserves management attention.

4255 I very much appreciate Ms.Malinowski’s excellent video regarding Iron county’s deer population. Having hunted in Iron county for at least 15 years and having gone through 6 years of buck only hunts, being able to harvest a doe last year improved my hunt tremendously. While I did not harvest a doe, just having the opportunity improved the hunt alot. We hunted (with bow) the week before the gun season and likely missed the rut. I saw multiple does and not a single buck. I am concerned about a highly skewed buck/does ratio occurring which would impact hunting the rut. Trying to find buck sign (such as rubs and scrapes) has always been difficult, making it very hard to know where to hunt. Making this ratio worse with buck only hunting will only exacerbate this problem. I very much hope there is a doe quota again this year. Thanks for your time and effort.

4256 I very much appreciate Ms.Malinowski’s excellent video regarding Iron county’s deer population. Having hunted in Iron county for at least 15 years and having gone through 6 years of buck only hunts, being able to harvest a doe last year improved my hunt tremendously. While I did not harvest a doe, just having the opportunity improved the hunt alot. We hunted (with bow) the week before the gun season and likely missed the rut. Making this ratio worse with buck only hunting will only exacerbate this problem. I very much hope there is a doe quota again this year. Thanks for your time and effort.

4257 Private land owners should be able to determine if they want to allow any antlerless harvest on their own property for them and their guests. They spend time and tax money to maintain their lands, and they know what kind of numbers they are seeing. My personal piece of property borders counties that have recommended antlerless quota, and we do see a much higher number of antlerless deer on our property year round, including on camera and in person. While I have no problem with allowing youth hunters to harvest antlerless deer, as long as there is a quota for them, I feel that with the telephone registration of deer there is a very likely probability of abuse of the system, with adults doing the actual harvesting, and then utilizing a youth permit to register it, especially since now even toddlers can “purchase” a license.
Public Input on CDAC Preliminary Recommendations - Spring 2020

I can tell you for a fact that the predators in both Vilas and Iron county are the problem for deer population. In Iron County our camp of 5 hunters only saw one deer, being the one shot on opening morning. From opening morning till Wednesday last day of our hunt Wolves were the only active animal in the woods. It is quite apparent that hunting is not a important factor for many political groups. I myself could care less for tourism. However the tradition of hunting is decreasing as the wolf population rises. It is apparent that Wisconsin is being told by Federal Judges that they know more that the people who live here. I believe that ethical hunters are going to take matters in their own hands to solve the problem on their own. However it will make a honest hunter dishonest which is a shame.

Overbrowsing of the shrub layer and ground flora has been shown to decrease the production of ground-nesting songbirds. I see areas of heavy browse pressure, to the point where northern white cedar only survives beyond the snow depth protection if otherwise protected from deer browse (like by fencing). Canada yew is absent where it used to be plentiful. For some reason, deer seem to prefer these species over white pine in my neighborhood, but I have seen white pine saplings browsed as well. Maples, ash, oak seedlings and saplings are all heavily browsed. These observations are based on my familiarity with the forest in my area. If I were to get into the topic of my yard I couldn’t do it without expletives! I am more concerned with the health of our forests than with my yard plantings.

Thank you for not having antlerless permits This is the way that it used to be in the 70's. The deer population in iron County (Gile Flowage where I own land is low). I have been hunting this area for 48 straight years (grew up there) It has been decimated due to wolves, snow, and poor DNR Management in the past. Too many doe permits. We used to buy them and immediately burn them. It appears the DNR is finally listening. You can’t run Iron County like SE Wis where I live. I have talked to Jenna in the past and have been impressed with her knowledge and professionalism. The DNR should give out more bear permits. I would also like to see a wolf hunt. Thank You

As a resident of Minnesota, the cost of an out-of-state deer license is prohibitive for me to hunt in Wisconsin every year. Especially, given the low deer population. For the last several years I’d pay the high cost for an out of state license, only to sit in the woods without seeing any legal bucks. Finally I decided the I could no longer make an annual contribution in that amount to the Wisconsin DNR. So, unfortunately I rarely return to hunt with my brother and his family in northern Wisconsin. Perhaps consider having varies license fees for out-of-state residents, i.e., a fee for northern zones and a fee for southern zones. Just a thought. I miss the family hunting tradition!

Whoever is voting no antlerless permits for the county is insane. I have private property and am overrun with does and I have no tools to use to reduce the population. You are never going to grow the herd to massive numbers in this county with the high predator load that is out there. Making buck only is just making the doe to buck ratio very lopsided; there isn’t a spike or fork buck around that makes it to 2 years when nobody has a chance to harvest deer for meat. I HAVE LOST ALL FAITH IN THE CDAC; THERE IS NO EDUCATED DECISION MAKING. EVEN THE COUNTY BIOLOGIST IS RECOMMENDING PERMITS BE AVAILABLE. You need to offer antlerless permits for at least private land.

Rather than have a zero antlerless season, why not issue say 100 antlerless permits both private and public land and advise the hunter they can only harvest one deer per season, if they draw an antlerless permit and harvest an antlerless deer they are done. This could satisfy the need for venison for some hunters (without violating) and reduce pressure on smaller bucks taken at a high rate due to a buck only harvest. Hunting for meat is more important to some than taking a buck. If you really want to take a stand on increasing the Iron county herd make the one deer limit include all deer seasons, bow, crossbow and gun. One deer harvested per hunter for 2020.
Baiting is the only way a person will see any deer at all in Iron county. Without baiting I would have to pass on hunting the area, this would be the first time in 45 years. Years ago you would see hunters all over the place young and old plus buck poles with a good harvest. Now if you see another hunter in the woods they are probably lost. The buck pole is a thing of the past. Young hunters lose interest because we have them sit in the woods all day and don't see hardly anything. I believe antlerless hunts and predators along with heavy snow winters have depleted the herd to a point that it may never recover. Thank you for allowing this feedback.

Has there been any consideration to ban deer baiting in Iron County and/or statewide? With low populations already, baiting definitely congregates deer into certain private areas, making it worse for hunting. In addition the illegal activities associated with it along with the spread of disease from baiting. Another concern is the lack of forestry practices on a local level that seem to have really changed over the last 30 years. No more large cuttings. Then number of wolves and predators in our area of northern Iron county has gone up dramatically as well. So many factors, along with poor weather deep snow early in December this year didn't help.

I believe a lot of our Wolves have moved South. We have not been seeing them as often as before. But we have an abundance of coyotes right now, and a few wolves. We have not seen our resident mountain lion in the last year or so, since forestry logged our area heavy. I think he liked the mature forest trees more than young saplings. I think over all you guys are doing a pretty good job of managing the deer herd. I remember bow hunting our area years ago, before the wolves. We used to see 15 deer a night. Now we might see 2-3 a day, but there are still days where we don't see any... It certainly is nowhere near what we had in the past...

I agree with the zero antlerless tags, I think doing that the past couple years has helped our population but we are still a long ways off from a decade ago. I would be supportive of many more years of no antlerless tags or even a shut down of hunting in the county. There are very hard winters in the northern part of the county and many predators that have been hurting our population. I did not see a single deer this season and I haven’t seen a buck in a couple seasons and I hunt about 6-8 days of the gun season each year. I also spend a lot of time hunting other animals in the county (Bear) and rarely see deer while in the area.

Deer management in iron county, makes no sense. Last year 2019 you had doe tags this year none, and that's good. In the past you had basically unlimited doe tags one year and none the next what is the reasoning behind that. I seen people have 6 to 10 deer on a trailer back when you went to register deer. When asked why you killed all of them, dnr sold the tags must want them killed. I started bear hunting in iron county back in 1979 you where lucky to see a deer the last few years are the same, do not bear hunting in iron county any more. Winter can be really bad especially if you get a bad spring. And predators.

I've been hunting Iron County for over 20 years. It's rare to see a buck older than 2.5 years, not just hunting but also on my deer cams. I maybe see one every 4 to 5 years on the camera. I support zero antlerless even though that may put increased pressure on younger bucks. In my opinion, the only way to get more mature bucks in Iron County is to have more deer. When I first bought land in Iron County, the older bucks were here. Then the population took a hit with bad winters, wolves and other factors. The herd has never come back. I agree with your 2020 recommendations.

I am glad they chose 0-antlerless! The deer populations tend to be in or around residential areas. There are very few deer in remote areas. In some places there are none. In winter timber sales there were few if any deer in the sales in many areas of Iron County. There is also a lack of Mature bucks on the landscape. We really cant talk about managing the deer herd without addressing the wolf predation and the population of these predators. Hunting in the area for years this is the only variable that has changed and why there is an absence of deer in the remote areas.
I own my own land with my sons and now a grandson. Our goal is not to harvest a deer but for the family to see deer when hunting to keep interest up. Hard for a young 7 year old to go with his dad and not see a deer all day!!! Our population is very low in our area. With another hard winter this year I am worried on the population. Preditors are high! I also believe cross bows are very deadly and so they shoot the deer in rut before rifle season. When populations are low if they get a buck with a bow they should not be able to harvest another with rifle!

I feel the cold and snow in our area is so severe more often than any other area in our state it seems to me it would serve our goals of increasing the deer population much better to protect the does in our unit. You add the predators to mix and we have the potential for real population declines in a matter of one season. We had a very small doe permit only one year in the last several years and yet our deer numbers have not jumped to numbers that show over browsing or a hazard to motor vehicles. This should be of some proof a doe harvest is not required.

I hunt on private land in the town of Knight and I am disappointed in the amount of deer I've seen in the area. In 2019, I would see what I believe to be the same 3 deer all year. All of my sightings, all were on trail cams, the deer appeared to be young and very skinny. I have frequent deer sightings in southern Iron county but the deer population north of Mercer seems to be quite scarce. I would love to see the deer population grow in Iron county. I'm in favor of another year of buck only hunting if that will help increase the deer population.

We have seen increased level of wolf activity last fall. Up to 5 different wolves were seen within the same week. We didn't see any by the time the season rolled around so it's possible they moved on by then. I feel like the wolf population is underestimated even though I know it's only a small impact to the overall deer population. Deer also show altered and skittish travel patterns in years we know wolves are around which makes hunting much more difficult. I would be happier if all wolves would be removed from the northern Wisconsin.

I am concerned about wolf population. I have hunted here in southern Iron county for the last 35 years. Hunting was always very good up until about 10-12 years ago. About the same time we started seeing wolves and hearing them at night on a regular basis. It is difficult to get young hunters (my son and soon my grandson) to sit in a stand for hours without the thrill of at least seeing a deer. I have not seen a buck during shooting hours in 10 years. I also have not seen anything bigger than a fork horn on my trail cam in 5-6 years.

I bow hunted in excess of one dozen times in October and November and saw a total of three deer. I only missed a total of four years due to military service and 1 year to being discussed the last 59 years in Iron county. Between the wolves and the bad winter kill it is nearly impossible to harvest a deer in iron co. Allowing 200 antlerless tags in this unit last year was totally irresponsible. It seems to be getting worse every year, and I doubt If I'll hunt in Iron county or any other county in northern Wisconsin this year.

Having been born in this area and having been hunting here for 60+ years, I've experienced the ups and downs of deer experience that this area can provide. TO THOSE OF US IN OUR "CAMP" THE CHANCE TO BE TOGETHER AND TO EXPERIENCE NATURE FAR OUTWAY THE NEED FOR A KILL. However, after hunting five days and only seeing 3 deer between four hunters while seeing a bear, two wolves, and a pack of coyotes, it was disappointing. We have always passed up shots on does and smaller bucks but there was no option at all this season.

I believe your numbers are way too high. I saw 1 doe and 1 fawn 1 week before the gun season. We had 3 hunters in our group. We did did not see another deer through the end of the 9 day gun season. I did go for a couple hikes to see what I could find out. Most days I found more wolf tracks than deer tracks. On 1 of my hikes, the wolves were howling on my back trail within 100 yards. I think I strayed too close to a den. The bear numbers are high in our area also. We had a lot of evidence of that all fall.

What part of the need to ban baiting doesn't the department understand? I did not buy a rifle license for the first time in 40 years in 2019 and I won't again in 2020. I even have a vested interest up there in the form of a cabin and property. I will continue to hunt western states where there is no baiting and animals to see. I found some of the data interesting, however it’s 2020!! There’s predators, winters etc. but I feel it ultimately comes down to mismanagement. Again, it's 2020, not 1980.
Personally I think we should close the season or really limit it for a few years. We used to have nice bucks up here regularly and you rarely see them anymore. Including me, other people are frustrated with the lack of bucks up here. Either you don’t see any or you have to take a small one, they never even get the chance. I’ve hunted off and on for about 20 years... probably less than anything. Due to time, public land issues and buck only seasons I’ve never even harvested a deer.

Bring back the back tags. There have been many incidents where hunters are trespassing on private property, but there is no way to track or report the hunter, because law enforcement is spread too thin in Iron County. Bring back deer registry sites. In theory, I don’t even need a license to go and harvest several deer, and under the current system, I’m not obligated to report any of the harvests. Tagging deer, and registering would prevent dishonest hunters from over harvesting.

We hunt by the Gile Flowage. We saw several wolves during gun season and zero deer. Deer numbers seem very low along with hunters. I can assume winters and predators but definitely not hunters are influencing the deer population. Please do everything possible to increase the population of deer. Predator hunts, no doe seasons, increase logging efforts, improve habitat, and increase efforts to catch poachers. I know our hands are tied but wolves are taking a lot of deer. Good luck

Deer numbers are not high enough in the majority of hunting land in iron co. Certain residential areas, because of legalized wildlife feeding, have an over abundance of deer creating localized herds. If baiting and feeding were illegal this would not be the case. Outside of these residential areas, the deer population is low in the vast majority of forested area. To shoot does after an extreme winter severity index score is not using science to make decisions.

We should try getting a bounty placed on coyotes, and stronger push for a wolf reduction plan. I would strongly support an antler restriction for a few years to give the year and a half old spikes a chance to breed the following year. A simple 2 or 3 antlers on at-least one side. Giving them a chance to get smarter, same concept lakes are doing with walleye size increases from 15” to 18” or slots. We have had buck only for years it’s not working time to re-attack.

I truly feel sorry for northern Wisconsin. The state appears it doesn't care what happens to the people and their lives. Last hunting season the number of hunters out of the area was almost nonexistent . Once again no or very little tourism money was spent in the beautiful northland. With almost no chance of shooting a buck why would people want to go and hunt the area. The deer will provide for the growing populations of wolves, bears, coyotes and other predators.

For the last 5 years I have seen less and less deer, no mature bucks. Bow hunting and gun. I have always seen good deer when bow hunting and now I see nothing. I’m not happy either that I can only shoot a buck with a bow. Most good hunters would leave the young bucks and take out dry does. I have lost this opportunity. I’m slightly handicapped and this makes it even tougher to get a deer. I’m beginning to think buying licences are a waist. 5 years no deer.

We do not have the deer population up there. I hunt out of a camp that will shoot any buck 3" or more because we hunt for the meat. In the last two years we have shot 3 Bucks total. We have 12 people hunting!!! Last year we saw a total of 5 deer!!!! Also Why cant we just have a set season date wise? This notion of having deer season over Thanks Giving is a JOKE! With the season being late last year, whatever deer we had were laying down after the rut.
Our county should reconsider the no doe harvest quota recommendation. Based on the deer that exist in proximity to the Flambeau, the car kill number, encroachment of CWD in surrounding counties, and suggestion from the area DNR wildlife staff a harvest equal to the 2019 season should be available. The late gun season and terrible weather contributed last year to many people seeing few deer. Grow the herd based on scientific facts not past myths. Forward!

Heavy Snowfall during the gun season (including Muzzle loader) is the single most limiting factor influencing time spent afield and harvest success in Iron Co. for me. I now spend more time during archery and little time during late muzzle loader due to deep snow. Gun hunters would benefit from an earlier opening date if they were willing to give up the tradition of Saturday prior to thanksgiving weekend.

The presentation provided by the Biologist was very informative and I learned a lot about gun season timing and harvest results. My recommendation would be to increase the Bow/Crossbow harvest limits of Antlerless deer due to lower number of hunters and success rate. I would like to see more information on the Predator problem in Iron county and what is planned to relieve that pressure.

This past winter I had counted deer numbers in the 50's on the lake. I also saw five remnants of wolf kills and personally saw 2 wolves chasing deer about the lake. I haven't seen this many deer for at least the last 10 years. In 2014 the most deer I counted at one time was 7. So, would be nice to get at least another year of zero or low numbers of antlerless permits issued to increase the herd some more.

CDAC members need to represent their whole county. As a hunter in the corn fields of the north there are plenty of deer! Friends around the Gile and Turtle Flowage are seeing more deer, and they want limited doe tags. Stop baiting and feeding and we’ll see more daytime deer in the woods where they should be. Too many are being killed on the road from feeding and yet people are worried about wolves.

Stop setting antlerless quotas. Iron County’s deer population is an embarrassment. It is the lowest in the state with the exception of Milwaukee and Waukesha Counties... that’s embarrassing. Iron County CDAC should consider setting point restrictions for 3-5 years to spike the population for generations to come, i.e. four points on one side, six point minimum harvest, etc.

in much of the Mercer to Island lake area i hunt the deer are struggling to recover on public lands. Can we have a sportsman program to plat food plots strip on town or county lands to improve habitat for late season food? I would think food plot seed developers would jump all over the opportunity to partner with local groups to improve habitat.

Many members of CDAC want deer numbers that were seen in the late 90’s and early 2000’s. That’s irresponsible and should not be allowed. Some of us enjoy eating venison and have some science background and value our DNR wildlife biologist’s professional opinion. We should have a antlerless harvest! At least a small number of tags should be issued.

The northern economy relies on deer hunting and here numbers drive hunting. Whoever has been working this herd number program needs to be fired!!!! Quit messing g with crossbow season because the Wis Bowhunter Assoc doesn’t like crossbow hunters killing ‘their’ deer. Everyone I know loves crossbow hunting and doesn’t want it taken away!!!

I hunt with a camp of typically 10 people and we’ve seen maybe 1 deer per year. Some years we haven’t seen anything. Your best chance to see anything is to hunt around neighborhoods. Do the deer feel safe? Is the food easier to access? It would be nice to see deer way back in the woods again some day, way off the beaten path again.

I purchased 120 acres strictly for deer hunting and wildlife management and in the last 10 to 15 years it seems like the deer have left our area due to the natural rut. I would like to see Iron county have an earlier deer season or even the the northern counties open the season on November 15th and run for 2 weeks like Michigan.
26 years of hunting in northern iron county, in the beginning there were plenty of deer but in 2008 started a severe decline in deer sightings. I've had my woods logged for better habitat but that didn't help. I am sad to see it happen as we are considering selling our property and move to where there are better deer numbers.

I think too many people place too much emphasis on antlers. I hunt for the venison. There seem to be plenty of deer. The deer I have seen look like they made it through the winter in good shape. Last year's kill was down because the conditions were terrible. Way too much snow. And the season opened late in the year.

As most people know the deer are not spread out proportionately. There are a lot of areas in iron county that have very few deer, while a few areas may be over populated because of feeding or other food sources. I believe that we need to grow the population and support the 0 antlerless permits for 2020.

The Committee is correct in establishing a zero quota for antlerless deer. I would also like a zero quota for the youth hunt, etc. The only element of growing the population that we can control is the number of does shot, all the other elements of growing the population are beyond our control.

I believe baiting/feeding deer should not be allowed until the Sunday after gun season ends. The one year baiting was illegal statewide, deer movement was much increased over any year before or since. And no, I didn't shoot a deer that year but still enjoyed seeing so much deer movement.

We need more deer but we also have too manage the herd so i dont feel that not harvesting some of the antlerless population is the answer i also feel there should be regulations on the size and age of the adult bucks so we arent taking the young healthy breeders out at their prime. Thank you.

I would recommend the same regulations as the 2019 season. I seen the same if not more deer in 2019 up until the week coming into Gun Season. The deer just went nocturnal. I still had them on camera. People don't do deer drives like they use to. That also plays a role in down numbers.

The many T-Zone hunts held in previous years wiped out the deer herd in our area. We need does to reproduce to rebuild the herd. And to help this along, I would be willing to see a one-buck-a-year, your choice of harvest tool system for a few years. Nobody needs more than one deer.

Keep the wolf population in check. Buck only in this DMU ought to be followed for a few more years until the deer population returns to a reasonable level. Hunting for numerous days during the gun season should allow you to at least see deer like it used to be in the late 1990's.

During all the past seasons of buck only harvests I question myself while sitting in my stand at how many of the shots I'm hearing are in fact bucks being shot. With no visual check stations and the lack of dnr help It sounds to me like and over abundance of bucks in the woods??

I feel the big drop on numbers of harvest is due to the multiple big snows we got during the season. I noticed many hunters quit going out and many of them left to go to their homes before it got here resulting in many fewer hunters which would mean a smaller harvest.

I was on the call in May and don't understand why the DNR wouldn't give tags to hunters or at least hunters on private land. We have a bunch of deer near Kimball and I don't see why I can't harvest one of the 20 does that visit a field nearby. Give out 100 quota.

Listen to the biologist. Deer population is growing. And yeah, it's going to grow slow, have you seen our forests? But let us hunt a few does. I want to see less young bucks being killed and it worked last year with the percentage that Jena talked about.

Deer population has decreased tremendously over the past 15 years. I would like the DNR to offer some concrete answers as to why the deer population is so anemic. I'm (and five family members) are seriously considering not going up north this year.
The amount of deer has increased over the last 15 years. I see more deer every year. All I hear is how few deer there are from the people up in the area hunting. The problem is they suck at hunting and are good at drinking and making excuses.

We need to keep the youth into hunting and to do that they need to see deer. Not enough deer to keep them interested. Doesn’t matter what you do with the hunting seasons, if there is no deer they get bored and will lose their excitement.

Enough of special seasons and letting kids shoot antlerless deer in buck only zones. Use common sense for a change. Farmers don’t kill their cows to get more milk. Stop allowing does to be shot. We want more deer in the woods.

You want to increase the deer population 1: give one buck and one doe tag for the entire season for two seasons weather you kill it using bow, gun, muzzle. 2: keep the season lengths the same. 3: no bonus tags no earn a buck

Great presentation by Jenna Malinowski. My only concern is that (it appears) we are using predation data that has not been updated since 2015. If that is correct, I think updating that data should be a priority. Thank you.

I agree with the 0 proposal for antlerless deer harvest tags for iron county. The deer population has and will take a while to recover. Especially with the winters and the wolves. Please keep it that for another 4-6 years.

I have been a Forester in Iron county for 20 years. This is the first winter that I didn’t have a single deer on any of my timber sales. Also last deer season was my worst as far as seeing deer, I seen one all week.

I would like to see deer baiting banned as soon as possible. Thank you for making the video and going thru all the graphs and stats it is good to better understand what is going into the decision making process.

Antlerless in Iron County would be welcome. Extremely rare to see bucks on the 80 acres of public land I hunt (couple miles south of Saxon Harbor) Rarely see bucks at all in that area overall Thanks

I love hunting in iron county. The deer numbers are way down. If the deer numbers get much lower I will quit hunting. The harsh winter’s and wolves are the major reason why the deer numbers are low.

When I was up in my place in Saxon Wi 2 weeks ago I counted 21 deer in my square mile area. I believe we should at least have the same amount of antlerless deer permits in 2030 as in 2019

Bring back antlerless permits for private land. Seeing too many does overabundance on private land and need a tool to control population. Buck to doe ratio way out of balance.

Make sure on your reports that you include wolf and coyotes deer kills, that with the bad winters kill more deer. Your predator kill is way off on your reports.

Manage all predators of deer, like adding a wolf season. Manage all people all harvest deer to help increase the overall future deer population.

There needs to be some antlerless permits available to take the pressure off the young bucks to get a chance to grow. Especially for private land.

In the past 20 years I have seen the deer herd more healthier then it's ever been, nature is almost back in balance, thanks to the big predators

Would like to see limited number of antlerless permits for private land. I have seen multiple herds of does and limited amount of bucks.

Please drop the county advisory groups and go back to letting the professionals make management decisions, not the bar stool biologists.

She said in her video that she would like to see does harvested for research reasons, why not use the car deer kills for that?
Bring back a limited number of antlerless permits. Private landowners need to be able to bring doe numbers down are too high.

Please stop authorizing doe harvests!! Iron County does not have a high enough population to sustain it. Please be smart!

Lots of predators give other wildlife very little chance of survival should start wolf hunts and give more bear tags out

Way to many predators, areas baron of any animal sign even 5 days after snowfall, so much worthless land going to waste

Need doe permits for private land. I see too many does and no bucks. All the young bucks shot before they grow.

antlerless permits need to be available for private land. I see all does and herds of them need to be thinned out.

2019 I did see a little more deer than the previous year, but the numbers are still way down from say 10 years ago.

I live in the county. My private land has too many does and am unable to harvest. Bring back doe permits.

not being allowed to feed them during the winter when we have the ability too has made a negative impact.

I believe the deer gun season should be extended to look something like Michigan has... i.e. 15 days.

We had a much milder winter than last year. Antlerless deer harvest numbers should not be reduced.

need doe permit for private land. See too many everywhere eating my yard and overbrowsing

Deer population needs to increase. Do what you need to do to get the deer numbers up.

Zero antlerless harvest, period. Give out more bear tags. Reduce Wolf population.

would like to see some antlerless permits. Multiple doe sightings on private land.

Cut out all and I mean all extra hunts, youth, black powder, late season etc. all.

make doe permits available for private land. Too many does on my property.

We have almost the same amount of deer as in the time of 1976 to 1985.

The deer population is low because of the wolves. Open wolf hunting!!!

Please don't allow any doe tags. Change the reg's on crossbow hunting.

agree with biologist. Need doe permits especially for private land

good job deer control. not many deer or hunters. glad to see no does

I agree with proposal of 0 doe permits including 0 for youth hunts

need antlerless harvest tags for my private land. Too many does.

I feel last years quota was perfect and should be inacted again.

No more antlerless tags. Also need to eliminate some wolves.

As a young hunter I am excited to harvest my first deer.

You have to have deer before you can manage them.

Issue antlerless permits for private land.

0 antlerless... thank you

too many predators.

Open wolf season
Jackson, Central Farmland

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

303 forms were submitted for this unit.

### Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 99
   - I visit this unit for non-hunting purposes: 69
   - I hunt in this unit: 287
   - General interest in this unit: 48

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 272
   - Bow: 172
   - Crossbow: 108
   - Muzzleloader: 110

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 23.78
   - Maximum: 66

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 208
   - Mostly Private Land: 39
   - Public and Private Land About Equally: 22
   - Mostly Public Land: 6
   - Exclusively Public Land: 10
   - I did not hunt in this unit last year: 2

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 6
   - Not too crowded: 22
   - Neither crowded nor un-crowded: 15
   - Somewhat crowded: 15
   - Very crowded: 14
   - Not applicable: 5

### Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 43
   - Fewer: 92
   - Same: 126
   - More: 35
   - Many More: 4
   - Unsure: 3

### Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th>Much Too Low</th>
<th>Too Low</th>
<th>About Right</th>
<th>Too High</th>
<th>Much Too High</th>
<th>Unsure</th>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...

Implement an ANTLERLESS HOLIDAY HUNT:
Support  Oppose  Unsure
78      190     35

If a Holiday Hunt is held in a Farmland unit...
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021:
Support  Oppose  Unsure
26      261     16

If the Population Objective is not "Increase"...
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons:
Support  Oppose  Unsure
124     150     28

If a Zero Quota (buck only season) is adopted...
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?
VALID  NOT VALID  Unsure
Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?  

<table>
<thead>
<tr>
<th>Concern</th>
<th>Average Rating</th>

First time participating in CDAC. Good process but remember no good deed goes unpunished, especially in deer hunting. Death, divorce and deer hunting bring out the worst in people - keep doing what you are doing in engaging the hunters in the process. My comments are regarding the disconnect between DNR management goals and hunter experience. For several years both DNR and hunters agree it's not working: DNR issues more tags, uses best science to establish quotas (too many deer) yet hunters are disappointed with the hunting experience (too few deer). Only so many hunters want to kill so many antlerless - so issuing more tags isn't the solution. Here's my nickles worth of free advice: 1) consider carrying capacity as a metric in establishing quotas. There are many like myself which work year round on INCREASED carry capacity - food plots (don't have enough space for that discussion), vegetative management (timber cuts, openings, etc), mineral placement, thick cover habitat, fawning habitat, predator control (coyote hunting but mostly bear predation). Using the generic 25 deer/square mile times the number of habitat square miles doesn't take into account the difference in habitat carry capacity. Certainly there are differences in carry capacity (up to degrading vegetation and not sure how cwd comes into play?) 2) focus on hunter experience and participation. Extension of seasons is like issuing more and more tags - pisses some people off and doesn't lead to DNR harvest goals. I'd rather see Holiday hunt in ALL zones, rather than extended antlerless season. Remember hunter experience? Family home for holidays, kids and grandkids come over - tradition, family and friends experience. On same line, don't screw with 9 day season (Wisconsin tradition) and continue new Holiday hunt tradition state wide. Youth hunts are good.

I have hunted in this unit ( and when it was 59c ) for 44 years with only 1 year of my deer hunting spent out of the unit. I can say that we have consistently seen less deer during seasons ( both gun and bow ) for the last 7 to 10 years, despite more days afield. The quality of bucks is better than years ago as hunters are more likely to pass on smaller bucks. I think allowing crossbows for the archery season should not be allowed for non-medical and non-age related exemptions. I have personally known of hunters who will consistently shoot much farther distances with their new crossbow than they would have dreamed of when they hunted with a bow. I would favor a ban of crossbow hunting fir non-exemption hunters - at least during the first two weeks of November ( active rut.). I realize it is probably too late to “put the genie back in the bottle” and go back to allowing crossbows for only exemptions. Lastly, I would like to say that I have always been extremely impressed in my dealings with WI game wardens around the state. They have always been friendly, professional, courteous and have gone out of their way to helpful and share their knowledge. Maybe you guys should host workshops for the DMV employees in my area- Ha. Seriously, kudos to you all.

I have a suggestion, and that is to have an early muzzleloading season that starts concurrently with the start of the archery season such as states like Kansas have. The season should be a “primitive weapon” season only, that is, flintlocks or percussion firearms, no inline, scopes, etc. As a bowhunter, I do not think this would interfere at all with that season, as there would not be a large number of hunters who take advantage of this early season and it would not be during the rut, but it would increase the deer kill and bring additional revenue to the state. I also don’t believe the late muzzleloading season helps all that much with either revenue or the overall deer kill, as licenses are already purchased for the deer gun season and by the time that season ends, the deer have become very nocturnal. Extending the gun season by an additional 10 days would not be all that productive, either, as the traditional 9-day season over Thanksgiving brings the most hunters to the woods. It’s not very realistic to expect that adding more days, as the weather gets colder, will keep the hunters in the woods.
Although I have only harvested one deer with a crossbow and prefer the standard bow hunting methods I do support any type of hunting that increases hunter participation. I believe the crossbow has helped several individuals that I know enjoy hunting and harvest more deer. I do think that there is drop off in the ability of crossbow hunters insofar as becoming more adept at improving hunting skills. Crossbow hunting does allow for less skilled hunters to be successful. My biggest complaint would be, many of the crossbow hunters over estimate their abilities and that of their crossbow. I have seen many many hunters that do not spend time practicing and honing their hunting skills, wound deer and not understand some of the nuances that make up good hunters. These crossbow hunters may, with time, improve with experience and failures which should reduce these situations if they follow the same learning curve of other hunting methods.

I would like to see an antler restriction be enforced in order for growing older, more mature animals. I am all for getting youth involved and enjoy seeing them happy with any animals they choose to harvest, but we have many neighbors who come up hunting from the Milwaukee area and are just there to fill the freezers. (Which is great!) I try to convince them to shoot does and get their meat that way instead of killing all the young bucks which simply aren’t smart enough to hide throughout the rifle season. They pay taxes on their land and I understand it is their choice I just think that we could see the same results as Buffalo County a well known deer capital around the United States and could attract many people to our county if we were able to help aid the deer giving them a chance to grow up and get bigger.

There are collectively a number of individuals that load up on permits and fill their harvest limit. There are many that buy licenses for family members that never hunt and they fill those permits as well. I think the DNR should take a close look at the data coming in from those individuals and better enforcement should take place. I think the DNR should impose a rule that if an individual fills 3 or more permits in a given year, they take a mandatory 3 year period of only being allowed 1 deer harvest. There are many of us out there working to balance the herd for the enjoyment of all and to see people that just want to take, take, take all the time is annoying. It’s just like over-fishing, many practice catch & release while others take home and eat everything they catch.

It seems more attention is given to elk herds & wolves in this part of Wisconsin. If I want to hunt elk I will do so in Colorado, Wyoming or Idaho. Please spend more money to improve your deer herd. The whitetail deer is your bread & butter here in Wisconsin. Promote that not wolves & the elk herd. When I was a very young hunter deer season was more of a religion then a sport. My Father taught me to hunt and have respect for the animal harvested and for other hunters. It is not that way anymore. Young people would rather stick their nose in a cell phone screen then enjoy what nature has to offer. It is sad to see and I am not sure how it should be fixed but the future of hunting in Wisconsin hangs in the balance.

Should reconsider the amount of BAIT one can use for hunting deer- 2 gallons or 10 gallons what is the difference? When you live a distance from where you hunt you end up just wasting fuel in your vehicle and 4 wheeler or UTV causing more harm to the atmosphere which is worse for the deer then the amount of bait set out!! Deer eat and lick from the same cob of corn in the field or a "licking branch" so what sense does it make "limiting' the amount of corn or acorns or soybeans whatever you can place in one spot ? If you want to PAY to feed and help maintain the health of the animals it should be the right of the individual to do such!!

Your new ideas about extending rifle season and all of your other ideas are just stupid. Get rid of the wolves and raise out of state license. The hunting has gotten worse sense i started when I was 12 and I'm only 25 now. Listen to more of the people that put hours into the woods vs all the stupid auto insurance companies. You guys want respect from me then actually do something good. Thank you for your time.
4376 The deer herd in this area has been down for years. At least in the part of the county that I hunt. The public land sign is solid but not anyway near what it was ten years ago. Thank-you for not going crazy with the doe tags. It is appreciated. Hopefully the herd will be able to keep up. There are getting to be more predators in the farmland. We are seeing bobcats, wolf, and bear on the camera’s. I am going to have to try coyote hunting this coming winter, there are at least three groups of dogs around the land I am able to hunt. The herd is in solid shape and keep the good work up.

4377 The antlerless deer harvest is necessary to keeping the herd in balance each year. A healthy herd is not overpopulated creating opportunities for disease, more car crashes & more chances of harsh winters having a bigger impact. Controlling the herd is done with antlerless harvests & limiting the buck harvest to one per year (get a buck bow hunting you could not legally shoot one during the rifle or muzzleloading season). This would be in between having having an antlerless only season & allow for more hunters to have a chance of harvesting a buck. I love The Great Outdoors!

4378 The DNR currently provides hunters with ample opportunities to harvest a deer. Some things that would be nice to see would be eliminating baiting and feeding of deer not only in this county but statewide. Herd health and age structure are the most important and antler restrictions would help the age structure and only affect hunting for one or two years before everyone would see the benefit of a more traditional rut. Public land in central Wisconsin sees too much hunting pressure and always has so doe harvest numbers should be set accordingly.

4379 One buck - per person - per year. Keep the gun deer season as it has been. Please no "Holiday Antlerless hunt." I would like to see a week break between gun deer and muzzle loader season. I feel this would increase the quality of that season and bring in more antlerless deer without the "Holiday Antlerless" thought process. Plenty of days available for all to take antlerless the entire season. Adding a designated time frame like the Holiday Hunt will only lower quality hunting afield by all participating in the late season opportunities.

4380 There is so much private land and so much logging that has happened on public that you either can't find any deer on public or it's so thick/swampy you can't get to a good deer hunting spot. You are forced to take what walks in front of you for lack of deer. Being in central farmland is a terrible location to hunt, and then to not be able to buy a doe tag because all of the out of state hunters get them first. I, as a Wisconsinite should be able to get a bonus or extra tag before out of state hunters. At least for the county I live in.

4381 Since implementation of EAB in my area of Jackson County (Hixton) our herd has been crushed. A lot of people in my area own acreage from 40- to 160 acres and our does got pounded hard. We then had some hard winters and increased predators, especially coyotes, and the herd has struggled to rebound. I think a lot of hunters understand that we can't have deer numbers like we did in the early 2000's however we need to limit our doe harvest for a few years. Conservation first and the hell with crybaby hunters wanting unlimited tags.

4382 The numbers of deer in each unit has decreased over the past decade we need to get the deer population back up to where it was. This would help with increase sales of licenses and increase our younger generation to want to hunt. When I was young and I hunted with my father it was very discouraging when I did not see deer. I understand the insurance side but the management of units should be considered upnorth is where there should be an abundance of deer. In areas that are closer to cities etc need to have fewer populations.

4383 There is no shortage of deer in western Jackson county. I feel we should receive 2 bonus antlerless tags with each license as well as the holiday hunt. Late gun season last year coupled with poor weather for 2nd half of the 9 days made it tougher to see deer (rut was over, lots of standing corn, and trees so flocked with snow you couldn't see 30 yards in many places.) would be nice to have the holiday hunt so us gun hunters could have more opportunities to put some venison in the freezer in the event of poor weather, etc.

<tr>
<td>4384</td>
<td>Hello, I would like to see an Early Muzzleloader Season implemented like The State of Iowa has had. Say maybe the first or second week of October. This way it is far enough out where it won’t affect the RUT and bow hunters have their chance at uninterrupted opportunities during this wonderful time to be in the woods. I both bow hunt and black powder hunt and I would like the ability to harvest a mature buck with my muzzleloader when it’s not bone breaking bitter cold. Just my two cents.</td>
</tr>
<tr>
<td>4385</td>
<td>The deer population is not what it once was in the area. Deer sanctuaries set up on private land for trophy size bucks are under pressured. This results in many deer bedding down during the 9 day hunt where they are safe. Wisconsin needs to extend our 9 day season to at least 21 days. This will give hunters a chance to harvest deer during the rut that has only been available to bow hunters. Some states have 30 - 45 day seasons. For the money we pay, we get shorted time in the field.</td>
</tr>
<tr>
<td>4386</td>
<td>I believe there are not enough deer in this unit and that’s why we are seeing people from out of state not coming any more. They are sick of spending money and going the whole hunting season and not seeing any deer. I bow hunt everyday that season is open and very rarely do I see a deer. Buck or doe. Private lands with game mgmt hold the counts of deer you guys are seeing. While regular private and public lands see no deer or very few. Please fix these issues.</td>
</tr>
<tr>
<td>4387</td>
<td>I feel there are to many antler-less tags being issued, I have seen fewer and fewer deer in the woods before and during deer season every year for the past several years. The population may be higher in parts of the county where people own big pieces of property but in other parts its not. It gets frustrating hunting and sitting dark to dark and seeing 8 deer and of those 8 it was probably 4 and you seen them twice.</td>
</tr>
<tr>
<td>4388</td>
<td>The current format favors bow/crossbow hunting far too heavily. It seems like an aweful lot of the bucks and bigger bucks are gone long before the gun season. Since I can’t take my kids bow hunting, they seem to be losing interest because they never see bucks or big bucks. Now that crossbows are allowed, there isn't that much difference between using a crossbow and a firearm. Look into making this more even.</td>
</tr>
<tr>
<td>4389</td>
<td>Need to have a point restriction on bucks. 4 points on one side minimum. Wisconsin used to be known as a state with mature deer and good genetics. Since then this has decreased with the people I know across the state and my own observations as well. I lived in Missouri and Iowa and hunted public land in both states the past few years and I see more mature bucks there than I have my whole life in Wisconsin.</td>
</tr>
<tr>
<td>4390</td>
<td>Being a bow hunter, I would prefer two archery bucks tags for the season and forego my gun tag. This may be one method to help buck population if bow harvests are less likely than gun harvests. I would actually prefer to hunt with bow during all seasons and forego my gun tags if I was allowed a second buck with the bow in lieu of gun season.</td>
</tr>
<tr>
<td>4391</td>
<td>I believe that the deer population is low. We should be increasing the deer herd. Over the past 10 years myself and other hunters have seen less to seeing nothing at all. Also the amount of hunters from outside my area that I hunt have all stopped hunting this area. This I think plays a part in why we see less deer during the hunting season.</td>
</tr>
<tr>
<td>4392</td>
<td>40 to 50 deer a night in our winter rye. Much higher numbers than last year. All deer appear healthy and over winter food supplies must have been adequate judging by proportional body weight. No deer appear gaunt or in trouble. As we get further into spring, I’m sure the numbers will disperse into surrounding farms and wooded areas.</td>
</tr>
<tr>
<td>4393</td>
<td>I agree with the recommendations set forth here. I don't want to see the deer population dwindle down to nothing. In the past few years, it is my opinion, that I have not seen enough deer to warrant extended seasons or holiday hunts. I also feel that crossbow is creating a disadvantage to the bow hunters and gun hunters.</td>
</tr>
<tr>
<td>4394</td>
<td>Bring back Registration Stations, leave Crossbow hunting and Archery hunting season and requirements alone, give Wardens power to enforce trespassing as well as harassment of hunters on public land. I was harassed twice last year on public land. Leave the 9-day gun season but allow a 48-72 hour cool down for gun hunters.</td>
</tr>
</tbody>
</table>
This unit can support the current crossbow and archery seasons. Please leave as is. I have seen plenty of deer on public and private lands the last 10 years. People who don't see deer are the ones that sit all day and don't drive deer. Population in Jackson county is very good.

There isn't hardly any deer left except on a few closed to hunting properties, how many blaze orange people you see walking around the day before hunting season compared to ten years ago....there's the answer to your population....you don't see them, you don't come back.

Please do not extend the rifle season, or stop the hunting season a week before the rifle season. Both are wrong, and would destroy hunting for many people, and it would seriously effect the quality of the deer herd. Please do not make these changes. Thanks!

The number of mature antlered deer seen, both when hunting and through trail cameras, has gone down significantly in the past few years. Allowing crossbows are making for too many easy kills and makes it like having a firearm season all fall and winter.

I believe there should be one antlerless tag issued with each license bought including for the youth. No extra antlerless tags should be available. The 9 day gun season should stay as is. The crossbow season should be 50 years and older or disabled.

I believe that the sharp decline in deer in our area is primarily due to coyotes and possibly wolves. I would like to see the DNR more actively involved in encouraging coyote hunting and we need to restart annual wolf hunts.

Concerned about deer predation. DNR should change bear season framework, hopefully to a spring season, to allow some decrease in bear numbers. Current bear season dates make it very difficult to kill bears.

We need to return to back tags and in person registration!!! The harvest numbers for this DMU as well as all others are inaccurate as compared to years when in person registration and back tags were required.

I think it time to get back to one deer tag per person and no bonus tags. If want give out bonus tag have a party tag system again where 3 or more hunters get one extra tag between the group.

It is completely ridiculous to not offer bonus tags for public land in this DMU. As an overall opinion I feel that there should be no "public or private" designation of doe tags.

Great survey! Appreciate you collecting our input and your dedication to balancing deer population, hunter satisfaction, and outdoor tourism. Keep up the great work!

I see large parcels of private land that only hunt antlered deer. I'd like to see something help reduce the deer population on or near those areas.

I don't know where the deer went, i know we had 7 bear all year in our hunting area. I think they got fawns and moved the deer to other areas.

I think the dinner is doing a good job Jackson county with the deer population. I am concerned about over harvesting of does. Thank you.
I own and farm and hunt 330 acres in Jackson County. The deer herd seems to be at about the right number for hunting and farming.

Keep bow and crossbow seasons the same. In fact, there should be no distinction between the two—they both launch arrows.

Get rid of agricultural damage tags. Or keep it for regular gun deer season til the end of December.

Holiday hunt will be a good and necessary way to control the deer pop in Jackson County.

Thank you to everyone for your hard work. I would like to see a higher deer population.

One doe tag per person is enough. Anything more and there won’t be any deer left.

Run the crossbow season with the archery season. No changes from 2018-2019.

I am satisfied with the deer population and the length of hunting season.

Let the DNR do what needs to done to best manage the environment.

I feel each license should be allowed 1 antlerless and one buck.

Do what ever the DNR thinks is good for the whole environment.

I would consider buck only instead of an antlerless season.

Opposed to limiting or restricting the cross bow season.

Don’t change from current standards.

Maintain 9 day regular gun season.

Keep up the good work!
Public Input on CDAC Preliminary Recommendations - Spring 2020

Jackson, Central Forest

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

309 forms were submitted for this unit.

### Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 42
   - I visit this unit for non-hunting purposes: 89
   - I hunt in this unit: 300
   - General interest in this unit: 47

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 279
   - Bow: 155
   - Crossbow: 116
   - Muzzleloader: 82

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 24.24
   - Maximum: 64

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 43
   - Mostly Private Land: 29
   - Public and Private Land About Equally: 37
   - Mostly Public Land: 45
   - Exclusively Public Land: 142
   - I did not hunt in this unit last year: 4

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 8
   - Not too crowded: 34
   - Neither crowded nor un-crowded: 55
   - Somewhat crowded: 67
   - Very crowded: 84
   - Not applicable: 5

### Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 55
   - Fewer: 83
   - Same: 101
   - More: 47
   - Many More: 15
   - Unsure: 8

### Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th>The Antlerless Quota is...</th>

<td></td>
</tr>
</tbody>
</table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
Implement an ANTLERLESS HOLIDAY HUNT:
Not applicable in this DMU

If a Holiday Hunt is held in a Farmland unit...
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021:
Not applicable in this DMU

If the Population Objective is not "Increase"...
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons:
Not applicable in this DMU

If a Zero Quota (buck only season) is adopted...
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?
VALID 167  NOT VALID 99  Unsure 43

11. How important were each of the following concerns in forming your opinion about the CDAC's recommendations for this unit?

<table>
<thead>
<tr>
<th>Aspect</th>
<th>Average Rating</th>

</table>
I called into the first CDAC meeting for Jackson county, with specific interest in the Central Forest. I have hunted in the Jackson Central Forest since the early 70's. Deer population in this area has dwindled greatly over the past 15 years. During the CDAC meeting no mention of natural predators in this area was mentioned. I believe that the wolves, coyotes and other predators in the area play a big part in the deer herd population and have helped in the great herd reduction! I'm interested in what the CDAC plan is to address this issue. During the CDAC meeting the herd size data was reviewed, the data indicated that the herd was not increasing, but declining. Several thoughts on the possibility of "bad" data were discussed, with a conclusion that the data did not really reflect the herd size. The conclusion in the meeting was the herd was growing. I found this disturbing that the data, in the end, was not used in making the recommendation for the 2020 season. I reviewed CDAC meeting minutes for neighboring Central Forest counties. Wood, Clark and Adams all have recommended to reduce the number of antler less permits from 2019 for the 2020 season. These counties also discussed the data for the herd population, which indicated a reduction in herd size. To help increase the herd size, I would like the Jackson CDAC to strongly reconsider reducing the number of antler less permits for 2020. One more reference point, from my hunting experience in 2019. I hunted all of November in this area, including the rut. Other hunters were also hunting with me during this time. The total number of deer we seen hunting was very very low, 6 total. This included many many hours in the woods. The herd is not even close to what it was 15 years ago, let alone 25 years ago when a hunter would see deer daily... the lack of a herd will aid in the reduced number of hunters! I have also read the DNR articles on concerns of few hunters, and a continued decline in hunters thru 2030. If we don't address the declining herd now we will lose more hunters! Last comment, again, what is the plan to address the over population of natural predators! We have many trail cams out and seeing wolves, coyotes, bears and bobcats is a regular occurrence. Thank you for your time and allowing my personal input.

Deer hunting isn't like it used to be. Too many stupid regulations make it hard to enjoy hunting. the promotion to deer hunt is high but yet back roads, dirt trails are blocked off, gates are in place making it undesirable to walk 3 miles to get to an area that even remotely has a chance of holding any deer. Clear cut the woods so the county can get more money is what it seems to be all its about. What about the days when back tags were issued? It was easy to report violators by giving dnr the tag number when you encounter illegal activity. now nobody knows if anyone even has a valid hunting license anymore just throw on some orange and go. I am a very avid sportsman and abide by all registration rules. How easy is it for people to get an illegally harvested deer from the woods to the freezer without calling in a registration? How many does are shot and registered over the phone as a antlered deer? Who is going to know??? How many buck fawns are shot and registered as an antlerless deer? Regardless if the antlers are 3 inches or not, there is still nuts on it making it a buck a BREEDING buck once mature enough. All the money generated by buying licenses, stamps, go wild cards etc. is going where???? 1 warden for , lets say 250 square miles it seems like, where is he when you do need him? 1 800 # then leave a message and maybe you get a call back before the season ends? Deer hunting in Wisconsin is so commericalized its pathetic. There can be 25 deer in Jackson county but dnr will promote to sell 5,000 tags and chalk it up to quality time in the woods with family and friends is what its all about anyways.
I'm happy with the recommendations made by the CDAC this year. I think it was a good idea to make the tags a 60/40 split in favor of the public land. It makes sense to give tags out based on the percent of the land base. Deer browse should be highly considered when setting antlerless quotas for the Central Forest Zone in Jackson County. Almost 200,000 acres of public land exists in this County, and much of that land is sustainably managed for forest products. Jackson County and many other counties around the state rely on consistent revenue streams from the harvesting of forest products in order to run their operations. If deer aren't allowing for adequate regeneration that is a big detriment to the County, the local community and Wisconsin's forest industry as a whole. I would be cautious when using hunter success rate as an indicator for deer totals in the Central Forest Zone in Jackson County. The hunting pressure has not appeared to be very high over the last few years, and less folks seem to be participating in deer drives. The eastern part of the County has a lot of thick cover due to logging practices and just because folks aren't killing deer doesn't mean they're not there.

My problem with deer hunting in my area is all the doe hunts that happen throughout the season. It starts with the youth hunt, as soon as that happens the few deer that are around go nocturnal. I spoke with a father and his daughters and asked them how they did during the youth hunt and the Dad said they they got a doe. I asked the daughter about the hunt and how it was to shoot the deer and she said my Dad shot it. I know not every situation is not like this but we all know this is happening. I dont purchase a gun license anymore because of lack of deer. I hunted with the bow 15 times last season and only seen 6 deer the whole time I was out. The true numbers are not there less deer now than 6 years ago. I hear wolves just about every night and have seen kills from them. My main thing i would like to see is to stop the doe hunts for a year or two. We need the population to get back up there. My wife and I usually get a doe tag every year but never use them to try to save at least two does from getting shot. Kids would be more interested in the sport if they were to see some deer. Tim Albrecht email address is timalbrecht181@gmail.com

Though I now live in Pa, I have come back to Jackson County to hunt with my brothers from Wis. Rapids. I shot my first deer near Saddle Mound when is was 14 and Jackson County deer hunting is very special to me and my whole family. I can not believe how you let the forests get cut down, what a sorry excuse for forest management. Your doe tag allocation increase is totally out of line with the deer population. You guys need to do what your predecessors always did, they got out of their offices and went out into the field. They actually counted deer by unit, county, area and township. You can't manage deer population unless you actually know how many deer there are in an area. Stop listening to the farmers, insurance companies and academics. Trust me, we in Pa sent you Dr. Gary Alt from Penn State Univ. after he ruined our deer hunting ... We use to put 400,000 hunters in the field on opening weekend .. now it is just a trickle. Bottom Line is if you your goal is to manage deer so we have something to hunt then stop interfeering with nature .. we hunters will thin the herd for you if and when there is something to shoot.

I took the time to watch the informative video of results and information- very well done With that said, I am a private land owner in the central forest and the deer sightings were much lower in my area than in years past. This included archery, 9-day gun and muzzleloader observations. I also received similar observation feedback from other hunters in the area. We continue to manage our private property for deer by hinge cutting, planting food plots, planting soft mast and thermo cover, establishing bedding areas and maintaining low hunting pressure. From our observations, the deer sightings were very low in 2019. We did have antlerless permits and decided not to utilize them on the very few deer we did see. From our observations, there is no sign of over browse on regeneration in our area, including red and white oak. I am by no means an expert, but rather wanted to share my observation. I would prefer a much lower antlerless harvest goal if possible. Thank you to all of the volunteers and CDAC committee for your time and information sharing. I hope you take my feedback into consideration.
Deer hunting on state and county public land has become one of the biggest disappointments in my life. I had enjoyed the hunts regardless of higher hunter densities that was part of the hunt. Wisconsin has managed wildlife habitat with excellence but all of that work is being compromised with baiting. When I hunt these properties now all I find is bait piles and tree stands left unattended. Deer patterns have changed to bait piles with unoccupied tree stands. Wisconsin has limited public land with a large amount of hunters, confrontations are happening often about hunting near bait piles of hunters. Old school deer hunting was a enjoyable way of life now deer hunting is dumping corn, pumpkins, potatoes, carrots and cheap feed out on public land and shooting a deer with a mouth full bait from the 50 dollar cheap tree stand left there all year. I myself will deer hunt federal public properties the old school way. I would also add that I will not recommend deer hunting to young or newcomers because shooting deer over baitpiles is not hunting. Thank you, Bill Stoll

Change the regulations to allow junior hunters to harvest an antlerless deer statewide regardless if the land is public or private - recommend using the same approach as state-wide antlered deer harvest. Currently, junior hunters select either 'public' or 'private' land when purchasing their license and this limits them to harvesting an antlerless deer on the land type specified on the license. Many junior hunters hunt both public and private lands and antlerless deer harvest shouldn't be tied to the land type. This limits their ability to harvest a deer when they hunt both public and private lands. It is in the best interest of this sport to allow junior hunters should be able to harvest an antlerless deer statewide on both private and public land. This will provide the best chance for them to harvest a deer regardless of the land type they are hunting. The junior hunter should be able harvest an antlerless deer anywhere in the state without consideration of 'public' or 'private' land.

In my honest opinion I believe the deer numbers are on the rebound in Jackson forest region. The number one factor that hurts the deer population in this area is wolves. I spend ALOT of time in the woods all year long weather hunting scouting looking for sheds etc and the amount of wolf sign is getting to be out of hand. I had to totally stop hunting one of my favorite spots to hunt due to wolves. They literally track the deer faster then I can and eat them down to nothing in little to kill time. Really frustrating tracking a heart shot deer that ran maybe 50 yards and there’s wolves eating it. I refuse to take my nephews and nieces hunting in this area due to the wolves. If they where to make a bad shot on a deer we would never be able to follow the in written rule “when I’m doubt back out” wolves will have the deer gone within an hour after shooting the deer if you don’t shoot the deer and immediately get down and go after it

My father and I have hunted in Jackson counties central forest zone for approximately 4 years now. We have hunted all over the unit and have spent some time scouting and finding good locations to hunt. We have seen deer in years past and have seen sign of mature deer in the area. The last 2 years I would say though we have seen a sharp decline in the amount of deer harvested. I’m basing this on talking with other hunters when coming out of the field and grabbing a bite to eat at a local establishment. I’m not sure what is causing this sharp decline but I feel as though making this unit very hard to receive a doe tag is a big deterrence from hunting in the area. I’m by no means saying to give away thousands of doe tags to hunters but to rather open up the amount alittle more to allow for more deer to be harvested and in turn bring in more people for local establishments and boost local economies. Thank you for your time!

I drive 3 and a half hours to hunt the public land in Jackson county. I saw 1 buck immediately on opening morning, along with 2 does. That was before 7am opening morning. I didn’t see another deer the rest of the hunt. I walked along with my brother 16 miles in one day, didn’t even see a deer, didn’t even see a track. What a disaster deer hunting in Wisconsin has become, 2020 might be my last year hunting in Wisconsin. To put it simply, the juice isn’t worth the squeeze. If 1100 deer were killed in Jackson county this year, I won’t be back next year. I guess it’s off to find the next piece of public land in western Wisconsin that has a slight chance of providing a wall hanging buck. Congrats dnr. Keep being happy with your turkey recovery efforts. And keep taking everyone else’s $24 for a deer license.
Please do not reduce the season for crossbow hunting during the archery season to two or three weeks and to exclude the rut from crossbow hunters. I would be in favor of crossbow hunting rules being changed to only include disabled hunters and hunters sixty and older to be authorized to use a crossbow. Cut back on all of the special hunts or cut them out completely with one exception, disabled hunt. The youth should only get a anterless tag the first year they hunt, that's it. They should enter the lottery like everyone else. With the current system, if you are lucky enough to draw a anterless tag, you can use it for either gun or archery season. In a limited anterless DMU, Party tags could be a very good option for the state to use. That was the old way and it seemed to work and hunters were somewhat satisfied.

I have hunted this area for 50 years and in the early times you would see herds of deer running through the woods and it was great to be a hunter! Now there is no way that many deer and hunting is not that much fun and exciting especially for the younger kids. They need to see more deer and have more opportunity to get one that's what makes it fun! It seems that we let other interest groups (car insurance companies and etc.) push you to keep killing more does each deer which reduce the total deer heard and bucks. LET THE HERD GROW! We didn't have problems before and we won't now! Close the ATV trails one week before opening bow season so the deer settle down and so we can bring kids, grandsons etc.to hunt when the weather is nicer! They enjoy it more and if the herd are up that would be great too!

Keep working on trying to increase the herd in eastern Jackson County. We need a wolf hunt. Cross bow 'hunters' are taking too many bucks. Keep doing without the Holiday hunt! Implement a full scale baiting ban. It seems hunter numbers keep going down. If they saw more deer, it would help. Continue to have 2 zones in Jackson Co. There was a Conservation Congress question about doing away with the different zones. That would be stupid to combine Jackson Co into 1 unit. There's too many predators. Allow foot snaring of bears to better keep the bear population in check. Encourage more CWD testing in this zone. I wish I could see more deer. Hunting has become quite frustrating. The government should plant less pine and plant more 'deer friendly' trees. Promote DMAP for zone 55 landowners. Thank you.

We need to stop killing the does, for every doe that is killed you reduce the herd by two deer plus the deer that you just killed. I have hunt this land for over 46 years and we used to see herds of deer which made it fun to hunt plus get others younger adults to join too. I continue to place many trail camera throughout the woods all year around and the deer herd is very low, too low. You shouldn't let others influence you that we need to keep reducing the deer herd or many others will not participate in the hunt! You just need to stop killing does for 3 years and everything will come back nicely. After that I would follow what Upper Michigan is doing for regulations. you'll have many more bucks to hunt and you can have a minimum antlers size to hunt. You need to change!!!!

I am retire and disable hunter. I put a lot of time in the woods more on the east side of hwy. 27 south of BRF. In my time spend in the woods and on the county forest roads I would say that the buck population is doing very well specially the 1 to 3 1/2 year olds. I have been seeing more does on the east side of hwy 27 in the last two years. There is a lot of does on the west side of hwy 27, with less bucks in the area that I hunt. There was at less 50% more gun hunters out for opening day. The second day I would say you only had maybe half of the hunters from opening day out, and by noon they were gone. During the 3rd and 5th days you were lucky to see another gun hunter. With this said I don't think a longer gun season would do any good at all.

I have hunted and trapped the eastern half of Jackson County for 13 years on state and County lands. I spend more time than the average sportsman out on the forest. Browse on fresh cuts is considerable and widespread. I have seen the deer herd grow since the earn a buck years and would have to say the deer numbers are the highest I have seen presently. It was not uncommon to see 10+ deer a day hunting. Try driving hwy 54 at dawn or dusk and not having a near collusion with a deer. With CWD on our door step, I believe it might not be a bad idea to increase the harvest of all deer to slow transmission of this disease. I believe 1000 public tags would not hurt the herd and would be well received by MOST hunter on the forest.
I used to able to see 40-50 deer a day 20 yrs ago, but then came along unlimited doe tags. Everyone and there brother went to public land to shoot their does. People I’ve never seen or saw again. Now I only see 2-3 deer per season. The people are gone. The wolves left cause they do not have any deer to eat, but the coyotes are horrible. Last 5 years the turkey population is down 50% id say. I won’t hunt there anymore. The best thing in my opinion is to let the does be for 3 yrs and hopefully by then the deer Hurd will come back. The DNR is loosing hunters. And the hunters are losing interest and faith in the DNR. The introduction of wolfs was a bad mistake on the DNRs part. They pretty much cut there own throat!

I personally feel the wolf population is very high in the Jackson county central forest. The predation on deer is very high, I can only imagine what the fawn mortality rate to wolves is like. Over harvesting oak stands which provide essential food for all wildlife is a problem too. Once those huge acorn producing oaks are gone, they are gone for a lifetime. It takes 60 years to regenerate those oaks. I’ve been seeing fewer deer year after year. How do I get my kids interested in deer hunting when I barely see 1 deer in 8 hours of hunting? Young hunters are not interested in staring at trees all day. Deer hunting is a heritage, a tradition, which has changed not in a good way.

The amount of does have increased due to the lack of doe permits available, so there for I'd like to see an increase to 1000 or more permits awarded for public lands. As for the season dates structure goes. I feel the way it is now is just right, other then the youth season in the beginning of October. I feel that the youth season should run just as long as the disabled season to allow more opportunities for youth hunters. As the weather is not always favorable on those current season dates. Especially when there's alot of us that hunt public lands and dont have the luxury of sitting in big box towers. Also parents work schedules can interfere with the current season timeline.

I hunt the central forest zone public land. The last 3 years I haven't seen any deer and the hunting pressure has dropped dramatically. Opening day gun season 2019 I think I only heard 1 shot. I am concerned the number of anterless permits for public is going to be too low. Would like to see it increased. I am concerned about how certain sections of the central forest east of hwy 27 is harvested for oak lumber as the areas where I've seen mast crops of acorns are no longer there due to lumber harvest thus the food source is gone and I don't see any deer. Please take into consideration if possible the habitat as well when trying to increase the population of deer.

I’m 63 years old I’ve been now hunting since I was 18! 8 of the last years on private property 160 wooded acres ! Ever year I see less and less deer! Just can’t figure why this is? I don’t need too harvest a deer ever year but it would be nice too see a few!! I’ve taken 1 buck and 1 anterless deer so far! I’ve bought the bonus tag and didn’t fill it because of the very low deer sightings!! We have ample feed and cover on property not pressured during the season and neighbor’s also say the same!!! I hope population starts increasing soon? Not many good years ahead of me!! Looking for future for grandkids hard too sit all day and not see a deer!!

Wolves, clear cutting, and the years of earn a buck from the past have decimated the deer herd in the Jackson County and Black River State forest. My son has come hunting with me for the past five years and loves coming to Jackson county , but the last two gun seasons out here have been absolutely dreadful. It’s pretty poor when you don’t see a single deer opening morning or hear any gun shots remotely close. Last year my son told me this is boring. That’s your future hunter and purchaser of licenses. 😞 Thin out the wolf population and spare the does, the big forest deer herd is hurting.

Hunting pressure is the Jackson county Forest region is actually quite minimal. Decades ago there were thousands of hunters, as compared to hundreds, a ten to one ratio less than now. Virtually no one hunts the hard to get at areas, swamps ect. The hunting culture has drastically changed. Most deer hunters now are lazy/farmland Trophy hunters. Can’t even bow hunt the forest region for a doe with a bow. Years ago bow hunting was a buck or doe statewide and done. It’s a big money game. The 10:00 go on line to get a doe tag on a weekday is a kick in the tally dodgers for the working man.
Do not have doe season for the forest county, my father has been hunting this piece of public for all his life and has never seen such low deer numbers, stop recking the deer population in Wisconsin or we will run out of traditions in the already trying time of the this world and PETA, remember what you guys “decide” to do will have an impact many years down the line. I have considered quitting hunting because of the lack of deer population on public lands that it disgusts me. After logging many hours in the woods it is very discouraging........... Hope you do the right thing....

Our group Hunt's central Forest, Deer Numbers are down considerably, have been for over a Decade. Bear bobcat, wolves are up. We've noticed small pockets of deer that lock down during the gun deer season and these Small areas are where we mostly spot Wolves. Lots of pressure on deer. It's almost impossible to keep the younger generation involved when they go days without seeing a deer. We see nothing sitting and turn to making some drives , which is hit and miss with a deer population that's under SO MUCH PRESSURE.

I feel increasing the antlerless quota in this unit will only take us backwards on trying to increase the herd and hunter satisfaction. Only after years of limited or no antlerless harvest are the numbers finally on the upswing and I feel it is still too early to start harvesting too many antlerless deer. Maybe in a year or two take another look at the numbers and reconsider. I am 100% in support of maintaining health numbers and herds and don’t want to see it go backwards from the progress we have made.

Reduce Predators - seeing more and more as they get more comfortable with humans. Seeing less deer. I don’t mind crossbows at all, but to use a crossbow over bait is like using a rifle over bait at 20 yards...no challenge and not fair chase. Reduce the number of days for gun season...hopeful result more people hunting less time result - better deer movement. Also keep in mind this isn't a soccer tournament where everyone who participated goes home with a medal...put your time in.

Something needs to be done, I have hunted considerable amount of areas in the lake arbutus public land in Jackson county and the amount of predators is out of control. Unless steps are taken to control the wolf population the deer hunting in this zone will continue to decline. We talk with several archery hunters in our area and they share the same views. Respectfully James Jurasovich

I believe the season structure this passed year(2019) hunting season was good. Leave it as it is. Also raise the price of none resident licenses. I saw fewer deer this year do to the areas being crowded. Most of everyone crowding in non residents or weekend warriors as we call them. In fact they are the ones we see violating the most. Hmongs are extremely thick in this area and they don’t have a care in the world for anyone but themselves
I feel the deer Hurd in my area is quite healthy, but it seems the buck population was down. The group I hunt with did good we did better the year before. (Rifle season)archery season we always seem to do better than average. But it did feel like the deer population was down a bit. I would like to see Hunter choice brought back! Get rid of some of the special hunts hunting is getting to complicated. This is why people just quit hunting!

With the amount of predators (wolves) in this area, I feel no antlerless harvest the best option. The population seems higher compared to say 10 years ago, but nothing like the 90s and prior. The last few years the population felt on the rise, but kinda stagnated. I think in part because of the antlerless permits. It also makes some hunters take more ethical shots if they only have a buck tag. Can't just shoot any deer.

I have been hunting this unit since 1989 as a 12yr old hunter safety graduate and now a 42yr old with two sons who now have been a part of this tradition. I have seen a decline in population and now with the help of buck only a few years back has help the population increase. There has been a decline of hunting pressure lately in the area I am looking forward to find out why?

In my back yard I have 15 to 24 deer in my backyard feeding on the new grass. As I travel around my region, I see herds of deer (25 to 40) feeding in the picked feeds. As I drove down hwy 54, the road has many dead deer from cars. In my life I have never seem as many deer as I see now. I see 24 deer to one turkey. The deer are looking for food anywhere they can find it.

Too many wolves and not enough hunters because of the wolf population. If you want to get more hunters out in the woods you have to decrees the wolf presence. And stop giving out so many doe tags, it should be one doe tag per hunter, and stop the youth hunt and have the youth hunt during regular deer season, it teaches them more about the true culture of deer hunting.

I only shoot bucks and have not shot a deer on our private property in years. it is frustrating to hear wolves hunting just after dusk and seeing their fresh droppings the next day. I know that it is affecting my ability to harvest a buck. I also understand that increasing the deer population will increase the wolf presents. We need a legal wolf hunting season.

The biggest problem in Jackson County are the predators. Having spent a lot of time on my property in the past. I have come across many wolves, bears, fishers, bobcats and badgers. Not only are they decimating the deer herd, but turkey and grouse also. Also there is the human predator as in the poacher. Not to many nights go by without hearing shots in the dark.

Where I hunt (just south of Bear Bluff) we have an active pack of wolves and in the past few years have started to get pictures of black bears. I am fully aware that humans are by far the largest predator when it comes to whitetail deer so I am not trying to blame low population numbers on other predators. Just wanting to share more information with the CDAC.

I hunt my brother's private land in southern Jackson. In past years, poaching has been an issue in that area, but I think that is changing. Some newer landowners are taking better care of the properties. We see more deer there in the past few years. Still, the impact of predators can be substantial. I like the buck only for now. Let the kids harvest the does.

please leave opening day of gun season the same.leave bow season open until one week before gun season get rid of special hunts.if muzzleloaders want to use their weapons use them during gun season.bring back back tags and in person registration.get rid of baiting the deer. get rid of deer farms and game farms. also wolves are taking toll on deer population.

I am seeing a big increase in deer numbers when hunting on public land. CWD is approaching our area and I don’t think continuing to let the population drastically increase every year is in the best interest of reducing the chances of CWD. I feel the CDAC recommendations will still increase the deer population and hopefully the quota isn’t set too low.
I’ve hunted the central forest zone on public land for over 40 years and believe the population to be quite strong. The number of hunters have greatly declined in that area as opposed to 10 years ago. I would ask that you would increase the number of antlerless permits available even if it was one permit to a group of hunters. Thanks, Jeff Ellison

I don’t understand why the change of population 2013/2014 and the discrepancy of heard size from east to west. I hunt in pray area and see wolves almost every other time I am in the woods and more bear poop. From registration you know how many people hunt on private or public, so bonus should be distributed by considering those numbers.

Winter die off, major wolf presence, and. Hunters all affect public land tremendously. If you want to increase hunters license sales you need to increase deer population. Nobody is going to purchase a tag when they sit out and see no deer. And I am very concerned about the affect wolves have in this area. We all see the aftermath.

Some forestry practices are definitely questionable...hardwood and aspen are harvested and regeneration is mainly white and jack pine. This is not suitable not only for deer but for many other species. Far to many predators and have seen a large, growing population of black bear and bobcat...fawn mortality rate has to be on the rise.

There needs to be wolf control in this unit and should be buck only. NO youth hunt in this unit. We need to build this deer herd back up! We have camped and hunted here for many years and you are lucky to see 1 deer in 5 days of hard hunting. No hunters moving deer as the number of hunters/camps is next to nothing.

I do not feel that the quota and aligns with the stated goal of increasing the deer herd for this unit. The harvest declined in 2019 when compared with 2018, so the CDAC should reduce the quota, not increase it. I feel the quota should be zero, but youth hunters should be allowed to fill youth antlerless tags.

This area continues to disappoint. Our camp would typically harvest approximately 10 deer out of 20 hunters up until 2009. Since then our best year was 2017 when our group (18 guys) harvested 3. Beginning to think I’m hunting Big Foot up there because sightings are so rare! Stop the doe harvest on public land!

Stop the atv use on public lands most are gated and no motor vehicle signs posted yet certain people still get gates opened for them and in my area they really trash the land with rutts garbage and destroy many trees not to mention the constant atv noise disrupts other hunters and deer movement

I don’t believe harvest numbers can be counted accurately with the no tag system we are now using. I think people are taking more than are registered and that deer are shot in one zone but reported to be shot in another. We need some accountable way to make sure the law is being followed.

Interest in deer hunting has gone way down due to deer population. Where I hunt there used to be an abundant number of hunters now there are barely any. I believe that no antlerless tags should be issued except for junior hunters. If you harvest all the doe there will be no more fawns.

Don’t take cross bows away it is the best way to get young kids involved in archery my 8 year old son shot 2 deer with the cross bow last year he is hooked he will be a life long hunter im sure he would not have been able to do this with a compound bow not strong enough to pull it back

I don’t feel that, as a casual hunter, I possess enough knowledge to second-guess DNR Biologists. We saw plenty of deer on our trail cams before the season. There is just not enough hunting pressure in our areas to keep them moving when we have a later gun season like last year.

I think you need to take in consideration the predation factor in the central forest region. The deer herd seems to be holding it’s own so far. If you raise the antlerless quota to much you could hurt the herd numbers. Please consider a small increase from last year.
I would like to know why Jackson County is split in half by highway 27. I've hunted in the past on the east side and have been unable to shoot a doe, hunters on the west side have always had the capability to shoot a doe. The County should be uniform, not split.

I feel the deer numbers are coming back, with that said I also feel the need to take this antler less hunting serious and not over do it again and wipe out the heard again. Also need to start taking care of the wolf problem and take that into consideration.

The zones are a problem!! Stop forcing hunters to stay hunting in one area!! All licenses should allow hunting in the whole state at all times. We pay for it now let us use it! Plus the DNR has too much influence. The must be downsized.

I saw a lot of antlerless deer while hunting I think there could be more harvested other people say not to harvest them but there just not seeing the deer. I was seeing from 6 to 10 deer a night and it was all over the unit.

To many doe tags given out. We need the deer herd to grow. Every year in the same area, we see less and less deer. And more sign/sightings of wolves. Something needs to be done about the high population of the wolves.

I would prefer going to a 1 deer only per license. Buck or doe, hunters choice but only 1. No bonus tags. Wolves are having a huge impact on deer population in this area. Need to reduce the number of predators.

I think the deer herd numbers for this area were exaggerated in recent years, especially since decreasing sign, no deer movement and increasing timber harvesting has decimated the area which I used to hunt.

Basically the ability to harvest a deer in our area is horrible. The deer pop needs to be increased. Get rid of cross bows and youth hunts period. Getting a deer is not a right, it is a privilege.

don’t want crossbow to be limited to only 2-3 weeks and be excluded from the rut. Bow season should end at least a week before gun season. Gun season suffers from bow ending too close to gun start.

We have a good and healthy deer population in this unit. No need to change on Bonus and alter less quota. The Wolf population was a threat on the deer population in this unit.

There should be no special antlerless seasons on the public land area in the Central Forest! Eliminate the youth hunt on public land. Establish a 3pt rule for bucks in the county.

I sat all day opening day in an area I hunted for over 50 years and saw 3 antlerless deer. It's been bad eve since the almost unlimited antlerless permis a few years ago.

Too much baiting in the month of November. Private land gun hunting totally changes because of the baiting. Sept and Oct bow hunting was much more enjoyable.

I believe archery and crossbow season should close on the Sunday before the gun season opener to allow deer to go unmolested during rutting activities.

As a life long hunter in the same area they need to have longer season the last couple years the weather has been awful! The kill has been way down.

More predator control - wolves and bobcats Suspend all doe tags except for youth for 5 years Stop cutting down forests, especially the white oaks.

Do not shorten the crossbow season. Crossbow should b for 60 and over and disabilities only. Oppose special hunts and kids under 12 hunting.

Just really surprised at cost of out of state. I was a le to get the welcome ba k last year at reduced rate. Really doubt I will be back.

Open the doe tags back up and let hunters havest the deer. Deer numbers are high and hunters should be allowed to take a few more does.
We need to do something about the wolf population! There are way to many of them, it is taking a huge toll on the deer population.

The last several years this has been a buck only zone. So how is there an antlerless quota for this zone for previous years??

I would like to see registration stations again. Helps us assess other Hunter success and motivates the youngsters.

Just put out a number of antlerless permits should not have to pick public or private. That is just ridiculous.

Increased wolves in packs seen this yr as well as numerous over use of baiting w/ corn and road hunting

I believe your wolf count estimates are way too low. In one season, I saw more wolves than deer.

Jackson forest dmu should be open for either sex to give an hunter a chance to harvest a deer.

I see 1 buck for about every 6 does I see and I see a lot more does here than in other areas.

Way too many bear killing fawns. Shorten crossbow season except for old or handicapped

Too many wolves, wolf management must be brought back to the state as soon as possible!

I see deer all the time. Need to offer antlerless tags to offer harvest opportunities

The Wolf population needs to be controlled. Never should have been reintroduce to Wi.

Wolfs and coyotes are getting very bad in Jackson county seen more then I wanted to

Thank you for your hard work and keep up the great work. Respectfully, Bill Mahoney

I think the recommendations for this unit are perfect. Keep up the great work!

Looks Good! Nice to see more tags in the public vs private but otherwise good.

If you want to increase the deer population, decrease the antlerless permits.

Ser deer every time I am out. Need to keep anterless tags available

I have been seeing more and more deer every year but less hunters.

Leave the length of the gun season the same.

Need much more concern for predator control.

Thank You for this very complete report.

We continue to see wolves each year.

To many wolves and coyotes.

Wolf predation is high
Jefferson, Southern Farmland

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

358 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 253
   - I visit this unit for non-hunting purposes: 48
   - I hunt in this unit: 317
   - General interest in this unit: 44

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 287
   - Bow: 200
   - Crossbow: 123
   - Muzzleloader: 115

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 20.52
   - Maximum: 56

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 169
   - Mostly Private Land: 58
   - Public and Private Land About Equally: 34
   - Mostly Public Land: 17
   - Exclusively Public Land: 37
   - I did not hunt in this unit last year: 2

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 26
   - Not too crowded: 49
   - Neither crowded nor un-crowded: 29
   - Somewhat crowded: 21
   - Very crowded: 16
   - Not applicable: 5

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 48
   - Fewer: 101
   - Same: 154
   - More: 34
   - Many More: 12
   - Unsure: 9

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
- Implement an ANTLERLESS HOLIDAY HUNT: 157 [Support], 179 [Oppose], 22 [Unsure]
- EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: 222 [Support], 125 [Oppose], 11 [Unsure]
- Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 39 [Support], 297 [Oppose], 22 [Unsure]

If a Zero Quota (buck only season) is adopted...
- ...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? VALID [Support], NOT VALID [Oppose], Unsure [Unsure]

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?

Jefferson, Southern Farmland
The deer numbers in Jefferson county are decent. The biggest thing that I see in the county is, you can tell where a person is able to hunt and not able to hunt. If you see a lot of deer it is hard to get access, if there are few deer in the area there is either public land around or there is access to the private land. I am against the bonus tag levels on a scientific level. There is plenty of opportunity for people to obtain doe tags in the county. Why is the council increasing the harvest on public land but not the private lands. According to the numbers that are being presented the herd on public land is getting pounded compared to the private. According to the presentation the buck to doe harvest for the county needs to be around 1.5 for the whole county to meet the goal of maintain. At the present time the public land harvest is 2.6 does to every buck, which equals a decreasing herd. The harvest on the private is only 1.12 does to every buck, which is an increasing herd. I have been to these meetings in the past, and all that you hear is we need to get more deer shot on the public land. The numbers above, your numbers, prove that is not the truth. The deer herd on public land is decreasing and the herd on private is dramatically increasing. There is no reason to increase the tags on public land from last years numbers (450). The bonus public tags lasted until after the gun season, which gave the public land hunters plenty of time to buy a tag if they wanted to. If you want to slow herd growth down in the county decrease the amount of doe tags available on public. Make the people that have access to the private take does on the private. Please preserve the deer herd around the public lands they are getting over harvested. 2.6 does per buck is a lot of does per buck. My kids do not hunt with me on the public because "we do not see anything." Please do not make the comment that you just need to know where to go, we get them all the time. We are not able to stand on private land and shoot the deer as they run out of the public land onto privat during a deer drive. Please keep the public land harvest at the same level as last year. Decrease the public land tags to last years level of 450 the science says you are going to get at least 2 does to 1 buck harvest ratio which does not meet the goal of maintain.

I archery hunt exclusively public land. The following are observations and opinions based on my experience: 1) Public land deer hunting In Jefferson County is too often interrupted by non-deer hunters. Last year as example, my opening day ended by 8AM, after having squirrel hunters shooting around me, and concern over my safety. Turkey and duck hunters are typically less of an issue. We should look at how we can shift a game season like squirrel hunting to not interfere with opening weekend and other peak deer season. I usually see 5 hunters to every 1 deer. 2) Public land hunting is often “brown and down.” I appreciate not having antlerless-only or earn-a-buck. As in older days, I went seasons with no deer harvest, because I only saw basket racks and no does. 3) While not part of this Jefferson County proposal, I’d like to comment on crossbows. Keep crossbow season as is. It gets more hunters out, including my wife. Don’t shorten or make it a special crossbow season. 4) In some areas where the narrow easement style walking path to larger public land is located, the neighboring private land owner gets aggressive with placing no trespassing signs right next to the path entrance, creating concern on whether it is still legal to walk the path in. I’d like to see an increase in use of the small “public land” signs, so it is clear to everyone...and have the local warden double check for those signs being up. 5) I don’t know how to fix this, but on several occasions I’ve seen neighboring private land owners, out walking the public land, trying to push deer to their property. Last year as I was dragging my archery deer out, I ran into a husband, wife, and their two dogs doing exactly that. They said they owned the neighboring 40, and were out for a walk. We all knew what they were doing. 6) Other than the marsh, we lack large areas of wooded public hunting land. More public acres = more public deer harvest. More public parking areas to give us more access points will increase deer harvest.
I believe that if you want your deer numbers to have a steady buck to doe ratio and help stop the spread of CWD that hunter should be allowed to hunt white deer or albino deer! They serve no purpose being protected other than that there hair is white. In my part of the county near Jefferson, Wi we have a over abundance of them and I believe that if you truly want to pass on the passion of hunting you should be allowed to shoot them! My reason are we have at least 15 of them around my property and they are taking habitable bedding and food for other deer to live in, therefore not being able to harvest them because they are protected. My second reason is because they are just as capable of having CWD as the next brown deer would. My third reason is when I have family and friends that come to hunt for 2 days and all they see is white deer they don’t want to come back because that may be all they see. I try to practice QDMA on my property and try to keep the buck to doe ratio even but it is hard to do so when I can’t harvest white deer. Over the years of hunting here the white deer are always here year round and I have hunted neighboring properties and they have them also. To say that there is only 15 white deer is this area would be a lie. There is a lot more than people see. I understand that it is hard to keep everyone happy with rules and regulations but in my opinion and current situation and as a land owner it can make it tough hunting when you see more white deer that legal shooting deer. I will say that we also see a good amount of brown deer but that being said if you want to get a good amount of deer in this county you need to legalize harvesting white deer. I appreciate you taking the time to read my comments and ideas! If you need any proof of the white deer I have over 5 years worth of pictures and videos of these deer! Thank you!

The population is fine, the problem is, most of the deer are on big private land and its hunted by family, every thing else is over hunted. Those people with big land will always have deer and so will there neighbors. You cant control that. I am lucky to hunt those lands and I know it. The coyotes are the only predators and the boys take most of them out. Health issues I have no idea, maybe an opinion, CWD has been around forever and your better suited to handle that. Car kills is a problem next to the big private lands and you know better where those are then I do. There is no influence on other wildlife in farm country. Tourism in jefferson is family of big private land. Crop damage is a joke, because alot of big private land is farmers collecting crop damage checks and only family is hunting there, they have 40 deer in the field every night and shoot 4 a year so they can collect a check. Winters have been easy, back yard plants can be sprayed, the guy next door feeds deer and they take a nibble on there way. I used to see 6, 8, 10 deer a day now I see 1 or 2. Forest land is similar, big private land, the forest is a ghost town, I rarely go up anymore. Look at the car kills and most are around big private, you can give out all the doe tags you want your just making it impossible for average Joe to get a deer unless he hunts close to be private. Most of the out of state guys that are still here own big private. Sorry to say it but hunting in Wisconsin will be more of a business in years to come. Commercialized and that is the only way for you to do the balance act.

The car kill numbers are not a good metric to use in deer herd size. Especially as the number of people moving into this county increases and there are less breaks in the traffic for deer to get across the roads. Please reduce the bonus tags being given out for the public land. It was a tough season last year on public. Deer sign is significantly lower than the past, and the amount of blinds and stands on the landscape is increasing. Last year I found 8 stand sites on 40 acres, yes this was the best sign on the property. Also need to get more hunters in the woods surrounding the public lands. All that these extended hunts do is decrease pressure and allows the deer to have refuges. The extended season allows a hunter to wait and get picky. If you want more deer shot look at how many deer are shoot opening weekend compared to the rest of the season. It is simple logic, the more people in the woods the less areas that are safe for the deer. Also it kind of stinks that there are 32 days of gun hunting that require orange to hunt. There are many people in the woods not aware of or forget that there is another gun season. If you are going to have all these seasons you need to let the public know what is going on. The public lands are full of non hunting public that are using it for hiking areas. Please get us back to the standard hunting seasons. No reason for 32 days of gun hunting.
I hunt several counties in Wisconsin and the deer numbers in Jefferson County still haven't recovered to where I feel they should be after the CWD debacle/earn a buck. Though I understand the car incident numbers are high?? 400ish what a joke to use that data, 1-94 and Hwy 26 cut this county in quarters the amount of traffic compared to others is much higher, driving higher hit counts. I sell recreational land in several counties and buyer's don't care to have Jefferson County land, because of the low deer population compared to other nearby areas. Our land values reflect that. I deer hunt a lot and it sucks to go out for days without seeing any deer, that happened more than ever this past year, including the archery season. I would rather drive a couple of hours or better to another county as my rate of sightings, more than make up for it. It's frustrating as a land owner/hunter to hear maintain after the population was decimated in this county. I'm an efficient hunter look at what I register every year, not seeing the deer is a direct reflection of low population and did you consider the amount of crops standing last year during the gun hunt?? No doe tags would be my vote for Jefferson county.

The installation of cross bow hunting over entire length of what was the traditional bow season has ripple effects that have diluted both the bow and gun season. It has more hunters in the field taking trophy bucks. This forces more traditional bow users also to switch to the more effective cross bow so they have a chance to compete for deer in their area / Then many of those hunters forgo gun hunting all together because it is easier to crossbow hunt at their leisure during longer ,warmer , and more active time for deer. Leaving the the traditional gun hunt that we once had in Wisconsin a shadow of what it once was. Other options such as lengthening the gun season will also spread the thin hunter out even further. Less hunter, moving less deer , less of the younger generation joining in because of loss of tradition, social stigma, and lack of interest. We may gain more older and retired hunters with the crossbow season, but will loose the new generation that we need to keep hunting alive in Wisconsin.

Jefferson County still hasn’t recovered from the earn a buck debacle! It should be increased,as Dodge county numbers are better and that’s being increased. This Mantence plan is simply about major traffic corridor in Jefferson County, that shouldn’t hold back having an adequate deer herd. It has hurt the rural real estate market and needs to change. The population is like it was in the early 80’s. I hunt at least 10 fold of your average hunters I hunted 5 full days in Jefferson County during the gun season seeing only 3 deer in total. Also hunted at least 30-40 days of the archery season the deer sightings where rare even during the rut. Stop all the goofy anterless seasons a let the herd rebound to an acceptable number. I shoot a lot of doe’s in counties where the population needs more control but Jefferson County isn’t one of those. I am also a licensed Real Estate Broker that specializes in rural property please consider increasing our herd.

I am a yearly successful trophy hunter of this county specifically. Most years I only miss 5 days of hunting. We have an abundance of deer in Jefferson County. I would like to see a higher number of bucks reach maturity. Preferably from a Pennsylvania style of 4 point minimum on one side. I see no reason that the public land doe tags were sold out. That means your number of available tags is way too low. 94% of the county is private. This is revenue that you are turning down and people willing to kill deer that we need killed and you are turning away. That doesn't add up. Also on a side note I believe deer kills will increase a decent number this year due to the COVID 19 virus. My fellow friends and I all have agreed with grocery stores the way there are we are all wishing we had killed at least one more deer for the freezers and have all vowed to not make that mistake again. Which I for one will not. Thank you for your time.
Hello. Been a life long deer Hunter in Wisconsin all my life (over 20+ years). I would like to see what's best for the deer themselves. Not very concerned if I harvest one or not but satisfied if population is heathy and abundant. Not a fan of endless tags due to unnecessary slaughter of heard consisting mainly of young deer. I feel 1 tag of either sex is sufficient, this way horn hunters can harvest their big bucks and people who hunt for meat can also be successful without having to pass or wait for correct gender to walk infront of them. If heard population is still too high due to numerous car damage then guess a tag for each gender would be satisfactory. Perfect world would be to have more observant drivers without phones in front of faces while driving but that doesn’t look promising so guess the deer population will have to adjust unfortunately. Just my 2 cents, thank you.

I lived and hunted in Ga for much of my adult life and was shocked at the amount of redtape it takes to get a deer tag in WI. According to State Farm last year, WI was #4 state in the amount of deer‐vehicle accidents. It would seem that a state so populated with deer would be MUCH more generous with deer tags. My goal is to fill my freezer each year - I don’t have to have antlers. In Ga, the tag was good for the state, public land is mostly done by quotas and drawings, and their season is much longer, and they issue every hunter 10 antlerless tags and two antlered tags. Their stats year after year indicate that most hunters kill less than two deer per year - I think WI just wants lots of money from deer hunters! BTW their regulations book is about 1/4 the size of Wisconsin’s, too. I realize there are a lot of considerations, but it seems like we are over‐regulated here.

I did not know the deer bow season was extended last year. If there was a way, I would only support the Holiday Hunt with a bow season extension. In other words, directly link the two. The Holiday Hunt is the last best time to get out during time off, and a great time to bowhunt a buck. I enjoyed the video, and the information was presented without attempting to influence opinion. Well done! One other idea (although I am mostly a trophy hunter). Let Muzzle loader season use either archery or gun tags. Last year I was fortunate enough to get a buck on opening of gun. I didn’t go muzzle loading since I didn’t have a buck tag. If I had, I may have shot a doe. I have a hard time going doe hunting when I can’t have a chance at a buck.(Still had archery tag)

Extending gun seasons is not going to increase harvest numbers it’s only going to educate the deer. Gun hunters alert and put allot of pressure on deer due to lack of scent control and driving the deer. That’s why gun hunters buck numbers were down because they don’t hunt smart and when a mature deer hears a gun shot they’re gone. So in conclusion my point is more gun seasons will lower the harvest numbers. Go back to the original hunting structure and back tags and registration stations. Because this call in system is only encouraging poaching. I can guarantee you allot of people shoot deer and didn’t report them and just cut them up and went back out. Go back to back tags and registration stations plus doing this helps allot of small businesses out and communities.

Strongly oppose Holiday and Extended Archery! After all the hunting pressure leading up to Dec.24 the deer have turned nocturnal and land owners are sick of hunters. Very concerned about the amount of tagging violations with no field tag and registration. The talk of returning earn a buck would really be a joke with hunters with the tagging and registration we have now. WI has a great reputation for great bucks without the DNR doing anything to promote the herd. None of our neighbors have group bagging which is really a joke with our tagging and register system and we still have better bucks. Having gun season a week earlier would really hurt the quality of our bucks and we would end up being sub par just like MN and MI with there early gun seasons.

The last time I attended the Jefferson Co. CDAC the chairperson was very rude. When it comes to public comments the Jefferson Co. CDAC states they want to hear what hunters have to say about their deer herd in this county but in reality this committee doesn’t want to hear what the general public has to say. The Jefferson Co. CDAC is nothing more than an Good Ol’ Boy Club and will do whatever they want to this county’s deer herd - even destroy it. In order to fix this problem the WCC and CDAC would need to remove the Jefferson Co. CDAC chairperson and obtain new members who will actually listen to the general public. I will never attend a Jefferson Co. CDAC again until the chairperson is removed.
When I first started hunting the property 15 years ago I would see 10-15 deer on an average opening day of firearms season, after the CWD slaughter the numbers are finally returning to better numbers but only because we and our some neighbors do not shoot any antlerless deer. However large groups on the other neighboring properties so deer drives and shoot everything and they all have 2 free antlerless tags. Do away with the free tags and limit the number of bonus permits, this will also limit the number of yearling bucks shot if the number of antlerless tags is limited. I would also be in favor of 8 points or better statewide except for youth hunters 16 and younger or first year hunters.

I hunted hard all last deer season both bow and gun. I didn’t see one deer in the woods. I seen more deer hit along side the road than in the woods. No matter where i hunted there would be hunters walking up on me and just about everywhere i looked you could see orange vests and hats. What really upset me is most of the people out hunting public land were land owners that were harvesting off of both public and private which isn’t really fair for people like me that can only hunt public due to landowners not allowing access but yet you see them on public land hunting. Makes it hard for me to fill my freezer for my family when people are double dipping like this.

Deer season is way to long in Wisconsin, we need to get hunters more excited about the hunt by simplifying the season dates and shortening up some of the hunts, Archery- crossbow should be October 1st every year up to traditional 9 day gun hunt . No 4 day antlerless hunts period After the traditional 9 day gun, guns stay out of woods till muzzloader that should be December 15th- 24th. Then have the antlerless holiday hunt through the new year. Close deer season the wknd right after New Years if it lands in mid week. No extended bow seasons. More people will want to get back out to woods if it has a chance to calm down, there will still be good harvest.

2x free tags resulted in 0 more kill, but resulted in lost revenue on sales of bonus tags, and subsequently devalued the deer herd. Also your final summary slide if maintain vs increasing did not match the numbers you showed during your presentation. Most items in your presentation indicated maintain, whereas the summary said increasing, clearly showing a bias toward encouraging more antlerless harvest. If you want greatly increased antlerless harvest in Jefferson county, secure more public hunting land. 6% is a pretty small number. Especially low when you consider large percentages of those acres are unhuntable cattails marshes with waist deep water.

Like deer hunting very much, but i can only hunt public land and don't have access to private land. Seems like you see a lot of deer in fields that are private, but hunting public lands are not very productive. I think farmers and land owners that get funds for crop damage and other things should have to open there land up to public hunting. If they are going to get government funds they should have to open their land to the public. On public land i can hunt all week and i’m lucky to see 3 or 4 deer all week. I some times think about not hunting, but i love the sport and have done it a long time. thanks.

Last year I saw slightly less deer than normal, even though I have improved my hunting habits. In the areas I hunt, there are tons of people. With the extended antlerless season, there have been a lot more deer shot the past few years. I was very concerned because I saw only 2 fawns all year and I hunted a lot. My main concern is if the gun season gets extended, especially moved forward, the herd will be thinned out dramatically. With how many hunters are around the areas i hunt, the spots will be burnt out quickly. Especially considering everyone in the area shoots anything that moves.

I do not want to see specific seasons for any type of bow HUNTING. Leave it the way it is . Im tired of hearing about crossbow hunters taking more deer than the longbow hunters. Everyone needs an equal chance to bag a deer. NO ONE TYPE OF HUNTER IS SPECIAL. IM 60 YEARS OLD IM TIRED OF LISTENING TO ALL THESE CRY BABIES WHINING. I HUNT PUBLIC LAND I USE NO BLIND OR TREE STANDS AND I AM VERY SUCCESSFUL AT HUNTING I.ONLY TAKE BUCKS NO DOE. REAL HUNTING IS NOT LIKE THE HUNTING SHOWS YOU WATCH ON TV. PLEASE LEAVE THE HUNTING SEASONS AS THEY ARE.
The price for non resident hunting permits needs to be increased. A WI resident pays MUCH more to hunt in neighboring states vs what those same residents pay to hunt here. If we are going to be gouged to hunt in other states then why are we allowing those hunters to come shoot our deer for a bargain? Increasing the fees for non resident hunters will provide more opportunities for our own residents to harvest deer and potentially increase revenue for the DNR if the same number of non resident hunters choose to participate.

Hunting is a life long tradition in my family and the cost of hunting to food in the freezer ratio is making it hard for many people to hunt now days. I believe if the DNR wants antlerless deer shot, they should give the tags to hunters free of charge. There are areas in WI that you don’t get an antlerless tag when you buy your deer license but, the DNR sell Bonus Tags for these areas. That’s wrong!!! Even if Jefferson County, the Bonus Tags should be available free if you have filled you other antlerless tags.

If you look at public land harvest and your models. you should have pretty even numbers of anterless to antlered deer but on public land your getting 3 anterless to 1 antlered ratio which would mean your public land antlerless harvest is way too high. Your population is decreasing at a high rate. Whether it be private land hunters hunting public to shoot does or whatever. I think the anterless tags on public land need to decrease as well as remove holiday and December hunts from public land.

We need to get back to simple traditional season framework, deer season is not exciting or as fun if it’s 5 months long, this is great that your asking for feedback and getting engaged w hunters, keep it up Archery, no crossbows . Oct1st- traditional 9 day gun, Crossbow after 9 day through dec 14th. Muzzldr 15th - 24 th Antlerless holiday hunt dec 25th- wknd after jan1st Wouldn’t even oppose asking for a 19 dollars for a crossbow stamp or muzzldr stamp Just thoughts

After the traditional 9 day gun season in Wisconsin there doesn’t need to be the 10 day muzzloader hunt followed by the 4 day antlerless hunt. Keep crossbow and traditional archery open after the 9 day, but no guns, give the woods a break! If you have muzzloader from 12-15 to Christmas every year, more people will hunt it, and probably with more success, obviously only with tags left from regular gun license sales, than after muzzloader do an the antlerless holiday hunt.

I truly believe the deer population is healthy. Saying that, I do believe it is important to harvest deer during specific seasons. Right now, there is way to much hunting pressure. From mid September all the way through the holidays is just endless hunting. Why do we need all the extra hunts with firearms???? I don’t think the antlerless only hunts in October and after muzzloader is needed. Design the hunt for traditional archery season and gun season!!!

I feel that the cost of hunting licenses for kids that live in the state is too high and as a state we should charge more for our out of state licenses. It is a steal for out of state hunters to come and shoot America’s number one big game species. To pay over $20 for a youth or mentored hunter to shoot a deer or a turkey is ridiculous to me. We love the outdoors, but it is hard to go out and do everything we love as a family with the cost. Thanks

I feel all the antlerless seasons combined with the crossbow hunters are taking way to many deer. Young hunters trying to get into hunting are losing intrest due to not seeing many deer. I personally have seen the antlerless numbers go way down on private and especially public land. There are still deer around but they are so pressured from the extra antlerless hunts and the influx of crossbow hunters that they are very nocturnal.

To me if you want to push the holiday hunt open up Buck harvest for unfilled tag. I pay a lot of money to own my property and to be held back from harvesting a buck after a long season is complete bull. I've had multiple opportunities at trophy bucks during these doe hunts and refuse to hunt them anymore. If I've hunted bow through gun and still have a buck tag I should be able to fill it.
I saw only 2 deer the whole season. I hunted with cross bow and rifle and I hunt lots of hours, I am retired. But I also have seen a lot of deer while not hunting. I attribute the lack of seeing deer during the season to a lot of standing corn in my hunting areas. I will have a very different opinion if this season is as poor as my last season. Thanks for your concerns on this subject.

I think that there are too many seasons all broken up into a small time frame. Muzzleloader should be later to give the deer some time off from the pressure. Skip the antlerless hunt in mid December and just have the antlerless holiday hunt. The more we pressure the deer, the more that get hit by cars and the more we pressure the herd, the harder it is for many people to harvest a deer.

Less days of gun season is better. Deer herd after CWD extended gun seasons were terrible. Wouldn’t see a thing. Drop down to just a 9 day gun and that’s it. Let the herd build back up. One buck per season limit. Please support increasing deer population, so it can make it worth hunting still. It’s expensive to hunt public property and constantly not even see a thing.

Not enough deer per acre on public grounds. No food plots planted to keep deer in the areas. I would also suggest that pheasant, small game seasons be moved to accommodate hunting in spring and summer so not to interfere with the deer season. This causes too many hunters on the grounds at one time. The deer flee to private lands. Greater potential for accidents.

The extended season needs to stop it messes with other hunting opportunities. It is tough to call in predators and late season turkey hunt in blaze orange. There is plenty of time to hunt deer. The holiday hunt screws up many opportunities for the non-hunting public to enjoy public land without having to worry about a group of hunters driving deer on public lands.

Whose fault is it that farmers are draining fields so fast that lowland habitat and the rock river is being destroyed, all the deer are herding up on small high ground farm lots, brushy back yards, old pastures, and the deer herd seems bigger than it really is, if we have a couple dryer years and deer start to spread out again..... will this all change??

Please keep the archery season open from September through January with no breaks like it has been, even during the gun season. I have heard rumors they where going to close the archery season during gun. That’s the only time my dad and I hunt everyday together and make those precious memories. Him with his gun, me with my bow, both in blaze orange.

It’s fairly simple when you look at this...other states are very successful when they implement One Buck tag per year and One doe tag per year.. that is enough meat for anyone to harvest...That would mean you have the option to shoot that One Buck and One doe during either gun, bow or crossbow season.. a total of two deer per person per year...

dis away with holiday hunt and extended seasons...its not just about hunting when it comes to other outdoor activities in late December and January...and yes I own private land and allow snowmobiling and other activities on my land...but other private land owners are not as generous opening up their land when a hunting season is open....

Unfortunately in my situation, I hunt private land in this county and am only allowed to bow hunt and only allowed to harvest one deer. It’s unfortunate, but I use this property in Jefferson county to try and harvest a buck, if I want to shoot a doe, I have to go to a different county (Dane) because of the property owner’s restriction.

Because of the way the gun season is determined by the calendar, this year was so late in the rut that the deer in our area were not moving unless a larger number of hunters start hunting in this area. All of the land that I hunt is private, so the deer do not see the pressure and bed down during the hunting hours.
4573 We really need to get rid of this holiday and antlerless hunt. In my area next to thousands of acres of public, the antlerless numbers are way down. I've been hunting this property since 1983 and the antlerless has been going down and tag numbers keep going up. How about 1 buck tag and 1 antlerless tag per person!

4574 By having to choose ahead of the season where I'm hunting. It takes out a lot of the hunting adventure. How can a person explore new places mid season if they must declare where they are. What if half way through season they are invited to go elsewhere? A tag should be good statewide! Public or private.

4575 I live in the country and do nor see the numbers of deer they say are there. Eve since you had all these special hunts the deer numbers have not come back to previous seasons. No one needs to harvest more than a buck and one doe, you are over estimating the size of the deer herd in this area.

4576 Owner of several 100 acres of wetland reserve/hunting property in Jefferson county. Great habitat, great buck management in our area. Doe to buck ratio is way out of balance. Estimate we sit at 8 or as high as 10 to 1. This is our problem in this area. More doe need to be harvested.

4577 I am a farmer and the damage from deer is not an issue. Coon and turkeys on the other hand are out of control. We need to just stick to the normal bow season. 9 day gun. And muzzeloader after gun. If you can’t kill the deer you want by then you need to wait until next year. Thanks

4578 I stopped hunting deer for 2 years after seeing no deer in 5 consecutive seasons. I have hunted for 24 years. I only went out this year because I thought they were saying there would be a record number of deer. I dont know where they get their numbers but I highly disagree

4579 For many other land users please change it to not having deer season of any kind go past January 1st to be able enjoy the land more in this high hunter density to habitat region! Would welcome more antlerless hunts but like to see higher age in the bucks.

4580 I would like to see a buck harvest with the late season holiday hunt. I know there is a big push on harvesting doe, but the bucks are the ones who impregnate Doe. Having the opportunity to harvest bucks as well would also decrease the deer population.

4581 There is absolutely no need for extended archery/crossbow!! So many hunting seasons. Give the woods a break!! It’s continuous hunting from September-January! Think about herd structure and herd quality, Not just how many deer the DNR can report killed

4582 I would like the option of purchasing an additional buck tag. Myself as well as other hunters I’ve spoken with would be willing to pay an increased license fee to do so. I think this would be a good way to increase revenue.

4583 Deer unit Jefferson county to many holiday hunts too many antlerless seasons as well. Stick to the traditional 9 day gun season. Over hunting of deer in my area is occurring, its having effect on the deer I see while hunting.

4584 I have never participated in the antlerless only hunts. I can shoot a doe any other day of the season and will not sit if there is no opportunity to harvest a buck. Not one other person in our hunting group will either.

4585 In my personal experience coyotes have done a significant amount of damage to the deer herd in this unit, not many fawns survived on the property I hunt. A incentive to remove coyotes would help the deer population.

4586 We need to do away with the "traditional" 9 day hunt and open it up earlier in the season. Maybe early to mid November. Michigan starts on 11/15 why can’t we? With fewer hunters out there we need to do something.

4587 get ride of ALL antlerless hunts Stick with regular 9 day gun season, followed by muzzeloader season which should be the end of deer hunting season. No more extended archery/crossbow until the end of January.

4588 It would be a thought to implement antler restrictions and let these bucks grow to their potential, all the things they need are here just need to get past spike and forkhorn stage to 2.5 or 3 yr old.
we need to bring back the back tags , and registure deer at registration stations bars gun shops gas stations . With no back tags on it makes it easy for people to trespass or poach deer

I would like to see the holiday hunt and doe only hunts go away. I only hunt public land and believe these regulations need to be looked at a little closer on a public land and private land basis.

do not see the number of deer i used to see. yes i see small groups and individual deer during the summer but i can be in my stand during bow season for a week or more and not see a deer

Please keep the archery (compound bow) season open through January. Including through all gun seasons. All I hunt with is a bow and have some of my best times during the gun seasons.

On the public hunting land i would like to be allowed to put up 1 hunting stand that I wouldn’t have to take down each night. whether that would be a ground blind or ladder stand

No deer hunting past December of any kind. Only one 9 day firearm season. No other hunts at all the way it used to be in the 70’s when hunting was fun and a tradition.

There is no reason in the world to have youth hunts for anything. Let kids go with their fathers like we did... or let hunting die. Not everyone has to hunt.

I believe extending gun season for 7 to 14 more days and including 2 antler and 2 antlerless in the tag package would help the deer population get regulated.

Deer numbers are good despite quite a lot of hunting. Seeing plenty of animals this spring. Current framework is working! No need to fix what is not broken.

Extending the gun season to 19 days and making it sooner than the traditional 9 day season with a "rest period" prior to gun opener would be a huge mistake!

I'm strongly opposed to an earlier and/or longer gun season. I heard that was a proposal, but I didn't see any information about it in the survey.

I would like to see more time allotted for Bow/Crossbow hunting. There are already PLENTY of opportunities for gun and/or muzzle loader hunting.

I think it would be beneficial to not have all the extra antlerless hunts after gun season. It makes it difficult to do late season archery.

I want a reasonable chance to harvest a deer but trust the CDAC to recommend what is best for deer health, land health, and other wildlife.

I would like to keep the gun deer season the same as previous years and to NOT extend it and keep the archery season the same as well

I would like to see the holiday hunt go back to it was years ago when we were able to harvest a antler deer during the holiday hunt

The extended season through Jan 21, I have seen that big buck's that have dropped there antlers where shot as antlerless, big error!

My land borders up with Waukesha county and sometimes there are as many as 41 deer running between the three properties.

To many antlerless hunts do people really need 4 deer per year? Run a traditional 9 day gun season stick to the basics.

I would like to be able to harvest a antler deer during the holiday hunt, I feel it would help with the herd control

I would like to see during the holiday hunt to be able to harvest a antlered deer also if a person had a permit left

Above all, R3 trumps most other concerns. Youth access is key. Youth and crossbow seasons are critical.
Over abundance of coyotes, terrible trespassing issues, and lack of quality age class of mature bucks.

If there is a holiday hunt I wish we could have the opportunity to harvest a buck during that time.

Take away antler-less hunts completely as well as reduce antlers tags to 1 per licensed hunter.

The Holiday hunt and extending the Bow and Crossbow season is a joke! Do away with them!

I think we should have 2 antler less tags and not anymore. Keep the population healthy.

I would like to see an opportunity to harvest a antler deer during the holiday hunt.

If a holiday hunt is pursued in this unit it should be only for antlerless deer.

Would like the opportunity to harvest a antler deer during the holiday hunt.

Stop antlerless hunts, as well as reduce doe tags to 1 per hunter license!

Stop the doe hunts. There are not enough deer in the area for that.

I saw one doe during the nine day gun season and I hunted every day.

DO NOT CREATE A SEASON LONGER THAN THE 9 DAY SEASON. MIKE

have an EARLIER season. To occur DURING the RUT not AFTER

would like to see season longer and starting SOONER

One buck tag and one doe tag. Per hunter per year.

I oppose people harvesting 6 deer in one season.

Just keep everything the same as last year

The gun season needs to be extended

Get rid of public or privatr tags

Open the state park back up,

Maybe bring earn a buck back
The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 78
   - I visit this unit for non-hunting purposes: 44
   - I hunt in this unit: 202
   - General interest in this unit: 28

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 188
   - Bow: 97
   - Crossbow: 90
   - Muzzleloader: 52

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 20.48
   - Maximum: 65

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 153
   - Mostly Private Land: 28
   - Public and Private Land About Equally: 11
   - Mostly Public Land: 2
   - Exclusively Public Land: 5
   - I did not hunt in this unit last year: 3

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 6
   - Not too crowded: 11
   - Neither crowded nor un-crowded: 11
   - Somewhat crowded: 5
   - Very crowded: 8
   - Not applicable: 5

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 32
   - Fewer: 58
   - Same: 88
   - More: 22
   - Many More: 10
   - Unsure: 2

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th>The Antlerless Quota is...</th>

First off you guys work very hard to manage the herd, hunters. Its complex (very) and I believe for the most part thankless job. Good job it requires alot of thought and effort and its appreciated by us hunters who realize its hunting and its not meant to be easier. I believe after talking to many hunters at archery clubs, tournaments, gun clubs, vfw’s and hunting clubs accross the state that a couple of things Ive not heard discussed could be the answer. Number one…. move opening weekend of firearm season to the Saturday following Thanksgiving as alot more people are off work. Family groups would be more prone to get together to hunt. ( hunting pressure slows the hunt and Ive had multiple people say the second weekend(traditionally ) that the hunting is harder. Those of us who do hunt alot always discuss the uptick in Buck movement of late Nov Approx 27th-dec 4th-5th. and believe it is to do with normal rut cycles. Give the firearms hunters this edge. The first phases of the rut Oct. 27th-Nov. 10th. the rut effect on movement is to intensive and firearm season would devastate states buck herd( would be fun for couple years, but would ruin the states great buck hunting quickly. Bowhunters are the most likely to be multiple weapon hunters than a guy who rifle hunts 2 days a year( hopefully they change their mind tho us bowhunters would welcome them with arms wide open) I meet alot of men that take their children on the youth hunt and than leave them out of the traditional part of the hunting culture here in Wisconsin(shameful) For that reason only..... Get rid of the youth season I promise you that this statement has been considered for years before voicing it. It is absolutely ruining hunter recruitment. Any hunter who says otherwise are the ones doing exactly what I spoke of and are behaving poorly about taking children hunting. Having been a part of archery(shooting and hunting) Crossbows are not easier and are definately not as effective as a compound is in the hands of a skilled archer. In prior years i would watch as a multitude of people of people show up at archery shops, ranges and clubs the weekend before season and dust off the bow because they dont have time otherwise( these are the people that benefit from crossbows cause if you watch them shoot you would prefer they use a crossbow as to negate wounding. It isnt always laziness, sometimes its just time constraints due to job,families etc. Leave the x-bow guys alone they arent hurting anyone. 30 - 40 years ago it was the same argument against compounds. Just a couple thoughts and I very much appreciate your time and efforts as we live in the best deer hunting state in the world. Be proud of that and remember you cant make everyone happy.....Its impossible.
Have hunted your state (I'm from Missouri) every year since 1983 except 2 years in the 80's/early 90's. I want to compliment Wisconsin for keeping the non-resident tags reasonable so I can come for 2 long weekends (442 miles) to spend time with local friends that have become extended family. I do not over hunt/kill as in all these years I have perhaps shot 6 deer in my 35 years hunting your state from Antigo County and the areas of Mauston, El Roy, Stevens Point and Black River Falls where good friendships were formed. One of my sons asked why I hunted Wisconsin as I never get anything to which my response was it was adventure. We work on our hosts farm as my cousin is a wiz at farm equipment maintenance/repair and we do home repair for the lady we stay with who owns the Dog House Bar who is our hosts mother-in-law. We have been with these folks since 1993 or so. The reason I saw less deer last year was no combining corn on a neighboring farm wasn't going on. The only suggestion I would have is have a statewide license fee for non-residents as I also hunt Monroe County where a friendship was also established. We bring our Senior host food and provide him gift cards to a restaurant every time we hunt and at Christmas. We have to declare what counties we want to hunt and it's so much for this county and so much for that which usually amounts to $200. I would rather just buy a $200 tag for the right to bag a buck wherever and a doe or two whatever I'm entitled too. I do not Pig Hunt as I am not one to shoot as many deer as I can. I believe strongly in deer management which I enforce on my farm in Missouri and just how many deer can a person eat. I am the Masterbowhunter Recorder for South County Archers in St. Louis and anyone wanting to be our Masterbowhunter or win the Big Buck award must register through me. Most of our members practice good conservation methods and many of those who do bag multiple deer share their success with less fortunate members who let us know they would appreciate some meat.

I have 50 acres of land 48 acres of land in Juneau County and 2 acres are in Sauk County. The Sauk part of it is next to HWY 33. Initially when I purchased the property in 2009 my idea was to provide a place to hunt and to be able to plant and grow trees. Little did I know that the 2 were mutually exclusive. Ever since the CWD rules went away the deer herd has grown dramatically and so has the damage to my trees. I have to install a tree tube for every tree I plant at a cost of up to $6.00 per tree depending on the size tube and manufacture. The first year I owned the property I planted 1000 trees. I had a 80% mortality rate on them. With the tube I am able to lessen the mortality rate dramatically. I found if I buy tube at least 5' tall I can minimize the browsing, however the biggest problem I am seeing is the rubbing and girdling of the trees after they out grow the tube and the destruction of tubes by the bucks. Every year I spend days fixing the damage they cause. I was able to fill almost all of my tags last year. I got a real nice big tree rubber during crossbow and past up some small bucks to try to take down another big tree rubber during gun. I didn't get that chance to take down a smaller one during the last few days of the gun season. I know this is probably not a possibility ever, but it would be nice to be able to take more than 1 buck per license or allow that an archery tag and crossbow tag each be able to take a tree rubber.

I have been a (Hunter/Patron License holder) for 50 years. I have seen many changes occur to hunting seasons and regulations, (many not for the better). I am a very avid bow hunter, gun hunter, duck hunter. We never had these youth hunts, nor any early seasons, ALL WHICH HINDER THE OPPORTUNITIES OF HARVESTING GAME, AND SEEING GAME A FIELD, by the true hunters and conservationist, NOT SPORTSMAN that just go afield to shoot something or just shoot at, with out even going to see if they hit the game that they are shooting at!! These youth turkey, deer, waterfowl hunts should be done away with, because they do nothing but hinder that opportunity or effort of a true hunter, just seeing game is a lot of work. Don't get me wrong, I am ALL FOR KIDS OPPORTUNITIES, but my opportunity came on OPENING DAY, which we all looked for, and rifles allowed in October should not be, ALWAYS HINDERING THE BOW HUNTERS !!! Guns for deer hunting should be your NORMAL 9-DAY SEASON, with muzzle loader season following after that, THAT'S 20 DAYS TO HUNT WITH A RIFLE TO GET A DEER OR TWO. If your so called Sportsman can not get a deer in 20 days, they need to go and stay at a range and shoot their weapon of choice, and leave the woods to True Hunters/conservationist's. Please reply if your choose to. If you read this and it offends you, I am sorry, I RESPECT THE GAME THAT I HUNT!!!! Thank you for your time and we do not need a longer gun season, nor these early hunts!!!
Consideration of other hunters and other seasons must be taken into the factors of extending deer seasons. I am a coyote hunter that still hunts with hounds. I already have had part of my season taken away due to extended deer seasons. We can only run hounds during the winter when there is snow. Due to the fact that 97% of the land here is private and deer hunters will shoot my dogs on their land if they are seen during deer season most hound hunters in my area will be done hunting. This will put hundreds of running dogs without homes or forced to be put down. Deer hunters already have 4 months to shoot a deer. Extending the season will not help the issue of too many deer people can only eat so many. We can already get more tags than we want. In my home alone we get 14 tags. We shoot 4 deer not because we are not seeing deer because we only eat 4 a year. Extending the deer season will affect almost every small game hunter in Wisconsin. Ask them what they want not the deer hunters. If the season is extended there will be 6 less small game licenses bought and 10 homeless coyote hunters. I'm not spending thousands on these dogs to hunt January and February weather permitting. If you want to kill deer go back to earn a buck tags.

Deer hunters in Wisconsin average less than 50% success rate according to number of gun licenses bought and number of deer harvested during the 10 gun deer hunting season. It's well known that if the DNR would issue one deer harvest license per individual that is valid from the third week in September until the last day of December the same year. Hunter success rate would be acceptable as well as improved deer herd management. Instead you play the multiple (seasons) shell game. Hunting in Wisconsin amounts to being fleeced by the Madison mentality of milking the rest of the state. That is why a growing number of Wisconsin citizens outside of Dane county have only contempt for the DNR. Its widely recognized for what it is. A money grabbing racket. I doubt very much you have the courage or integrity to forward this to the highest level of your organization.

I have hunted the same property for the last 33 years so I think I know a little something about the deer population in this area. It is down. Way down!!! I have been lucky just to see a deer during the season the last six to seven years. I also drive to work at prime times for deer to be moving. I hardly ever see them now. Maybe ten a year. Ten years ago that would have been around a hundred. My satisfaction with deer hunting is at a all time low. On a scale of one to ten it would be a big fat zero. My dad and brother have both given up deer hunting because they felt the same way and I think it is now time for me to throw in the towel also with the way they have been mismanaged.

I hunt just north of Lyndon Station and gun season was pretty quiet I thought, shot a spike but only saw 1 other doe. I personally think a person should only be allowed 1 buck for this area no matter what season or weapon is used. There is no reason a person needs to shoot more than 1 buck. But to help maintain population and let the meat hunter enjoy venison and hunting, I would allow 2 antlerless total per person no matter season and weapon combination. There absolutely no reason a person needs more than 3 deer total in a hunting season in this area just north of Lyndon Station but still in the farmland zone.

Bring back the registration stations. This on-line registration is causing more and more killing of deer without limitations. There is no true accountability to legally registering the deer. This coming year, more and more people will be out hunting because of the butcher factories being shut down in reference to beef and pork because of covid-19. There will be more illegal deer shot and not registered!! People that I know are shooting way to many deer. One person had shot 6 deer and some of them were just nubby bucks. To me, that shouldn't be allowed! In summary, there needs to be better regulations!!!

Our certified Tree Farm in western Juneau County suffers heavy damage from an oversize deer herd. We get virtually no natural regeneration of oak, which are heavily browsed in the summer, and conifers, which are heavily browsed in the winter. In addition, there are enough bucks to do significant damage to 1 to 5-inch saplings. Besides the doe and buck permit per license, I would like to see a bonus doe permit. Fencing is the only way to assure generation of what I consider our prime species: red and white oak, white pine and sugar maple. I appreciate the work of the CDAC.
I would like to see a muzzleloader hunt that is later in the year. Being immediately after gun season does not give a chance for the deer to settle down after a extremely high pressure 9 day deer gun season. Having a buffer of a archery /crossbow season and then a later muzzleloader season, possibly even with a concurrent archery/crossbow season seems logical and reasonable. It would definitely give muzzleloader hunters a chance to hunt a deer heard that is back to a more natural pattern and a better quality hunt. Thank you for the consideration.

Nine days is plenty of time for people to shoot a doe or two with a firearm. There is no need to offer these antlerless only hunts from a numbers perspective. Take the holiday hunt away and those 70 does that were quoted during the earlier CDAC meeting as being shot in the holiday hunt season would have been taken during the 9 day regular season. As it stands now, you essentially can’t go in the woods in the month of December unless you’re glowing like a fluorescent orange pumpkin. It’s a needless aggravation.

Keep the hunting seasons the same, 9 day gun hunt, September through December Bow, cut out the antlerless hunts and no holiday hunts...you can’t rate a hunt always by the number of Deer harvested... that’s NOT what hunting is all about... I’m a sportsman of 49 years and grew up with the hunters choice tag/armband...I believe a lot of Deer harvested are NOT being reported due to the new registration process...also the Back tags were helpful identifying violators...my .02¢

There should absolutely not have any antlerless deer harvested in Juneau County. There is know deer the way it is. My niece and nephews gave up hunting because they did not see any deer. We are loosing our heritage due to shooting all these deer. We should go a couple of years without shooting any deer. Or going back to the early 90’s where you could apply for a hunters choice, but that would be it for a couple of years.

CWD is a definite problem and needs attention and solutions. However, there are too many deer tags for one hunter, And there are too many gun seasons. It doesn’t seem to be an effective way to manage deer health problems, is more dangerous, interferes with other hunting, etc. we need encouragement of hunting from the broader population and a focus on alternative mitigation practices for CWD

I’ve been hunting this area for 24 years. Always experienced good deer numbers until around 2012. There were a few seasons since then I haven’t seen a deer while on stand. Last few seasons seen 2-5 deer. The area I hunt around Elroy is starting to come back but is nothing compared to the late 90’s to early 2000’s if that helps at all with a specific area of interest.

We only harvest a few deer on our property for our use. I feel that having extra season length and antlerless only holiday hunts are fine as long as hunters only take what they can use and not do as the hunting shows do where the hosts travel around shooting deer in several states. Deer are a resource that needs protection and proper management. This is my opinion.

Easier CWD testing would allow me to use meat for my extended family. I take a doe most every year for my own use off my own 50 acres. Testing is not convenient so I do not always test. I will not feed anyone other than myself and wife an untested deer. Easier, faster and more convenient testing would be good for everyone especially the herd management.

I like the recommendation of have the WI gun deer season start near the 15 of November. Granted I only missed 1 year due to weather. Not all people are dedicated as my family. It is also easier to get 91 yr old dad into his stand with nicer weather. This is his only hunting he still is able to do. Let’s make it easier and safer for everyone.

I think the nonresident hunting licenses need to be raised cause Wisconsin is so cheap in that regards compared to other states. I agree with the Holiday Hunt in some areas but all the state wide doe only hunts are not a good idea. Also I’ve heard rumors of extending the 9 day gun season to 19 days is ridiculous no reason for that either.
I would like to see a 16 day gun deer season permanent, to spread out the pressure on the deer. Would also like to see the muzzleloader season before the gun season like other states. Wouldn’t mind a one buck per year like Montana gun or archery. Or a point restriction like 4 points on one side like Missouri.

Not in favor of youth hunt disturbs the deer hunting later. Rifle hunting was a tradition that is lost in wi because of hunting being made convenient for warm weather. I oppose the holiday hunt for antlerless deer only during late season I like to hunt bucks then however I can because of the season.

get as many antlerless tags as possible in the hands of the hunters, we need to control the population to slow the spread of cwd, people need to shoot antlerless deer, good job on up some antlerless tags for the forest zone on private land to the south of that zone, deer numbers are high there thanks

I would like to see the muzzleloader season pushed forward to have separation from the 9 day Deer Gun season. After a lot of pressure from early seasons it would give the deer a chance to settle down and provide a quality muzzleloader hunt. Mid to late December or early January. Thank you!

We have a lot of deer in southern Juneau county. Please leave the 9 day gun season structure but maybe put earn a buck back in place to give hunters an opportunity to harvest a second buck. That would keep more hunters in the woods and I believe get the kill numbers to where they should be

People who complain that there are no deer in this area clearly don’t spend any time in the woods. If the dnr wants more deer shot let people bait deer during the hunting season. But no feeding. Just baiting during the season plant a foodplot lazy couch riders

Get crossbows out of the archery season for able bodied hunters. They are not archery equipment. Your holiday antlerless only seasons have prevented me from shooting any deer because the quickest way to lose hunters is to make shooting bucks illegal.

Have the youth be able to harvest a deer of either sex is important to the sport because it gives them a drive to go and do it again even if they harvest one or not they have the opportunity to do so and have a better chance they stay in the sport

I have not heard anything mentioned regarding the 19 day extended rifle season in any of the proposals for the 2020 season. I hope that means it has been taken off the table. If it hasn’t been, I as well as many others, strongly oppose this.

I have hunted in Juneau County central farmland for four consecutive years. I have only seen one deer in the woods during hunting seasons. I believe depredation to be a significant problem. More critters on deer cams than deer.

I think the biggest threat to Deer are coyotes I’ve seen just as many coyote pics on my deer cams as a deer they are there and in abundance it’s not deer hunting that's reducing the herd more like car collisions coyotes and wolves

My biggest concern is we keep the crossbow season the same as the regular bow season. With the new scopes for the regular bow does not give the crossbow an advantage. I see a lot of good sign in the woods for another good season.

When talking to other hunters at the hotels many have said they were not returning because they hadn't seen a deer in years. I see 3-4 every other year it seems whit some days not even hearing a shot near by

Overall, there appears to be plenty of deer in this unit. CWD is creeping across this unit and reducing the herd numbers may need to be considered for future years in efforts of slowing the spread of CWD.

Our area has a lot of pregnant females at this time. Last year in our immediate area we had 4 sets of twins and 2 sets of triplets, plus many single births. The racial of females is 8 to 1 in our area.

Public Input on CDAC Preliminary Recommendations - Spring 2020

Juneau, Central Forest

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

372 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 93
   - I visit this unit for non-hunting purposes: 106
   - I hunt in this unit: 344
   - General interest in this unit: 62

   The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 316
   - Bow: 192
   - Crossbow: 136
   - Muzzleloader: 83

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 22.62
   - Maximum: 60

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 145
   - Mostly Private Land: 35
   - Public and Private Land About Equally: 49
   - Mostly Public Land: 35
   - Exclusively Public Land: 76
   - I did not hunt in this unit last year: 4

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 9
   - Not too crowded: 45
   - Neither crowded nor un-crowded: 30
   - Somewhat crowded: 42
   - Very crowded: 62
   - Not applicable: 7

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 69
   - Fewer: 111
   - Same: 105
   - More: 49
   - Many More: 21
   - Unsure: 17

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
Implement an ANTLERLESS HOLIDAY HUNT:
Not applicable in this DMU

If a Holiday Hunt is held in a Farmland unit...
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021:
Not applicable in this DMU

If the Population Objective is not "Increase"...
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons:
Not applicable in this DMU

If a Zero Quota (buck only season) is adopted...
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOTVALID in the unit?
VALID 192  NOT VALID 130 Unsure 50

11. How important were each of the following concerns in forming your opinion about the CDAC's recommendations for this unit?

</table>
I have great concern regarding the continued efforts to "manage" the deer herd as well as potentially curtailing the crossbow use/season. First, the efforts or recommendations seem to revolve around revenue generation in regards to making the gun deer season longer in an effort to create more of a buzz around it. The hunting seasons work fine, the constant "adjusting of the rules" to get deer herd numbers in line are what is ruining the hunting experience for many. As you are well aware of, there are any factors that change from year to year that impact the herd. While I don't suggest we have no rules, they should be only minor. When the herd is healthy, hunters have a good year, they see deer and continue to have an interest in the sport. I have had dismal hunting for the past 10-12 years in my area. Herd "estimations" are ridiculous. While I own property in an area where there are some farms, I don't have the herd concentration on or around my property. This throws the system out of balance.

Next, in regards to the potential change to the crossbow season. These potential limits are unjust and would seem to go against your herd management tactics. When the legislation was first proposed and then adopted after the 3 year trial period, I purchased a crossbow with a rejuvenated interest. Now to find out that either 1. A small group of hunters are crying foul because more bucks were harvested last year and want it changed back in the name of keeping more bucks around for the gun season is ludacris. If this is the case, only recurve bows should be allowed so that we are all on the same playing field. And from a management perspective, isn't killing more deer the goal (yours not mine)? Or 2. this is only about generating revenue which seems to be more prevalent theory. If this is the case, more people will become disenfranchised with this sport and simply stop buying licenses and will not pass on this sport to future generations. While I understand that my voice is small in comparison to other special interest groups lobbying for all of these changes, it leaves me dismayed as to what my son and his kids will have left as a sport in the future. When I started hunting, it wasn't necessarily considered a failure if you didn't get a deer. It was the hope that the deer you were seeing would be a buck or at the time, every other year or two you drew a doe tag and could shoot the first thing that comes along. The problem now is that you can't even get as excited, because even seeing a deer is a fleeting moment at best. 2019 Now hunting season stats: 18 days now hunting and every day of the gun season with total deer sightings of 5 doe and 1 small spike buck seen during bow and 0 deer seen during gun season.
We hunt in the NNWR which I think is very different than private or small track public land. One issue we have seen is the pressure wolves place on the movement of deer and therefore ability to harvest deer. We typically see a lot of wolf tracks on the road and I have seen wolves in the woods a few times over the years. But this last year was the first year I understood the impact wolves have on the deers. The day I speak of we had seen at least 4 bucks moving through the woods looking for Doe in mid-November. The most activity we had seen so far. My son, was able to harvest his first buck during bow that morning. We had heard wolves howling early in the morning, but way off to our North. We came back that afternoon, and the woods was dead. Nothing was moving. It wasn't until the sun was setting that we realized why. The wolves started to howl and they were now in our section of woods and no more than a few hundred yards from out location. There presence totally suppressed the deer movement during what had been the peak of the rut, at least as we considered based upon the deer movement. I bring this up because I had seen a lot of does moving. Usually early in the morning or late in the evening and only in heavy cover. At one point, I had a group of 8 doe come up on me one morning. The most I had seen in one group since probably 2000. The reason I bring this up is that I see a lot of sign of deer in the woods. I also had seen a lot of does last year but they are very wary and stick to heavier cover making it more difficult especially for bow. They stick to the heavier cover because of the wolves in the area. Also the hunting pressure in the NNWR is very very low for bow season. Which I like because the deer are at least not pressured by hunters. It allows more natural movement but you just need to find where they are comfortable enough to move. During gun season, there are more hunters but not enough to move the deer. The numbers of hunters in the NNWR have dropped considerably since 2008. In fact, what I feel happens is that the deer feel the pressure and there is enough areas for them to hide and not enough hunters to keep them moving. So I feel the deer population is fairly large within the NNWR but is difficult to hunt. Too many areas for the deer to hide, not enough hunters during the 9 day gun season and the added pressure of the wolves keep the deer to heavier cover making them more difficult to hunt.

I have hunted Juneau County Forrest from age 12 and most of my adult life. The area I hunt is posted no ATV . I see a lot of ATV traffic in the county Forrest. I also see a lot of dumped deer carcass. I have seen fewer Gun Hunters but a lot more bow hunters and Turkey hunters. I use Crossbow I qualified for medical Crossbow hunting 2012. I see they are discussing shortening the XBow season. I would not be able to hunt with my family in November as I turn 59 in May this year. I would hope my medical permit from 2012 would allow me to hunt into November. We do not see a lot of deer and we spend a lot of time in the woods. Harvesting is not are main objective. We enjoy seeing deer, predators, and all other wildlife. I worry that increasing the doe harvest will result in less deer sightings. I have seen an a lot of Bobcat and Fishers the last several years . I have seen fewer Coyotes. I welcome them all and don’t mind sharing. I’m just as happy to see them as deer. I have also seen more Wolves around the area while driving my vehicle in the Central Forrest . I have not seen one while hunting although I would love to. Please don’t cut my Crossbow season short. I retired here because I have hunted public land here my entire life and so look forward to family bow hunting in the fall. I might add I saw a lot of Turkey last fall while in my stand. I have never seen many Turkey but loved watching them last fall. I had a fall permit but did not shoot one because I was not seeing many deer and did not want to spook any Deer to harvest a Turkey. Thank for the great information provided in your Central Forest Video. Please keep up the good work and protect are beautiful natural resources.
Lower the number of special hunt seasons. Go back to a doe tag/antler less lottery system. The state issues antler less permits with each license sold. That is poor management. There has been over harvesting of antler less deer for many years. Over two decades at least. The introduction and full protection of Wolves has decimated deer populations in the areas where the wolves were introduced. Introduce a wolf hunting season again. I am much more concerned about crop/livestock damage from wolves, not to mention potential human interaction with the wolves, than that of crop damage attributed to deer. I grew up in Wisconsin, went to college and paid taxes for many years there. I now am forced to buy an out of state license for $160.0 My son travels from New Mexico to join our group during the traditional 9 day deer hunt. This is not inexpensive, and if you do not start to manage the heard better, you will lose my family as you have many others. The hunter numbers continue to show decline every year. Its not a lack of families continuing the sport, its the poor deer population as managed by the WI DNR causing them to leave. We are seeing less and less deer every year. It is obvious the state has enabled the population to be decimated due to over harvesting of antlerless animals. The decline is not attributable to hard winters. I feel that the state is helping the auto insurance industry lobby by lowering deer populations more than they are their number one supporters...the hunter conservationists. We also contribute immensely to the economy which you don't seem to care much about.

I'm an advocate of predator populations and the correlation to healthy deer herds. That being said, we saw a dramatic increase in bobcat and wolf sightings over the last three years and a drop in fawn and first year deer sightings over that time. I’d like to see an increase in availability of bobcat tags in this region of the state as well as a new look at the wolf hunting seasons and harvest goals. Second, I think the reduction of doe tags to the current level has not done any good for the overall hunting in the area. The draw system for doe tags is also skewed and most hunters will never have a chance to get a doe tag that way its set up. There should be an application process for the doe tags and you should be allowed to build up points to get one, rather than lottery and whoever gets on the DNR business portals getting the first shots at them. There has to be a more equitable way to distribute these tags to the greater population of hunters if there is going to be so few available. Or maybe we can go back to One deer of either sex with each weapon of choice.

The proposed quota for Juneau County Central Forest Zone is way to high. I understand that certain sections within this zone feel like their local population is above where it should be but that situation is few and far between when considering the zone as a whole unit. For the rest of us it seems like we have been making "baby steps" in recent years but at least these steps have been in the right direction. Unfortunately these steps in the right direction could easily be erased if too many antlerless deer are harvested. There are options available to those select few with a "high" population. They should be instructed to enroll in DMAP, with or without their neighbors. Although I wonder if they would be able to get their neighbors to "buy-in" because as I said above the vast majority of landowners and/or hunters in the Juneau County Central Forest Zone do NOT believe the deer population is anywhere near the point where such a large increase in tags is justified. Please don't punish the rest of us for the couple alleged "hotspots" in the zone. 1000 tags MAX!

I hunt with four other gentlemen on a property north of New Lisbon in the "Forest" region of Juneau County. This property is a farm with woods along the Lemonweir River. Adjacent lands alog 8th Avenue are also farmland not forest. It is difficult for any of us to obtain doe permits. Trail camera surveys of the property have shown an increase in deer, does in particular, over the last three years. with our fields in corn last year we saw many traveling bucks during Oct. but none during gun season. We practice Quality Deer Management are are seeing larger bucks. I passed on a buck [have him on film] which has my associates questioning my sanity. [ just wasn’t the one I was chasing] It would be nice if this if the farmland acres along 8th Avenue north of New Lisbon were moved to the Juneau County Farmland designation with additional doe permits available. Thank you for your time and consideration.
Although I think there is a small increase in herd we have seen very few deer the last 5 gun seasons. Hunting pressure is much less on public land, maybe because of the very few antlerless tags available, fewer hunters may be leading to less deer movement. Predators are still a major concern, bears, bobcats, wolves, and coyotes all seem to be on the increase. Also concerned about loss of major stands of oaks due to logging which seems focused on oaks and creating more pine/jackpine habitat. Snowshoed some areas in February, most of the deer sign was in the better oak areas, very little activity in recent cutovers. I understand the importance of doing the cuts, just wish more oaks would be left, how long do oaks have to live till they produce mast, 40 or 50 years? If oaks were not that important why are foresters talking about deer impacts on regeneration? I am grateful to be able to hunt the public lands of Juneau county in the forest zone.

We have been hunting in the Meadow Valley/Sand hill area for 30 year and more. For some reason, you, the DNR, think that you have to keep the deer population down by doing some very unthoughtout ideas. 30 years ago you had party tags. that was fine. Then you give everyone a tag. Then you gave everyone 3 tags. Once the deer were wipe out, almost completely, then you brought the wolves in. Now you have nothing. The businesses that survived on these hunting seasons, with thousands of hunter coming into the area, like us and we spend a lot of money, are all but wiped out. That is a shame. There is no reason that there should not be thousands of deer running all over the area. that would great help out those businesses and it would also give hunters a great place to want to hunt that don't have anywhere to go where they live.

After hunting this area for over 40 years. I believe the answer is to go back to a 9 day only hunting season with random draw (hunter choice) tag. Making it a one deer tag not an extra tag. And not having to sit at a computer for hours to get a tag. No more youth hunt, holiday hunt, muzzleloader, antlerless season. Only a 9 day gun season. This will get hunters back in woods during the normal season. Hopefully getting some of the interest back in gun season. There are very few hunters in the woods during the 9 day season. This year with the late opening would have been improved with more hunters in the woods moving deer. There is strong evidence a sizable number of deer taken during the youth hunt are not shot by youth. The youth need to hunt during the gun season the get the tradition of deer hunting. Crossbows should go back to seniors and handicap only.

I’ve been hunting Meadow Valley since 1972 I have never seen so few deer year after year for the last 10 years in my life. I bow hunt and gun hunt The public lands of meadow valley and the Necedah national wildlife refuge. I feel there should be zero antlerless permits available for this area of the state for the next three years. Back in the 70s there were tons of deer and it was very fun to hunt. Now I have a son who I’ve brought up hunting with me and he does not enjoy hunting mainly because he sees no deer. He hears my stories of when I was Yung seeing 50 deer by 9 AM of opening gun deer season. When you hunt various locations throughout the season and you see little or even no deer this is a major problem. The restaurants and bars are virtually empty when you used to not even be able to get into the door. This is another really sad thing to see.

I believe the Central Forest map has been draw wrong. The southern border of the zone should be STH 21 instead of IH 94. The area between STH 21 and IH 94 has far more deer in it than is being reported. I would estimate that it is very close in numbers to Juneau Co Central Farmland zone. However north of hwy 21 (we own land and hunt in both areas) is having a hard time with getting deer numbers up. Near the Necedah wildlife refuge and private lands west their is little farmland and lots of wolves. If you could track the deer kills to their exact location in the Central forest I would estimate 80-90% are killed south of HWY 21. I would suggest either redrawing the line or including a smaller zone north of Hwy 21 so that you can build up that deer herd while increasing the tags south of Hwy 21.
Being none resident I was told I could only harvest one buck per season, I was fortunate enough to have two full weeks to bow hunt last year. I had what I would call a management buck on our property that was obviously injured. I wanted to harvest a mature buck and wanted my two week hunt to last more than one day so I did not harvest the wounded buck. Just my opinion but the time spent hunting with a bow a person should be allowed to purchase a second archery tag and harvest a second buck. In my two weeks hunting I seen at least 15 different deer on our 25 acre property I wasn't fortunate enough to harvest a buck by my choice on waiting for a mature buck but I think Wisconsin DNR is doing a fine job I really enjoyed my time hunting up there and plan to come back this year.

I only hunt the refuge, mostly with a gun. It used to be a great week of seeing deer. The last few years are maybe getting a little better, but still way way down from numbers from after the big kill off when there was over 10k bonus tags available. A week long tradition of seeing a few deer has become a weekend or long weekend of seeing no deer. I also believe extending the gun season would hurt the fragile population more and give archers less of an opportunity to harvest as well. Also because it didn't seem like some of the bubbles I clicked on for answers worked I would support youth antlerless tags being valid for 2020, I hunt only public, I seen less deer sign can't be less deer when I also seen none the year before and the refuge is still overcrowded.

Please continue to increase the herd! We can not manage the predators so we must take them into consideration. The predators are going to eat, and the hunters need to SEE deer also. To accomplish that goal the herd must continue to be increased. The carrying capacity of the land is far from it's maximum load. I spend time in the refuge and I do not experience an abundance of animals. During my 49 years while hunting this area I have seen deer populations fluctuate. What I haven't seen is such a prolonged period of low population density which is what my time in the woods tells me. Please keep the antlerless tags low to accomplish the goal of being able to SEE deer on a regular basis. We are not there yet! Thanks for your time and consideration!

The deer were all killed off about 10 years ago. Now there is no hunting pressure which makes hunting large public tracts even harder. The overall numbers seem to be increasing in the past two years, but many are antlerless. I believe that 100 public antlerless tags is too low. There would not be a noticeable amount of deer killed by hunters. The wolves and coyotes kill way more deer than we would. It is hard for hunters to keep going when they can't harvest an animal for years at a time. This is making the lack of pressure worse, and younger hunters lose interest. Many areas are so thick that it is hard to confirm a bucks antlers and get a clean shot. I feel a couple hundred more public tags would help this scenario a little bit.

I believe that the management in my unit is typically good. I have had a hard time obtaining an antlerless tag in the last couple years. As a traditional archer, I would like to have the additional tag for an opportunity to harvest a doe. I took the survey last week and there are proposals that I find very concerning. Extending the gun deer season is simply the wrong thing to. Crossbows, In my opinion, have no place in the hunt whatsoever. One of this units greatest resources is the Necedah National Wildlife refuge. I love to hunt here, but as an archer I don't like the idea of others crowding it with long-distance deadly weapons while I'm camouflaged and trying to earn my harvest.

I believe the efforts of the CDAC have helped the deer numbers in the Juneau County Forest Zone tremendously. However, I still think the focus needs to be on increasing deer numbers in general. At this time the State does not have the tools/ability to manage the apex predator in the area (wolves) as they remain protected by Sec. 7 of the Endangered Species Act. Therefore I believe we need to continue limiting the antlerless harvest for the foreseeable future until we once again have a healthy population. I believe I've seen a slight increase in the deer numbers over the last 5 years, however it is still challenging to keep kids Interested in deer hunting when they are maybe seeing 1 deer a day. Thank you for your time!
The way antlerless tags are distributed is frustrating. It doesn't seem to matter if I log in at the prescribed time to get in the E-line, the tags have always been gone prior to my pool ever getting a chance. Perhaps you should consider not giving antlerless tags to people that: A) Don't own the private land on which they hunt (non-taxpayers) B) Received one the year (or years) prior. I know plenty of people that seem to get tags each year they're available. You should certainly have data on who receives them each year, by DMU, so they would be ineligible until everyone else has had an opportunity. It's frustrating to not have deer in the freezer because all you see on the land you own and pay taxes for are doe.

It is my belief there is plenty of farmland South of Hwy 21. I believe the management unit should be shifted to Hwy 21 instead of I 90-94. I count deer on a daily basis South of Hwy 21 and in a 20-mile drive have seen almost 200 deer on numerous occasions. I believe the deer population is healthy and although we have some predation our numbers are up from previous years. As a landowner in the Central Forest Land unit, we have seen an increase in bucks as well as does. Part of this may be due to planting food plots within our woods but it seems the numbers are significantly higher than in previous years. I believe with the farmland close by, as well as the deer we have seen, we could be included in the farmland unit.

I've hunted public land in Juneau county for 44 years. In the last ten years the number of deer seen has been very low. I have gone two years consecutive without seeing a deer. That is with an average of hunting 5-6 days 6-8 hours a day hunting various ways: stand, still, and doing drives. I have never been one to have to fill my tag. What is more disappointing is the fact I haven't seen deer in general. I know the tourism economy benefits greatly from deer season. My feeling is that if you increase your product public interest will increase as well as revenue for the state and the local businesses. Thanks for reading. Looking forward to the final recommendations. Sincerely a devoted traditional hunter.

I have been hunting this unit my entire hunting life. Numbers have never been lower. Last year I spent 4 days hunting this unit saw very few deer. Spent a lot of time walking around with snow and came across very little amount of deer tracks. Used to have opportunities at deer almost daily in this unit. Now you’re lucky if you get one opportunity throughout the season. I think there should be very few public land antlerless tags available if any at all and the private land tags should at least be cut in half or more from the proposal. Much of this unit is public so why should there be that much of a difference in availability of tags between public and private? Tags should be very limited for both.

The DNR should make it simple: Each person gets One buck and One doe per license and no Bonus tags, No special hunts! Make Bow Hunting from Mid-Sept to Mid Nov. Then Gun season from Mid-Nov to Feb 1st but allow bow hunting and gun hunting in blaze orange. Make all hunts Party hunts to encourage "hunting Parties" to help with local businesses, the economy and to help with the hunters that can't get off certain weeks but would like to hunt. Do NOT Do ever again: Earn a buck, party tag of does or buck only as most of us hunt to eat! We also need to be able to hunt Wolfs, they are a Real problem with Safety as well as I have trail cams with Wolfs tearing apart my deer and other wildlife!!

I believe there should be one license that can be used for bow / crossbow. Why have separate licenses when some of us want to be able to switch up from time to time? The idea is to get more people out in the woods and harvesting animals, why make it more difficult? I disagree with the idea that bow hunters have given about those of us who choose to hunt with a crossbow. That somehow we have an unfair advantage. Their vertical compound bows have so much advantage over the bows of 20 years ago. I see no reason to punish crossbow hunters for their success last year by shortening and limiting their season!
WHY DOES THE DEER POPULATION NOT EXPAND WITH FEWER ANTLERLESS DEER HARVESTED AND OVER WINTERING CONDITIONS NOT BEING AS EXTREME? THIS IS PRIME WHITETAIL DEER HABITAT WITH NO DEER HERD EXPANSION. IS THIS DUE TO THE WOLF (YES). I HAVE HUNTED HERE FOR (46) YEARS AND THE DEER POPULATION SEEMS TO BE STAGNANT AT AN ALL TIME LOW. I USE TO HUNT WITH A GROUP OF (25) HUNTERS. NOW IT IS JUST ME AND MY (4) KIDS. THE OTHER HUNTERS HAVE QUIT HUNTING DUE TO A LACK OF DEER SIGHTINGS IN THE MEADOW VALLEY & NECEDAH WILDLIFE REFUGE AREA. WHY LITTLE TO NO RECRUITMENT OF THE WHITETAIL DEER??? THANK YOU.

I live in Juneau County. I keep a spreadsheet on high deer sightings in my 20 acre field. In 2018 thru 2020 I have seen 33 to 37 deer many times. This spring in 2 fields a mile or so away I counted close to 60 deer. My woods has no oak regeneration. We have way too many deer in my area. I also would like to see the Juneau County farmland zone moved north to Hwy 21. Getting doe tags easier than the online application process might help trim the heard here. I think land owners and the hunters there would manage the doe kill with common sense. Thank you.

My family hunts un Juneau central forest (7th and 28th street) Clearfield. We usually have 6-7 family members hunting bow and most of gun season. Leave Wed. for Thanksgiving. We hunt very hard as sit all day. Out of our group we hardly see any deer. Very light population. Out of the 7 hunters we pick up 1 deer. Many of our group have stopped hunting because the lack of deer. My son's 27 and 30 have stopped hunting this area and hunt in Western Wisconsin. Please increase the deer population in this area. It would be good to bring back our family tradition of hunting together.

I've hunted this unit for nearly 20 years and this past year was the worst I've seen it. The doe to buck ratio is ridiculous. There are way more doe than buck in this unit. The DNR needs to give everyone a buck and doe tag and stop limiting the amount of doe tags for at least 1 year. I saw 0 bucks and 15 doe in a week of hunting. I pay for an out of state license. 160 dollars I contribute to the state of Wisconsin and I feel I get screwed by only being allowed to shoot a Buck. I am currently looking for a different state to hunt and spend my money on a tag that is worth it.

Please consider reducing the antlerless harvest to zero. With the amount of wolf deprevation in the Necedah wildlife refuge along with Hunter not registering their kills appropriately we DO NOT have the amount of deer the habitat can support. Year after year I fill this out and believe i/we are not listened to. We don't have the deer around that the cdac wants to believe. I spent almost 4 weeks in the woods sun up to sun down and saw 7 deer all year. Yes 7 for the year, I kept a log.. please reduce the anterless to zero for 1 year and let's see if we get a rebound. Thanks

I would like to see the central forest zone boundary line changed to HWY 21. I live and hunt in the zone south of 21 and deer are very overabundant. Our forests are being over browsed, and farm fields are being destroyed by the amount of deer in this zone. I also believe CWD will have a huge impact on this heard in the near future as the abundance of deer is so high. Please give the CDAC the ability to move the boundary lines of this zone. I would also like to see the CDAC be able to bring back earn a buck as it is a great tool in managing the deer heard.

Thank you for proposing an increase for the number of PUBLIC LAND antlerless deer permits. This area is some good hard hunting--the best!--and it would be a bonus to have an option at a doe along with our buck tag. That said: 100 permits for antlerless for PUBLIC LAND feels way too low. In addition, I’d like for the committee to consider proposing a separate crossbow season--perhaps for early January, somewhere in the late season. Call it what it is: a crossbow with a scope on top is damn near a rifle; it is NOT bowhunting. Thank you.
Cutler Township is paid federal funding to maintain existing roads within the boundaries of the Necedah National Wildlife Refuge and the boundaries of Cutler Township. Instead of maintaining the roads, the township has erected ROAD CLOSED signs which prevents hunter access. Please use whatever influence you have to find a way to re-open the roads so there can be hunter access to the areas of Necedah National Wildlife Refuge within Cutler Township. Without access, the statistics about all wildlife within that public land is invalid.

The deer herd in the northern third of Juneau county, north east Monroe county is under heavy wolf predation. These areas also have large areas of public hunting lands. I’ve been noticing the herd dwindling in these areas. Most human hunters have already moved on and the wolves are not far behind. The wolves need a place to be and I’m afraid that as they move south in search of food they will in counter more resistance due to denser human population. We as humans can easily find great deer populations to the south and west.

Hunted this land for 40 years. 2019 is my last year in the public lands west of the refuge. I saw couple of deer this year and "0" last year. I hunt pretty hard, always have. I do see a great deal of wolf sign. With cameras, it helps see we have wolves and not deer. You have mismanaged the resource and the Federal Protection of wolves has met its goal of replacing the hunter. You have replaced my 40 years of sport with the wolf - good luck. At this point, I feel the wolf is managing the herd. We humans are not.

Deer hunting in this area has been on a downward spiral for the last 20 years. Most every change you have made has been for the worse. When I was a kid there was no special hunts or tags and I still hunt every year to this day. There is very little left in keep people hunting. No back tags no tags for deer might as well be no licensees too. No one gets excited anymore and the kids that have been coddled bail out when something else comes along. Bring back back tags , and carcass tags and let people hunt.

Antlerless tags for this unit should be included with license just like it is for farmland zone. If anything the bonus antlerless tags for this zone for public land needs to go way up From 100. Private land gets 1900 but public gets 100 that’s unacceptable. I hunt in an area with thousands of public hunting ground and see so many antlerless deer. Probably about 8-10 for every buck. Way too many of them. Since it’s mainly buck only all the bucks I see and get on camera are small 8 pointers or less.

Our private land location is in the Central Forest Zone, but the topography looks the same as the Forest Zone areas in southern Juneau. A better boundary for Central Forest would be Highway 21 instead of the Interstate. North of Hwy 21 there is much more forest including Necedah Wildlife Refuge and other State owned forest properties. We see very few deer when we hunt the public land above Hwy 21, but we have seen wolves above Hwy 21. How about a wolf hunt to help the deer population?

I honestly think having a 6 point or bigger buck to be harvested will help let the smaller ones grow.. and do a lottery system for antlerless deer for residents only . Back tags should be brought back . And actually taking the deer to a registration station to be registered. There are too many deer that i know about that are not being registered and does harvested and taken to does zones.. and maybe extend the season. Final thought .. possibly 1 buck tag to be filled for the year..

Deer numbers in my opinion are WAY too low for this area. 8 of us gun hunted by Necedah again (why I don’t know) and saw 3 deer. 5 of the 8 are kids. It’s imperative to get the message across to those that set the season quotas that the lack of hunting opportunities (ie: youth hunts, crossbows, muzzleloader, special antlerless, etc etc) aren't what is keeping harvest and interest low, it’s the NUMBER OF DEER ON THE LANDSCAPE that is too low!! Stop issuing so many tags!

Please move the wolf south. We pay tons of money year after year to hunt deer. We see five wolf to every one deer. They even take naps by our tree stands when we’re hunting. We can’t get our families 30 and under to hunt deer anymore. They sit outside in the cold day after day and see nothing. You have managed to kill youth and new hunters from the sport. Many of our generations enjoyed hunting together. Now that cycle is coming to an end because of to many wolves.
The last 10 years, hunting has become less enjoyable. I don't care if I personally do not get a deer but, it would help to at least see a deer. We encourage our younger folks to get into and enjoy deer hunting and they have lost interest because nobody sees a thing. 2019, opening day morning, I counted 7 shots. Last year maybe 30? I would guess that there are maybe a half the hunters now, compared with what it used to be like. Hunters go hunt in other counties.

As a land owner I would like to go back to the "plastic back tag" because when you have trespassers on your land you can at least have chance of getting their hunting I.D. number. I would recommend this for the whole state. I would also like to see a longer deer season from 9 days to 14 days because as a divorced parent and visitation issues and problems. The child of the divorce might only be getting 2 days out of the whole gun deer season.

I just feel like for a few years we cut back on how many tags are given out so that way instead of goin out and hopefully seeing a deer you can go out and see plenty of deer it makes hiking more enjoyable and hunting all around because shoot a deer isn't all of it being in the woods seeing them is awsome. Harvesting on is a bonus but could be come a more normal thing if we get the deer population back up alot which i think is a good thing.

I have enjoyed hunting for over 40 years of my life. In the past 10 years I have seen the amount of deer declined dramatically. Not only in this area but many areas of the state. My opinion is there are way too many doe tags being handed out. We are not going to get more Hunters involved if they are seeing less deer in the field. Just because there are extra days does not necessarily mean they are going to see more deer.

I have three comments pertaining to Juneau county central forest hunting. BAN BAITING!!! I'm also a little concerned over the loss of the Hardwood bombing range for public use. Hunters now crowded into surrounding public land. I think registration numbers are off due to hunters not registering deer. Yes, I know, violators will always violate, but, I believe the new method is easier, and easier to accidentally forget.

In the last 10–5 years I have seen a dramatic reduction in deer sightings while hunting. The wolves, bears and cars are thinning the herds out plenty, we don't need to take even more with all these anger less tags you give out. If you feel compelled to kill does why don't you try using the old party doe tags. Another thing I would like to see is going back to the old age limit for purchasing a deer license. Thank you!

My family has owned a cabin in Juneau county since 1951. We have seen the down fall of deer hunting up there. It's not even fun anymore way to much work for little reward. I have actually had better luck bear hunting up there than deer hunting. Let that tell you something. I have been seeing more deer lately the past few years but it's not back to what it use to be years ago. Need more deer simple as that.

I've been hunting for over 20 years now and I can't believe how many hours I have spent on stand without even one deer walking by. I own 72 wooded acres with fields on 3 sides. I'm sickened by the amount of tags giving out in 54b, our group of hunter's stay out all day until dark and never see any deer. Our same group use to pass up all doe and small buck and still fill our tags of nice bucks. ThanksDNR

In subtracting the choice permits filled from the total number issued I think only 16 went unfilled in out whole unit in Juneau county. In our group of 11 hunters we failed to fill 4 of these permits. That means for the whole rest of the Juneau county woodlands only 12 permits were unfilled? Either my math is wrong, or there are a lot more deer in other parts of the woodlands...or ??

I have noticed a definite decline in the antler-less deer population over the past few years. The heard numbers are continuing to decline in this area. Also I have noticed that quite a few mature Doe's are without fawns. I would like to see Juneau, Central Forest adopt a zero antler-less harvest for the 2020 season. Then reevaluate for the 2021 season. Thanks for your consideration.
I hunt the Necedah area and it is a joke compared to what it used to be. I've been in the woods in this area since 1977. I'm not a biologist but I can tell you the biggest problem there is, WOLVES. You don't need to give out more doe tags, the predators keep it in check. Also you better get on board and raise the price to out of state hunters, every other state has.

I would like the public lands permits scale back to 50 from 100 because there are more predators in the central forest zone then the DNR admits to. I and my family have been hunting this area for 50 years and have seen first hand how the numbers of deer can go up or down but until the predators are managed that will be the only way to managed the deer herd. Thank you.

Instead of offering 100 antlerless permits for the central forest zone, why not authorize those 65 years old and up an option of antlerless. After spending the past 55 years deer hunting, my hips and knees and feet are worn out. I am not disabled, I just can't walk very far anymore. Those under 18 and those over 65 should get a little help with the harvest. Thanks.

On my central forest property I see way to many does to bucks. Furthermore most if not all does had fawns/yearlings with them. Biggest problem is landowners aren't getting any or few of the PRIVATE antlerless tags!!! They go on sale at 10:00 a.m. when we are working to pay for our property taxes !!! All land owners should receive a doe tag to manage their own herd.

Thanks for the video and information. There were 50 public tags for Juneau County public land. I was the 6th person in line about 5 minutes after the tags opened up. They were sold out. I don't know how else to get them. There shouldn't be any bonus tags in this area if there can't be more antlerless available. Doesn't make sense to offer bonus.

1900 is ridiculous. I bow hunt, gun hunt and Muzzleloader on my 48 acres north of Necedah. I have not harvested a buck in at least 6 years, and that was bow. I have not shot a buck during the gun season in about 10 years. I do food plots and have plenty of water on my property. This number will completely decimate the population through there.

Over the last 3 years I have hunted mostly on private land in Juneau County central forest. I have been unable to get an antlerless tag in the lottery for either public or private land. On my property I have seen about 20-30 each season but have been unable to harvest one because I haven't been able to draw a doe tag.

The zone should be split in two with Hwy 21 being the divider. Predation seems to be a huge factor north of Hwy 21. Between the wolves, bears, coyotes and bobcats, there are a lot of mouths to feed. Consider reducing the public land tags to 50 or even 25 to allow minimal harvest and hopefully increase the population.

I still see far to many hammerhead does, (Small headed short snout Does) Never have young in the spring, they appear as older dear (when examined after harvest) have no benefit to the overall population. Education of hunters to identify and remove these deer as part of the antlerless harvest is important.

The number of deer is drastically lower then years passed, we need to keep as many does as possible. Twenty years ago you couldn't drive 40 mph at night on G north of 21 for fear of hitting a deer. Now your lucky to see one all the way to (25 miles) Rainbow casino.

Have seen a significant increase in herd size in southern central forest area. Mostly I am seeing does and few bucks. Obtaining an antlerless deer permit can be nearly impossible with past quota numbers. Hope the proposed increased will help to obtain a permit.

The control of the predators in this unit would be very beneficial. When you see more predators than Whitetail deer in this unit. It is hard to get excited about hunting and trying to pass the culture of Deer Hunting to young people of today! Thank you.
There is way to many wolves in Juneau County! Especially in Central forest land. Something needs to be done! Also young game wardens harrasing law abiding hunters is out of control. If it continues to happen i will be filing lawsuits against the state!

Instead of making the deer season longer, put a 30 day Muzzleloaders season for December. Other states seem to do well with this. Also would like to see a wolf season opened. Saw more wolf sign in the refuge vs deer sightings and sign. Just a thought.

I would like the DMU's be by county and not forest and farmland. As for public and private I think they could also be combined. I have great hunting opportunities on both sides of the interstate highway that divides Forest and farmland in Juneau county.

Harvest of Wolves black bears and coyotes is the only way this DMU will be able to sustain the same amount of tags available. First time bow hunters should not be able to use the antlerless option to be used during the rifle season.

I believe we need to realign Central Forest. The deer in CF travel to and from Farmland, and the divider limits a doe tags. Farmland gets 2 tags per licence, I believe. And CF has to apply for the bonus tag. Doesn't seem right.

Let's go to a 14 day season starting 2 Saturdays before Thanksgiving and ending the Sunday after Thanksgiving. This will align the rifle hunting season more in line with the rut. I find the earlier in November the better!

I'd like to see more public land permits, I hunt both and seen lot of does in my area on both and and yet you wish to give more permits to private then public and this makes no sense to me. I wish this can be changed.

In the 20 years I hunted in Juneau County central I've never seen the numbers so low. There used to be 15-20 deer along hwy 21 from the county line to Necedah in the evening. Now your lucky to count three.

1900 bonus tags and only 500 antlerless shows the DNR just wants to make money on the deer herd instead of manage it for hunter satisfaction. 1983 UWSP Wildlife Management Graduate. Keep politics out of the DNR.

There are so few deer in this county due to mainly wolf predation that we are thinking about selling our deer hunting cabin and property and hunting in a different county like Green Lake or Washara county.

If quotas for antlerless deer are low, non-resident hunters should be excluded from getting them. Property owners actually living in these areas should be considered before any other group.

Their should be more antlerless public deer permits. Due last season private land owners buying both public and private antlerless permits. I don't have private land to hunt.

Availability of Harvest Tags for residents that live here full time. Maybe preference point could be used for areas with limited Harvest Quotas? Thank You for listening.

I believe the public herd is still very low. I hunt all season in this unit and I cover miles of public land. I believe we are still in need of rebuilding this herd.

I feel the number of non resident tag should be limited especially in the necedah wildlife refuge, every year more and more out of state hunters flood the refuge.

I want the opportunity to harvest a doe on public land if possible. Too many private land tags, not enough public land tags for the number of public acres.

My family's woods used to be a "T-Zone" and I never saw the reason as to why this was changed. If we could get it back to "T-Zone" that would be preferred.

I believe that the turkey population has great impact on the deer herd. Decreasing the turkey population should bring an increase in the number of deer.

I am disabled and only hunt on my property. I have seen more wolves, Bobcats, and coyotes than deer. I saw 2 deer last season, and my daughter saw 0.
I believe that using protein supplements and deer growth should be allowed to help bring up the buck population and produce better herds.

Why are land owners getting all the kill tags?? Public land hunters need a fair chance. The application system for bonus tags sucks.

Deer are there but don’t move n become very nocturnal. Pictures on cameras at night and after seasons but they are there thanks.

Antlerless twg should be available for private land. Have not hunt in my land the last three due luck of antlerless tag.

Just a regular deer hunt no antlerless hunt(s) what so ever. There is no deer leave them alone for at least 3 years. Look at the correlation between car/deer accidents and doe harvest. Then allow doe tags to be sold on that data.

47 years in this unit and very dissatisfied with deer populations. Drastic decline over the last 20 yrs.

There are far to many does throughout the zone and it’s showing with the smaller bucks being seen.

Need to go back to in person registration so that there s a more accurate count of the deer kill.

We need to have a wolf hunt in the area. There are far too many. That is all we see and hear now.

Wolf sign everywhere, deer population much lower than it has been. Been low since 2006

I am glad that there is limited doe harvest for central forest so the herd will grow.

We need to build the heard so until we meet that goal no doe tags should be awarded.

Not in favor of longer gun season or shortened season for crossbow hunting.

Too many hunters on public lands and not enough access to private lands.

All deer harvested should be tested for CWD and results published.

Central forest boundart should exist north of highway 21 not I94

Extremely concerned with the wolf population on my property.

No anterless season allowed on central first public areas.

We saw more wolves this year than deer, that is a problem.

Consider allowing bow hunter the chance to tag two bucks.

Deer are populated every year, not enough hunters in area.

Wolves killing a lot of deer on public land in this unit.

extend the muzzleloader season till the end of Jan.

Leave our deer seasons the way they are.

Extend muzzleloader season to Jan. 31

More save place to hunt . Big land

Doe to buck ratio is too high

Too many wolves in the area.

Please no 19 day gun season

Buck only for awhile

Bring back back tags

10946
Public Input on CDAC Preliminary Recommendations - Spring 2020

Kenosha, Southern Farmland

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

95 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 77
   - I visit this unit for non-hunting purposes: 15
   - I hunt in this unit: 77
   - General interest in this unit: 27

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 57
   - Bow: 53
   - Crossbow: 36
   - Muzzleloader: 26

3. How many years have you hunted deer in this unit?  
   - Minimum: 1
   - Average: 15.09
   - Maximum: 51

4. Which statement best describes where you deer hunted in this unit last season?  
   - Exclusively Private Land: 37
   - Mostly Private Land: 11
   - Public and Private Land About Equally: 6
   - Mostly Public Land: 7
   - Exclusively Public Land: 15
   - I did not hunt in this unit last year: 1

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?  
   - Not at all crowded: 10
   - Not too crowded: 13
   - Somewhat crowded: 7
   - Very crowded: 2
   - Not applicable: 3

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?  
   - Many Fewer: 12
   - Fewer: 28
   - Same: 38
   - More: 4
   - Many More: 5
   - Unsure: 8

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th>The Antlerless Quota is...</th>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

- **If a DMU is in a Farmland Zone...**
  - Implement an ANTLERLESS HOLIDAY HUNT: Support 38, Oppose 49, Unsure 8

- **If a Holiday Hunt is held in a Farmland unit...**
  - EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: Support 58, Oppose 31, Unsure 6

- **If the Population Objective is not "Increase"...**
  - Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: Not applicable in this DMU

- **If a Zero Quota (buck only season) is adopted...**
  - ...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? VALID NOT VALID Unsure Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit? *(Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very)*

Comments for  Kenosha, Southern Farmland

Note: the comments presented in this report are the unfiltered opinions of individuals who responded to an online public input form. The viewpoints expressed do not represent the views of the state of Wisconsin, the Department of Natural Resources, or its employees.

4798  
My husband said that when he was a boy, someone told him that they saw a deer in Western Kenosha County. My husband could not believe it - at that time, deer were only found "up north." Now, they are everywhere, and we live in a subdivision. There are often 7 of them in the herd we see that come right up to the house and chomp on my plants that are right under my windows. They began coming into our vegetable garden and made us give up on anything but tomatoes and peppers and cucumbers. They decimated the spinach, lettuce, kohlrabis, broccoli, beet tops and then the beets themselves, and on and on and on. It takes all the joy out of living in an area where we had planned to make a food supply for ourselves. And flowers? Hardly a chance of seeing them grow untouched throughout the summer season. It is depressing to see the decimation of our plants and vegetables. With all the possible problems they will happen to the food supply because of CV_19 or other things, we think that the deer hunting season should be extended year round! There are so few killed during hunting compared to the actual number - raising the number that may be culled from the herd certainly would not cause deer to become extinct, and we might have a chance of actually being able to can and freeze food for the winter. Thank you for reading this.

4799  
Very disappointed that cdac recommends no bonus tags for Kenosha county. We continue to fall short of the quota, yet refuse to make any bonus tags available. DNR estimates point to an increasing herd, yet no bonus tags. Listening to the last meeting, the impression early on was that there were going to be no tags. It sounded predetermined to this listener. As a property owner in Kenosha county, who only bowhunts, you force me to make a choice of private or public land, basically denying hunting opportunity. 2019 saw 123 antlerless deer harvested. The quota, for increase of the herd, this year is set at 175. That is 52 deer under the quota harvested last year. If you sold 25 public and 25 private tags at a success rate of 3.1% we would harvest 1.5 more deer. At 50 tags each that would be 3 deer. Still well below the quota to increase. Your refusal to make bonus tags available makes absolutely no sense. Not to mention the fact that you also deny the DNR the revenue from selling those tags. I would ask the council to reconsider there recommendation of 0 public, 0 private Bonus tags and consider selling 25-50 private and public tags for the 2020 season.

4800  
'- Get rid of group tag hunts and tags for infants or kids who don’t hunt. Folks just want more tags. It’s cheating!  - Stop blaming crossbows for 2019 weekend gun hunters. Corn still up, fields wet. Moving gun up, restricting crossbows won’t help. Crossbows still up close and personal, real hunting, matching wits with the whitetail. Group deer drives and pooling tags isn’t really hunting. Those part timers want a deer, clock the time like the rest of us. -I pay taxes....just have tags for the counties specified and drop the public or private! This is especially true if herd numbers need to be brought down. - I buy an out of state bow tag for IL. They charge me $400! We let them use our roads for free and hunt for next to nothing, yet they soak WI with tolls and for hunting crazy fees. About time we do the same! -Of you have to have an antlerless gun hunt, holiday or otherwise, let us bow and crossbow hunters use our tags for bucks and does!  -Open more metro area public lands.

4801  
Overall saw fewer deer during the fall hunting seasons. Since I hunt archery, muzzleloader and gun hunt I am out hunting over and through most of the fall season so this is an observation made over the 3 month period. Just not seeing our objective of "Increasing the herd" being made anytime soon by doing the same game. To many doe tags. I actually spent more time last fall harvesting coyotes to help on future year deer populations but as you know without impacting the predators year after year they will thrive and return. Maybe this is the best it gets. Thanks for the CDAC team efforts, I do think this is the best way to be able to achieve the county goals.
With an overall decline in harvest numbers from 2018 to 2019 and a fairly flat population, I do not understand the need to add bonus sub-metro tags to 50 (25/25 public/private). If the overarching goal is to increase deer population how is adding 50 deer tags helping? I understand the bonus tags are added revenue and 2019 success rate for sub-metro was ~3% for people getting a sub-metro tag, but the people buying the extra bonus tags are probably the people that filling those regular sub-metro tags YOY. Thank you.

All I can say is I've heard rumors about extending the gonna seasons and that's a huge huge mistake. Harvest numbers were down because of the warm weather and second because of the date the gun season started this past fall. After the rut and warm weather is only gonna keep the deer in bed. Do not extend the seasons!!!!!!!!!!!!!!!!!!!!!!

Holiday hunts provide a good last chance to fill unfilled tags CWD is a concern Hunter crowding on public land is very bad in Kenosha county (saw 8 people in same field morning of deer opener). Would consider a system of allocating opportunity, and would like to see more private/public partnerships for access.

I have seen less and less deer in Kenosha County over the past 10 years. Now I consider it lucky to see a few deer throughout the hunting season and continue to look for other hunting opportunities in other counties.

I do not support the extending the 9 day gun hunt. I also dont believe that the archery season should be shut down the week prior to the 9 day gun hunt as it is the week where most archery harvests are accumulated.

I don’t understand how you think that baiting deer is creating a problem with CDW. The deer hang out and eat in groups weather or not you are baiting them, so why not allow for baiting?

I hunt two counties , why can’t we split the antlerless tags that come the gun and crossbow licenses between the two counties. Or if one only use it in eather county.

Lifting the baiting banned on the unit. One CWD deer found in Walworth County on a deer farm should of not shut down baiting especially in another county!!

I believe the seasons should be set. Archery for a set amount of time then gun, or vice versa. Going back and forth between the two can be confusing.

Deer numbers are up! Tag availability is what shows the lower kill numbers! Plenty of deer in both public and private!

No need for gun doe hunts after November and does are bred. Need to increase the doe numbers to get more bucks. Thanks

Don’t change anything-bow, crossbow,gun,seasons,tagging, quotas,units subunits metro etc everything is working fine!

I would like too see statewide baiting reinstated. It is also helpful for other units with higher deer populations

Over the last 30 years the number of deer has dropped considerably. I would like to see the numbers increase.

Would love to see parks be open to a limited amount of hunters to help control the herds in these areas

I think they should have antlerless bonus tags for this area.

The baiting ban needs to be lifted, everywhere.

Bring back baiting.
Kewaunee, Central Farmland

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

258 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 127
   - I visit this unit for non-hunting purposes: 31
   - I hunt in this unit: 240
   - General interest in this unit: 32

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 229
   - Bow: 123
   - Crossbow: 118
   - Muzzleloader: 102

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 22.65
   - Maximum: 60

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 172
   - Mostly Private Land: 39
   - Public and Private Land About Equally: 14
   - Mostly Public Land: 3
   - Exclusively Public Land: 11
   - I did not hunt in this unit last year: 1

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 9
   - Not too crowded: 28
   - Neither crowded nor un-crowded: 6
   - Somewhat crowded: 9
   - Very crowded: 7
   - Not applicable: 8

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 27
   - Fewer: 78
   - Same: 110
   - More: 29
   - Many More: 12
   - Unsure: 2

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
- Implement an ANTLERLESS HOLIDAY HUNT: 134 Support, 91 Oppose, 33 Unsure

If a Holiday Hunt is held in a Farmland unit...
- EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: 171 Support, 69 Oppose, 18 Unsure

If the Population Objective is not "Increase"...
- Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 59 Support, 189 Oppose, 10 Unsure

If a Zero Quota (buck only season) is adopted...
- ...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? VALID NOT VALID Unsure
- Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit? (Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very)

Report Generated: Friday, May 01, 2020

Kewaunee, Central Farmland
Right now on my property in western Kewaunee county we see very few deer. I saw a few during the archery season. I saw none during the gun season. Our hunting party of 4 saw only 2 deer a doe and a fawn on opening day. on a neighboring property 5 does were shot and the other neighbor took 2 does. 1 buck was shot north of us. There are too many doe seasons. The late doe season and the holiday hunt. As for the crossbow season leave it alone. The same goes for the traditional 9 day season the week of Thanksgiving. Hunting pressure make the deer nocturnal starting with the youth gun hunt. If the 9 day gun season changes or the archery season bow and cross bow season change. I am done hunting. I will close my property to deer hunting. I will stop purchasing my patrons licence. I started hunting in 1968. In the 60's and early 70's there were far less deer yet we saw more deer and has enjoyable fun filled hunts. Hunters should stop bickering over the crossbow and archery seasons. compound bows are just as high tech as cross bows. There should be less focus on shooting monster bucks and more focus on appreciating each deer that is taken.

I believe the youth hunt should be eliminated or moved after the season. That is good bowhunting time and some of the blame for more bucks shot on cross bows but there has to be an impact with the youth hunt. Shooting gums during that time affects the deer's patterns. I think the youth hunt should be moved to the anterless hunt weekend after the deer season. Have the anterless season in December like normal and if you are under a certain age and didn’t get a buck during the season you can be allowed to shoot a buck during that time. The option for public and private license should be removed as well. Just buy a hunting license like you used to be able too. The 19 day gun season is also absurd. Gun hunting is not what it used to be and making 19 days is way to long. After opening weekend the amount of people out hunting is not what it used to be in the past and I feel more people are frustrated with the gun deer season then in the past. Making it 19 days will not improve this.

I have been deer hunting for 32 years and have had good hunting seasons and poor hunting seasons. I and my adjacent land owners do not want to go back to deer seasons like right after earn a buck which depleted deer numbers. As the last deer season was structured there is to many deer hunts, my children also hunt and they don’t understand why there is basically deer hunting for 4 months with the anterless seasons etc. Young hunters now days don’t appreciate hunting as much with all the seasons. To much is not a good thing. I understand the deer numbers are up and that’s good and is better than down. Deer hunting is extremely important to families and friends and we don’t want to have a major decline in the deer population. There is also a a lot more traffic on roads even on side roads which I live and more cars more deer being hit. Hopefully we can have a happy medium in the deer herd opinions. Thank you.

I’ve hunted Kewaunee county most of my life. I’ve been stuck hunting public land for the past several years. Last year I saw zero deer. It seems to be getting worse every year. I have been getting more and more frustrated to the point of just giving up deer hunting entirely. I know that I’m not the only person that feels this way. You have to be seeing a drop in hunters every year. Kewaunee county has very little land that is open to the public. I know that there is private land that through tax programs that are available to hunt but to find them is really tough. I believe that if the land owner benefitting from the tax programs, the land should be posted with signs identifying that it is open to the public. When I was land owners would have no issue with hunters, but that has changed now. Bottom line we need more access to available land.
The discussion of discontinuing use of crossbows during November was discussed and that is something I was very opposed to. That wasn’t addressed here but I fee that I wanted to express my opinion regarding this issue because allowing the use of crossbows has brought so many people back to the sport of bow hunting. I know I am in the transition where I am using both weapons depending on the time of year and amount of gear I have on and many like me feel the same way. I feel if there is a change in allowing crossbow hunters only to hunt September and October you will lose some hunters. Another aspect I’d like to see return is in person registration. I know there is a cost but I believe it helps prevent poaching and u ethical hunting harvests with having to register deer in person.

Kewaunee county MUST come up with a number of deer that need to be harvested per hundred acres, or per 40 acres owned. If you own or occupy 100 acres. You need to take how many deer to do you’re part. Otherwise people just won’t get it, they need a number to reach. Also, agriculture department is hearing the deer by not regulating the crop rotations. A 300 acre family farm used to have multiple crops, deer wouldn’t have to go too far. Now it’s 700 acres of plowing and manure which makes prime hunting place inaccessible, and no reason for deer to be there. You’re methods of deer management are based on a different time, with different circumstances, and are completely irrelevant now.

We should give the CDAC committee praise for doing what is right for the county in there effort to control the deer population. They are using all the tools that are given to them to help control the heard. It is disappointing to hear people continuously complaining about deer hunting interfering with other hunting going on at the end of the year. All hunters should be able to work together in the hunting community no matter how long deer seasons go. Look at the big picture and understand that the deer population is one of the biggest problems in Kewaunee county. Stop complaining that it’s interfering with other hunts and work together to make the best choices.

If CDAC truly wants to control the antlerless deer population they would bring back earn a buck but use it in a different way then it was used before. I personally was not a fan of earn a buck because it was jammed down hunters throats every year. If you brought back earn a buck and used it every other year and made it that if you shot an antlerless deer in the off year that you could carry that tag over into following year when earn a buck was in effect I believe most hunters and land owners would except this proposal and you would get much closer to the two to one ratio that is desired for antlerless harvest.

Very disappointed in deer numbers this past year. Very few deer seen. My son who is 14 is discouraged to want to continue hunting with the decreasing deer herd. There are not the deer you say there are. I attended a conference in Madison and at the same time there was a insurance conference going on at the same place. There state lobbyists admitted that the numbers are being driven by the insurance industry. Great way to ruin a great tradition in Wisconsin. I’m not the only person who feels this way. We are not seeing the deer. I’ve been hunting over 40 years.

My observation with many days in the field in late season month of January there is no significant reduction in the doe herd. Way too cold for hunters to harvest a doe. The only hunters out there are the die hard buck hunters trying to Bait in a Trophy Buck !! If the DNR wants to reduce our Forest Damage before its too late for future generations we need to reduce the doe herd. Your up against a brick wall in that Bitter cold month of January, only answer is BACK TO EARN A BUCK !! Ask a warden, HOW MANY Antlerless HUNTERS Does HE OBSERVE IN JANUARY !!
I hear talk of an extended gun Deer season. I would be in favor of this. The rut in our area is usually 1 week before gun season. I would be in favor of extending the gun deer season for 1 week before the regular season to capture the rut window. I also would like to see hunters be able to hunt on Kewaunee County property. Many deer gather there because they know they are safe. This is not fair to the tax payer that though their taxes purchased that land in the first place. At least let us go into these areas gun less to drive them out.

Delete the youth hunt. This is an unnecessary hunt that does nothing to promote the hunting tradition that WI is famous for. There is absolutely no reason why youth need their own mini season outside of the normal hunting seasons. The whole idea is that a youth learns to hunt in the conditions that are normal to the seasons that they will hunt as adults. This has been a poorly conceived hunting season since it was introduced and has done nothing to increase the likelihood that a youth will become a hunter in their adulthood.

I would like to see a 15 day gun hunt starting on 15 November. This would do one of two things for the hunter. Getting a chance of nicer weather. I am thinking that would do well for young and older hunters that don't like the cold better weather. I also think this would be a good promoting tool that may bring young hunters in to our gun deer hunting season, and maybe even bring back a few older hunters. That can’t stand the cold anymore. I know some would not agree with me, but sometimes change is for the better. Thank You

I don’t think you need too have so many different hunts in one years time its foolish. Why have a 10 day muzzleloader hunt, its not the traditional way it used to be now your better off taking muzzleloader out for the 9 day gun season. And the stupid youth hunt can stop at anytime all your doing is making the bow hunters angry. All the hard work that bowhunters put into their stands and food plots and the next youth can come in and shoot 200 yards with a rifle at a trophy you've been after all year.

I would like to see a either a antlerless only or 1 buck tag filled with either bow or gun hunters chioce but only one buck the doe numbers need to be thinned to get better buck movement in the unit My thought is there is no reason Kewaunee county can’t produce thropy bucks but need to stop this harvest of 2 bucks a year also a longer 15 or greater gun deer season is a great idea for farmers getting crops off later due to weather and gives more chances with work to get out and enjoy the outdoors.

The deer herd is perfect right now. I am a father of four and love to take my kids out. We use the bonus tags when we hunt with the kids to get them the experience. The holiday hunt is a great opportunity for me to get out with the kids during their Christmas break. If the herd gets severely decreased due to longer hunting seasons or more available tags, the kids lose interest if it is boring. As you can tell, I am hunting for my kids not me. That is why I took the time to do this. Thanks.

I feel we have to many hunting seasons. I have 3 kids that hunt and also there friends and we all hunt together and they all get burnt out of hunting. They wonder why we are shooting deer for basically 4 months. The kids now are the future of deer hunting in our state. I understand we have a strong population of deer but if we go back seasons like after earn a buck and have low deer numbers, children will lose interest fast. Hopefully we can all agree on a deer hunting framework. Thank you.

I strongly oppose extending the archery season. There are areas with plenty of deer, and with all the seasons plenty of opportunity to harvest. Like many others I am passionate about archery season. But by the end of December I’m sick of deer hunting and move on to other small game. Maybe if deer seasons were shorter it would put pressure on hunters to harvest does sooner. I’m guilty of saying “I got time yet” then as season goes on deer get more nocturnal and I need to move on.

We do not need Earn a buck or anymore doe only hunts. Also don’t need to extend the 9 day gun season. The firearm season should be only the 9 day gun season and a 4 day tzone after the muzzleloader season. Get ride of these extension in January and holiday hunt they are ruining the normal hunting season for everyone and making it easier for people to go trust passing and other violations continue to climb. During these extension.
As a hunter in Kewaunee county, I believe the deer population is too high. I believe hunters who are willing to harvest does should be given every opportunity to do so. I believe antler less authorizations should be transferable to family and friends. I don’t believe there should be a charge for them. If we need to harvest antler less deer, give the hunters who are willing to harvest them the tools to do that.

I hunted a lot this past year 4-7 days a week. I typically saw does when I was out hunting. However I only saw three bucks all bow season, two of which were 3 year old deer and the third was a yearling. That is concerning to me that I hunted so hard and I only had three encounters with bucks two of which were on private land. Even on cameras I had out I had very few bucks traveling through.

With the earliest gun season in 2018 to one of latest in 2019 I was a little disappointed with number of bucks I saw during gun season. Although I believe 2018 was a good number season so makes sense 2019 wouldn’t have as many numbers. Although I was unable to shoot a buck I did harvest 3 does with crossbow. I would keep things the same as 2019 for 2020 season and probably 2021 season.

I am most worried about the spread of CWD in Wisconsin and find it to be the biggest threat to the Wisconsin deer population. There is an extremely high doe population in Kewaunee county. I am in favor of earn a buck because it is the best management tool we have and CWD is a lot more serious of a disease than what people uneducated on the subject think it is.

There needs to be a cwd sampling kiosk in kewaunee county. More hunters would have their deer tested for cwd if they didn’t have to drive to Green Bay to leave the head at a sampling kiosk. Early detection is key! Even if there haven’t been any cwd positive deer tested in the county yet, it doesn’t mean there won’t ever be.

Please discontinue deer baiting in Kewaunee county and state wide, I am very concerned about CWD. I support making the gun hunt first Saturday closest to November 15th I think it will help with harvesting more deer, first time in many years I didn’t get a deer in Kewaunee county in 2019.

I feel it may be beneficial to extent the overall 9 day gun deer season to a 15 day gun deer season. I feel that weather is such an important part during that season. If that was done, you could eliminate the holiday hunt but allow the crossbow/bow season to continue until December 31.

I see a lot of deer sign but rarely deer. We had 30 tags in our group and got one small doe. Mine as well had 1,000 tags. Who cares if you don’t fill them. If issuing so many tags is trying to harvest that many deer that strategy is failing. We shoot everything we see.

Private land owners need to shoot more does. Some of them think the more does on their property the more bucks will be around. There’s no shortage of deer at all in kewaunee county, the DNR should tranq and transport a few trailer loads to Jackson county.

Based on scientific proof and historical data if we are serious about harvesting more deer overall to meet a sustainable population then the gun season needs to start earlier to coincide with the last part of the “rut”. Not after the rut

An early to mid-October antlerless-only gun deer hunt could eliminate the need for more antlerless hunts in December and January. Far more hunters participated in past October antlerless deer hunts than do in the late season hunts.

Far too many hunters in my area, Casco/ Alaska lake that REFUSE to shoot does but will shoot the first 1 1/2 years old buck they see. Then not hunt anymore for the year. These people need to be required to kill does!

I think changing to a single Buck tag not weapon specific, per hunter per season, or a earn a buck that you don’t have to shoot an antlerless every season, you just need to shoot an antlerless renew buck opportunity.

My family and I have hunted kewanee county our whole lives. This past season was one of the worst in memory. The number of deer sightings were down and the number of mature bucks in the area killed were down.

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

312 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 231
   - I visit this unit for non-hunting purposes: 41
   - I hunt in this unit: 282
   - General interest in this unit: 64

   The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 262
   - Bow: 168
   - Crossbow: 108
   - Muzzleloader: 87

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 23.59
   - Maximum: 62

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 201
   - Mostly Private Land: 41
   - Public and Private Land About Equally: 17
   - Mostly Public Land: 7
   - Exclusively Public Land: 10
   - I did not hunt in this unit last year: 6

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 6
   - Not too crowded: 19
   - Neither crowded nor un-crowded: 19
   - Somewhat crowded: 13
   - Very crowded: 14
   - Not applicable: 4

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 39
   - Fewer: 84
   - Same: 133
   - More: 42
   - Many More: 10
   - Unsure: 4

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th>The Antlerless Quota is...</th>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
Implement an ANTLERLESS HOLIDAY HUNT:
Support: 146  Oppose: 128  Unsure: 38

If a Holiday Hunt is held in a Farmland unit...
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021:
Support: 180  Oppose: 98  Unsure: 32

If the Population Objective is not "Increase"...
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons:
Support: 41  Oppose: 254  Unsure: 17

If a Zero Quota (buck only season) is adopted...
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?
VALID: Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?  

Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

<table>

</table>
The proposed rules extending gun deer season an extra week and limiting crossbow hunting to October are absurd and ridiculous. By limiting crossbow hunting to October only you are taking women and children that mab can't pull a vertical bow back efficient enough to kill with it and putting them on the sidelines. I thought The objective is to get kids and beginning hunters out in the woods? If anything add on to the back side of the gun season into December and eliminate the antlerless season and muzzleloader hunt and combine them all. This would allow the gun season to catch the secondary rut and keep both sides somewhat content. The people that aren't seeing deer in lacrosse county need to try and hunt a different way and put a little more effort and skill into it. Other cause there is deer everywhere and on neighboring farms whole crops are being decimated by them. May we should look at putting together workshops on basic woodsmanship and classes teaching people how to hunt skillfully.

I live out in the country in east central LaCrosse county, have for almost 35 years. I currently think the deer population in this area is perfect. I see deer more days than not but not too many. I believe the biggest reasons for decreased hunter numbers is something I hear a lot about. Not having as much fun anymore.... and I attribute that to the attitude of "does are for kids and the elderly and the REAL hunters only shoot wall hangers". The days of just hunting for fun and camaraderie are long gone and it's a darn shame. The harder problem to fix is the overall deer kill. Part of it is mentioned previously, the second part is much more difficult to fix. So many complaints about not seeing deer BUT, they're there.... but no one is moving the deer like we did in the 70s thru the 90s..... some due to pure laziness but the biggest problem is the amount of people that now own the hunting land. Take any two thousand acres in LaCrosse county....8-10 people used to own it and now it's closer to 20 or more, therefore access is the problem! How do we fix that??

I have been hunting the current private property for 15 years. I have requested advice from DNR forester and deer biologist. I bow hunt about 15 or more days during the archery season and 5 to 6 days during the gun season. I see most if not all my deer sightings during archery season. Gun season has been a huge disappointment. I have many neighbors that experience similar results. I may not be an expert hunter, but I control my scent, choose stand location considering wind direction and approach. If I see 6 deer total for the entire archery and gun seasons combined I'm lucky. Maybe I am expecting too much, but it would be so awesome to see several deer and have the luxury of holding out for that mature buck or managing does because there are 20 of them in the field on any given hunt. I do believe there are some areas in LaCrosse county that have higher deer populations. The largest sightings I have of deer are in the housing developments. The deer know the safe zones, and I'm not sure how to manage that. Thank you for your time.

I wish to see the Holiday Hunt go away because i believe that deer are hunted enough with firearms during 9 day gun season and muzzleloader season to follow. I enjoy archery after the muzzleloader season and would be nice not having firearms come back out during that period. The question concerning deer to vehicle accidents can be easily eliminated, i drive to illions often and on the toll road on I90 they have tall fence on both sides of the interstate. there are zero dead deer on the side of the road. at least for La Crosse County, i would be very impressed if i saw tall chain fence on the interstate COMPLETELY eliminating accidents and or deaths caused by deer. also it honestly distrubs me to see deer lying their smashed up and guts hanging out, head decapitated, on the side of the road. it sadens me and is disgraceful to such a beautiful animal. i dont like to see deer die that way. i like archery from the mid september to january, one 9 day gun deer season and the muzzleloader season after that.
There is already the T Zone hunt and you really don't see many people out for that. Also most hunters know that the T Zone hunt is doe only. It surprises me that some of the ones who I know hunt the Holiday Hunt don't realize it's doe only. If it's still in the cards, much more info has to go out or call it a Holiday T Zone to get the point across. I don't really gun hunt and my favorite time to hunt is during December. My business is slow and I can spend time in the woods. That's when some nice bucks show up in the fields. Now I can't touch them for most of December. Can't hunt January much because business takes off after the holidays and I work 7 days a week. Would like to see archery(xbow or regular) up to gun, then 9 day gun(if have to buy a gun tag to bow hunt so be it) then archery to first Sunday in January. Nothing against gun or xbows. I hunt traditional. Would like to see 1 buck per hunter per year and no group hunting for bucks. Would solve a lot of infighting. Thanks

One concern I do have is with this fairly new registration system. I feel that some individuals may not be registering deer, therefore making the harvest data not as accurate as it should be. I spend lots of time creating deer deer habitat, monitoring the deer on the property I hunt and I feel the deer numbers are stable and at a good number. There are a sufficient number of opportunities to harvest deer and a good number of survival rate. I am concerned with any plans to increase the number of metro bonus tags or other increase of antlerless tags, along with being concerned about lengthening the hunting seasons. I feel the population should not be decreased in any way. I also monitor each deer I harvest for CWD, controlling this disease is my only real concern with the current model for hunting seasons. I feel if we increase length of seasons more deer will be killed and pressured, this still needs to be fair chase and give deer the opportunity to survive as well.

My concern is how we will ever get this herd in check on private land in the county. I own and farm 550 acres. I have huge amount of crop damage and every gun season have fifteen or more Hunt my farm. If they don't have theredeer the first day chances are they won't get one as these deer know where these refuges no hunting areas are after the first shots are fired and head there and stay there til we'll after the 9 day season is well over. Years about the neighbors all joined together to hunt and help one another get a deer. Not anymore One neighbor put an 9 ft tall fence on the property boundary so as to keep the deer from coming on my land?I welcome bow and muzzle loader hunters as this is the only way to possibly curb the herd growth. In the winter and spring I see herds of 40 or more deer from my home. Just my 10 cents worth.

Weather this gets brought up or not doesn’t matter to me just as long as someone reads it and I’m sure it’s been brought up before but I’ll voice my opinion. I believe that the kill numbers would be up some if you had to go and register your deer at a station instead of on your phone. How many people forget to do it or they just don’t do it because they process there own deer at home. And for the northern and some central units the wolf pack is doing what it’s intended to do an that’s thin the deer heard so there your not going to have a high kill count so your quota won’t be met. And last but not least, with the sport of deer hunting trophy deer people are doing there own deer management “let them go so they grow” just some thing to think about even though I’m sure it’s been brought up already. Thanks Have a great day

I bowhunt and gun hunt across many areas around La Crosse county. The herd numbers are down. I believe a better idea is to make available a bonus/antlerless tag to hunters every other year. Give the hunter the opportunity to make the decision on when to claim a bonus tag. Most hunters know how many numbers of deer are in their hunting areas and can make a better decision on when to request/use the bonus tag. For example, I hunt with 3 friends on a consistent basis. We all don’t need a bonus tag every year nor would we use all 4. If 2 of us request a bonus tag each year we would know the other 2 would be eligible for a bonus tag the following year. This would help improve the overall herd number in La Crosse County and give land owners and hunters a little more stake in the quality of the herd.
The real problem with deer hunting in Wisconsin is the lack of hunting land. Private land is becoming almost unattainable unless you own the land. Public land is over hunted and often not feasible with distance to drive to hunt. I am not sure if this is where we offer opinion on consideration of extending the hunting season and eliminating cross bow hunting in November-leave the season as it is. With the lack of land to hunt making these changes will not improve license sales-young people are not attracted to hunting like it use to-no where to take a young person out to hunt. Bottom line-Wisconsin deer hunting is becoming a sport only land owners may partake in. A lot of my gun hunting is done at For McCoy because that is the only available option and I have been hunting for over 50 years.

Deer are way over hunted as they are chased from early September through January. by the time gun season comes around they are dug in so hard that after the first 2 hours on opening day that you seldom see a deer the rest of the week as they know where to go where they will not be bothered either on land no one can hunt or large properties that are only hunted by a few people who are sitting in stands and not moving around. also after lunch on opening day most hunters quit the season because they know there is only a very slight chance of seeing a deer the rest of the season. after the first 2 hours of the season you w very seldom hear a gun shot the rest of the season. it has been like this for a number of years now. i know because I usually hunt 6 to 7 days during gun season.

Problem starts with your new method of registration NO Tags. All phone in. Anyone can kill a deer and not do your phone in! They do their own cutting up and nobody knows. That deer didn’t get counted by you. I’ve taken deer in to be butchered and all they ask is did you register it. you can say yes and nobody ask for proof. No Tag. I have my own land for many years and have seen a major decline of deer. I have no idea how you come up with counts but you’re way off. New housing editions going up and taking habitat away from wildlife. To bad their flowers and garden get hit, it was wildlife territory long before. More people driving deer are going to get hit. Time you don’t listen to the insurance company. Don’t screw this up. Listen to the people that are in the woods.

The DNR doesn’t have true kill numbers for deer. The online registration while a technology of the times has made it to easy for people to harvest deer without reporting them. This also took away a huge revenue from bars and bait shops for registering deer. So please do ask question concerning local economy. The last two years in my area was the worst I have seen the doe population in the past 7 years. About 60% of the deer were bucks or nubbin bucks. Also the extending of so many deer seasons has started to destroy the history, tradition and excitement of the sport. Deer season use to be cherished. Now the season seems to run for 1/3 of the years. So many of the changes and suggestions I find to be piss poor. Please Try again.

Am retired & bow hunt a lot from Oct.15 till season closes & only seen a total of 19 deer in the extream amount of time I spent in the woods bow hunting. The total kill has dropped off sigenfcenty the last couple years & the DNR tries to blame it on weather instead of the amount of over kill that they continue to support by allowing the excess amount of doe tags to be issued. Another reason it the over kill with the Xbow, seeing that they killed 19% more bucks that the rifle hunters they should be taken out of the bow season & given their own season from Sept. 15 till Oct. 15 or after the rifle season.

I don’t believe we need to sell extra antlerless tags for any season. It should be only one of each sex per tag. For years I’ve seen the deer numbers decline in my area especially in the area we hunt. This opinion is shared by all hunters in the area. I see more bucks then does every year for the last eight years so having a antlerless only season for all would be ridiculous. I’m all about maintaining a healthily deer population but I’m my opinion they are over hunted with bonus tags, even with declining amount of hunters.

For the most part the deer management has been pretty decent…. I think there are opportunities to encourage large land owners to allow hunters to hunt maybe a later season. In this area there are some pretty big tracts of woodland that either doesn’t get hunted or only on a very limited basis. These large tracts end up being sort of a sanctuary and end up holding deer that could have been harvested if they would be pressured to move … Don’t know what incentive would get these lands available but $$$ usually helps.
Would like to see Baiting return with a smaller amount allowed say 1 quart the reason for this is that it stops the deer for a better more humane shot The small amount would not result in multiple they’re feeding on the bait pile..... would like to have you consider something similar to Houston County Minnesota where they only allow bucks to be harvested if they only have four points on one side this again creates a safer hunt And creates a Hunting experience filled with anticipation and hope.

I realize that hunters are probably already harvesting deer in the DMU and Metro Zone in relation to demand but providing additional antler less/bonus tags can’t hurt anything and may actually result in the harvest a few more deer, helping maintain current population levels. My main concern is a lack of testing for CWD in the DMU. I would support MANDATORY TESTING of any deer harvested in DMU townships adjacent to any township in a DMU that had deer testing positive for CWD.

Bad weather, especially on an opening weekend seems to impact harvest numbers considerably. There may need to be a provision to allow some “make‐up” hunting opportunities in early December to overcome these impacts. These opportunities should include the allowance of filling a buck tag, as well as antler-less, as that will generate more interest in hunting. Thank you for your efforts and the opportunity to give an opinion.

Thank you for the opportunity to share my opinions and viewpoints. How will having less time to hunt and or less tags available in any way help Ensure hunting traditions can continue with in the great state of Wisconsin? Why do we continue to only have within the gun deer hunt 9 days? Why have we completely changed and gotten rid of back tags? How has getting rid of back tags helped raise the safety and awareness of hunters?

Over the past 8 years or so, If we see more than 2 deer per day, it is a good day (bow hunting or gun hunting). That is hunting all day, not leaving the woods on private land. We still have gun hunting days that we are in the woods all day, and see no deer. We sit, drive, and still hunt. Seeing 2 deer per day is hard to keep the kids interested, but seeing no deer is very frustrating for all of us.

I think that the CDAC should provide as many hunting opportunities as they can without harming the population of our deer. Responsible and considerate harvest of our wildlife resources should be encouraged within legal means. If we can find a way to encourage new hunters to hunt, especially a youth season or a mentor/mentee season, we should do those and have special seasons for new hunters.

Particularly since cross bow season was liberalized to all interested hunters the age structure of antlered deer has noticeably changed for the worse while antler less deer numbers have increased. More antlerless deer need to be harvested to help decrease the opportunity for disease spread and ideally less immature bucks would be removed from the population. Thank you.

Large mature whitetail bucks are in recovery mode at this time of the year. They are very vulnerable to hunting pressure and need food to recover. That makes them patternable to kill late in the year. Sounds like a great situation until that mature buck has lost his antlers and now was harvested as a antlerless! If archery is to be extended make it antlerless only!

Very high concern of over harvesting of doe. Too many special doe hunts and crop damage issuance of same number of tags year after year . Loss of interest by our youth to get into hunting due to the lack of seeing deer. I work for a school district and it is unbelievable how the number of students taking off for deer season has dropped in the last 8 - 10 years.

Cross bows should not be allowed during our bow season,they should only be allowed for handicap hunters,Cross Bows are not Bow Hunting, Personally I feel they should be banned,or if they have to be allowed they need their own season,NOT DURING THE RUT,THEY ARE RUINING BOW HUNTING as a private land owner they are not allowed on my property. Thank you.
This probably does not pertain to CDAC, but they should not eliminate the muzzleloader season because people have a chance to hunt more land because it is after the rifle season and some landowners are more willing to allow hunters to access land. I know I can access more land during the muzzleloader season than I can during the rifle season. Thanks.

Close deer farms to reduce the careless spread of CWD. Provide DNR wardens the authority and directive to enforce trespassing violations. Hunter identification should again be mandatory through required display of "BACK TAG". Removal of the back tag requirement can only lead lead to increased game violations and trespassing.

Too many antlerless. Your responses from public land hunters should reflect that majority hunt within a few hundred yards of roads and private lands and don’t spend much time scouting and preparing for a successful hunt. There are way more deer in the woods than what people think they know. Good luck and make wise decisions.

I don’t think we should extend the season at all, leave it exactly how it is now. Don’t mess with something that could hurt the population with over-hunting. I’ve seen what longer deer season do in other states, and over half the deer in other states I’ve hunted are no bigger than my chocolate lab that’s a year old!

Air rifles have come a long way. I would like WI to be able to allow air rifles that have 150 ft-lbs of energy for harvesting deer. They are extremely accurate, safe, will not damage hearing, and less dangerous at distance. Many states are already utilizing this form of management with great success. Thank you!

Please get rid of choosing public or private for deer tags. Many of us have to hunt public but if I get the chance last minute to hunt private I would feel safer but I have to pre-select for my tag making it hard to change where I’m hunting. I buy a Wisconsin deer hunting license but you limit where my tag is valid.

I personally would like to see baiting allowed again in La Crosse county. I think it helps keep hunters more interested in hunting as most people have a limited amount of time to spend in the woods, and baiting often increases a hunter’s chances of seeing and possibly harvesting more deer.

We have way too many properties that do not hunt and/or allow hunting. The DNR needs to work with landowners to promote hunting and get the deer moving. You can give me all the tags you want but if the only deer I see are on property no one hunts then it’s a waste of everyone’s time.

A lot more deer were killed than what were registered. Ever since we went to online registration I personally know multiple people who don’t even register deer anymore or to even buy a tag. I should be seeing more deer than what I am and I hunt almost everyday of bow/gun season.

I mainly hunt in the La Crosse metro unit which includes the bluffs. I would like to see the education of the public about wearing blaze orange during the gun deer season, also limit the number of dogs off of leashes. I saw plenty of deer getting chased by dogs in 2019.

I would like to see the seasons to stay the same deer hunting is a tradition in the state of Wisconsin and should remain at nine days season during Thanksgiving week and I think both seasons should remain the same whether you using the vertical or crossbow.

I would like to see where if a holiday hunt is held again, bow buck tags still remain valid during that time. With all the "anterless hunts" that go on in Dec, it makes it very difficult to find time to hunt with a bow and fill a buck tag. Thank you.

Myself and all my other hardcore bow hunters usually shoot a doe within the first month of season before the rut. That leaves us hanging during that damn holiday hunt when we have off work for the holidays to shoot a buck during a possible late rut.
I hunt for food alone. Outside of the various hunting seasons I think very little about animal populations or the factors that affect them. I trust in the DNR to use the information they gather and their expertise to manage the deer population.

I hunt Van Loon wildlife area, 1st by duck hunting and then archery deer, had a lot of high water, lots of ducks but few deer for 2019, where do they go I don’t know but the few deer that were around I only witnessed a few tracks.

I think private land within the metro zone especially has too high of a deer population density. I like seeing the deer but they are browsing down too much forage which just causes too many invasive species to thrive.

Kill numbers were down because of the weather this past year. That is the only thing that hurt the hunt. I heard a bunch of explanations, but the weather plays a HUGE role in the harvest numbers.

Crossbow should be during gun hunting. It is more like a gun than bow. Many gun hunters are becoming discouraged because crossbow hunters are killing to many trophy bucks before the gun season.

I personally liked Earn a buck. I think the mature buck ratio has gone down since it was removed. I think that program provided good herd management and balance. Bring back Earn a buck!

Need program to link hunters to private landowner who would like antlerless deer shot. Some type of incentive program to increase private land antlerless harvest.

Open the muzzleloader season to hunting with center fire handguns. Same effective range as a muzzle loader and more incentive for hunters to continue their season.

2019 deer hunt did not see any mature Bucks and deer population was less than previous years so encouraging the deer population to result in more “shooter” bucks.

I am interested in opportunities to reduce the spread of CWD northward, a sustainable deer population with broad Age structure, an opportunity at a mature buck.

In La Crosse County in the public land the deer over browsing it’s out-of-control I think we should focus on these areas to help get the forest back to normal.

Live in a condo area and people have feeders out for birds but are frequented by deer and the deer are causing excessive damage to a lot of trees and shrubs.

I believe that some sort of tagging need to brought back. It is very important to me as a land owner that all deer are registered and accounted for.

The crossbow season should be shortened and should be limited to those over the age of 50 or those who are disabled or have a note from a physician.

Limit the number of antlered deer to one per year. If you harvest a buck with a bow, you cannot harvest another with a gun/muzzleloader.

I think we should consider a longer gun deer season maybe of 2 weeks to give everyone a better chance to harvest deer.

About time for 1 doe tag & 4 deer tags to apply for party tag again. Heard is in worst shape than it was in the 60's!

Limiting crossbow season while extending regular bow seasons or having special archery hunts would be a good thing.

Why is the La crosse metro unit not shotgun only. Rifles should not be allowed in this zone for safety reasons.

I would be in favor of limiting crossbows. I would prefer returning to needing an exemption to use a crossbow.

Crossbow for elderly, disabled, children, or can’t shoot a bow. More food left on public lands like Iowa does

I think this area can safely carry more deer. Would love to see buck hunting only allowed every other year.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 97
   - I visit this unit for non-hunting purposes: 57
   - I hunt in this unit: 217
   - General interest in this unit: 43

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 208
   - Bow: 133
   - Crossbow: 75
   - Muzzleloader: 64

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 21.62
   - Maximum: 60

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 22
   - Fewer: 71
   - Same: 102
   - More: 20
   - Many More: 11
   - Unsure: 3

Section 3: Feedback on the CDAC's 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
Implement an ANTLERLESS HOLIDAY HUNT : 106 103 20
If a Holiday Hunt is held in a Farmland unit...
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: 129 73 27
If the Population Objective is not "Increase"...
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 27 184 18
If a Zero Quota (buck only season) is adopted...
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?  
Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

Report Generated:  Friday, May 01, 2020  Lafayette, Southern Farmland
Lafayette County, as far as deer hunting success goes, is a textbook example of 'have' vs. 'have not'. If you have forested land on or near the place at which you hunt, you're more than likely going to have (at least) an opportunity to harvest a deer. If you're surrounded by fields, chances are that your hunt will be less successful. As someone who is fortunate to own land with forests and pastures, I see the damage caused by the deer herd first hand. The woods are struggling to regenerate. While I am extremely fortunate to have mature oak, walnut, hickory, and other species, I do see a disturbing lack of young trees. The 4-8 deer I see *every* day browse saplings to nubs, carry Lyme disease carrying ticks onto our property, and make it easier for invasive vegetation to spread. With all of that being said, I believe Lafayette County, the DNR, and all hunters (especially those in southern farmland units) need to get serious about controlling deer populations. There is no reason to manage deer as some limited resource that needs conservative quotas to 'ensure the future of hunting'. Rather, I would argue, the deer population needs to be reduced drastically. I would love for the return of Earn-A-Buck, expanded hunting seasons across the board, and making available unlimited antlerless tags. In fact, I believe that, in certain areas of the county, a spring antlerless hunt should be opened up for an even more effective means of population control. Realistically, those with Ag-Damage tags can already hunt, why not help these farmers (who are likely busy with other ag-related work) by allowing 2 or 3 weekend hunts? It would allow hunters to get into the woods after a winter spent cooped up indoors and it would be more effective in keeping deer populations in check than the fall hunt. I realize the spring hunt will likely not happen. That's why, in order to maintain the herd in Lafayette County, we need to maximize the opportunity for hunters in the fall. We need to allocate more non-resident tags (I would offer 1,500 as a minimum), make available as many resident tags as needed, and we need to allow longer seasons for bow and crossbow alongside expanding the gun-hunt to 19 days, keeping the antlerless and holiday hunt as an option for those who wish to participate. We saw extended bow season having but a minuscule effect on the total number of harvested animals so there is, statistically, absolutely no negative effects of allowing bow hunters in the woods for that extended season. The Lafayette County CDAC did a good thing last year by maximizing the hunting opportunity for all. Please, at a minimum, do the same this year. Prioritize hunting opportunity. Do this through extended seasons, a holiday hunt, antlerless only hunts, and by increasing the quota.
I believe the Antlerless quota of 4000 is high when there was only 1362 reported to be harvested. Also, bonus antler less tags of 2000 is also high. If a hunter is given 1 free tag with each weapon (archery/crossbow, gun) that would be a good amount for free tags. Then it might drive more people to buy bonus tags if they truly want to harvest another deer, also hopefully make a little profit from that. With that being said, I don't think the deer numbers are enough to actually harvest 4000. With the decreasing fawn to doe ratio does not seem like a good thing to try and harvest more antlerless deer, plus loosing fawns mostly during the summer due to predation. I also took into consideration of deer vehicle collisions going up last 4 years, I believe it has to do with just the fact there are more people on the roads during the year. But I also would like to mention the relationship between total number of bucks harvested vs antlerless harvested since 2006. The bucks has stayed pretty consistent threw the years. But the antlerless has fallen off. I truly believe it is because people will register a buck kill but not a antlerless deer. I can't remember the year it switched from having to go somewhere and registering your harvest to doing it online but I think it is around the same time the big decrease is in the total number harvested. So I think there are some buck harvest that go un registered, but there are many antlerless deer un registered. I am opposed of having a Holiday Hunt (Antlerless only) because I don't think the deer numbers are where they where when I first started hunting. Also, some bucks loose their horns during that time. I heard of a few people just in my area shot bucks that thought they were does during that time. Also looking at trail camera pictures, I get many bucks starting to shed where I hunt during that time. One other thing I would like to see go away is party hunting for a few reasons. I believe it is dangerous since the entire state can use rifles. Lots of very small bucks, that people might think are does get shot. But also I have noticed from experience, neighbors are pushing their woods then deer come out and run through where I am hunting and disturb other deer in that area. All of those deer run off and out of sight for the remainder of the day. The last point is most deer are not shot and killed with an ethical shot. Many deer have to be shot multiple times or not even recovered. That is waist the tasty venison!

Ok, i will admit that i did not take the questionnaire to serious. All i really wanted to do was get to this point. I know from hunting for 22 years that our doe population is to high and the tradition of the 9 day gun season is gone. As a hunter that practices QDM having to many doe makes harvesting and even growing world class bucks very hard. As a father that's teaching my girls the traditions of the Wisconsin 9 day gun season, i am finding it harder to keep them interested in comparison to my father teaching me. Below are three small things from the past that i think could rejuvenate the Wisconsin Deer hunter, and help with population control. Earn a buck tag- This was awesome! It really helped the Doe population, made hunters get out and push deer around if they wanted to fill there tags and freezers. Harvesting a doe during the archery season would work to get a buck tag that could be used with archery/ gun. Earn a buck does not apply to archery season. As it is hard enough to harvest a deer with your bow. traditional 9 day season- This is how every hunter in my generation grew up hunting! This meant, everyone got together like it was a holiday and hunted hard for 9 straight days. Know everyone half assed everything because there will be another season, or a nicer day, so i don't out of bed or sit in the cold. Thats just not what hunting is about. IMHO. No more online or over the phone registration- who knows how many deer go unregistered with the new rules. Not to mention all the small town restaurants- bars that lost a lot of business. It was quite a tradition in Blanchardville-Argyle- Hollandale to shoot a deer and run it in to town to register get breakfast and tell stories. Some of my best memories as a kid were getting eggs with my dad at Husies and telling all the old timers about the buck my dad or i shot. i hope this finds someone well thank you for your time.
This year, 2020, is only 2 days earlier start than last year. This year Nov 21st vs last year Nov 23. Its going to be another down year as far as kill counts for the 9 day hunt. Get rid of the doe only Dec 4 day hunt and the holiday hunt. This county for sure does NOT need them. Noone even goes out for them. Deer numbers are absolutely nowhere near what you report. Its getting ridiculous with your numbers that you come out with. Absolutely do not extend the 9 day to the 19 day hunt that was proposed. Here's what I do... And every single person I know does. I have cameras. I target 1 buck a year. Hes usually target buck til I get him or someone else does. I shoot does every single year up to as many as I know I can eat and that's it. Im not going to go out and kill deer just to kill deer. Im after 1 buck and whether I get him with the bow I will not shoot one with the gun. In my opinion every single hunter state wide should be allowed 1 buck per year. Up to you what weapon you shoot him with. I would also like to see an antler size put in. 4 on each side for people 18 and older. Let the deer experience life and mature before being mercilessly killed. You think this will deter hunters from participating and I 100% guarantee you it will bring more hunters out than it will deter. I know guys who quit because everyone just shoots the 1st thing they see. You guys give us free doe tags to use. No reason to be shooting small yearling and 1 1/2 year old bucks except for kids. Make it about the sport not the kill.

I've been hunting deer for over 40 years in Lafayette county. There has been alot of changes in those years from a 3 day hunt, to buck only, shotgun only and taking 8 buck tags sent in to get a doe tag. Years ago land was posted so you knew where you could hunt, now they don't have to post their ground so not knowing who owns it hard to ask. A lot of big acre farmers now. Season was short so alot of hunters out got the deer moving. We use to set up drives that got them moving. Now people sit that goes back to not knowing who owns the land we can hunt on. In my opinion season too long need people out at same time. Opening day is pretty good but after that if weather is cold people will wait a couple days. I like the holiday hunt to get out hopefully with snow on the ground but I don't see why just antlerless. Trying to keep deer population down so I'd think all deer should be harvested. CWD control in my opinion should be done by the DNR picking up road kill and testing them, this way can narrow down where it is most common. I travel alot during the week thru Wisconsin and see alot of road kill that are not removed. Just an opinion from an old deer hunter.

We process our own venison and are concerned about CWD. We harvested 2 deer and spent several hours looking for a place to have our deer tested for the disease. We went to Yellowstone Lake where they have collected in past years and there was no testing. The DNR website was vague on resources available to hunters to get testing done. We finally called and talked to someone who told us there was only 1 testing site in our area and that was about an hour's drive away. This most definitely had an impact on the number of deer we decided to harvest. Had we had easier access to good testing we would have taken at least another 3 animals. It is also disheartening to me that our deer herd is at a "maintain" level, which I agree with, yet we have neighbors who get many ag or crop damage tags and kill many does, effecting our deer population. I would support cost sharing for high fence to prevent damage, but not handing out a fist full of ag tags effecting all of us. In many cases ag tags are being abused, not as a tool to prevent damage, but to fill freezers.

Just my thought on the harvest numbers from 2019. I don't believe that extending the gun deer season or having any other special hunt will bring up the kill numbers up. What i can tell you is that if u do extend the gun season at all, the license sales will drop more. I do believe that the numbers are down due to a lot of passionate hunters being more selective on what and how many deer they kill for many different reasons. Like myself that has hunted every year for the last 28 years in the same area and actually study the herds. Not just fly over in the middle winter and see 50 deer in a group and say that's too many for 1 area. Then turn around and try to add a holiday hunt or something stupid like that. That is probably every deer for 5 miles in every direction. Us hunters have put the time, effort and money into keeping the population up. Leave the 9 day season alone and get rid of all the extra seasons. Otherwise there will be 4 less archery licenses and 3 less gun licenses in my house alone not to mention all the other hunter I've talked to.
I do not agree with extending the hunting season. I think if you are looking to take more deer, you should go back to the old days. Automatic two buck tags and two doe tags. When you register one, you could make it an option to give more depending on the zone. Due to land constriction in most areas, some people only ever see bucks, some only ever see does. I can count on two hands and the amount of bucks I witnessed on camera. All hunting season we only saw a handful of the same does whether it was in person or on camera. I think we need to do something to open up land to be able to be hunted. Where it’s a tax break for landowners or something. There is property I know of in Lafayette and Dane County that have over 400-600 acres that no one is allowed to touch for any kind of hunting. You want more deer harvested, open up the state parks to more tags too.

Thank you for the opportunity to comment. With that being said, CWD is a very real concern to me. Not only from a consumption standpoint but also for my passion for this amazing resource that we’re tasked with managing and responsible for protecting. I ask you to please take this disease seriously if not for yourselves but for future generations. I also want to thank you for once again offering the holiday hunt and the extended archery/crossbow season. I’m very appreciative of this season as it’s a great time to hunt with friends and family. This additional opportunity also allows those who weren’t previously successful and those who want to harvest more deer the opportunity to do so. With that being said, I fully support and thank you for preliminary recommending the holiday hunt and the extended archery season.

One of the major issues that contributes to the quality of public land hunts during the archery season is the small game hunters (squirrel/pheasants). I experience this on several public properties but Yellowstone in particular. We will hike 2 miles back to get away from everyone just to have bird hunters come through at 4pm. I am all for sharing public land with anyone that wants to be outside but during the rut when guys take off for vacation, I don’t think it’s unreasonable to close small game hunting by 2pm so that bow hunters can at least have the evening sits to themselves. I myself am a pheasant hunter and they have my full support but a bow hunter never screws up any of the bird hunters or squirrels hunters so I believe it’s fair to close the woods to them at 2pm, at least during the rut.

The public opinion is opposed to having the holiday hunt. In 2019, the CDAC voted FOR the holiday hunt. They are supposed to represent the public, but instead went against the public for no certain reason. We should not have a holiday or extend archery season. This is a time where people need to try other types of hunting such as small game and pheasant hunting. It seems as if everyone is just set on deer hunting. Onto another subject. The buck to doe ratio in the county is horribly skewed, and the quality and quantity of bucks is not there. The CDAC and DNR need to do more about improving the buck to doe ratio and the quality of the bucks. We do not need to increase deer numbers, but we should work to improve the deer herd health.

I live in Lafayette County where County Road G meets Hwy 23 North. We have few deer here in the block of County G, O’Niel Rd to King Rd. This area has been over hunted and deer travel corridors taken out by farmers that once connected abundant herds and habitat. Also DNR keeps handing out crop damage tags to my neighbor like candy canes and he slaughters the deer - I once was able to hunt and have my choice of a nice buck from this area every deer season. Now I have to try and find another property to hunt due to the reasons above - in my opinion Southern Unit needs to be broken up into sub units to manage deer more locally instead of lumping the numbers all as one unit.

Hunters cannot seem to kill enough deer each year. There are too many deer being killed by autos and not enough harvested by hunters. I have a suggestion as to how to increase the deer hunting kill and decrease the number of automobile deer fatalities! I propose that the insurance companies and the DNR, in concert, put in play a bounty/bonus program that would pay hunters to shoot more doe. This would save the insurance companies a substantial sum of money and allow hunters to harvest more deer. Thus also reducing the deer population and auto repairs! The amount of each bounty/bounty would be determined by the DNR and insurance companies! Your Thoughts?
4980 Why don’t you have the muzzleloader season in place of the worthless holiday hunt. The current muzzleloader season falls directly behind the gun deer season. The deer in Lafayette county are very pressured deer. They need time to settle back down and they are easier to pattern as they are going from food to bedding. I as a landowner get tired of patrolling my property for tress-passers during a time when you have morons out shooting does..look At Iowa and the trophy opportunities that they have compared to Wisconsin.

4981 I would like to see a 2:00pm daily closer for pheasant hunting on public land for a two week period during rut. I am a archery hunter and pheasant hunter but as archery hunters take vacation walk sometimes over a mile set up only to have their hunt ruined by two guys and a dog, this has happened to me and fellow hunters on numerous occasions, please consider this option as it is used on other public land where waterfowl is abundant, thanks and I do appreciate letting the public have input.

4982 I do not like the use of crossbows during the deer rut that should only be open for archery season hunting, last week of October through end of November excluding the deer gun season. I feel crossbow hunting should have a shorter set season separate from archery, &/or allowed use with bonus antlerless tag only to cut numbers in high deer populated areas. I would be okay with wounded veterans that cannot draw a minimal pound bow to use a crossbow during the entire archery season.

4983 Leave the hunting regulations to 1 buck and 1 doe per hunter per season. Continually changing of the regulations is driving hunter out. These confusing regulations and the fines that follow a hunters mistake are not worth the headaches for some. Bring back the 3 day wait to hunt after purchasing a liscens. Bring back the registration stations. Enforce tags to accompany game to processors and taxidermist. Anyone can kill and still have the animal processed with out question.

4984 I hunt in north East Lafayette county near the Pecatonica River. I found three small bucks dead, probably year and a half olds. I also found two antlerless dead. I could not tell how they died. They were all close to a miles worth of proximity. It was fairly alarming. I strongly believe in raising the cost for non-residents to hunt in our beautiful state, substantially. It will help pay for the cost of CWD. A hunter friendly CWD test would be nice.

4985 I have lived in and hunted this unit for many years. Last year was by the far the fewest amount of deer that I have personally seen. Reminded me of hunts in the mid 1990's. The areas we hunted had a lot of standing/surrounding water, and a lot of crops (mainly corn) were still up. I would like to see a Buck harvest, however, if the data supports an antlerless only hunt, or a large antlerless quota, I am on board.

4986 If testing for CWD was more available and results more timely we would shoot more deer. Without testing many family members will not eat the venison. We process our own and do like to eat it. During the 2019 hunt our family only harvested 2 deer. There was 5 of us hunting last year with the opportunity to harvest many more. If more convenient testing was available we probably would have harvested at least 6 deer.

4987 I would like to see the county be on a antler point restriction. This area of WI is capable of producing large numbers of large bucks. The antler point restriction would decrease the demand for someone to shoot small bucks for the sake of shooting a deer. Having those people shoot a doe. This will help maintain the overall population and keeping the Buck to Doe population at a better level.

4988 CWD is a definite problem and needs attention and solutions. However, there are too many deer tags for one hunter, And there are too many gun seasons. It doesn’t seem to be an effective way to manage deer health problems, is more dangerous, interferes with other hunting, etc. we need encouragement of hunting from the broader population and a focus on alternative mitigation practices for CWD.

4989 I don’t believe crossbow’s should be allowed during the archery season that precedes the gun season, unless an individual is over 65 or has a disability. Too many deer were harvested in our immediate area with crossbow during the early archery season. Many archery hunters have switched from a bow to a crossbow to improve their harvest success rate.
Please do not hold the holiday hunt due to conflicts with other family recreational interests at this time of year. Even if we choose not to hunt, we do not want to interrupt the neighbors while they are hunting season. Also, the harvest of about 90 deer in 2019 shows that this season is not an effective population control measure.

I do not support a longer hunting season or a holiday hunt. The deer numbers were down from what I’ve seen and people I’ve talked to. It’s too much of a sport for people, killing just to kill. It would be nice to build up the population. Late harvest and late season had some effect but I don’t think people need more tags.

I think there are too many deer in the area and I realize that over last 5 years they have eliminated all fence lines, small patches, and other general bedding areas outside of the timber, I think Holiday Hunt should be eliminated. I also think predators are playing a role in the decrease of population.

I would like you to consider eliminating the use of crossbows during the archery season. We would like to see crossbow use be limited to a disabled permit holder. We are seeing a significant loss of young bow hunters with the availability of the crossbow and scopes being used during a primitive weapon season.

My recommendation is to promote more coyote season hunts to reduce the fast growing predator population and increase the deer herd. I also would like to see an antlerless only season one year to create some real trophy buck opportunity. In turn the DNR can then justify raising the nonresident tag cost.

Please consider a 2:00 closure for pheasant season during peak rut, I hunt pheasant and deer but on several occasions had my archery hut obscured by pheasant hunters after taking vacation and walking sometimes over a mile to get set up, Thank you for allowing my opinion.

When you see very few deer during a season, it seems senseless to increase the number of harvest tags. Only seen 3 deer on opening day and 6 deer total for the gun season. Our property borders state hunting grounds and shooting was down drastically in this area.

I would like to see the muzzle loader season moved up and start the end of October into the 1st part of November. Make this a separate tag there by increasing license revenue while providing more opportunity for the non bow hunter to participate in the rut.

Extra bow seasons is a waste of time unless you are a land owner and are able to plant food plots and pattern them. Not fair for people who hunt land that food plots can't be planted. And drags the season out to the point people get sick of deer hunting.

I think you guys have a tendency to over-analyze everything. Let's stick with tradition. Bow/Crossbow hunting and the nine-day gun hunt. That's it! Stop this holiday hunt, youth hunt, and every other stupid idea you guys come up with.

The program that has worked to reduce deer numbers in the past was Earn-A-Buck. Lets go to work on our elected officials to bring it back selectively in certain counties or zones. Thanks for the work you do CDACs!

Youth hunt= yes... extended archery/crossbow= yes... 9 day gun hunt= yes...muzzleloader=yes.... No holiday hunt, no antlerless only.. more free antlerless tags for archery/crossbow and firearms season

I completely agree with Lafayette CDAC and their recommendation to keep the season structure similar as 2019. Please increase public lands bonus permits to ensure they do not sell out. Thank you.

Eliminate the holiday hunt people are traveling and getting together with family and not out hunting. Look at the data does it still support a holiday hunt. How many does are actually harvested

Get rid of the holiday hunt and extended bow season. 89 deer killed in the holiday hunt. Not even worth having. The deer numbers are not out there like the DNR says.

I am 63 years old this year and I have used a crossbow the last 6 years and I hope you don't shorten the season. I heard you might shorten it? I'm not for it.
I would strongly prefer more options for comment and input about the schedule. Specifically I would like to see the Gun Deer Season start sooner.

I support all types of hunting it is about being in the outdoors what ever weapon you use should not matter thanks

The holiday hunt had very limited deer harvested so I question why have one. It didn’t achieve the goal of increasing deer taken.

Could you continue the archery hunting during the Holiday Antler-less hunt, allowing bow archers to kill antlered deer?

Allowing tree stand to be premitted in this section. It is unsafe to put up and take down stand in the dark to hunt.

I would like to see the gun hunting season start date be similar to Michigan and start the season on the 15th November

I would like to see the season go to a split season. I think you would get more hunters out and get the deer moving.

My only additional comment is there continues to be a large number of does observed on the private lands that I hunt.

I feel that the ability and availability of crossbows is adversely impacting the ACTUAL archery season tremendously.

I would like the 9 day season extended to a 16 day rather Than all of the extra hunts

Needs to be more push to dimish coyote population. They are hard on the deer herd

Please STOP changing things every year. Its driving more people out of the woods!

Get rid of the crossbows unless you’re disabled or under 65 years old

If a doe only season were put in place we will hunt another deer unit.

I like the Holiday. It provides more opportunities to hunt

No longer gun season 9 days is ENOUGH !!

Earn a buck and antler restrictions

No 2 weeks firearms deer season !
The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

545 forms were submitted for this unit.

**Section 1: Information about who provided the input.**

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 186
   - I visit this unit for non-hunting purposes: 146
   - I hunt in this unit: 515
   - General interest in this unit: 82

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 498
   - Bow: 256
   - Crossbow: 227
   - Muzzleloader: 186

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 22.99
   - Maximum: 70

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 201
   - Mostly Private Land: 74
   - Public and Private Land About Equally: 92
   - Mostly Public Land: 47
   - Exclusively Public Land: 90
   - I did not hunt in this unit last year: 11

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 15
   - Not too crowded: 70
   - Neither crowded nor un-crowded: 57
   - Somewhat crowded: 83
   - Very crowded: 70
   - Not applicable: 8

**Section 2: Perceptions about the number of deer in the unit.**

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 147
   - Fewer: 180
   - Same: 157
   - More: 39
   - Many More: 10
   - Unsure: 12

**Section 3: Feedback on the CDAC’s 2020 preliminary recommendations**

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th>The Antlerless Quota is...</th>
<th>Much Too Low</th>
<th>Too Low</th>
<th>About Right</th>
<th>Too High</th>
<th>Much Too High</th>

</table>
My grandpa’s land is in Langlade country. His land borders right next to Shawano county. Now last year the antlerless tags given in Shawano were 6 and yet no free tags were given in Langlade. My Day my grandpa and I have discussed this topic about why we see so many does and there offspring of that year throughout the hunting season. We believe this is the answer. We know that purchasable tags are allowed for Langlade (1500 I believe). But we think that is not enough. We find it very annoying how the border right next to us gives out SIX antlerless tag and right to the north you believe that the deer population needs to be maintained so you sell antlerless tags not give them for free with your purchase of buck harvest. This is not my most upsetting point however. When I was too young to carry a gun I would hunt with my dad, just sit in his stand with him, but I remember ever single year he would come out with an sizable buck (8 pointers with good spread) my dad has agreed with me as well. This was around the years of 2006-2012. My grandparents also have four head mounts of 150 class buck that came out of that land in the early 2000’s I believe you guys say that the deer population was low around that and even if it was I don’t care because the quality was superb. I was able to hunt in 2014 and got a spiker, fine for a first buck, and then next year an nice traditional 8 pointer in the youth hunt but that would be the last time I ever saw a buck. For four seasons with as many hours as I could on stand I would never see an antler. My dad only seen 1 small scrap rack and my grandma with 2 1/2 year old buck. This with all we got in four years of hunting what used to be prime land. My point is that from our stand point you guys are always worried about the population, which is important I get it, but you also need the ratio of the deer to have a quality deer herd. I know you guys know this but it’s hard to believe you enact it. The population may actually be too high in my opinion because this last season I kept track of the deer I saw. Knowing some were definitely repeats my numbers were 41 antlerless deer and 0 bucks. That does not seem like a healthy population to me. The deer were always one medium sized doe with one or two or even three very small does or maybe antlerless bucks with them. Not only is there an overwhelming number of does but my dad said that years ago you used to see big does and now it seems like there all the same size. Small. Now obviously the deer are reproducing to get this high population but if they are it can’t be big healthy genetic bucks doing it because we obviously would have seen them being that four people are on that land throughout the summer (not hunting deer) and bow and gun season. Please come up with a way to maintain the population AND a healthy ratio between the deer. My dad said you guys used to do a buck/doe tag. He said if you didn’t see a buck that you wanted to harvest you would shoot a doe and then the tag would be filled. This in my opinion would be a great way for hunters to not be forced to shoot a buck to get meat in the fridge. Leaving some bucks to grow a little is needed to bring back the healthy land we used to hunt.
First of all I would like to thank the committee for their work on trying to maintain a health deer herd in Langlade County. My job with the WI DOT requires me to keep records of all winter storms in Langlade Co. this year we had over 90 inches of snow fall and with the three rain falls we had this year we had one of the densest snow packs in a long time making it nearly impossible for the deer to paw through and very easy for predators to run down deer. I also understand a late opener can bring down the gun harvest but down over 40% is excessive. Another thing to take into consideration is that the car deer kill was down 35% in Langlade Co. from 2018 to 2019 there was only one year in the last ten years that there were fewer car deer collisions. In the areas that I hunt I have noticed a steady decline of mature bucks witch in my opinion is do to the underestimating of are winters the amount of predation by bear, coyote, wolf and bobcat and the extra hunting pressure. (bow, crossbow,gun,muzzleloader,Tzone,back to archery). I also think not having to tag your deer has resulted in people getting there deer home and not registering it. In my opinion as high as 15-20%. All these things considered I believe have lead us to over estimate the herd in Langlade Co. A health herd is a well balanced herd buck to doe as well as age class. Langlade Co. is going in the wrong direction when it comes to age class and i think the buck herd in general will fallow that same decline as the mature bucks have. The second thing I would hope the committee would reconsider is the support of an eradication zone in another county without first talking to that county's CDAC committee. A vote to support whatever decision that county made would have been a much wiser choice. Eradication has not worked in the south and will not work here if all the people in the eradication zone are on board and even if you could eradicate the head in that area the DNR has told us that prions live in the soil for years so once deer come back they can be affected again. Is the DNR prepared to buy up all this land and maintain a fence around it the way they have with some deer farms!! If they want to combat CWD start where it is coming from DEER FARMS!! and not destroy our herd. Thanks again for your time and commitment to Langlade County's Deer Herd.

BRING BACK BAITING TO SAVE THE SPORT!! With all other options for today's youth, if they do not see a deer, they will have no interest! They in turn will not hunt as adults and not teach their children to continue the sport. These deer have just as much as a chance to get CWD off of twigs and farm fields as they do on any bait being put down. Not to mention adults lick their young! Adult deer go nose to nose with other adult deer! Your killing interest of thousands of people! Part of the most exciting aspect is putting out bait for them to eat and look at pictures of what's coming in! No one wants to go freeze their butt off week after week in hopes a deer might get close enough to shoot with a bow. They have no reason to come to you and will keep distance without reason! To say it's ok for private land owners to add food plots in their backyard but then tell the ones that don't have their own private land that we can not put anything out to attract deer is ridiculous. So deer won't get CWD on private land but will on public? It doesn't make sense. Our group of 32 will not hunt Langlade county due to unfair restrictions put on public hunters! Your numbers are not down due to the timing of the season. They are down because people are no longer hunting. Why? WI DNR has taken all the fun out of it. Don't you overlook the transportation of wildlife into the fenced hunting areas? Isn't that where this disease started? So essentially the DNR allowed this into our area. And now all hunters have there “rules” due to this? Yet deer farms are still going, single fenced?! Let your mistake run it's corse at this point. Why punish us?! Less kills mean more infected deer to roam on and spread to others. A baited deer that gets shot won't be able to spread it to other deer for another year. Your going about this backwards, and killing the hunting future right along with it!
We find hunting to be horrible since the baiting ban. We just bought property in Langlade County only to find out the ban was extended two more years because another deer was found on a game farm land far away with wasting disease. We are in fact so disappointed with the baiting ban in the way it is being implemented we firmly believe this is a money-making racketeer put on by the DNR since they do not have to share the money with any other agencies. We have contacted both local and National media to try to bring attention to this fraud on the hunters. Being very experienced just a few miles away in Michigan, we have found baiting ban to lower the number of licensed sales, increase the number of deer being hit by car and increase the number of deer that are exposed to the disease. So it is crystal clear that Wisconsin DNR is doing this on purpose for the millions of dollars in baiting fines are collecting every year. The deer kill in Langlade county in our area was down over 50% and I know in the County hole it was down 43%. This state requires baiting for a good deer kill! As long as you’re scamming your people you will not receive near as many license sales and the deer are going to overrun your state. We are going to not purchase any more licenses or do any more hunting until the baiting ban has been lifted. Nobody’s going to drive miles and miles and travel to your state to not see deer. Wisconsin will suffer with higher and higher deer numbers every year and less and less amount of hunters but I guess the four million dollars in fines charged to the four people that own land in your state and their hunters oh, I guess you guys will make some money either way.

I listened to the entire video and not once did he mention the bad storm in July of 2019 where it knocked down 1/3 of the forest in the northern zones!! It was next time impossible to hunt and most people did not even venture into the woods as it was a complete jungle. It was next to impossible and impassable to walk through that most guys opted out of the gun hunt. I was hunting the crossbow season from Halloween through Thanksgiving which is suppose to be the rut. Well, I don’t think the rut ever really happened as I only seen one buck chasing a doe in that period and I hunted hard morning and evenings everyday. The gun hunt was way down due to no one trying to get to their stands cuz it was impossible and if you would shoot a deer then good luck finding it or dragging it out with the 1,000,000 trees down. How many deer died from the storm??? No one will ever know and no one will ever know how many guys that bought tags did not even venture into the woods. I sat all day gun hunting off hwy “U” in the lower post lake area and maybe heard 6 shots all day and only one close!!! What does that tell you? No deer cuz nobody out hunting them cuz of the very poor conditions!! Crossbows take more deer cuz you opened it up to anyone that wants to own one. I have a disability but that doesn’t matter anymore and I definitely don’t think you should change the season as the way it has been set up for years works. And please stop making the antlerless hunts during the rut when we’re trying to bag a trophy. Keep the doe hunts till after the gun seasons So, in a nutshell, the season in Langlade was way down due to the nasty storm of a lifetime!!

Started hunting age 16, in 1966. It was fun than because there was a healthy deer herd with many and most of them harvested where bucks. We could penetrate the woods, STAYING ON LOGGING ROADS, with our vehicles to set up sitting stands and for driving. Now after a area is logged county and STATE, block off the woods with dirt berms, boulders or gates. The DNR has lost hunters interest with nolonger the large numbers of hunters to move the deer around. You make road hunters out of those who continue to hunt. A deer can get kicked up, run 300 yds and than not even know its gun season. Lucky you here 5 shots on opening day, unlike years leading up to yr 2000, within 20-40 mins. the woods was full of deer and hunters, either seeing another hunter, gun shots or deer. Deer were moved around. DNR make it known that you NOW cater to the forestry and logging industry over the hunter. If you care about the OLE Wisconsin traditional deer hunt than take a look back at and the way it was and the changes you have made the last 20yrs. for the worse. Give us our deer herd back and give us vehicle access to our tax funded land. Publish hunter watch dog for those who tear up the woods, off of a logging road with a heavy fine. When its time to log, let the loggers come in with a cat and level the road, they can do there part as well. BUT I highly doubt that what I proposed would ever be considered. Coming down to the DNR saying they have the hunters interest and concerns but will do as they please and submit to the higher powers of the forestry and logging industry.
I’ve been hunting county land my whole life in northern Langlade county and we’ve been hunting with a zero antlerless quota for years. I supported this for a long time believing it would bring the population back but I’m not so sure anymore. We and all the neighbors that hunt the same land have not shot does for about 10 years with the hope for an increased population and have not seen the population get better. I do see deer. I normally have about half a dozen does and 2 or 3 scrub bucks yearly. Occasional decent buck that only shows his face at night. But it’s been that way for all my years hunting there. My mind has shifted to predators and rough winters being a reason. I’ve personally seen wolves where I hunt. Reports of mountain lion by locals but never laid my eyes on one. Winter can’t be changed but predators can. I FULLY support a wolf season to come back. Also... considering I don’t get an open line to communicate very often, I feel I should say this on here. I am wondering why I have to wait 11 years for a bear tag in this area? There’s been nights bow hunting in September I’ve seen 6 different bears. I like a healthy population of black bear and don’t feel they effect the deer herd. But at the same time, I may only get a couple bear tags in my life in the area I love to hunt. Wish I could see that number get better and be able to get my young kids some opportunities! Thank you!

Wisconsin needs to become a lottery state as far as hunting is concerned. The southern and south west part of the state I feel deer numbers are higher than in the northern part. With all the proposed rules coming in I feel that it would do more harm than good. Adding more time to the rifle season would be devestating to the deer population. As it is now, after opening weekend of gun season the deer don’t move. More deer are killed during that week of gun season than all of bow season. I would go as far to say in certain parts of the state to take away gun season for a year or two and extend muzzle loader. Also, I definitely don’t want a "quiet period" the week before gun season. For the northern half of the state that is usually peak rut time, most of us bow hunters would miss out in the peak rut. If too many people are complaining that "their deer" are shot during bow season, they can possibly invest in a bow. There are several different types of bows for everyone to use. People don’t need to solely rely on gun season. I have hunted Wisconsin all my life and have never really complained as to how the seasons were ran. These new rules possibly coming into play are not good at all. Everyone I spoke too about these rules did not like them either. I would definitely listen to everyone commenting on these and take them into serious consideration. Thank you

Need to split unit into public / private units. or north and south if that is easier. On the video you said that data shows that people are hunting more on public and that is why more deer shot on public. My opinion is that logic is incorrect. Less hunting on public is because THERE ARE NO DEER. I saw more wolves this year than deer. Wolf - 1, deer - 0. Last year in 7 days I saw 1 bear and 1 deer. That was hunting for 7 days on 14 different square mile sections of public. The low number of deer is disgusting. I know that the land can support more deer. My kids won’t hunt with us any more because they went 3 years in a row without seeing a deer and while hunting hard. The 7 deer that live on all the public land in the northwest converge on several bait piles. One of our 10 guys shot a buck this year and another last year. Bellies were full of corn. What that means to me (I don’t bait) is that I need to find the baiter and hunt near him or I will not see a deer. I find the deer piles during bird hunting easily. I suggest you look in areas where you see the same truck every day. Either allow baiting for all of us or get serious about enforcement. Also, don’t turn a blind eye to the beat trails in February leading to a non-hunter’s huge bait pile. They are easy to spot. DNR should do their job.
| 5033 | Though this survey is focused on Langlade County, oversight must be considered with the abutting counties such as the Menominee Indian Reservation and the detrimental impact that their hunting practices have on Langlade County. Particularly, factors to consider are abutting counties deer density in contrast to the known harvest permits and predator population. Langlade is a very unique county geographically and from a hunting perspective the far east end of the county is much different than the southern portion of the county and equally different than the northern or western part of the county due natural and agricultural aspects. I’d strongly recommend suggesting a lottery system with a minimum antler length criteria (maybe for first time or disabled hunters any size antlered buck) for the firearm deer season much like a bear season permit to both improve the overall quality of the hunt and to regulate hunter density in the process. We as conservationists should strive to have an overall healthy deer herd but also not lose sight of the trophy potential that exists if the right measures are in place. Increasing the odds for hunters to harvest a mature buck will bring revenue to the State of Wisconsin, increase property value, and bring about better overall herd management over time. Thank you. |
| 5034 | I have Gun hunted langlade county for a long time. I do agree that at one time there were too many deer which was not good. Now I don’t see enough deer at anytime of the year to even think there are enough deer to sustain population. Deer sign can also show a lot of information and when the trails during the snow season show very few tracks there just aren’t any deer. there may be more deer in the farmland area of the county like around Antigo but in the north, there are very few. I am not a person that thinks he should be guaranteed success during a season, but it would help if a person might even see a deer during the whole season. That is ridiculous. My other issue is with baiting. I do hunt mostly public land and when i would follow a decent deer trail, everyone of them ended at a bait pile. I was surprised that I saw that many. One person out of 12 of us shot a deer and guess what, its stomach was full of corn. Amazing since their no homes within a mile of where this deer was shot and there aren’t any corn fields for miles around. I do my best to hunt legally and ethically and this is really not a good representation of how we should be hunting. I am not against baiting but if some people are going to do it and get away with it, something must be done like maybe a hotline or something. |
| 5035 | We own Property that borders Shawano county, and some that is in Shawano County. The fact that Langlade is closer to a reasonable doe harvest number. Versus Shawano County which has an unreal amount of doe tags is very frustrating to us. We have neighbors who feel that is necessary to kill every deer They see. Because of the fact that Shawano county has so many doe tags, and that some people are unscrupulous and will call in one shot in Langle County and register it as a shot in Shawano county is very much hurting the deer population in our area. I will leave the same message in the Shawano county page as I own property there too. But the astronomical number of tags given in Shawano county is very much hurting our deer herd. On top of this the cross bow hunters need to have a limited length of season. You have created an extra season for the slobs that hunt in our state. These people only do it because it is easy and not because they want to hunt seriously. We have had a large number of increased wounded deer by people who don’t take the time To track an animal that has been wounded. The mortality of deer wounded by crossbows is sickening in our area. It’s great that you are introducing more people to hunting, but the means by which it is done is hurting the normal hunters attitude. |
5036 I feel that we are not getting accurate information when assessing the overall heard and we are killing off way to many deer. Instead of making seasons longer and getting rid of crossbows, get the youth involved by allowing crossbows as they are easier for kids to start with. Extending gun season doesn’t help anything, I feel like your throwing random ideas at a wall and seeing what sticks?!? We need to stop making such dramatic changes and focus on what we can really do to improve the overall hunting experience. This was a very harsh winter and I feel like giving out so many bonus antlerless harvest tags is killing off our heard, and it needs to stop! If all the outside factors aren’t killing enough we keep handing out all these extra tags letting people demolish the heard, but it then you want younger generations to want to hunt? If you want them to hunt have a healthy heard available so they can enjoy watching them as much as they do harvesting them. If your looking to make more money start charging out of state hunters a lot more for tags than you currently do, every state around us charges a pretty penny for a an out of state license and WI doesn’t charge much at all, it’s crazy to me!! It’s an easy way to make more money for the organization.

5037 My biggest concern after watching the video, is you guys are worried we didn't kill enough deer again and trying to find a way to change something again to kill more deer. The deer just aren’t up here like they have been in the past. Look at the graphs that go back 20-25 years on the deer killed each season, way higher. And it continued to be every year, majority of them bucks, because it was hunters Choice back then. Since then t-zone was implemented, and many other antlerless hunts, and things have never been the same. And never will be again if we keep doing that. And now with the positive tests of cwd in Oneida and Lincoln county, the guy in the video wants to create a 350 mile radius area, that anyone can get a antlerless tag and as many as they want if they fill it. There will be no deer left up in these northern counties at all if your going to give everyone antlerless tags. Herd will be gone. Say goodbye to any of your deer license sold for up here in the next few years. It's not like down south wheere they've done that and it recovers quickly, up here that will decimate the herd. I surely hope you're all smart enough not to open up this 350 mile management area. Thanks for your time

5038 How do you expect only 1500 anterless deer to be harvested when your making available 5,000 anterless tags? You invite over‐harvesting and it happens every year! I know because I live and hunt here for the past 30 years! Way too many hunters in this DMU are of the opinion that "brown is down" regardless of sex or size and they use NO judgement or self control in shooting everything that moves. They further state on a very regular basis that “I might as well shoot whatever I see because the neighbors will if I don’t”! In addition to over‐harvesting there is way too much poaching of deer taking place on a regular basis in this DMU. Just listen for the number of single rifle shots you hear just after dark every night and you'll know what I'm talking about! Too many locals feel that they are "entitled" to shoot as many deer as they want to. Plus, dads and moms shooting deer for their children (babies through 8 year olds) is OK with them too as long as they bought the kid a license. It’s pathetic and old to sit on stand day after day during ALL of the deer seasons and see NO deer or maybe one, even when I’m hunting on my own private property!!

5039 I feel your numbers are inaccurate due to natural death, car hits , other animals and the comparison of apples to oranges of the 2018 to 2019 season (that is less hunters , less land e.c.t ) and a lot has to do with the bait ban the deer are heading to private land , food plots , fields the only people that suffer from the ban are those who hunt on public land and the ones that should be are deer farms that we are told are supervised by the DNR in some cases you have even funded them and again took away from public land hunters cwd will run its course just like the fish epidemic did years ago and there is nothing the DNR does will stop it it is hurting not only small business but WILL effect hunting as a whole we have a group of 27 that if the ban continues will probably not hunt 2020 which will reflect on our children well you can see the down word spiral it will have in years to come which also reminds me of a article put out some years ago by a DNR director warning that this would happen if thing didn’t change and if we didn’t have land our children would be hunting inside a fence I for one was not brought up that way nor will my children
I do not think that the state has done a very good job with the Deer population. I spend a lot of time in the woods during the hunting season, both bow and gun season. Over the past 10 years the amount of deer I see continues to drop. This year I saw more bear and wolves the past two years than deer. This year during gun season I only saw two deer in the nine day hunting season. Bow season I saw a few deer but no bucks. Ten years ago I would see deer every time I went out. Now I would be lucky to see them. Very few on my deer cameras too. What use to be an abundance of deer is now next to nothing. We are thinking about going to South Dakota to hunt deer and not even waste our time hunting in Wisconsin anymore. All my years of hunting I have never seen the population this poor. It is sad to see such a good natural resource wasted by very poor management. You should all be embarrassed with your performance.

Please separate public and private antlerless. I see deer on the side of the road and fields of private property. Public land has a significant less member of deer. There isn’t many hunters on public land anymore to make deer move. Most of the people I know that hunted public have stopped for two reasons. Not as many deer and access cut off for the state or county. People are lazy and won’t walk to stands. Can’t help or change that but please allow more access to public land. It’s turning people away from the sport. Look at what crossbow has done to the deer harvest numbers for the archery season. Allowing access would do the same. I would love to show a biologist or anyone the areas that I used to hunt buy access has been blocked by gates or piles of dirt. Young kids are lazy and us older life time hunters are getting old. The quality of the hunt goes down. Please take these two points into consideration. Thank you.

I feel that all of the seasons should remain as is. Each and every hunter should have a choice in which method or tool to hunt with. All parties should respect each hunters decision as to the choice of weapon. There are some hunters that cannot psychically hunt with a compound bow and still want to enjoy the time spent in the field. Without the crossbow season kept in tack, they may feel that they are being singled out. If the rut is taken away from these hunters, they may give up hunting all together. I doubt that the state of Wisconsin would like to see that. Somehow, the DNR should help educate the die hard compound hunters that back when the compound first came out that they were the new form of hunting tool and the long bow hunters needed to adapt to the “new style of hunting”. We hunters should all get along and enjoy what our wonderful state of Wisconsin has to offer all of us.

I really appreciate all the data you provided. As one might expect, it is very hard to make a single plan that fits an entire county. I would like to voice my concern with respect to the numbers. I own land, managed for deer hunting, on the eastern side of the county near Hollister. 4 gun hunters, hunting 5 days, never saw a single deer. This is the first year that has happened and we have owned the land 11 years. I disagree with your possible cause for the decline being due to season timing since I also saw an over 50% reduction in deer on trail cameras from September through November. You can check those numbers by looking at my Snapshot Wisconsin camera if you would like. I am not sure what to do about it if other parts of the country are different but I can only share what we are seeing. This is why I suggest reducing the number of doe permits.

we don't need all these crazy amount if doe tags. Look the population just started to go back up and then the flood gates are opened on does. Limit these! My group always buys extra tags so we have them incase we have a real need to harvest more does, but usually the group only uses a few. Let's get real on the wolf imacpt and CWD. Wolfs need to be thinned ! That's a fed thing. CWD needs to be addressed, this sit on our hands crap and look the other way and tell people to stop baiting is NOT the answer. Other states are aggressive and fighting it and we need to get back and get aggressive. If we do not address the 2 above items, the. The questioner will not be worth a crap...why? Because we won't have a healthy herd to hunt! Thank you for letting me provide my opinion via this manner and thank you for reading this. Stay safe and healthy!
In my opinion the suggested harvest quotas for Langlade County are pretty much spot on. In the last three seasons (I bow and rifle hunt) my sightings of both deer overall as well as the population densities of individual age classes and sexes has really been consistent. Regardless of where the gun season has landed on the calendar has had no effect, to my hunt anyway. In my opinion last year's gun deer season harvest numbers can be directly attributed to not when it was held, not the population of deer, but the weather. A very warm opening weekend followed by a rain/snow maker into the middle of the week and another weather maker for the second weekend left but a couple good hunting days for Thanksgiving Thursday and Friday. And in the north those good hunting days were difficult as well with the wet heavy snow severely limiting visibility.

In regards to the percentage of antlerless permit distribution don't use percentage of private verses public land in the county, use the percentage of deer populations on public/private land. I watched the video for Langlade county. My observations contradict some of what was presented. I saw far fewer dear kills on the roads. Tracks, rubs, scraps, sightings were all far less than 2019. I started hunting in October and spent 60 plus hours with a crossbow and 5 days during the gun season. I am 71 years old. Two of my grandsons hunted for the first time this year. What a great time but they each only saw one deer. I am not sure how long they will stay interested. With no oversight I question how many does are shot on public land but registered as taken on private land, if resisted at all. Please go to Buck Only on public land.

I believe baiting should be allowed. When it was legal we saw many deer and had a most enjoyable hunt. We hunt private property and harvested two to three does and usually at least one buck. Letting many does walk and we're selective by size. The last couple years with no baiting sightings have gone way down although we know the deer are there. Limiting the amount of bait to a dozen apples and a couple cups of corn is all that's needed to draw a deer in. It would be eaten up quickly and would not create a disease hot spot. Having the luck of hunting along an agricultural field is far more productive than trying to pattern a trail in the middle of woods. Fortunately we don't all live on farms. Allowing food plots is no different than baiting and has the ability to create a disease hot spot when small in size.

I believe that the current time put on DMU's that border another county with confirmed cases of CWD is too long. I can understand perhaps a year at most unless another case is found. And the current practice of trying to control CWD was addressed by another state (sorry I cannot remember the exact state now) and they found that that state doing the same as Wisconsin is now made no affect to controlling CWD - just my thoughts. Also, it makes no sense to me (and many other hunters in Langlade) that south of Hwy 64 we cannot leave tree stands up overnight. It is how more dangerous as a hunter to carry all of that in while it is dark out and then again in the evening. I know that the number of hunters are dropping and perhaps that because of the current laws. Just my thoughts.

I sit on another county CDAC and it's my opinion that we need to drastically increase the number of antlerless tags available on private land. Currently, we estimate that the doe to buck ratio on our 500+ acres of property is around 25:1. Our ability to harvest more antlerless deer depends solely on the availability of antlerless tags. It's no secret that private land typically holds more deer because of the habitat we provide. That said, private land owners need more tools at our disposal to manage the herd. Langlade is also one of the most difficult counties to manage because technically only the northern half (or so) is what most would consider "northern forest". The southern half should be categorized as "central farmland". Keep up the good work everyone!

I disagree with the public and private doe tags that we have to buy. I wish you bought a doe tag and it was good for both. I buy a doe tag and hunt 50/50 public and private and would shoot a doe using my own judgement for what I see in the area or if I have shot a buck and need to shoot a doe or not. I usually had better success on bucks on the public land and would shoot the does on the private land if needed. I hunt private that boarders alot of public but legally could buy a do tag and walk 10 yards to far and not have the proper tag. This just does not make sense to me and I know people complain about people shooting all the does on public land but I don't really see that by me and there are not alot of hunters that even go into the public land I hunt.
first off, thank you for letting us share our thoughts. I have three young sons I'd love to get into hunting. My oldest passed hunters safety last year and we tried youth hunt and the 9 day gun hunt. Saw nothing. I just don't see how I can raise a hunter when we don't see deer. I need your help. I hunt the same public land I grew up hunting. Northern half of the county. Every year I see hunters driving around and taking doe from public land. Sometimes I've had the chance to talk to them and find many have private land but come to public to fill doe tags. I therefore don't understand why die permits are based on the % of public land. Not many private land owners seem to take doe on there own land. Don't let doe be taken from public lands.

One issue that I have not seen addressed are the storms that devastated hundreds of thousands of acres of forest in July of 2019. The 20 min. video summarizing the Langlade county 2019 deer population and harvest statistics failed to mention this when presenting the decreases from 2018 to 2019. I am not a biologist, but I would assume that this will have a significant impact on deer population and habitat over the next several years. I do not have any suggestions to "fix it". However, I speak for a lot of hunters in Langlade county when I say it would be beneficial to hear the DNR/CDAC acknowledge this impact, and offer some insight on what to expect from the deer population as the loggers move out, and the forest begins a long road back to recovery.

There have been way too many antlerless permits given out for the 2019 hunt! Langlade county was the 3rd highest county in the state for antlerless permits and this is just ridiculous because the deer are just not here! I hunt in the southeastern side of Langlade county i.e. Jones Springs area. I did not nor did any other hunters in the area hear very few shots the entire season. This entire area has been destroyed by the July 19th storm! The forest is flat in our area and there are very few deer around! Either they were killed during the wind storm or they moved out. You have to take in consideration the July 19th storm and I'm thinking that it was not part of the process when determining anterless permits. Please look into this and thank you!!!

I would not support the recommendation of a CWD zone aggressive harvest. I don’t believe this will mitigate anything other than reducing the overall population. I believe this disease is here to stay and the cure shouldn’t be worse than the disease. Slaughtering deer to “save” them is not a strategy I support at all. I also believe we should roll back to the old DMU’s with some modifications and reestablish the rules from the 1990’s. For example, southern Langlade county (south of Hwy64) should be managed differently than the rest of the county. Completely different habitat and carrying capacity. Also, the current rules/seasons are too burdensome with multiple seasons within seasons. Go back to pre-Dr Kroll. Please.

It seems very obvious that that latest possible 9 day gun season had a dramatic impact on gun harvest. I don’t view this as a valid reason to extend the gun season. While I am a bow hunter, I absolutely DO NOT support limiting or removing the crossbow season. I personally know hunters who have taken up crossbow and stopped gun hunting because they enjoy it more, and are generally more successful. It also afford hunters a better opportunity to hunt during the rut, which hit before gun season in 2019. I have never had any confidence in the predator kill and vehicle kill numbers - that data is in no way empirical. My area gets hit HARD by coyotes - is like to see more focus on controlling that predator population.

Hello, thanks for asking. 4 of us hunted this year for the first 4 days opening weekend of gun season all on private land where we have done a lot of work in the last few years to improve the habitat. We saw no deer at all. Trail cameras showed almost no deer. I do not believe this had anything to do with the late season or the weather. The other thing we noticed is there was very little shooing within earshot of us. The woods was very quite so we could hear a long ways. We need to build the herd back up. Giving out more antlerless and bonus tags is a bad idea. We are considering bypassing the Wisconsin season and going out of state this year.
Our group (9 hunters) hunt both private and public land. We are seeing a major decline in the deer herd we believe is due to a major increase in the wolf population. We are now getting more wolf pictures on game cameras in early November than deer pictures. (North West of Antigo) Our wolf population has skyrocketed the last 5 years. I believe we need to harvest less antler-less deer to make up the difference until we get a wolf season to get them under control. I hunt every day during the nine day gun season and the last two years only observed 6 deer total where 10 years ago I would see at least 6 per day. Thanks for your hard work in this area!

I hunt off of Diamond Roof Road and I haven't seen a buck in the last 10 years. I believe the area has no underbrush for the deer to eat, wolves are a problem, private land hunters are baiting and harvesting too much and there are way too many hunting seasons leading up to the gun deer season. I have been hunting in the same location for over 23 years and my father and grandfather both have been in this area over 70 years. Please do something to bring some large bucks back to the area. It is getting to the point that I will not continue hunting and I will not bring my 3 boys to carry on the tradition if it doesn't change soon.

Have historical weather patterns been considered in making recommendations? Our group was without power for extended periods several times, due to snowstorms, during the 9-day deer gun season. Several hunters decided to end their season early due to continued snow forecast at the end of season. There are significantly more deer in the area we hunt, most likely due to an increase in planted crop land. The number of deer does not change my intention to hunt, it is family tradition. Youth hunts and considerations make to support new hunters are very important. Thank you for making this public comment period available online.

Too many people are buying private land doe tags and using them in the large blocks of forest crop tracts that are owned by timber companies. I was told by a warden that using the private tags there is a gray area since the land is private but open to the public so either tag will work. The age for the youth hunters needs to be fixed. As it is now, a infant can buy a license and hunt early. This can continue until he reaches 18. Way too much early hunting. Could they allow youth hunting for the first 2 years that the youth buys a license to get him interested? After that the youth should know if they like it or not.

I see fewer deer in our forest. We need the deer to keep down the undergrowth vegetation to keep down the wild fire danger. In this era of species extinction I really think we should refrain from calling deer a "Harvest." These are wild animals and belong in an ecosystem of predators who may depend on them: bear, wolves. I suggest that the "hunters" find something else to do. I am ok if someone needs to eat, but the trophy hunting now has really run its course in civilization, All humans need to leave wild animals alone and get over the idea that we have a right to own them and take them for fun.

I recommend going to a buck only harvest except for the youth antlerless harvest. I have seen a steady increase in the number of deer over the last couple of years on my trail cameras. I have not seen as many during hunting hours. Ever since the Earn a buck and tzone years around 2008 our population around Elcho has been very low. There are high numbers if wolves and bears that must be addressed! Until that is then I propose a buck only season. I am someone who harvests at least one antlerless deer a year. So I am not adverse to shooting antlerless deer in general.

In my opinion I believe that baiting should be allowed but only in a certain quantity. Like there shouldn’t be 100lb bags of corn being dumped at once but an amount that will keep deer in an area for hunters. Or allow baiting before season and when gun season hits (because most people only gun hunt) that’s when there could be no baiting. Or just allow small buckets or corn and lures that can be cut up or spread out easily. Because I feel that more deer can be more at risk from lures being in a huge pile rather than spread out in small pieces or very limited sized piles.
Every year its the same talk, saw less and less. sometimes its to the point where none were seen. buck contest pools are lucky to see 1 in 20 with anything on them. most hunters want to go "up north" and hunt in the woods, not go to the city to find deer. the problem with having too many deer in counties like Waupaca and so few in the northern counties needs to be addressed. This is what’s hurting the sport and the overall interest in it. most hunting groups have shrunk to just a guy or two, when 15 to 20 years ago it was cabin full and more kids on the cots.

Same as forest county to many antlerless permits over years past with some rough winters no chance for herd to rebound our crew consists of about 12 and the last few years party hunting have been getting worse for seeing deer in general and we cover lots of country just to find small pockets of deer numbers just aren’t there also some rough winters past to years hasn’t helped, used to see 30 deer in a season now lucky to see a dozen not many with horns most bucks don’t have chance to make 2.5 years old before harvested.

I personally witnessed more wolf sign than ever. Additionally, fawns and other deer that were present in summer were not seen during the fall. The number of deer on trail cams was drastically lower in 2019 that in 2018. Overall deer sign and sightings were down significantly. Multiple days spent in perfect weather conditions in early Nov produced zero sightings and dramatically less sign than previous years. In my opinion the amount of deer is drastically lower than in most of the years (42) that I have hunted.

I have been hunting in Langlade County for 42 years. I have seen deer populations go up and down. In the past 6 years the DNR has put so many rules, regulations, and seasons into deer hunting that from year to year you need a manual to keep up. Many of my friends have quit hunting because the anticipation of deer season is gone. Go back to a 9 day traditional season. Let a hunter get a doe tag every fourth year. Bring back tagging stations. It would bring back the tourism money to the northern part of the state.

I would like to suggest splitting the county similar to Oconto County. I believe it is very unrealistic to set quotas and manage the county when there is a vast difference in the landscape. I personally have been hunting the eastern public forest lands for 32 years and have seen a drastic decline in the deer population. Splitting the county should help to better manage the deer population by distinguishing the farm lands from the forest lands. Please take this into consideration and thank you for your time.

Sure would be nice if the experts who are recommending we shoot more deer and then ask why hunter numbers are down is for them to actually take a walk out in the ackley wildlife area or any of the public land and tell us where all these deer are because the deer are not here like you say they are I’d gladly take anyone of the experts out and walk the ackley wildlife with them when there’s snow on the ground and count deer tracks it’s VERY DEPRESSING I’ve hunted ackley for 22 years and I’m also a logger.

Please do not change the crossbow season. We as hunters are attracting youth and women to the sport when hunter numbers are dwindling. Because traditional archers are whining we have to change a ethical legal way of hunting? I hunt with both and it should be my decision to choose what I use. Deer are not being over harvested, so why the problem? It sickens me to hear traditional archers complain that all the bucks are shot before they can hunt. Season is the same for both, so get out and hunt.

Please stop killing does! We need the deer herd to rebound! The stats you have given means nothing to me! We are seeing low numbers of deer! I have 3 grandkids that i am trying to get into hunting! They lose interest because they are not seeing anything! Please do not change the crossbow season, leave as is, i am finally getting one of my grandson's to hunt with a crossbow and trying hard to get my granddaughter into crossbow hunting! PLEASE NO DOE HUNTING FOR AT LEAST A YEAR! THANK YOU.
I think it is unfair that I have to pay extra for antler less tags these past few years in Langlade County. Other Wisconsin residents get antler less tags for free with their licenses. And there were plenty "bonus" tags available for purchase last year throughout the season, so don't say it's to limit to harvest - that just isn't so. Give them to us in Langlade County like others get them. We are essentially being taxed again, for the same thing others get with the license. It's a rip-off.

I have owned deer hunting land in Langlade county for 20 years and have seen deer populations decrease dramatically. I believe such is due to the predators of bear, coyotes and wolves along with some years of over harvesting with too many antlerless tags being issued. In addition, I'm a gun hunter and by allowing such a long season for archery, especially cross bows, it has affected the gun season decline. 1st, cut back on the bow season and 2nd, do something about the predators!

Please do not consider a antlerless season for Langlade county. I would like to see one buck tag with the option of purchasing a antlerless tag. Because I have been very selective in the deer I harvest, I have seen an increase in the population of deer over the last 6 years where I hunt, but still not to the numbers I would like to see. Neighbors around me have also been very selective to keep the herd numbers up. Sometimes hunting is about seeing deer rather than shooting deer.

I am rather surprised that we have yet to address a proposal for antler point restrictions on the buck harvest. With the possibility of hunters harvesting a buck both with archery and firearm equipment. I find it rather disturbing that we aren't addressing this issue. Something that should be considered is the harvest of Bucks with 4 points on one side. Until we do this we will struggle to balance the buck/doe ratio and certainly with the size bucks being harvested.

I think you should do away with private and public doe tags. If you want a certain number of deer harvested sell a doe tag to use anywhere in the county. Last I checked deer do not read public signs and will cross in and out of public and private lands. If your goal is 1500 deer harvested let all hunters have equal opportunity to harvest not just private land owners. If you sell most of the tags to private owners other people have no reason to hunt this area.

I commend the committee for reducing the number of antlerless tags available. I do believe the deer herd is decreasing at this current time and not being maintained. I believe this lead to the decrease in harvest number not the DNR smoke screen of a late season and bad weather. I only ever hear excuses of lower harvests and not actually listening the majority of hunters who are out the woods. Kudos for reducing the harvest quota. That is the right choice!

Our area got hit hard in July an the few deer we had know what happened to them u keep handing out more bonus tags every year an wiping out the few deer we have also what the hunters don't shoot the bear coyotes an wolf do to the population. Also u want more hunters but in our area u keep blocking logging roads off your not going to get hunters to walk more than 500 yards from there vehicle. Open the logging roads back up.

There seems to be an abundance of coyotes in the area I hunt. Some nights I can hear three different packs going crazy. I have to believe they are taking a decent number of deer out. Is there data on just how many? If it is a lot is there some sort of incentive (bounty) the DNR could provide to encourage people to hunt/trap them? I hear more people getting in to hunting them just for the challenge of it, but maybe there is a way to get even more.

Hello. I'm just saying I abide by the laws an have not baited in the past 3 years. But neighbors around me have an my son an I have not shot a deer. I think baiting should be allowed in my area. We hunt the allotted time an still have not seen any deer. I see them on camera. But not during hunting hours. My son has been in the youth mentoring program an goes with me but I think he is getting discouraged because we haven't shot a deer.
I feel like the deer population is healthy in Langlade county but I hunt in the southern portion of the county. I am concerned about CWD. I do not support major changes to the rifle season length or bow season at this time. I think lengthening the gun season could create a higher buck harvest rate which may not be good for herd quality over time. I of course am basing my opinion on my experience and not on data, for what that is worth.

Hi, I hunt where landage and Oconto meet where the forest is destroyed from all that vor-text storm that went through in July 2019. That part of old management unit 44 needs to let the deer come back. Once the forest is cleaned up, it should flourish with wildlife once it puts new growth of young vegetation that will support deee and other wildlife. So stop baiting by illegal hunters and keep the doe permits out of this area. Thank you.

Per my observations, deer populations have been increasing each year for the past 3-4-5 years. They are much higher than they were in 2017 and higher than 2018 and again higher than a year ago spring. The past antlerless harvest has not controlled the herd. Last years low harvest was late season -weather related, not at all indicative of the population. We should increase the antlerless harvest or disease and a bad winter will.

The only opinion that I have is that the youth hunt should be allowed to kids that should be allow to go two season until they reach 15 years of age because by the time they would know if they want to hunt or not. Also you should only be able to hunt from daybreak to 10am like turkey season use to be that way the folks that like to use a bow can sit in the afternoon and evening and wear camo and not blaze orange for the week end

I think predator management should be taken into consideration especially in Langlade county. I think a large factor is fawn recruitment which is largely impacted by the number of black bears present in Langlade county. I think it's absurd that it can take a resident 10-14 years to get a bear tag. I think the numbers of bears has greatly increased over the past 15 years and believe it should be a factor when issuing bonus tags.

Please do not change the crossbow season. It is a ethics humane way to hunt. Let’s not pander to the traditional archers who claim crossbow hunters shoot all the deer before they have a chance. They should get out and hunt, you don’t have to wait for the rut to be an effective hunter. Crossbows get people out in the woods when hunter numbers are dwindling. Why wreck a good thing because a few people piss and moan.

I have a cabin in this unit. I have hunted there for 35 years. I hunted for 8 days last year. I never seen a deer. I beleive your deer count is way off. 3 year plans are nuts. I beleive you have to do it yearly so you can take into account winter kill sooner. also there is way to many preidtors. wolfs bears and coyotes are killing all the fawns. stop the doe tags for a while. also they should enforce the laws on baiting.

The reissuing of tags for any/all deer that are turned in for CWD testing could possibly be the easiest way to devastate the deer heard. It could potentially take one person/group/family that just likes to shoot deer and not manage the deer heard to over harvest an area. If a person wants to donate a deer for testing that is perfectly fine but they should not be rewarded for just shooting deer.

I am not a doe hunter i only ever hunt bucks the best buck hunting was when there was no doe hunting .it is very rare when i don't kill a buck but i can tell you since the introduction of wolfs it is getting darn hard.Sometime down the road cwd will cover the whole state so there will still be game farms .i hope Wisconsin can make enough money from that cause no one will be hunting just the wolfs.

I think where farmland is adjacent to public land the deer population is elevated. When far from agriculture the deer population is low. It would be helpful to give private landowners preference on antlerless tags in agricultural areas. The summer wind storm also created a lot of hiding areas and many trails are blocked. This creates congestion on open trails. These blow downs need to be cleared.

We hunt the county forest where it meets Lincoln and Oneida county forests. Deer population is way down due to the heavy snows of 2018-19 winter and out of control bear and wolf populations. Too many antlerless tags is drawing in too many hunters who have never hunted there coming in thinking the population is high when it is not. I fully support buck only for three years with NO junior tags.
There seems a wolf problem in this county as evidenced by local landowners with cameras are there any plans to decrease the wolf population to ensure adequate deer population for hunters. If you are going to extend gun season and bonus tags, those privileges should be the rights of landowners exclusively. Nine days of trespassers is enough. Perhaps the hunting age should be reassessed.

In regards to the CDW situation. The disease will spread, it is inevitable. Slowing the spread would be very difficult unless drastic measures are made to reduce the deer population which is not what hunters want whatsoever. I would hate to see it like it was 10-15 years ago when the deer population was so sparse. I do not support excessive shooting of deer to try to control cdw.

The 9 day gun season is too short. It leads to frantic gun hunting where people reduce their respect for the hunt, the deer, other hunters, and the landscape. The gun season should be increased in length, using the state of Michigan as an example. 15 days long, set day every year so sometimes you get a “soft start” on a week day. Leaving some good rut hunting days for archery.

I think predation on the deer population in Langlade county is High, with the amount of forestry to agraculture to include reservations gives prime habitat for predators to include Bears, Wolves and even mountain lions. Bears and Kyoties to be the major factors in the predation toll on the deer population. I reccomend bear and Kyoty hunting to control the populations...

I have observed hundreds of deer in late picked corn fields this spring. One field in particular had over 250 deer plainly visible. Based on the numbers of deer observed in these fields in comparison to numbers of deer observed in previous years in similar fields my guess is that the deer population survived the winter with good numbers that warrent high quotas.

In the area I hunt and live we have a lot of hunting pressure due to the public land around us. If a buck is killed it is never older than two years and it is rare to see a buck at any time but the doe population is out of control this is a very low quality deer herd. I would support the no buck kill for some years. And let kill a doe so the herd won't grow.

Hunting pressure is very low in the northern part of the county. I see an average of one to two hunters every three years! The deer numbers are much lower in the northern part of the county compared to the southern part. With the population numbers being what they are in the north you are going to lose even more hunters. Bonus tags help attract new hunters.

I live about a 1/4 mile from Shawano county where they give tons of tags away for free, and I see very many antlerless deer, yet if I want to harvest one I have to purchase a tag. I think the changing of the management zones by county was not the right move in general as the population in one portion of the county may be totally opposite in another portion.

Please drive around and look at all the deer that are on the landscape in Langlade County throughout the year. Just looking from your treestand during the opening weekend of gun season is ridiculous. There are many, many deer that are available for harvest. Now more than ever with folks out of work and the food supply chain disrupted. Let people hunt!

The current structure for the gun season is not conducive to annual goals or annual enjoyment. The 2019 season was too late. We should adopt a structure like the state of Michigan where the hunt is on the same days each year. Remove the volatility associated with the hunt timing and give hunters the best days to see peak deer activity in the woods.

The number of deer we have seen has gone way down in the past few years. Hunter numbers have been dwindling also. I've seen way to many fawns taken where the animal is able to be picked up with one hand. I believe that hunters can harvest fewer doe and bring the herd here back. All hunters should be skilled enough to tell the difference between a doe.
When this area was doing buck only we we finally starting to see some good numbers of deer. Since you have started allowing antlerless harvest deer sitings all but vanished. I hunt with a group of six, we bow and gun hunted roughly in the same area, we saw two deer!! Deer signs were minimal at best. Please go back to Buck only in this unit, please.

The problem with this unit is there is a substantial difference from the northern portion of the unit to the southern portion of the unit. The northerner portion is almost all big woods and almost no agriculture, and the southern portion is the opposite. Instead of dividing this unit east and west could you consider splitting it north to south.

Locals have less chances to harvest deer when tourists come here to hunt there are also poachers who reduce our chances along with others buying tags and having others fill them for them there are also baiting/feeding problems we have seen less healthy deer most look half starved Hence why they feed on crops an wonder across roads to find food

When I hunted Langlade county in 2018, I saw multiple does a day, but only one small buck. Almost every state has changed there buck only policy. Modern studies show, that you need to harvest does in order to have a healthy whitetail population. There should be no such thing as a “buck only tag”. Only either sex or antlerless only bonus tags.

Please, no shooting of does for at least two years ! I am trying to get my Granddaughter and grandson to sit all day with me in my stand ! it is very hard to keep their concentration on deer and the wildlife if there is nothing to see ! Eight deer seen in total sitting everyday except half of last saturday and all of sunday !! Thank You

We need to stop all the extra doe seasons. Hunters should hunt regular season schedules. The Northern zones have enough winter, and predator kill to support mass doe harvests. If anything private land owners that manage their property for whitetail habitat should harvest does based on the population of their particular property.

I was hunting in western Langlade County and eastern Lincoln County last year. Our family has seen fewer deer over the past few years even though we have more eyes in the woods with some of our children now starting to hunt. The population in the south and central parts of the county seems much higher but not in other areas.

Wisconsin's DNR has handled the CWD in an poor manner. I read an article years ago that someone in the DNR admitted they spent millions in a wasteful manner. I have zero confidence in the DNR's ability to manage any wildlife, such as the huge bear population, fish, deer, grouse, etc. You get the idea!

Due to the nature of my work, hunting times for me are fairly limited. Although the question wasn’t asked in this survey, if crossbow hunting becomes unavailable for the general public, I would no longer be able to justify buying a hunting license due to amount of time available for me to hunt.

I saw deer through the season, but very few. The winter again was difficult for the deer to find adequate food to eat. Trail cam pictures from March 2020 showed deer in very rough shape. Just thinking a feeding area for them is needed for them to more easily make it through in better shape.

The big wind storm most likely played a huge role in the ability to see deer. They were able to easily find large hemlock trees on the ground which hampered movement. All and all, it was an enjoyable season. We'll need to see what next season brings. Please, no kneejerk reactions.

I find that private land deer numbers are doing very well but the public land that I hunt is far from being good. I'm hard pressed to find good deer hunting on public land in places that use to support a good herd. It's tough to get kids into hunting if they do not see deer.

Need to consider buck only for a few years and not harvest so many antlerless deer which destroys the population. Also I feel we need to get the “real” numbers of deer predators established with bear and wolf populations as this is a big factor as well in my opinion.
Seeing fewer deer due to over harvest of does especially on public lands would like to see only youth hunters able to harvest does let the youth manage the does that need to be taken that gives them the greatest opportunity to get a deer and get hooked on this great sport.

I strongly recommend the Langlade County CDAC separate the county in two zones. One being southern (Antigo area) and the other being northern (Bass lake area). The geographic difference between the two area are significant in terms of topography, vegetation and habitat.

I think junior hunters and mentored hunters should be able to shoot either sex. Landowners and their families should also get anterless preference as many are contributing to improving habitat on their lands not only for deer but other wildlife species as well.

The storm damage that occurred in the Elcho, Post Lake & Lily areas with subsequent logging are going to have long term affects on the deer population for the next 10-15 years. Care must be taken order to keep from crashing the deer populations in those areas.

All these youth hunts (all not just deer) need to stop!! Young hunters need to be just that hunters, not given special privileges!! I can see with handicapped, but that's it!! Time to bring back the deer, duck, populations!! And true hunting tradition!!

We operate 1500 acre farm in eastern Langlade County, and western Oconto County. I have seen noticeably if you were deer this spring than in the past. I am in avid hunter And sportsman. I believe there are few were deer than the estimates indicate.

In Langlade County the amount of hunting pressure and deer seen might have been influenced by the tremendous storm damage from the July high winds. Still I support the recommendations to keep our herd healthy. Thank you.

I would like to see an open season on wolves and a reduced point minimum for black bears in Zone B. Also, make crossbows and bows the same, no added fees. I would love to see increased fees for non-residents for ALL tags and permits.

It is like 2 different counties if you split highway 64. To the South plenty of deer. To the north not so much. We call the triangle of 64 east/west, 52 north, and 55 north which deer numbers are not like the rest of Langlade County.

Please provide the estimated wolf and coyote population in Langlade. We are seeing less and less deer. We are very concerned with the lack of deer being seen. What is being done to monitor the population of wolves and coyotes?

There isn't the amount of deer in north county as there is in south. Much more farmland/fields in south vs woods north. Antigo has a very healthy deer population while Elcho/Post lake has very few and small population.

We have a very high amount of wolves in this county and the dnr needs to address it I found many kill sites this last winter and it just pushes the deer out of there winter grounds creating a tougher winter for them.

My son and I hunted on 240 acres and saw 1 deer all season. We did hunt enough times that we should of seen a lot more than 1. My son was discouraged and that's the last thing we want for this younger generation.

They should rethink the banning of using bait. Reason being people still feed the animals around there house. Hard to hunt deer when there main food source is around the houses in the area and not in the woods.

Think you should go back to the old way either a buck or a doe with your archery tag then their would be no need for all those tags every year and it would cut down on the number of bucks taken with crossbows.

You have to do something about wolves and coyotes, in the last year it has become relavent that the population in this dmu has become over run with canine and it makes for enjoying the gun season impossible.
We are concerned about the number of deer taken by wolves, coyotes, and bear in this area. It has influenced the lower number of deer seen and harvested during the bow and gun seasons in the area.

Some type of baiting rather than trying to turn hunters into farmers with the same outcome, help the farmers we now have that know what they are doing and save everyone a lot of time and money!

The deer I have seen in person and on my game cameras look good. Recently an unharvested field of soybeans near my home had 60 plus deer. This was a 40 acre field very near forested area.

ONLY GIVE OUT ONE ANTERLESS PERMIT PER PERSON NOT UNLIMITED TAGS THAT IS NUTS KILL ALL THE DOES AND THERE WILL BE NO REASON FOR ME TO HUNT IN LANGLADE COUNTY OR ANY WHERE ELSE IN THE STATE

There are too many predators, mainly wolves and bears...we see more of them than we do deer. Bring back baiting, hunting big timber with no bait is very boring and not very productive.

This is a largely wooded region with lots of public land and a low deer per square mile ratio. Stop handing out antlerless tags so the hunting can go back to how it was 20 years ago.

While I understand the need to raise prices at times for our hunting licenses, I believe our pricing for out of state hunters is extremely low. I believe we need to raise those fees.

If the rifle season is extended, which I support, the muzzle loading season needs to be adjusted. Follow Colorado's muzzle loading season structure and hunt early like bow season.

Bringing back baiting for deer would make hunting Langlade country good again until you bring back baiting you are just wasting your time and money hunting Langlade country

Whoever does your deer numbers needs to stop hitting the crack pipe before they are counting and listen to the people who are seeing more wolves and bears than deer.....

Your deer counts and herd objectives have messed up the population of deer statewide. You can’t count. CWD is a money grab for the dnr. Not a real issue in this state.

I hunted everyday in the area and never saw one deer and I sat everyday in an enclosed stand. Very very very disappointed season. I’m ready to give up deer hunting.

What about baiting.? There has been a ban for awhile now and even in the original county it hasn’t gone down so why not allow it just during the hunting seasons

Area of hunt was effected greatly by the wind storm of July 19, 2019. Either your unable to travel or its been clear cut, to an extend, to remove fallen trees.

My experience, as a landowner of 92 acres of wooded land is that the deer herd has wintered well and that the population of deer is too high. Thank you

The 2019 season is the first season in my lifetime that no one in our group was able to see a single deer, with very little shooting heard in our area.

I would certainly both enjoy and recommend a longer rifle season, and possibly extending the muzzleloader season to accommodate more days for rifle.

There should be a lottery draw for hunting wolfs in the northern forest they are destroying our deer populations in the north and must be regulated

In 2019 there was A lot of standing corn in Langlade county all the way thru January. I believe this had a major effect on bow many deer were seen.
I noticed multiple deer kills from coyote and wolves this winter due to the deep snow. Also say coyote chasing deer 2 times during rifle season.

Start a wolf hunt it is getting overwhelming on how many wolf kills we have had. We do not have that many deer anymore due to wolves and bears.

Bring baiting back if you want to see more deer killed I hunt Wisconsin I live in Illinois last year without baiting I didn’t even see a deer.

We should raise the out of state license fees, we should make this state a trophy state. No shooting small bucks!!! Educate on culling does.

Bring back baiting for deer and people will start hunting Langlade country again and actually seeing deer. otherwise it is a waste of time.

You should really start being truthful about cwd and that humans can contract it from deer. My dad died from cjd that He got from deer.

I would like to see a long gun season state wide. For those of us who work and pay taxes the 9 day season is not a good thing.

Every year I find body’s of deer killed by wolves. I hear more and more wolves each summer. Time to bring back a managed hunt.

Only give out one anger less permit per person in landlade an northern forest unit Not ONE PERMIT PER DAY THAT IS REDICLOUS

My concern is the large number of predators such as wolves,bear,and coyotes and the inability to control the problem.

You need to cut the county in half for doe permits there should be no doe permits in the northern part of the county.

There are a lot of predators in the area of the county that I hunt. Are there any plans to bring back a wolf season?

Bring baiting back to langlade county, so the youth stay interested in hunting and not just looking at trees all day.

Would like to open baiting ... in small amounts again .... in my experience, No attractants means no deer ....

Some of reasoning for less deer sightings in area was due to July storm that changed landscape dramatically.

Too many antlerless deer and bucks are over‐harvested. Bring back earn‐a‐buck especially on private land.

No more incentive to buy a license with low to no probability of seeing or harvesting a deer any more.

Keep the limited amount of doe tags and implement a point restriction of four points on one side.

Reduce the bear population. Reduce the wolf population. Too many predators in the county/state !

There was a lot of standing corn through out langlade county during all deer seasons.

the winter death rate was still high on and around my property due to predators!!!!

If there is a low deer season kill, consider a later season. Or Christmas hunt

I would also object to a 19 day gun season and a shortened crossbow season

Please allow baiting so I can compete with those that disregard the ruling.

Something needs to be done to better manage the predator populations.

Seen 4 deer all season and wish there wasn’t as many doe tags

the north 1/3 of langlade County should have no doe tags.

Something needs to be done about the wolf population

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 275
   - I visit this unit for non-hunting purposes: 144
   - I hunt in this unit: 578
   - General interest in this unit: 105

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 559
   - Bow: 259
   - Crossbow: 245
   - Muzzleloader: 192

3. How many years have you hunted deer in this unit?
   - Minimum: 0
   - Average: 24.98
   - Maximum: 68

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 250
   - Mostly Private Land: 116
   - Public and Private Land About Equally: 100
   - Mostly Public Land: 50
   - Exclusively Public Land: 52
   - I did not hunt in this unit last year: 10

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 15
   - Not too crowded: 63
   - Neither crowded nor un-crowded: 65
   - Somewhat crowded: 72
   - Very crowded: 94
   - Not applicable: 9

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 186
   - Fewer: 204
   - Same: 146
   - More: 63
   - Many More: 14
   - Unsure: 14

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
- Implement an ANTLERLESS HOLIDAY HUNT: Not applicable in this DMU

If a Holiday Hunt is held in a Farmland unit...
- EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: Not applicable in this DMU

If the Population Objective is not "Increase"...
- Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 75 506 46

If a Zero Quota (buck only season) is adopted...
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?
- VALID: 298, NOT VALID: 260, Unsure: 69

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit? Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

</table>
The Wisconsin DNR continually uses old out of date models for projecting deer herd quota tags in all areas of Northern Wisconsin. I lived here my entire life, and hunted almost every inch of this area at some point or another. The Wisconsin DNR only cares about the amount of money they bring in and it affects the hunting as a whole. Our area is hunted hard due to the vast amount of public lands and the non-locals are the ones hurting our deer herd. Last year for example on Tuesday of Gun Deer season, I was driving south and was passed by a vehicle coming off an area exit with 4 fawns on the back of their SUV....4 fawns.... I am disappointed in the DNR continually allowing the killing of antlerless deer in our area as when compared to other areas of the state we have high numbers of wolves, bears, bobcats and other predators. The deer herd continually is under pressure from unethical hunters, native americans, and predators, and has never gotten time to rebuild as 2 out of 3 of the last winters we had record or near record snow falls also putting a strain on the animals. I would much rather see buck only kills for the next 3-5 years depending on how the deer herd responds as antlerless could open sooner if it builds quickly. I am disappointed in the DNR along with other hunters in this area where soon we might not even buy tags to hunt because there isn't the animals to hunt. With that being said I will give you an example, when I first started hunting at age 12, it was nothing to see 10 - 15 deer while sitting out in the woods naturally. Fast forward to when I am 30 years old, I am lucky to see 2-3 deer while sitting all day long during rifle season on private land.... Deer drives when younger, use to push 12-15 deer out a drive, now its a big deal if we push a deer out even on a drive on public land. Now I grew up different than the new age commercialized hunters due to the Outdoor Channel. I only shoot what I am going to eat for the year, along with the rest of my family. I actually enjoy sitting in a stand and just seeing / watching animals and it isn't a blood sport. Unfortunately, the last few years because of the T-Zones, lack of bear tags in our area, antlerless permits, and promotion of the reintroduction of the timber wolf, I am at a point where I am about to call it quits hunting in Wisconsin. I have not killed a deer in possibly 6 years if I remember right, it could be longer. I have bought a patrons license since I was 18 as I partake in everything Wisconsin has to offer, and I am at a point where I rather take my money and go out west to hunt, where the game wardens talk to you and are not out to harass you, you see animals, and you enjoy the experience. I really hope these comments hit home with someone in the department, as this is not an attack, but an honest observance of how things are ran. To reiterate what I would like to see in Lincoln County, is no antlerless kill for 3-5 years so our herd can get back to what it was when I first started hunting. Right now hunting to me is just family time as it is not enjoyable due to the poor management decisions over the past 18 years I have been doing this. Make the right decision with these deer council advisory committees and listen to the people that hunt in the area, especially the forested parts of our county as we are split between farm fields and forest. The farm fields can get their farm tags, and also private land owners can get antlerless where deemed necessary. But by having bonus permits available and allowing antlerless deer kills to happen, a majority of the kills in my opinion are on the public lands where our deer herd is down to non existent. I say that with a good understanding, my brother is a logger and in the woods all year, we still do deer drives, and we see more hunters and less deer in the woods every year more and more. Thank you for your considerations of my thoughts, as again the whole idea of these councils is to protect local deer herds and make hunting sustainable for the future. Right now hunting is not sustainable under your models at the DNR.
Start off saying I appreciate the Lincoln County CDAC board for what they do. For my input, I was out many days throughout the archery season, was out everyday during the 9 day gun deer season and most of the muzzle loader season and I truly spoke with a lot of hunters, mainly on public land (including MFL open). I would say it didn't matter if I spoke with hunters in Harrison Hills, Underdown area, New Wood, Tower Road, Wilson, Somo etc hunters are not seeing the deer on public land and this includes private owners that abut public land. I would never say everyone was disappointed but when I speak to the number of people I speak with, I will disagree with having the number of public land permits that the cdac has recommended. Now, I have heard members of the cdac board say if the deer aren't there you can't shoot them or people have to be there own conservationist. Although I agree to a certain extent I will say this, you have people that are conservationist but I think there are far more people that just want to shoot a deer no matter if the population is ready for it or not just because they haven't seen a deer this season, last season, or forever. For the cdac member that stated he would like to see higher public land permits to increase tourism, if you increase the number of public land tags that doesn't mean more deer will be shipped into Lincoln County public lands. Those tourist that may come, because of higher antlerless tags, will find out that it was a waste of time to come to Lincoln County and won't return. You need to first increase the deer population and then increase the tag numbers. I do believe that Lincoln County has to be one of the hardest counties to please hunters due to the break up of ag land and northern forest. You will never please everyone but I do believe we have to split Lincoln County into two separate units east and west. There are a good number of deer in the southern 1/3 of our county (with the exception of the southwest corner of the county) and work your way east of State Road 17 north to the County Line. Of course there are exceptions where deer populations are to low in this area but I'm sure you know what I am getting at. Finally, I found it interesting how the wildlife biologist brought up the CWD zone only after the cdac board voted on the quota for the antlerless tag numbers. Yes you need to go in order, to not get off track, but I believe most people listening in on the April meeting didn’t know any of this CWD zone was getting brought up. Also it was confusing during this CWD talk. It was stated this was a small zone which I believed, among others, was the 2 or 3 mile radius around the locations the CWD was actually located. Afterwords finding out this "zone" could extend literally west to the City of Tomahawk, south to County Road J, east to State Road 17 and then back north to the county line. I think this was very misleading on the wildlife biologist’s part and I would like the cdac board to bring this matter back to the table on weather the board approves this large area as the zone where a "liberal" amount of antlerless tags would be given out. I am up for the fight against cwd and believe it’s a serious issue but I believe this area is far to large. Lets focus and hit that immediate area hard (2 to 3 mile radius) and if find any more positives are found extend out. Thank you for your time.
There was no option that fit for me for the final question: How important were each of the following concerns in forming your opinion about the CDACs recommendations for this DMU? So I have included the following summary to clarify my reasoning. My reason for advising that we need more antlerless tags and even an antlerless only season, is because our buck to doe ratio is terrible. I see plenty of deer during the hunting seasons (as would most hunters if they put in the hours), but the deer I see are mainly doe and fawns. The majority of the breeding buck population is 1.5 year olds. In my opinion, we still have not recovered from the past -buck only - seasons we had in Lincoln County in the last 10 years- I think we had 2 years of it in recent times, on and off- around 2010? Can't remember the exact years. The combination of those past years hunting only bucks, the current increase of crossbow use which have made it clearly easier to harvest bucks(which I believe crossbows need a much shorter limited season due to there potency of kills compared to archery), the rise of wolves in the area, and recent deep snow years - have crippled the buck numbers and their age structure. We have a very young age structure of our bucks. I think the older bucks are getting worn down with the demands of the rut - with too many does to breed - they are easy pickings for wolves/coyotes or just starvation in the more recent harsh winters After losing so much body fat rutting intensely. Also the ban on feeding of these bucks to help them gain some fat reserves post rut because of the VERY few positive CWD results on the Lincoln County boarder has been the nail in the coffin for them. Overall, my recommendation to get a strong heathy balanced herd, with a productive rut, and a better chance to harvest more mature bucks, we will need a better balance of the buck to doe ratio. We will need higher doe kill. I believe that many people just pass a doe with more meat on her to shoot any little buck they see- status of getting antlers I guess. Harvesting more does will create a better buck to doe ration, and ultimately provide more opportunities to harvest a mature buck for hunters. But most importantly it will create a better balanced deer heard with the proper age structure to maintain itself. The deer herd is out of balance. We have a decent number of deer, but too many are does. We need a way for more does to be taken. Possibly an “earn a buck” type hunting season. Too many hunters will pass a bigger doe - with more meat on her bones- just to shoot a small 1.5 year old- spike, four or six point buck. This creates a dysfunctional unbalanced deer heard. As managers of the resource, it is not your job to please hunters all time, sometimes you need to take a stronger stance and do what you know is best for the resource- (the deer herd) you are managing. I ask that you seriously consider my requests. Thank you.
I just wanted to share that the effort I have seen put forth by hunters to harvest deer has decreased in my opinion and I feel like that led to the low harvest numbers more so than a possible low herd number. People seem to be confined to riding around in UTVs or trucks and not actually getting out and walking around. The bait ban probably has some affect also because that was the way a lot of hunters, especially tourist type hunted. Just set up a bait pile and sit and watch it. Now more effort and homework to pattern deer is required and people don't seem to be as interested in that, which is sad. I will also say that there was a crazy amount of "wildlife" corn being sold last deer season even though there was a bait ban. Obviously there was still a lot of baiting happening. I just hope that we can find a moderate consistent antlerless goal that ensures young hunters a better chance to see deer, not necessarily having to shoot one if they see it. If young people, and people in general can see more deer and not feel the pressure to shoot any deer they see I'm afraid they won't see another it will be better for hunting. I personally have had my best days hunting when I never actually shot at a deer, just got to see a lot and enjoyed being around them. One more thing I will add is that a big part of the hunting tradition was bringing the deer into town after harvest to register it, talk with the other hunters, grab something to eat and spend some money around town. With the change to by phone registration a lot of that tradition was lost, again losing more interest from hunters I feel. If there is one thing I would push for to have back is in person registration. People really seemed to enjoy it and I feel if you want to talk about having any concern about how hunting affects local economy, by phone registration seems to be the biggest limiting factor I can think of. People seemed to shell up in their cabins, no interest of coming into town much. Non locals would harvest their deer and then just head back home. In person registration gives people a good reason to come into town and spend some money. People want to check out the deer being harvested, talk with other hunters and so on. As I eluded to before there was none of that going on with the new registration. Thank you for allowing me to share my input and hopefully though long winded my opinions are helpful.

I have gone to past CDAC Meetings 4 years. The Area NW of Lincoln County is known as Newood Area. Formerly a good portion of Zone 32 during Quata System. The Forested area has seen a drastic deer population since Early 90's. Heavy Predation an increasing attitude of selling large amounts of Antler-less Tags. The hard winter of 2018 and severe cold took a further toll on the population. In a 160 acre tract of logging I found 7 dead deer 6 were fawns froze in a fetal position, Gave these pictures to our biologist. She had no way to make adjustments to compensate as Lincoln County is both Agriculture and Forest. She had to make a recommendation on county as a whole for Antler-less tags. Since Scott Walker made the management zones the county, there is no way a biologist can compensate for deer decline. 3 days of not seeing deer was enough. Buck kill very low: DNR has excuses for that/ late season, too many snow storms. In the past if the kill was low we compensated with a lower or no antlerless tags. now we seem to be more interested in how many antlerless tags we can sell. You wonder why interest in hunting is falling off. At the last CDAC Meeting for 2020, a gentleman made a comment from County Logging that he is not seeing many deer in the large tracks being logged in the Newood Area. Here is a fellow spending lots of time in the woods: do we value his opinion. My cameras for 2019 had about half the deer numbers and a steep decline in mature bucks. The last four years the question to the CDAC committee has been can Lincoln County be divided similar to Marinette County. Forested seperated from Agriculture, this would allow the Biologist to make adjustments and regrow the herd in forested area. How do you create more interest in Deer Hunting: give us deer to see keep the interest up.
I have two main concerns with the County proposal. 1. While I like increased opportunity when deer hunting, do any of you remember when we had hunters choice tags in the early 2000’s? Remember how many deer were on the landscape? This of course was when the DNR, now CDAC did not make thousands of antlerless tags available on an annual basis. I believe this herd has been mismanaged for years and the harvest numbers and number of animal sightings directly reflects my point. I believe the number of antlerless tags available should be reduced by 50% to bolster a fragile herd. 2. Your thought to have a sport hunt to "eliminate any spread of CWD" is insane. I cannot believe that this passed. The DNR increased tags in the southern part of the state when CWD was first discovered in Wisconsin. They used a similar approach, all this approach did was decimate the deer herd for a number of years. Guess what.....they still have positive CWD cases. All that you are going to achieve by doing this is a slaughter of a deer herd, you WILL NOT eliminate the spread of CWD. I believe this is a completely irresponsible action that will impact the herd, sporting opportunities, land prices and the local economy with few people wanted to hunt in that area. I know that everybody cares greatly about these topics. I thank you all for volunteering your time to sit on this board to represent the County and those with interest in this County. With that being said, please, please think about the impact and ripple affect created before making decisions that recent history has shown do not work. If we don't learn from history we are bound to make the same mistakes over and over again.

Dear numbers have been very very down for quite a few years. We used to have great hunting seasons years ago and at least see a bunch of antlerless deer and small bucks on our little food plots and pass them up so they can grow. But since the deer population is super down, possibly because of wolves and possibly for other reasons, I take that back, I know the wolves are taking them out to some degree 100%, hunters seem to shoot anything brown that walks by now because they figure they will be no chance of them seeing another deer. That's hurting the population around us even more. Sightings are down, trail camera pictures are way down even in the middle of the night with top of the line cameras that used to produce thousands of pictures, even fine-tuning our food plot which has always been an amazing attractant hasn't shown us nearly as many deer in the last couple years. I love that we finally aren't baiting. I feel like that screws up the deer, they're habitat, and the hunting season in general. So thank you for that. And I feel selfish wanting to make sure I have an antlerless tag every year so I can get some meat, but I would honestly rather see you shut it down for a couple years so the population can grow. Pretty much any Dough we see, only has one fawn with her instead of two or three like normal. Talking to guys at the bar, harvests are down. Sightings are down. The quality of buck isn't there anymore because everyone shooting whatever they can just to get meets. So as it pains me to say because I want some venison, I would like you to let the population grow so that future years can benefit from a healthier deer population.

I have four major concerns: 1. Lack of new hunters into the sport of hunting. 2. The impact of less hunters for our Hotels, bars, restaurants that need a boost right now. 3. Baiting bans are resulting in serious declines in success rates, that will have another hit on the economy and farmers selling feed for deer. 4. Covid-19 has hit our lower income residence harder than higher income hunters. We sell out of public land antler-less deer permits in the first hour. Lower income hunters tend to hunt on public land. Doing simple math, the hunters that can use the venison the most cannot get the permits to shoot does, and have a very low chance of bagging a buck. Our deer population is at a very high point, most of Lincoln county had a mild winter, we had the lowest number of deer harvested last year than at anytime in the recent past. Even if we were to double the number of permits in public land, using last years success rate we are talking about 300-350 deer total. When we estimate the population at 22,000. It is my feeling that by increasing the antler-less permits on public land, we energize the sport as more people will be successful. We help the economy with added tourism. And we just might put food on the table for some of the hunters that cannot afford to buy their own private land to hunt. And when I see a hundred deer come out of one small corn field that was left standing for the entire winter, do NOT tell me that baiting deer is the cause or effect of CWD.
2019 was a very rough season in our area. I understand part of the problem was the late start date. All of the proposals put forth on the Spring Hearing Ballot seem geared to make firearm hunters happy, at the expense of crossbow hunters. Moving the gun season to an earlier date and keeping all hunters out of the woods prior to the firearm season is not going to sell more firearm licenses. People either want to deer hunt, or they don't. Kids either want to deer hunt, or they want to sit at home and play video games. Keep it simple -- pick an earlier date like Michigan has done for decades (Nov 15th), and start the season on that date every year. Why punish crossbow hunters, when the statistics apparently show that the overall harvest has not increased since crossbows were approved for everyone. If it is so easy to shoot a buck with a crossbow, perhaps some of these people should pick one up and extend their deer season. If I had to give up my crossbow season, or my firearm season, I would quit gun hunting. I'm over 60, so the proposals won't affect me, but they will affect my son who is going to be crossbow hunting this year for the first time. If these new proposals keep us out of the woods on the best hunting days of the year, it will be easier for me to sell my land and find a new sport. I have a huge investment in land and equipment, and every day of the season matters to me.

I don't want to be selfish and say its all about me, I just want to see a deer every couple sits. And i want my kids to at least see one every now and again to keep their interest. I grew up hunting the 1990's in waupaca county, but I understand those were the "good ole days", when a 120" buck was a giant and I saw 15+ deer sitting in the oak trees. I love hunting for big bucks, but at the same time I like venison, and hunt for the experience - meaning I'm not afraid to shoot a spike just so my kids can at least come help track and drag one out. I have hunted lincoln county for 12 years now and have shot 3 deer in this county over that time frame. I hunt most weekends and take a week for november rut and a few days off for gun season. Starting late october and through november I hunt all day, dark to dark - sometimes all day sits in the same tree, sometimes 2 separate locations within walking or mountain biking distance of each other. I have to admit, I go elsewhere for the rut waupaca county and oneida county, because the sign just isn't here and I haven't found any sort of pattern that the deer follow in lincoln county (believe it or not, my big woods public land spots in oneida county have very predictable patterns), and I've wasted too many days here (wife gets mad we bought land and I choose public land instead lol).

I have hunted in the New Wood area for 55 years. There are almost no words that can adequately describe the decline in deer numbers in this area during this time period. During the 80's and 90's I would hear 400 to 500 shots fired while on my stand on opening morning. Now I hear under 10. This is not due to a lack of hunters in the woods. I did not see a single deer from my ground blind during the 2019 deer season. If the DNR is truly concerned about the growing disinterest in deer hunting, proposals designed to increase the heard should be put in place. For example, the DNR should discontinue selling antlerless permits in the area for the foreseeable future. More also needs to be done to reduce the size of the wolf population. Because there are so few deer, deer hunting season has become more of a social event that an opportunity to enjoy the sport and put meat in the freezer. If the proposal to lengthen the season is adopted, there will be little reason to go deer hunting and a Wisconsin hunting tradition will be destroyed. Perhaps none of this matters since CWD will eventually all but eliminate the deer heard. I suspect, and think you already know, that CWD is present in deer semen so there is nothing that can be done to stop it.
I am extremely disappointed with the management of the deer herd in Lincoln county. I have hunted in the same area for 27 years. New Wood is heavily forested with no agricultural land for miles. Over that time, it's my opinion that the population of herd has plummeted. I used to be able see 10-20+ deer per gun season. As I matured into a young adult that had gained valuable deer hunting experience, I regularly harvested a deer. From 2003 to 2011 I harvested a deer every year. Since 2011 I have harvested 1. I'm seeing approximately 2 deer per season during that span. Last year was the first time ever I failed to see a deer for the entire season. My hunting party hunts 8 of the 9 days and I regularly head out at first light and head back to camp at dusk. We regularly visit other hunting camps in our area and there are very few deer harvested. In favorable calendar conditions for 2018, my buck and a second one shot by neighbors 1 mile away were the only 2 deer harvested for multiple square miles that we are aware of. It's very discouraging to see the abundance of antlerless/bonus tags when there are so few deer being seen/harvested.

In the nine years I have hunted in Lincoln County there has been a drastic change in the deer population. When I first started hunting, I could sit out at my uncles shack at night and watch 10-30 deer per night make their way through the shack yard, to where now we are lucky to see a deer. The migration of wolves into Lincoln County, specifically the New Wood area, has had a huge impact on the deer numbers. This spring alone, my uncle and I have found 10 deer killed by wolves in only a 40-acre piece of land. The wolves numbers are continuing to rise, while the white tail numbers plummet. In my opinion there should be little to no antlerless tags sold in Lincoln County for the next 3-5 years in an effort to rebuild the deer population. Also, a wolf season NEEDS to happen yearly in this area. It's pretty sad when I drive through all of New Wood and not see a single track other than a wolf. They are taking over and eating everything in their path. If the Wisconsin DNR truly cares about people having a great hunting experience along with the health of the deer herd, these changes need to made ASAP. Thank you.

I would like to see deer hunting scheduled in the first half of Nov. (1-15) to take advantage of the rut! This season I did not see any deer the first 3 days of hunting & did NOT go out the rest of the season. All the deer were nocturnal on my cameras (3) & we did not have the people to do drives! This has been one of the worst seasons ever in my 55+ years of hunting!! If this situation does not change I will consider NOT going hunting! I have several grandsons coming of age (6-8) to go hunting BUT this scenario is not productive to interest them as future hunters! If the season lapped the rut, there would be more opportunities to see deer during the daytime hours! I would also like to say that getting rid of baiting (1 gallon) has been terrible for hunting. Previously I would see 2-3 deer come in to eat (NOT a big herd) & now nothing! Yet you allow neighbors to do food plots(.5-3 acres) & draw the deer to their areas! This is NOT fair to the people who can not afford to go that route! If there is nothing done to change this, soon there will not be many hunters left to do your deer management!

First let me state that i have been hunting Lincoln county public land for almost 10 years. During the rifle season i camp out and hunt the full nine days. From getting out there and sitting an hour before shooting time to make sure i get in my spot before other hunters to sitting to last shooting times. I've had years in Lincoln county public land where i didn't see a single deer the 9 days to where i have only seen two. The last two years i have seen the most deer ever and bagged my first buck from the area. It appears like the current arrangement is working. The only thing i would like to see happen is splitting the doe tags between public and private. I know too many guys that own land that buy public tags and shoot does on public because they don't want to shoot the doe on their lands. This is complete BS. It doesn't give the people that don't own land a chance at harvesting a doe. My suggestion would be to get rid of land type tags and just go to a general public / private either or doe tag, though i know that would cut into your money making plan. just my two cents.
I recognize the “barstool biology” that all too many have practiced over the years and I tended to side with the DNR and their recommendations more times than not, but this past year was so disappointing in our area. I spend hundreds of hours in the woods, build food plots and have numerous trail cameras throughout hundreds of acres of private and public land. This was the worst year I have ever logged dating back more than 20 years of keeping track. Numbers seemed to be concentrated in areas and there were essential dead spots for miles. I know that bad winters and wet springs and predation have created a perfect storm for declining numbers, but something needs to happen. I also think the only people that agree with all these youth hunts are the youths themselves, and that may even be up for discussion. outdoor sports should not be exclusively supported to drive revenue and too after that seems to be the case. Raising tag costs, adding youth seasons, allowing crossbows, reducing age to hunt and I don’t see any impact on helping the sport. Take all this for what’s its worth.

reviewing last meeting minutes antlerless success rate public land about 14% ,263 out of 1900 tags.private land success rate about 15.5%,699 out of 4500. But later in report on total antler kill was 263 public,913 private. Who is lying to who ? I have been coming to meetings since the beginning, notice that less people are coming. We use to take votes on what we think quotas should be, but last year no vote was taken. dnr. made recommended what they wanted the board quickly made motion to excepted quota numbers. NO recommendation from us. This year looks like our recommendation will go silent again. You are already voting to screw us that only hunt on public land, voting to raise quotas on public land. SUCCESS rates should tell you deer numbers are down. The DNR. should check their numbers because they are missing something. IT SHOULD NOT ALWAYS BE ABOUT THE MONEY!! You are having these meetings in name only. our opinions do not matter. IF YOU COMMITTEE MEMBERS ARE MAKING ALL THE QUOTA RATES DO NOT WASTE OUR TIME.

I do not believe there is an over population of deer. I believe in the deer population needs to grow about another 25% to have it be back to the optimum size that I believe it was when hunting was at its best. I have lived in the area and hunted in my area my whole life and have watched and monitored deer population through game cameras extensively. I watch them browsing on my game cameras in the forest and I believe that the forest is very healthy due to management of the forest by cutting old growth letting new growth begin. I also believe in baiting should be allowed from September 1st through January 31st. As the hunter population gets older baiting allows them to have a better chance to harvest and maintain the deer herd. It is hard to compete for deer with people who have fields of soy beans and such food plots to draw the deer in if you are unable to create a food plot as such during the season your chances are greatly diminished because the deer herd up close to these plots.

I own 158 acres of prime deer property in NE Lincoln County. Food plots throughout the property. My property borders hundreds of acres of County Forest to the south. Over the past 5 years, I have seen a trend of declining deer numbers, despite my food plots and habitat improvement. Predators are a significant issue on my property, and I suspect the County Forest to the south. By late fall, my census is that only 30% of the adult does has a fawn surviving. I spend a lot of time in the woods, and the tracks, trails, rubs, etc. continue to decline. I also don’t believe that the archery harvest is a good annual comparison, because the length of the season allows adequate time to harvest a deer. All this having been said, I realize that my property is a small piece of Lincoln County, but myself as well as my neighbors are seeing the same trend. Please take this into your considerations. (If the 2020 deer harvest is declines again, rethink your indicators!)
I have lived and hunted here for 25 years. The first 10 or so years were awesome. Saw a ton of deer and harvested yearly. Since that time it has been a steady decline. Last year 2019 was the absolute worst. I hunted all fall be it now and rifle and saw the fewest deer ever. I also have grandkids that are hunting and are getting very frustrated on the amount of deer they don’t see. I highly recommend getting the population back to what it use to be to keep the younger generations interested. If it stays like this you are going to loose a ton of hunters including myself. I have been hunting for 45 plus years and I am about ready to say the heck with it. It is very frustrating to not see deer sitting so many hours every year. I know CWD exists but I think baiting should really be brought back. You are going to loose the younger generation more than you already have. I hope my thoughts and comments mean something!!

I've been hunting Lincoln County east of the WI river for 12 years. The deer hunting has been MISERABLE at best. I've attended Spring meetings to express my concerns, only to see DNR personnel dismiss others accounts of an anemic deer population. While I don't consider myself an expert hunter, I do hunt regularly and know what a "good deer woods" looks like. My simple 80 acres has all the makings of a good deer woods in the middle of heavy timber. That said, in 2019, I hunted as hard as I ever had. I only saw THREE deer in one group the entire year!!! I know you will dismiss this as just one disgruntled hunter so I don't even know why I respond to these things. There continues to be a MAJOR problem with deer numbers in Lincoln County. It's pathetic at best. We are either over-harvesting, poaching, or the predators remain at the top of the food chain. Too bad for the kids. They don't deserve this.

Completely forget about "earn a buck" and never implement that again - the deer population will never recover from that until humans are gone. Cut the doe tags down by 3/4 of what you had available last year. Implement 8 points or better for bucks - lots of people taking 1.5 and 2.5 year olds - LET THEM GROW!! Increase fines and punishment for poaching - make it not worth the risk - right now it's a slap on the wrist. Raise non-resident tag prices by 2-3X what they are currently - we pay BIG dollars if we want to hunt out west...why should we (Wisconsinites) give our tags away to non-residents for the price of a couple cases of beer? The deer numbers are laughable in Lincoln county - I started hunting up there in 2010 and it was like a deer farm on my buddy's 40 acre plot, and now, we're lucky to shoot a scrub forker on the last day for the freezer. Too many hunters and not enough deer. Period.

I saw two deer total in the 2019 deer rifle season. There were wolf tracks all over the area I hunted. I found three dead deer carcass remains this spring and am confident they were wolf kills. The wolf population in Lincoln county is underestimated (I have a single photo from a trail camera with 6 adult wolves on it from November 2019). The number of deer being killed by wolves is underestimated. Decrease the antlerless harvest and let the herd rejuvenate. And lets hope the federal government can get the wolf hunting/trapping season reinstated so the wolf population can be managed. Open deer rifle season the Saturday closest to November 15th and make it a 16 day season Limiting the hunting season for crossbows is counter intuitive .... you want more deer killed and you want more hunters buying licenses and hunting....so your answer is to reduce the crossbow season timeframe? That makes no sense.

I truly believe Lincoln County needs to be managed in 2 different zones. I know it takes special decisions but I know it also can be done. New wood is not the town of Pine river. We are consistently struggling with many obstacles not only winter and natural predators as well as the human predator. We cannot continue to hunt these animals for 3-4 months and battle nature via weather or predators and ever hope to have a good population again. I am a stout believer that there should be no doe tags available other than 1st time youth for the entire New wood area from the Wisconsin river west and hwy 64 north to the county lines. Say what you want but we don't have the deer.I have documented the decline for the last 12-15 years and see a much lower deer count constantly. How will we keep kids interested with deer hunting. You can't remove the producers-the does. we are getting below a sustainable count.
The forested areas of Lincoln Co. have very few deer. While we would like to see the hay day of hunting restored in Lincoln Co., it won’t happen until predator control receives more emphasis by the DNR. Sure, hard winters, changes in forestry practices, and agriculture all affect deer numbers. All these contribute to deer numbers, either adding or subtracting. But the total weight of the subtractions have meant fewer deer for years. Deer have been able to do better where there is ample corn fields and other crops, milder winters, and fewer predators. The young forest initiative, and uneven age cutting, should continue to be promoted. The CWD area is very focused, and a concentrated overharvest in the 2 square miles around the positives is warranted. A liberal harvest in the entire control area is not needed, and would be very unpopular with people who live in that area.

I live and hunt in Lincoln county 2 miles from the southern boarder. Deer population is very high here. There are way to many deer especially antlerless deer. They eat good all winter near the area corn drying facility. All summer in the area corn and bean fields. I daily see deer running together in groups of 10 to 12. My major concern if you lower harvest these numbers will increase. I am a small property owner only 17 acres but surrounded by much private, land that sees little hunting pressure, with no close public land. I don’t have the solution for this issue. My fear is the increase opportunity for CWD and vehicles damages. These deer have no reason to move to an area with higher hunter pressure as they have all they need right here. A no buck season my help but how do you decide a hunting unit and my neighbors would shoot the buck anyway and ignore the rule.

Lincoln county is a part of the Northern Forest unit however Lincoln county should be split into two with farmland area to the South there is a difference in the population of the deer as to the northern part where did becomes Big woods country. Also, the DNR needs to start to go back to the way it used to be of listening to the hunters and what they are seeing and stop making the excuses for the bad numbers. The bad numbers do not come because hunters are good it comes that over the past few years on our private property we have seen a dramatic decrease in the number of deer on our property even though we have done significant changes to it to increase the quality of deer habitat. It would just be nice for the DNR to listen to the people again and not just rely ge sex kill model to get their estimates of how many deer are there.

Good presentation. I can certainly attest to seeing fewer deer last year, and overall, hearing much less shooting in the woods during the gun season. But the theory regarding the timing of the season (early in 2018 vs. late in 2019) makes sense and appears to be supported by recent data. To me it basically boils down to two sets of opposing observations/data. On one hand, the lower gun kill and hunter observations. On the other hand, the bow kill heading into gun season and the early-to-late season change from ’18 to ’19. To me it makes sense to keep the same quotas and see how the 2020 season turns out. The only thing that gives me pause is the CWD factor. Are there benefits to early interventions, etc? Overall, the proposed quotas seem to be a good balance of all the variables and competing data.

The DNR biologist's video is what is wrong with deer management today. Annually, we hear the same excuses from our deer "managers"...just pick the year. Too cold, too warm, lack of hunter effort, too much snow, too much standing corn, too late of a rifle season, etc. We are led to believe the deer population is higher than in the 1980s. What is different now then at that time? From party tags/hunter's choice to bonus permits, from no wolves to wolves, shorter seasons to longer seasons, introduction of youth hunt/muzzleloader/December hunts, older technology to newer technology - how can the population be anything close to what our biologists say? Logic dictates otherwise. These biologists are spreading propaganda from Madison pure and simple. Anybody that uses logic would disagree.
I wish the county could be cut in half for deer management like it was in the past years, units 32 and 52. The reason being is that there is a huge difference in deer population. I live in the eastern part and see 15 to 25 deer per field each evening. Which is great. But in the western part where I own land and do most of my hunting. The numbers are not even close to that in the eastern part. I do have a lot of contact with wood haulers, loggers, and land owners that agree with my statement. During the winter months you can get a good estimate on the population, due to the deer herding up. And when your only seeing a hand full of deer on some of those bigger logging jobs, the deer numbers aren’t there. I wish something could be done to strengthen those numbers in the western part of the county.

I believe the no baiting laws in this unit should be enforced more. I believe there is still way too many hunters baiting even though there is a baiting ban. I would also like to see some measures taken to have better quality bucks in our unit. I started hunting SW Wisconsin and am highly impressed with the amount of bucks I saw and wouldn’t mind taking a year in northern Wisconsin for doe only to try and replenish the buck population. Also don’t worry about the “WOLVES” in this unit they’re not as bad as most hunters around here say, it’s just what they put the blame on instead of themselves for not harvesting a decent buck. Thanks to all the DNR staff for doing your best to manage our forests and wildlife to make it better for the outdoorsman.

It is my opinion and thousands of others that baiting and feeding the deer should be legal. If you want our youth to hunt baiting deer keeps the youth hunters most interested in the sport they see way more deer and other wildlife. CWD is not spread from feeding the deer. Have a public vote on this for each county and you will see that baiting is favored among hunters. Stop letting the people that don’t hunt or observe the deer make these decisions. Hunting numbers are dropping because you keep messing with the baiting. My son and I found over a dozen deer on private and public land killed by the wolves this winter in Lincoln county. The wolf problem should take care of your doe issues. Let the kids shot does until there 18 years of age.

We see a high amount of predators on our cameras throughout the year (wolf, coyote, bear and bobcat). We have 8 hunters in our deer camp and we hunt on 260 acres of private land. We saw a total of 13 deer in the 5 days we hunted! I have a 13 year old child who got completely bored with not seeing any deer and I don’t know if I will be able to interest her in coming back out next fall. When I was a teenager hunting on the land, I would see 10-15 deer per day, plus always see a decent sized rack on a buck. I have not seen a decent rack with my eyes in over 5 years! Predators, in my opinion, are taking a big toll on the deer population. All our neighboring hunting parties had similar results and also agree with the predator factor.

I still have a hard time understanding how a food plot is a legal form of baiting and spreading corn or apples not piling up is not. if baiting is not allowed it should go for every source. deer seen was significantly lower in 2019 than 2018. I would also recommend changing tree stand laws. portable shelters and portable stands should be able to be left up for entire season without damage to trees statewide not just north of 64. public land is public land weather its county forest land or forest crop land or open managed land. do not agree with a possible 19 day gun season. would be in favor of a early muzzleloader season. I believe if rules went back to how they use to be years ago the hunter numbers would go back up.

In short I would like to see baiting and feeding prohibited state wide for good, and also would like to see some kind of physical tag brought back for all animals. I fully believe there are a lot of animals being harvested and not being called in because if people can make it home after a harvest( without anyone seeing them) the animal is butchered and they continue to hunt on that tag. At least if there was a tag to attach to the animal as soon as harvested it would sway people from being illegal. It is way to easy for people to get away with shooting multiple animals on one tag thus not giving an accurate number of animals harvested. This should go for all animals, not just deer. Thank you for taking time to read this.
I’ve been hunting the New Wood area for the last 24 years. I am 45 years old. When I was young and dumb I listened to the DNR. Early 2000’s lots of does!! "Shoot them, their over populated"!! I regret shooting so many of them. Now I’m lucky to see 2-3 a rifle season. For the last 6 years all the shack on our right away (camp 26 road/whiskey bill) leave after opening weekend. They all have the same response... "no deer" I was hunting up there when it was in its prime and then theres now, the dead zone.. This is not farm country. As long as your going to give out doe tags people are going to shoot them. I can not control what my neighbors do with doe tags, but you can. Split the unit farm country/north forest......

You have two choices, make a serious attempt at lowering the deer population for a few years and wiping out CWD, or stay the course and learn to live with it though out WI. Banning baiting is a joke, and the DNR knows it. It is their way of making us believe they care. Allowing farmers to keep corn up all winter was a magnet for CWD, compare that to a few coffee cans of corn on a hunting stand, and you might see the big picture. Did anyone do the math and realize that much of the corn was left on the fields because the hunters were not allowed to buy it and spread the corn over the entire county? Instead all the deer gathered in the field and ate it all winter. Good Job DNR, hurt the farmers spread CWD.

In our direct area where I hunt, there has been a large increase in wolf population again. It seems to cycle through between coyotes for a few years and then wolves again. Last year was wolves. Regardless of if you believe they are present or not, that has been the topic around the area. Lincoln county is also seeing a large boom in wild cats (cougars and bobcats). Whether trail cam photos and actually seeing them while driving or out in the woods, they are present and breeding rapidly. You are going to have to come up with a plan to manage all of the above. The deer population needs a break to bring numbers back up. We are finally seeing large bucks again, now we need the entire population to recover.

Most years I am able to beat the crowd and get a doe permit. This year I was unable to get one as I could not get off of work, by the time I got to the hardware store, they were gone. I hunted 8 out of the 9 days and did not see one horn. Therefore I was unable to shoot anything this year. Venison is a real treat for our family, and this year we went without our favorite meal. With all the deer you say we have, would it really hurt to let me shoot one doe for our family? I am not always able to take off of work to wait in line the morning of the permit release, you give all the permits to the people that can afford private land, and less than 25% to the people that cannot afford land, that is so wrong.

I have hunted the same property since I was 12 and I have seen the amount of deer decline steadily in the last 10 years. I quit bow hunting because of not seeing any deer night after night. Last year I hunted all 9 days of the gun season and did not even see one deer the whole year. After a frustrating season I opted not to muzzle load and am really seriously considering giving up deer hunting altogether. With the increased Bear population, Wolf populations out of control and the antlerless hunting eliminating the does the deer population is not sustainable. As stated earlier I have hunted the same property for 40 years and always saw deer in the old days now all you see are wolf tracks and bear.

In my opinion of the hunting season is that there is too many hunts and over harvesting going on that is not reported. Without the old tagging system one does not know if the person hunting in the next field has a license for the hunting year. Two did they shoot more than one deer and said they called it in. I am not in favor of extending season due to the fact that after a party gets a deer they are done for the year. And pull out of the hunt for deer. More hunters are getting older and are sitting and not pushing deer like in the past with drives. If people would see more deer during the season, it would drive more excitement between people. Keeping more hunters out hunting. Thank you,
I hunt all season on my own land and am lucky I see more than 2 or 3 deer. Cameras out all year and seeing less and less deer every year. Nobody even hunts there anymore unless they own land so good or bad that's where you hunt. Plenty of pics of predators year round. Am surrounded by clear cuts so plenty of browse but no deer, dang if we can't figure out where they went unless they were lunch for the predators. Very sad to see it so bad. Can understand why many have quit hunting. I may be next. I do think way too many extra tags are sold, how about 0 for a couple years? Maybe the herd could rebuild. As it is this may be the end of the great northern WI deer hunting tradition.

I feel as if the CDAC is not doing what they are saying. They have a maintain objective but it seems like the numbers keep dropping. I feel as if there should be no permits on public land as the herd is decimated on public lands. The permits on private land are not as effective as intended since landowners will use public land tags to harvest on public land and have their private lands act as a preserve. I do not think the harvest will be much different than last year due to the herd being down. The equipment that we are using these days are not taken into consideration, I think the yearling buck harvest percentage is up from what is calculated and the numbers are outdated.

Since I started hunting at age 12 this is the worst year I ever had. I feel bad for people that half to hunt wolf infested county land. I still don't know why all these predators are getting protected by the dnr. Wolves are at an all time high. It takes you 13 years to get a bear tag and there are bear everywhere. That is ridiculous. I spend hundreds of dollars on food plots every year to help the deer out and it just seems that you want the deer to be slaughtered. A buddy and I r so fed up with hunting northern Wisconsin wolf infested woods that we planned a trip for Missouri this year. I know I'm not the only one that thinks this either. Thank you.

Well from a Hunter's aspect, I seen more bobcat tracks an wolf tracks in the woods then ever. Our beloved DNR preaches on how to get youth involved in hunting an quite frankly if we don't do anything about predator control for one we won't have to worry about hunting deer in our state now will we. Next off if we keep killing all the Doe's and having this youth hunt it's only going to spoil youth Hunter's in year's to come when you can't no longer go into a bean field in the middle of August with a high powered rifle and shoot a 160 inch giant. I'm with control but that stems right on through to the predators as well 🤷♂️🤷♂️🤷♂️

In 2019 prior to the deer gun and muzzleloader hunts I observed numbers of deer greater than the previous 5 years. Several things in my opinion caused the lack of seeing deer during the gun hunt. The rut was pretty much over, warm temps encouraging hunters sitting longer. Where I have been hunting, Harrison Hills, there were fewer hunters than previous years. I have hunted there for 59 years and the number of hunters in the area were more important than the deer population to hunter success. It's a very difficult area to hunt and more antlerless tags woul draw more hunters to the area. Thanks for listening.

I hunt in Newood in a group of 10. We make drives all day, everyday. in 2018 I didn't see a deer and last year I saw 2 deer. If it wasn't for tradition, I would not ever buy another tag to hunt in Wisconsin. Lincoln County needs to be broken up into two areas. There is farmland and big woods (Newood). I do see plenty of deer around the farmland, but that is not the case in Newood. There should not be any doe permits given for Newood and big woods areas. We have several young hunters in our group that already have quit hunting because of this and I see that happening to more of us older hunter also.

Bow hunting should be just that. Crossbows are fine for aging or disabled ONLY. Muzzle Loader season is "enough" pressure on the herd, especially with a "modern" Smoke pole. We should be trying to build up the deer herd let the herd get healthy. After completing a Hunter Safety Course a 12 year old can hunt with an adult and not before, all the "special hunts" should be eliminated. A young person will have a greater appreciation for that first opportunity and just might be hooked for life, Not just give it a try because "dad" wanted it and then show no interest the rest of their life.
Public Input on CDAC Preliminary Recommendations - Spring 2020

Very low deer count. The property i hunt is managed very well but still very low count. I primarily hunt Oklahoma but i am confused at the reasoning behind not letting people feed the deer? Why is it ok to build a food plot but not ok to use a feeder? I understand that one concern could be CWD as the deer would be eating in the same spot as other deer but isn't that what happens on a food plot also? seems like there would be huge benefit in being able to feed the deer minerals. the antler growth is almost non existent which to me points to lack of minerals/nutrition.

I have hunted this county for over 20 years. It's been obvious a consistent in population and just total number of deer seen. I hunt public forests, so I'm not overseeing farm land or other commodities feeding areas where some hunters might not notice the decline as easily. In the past five years I hear wolves on a nightly basis where years ago, hearing a wolf at night was a treat. Obviously environment/weather/food source are all impacts, but the predator and quota numbers are two things you can change and alphabetical a significant impact on the population for future.

I did not hear or see anything about predators. We have a wolf and bear predators problem. You know it and I know it. There are way to many wolves. Not enough bear tag issued. My area has been decimated over the last 15 years. It has been awful. Lower the wolf population and you will have better hunting and better numbers. Tag sales are down and this is why. No one wants to waste their time anymore. Hunt seven days see one deer. How can you get a young kid interested if all he sees is nothing? Hard to keep them interested. Also I am in favor of banning bait!

One of my biggest concerns are the Predators in the North compared to the Southern, South Western parts of Wisconsin. Wolves have become a major concern for people in the North. Bow and Deer Gun Season brings in money. Businesses up North rely on this hoping hunters spend money. This is not Science, it's just a fact. To say, Wisconsin is looking at 1.3 to 1.4 million deer? Most of them must be in the lower half of the State. Just saying be careful on how you, the DNR look at this. Hunting/Hunters bring in money needed to fund many, many programs

I would like to see baiting brought back to this area. With limited space available to hunt and not having ideal land to hunt baiting is a way to bring deer into your area so not only I can see more deer but my kids and my grand kids will have an opportunity to harvest a deer. We have planted food plots but they only support a small portion of deer and are expensive to maintain. We need to keep our youth involved in this sport and that will not happen only seeing one or two deer a season and not harvesting an animal say nothing about getting a buck.

We have large public tracts that are way below carrying capacity for deer. (Newood/Harrison/underdown). Wolves are making a huge impact. The deer numbers are having an impossible time gaining any ground in those areas. I want to see the balance of predator/prey managed. Please do something to get DNR control over the balance! People here count on venison for food. The large woods of all Northern Wisconsin has had a very disappointing deer population for way too long! My Grandkids are hunting soon, and I want them to continue our heritage!

You have failed again to address deer farms and the relation to CWD. This is dereliction of your duty. Deer farms are anti deer and anti citizen deer hunter. You are lacking honesty in this regard. Secondly ticks, mice and coyotes. Misguided hunter kill the coyotes that eat the mice that are a vector for ticks. This has to stop as well as ticks and tick born diseases are out of control. Please take the lead in this. We hunters need to take the lead in these issues. Hiding the issues does nothing but it is job friendly for the biologist.

Our family has hunted the Lincoln County public land for 60+ year. The last few Year I have not seen a deer in the first 4 days of hunting. This last year was the worst with almost no sign of deer. ( our group of 5 hunted all day the first 4 days with -0- deer seen. How can you justify a doe hunt when there are no deer ? I live in Michigan so pay out of state. I enjoy spending time with family but why buy a license to not Evan see a deer. Oh, we do know the woods we hunt in and I have shot allot of deer just not in Lincoln County.
I would like to see the CWD infected deer eradicated with some type of plan. I don't believe this past winter (2019-2020) was to tough on the deer population, but the 2 previous years were with the blizzard in the late winter, and the very cool/wet springs. Which brought populations down some before this last season. I have also been seeing an increase in wolf, bear, and coyote numbers in the Lincoln county area, which does not help. I have also been seeing dumped carcasses pointing towards poaching/night shooting.

The last days of the deer gun season were horrible in terms of weather (in line with a late start.) The other issue is wolves, wolves, wolves (is anyone listening?) Our hunting crew (private land) and the other 2 crews near us had wolves on every single game camera in 2019! I averaged seeing a dozen or more deer every day in 2018 and averaged 3 in 2019. Only a few wolves captured all fall on game cameras in 2018. I have seen a wolf every year for the past 4 years in a row. I don't have a sense for the bear population.

Own approximately 300 acres of land. I do food plots and other projects to benefit wildlife. I spent approximately $50,000 on logging equipment to log my property over next 10 years as hobby. 1st winter 15 deer always around skidder. Last winter 2 deer for couple weeks then nothing rest of winter except wolves. This will be 1st deer season I’ll miss in 35 years. Heading Colorado elk hunting. Probably done deer hunting and doing food plots. Plant Christmas trees call it quits. Spend my dollars somewhere else.

I'd like to recommend that we charge the same amount for out-of-state licenses rather than the insane prices we are currently charging. If the prices were more feasible, we would likely see better turnout, and more revenue in the state, not just for hunting, but for all the local businesses too. At the moment, it appears that we are simply trying to make as much money as possible for those that visit the state - some of these folks only come back to their home towns to hunt and spend time with their families...

The public / private antlerless tag permits , these specifications that are given are not followed as close as you think they are , which really changes the numbers your graphs might show. Many people in Lincoln cty are using private tags (which are easier to obtain, seen as though there are a lot issued) and using them on public land because they don't harvest a doe on their own land. Many people in this area don't like the youth hunt , antlerless only hunts and any of these types of extra hunts.

Antlerless tags should just be for the county not private or public. I hunt an area with both public and private land touching and i know the people owning the private land buy up all the public tags and either shoot a doe on public land or dont use the tag at all. Also cwd is natural stop worrying about it and allow baiting. Private land owners bait and thats why they see more deer and if u dont believe me go to any gas station during gun deer season and watch guys fill trucks with apples and corn.

I would like to move towards getting an older deer population and believe that having an older herd it strengthens it. That being said it is difficult to age a doe but a little easier with bucks. I think it would make the sport of hunting Lincoln county if we established qdma and people would travel to Lincoln county if we practiced this and in just a few years our deer herd would be a lot well off and people would travel to our county for a higher chance of shooting a mature buck.

Did not see a single deer this gun season. How do we get our kids interested in hunting when there is nothing available to hunt? We heard 3 gun shots opening day. Quit mismanaging the deer herd in northern wisconsin. Do something about the wolf population. This is not the only county ruined. Nicolette Forest is a joke to hunt. Quit over logging These parks and cutting in more trails. Used to be 5 miles between roads, now less than one. You have ruined deer hunting in the state.

I personally believe that discussing harvest numbers while not considering enforcement of illegible baiting is somewhat useless. Baiting and crossbows are significant factors impacting deer kills on private land. Additionally private land borders public land, thus concentrating on these differences has me a little confused in discussion of actual population. The only difference is kill ratios. Do we know how many hunters are on each type of land as opposed to registration data?
Hello, My major concern as a gun hunter is that the modern crossbow hunters will harvest a disproportionate number of deer and get to kill the choice bucks before we even enter the woods. I believe crossbow hunting during archery season should be by ONLY disabled and "older" hunters. Remaining fit-and-healthy crossbow hunters should have to wait and hunt during the gun-only season. Modern crossbows have become as lethal as guns under 100 yards! It is NOT archery!

I hunted the first 3 days of the 2019 gun season and never saw a deer. I'm pretty sure this was the first time in 50 year of hunting. There just are not any deer in the upper part of Lincoln county. Too many wolves, bear, coyotes and other predators. Although it is too late, the DNR must regulate or close game farms. CWD continues to spread because of the lack of management. I am seriously considering giving up hunting because of the lack of management and spread of CWD.

Opinions of residents in this area suggest that wolves are responsible for the significant decline in the number of deer seen in the 2019 season. On my 20 acre parcel, no one saw a deer the entire season. A second contributing factor was the ban on feeding deer in hunting areas. Neither of these was specifically mentioned in your survey. Does this suggest the opinions of residents are incorrect? I have seen large wolf tracks on our property for the past several years.

Deer numbers north of the East-West line formed by northern most East-West running Hwy. E segment drop off drastically. Very few does should be harvested in that area or probably in the areas two miles south of that E segment level in an attempt to build up the herd there. Another problem in that area appears to be the number of wolves which adds to the difficulty of keeping deer there. That could be the biggest problem - the deer just leave to avoid the wolves.

Predator populations (specifically coyote & wolf) need to be drastically reduced....when getting tracked by wolves while skiing or even jogging on gravel roads it is enough to worry me, especially near Baldwin creek on the south western corner of Lincoln county near the Rib River. Considering also that fisher & pine martens have had significant impact on newborn fawns, it is that which troubles my view of the low deer population in the area.

When you give out antler less permits why can't it be a lottery draw or random draw. My neighbors are from Chicago they have 80 acres of land and they have 15 people hunt there and they all get doe permits, what do you think I see all season? I saw 2 deer all season, it gets so frustrating I think I am getting closer to just quitting all together. If you had a random draw at least not all of them people would be getting tags for a doe.

Hunting on my property last year was obnoxious. Car after car every 20 seconds it seemed. There was a guide in the area with a van full of people from Illinois. There aren't even a whole lot of deer in my area. So the yearlings get shot and the herd never seems to rebound. Such a joke. And without being able to toss a little bait out my chances are slim to non. Hunting season last year made me want to quit all together

Wolf and bear populations are too high and have negatively impacted the deer population for many years. Hunting our land in Lincoln County off Tower Road north of County M is much worse than it used to be. There is good forest management in the area to support higher populations and less people hunting the area but the deer population has been down for a long time. We are traveling more to Marathon County to hunt deer.

I hunt in NE Lincoln County. We have an abundance of deer on private land. Keep many tags available for landowners that want to harvest this overabundance. CWD is less than 10 miles away. High deep population with CWD moving in is not a healthy situation. For the long term good of our herd consider encouraging more antlerless harvest on private land. Public numbers in Otter lake area are probably too low.

The deer herd in the area where I hunt in this unit is know as (Newwood wild life area). In this area there is an over abundance of predators not just wolves but black bear and bobcat and of coarse hunters also. The herd in this area has not bounced back. In the late 90's early 2000's there were a lot more deer, but then came a time of almost unlimited harvest tags, From which the population has never recovered.
Last year was the lowest number of deer (3) I had seen in the last 30 years of hunting in the same areas of Lincoln County. The last 2 winters had been very hard on the herd which I feel has been a big factor. Also I strongly feel that many hunters are not being truthful with calling in and registering deer taken and continue to hunt. I feel many deer are taken with the new method and no back tags required.

Predators, predators, predators, must be controlled better, way to many! A late start to deer season almost always ends in a lower kill, start gun season around the 15 of nov. every year for more continuity. There were one hundred deer sited in a 2 mile square this spring north of Tomahawk, we did not see those animals at all last fall, hard to tell what happened, there was no shooting, where were they?

Our DMU has very few deer due to the wolf population. We need to decrease the amount of wolves through hunting or trapping. Also, we have a large population of black bear which have an impact on our deer numbers. We need to allow more tags to be issued for bear and we need to reduce the point system where every other year you can get a bear tag. Also, baiting should be allowed in the Northern Forest.

I am opposed to youth hunts and think they are detrimental to wildlife population and need to be taken into account under a management policy and plan. Hunting is not soccer; everyone doesn't need to shoot a deer every year up to the age of 18. The overpopulation of the timber wolf also should be included in the management scenario. There were times, while hunting, I saw more predators than deer.

Buck kill this year in Lincoln County was lower than 3 years ago when the CDAC proposed to "Maintain" the population. I do not understand why there are still the same amount of antlerless licenses being allotted when the buck kill is lower than it was three years ago. I'd like to see the bonus tags on private land reduced by 30% and no bonus tags on public land for at least three years.

Although the private section of land I hunt on in Lincoln county has not had many deer over the last few years which has been disappointing as a new/inexperienced hunter, I would want to adjust and adhere to a quota that would positively impact not only the future buck & antlerless deer populations but also other ecosystems including agricultural crops, predators, and forests.

I think the CDAC Committee made good decisions regarding the quota of antler less permits for 2020: given the number of bucks harvested. That number being less in 2019 than 2018 might indicate a less quota would be proposed but given the late deer rifle season and CWD concerns I think they thought the issue over. Thanks for you work. Please do not change your recommendations.

To many rifle seasons I think nine day and muzzle loading should be one as there both guns no holiday hunt in North woods as no deer to begin with if you shoot everything what's left for younger generations stop letting insurance company's decide if deer crossing roads getting hit put up high fences it will solve the problems for years to come instead of year to year

Winter of 2018-2019 had a severe impact with killing off some of the deer population, along with supporting predator killings which I saw on my land. Hunting season saw a total of 5 deer, past season was able to see approx triple that number. This winter 2019-2020 will be probably the same case as I had a number of dead deer or sick looking deer on trail cams.

I am the wife of a tree farmer, this maybe or last year in business as our tree damage is increasing every year, we need to thin the herd why don't you wake up. Anyone that says there are not enough deer do not spend enough time in the woods. Ours sons hunted and did not see a thing as you also made baiting illegal, what else can you possibly do to hurt us.

There was nothing mentioned about controlling the wolf population. When one goes out and looks at past prime deer habitat and only sees wolf sign, (scat, tracks) and no sign of deer (scrapes, rubs, droppings, trails through tall grass) something is out of adjustment! Lets get more proactive and look into what can be done to help this situation.
there have been many deer killed via car, predators, and due to our winter. We are finding a ton of caucuses and id hate to see the deer population decrease because of the amount of tags authorized. Predators are getting worse, deer population is going down. Winters are getting harsh, deer population is going down. I’d love to see it rise.

I think there should be better seasons or times for the youth to harvest a deer. It’s hard when you have a 9 day season and don’t see a single deer. It has been very disappointing for my children last few years. Very hard to get them involved when they can even see on deer to atleast observe and get use to what hunting is all about.

Hello, I believe baiting has been stopped in this county I hope? Our group has never baited and I think no one should be able to bait wether it be public or private. When deer feed as a group they are usually spread out somewhat and feed naturally and thats the way it should be for good reasons you all know about. UWSP - go Pointers!

I feel that they should only allow the special youth hunt in agricultural zones where they have higher deer density. The northern zone needs to have more deer numbers so we can have proper age class deer again. Two hard winters with deep snow and growing predation numbers. I have not seen much as in 2+ year old does and bucks.

My goal for deer hunting is to have fun first with family and friends first. But enjoy to see deer. Being in the woods for 3 to 4 days and seeing 1 deer in each of the past three years not great. I don’t need to harvest a deer and prefer not to shoot doe. Don’t like insurance lobbyist controlling the size of the deer herd.

We hunt near the Merrill school forest on private land. In the last 3 years on our trail cams and hunting we have seen a lot less deer and almost no large bucks. We do spend a lot of time on our wood lot just walking. This has been a big change compared to the years before. Thank you for taking the time to ask our opinion.

I hunt the public land in Lincoln County for the past 40 year, past years was able to see many deer and harvest some nice deer. The last two deer seasons I never saw a deer. I have a 10 year old boy that is interested in deer hunting, but it's hard to be interested in hunting when we are not able to see deer.

Don’t believe we should extend deer season to a 16 day season the number of deer I’ve seen is extremely low. In last 3 years between 3 to 4 hunters we’ve seen zero deer. Need to work at getting a wolf season back see more tracks of wolves than deer. What does a longer season do for an area that numbers are very low.

Deer heard needs to be bigger so that public land hunters see more deer. Would be nice if the logging companies would leave some oak trees and not just cut a wide open area. We are not allowed food plots on public land so we need natural areas that draw the deer in. With out that habitat then why would deer come in?

I am a bar owner, number of hunters was down from past years. However the ones that did come spent more time in my tavern as they were not seeing any deer so they drank more. That should make me happy but many said that they could not get a doe permit and did not see any bucks so they are not coming back this year.

In the past I have seen deer throughout the entire gun season. This year however I had only seen one deer, and that was a young doe. I felt that there had been more of a kill off of deer from the winter season then had been expected in my area resulting in a lower deer population form one year to the next.

I work in law enforcement and travel in a vehicle between Taylor and Lincoln counties. I frequently monitor deer traffic to present during traffic safety meetings particularly around spring fawn and fall rut. The amount of deer traffic on the west side of Lincoln is later this spring than last spring.

While hunting the New Wood area, I've noticed a decrease of fawns during the open deer season. With the large forested areas of the county, could the management area be split into two with ag areas with higher density of deer split from the large New Wood area? Thanks for your considerations.
I think it could be of use to set an antler minimum as other states have. For example, bucks would need to have at least 6 points in order to be harvested. This would give the opportunity for greater reproduction and a more exciting hunt. The deer population could increase if time would allow.

Once again there are too many doe tags available to purchase. Everyone has seen the deer numbers decline along with the number of hunters. More deer would mean more hunters. You are going after a new age of kids that need to see things in the woods otherwise they are done and not coming back.

The wolf influence has changed my hunting and recreation life. Deer are not present like in the past. I don't feel safe for my family as they try to enjoy our property. Now I and my son carry a firearm every time I walk my land. I never had a fear when I was younger. Disgusted.

I have watched my deer population deteriorate since purchasing this land. I DO NOT SHOOT DOES ON MY LAND!! In hopes my population will return but it doesn’t. Wolves, bears and coyotes will ruin my 240 acres and my grandchildren will never live the hunting I did and that's very sad to me.

Need to somehow get younger people involved in hunting. If they are able to shoot a doe and experience success they are much more likely to take up the sport. When doe permits run out in public area in the first few hours, they have no chance at a permit, and little chance for success..

The 2019 deer gun hunting season was one of the worst hunts for me in a long time. By that I mean: no deer sighted and very, very little deer sign...i.e. rubs, scrapes or tracks. Last season is going to change the way and where I hunt in the future. I may not gun hunt at all this year.

I hunt hard with others and we do not see the deer as in past years as I enjoy sitting out in nature it sure would be nice to see some deer when I am out in the woods as would the others I hunt with its hard to keep interested in hunting deer when you do not see any deer Thank you

Stop trying to eradicate ALL the deer in this zone just because there have been 3 positive CWD tests. There is no need to make huge eradication zone for a small effected area. Doing this will further ruin the heritage of deer hunting in WI which the DNR is supposed to be protecting

I think that one tag per hunter is more than enough. This is a sport! No one hunter needs to be greedy. Now with that one tag you should be able to harvest a buck or doe. The State doesn’t need to be greedy also $ for more tags. One hunter one tag per season.

do away with crop damage permits or neighbor shoots the does with the fawns in them and a lot of the deer end up in the ditches ask him for a permit will not give you one if you have that many deer give the hunters an extra permit at least the meat would be used not destroyed

Deer density is unevenly distributed in Lincoln county. Agricultural areas have significantly higher densities. I am extremely disappointed in deer activity during the gun season and will consider bow season only in the future, unless the gun season is moved to earlier dates.

It's my opinion that the wolf population is just about right. I think the real problem is that we have way too many black bears that are feasting on the fawn population. Also if we want to achieve a memorable hunt we need to shoot does and leave spike buck population alone.

Northern Lincoln County is vastly different than the farmlands of southern Lincoln County. We can walk several forties and not see a single deer track in the New Wood. We currently are seeing a pack of 8 wolves on camera. We found 6 deer killed this winter by the wolves.

Please do antler restrictions for the entire state. Look at Pennsylvania and Arkansas and their success. It would be a one year trade off for great returns down the road. It would also increase the trophy potential for all hunters leading to more revenue for the state.
It is hard to get young people interested in sitting all day in the cold if they are only seeing 2-4 deer all gun hunting season. The numbers have to be increased in order to improve the odds of seeing deer. Otherwise we will continue to see a decline in participation.

I believe the deer herd is doing well in our county though the gun season was kinda a bust my bow season was the best in years. I didn’t kill a deer but for the first time in years I had nice buck that I seen and had on camera. Am really excited for this bow season.

In last years quota was insanely bad! My experience hunting in my area was drastically traumatized by the bad winter and amount of snow in spring of 2019. Just couldn’t realize no one could see that. This next year of 2020 should be a much better one than last.

My opinion is I have not seen the deer population rebound since wolves were introduced in my area, way too many wolves killing off the deer population, In my opinion introducing wolves was a very bad mistake! The DNR really dropped the ball for us hunters!

We live in the Southeast part of the county and have been seeing a continued increase in the deer population. The “block” we live in is 6 sq. miles. Three years ago we would see around 100 deer in a drive around the block. Last night it was close to 160.

I have hunted public land in Lincoln county for over 40 years. I noticed the effects of baiting as soon as it was made legal. Where I hunt the largest impact is from adjacent private land owners baiting. I would fully support a total ban on baiting.

Rebuild the northern forest deer herd. Go back to buck only for a few years. Then possibly get the option again to purchase a hunter’s choice gun deer license like we used to. This deer herd could be so much more healthy in regards to population.

I believe the DNR has hurt the deer populations by taking to many out. And now that the numbers are so low hunters and the kids are suffering and are giving up on hunting because they feel it's a waste of their time. Sitting all day seeing nothing!

1. I feel crossbows should be considered archery equipment and no additional licensing or fees attached. 2. Deer carcass removal stations made available. 3. More DNR resources spent on CWD research containing scientific data and not speculation.

I believe there should be a 4 point rule for Wisconsin because that gives a chance for the bucks to grow. ALSO I think there should be some doe tags around 400 for the youth hunt in Lincoln county. But No doe tags for experienced hunters

Please tell me how there is a feeding ban in Lincoln county and the neighbors are still feeding is fair to me and I do not see any deer at all during the hunting season? Either this needs to be enforced or removed from the regulations.

Am worried about the CWD expansion and what it will eventually happen to deer hunting and opportunity. Would like having mandatory testing to ensure knowledge of where there are problems throughout the county each year if possible.

I live on 150+ acres. During 2019 during turkey and bow season I crossed paths with 2 different bears several times on the same property. on fields I usually would see 9 or more deer each night I would typically see between 0-3.

Part of the county is in farm land and should be managed differently from the northern forested part. The forest land of the north part have and support far less deer than the farm land and the quota should be adjusted accordingly.
Didn’t see any deer in 28 hunting days. The sign was not present. Not sure if it was due to severe storm that knocked down so many trees. I don’t know if I will continue to deer hunt in Wisconsin if new proposals come to fruition.

We had wolves move in last year again and our our deer sightings were less than from previous year. The wolf problem needs to be addressed. I never thought hunting up north would be this hard. Deer are on high alert ALL the time.

I think that the baiting ban in Lincoln county should be lifted. During the first year. I bow hunted and saw very few deer. So last year. I didn’t get a license. Sitting and waiting for a deer to stumble by is a waste of time.

Wolf population is still killing to many deer. Suggest opening a season or adapt wolf control practices. Deer hunting was Once a family tradition but no so much anymore. Feeding restrictions have also hurt non-field hunting.

I would appreciate a reconsideration of deer baiting rules in this unit. Other nearby units to the west are allowed which makes it difficult to keep deer in the area for a successful harvest. Thank you for your consideration.

Wolf / coyote packs in the northern regions need to be addressed, on the verge of being out of control. Hindering everything from hunting tourism to future youth involvement of the hunting heritage. Thanks for consideration

Go back to party tags instead of youth hunts and stop doing all these doe hunt. When I was 12, hunting was exciting because we seen deer all year. Now fast forward 34 years. I seen 3 does in the last 4 years of gun hunting

The "Northern Forest" management unit should be all the land north of Highway 64. All the farmland south of highway 64 is identical to Marathon County (Central Farmland) zone in terms of deer habitat and deer population.

Hunted 9 days sun up to sun set. Sat about 3 hours every morning and 1 to 2 in the afternoon. In the middle of the day walked about 35 miles for the week. Never jumped a deer walking saw 2 sitting for the 9 days.

I enjoy seeing the deer during the hunt, doe or Buck. The doe numbers are down in the area that I hunt, but still see a fair amount of bucks. I would support only one buck tag regardless of method of harvest.

I do not agree with the bait ban. Deer are social animals and make contact daily without bait. I think if you made bait hunters disperse the bait in a large area it would be similar to natural browsing. Thanks

Hard to introduce the next generation into a sport where you don’t see any deer. Even the old seasoned hunter doesn’t want to sit all day, or all week, and NOT see anything. I will spend my money elsewhere.

We cannot overlook how our decisions now will impact the effects of CWD on the deer herd moving forward. Please seriously consider CWD and other deer health impacts when making quota recommendations.

The deer population has been consistently declining over the last 10-15 years in the area I hunt in this unit. Resulting in less hunters in the woods and disappointment from the ones who did hunt.

If you want to maintain hunters and attract new hunters, they need to see game. If kids, or adults for that matter, don’t see deer while they’re out hunting, they won’t hunt in the future.

The deer have destroyed the fruit trees in my yard once again. Year after year I re-plant, spray them monthly and they still get destroyed. What can the DNR do to help me with this issue?

Thank you, I have never went to a meeting but had always thought I should. When possible real meetings should be held but nice to be able to give in put by computer even if meeting held.

I’m a landowner in Lincoln county hunting off the tower road side of new wood I believed the dnr lies for a number of years. In my my opinion there should be a buck only season for 2020

Far too many deer. Forests struggling to regenerate. Terrible agricultural damage, I spent $75,000.00 on fencing in 2019 to keep deer out of my agricultural Christmas tree fields.
Our buck numbers need to grow. Maybe we should limit out of state hunters. Maybe we should allow only one buck tag per hunter and that person can use any method for that one buck!!

1) expand gun deer hunting season to nov 15-nov30 2) make gun deer license harvest valid for 1 deer, either sex (rules are getting too complex; confusing hunters, losing hunters)

I think because of the drop in harvest last year we should remain cautious in quotas for this season. We have theories as to why it happened but we just don’t know for sure why.

I believe that there is a predator problem affecting deer number drastically. The amount of Predator sign is overwhelming in areas that I’ve never had sign or problems before.

Since wolves showed up in our area the deer hunting has been getting worse every year. We have gone from seeing several deer per day to being lucky to see one all season.

Leave framework alone current management tactics are working. The severity of the winter storm during the 2019 gun deer season was a significant factor in a low harvest

The younger hunters in our group are discouraged and considering hunting options outside the State of Wisconsin and not hunting in Wisconsin. They want to see deer!!!!!

We really need to look at adopting a minimum point requirement for buck. This would allow for younger bucks to grow and make hunting more exciting after or few years.

Deer numbers seem to be down every year. To many hunting seasons and when the gun season arrives which is the main season people enjoy the deer are already gone.

To many predators to increase deer kill harvest. Keep deer season the same length( 9 days ) as it always has been. Have a season on Wolves and other predators.

Continue the baiting ban. This will keep deer operating in their natural environment, reduce CWD and level the playing field for all hunters and all weapons.

There is no need for an extended Deer Firearm Season. The traditional 9-day Deer Gun Season is plenty long to keep our deer population where it needs to be!

North of highway 64 has no deer, make it no does, need a wolf season, which you already know because you can’t manage any wildlife let alone the wolves.

I only saw one deer during the gun season last year. Killing one isn't my main concern but it is nice to see wildlife in these woods while I am hunting.

Why can't you have a random draw for doe tags so areas do not have over kill by out of town people that hunt in a big party on small amounts of land.

The deer population is way too low to allow for any anterless harvests for some time! How did it go to zero anterless permits to 4500 in one year?

I have been a logger and hunter my whole life and I firmly believe the Deer population is too low and the predator population is out of control.

I am very very concerned with the Wolf population in Lincoln County. It has truly made hunting difficult in this county. Thank you for your time.

I want you guys to lift the baiting ban and leave everything the same get rid of the forest and farmland thing and and go back county by county

Crossbows should not be considered equal to a bow. The crossbow season should be shorter by far. Maybe the month of October only. Thank you
5313 Wolves are a problem for deer numbers in this unit. The proposal to have a liberal season within the CWD control unit is not necessary.

5314 Get rid of the Wolves, Or thin them out. Crazy going out and have to be afraid of them. And not seeing any deer for days because of them.

5315 Just leave everything the way it is.

5316 if atv trails are closed why can hunters drive them all over.so if we shoot a deer way back why can't i take my snowmobile to get it.

5317 I believe the wolf population is harming our deer population. there are more wolfsign every year and less deer. Also to many doe tags.

5318 Last night of Bow season in January 14 deer walked by I had no antlerless tags b/c I used them already. Lots of deer in Lincoln County.

5319 I believe further testing for CWD should be done throughout the county to continue to monitor and reduce its spread of possible.

5320 I do not believe that the Baiting Ban in Lincoln County is appropriate and should be lifted. There is no evidence that it works.

5321 I personally wish we could go back to a minimum forked buck season to populate (to promote) the bigger bucks in the state.

5322 I own a bar and grill, we had half the hunters last year as the year before, non-baiting really hurt the hunters showing up.

5323 More black bear and bobcat tags should be given out with less points. Also timber wolf population HAS to decrease.

5324 I have major concern on your lack of concern on the excessive wolf population particularly in the Newwood Area.

5325 Thanks for this opportunity. I recently purchased some hunting property and want to hunt with my two sons in it.

5326 wolves are a big problem on the deer in lincoln county. the amount of them on trail cameras we have is unreal.

5327 I would be in favor of buck 6 point or better in order to harvest. I would also be in favor of zero baiting.

5328 Too many predators depleting the deer herd. Concentrate on them, then look at regulating the deer herd.

5329 Wolves made for a tough year of dear hunting. Deer were around, then gone. There should be a wolf hunt.

5330 I am a tree farmer, too many fricking deer. Get real shoot some of them or my trees will be useless....

5331 16 day deer hunt would be helpful. 2018 they were in rut 2019 the rut was over so it was not helpful.

5332 Too many predators in Lincoln County. Between bears, wolves, coyotes and bobcats, deer are struggling.

5333 I would like to see less swing in the season from early to late. Pick a weekend and stick with it.

5334 Great job on decimating the deer herd by introducing timber wolves, real smart (heavy sarcasm)

5335 I believe deer harvest was down due to the no baiting law. Please open baiting back up.

5336 Lots of deer this year, mild winter, concerned about CWD with deer population so high.

5337 Would like to see season for Bow and Gun run at the same time and for the Same length.

5338 My main concern would be better predator control. See too many wolves in the area.

5339 Thanks for all that you do at the DNR - respect and appreciate the work you do.

5340 At least a fork to be a legal buck. No youth only hunting seasons.
I seen more wolfs than deer... how does that happen?? Hmm

There is a lot of deer here and lots of fawns made it.

Unit 32 should be split north and south. Too many wolves.

All crossbow season and rifle only seen 2 deer.

Get rid of deer farms. Major cause of CWD.

Recommend 6 point minimum buck harvest limit.

I think the season should be extended.

Would like to see minimum buck size limit.

Baiting needs to be brought back!

Modified small portion baiting.

Deer numbers are way down.

You don’t know anything!!

Please stop all baiting

Start shooting wolves
Public Input on CDAC Preliminary Recommendations - Spring 2020

Manitowoc, Central Farmland

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

433 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 286
   - I visit this unit for non-hunting purposes: 57
   - I hunt in this unit: 395
   - General interest in this unit: 68

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 373
   - Bow: 186
   - Crossbow: 200
   - Muzzleloader: 154

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 26.53
   - Maximum: 67

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 264
   - Mostly Private Land: 86
   - Public and Private Land About Equally: 26
   - Mostly Public Land: 7
   - Exclusively Public Land: 9
   - I did not hunt in this unit last year: 3

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 17
   - Not too crowded: 45
   - Neither crowded nor un-crowded: 25
   - Somewhat crowded: 17
   - Very crowded: 14
   - Not applicable: 10

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 61
   - Fewer: 142
   - Same: 166
   - More: 50
   - Many More: 12
   - Unsure: 2

Section 3: Feedback on the CDAC's 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th>The Antlerless Quota is...</th>
<th>Much Too Low</th>
<th>Too Low</th>
<th>About Right</th>
<th>Too High</th>
<th>Much Too High</th>
<th>Unsure</th>
</tr>
</thead>
<tbody>
<tr>
<td>9</td>
<td>25</td>
<td>206</td>
<td>128</td>
<td>58</td>
<td>7</td>
<td></td>
</tr>
</tbody>
</table>
Section 3 (continued): Feedback on the CDAC’s 2020 preliminary recommendations

8. In your opinion, how would you rate the number of $12 Bonus Antlerless Harvest Authorizations recommended for this unit by the CDAC for the 2020 season?

<table>
<thead>
<tr>
<th></th>
<th>Much Too Low</th>
<th>Too Low</th>
<th>About Right</th>
<th>Too High</th>
<th>Much Too High</th>
<th>Unsure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bonus Harv. Auth. - Private:</td>
<td>6</td>
<td>23</td>
<td>198</td>
<td>134</td>
<td>52</td>
<td>20</td>
</tr>
<tr>
<td>Bonus Harv. Auth. - Public:</td>
<td>10</td>
<td>31</td>
<td>210</td>
<td>100</td>
<td>46</td>
<td>36</td>
</tr>
<tr>
<td>Bonus Harv. Auth. - METRO Private:</td>
<td>23</td>
<td>75</td>
<td>203</td>
<td>15</td>
<td>8</td>
<td>109</td>

<td>18</td>
<td>74</td>
<td>205</td>
<td>14</td>
<td>10</td>
<td>112</td>
</tr>
</tbody>
</table>

9. In your opinion, how would you rate the number of FREE Antlerless Harv. Auth. recommended by the CDAC to be issued with each license for 2020 season in this unit?

Note: Farmland Zone and Metro Subunits only.

<table>
<thead>
<tr>
<th></th>
<th>Too Low</th>
<th>About Right</th>
<th>Too High</th>
<th>Unsure</th>
</tr>
</thead>
<tbody>
<tr>
<td>FARMLAND ZONE Antlerless Harv. Auth. per License:</td>
<td>33</td>
<td>247</td>
<td>148</td>
<td>5</td>
</tr>
<tr>
<td>METRO Antlerless Harv. Auth. per License:</td>
<td>34</td>
<td>225</td>
<td>113</td>
<td>61</td>
</tr>
</tbody>
</table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
- Implement an ANTLERLESS HOLIDAY HUNT : 153 244 36
- EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: 254 139 40
- Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 49 367 17

If a Holiday Hunt is held in a Farmland unit...
- ...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? VALID NOT VALID Unsure

If a Zero Quota (buck only season) is adopted...
- Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit? (Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very)

<table>
<thead>
<tr>
<th>Concern</th>
<th>Average Rating</th>
</tr>
</thead>
<tbody>
<tr>
<td>Amount of deer mortality during an average year...</td>

</table>
**Comments for Manitowoc, Central Farmland**

Note: the comments presented in this report are the unfiltered opinions of individuals who responded to an online public input form. The viewpoints expressed do not represent the views of the state of Wisconsin, the Department of Natural Resources, or its employees.

The issue that I have is that through the use of trail cams, I can see that there are plenty of deer in the area that I hunt. BUT the deer movement is 95% nocturnal. How in the heck am I supposed to harvest a deer that moves only at night? During the day the deer all sit on posted "Absolutely No Hunting" land. Back in the 1980's we used to do deer drives to move deer. Nobody does that anymore due to land being posted no hunting. Deer are smart, so they sit where it's safe during the day and move at night. I also have issue with the 9 day hunt. It should be extended. There was a time when hunters would take the whole week off from work to hunt during the 9 days. Not nowadays. In today's world people have to work more to pay the bills. The three days before Thanksgiving are now days hunters go to work instead of going into the woods. I know, I'm one of them and so do many hunting friends of mine. Times have changed from the last 30 years of hunting in Wisconsin. Our rules, seasons and way of thinking need to change with the times. Extending the 9 day gun hunt AND archery season will help bring deer harvest numbers up. You can give me 100 doe tags, but if I can only gun hunt 5 days out of 9 and the deer are nocturnal, I can guarantee you that I'll be lucky to fill one doe tag. In fact, I haven't harvested a deer in 10 years. When I do have the chance to hunt, I do hunt all day. And the trail cams show the deer walk right past my stand in the dark two hours after I leave. Since the deer bed in no hunting land, I'm starting to think, why do I bother paying lots of money to deer hunt? Yes, yes it's the experience of being in the woods during hunting season. Hell, I can do that without buying a hunting license and I won't have to clean my gun afterwards cause it'll sit in the house. Our society has changed and our deer hunting structure has to change with it if we are to have future generations follow in our paths as hunters. Young hunters today live in much different times than when our current hunting structure was first developed. Thank you for having an online survey since work prevents me from attending actual meetings and this Covid 19 situation really prevents it.

I would like to see anterless tags issued for ALL central farmland counties/zones and for all land types, rather than zone specific. In my opinion the zone specific requirements limit the number of anterless taken per county as hunters often have a choice to hunt in many counties but will often choose the county that provides them the best option and opportunities to hunt, however if they could squeeze in other hunts they would. For example, I hunt on private land with family in brown county and we want to maximize our anterless harvest there to improve the buck to doe ratio and eventually improve our chances of mature buck harvest, however I would also like to hunt for anterless in Manitowoc county, on public or private, and in metro or regular, but forcing me to buy many tags deters me from buying any, and therefor I do not hunt at all in Manitowoc county. In my opinion, simplifying the tag structure would increase deer harvest. Also, if there is a large desire to increase anterless harvest, decrease the bonus tag cost or make them free after buying a tag. Final note, there were rumors to extend the nine day gun deer season by opening it one week earlier, and as a primary archery hunter I oppose this measure as it limits the opportunity to harvest a buck during the rut with a bow, but it would also detract from the well established traditions of Wisconsin's 9-day gun deer season that has been passed from generation to generation. Thank you for reading my feedback, stay safe and stay healthy.
I disagree with the premise that you must lower the number of deer. But alas the Farm lobby is bigger than the hunting lobby. When I can sit in a 25 acre wood lot completely surrounded by planted farm fields from mid-September through the end of November and count the number of Deer I see on one hand, I’d say the DNR has once again tricked me into spending a bunch of money on a false premise. Your goal is to sell tags, not kill deer. If you continuously sell tags by lying to hunters ("we have tremendous amounts of deer that must be harvested") you accomplish your goal of making money. Eventually however your lies catch up with you as evidenced by the 20% decline in harvest rates. This eventually leads to reduced numbers of hunters, which is also occurring. My grand-kids get bored watching the wind blow. You wonder why youth recruitment numbers are low, and going lower, and you blame it on poor parenting and social media, when it is your mismanagement of the resources that is to blame. You (the DNR) are the ultimate blood sucker, eventually killing your largest host (hunters). Eventually you will need to sell licenses to bird watchers and bike riders to pay for your new pick-up trucks and top-dollar pensions. Good luck with that. More Government run amok. Many of us, both young and old, are finding other pursuits that don't include buying overpriced hunting licenses to chase ghosts.

What needs to be done, not only in Manitowoc county, but overall the state, is to have more access to private property which is posted. The deer numbers are much greater in sub metro areas and private property where many deer have a sanctuary throughout the hunting seasons. That's why so many hunters are quitting hunting. It doesn't matter at all to extend the seasons a few more days because the deer will end up on property that is posted not to hunt. A lot of these areas are managed for QDM only, where the buck to doe ratio is very uneven with less does being killed then bucks. Bucks that are above average, to take into consideration. The only way to bring the deer herd down to the expected level is to allow hunters access to these properties. Until then the population will remain high and CWD will be more of a problem to the point sharp shooters will have to kill the majority off. Overall the deer hunting for me sucks! We need the Manitowoc river dredged out by the KillSnake area because it’s always wet every year. The river floods when it rises. I don’t have land of my own but I still hunt hoping to get a deer every year. That's the way it should be for everyone.

Why would the CDAC recommend to DECREASE when they don’t take advantage of all the seasons that are offered. They are concerned about snowmobile trails, trapping and small game but they had no problem implementing these extra seasons in the metro zone. Whats good for one area should be good for the other area. The Manitowoc county metro zone in 2019 harvested 11 deer per sq mile of deer habitat compared to 22 deer per sq mile of deer habitat in the rest of the county. In 2018 it was metro 10 to county 25 The Metro zone does not have a deer density issue, it looks like the rest of the county may have. Its not from a lack of hunting pressure in the metro area that is for sure! Something is drastically wrong - the Metro zone should have been only used as "METRO" directly adjacent to the city not along the whole lakeshore. Now you recommend 2 extra tags for the Metro unit, do the math, the deer numbers are not there!! It will cause more land to be posted with limited entry.

This was not specifically mentioned here, however I would still like to state that the idea of expanding the gun season is a terrible one. There is no need to harm bow hunting opportunities by lengthening the gun season or moving it up to earlier in November. Gun hunters have plenty of opportunity during the 9-day gun season to get a deer. Plus, having the season during the week of thanksgiving has worked well for many years. Also, the suggestion of shutting down bow hunting for the week prior to gun hunting to “increase anticipation” for the gun hunt is alarming. This fact that this would even be considered makes no sense at all and calls into question the sanity of the decision makers at the DNR. Making decisions based on feelings and the desire to “increase anticipation” for the hunt is, quite frankly, idiotic and will cause more harm than good. Decisions need to be based in science and should be made for the benefit of deer hunters and deer populations as a whole.
It is my strong opinion that the nine day deer season should not change. Changes to the traditional deer season take away from the integrity, quality, and anticipation of the normal season. I believe we need to maintain the youth hunt and all other special seasons should be terminated. The nine day deer season in Wisconsin is a tradition for my family and we do not want to see it extended. If we continue to change season structure, it is my strong opinion we will take away from the excitement and tradition of our Wisconsin nine day hunt. It is also my opinion, and that of my family with many young hunters coming up, that we need to maintain the deer population in Unit 64 and stop the decrease. Not seeing any deer in the woods is a sure way to lose young hunters. Our continuing decrease in Unit 64 is doing just that. Thanks for allowing me to express my opinion.

Overall I think the Manitowoc CDAC is doing a good job, but the recommendation from the DNR to extend the gun season and/ or bring back earn a buck is a knee jerk reaction to a 2019 gun season that was later than usual. I hope our local CDAC is is against both these ideas and does not give this type of power back to the DNR. I personally believe hunter numbers are down because of the lack of available land to hunt. There is an abundance of public land in Northern Wi that isn't hunted because there are no deer. The traditional deer camp has been ruined by policies of the DNR!! I would love to take my boys " up north" for deer camp to experience that family tradition, but why do it if they dont see anything? And the DNR thinks they see something if they make the season longer???? They would rather introduce and protect predators that ruined a long standing Wi tradition.

Hello, I am just about to go out of state for college which leaves me with not a lot of time, if any, to hunt with my dad. When I heard about the possibility of a Holiday Hunt in Manitowoc County, I was ecstatic. This provides me, and many others who are in the same situation as I am, to get an opportunity to hunt. As someone going into conservation, the chance to hunt is important to me. This Holiday Hunt is also another useful way to help even out the deer population. I can confidently say that some days I see twenty to thirty deer in a day, if not more. In my childhood, I never saw that many deer. It is a strong possibility that more action will eventually be needed to stop deer from overpopulating. The Holiday Hunt would provide an opportunity for more deer to be harvested and would act as a start to attempt to bring the deer population to an even state.

We have a few issues facing our hunting heritage. 1.) eradicating deer from an area due to over hunting, or too little huntable property do to private land areas. This is especially true in Manitowoc county. Most of the land is private and not huntable. I would like too see additional lands leased by the state for public hunting. 2.) I believe there is an increase in predation by coyotes. I think there could be an increased effort to encourage more predator management. And 3.) I believe that the majority of harvesting is on private and by a relatively small segment of the hunting community. By that I mean to say that private land owners and land parties when awarded too many antlerless and antlerless bonus permits kill an excessive number of deer because they can, and I believe further restrictions should be placed by size and age requirements.

I PRIMARILY HUNT THE AREA NORTH OF TWO RIVERS WHERE THE SOLAR PANEL PROJECTS ARE BEING BUILT AND ADJACENT TO THE TWO CREEKS NUCLEAR PLANT. THERE ARE "MANY" DEER WITHIN THE CONFINES OF THE NUCLEAR PLANT BUT DO TO ALL THE HUNTING PRESSURE IN THIS AREA PRIOR TO THE GUN SEASON THE DEER FOR THE MOST PART STAY ON THIS POSTED PROPERTY. ALSO, I AM SURE THAT WITH ALL THE SOLAR PANEL CONSTRUCTION TAKING PLACE THIS WILL AFFECT THE MOVEMENT OF THE DEER. I HAVE TRIED HUNTING JUST A FEW MILES NORTH OF TWO RIVERS BUT THERE IS SO MUCH PRIVATE LAND AND MOST OF THE LANDOWNERS WILL NOT LET A PERSON ON THEIR LAND TO HUNT AND POSSIBLY SHOOT "THEIR" DEER. THE POINT BEACH STATE FOREST IS VASTLY OVERCROWDED WITH HUNTERS AND FOR SAFETY I DON’T HUNT THERE. MY OVERALL EXPERIENCE WITH DEER HUNTING HAS NOT BEEN A GOOD ONE AND I AM SERIOUSLY THINKING OF GIVING IT UP!!
5367 Numbers have really dropped in this zone in the last 3-5 years. Many hunters young and old in the area have quit the sport, and have not introduced new hunters because they have little success, and many don't even see a single deer in several days of hunting using multiple methods of hunting on many large tracts of private land. Our group of roughly 20 people pushed, sat, and still hunted around a thousand acres of private land per day every day of gun deer season. We collectively as a group saw a maximum of 11 deer in one day and a minimum of 0 on several days. Clearly the animals are not there. Yes, we pushed standing corn fields as well. It's impossible to kill something that just doesn't exist. If someone is complaining they are seeing too many deer, just give us a call we can reduce number for them.

5368 I have lived in the county for 45 years and have hunted here less than 10 years. We typically travel up north and hunt in the National Forests in North Central WI. When hunting here we have always hunted private land. Personally I have hunted in the county about 7 days over the last 5 seasons. I plan to buy a crossbow and hunt here in the fall for does as the county is looking to reduce the population and I believe that the deer here are above the social carrying capacity but not the biological capacity. The deer here also due to the heavy agriculture acreage is very concentrated in high population spots and that increases the issues that deer bring to the landscape. There are more deer here to shoot in MTC CO then up north but the hunt or experience is less satisfying from an outdoor experience.

5369 I think that deer hunting is a great thing to pass down to ones sons, daughters, and grandchildren. I believe that long range rifles are not really necessary in this unit. I feel the crossbow is a great thing for us hunters as we get longer in the tooth. Compounds are great for the younger bucks who can draw them back. It really is a meeting of our souls with nature and something that we can enjoy just sitting in our blinds and enjoying the magnificence of nature and how we can blend with it. We are not entitled to this enjoyment, but should be stewards of this heritage. We have lost some of that because places to hunt are more limited, and some people do not respect the beauty of taking a deer with a clean shot and thanking the heavens for giving us this enjoyment and bounty.

5370 Deer hunting in Wisconsin has become an absolute disaster in some areas. There really isn’t many deer around, I walk for numerous miles on some days and don’t jump any deer, to the DNR to say the herd numbers are high is ridiculous. Thinking of totally abandoning this state cause hunting isn’t fun anymore here in Wisconsin. Keep giving all those tags to everyone, it makes no sense. It’s an absolute joke. There’s not many deer, all the little bucks get killed off and have no chance to grow, so the chance of really harvesting a decent buck is pretty slim. If everyone continues to receive a buck and doe tag, is it that hard to maybe implement a 6pt or bigger only buck? I don’t know what else to say, but gun hunting in Wisconsin is an absolute waste of $24.

5371 In regard to the three year goal to decrease the overall deer population, the proposed changes to season structure would be contradictory. Archery season in particular, the shortening of the crossbow archery season opportunities will decrease the harvest as shown in vertical vs. crossbow harvest numbers. Crossbow is a more efficient weapon for most hunters, this leads to higher harvest numbers. Please don’t change the season structures regarding archery. Any changes to season structure should happen on the back end of the gun season. As weather dictates the use of hunting blinds to extent time afield. Blind hunting later in the season with firearms may help increase harvest numbers, which is the goal. Late season (December) could be an “any weapon” season.

5372 I hunt the very southwest corner of the county, deer sightings have continued to go down yearly in this area. I'm sure some areas of the county have large populations of deer but are in non-hunting areas. Earn a buck should never happen again in this state it was a joke, antlerless deer were being harvested during the bow season in other DMU's and out of state (Michigan). and regestered to get the EAB permit. One archery season no matter what bow style is used (recurve, compound or crossbow) Starting the the gun season a week earlier is a poor decision, First thing said every year after the season is over "to much corn standing" you think starting the season a week earlier, more corn will be harvested?

Report Generated: Friday, May 01, 2020 Manitowoc, Central Farmland
The Metro zone north of Two Rivers should be eliminated!! The recommendation to increase the doe tags to 2 ea in metro zone is ridiculous, that means every hunter for each liscence in the metro would get 4 tags to use. If I hunted bow n gun I would have 8 doe tags to use in the metro area. The deer numbers DO NOT support this. The extra seasons and more tags have a direct result of more land being not accessible. Less land less deer equals less hunters wanting to be a part if the sport. I agree that there are a few hot spots in the Metro but that will ALWAYS be the case as a result of no hunting allowed. Do the right thing and eliminated the extra tags in the metro n eliminate the zone in 2021.

I would like to see the season end by Dec. 31st. and not go into the new year. My reasoning, the deer have been chased since September and entering the hardest month they don't need to be continual pressure at that time. Winter is difficult enough. Leave them be after the new year. Crossbows I believe are superior in accuracy and will have less chances of wounding deer. Rifle was a great implementation. I feel strongly that people hunting with rifle in Manitowoc county should do so in an elevated stand and not on the ground. The density of houses is just too great and the chances of stray bullets with increase traveling distance is too great a risk for injury or death. thank you.

I would encourage CDAC NOT to have another earn a buck. Last time it was implemented it caused problems in our neighborhood and showed how inaccurate the DNR was in controlling the deer herd. We had shot a lot of deer the year before EAB implementation on our own to control the population and then the EAB came the next year and really hurt the population. I would hope educating land owners on the negative effects over population would get more does to be taken. Also, it would help if there was a good way to donate deer. Rather than commercial processing only, some people may take a deer to process themselves if there was a website or "Face book" page for people to request deer.

I feel that the doe permits should be the same number regardless of whether or not you're hunting private property or public property. A lot of private land owners hunt public property as well as private and I know of one group of about fifteen or more that start deer drives opening morning with the intent to push deer off the public property. Their drivers will walk right past you within five feet. They have no idea where anyone is sitting and yelling to run the deer off. It is just a matter of time before they get someone hurt or killed by their actions. Why should private owners be allowed double or triple the amount of tags as those that hunt public property?

1. Eliminate the Metro Zone 2. Eliminate the extended bow season in the Metro. Late season bow hunts put added stress on the deer heard by going into there wintering areas and forcing them out. I’m avid bowhunter and despise this extended season. There is a lot of baiting going on in the county, it happens even more with the late season bow hunt. Bucks that are run down from the rut are loosing there horns during this time period also. 3. The CDAC wants more deer shot have the holiday hunt. 4. Promote to the public and sportmans clubs how to find out which farmers are asking for crop damage tags so the public can get a hold of these farmers to hunt them.

Deer hunting has progressively worsened the past few years in Manitowoc County. Deer sightings have declined and the quality of deer has worsened, which has led to a lack of Hunter recruitment and retention. Manitowoc County can safely sustain and support far more deer than the DNR studies recommend. The goal of the Manitowoc County CDAC should be to maintain, not reduce, the overall deer population. Crop damage tags, additional bonus antlerless tags, and all special antlerless hunts should be discontinued with the exception of the metro zone. Hunters should be given a hunters choice tag or only ONE antlerless tag per person (not per weapon).

The deer herd in this unit will continue to be high and strive. There are two very important issues which help the deer population maintain high numbers. The first is there are an increasing number of hunters that want the trophy bucks or bucks only thus won't harvest a doe. I am not one of those as I like venison. The other is the increasing loss of available hunting land. This land is lost either to development, loss of the family farm or corporate farmers/land owners who will not allow hunting. The majority of the above land is adjacent to good hunting land. Opening day starts and deer seek refuge in these safe areas.
Last 10 years aren’t your numbers on our land have gone way down where we only see a few and rarely see a buck. Hunter numbers have decreased so therefore deer are getting pushed around like they used to. They get in the thick stuff and don’t come out until mid week when they go back to being somewhat natural and if we don’t hunt those days we rarely see any. On opening weekend. Because of this I always let those go but now I am changing my attitude that it’s OK to shoot the seed for the next year, Otherwise my family does not get any meat. It’s not that we don’t need it and it’s just nice to have some every other year.

I have hunted my 34 acre property just north of Manitowoc for 8 years. Last year almost no bucks seen either hunting or just day to day viewing... I feel that the crossbow hunters are eliminating most of the mature bucks in the local area. Antlerless hunting example: I have a neighbor who shot 2 large does (I personally witnessed it) both does had twin fawns. I have found 5 dead fawns this winter. So, in my opinion shooting a doe with fawns kills all of the family, much like shooting a cow moose with calf. Therefore, your analysis of “kills” should also include the elimination of fawns of the year with the mother.

Managing for quantity only is a mistake. If you manage for quality people will be more likely to keep the quantity in check. And be happy about it instead of resisting the idea of lowering population numbers. Example. 4 point on one side buck restriction with 2 doe tags per license. I’ll shoot a doe and pass a young buck if I knew the neighbor wasn’t going to shoot it the next day. Like others in Wisconsin, I’m loosing interest in hunting this state due to poor management! If Wisconsin didn’t have the “hunting tradition of deer camp” there would hardly be any hunting!

I have the opportunity to gun hunt Manitowoc, Brown and Door counties. When buying a license, one must list the one county he will be hunting. All these counties are slated to decrease their deer herd. There should be a way one can be issued an anterless deer permit when purchasing a license for more than just one county without having to purchase a bonus tag. If the DNR/Counties are interested in reducing the deer herd in this area, there should be a way that one can get anterless tags in multiple counties without having to pay extra.

I’d like to see less does being taken it’s gotta stop!! Pretty soon there’s gonna nothing left around here. Don’t know why the numbers are so high because if there was really that many deer around you’d see them all over but we don’t! The nineteen gun season should not happen because if that happens the herd really be wiped out. What’s it gonna do for us bow hunters then? It’s really very frustrating when hunting comes around and especially on a all day sit to not see deer so if there really was that many we would see them then.

I feel the deer numbers on on track for Manitowoc county farmland. I oppose all early season gun type hunting prior to Nov. gun deer opener. Keep the 9 day deer hunt opening on the Saturday before Thanksgiving, Deer hunting is a tradition. I also oppose the Holiday gun hunt. I have kids that are soon to be hunting age. I hope you keep youth type programs in mind. All important to keep kids interested in deer hunting. Nothing is more disheartening for a young hunter than hunting all and not see even one single deer!

you all want to decrease the deer population to what you all think is acceptable. the complaints of deer damage is growing because payments are made to liberally now. thus the quality of deer have dropped and buck quality has significantly declined. insted of giving more licences out how about the dnr starts to change prices for all hunters who come out of state! that also includes out of stat that own property and clame residency. that will open up public lands more to residents and quality of deer will greatly increase!

I think the DNR would need to find a better way of totaling deer population. The DNR, I my estimation, are issuing too many kill tags in my unit. I have hunted the same 2 stands for 34 years. Over this time I have witnessed fewer deer than ever. I understand that environmental factors contribute to population. With that said, I would witness groups of 20 or more at one time. In the last 6 years the largest group was 2. Unacceptable!. Keep giving out multiple doe tags and the DNR will loose me as a hunter.
There are way, way, way too many deer in Manitowoc county for many reasons. Agriculture damage, deer health, forest damage, Lyme disease, driving accidents. The biggest threat that deer pose is that they will eventually contaminate the environment with CWD Which will probably cause extreme upheaval in Wisconsin agriculture and land values. CWD prions have been proven to be taken up into plants. Eventually it may be determined that cows can acquire CWD by eating feed grown on contaminated fields.

Very hard to get my children interested in hunting when we sit for days without seeing a deer. I hunted the same three properties for my whole life and I feel the deer numbers are low. Years ago we always saw deer, and now we are lucky to see deer once every four or five sits. I can not figure out why the DNR still wants to reduce the herd. Maybe we need to make smaller units again so it is possible to control the local herd, instead of putting us in with deer herds from 50 or 100 miles away.

In my area of the county, (northwest), my neighbors, my family who hunts the land with me, and myself all had the WORSE season in my 15 years of hunting. I saw 8 deer during the entire archery season, and 2 fawns on the last Sunday of the regular firearm season. Total of 10 deer, and that seemed pretty average for everyone in my area. The deer numbers in the area seemed very low despite what we are being told. Even deer sightings in fields have been down compared to other years.

Get rid of the tag system that only allows me to hunt 1 county. I almost got fined last year because I accidentally selected private and not public. Bring back registration stations. Do both. The current system is terrible. I used to hunt up north at the family cabin opening weekend then private land in Manitowoc county as well as public in Collins and public in the Brillion marsh. It’s impossible to do that now with your messed up zone/county/public or private selection BS.

We farmers are having a hard enough time making ends meet then we have to feed the deer too. Had recorded crop damage the past few years. Any land around wood forget making money soybean fields mowed right off 12 to 30 deer on a 3 to 10 acres field. We shouldn’t have to have to take this. Crop damage tags are great but hell when you can fill 3 in a night in a row because there not even scared of the gun shots. Something needs to be done and not wolves eater!!!!

I want to mention that a long time ago, recurve and long bow deer hunters were saying the same things about compound bow hunters, that compound bow hunters are now saying about cross bow hunters. If you restrict cross bows then go all the way and also restrict compound bows. I like that young people can shoot a cross bow and have success. I have seen good examples of this but it is taking time. Please stay the course on cross bow usage. Thank you!

I have been hunting for over 40 years and spend hundreds of hours in the woods every year. Every year I see fewer deer and wonder why the DNR continues to eradicate deer in Wisconsin. The number of hunters is going down because hunters are tired of sitting in the woods all day and seeing nothing. I am a die hard hunter and am trying to pass the love of hunting on to my grandchildren. Please don’t kill all the deer! Sincerely, Ed Kletzien

Please do not extend the deer gun season. In the area that our family hunts in, the deer population has decreased significantly the last two years. Also, please go back to back tags, for identifying trespassers. If people were able to be identified from their back tags, they would be less inclined to hunt without permission. Please go back to in person registration of your deer, to prevent poaching, and a more accurate harvest numbers.

go back to regesturing deer at public places to many people regesturing bucks as does so they can continue hunting that is what is happening to your buck kill. it is not us crossbowers we are ethical hunters not its brown its down how many nubby bucks get shot that way should reg. those as a buck not a doe its a boy not a girl. thank you my spelling might not be the greatest sorry thank you for your time ..
Bring back in person registration stations. I've been hunting for 24 years and last year I got my first one EVER! That is an experience to talk about it with other hunters!!! Also have no bag limits on deer. No more earn a buck...I drive semi truck and I see far too much wasted venison lying and decaying in the ditch unused. You want the population down? Stop with the bag limits! Thanks.

The deer herd is this unit is substantially lower than it was in the late 80's early 90's and back then we had hunters choice and no bonus permits. I don't understand why it is said the population is to high now. We used to take our children shinning at night and would count 600 or more deer when we went around the NN swamp. Nowadays we only count 125 maybe 150. That is a drastic decrease.

I do NOT like having to pick a county, I have land in both counties, why do I have to choose!! What if a wounded deer runs across county line( yes i'm That close)!! Very dissatisfied with deer hunting, not sure DNR takes into consideration all the private land in which is off limits to hunting, I totally understand it’s owners right to post, but lot of land taken out of circulation!!

Poaching at night is a MAJOR problem. Blood spots on side of roads, gut piles in ditches, etc. Need to BAN deer shining in Manitowoc county and any other county. Disrupts normal deer biological behaviors and only promotes bad behavior and poor stereotypes of hunters. An all antlerless season will only increase the amount of night poaching of bucks. Please, please ban deer shining.

Difficult to understand why baiting was ever started in Wisconsin. Since I began to hunt deer in 1957, when even elevating yourself on anything was illegal, I saw many rule changes. Baiting has been the most detrimental because it involves monetary and political issues. Of growing concern is a hunter’s “right” to claim a spot by leaving a tree stand on public land. Problems...

5th generation farm land owners with a steady population of deer in my area . 50 years ago we rarely saw a deer track walking to the woods ,but now it's a regular sight ! URBAN DEER seem to be a problem ! Deer surviving near city limits or within , know where it is safe and possibly get fed or access to feed on a regular basis with NO hunt pressure ! Deer know where to hide !

A person is only going to kill as many deer as they need or feel comfortable with. If a person can’t kill a deer in the liberal seasons the dnr provides they are not very good hunters and adding more time isn’t going to help. I won’t go hunting during doe only seasons because I don’t want to be tempted if a trophy buck walks by. So adding doe only seasons keeps me from hunting.

Manitowoc should join the rest of the lakeshore counties and have the holiday hunt. Perception of conflicts is just that, perception. More counties are getting on board as they realize there is no conflict and it can be a great time for families to get together for another hunt. The holiday hunt has taken more deer than the Dec. antlerless hunt in other counties.

I live near a area where 3 county’s meet, I wish your tag is also good for adjoining county’s. The deer population near us seems to high. I saw 16 yesterday when a turkey went into the woods near me. I don’t have any answers on how to lower the population, but last year the deer were hard to find. I think the deer have safe zones and they know where they are.

I hunted the holiday hunt in Sheboygan County and enjoyed it greatly. Few hunters in the woods - the experience was very good. I want this opportunity for Manitowoc County as well. I disagree with it interfering with other hunts. I hunt pheasants all season long, and I think it helps other hunters more than hinders them. Deer hunting is the same.

I feel the crossbow season is way too long. It is not like a bow. It is like a shotgun as far as range is concerned. It should follow the muzzleloader in equality. If we need to trim the herd, we should open the gun season earlier or the muzzleloader season earlier and longer. Maybe the muzzleloader and crossbow season should run together.
Give one buck and one doe tag per license. If people want to shoot more, let them purchase more doe tags. Allowing archery hunters to use their gun tags during gun season is very beneficial for people who hunt their own land, or go so deep into public where most hunters won’t venture and don’t want to chase deer around during gun season.

The biggest reason for the low harvest numbers is the lack of hunters. I do support holiday hunts and metro hunts but i do not support extending the 9 day gun season. Living in Manitowoc county I do not see the amount of deer that i did when i was younger that is my biggest reason for not supporting to extend the 9 day gun season.

Have hunted Walla Hi Area, Hawk Island, and 151 swamp all my life. Deer numbers are down in these areas. I hunt an average of 70 days a year. You can't even get into many of public areas in the 151 zone anymore from highway 67 north to Brillion it's under water. Thats a huge area that doesn't hold large deer population any longer.

Wisconsin should implement all out of state hunters are required to purchase a qualified license before being able to purchase a non-resident deer hunting license. The qualified license would be an annual non-resident fishing or small game license. Most western states require this and it produces significant revenue for them.

Not enough deer in my area. Would like to see more doe and fawns. If the doe /fawn population stays at this level then would like to see an antler point restriction (4 point one side) as other states have implemented. If we can carry over most of our yearling bucks to their 2nd year, the quality would be incredible.

My only comment is that I think there are fewer deer then what the experts might be saying and I would like to see the deer population increase so a hunter can see more deer and also have a chance at harvesting one. Thanks for conducting this survey and letting us express our point of view and suggestions.

Do not put gun season during rut! And also crossbows need to be allowed during all archery seasons. Bow hunters don’t need there own season, more Deer being killed this way now and more recovery’s. Gun season is when most archery’s like me fill the freezer with multiple antlerless, don’t Change archery season.

I would like to see an antlerless only hunting season for 2020 to help reduce the antlerless population and achieve a healthier deer herd. As a farmer I fear the over crowding of antlerless deer and growing popularity of trophy hunting will bring cwd to Manitowoc county if left unchecked. Thank You.

I think DNR is doing a good job. I do not like the honest rule of calling in a deer harvest versus making you register it. I think to register deer again will give you best numbers to make decisions. My opinion only is hunters are at 25% not calling in a deer harvest and i hope i am wrong. Thanks.

i think your surveys might be under reported i think more deer are killed and not registered by phone or on line versus the actual registration stations should be reinstated would give more accurate findings you can make decisions off of and also contributes to nearby businesses. Thanks.

Please don't mess with the "crossbow" season.. no different when bowhunters were crying with the difference between a recurve bow and this new fangled gizmo called a "compound" bow. Also, leave the gun hunt as a traditional 9 day hunt. Thank You all for your time and dedication.

By spreading the deer season out as well as two many different seasons. Its my opinion it has hurt us economically as well as taken the family aspect out of hunting. There are also allot of deer killed that are never reported by vehicals and other factors.

Nothing about this unit but an ideal in general when registering deer on line. Why don’t we also state what township the deer was harvested in during the registration process? I would think that would help you narrow down a get a closer look of the deer population.
3 tags total, one buck two antlerless is good. Therefore over the counter bonus tags should not be sold. Antlerless only season should not happen, if there is as many deer as they claim. Hunters should have no problem harvesting deer during the regular season.

Overall I feel the deer population is at a good number in Manitowoc County. I would not want to see it decreased, however I don’t feel it necessarily needs to be increased either. Status quo with current harvest rate would be good in my opinion.

I would like the youth hunt to be antlerless only. I would like a shorter season for cross bows in either September or October. Would like to see the in person registration stations come back along with issuing back tags again.

I think we should look at a "DEER SEASON" instead of multiple seasons using different methods. Establish a time line and use whatever method to harvest the number of deer targeted. No separate bow/gun/muzzleloader seasons.

Would really like to see the holiday hunt and extended archery season held, which would help in the goal of "decrease". Also bring back the October antlerless hunt for increased harvest and recreational opportunity.

The hunting is not great in Manitowoc county. The past earn a buck policy really hurt the heard. Let’s grow the population and start working on QDM policies that will grow the population and quality of the buck.

I believe the two antlerless authorizations per tags meets my needs for venison for me and also for family and friends that do not hunt but enjoy venison. I am satisfied with the amount of deer I see.

I feel we should have deer season from sept to end of Jan one license use whatever weapon you wish an you can shoot 2 deer buck or doe you can hunt when you want and 2 deer should be plenty for you.

I support equal or increased antlerless harvest to balance the herd. I further support a minimum point restriction to be trialed in the county as a whole or a section like SW corner of the county.

I propose that when a hunter purchases a deer license, the selection of private/public land for a antlerless permit be eliminated and that information be gathered when the deer is registered.

This survey is completely bogus. Just because you give out or make available more antlerless tags doesn’t not mean that people are going to shoot any more/less antlerless deer.

Simplify deer hunting. Get rid of all these extra hunts and stick with a bow season and a gun season (crossbow runs same as bow). Limit one buck and one doe to a hunter.

No more bonus antlerless tags. Just because one guy can fill all his tags doesn’t mean there's and abundance of deer in the area. No more antlerless only hunts.

What about limiting 2 deer per hunter 1 buck 1 doe that can be harvested in any season. No one needs to harvest 2 bucks and 2 or more does every year.

We have a lot of crop damage on the farm from deer and other wildlife. It bad enough trying to get crops off and then we have a lot of crop damage.

only saw 2 deer all fall on my land. very few tracks. used to be plenty about 5 years ago. less every year and the same story for naehbors land.

I think the baiting decision from DNR should over ride the local ordinance for Manitowoc County due to anti hunters making the decision.

The amount of private land is making it nearly impossible to manage the herd. Very few landowners will give you permission to hunt.

I would like to see in person registration become mandatory again. I believe that it helped get a better number on the deer harvest.
The lack of hunting land is the largest issue starting to interfere with the desire to go or keep the younger ones interested.

I want to Thank All The Members Of The CDAC for Their Leadership and Opinions and Recommendations and My Opinions and Input!

Go back to public registration to many people not regestrating bucks they are all does. That is why the buck kill is down.

should be trying to increase the population in this unit as numbers of hunters keep dropping because of not seeing animals

I don’t support the excessive crop damage tags that a neighboring vegetable farmer receives year after year.

was not able to tag a doe through bow, gun, and black powder season in 2019. I feel the doe count is down.

Deer numbers were way down in 2019 I believe it was due to all the high water in the area I hunted.

Deer numbers down again, fewer people hunting (again). Economic damage has been done

Be allowed 1 bow buck, 2 univeral does tags, 1 gun buck.

I’m happy with tags as they are. Support holiday hunt

Please have a holiday hunt this year. Give it a try!

More permits should be available for public land.

Please do not implement the earn a buck

Keep the seasons the same as last year.

I rather bow hunt, too many gun season

I would like to see baiting again

Agree with recommendations shown.

You all are doing a nice job!

Extend the gun deer season

I’d like an extra buck tag

extend the gun deer hunt
The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 654
   - I visit this unit for non-hunting purposes: 165
   - I hunt in this unit: 898
   - General interest in this unit: 177

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 849
   - Bow: 514
   - Crossbow: 390
   - Muzzleloader: 331

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 24.96
   - Maximum: 65

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 546
   - Mostly Private Land: 158
   - Public and Private Land About Equally: 98
   - Mostly Public Land: 32
   - Exclusively Public Land: 54
   - I did not hunt in this unit last year: 10

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 34
   - Not too crowded: 92
   - Neither crowded nor un-crowded: 72
   - Somewhat crowded: 67
   - Very crowded: 53
   - Not applicable: 24

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 182
   - Fewer: 320
   - Same: 355
   - More: 99
   - Many More: 29
   - Unsure: 11

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

   If a DMU is in a Farmland Zone...
   Implement an ANTLERLESS HOLIDAY HUNT:
   Support  Oppose  Unsure
   233       664     99

   If a Holiday Hunt is held in a Farmland unit...
   EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021:
   Support  Oppose  Unsure
   402       494     98

   If the Population Objective is not "Increase"...
   Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons:
   Support  Oppose  Unsure
   98        840     58

   If a Zero Quota (buck only season) is adopted...
   ...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?
   VALID  NOT VALID  Unsure
   Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?

   Scale: 1 = Not-at-all;  2 = Slightly;  3 = Moderately;  4 = Very

Public Input on CDAC Preliminary Recommendations - Spring 2020

Comments for Marathon, Central Farmland

Note: the comments presented in this report are the unfiltered opinions of individuals who responded to an online public input form. The viewpoints expressed do not represent the views of the state of Wisconsin, the Department of Natural Resources, or its employees.
Apparently your entire recommendations on deer harvest are done from information and metrics that you use in your computer programs. Not once have I heard any information that was given by either landowners, hunters, or the DNR’s own personnel in regards to the number of deer that were actually observed. I highly recommend that you people get off of your $500 leather chairs and get out in the field and see how many deer or lack of deer there actually are. I did not buy a deer hunting license last year. Why? Because there are no deer!!! I found it very interesting that right before the gun deer season of 2019 opened, a supposed DNR wildlife specialist issued a public statement claiming how successful the 2019 gun deer hunt would be because of such an abundance of deer in the state, he claimed record numbers of deer roaming around on the landscape. That statement was not only propaganda but total BS. The DNR wants to blame everything under the sun why the deer harvest was down. It was because the hunt was late and the rut was over, or it was because of weather conditions, or maybe it was because of the bunion on grandma’s big toe. All of bunch of fat lies!!! You could talk to anyone that hunted within the state and they all were complaining that they were not seeing any deer. Hunters and landowners from my immediate area, without exception, were complaining of no deer. And not just this year. That’s been going on for many years in succession. I have been living in the same area for my entire life. I am presently 66 years of age. And out of those 66 years, I hunted white tailed deer for 51 years. I saw and harvested more deer in the 1970s than are around today. And the 1970s were considered lean years by your estimation. When you go out and sit from morning to dark for the entire season and see perhaps 2 or maybe 3 deer during that entire time frame, don’t tell me that there’s all these deer running around. I have a better chance of seeing a sabertooth tiger then a white tailed deer!!! This all dates back to the days when the DNR, in their ultimate wisdom, instituted earn-a-buck. What that did is turned many hunters from sportsman into killers. And for many, and this is no exaggeration, anything that was brown was killed. One of my neighbors saw a group of hunters driving out a woodlot on their land. 7 deer came out of that woodlot onto the field, mostly does and fawns from what he could see through the binocular’s. And the hunters shot every single one. All seven deer were killed. That’s not being a sportsman. And in my area, the deer numbers have not recovered since. Why do you base the deer population and projected kill entirely on what your computer tells you? What a bunch of fools!!! In my opinion, and the opinion of many other land owners and hunters in my immediate area, there should be absolutely no white tailed deer hunt whatsoever in 2020. And in 2021, it should be buck only. Absolutely no antlerless permits given out whatsoever. I am not against issuing antlerless permits if the deer population is excessive. But the deer population has not been in excess in my area for a decade. Apparently the DNR thinks that deer fall like rain out of the sky. Maybe the DNR’s deer biologist should go back to school and learn how reproduction actually works. You shoot off all the does and fawns, you will never have the deer herd recover. There are hunters out there today that are saying that if they have to spend $24 for a deer hunting license, they will shoot anything that’s brown, even if it’s only a 25 pound fawn. How absolutely sad. Another thing that should be implemented immediately is to make hunters choose between either an archery license or a gun deer license. No doubling up on the amount of deer that can be harvested by issuing multiple licenses. By allowing all hunters the option of hunting with a crossbow has seriously affected deer numbers. A crossbow in my opinion is not much different than hunting with a gun. The accuracy and range of a crossbow is about five times that of a conventional vertical bow. One of the stupidest thing the DNR ever did was making the deer zones larger. Given the size of Marathon County, the deer populations can vary drastically. I live and hunt in the middle of old unit 46 my entire life. There is absolutely no way the DNR can regulate deer population and harvest numbers in such a huge, diverse area. I was an avid deer Hunter until it got to the point where I could not see any deer whatsoever on my land. And trust me, many other landowners, which are also deer hunters, feel the same way. It’s time to make some major adjustments instead of continuing to tell us that we have all these deer and were just too stupid as hunters to find and hunt them. If I would have to make an estimate based on the number of deer that I saw and other landowners in my area saw, I would say there are about 3 or less deer per square mile. Instead of worrying about how much revenue that you can generate from selling more deer hunting licenses, I suggest you truly knuckle down, get your bodies out in the field, and see how many deer there actually are out there before making your incompetent and foolish recommendations. How can you ever inspire any young person to buy a deer hunting license when there’s no
deer to be found or seen to hunt. I will guarantee you that they will feel just like I do. If you can’t see any deer, why buy a license in the first place? And if they don’t see any deer the first time they go out, the odds are they will never again buy a deer hunting license.

The one factor for the 2019 gun deer season that was not mentioned was the miserable hunting weather. I have hunted since 1976, and 2019 was one of the worst years of weather I can recall. Opening weekend was warm followed by heavy snow, wind, ice accumulation. There were few stands that I could utilize after opening weekend, as the conditions were too treacherous. Trees were mostly ice covered so even a climber stand wasn’t an option. Early talks of extending the gun season by starting earlier I think would be a terrible idea. The bucks are trying to recover from being energy depleted from weeks of pre-rut and rutting activity. Keeping them moving following the rut by starting the gun season early and extending it would prevent them from resting and building up their energy reserves. There would be a higher deer mortality from winter because they would simply be wiped out by the constant hunting pressure. Most of the increase has come from the addition of crossbow to the archery season. If I’m recalling correctly, the preliminary idea to reduce the times available to crossbow hunters is in essence trying to divide hunters into groups and pit one group against another. Increasing the length of the gun deer season would have little effect on the number of hunters for that part of the season. Most people are limited by available vacation time and seniority in many places to apply for time off during the gun season. There would be even less family/hunting group social time in an extended period, as the likelihood of all hunting members in a group getting the same vacation days would decrease. Also, the Wisconsin season coincides with the Thanksgiving week, which many hunters count on to get a few extra days in the woods. Minnesota has meddled with their hunting seasons to the point where they have created more problems than solutions. Many fellow hunters and myself would not want to see WI head down this road. The many special hunts and seasons make it difficult for bow hunters and landowners to safely access their properties, either for their own hunts or forestry and property maintenance in the fall. There needs to be continued encouragement of our youth to become part of the hunting and fishing heritage. In my opinion, the elimination of age 12 as the starting age for hunting was not well thought out. I think it is fine for kids younger than this to be next to their parents during a hunt, but to have a 5 year old toting a rifle and discharging it when they don’t really have a concept of safety or making a kill at that age is more of a disservice to them, and will likely trouble them in the future. In summary: - Show weather as a factor in your reporting of harvest numbers. - Do not increase the length of the gun deer season or move it from the traditional week. -Eliminate the special hunts - there is plenty of opportunity during the regular seasons for hunters to fill an antlerless tag. -Do not attempt to slot hunters into groups, there is opportunity for everyone and we should not be pitted against our fellow hunters to grind someones political ax. - Set the minimum age back to 12 with a hunters safety certificate in order to participate in a hunt.
I am a disabled veteran who grew up hunting in Marathon county. Because of my disability I am unable to get out into the woods, so I have my disability permit and I hunt from the bed of my pick up on public land where I park on the highline. Also, because I have to hunt the way I do, I have been in the same location for over 25 years, but every year someone has an issue with it and I have the warden called on me. Even, though I have my disabled hunter sign clearly posted in my front windshield. Certain decisions that have been made, has affected the overall quality of deer hunting. First, more enforcement of the law needs to be done not only by the DNR but from local law enforcement as well. Secondly, far to much favoritism has been made towards archery hunters and the archery season!! Third, all the posted, private land has had an impact on the hunt as a whole!! Basically, no one is hunting on public lands and at least from my view point no one is really hunting the private land. Road hunters are also a real danger to, regular hunters, normal citizens, the deer population and property! All the benefits for disabled hunters has been taken away, use of crossbows, being able to use doe tag to harvest a buck and road hunting. Basically, everyone can do all the above?? No special advantages/benefits for disabled hunters or disabled veterans during the 9 day gun season, which is totally unfair and just wrong!! And there isn't even a discount for me, since I am a disabled veteran?? Also far too many (so-called) disabled hunters in my opinion are abusing the permit privilege. Also, this pertains to overall hunter safety, the AR-style sporting rifles should be outlawed!! I should not be sitting in my stand and hear in the distance someone rattling off 10-12 shots in a row, because they have a large clip and can't hit the broad side of a barn!! That is not what hunting is!! Bottom line, over my 30 years of hunting things in the state vastly shifted from gun to archery! And the cost for out of state hunters is far too high. If it could come down to where it was in the early 2000's I know that more of my out of state relation could afford to come back and hunt. The state and the DNR in my opinion has a lot to focus on, not just focusing on the deer population. Safety, enforcement and participation all need to be addressed!! The area I, my son and older brother hunt have seen in just the past 10 years go from around 10-15 hunters down to just 4-6, and those numbers include me and my family members. No one is getting out into the woods on the public lands where we hunt. And about 90% of the private land, you are denied permission to hunt and what is worse, no one then hunts the land(private) at all. But in those 10 years, the amount of road hunting has gone up by over 1000% Something as a whole needs to happen. Because it is the lifelong hunters like me and my family are who end up just wasting money and not being able to enjoy the experience, the traditions or the hunt itself!!!
In my opinion, I have never seen fewer deer in my whole life. The notion that the deer population is at high levels is absurd. In years past you would frequently see large groupings of deer. Now it’s few and far between. If you see 10 or 12 deer in a field it seems like a lot. But you used to see 20+ in that same field. I think if you asked any older generation of hunter they would say the same thing. There is less land available to the public for hunting. There’s also much less land for deer and other wildlife to habitate. People are losing interest. Traditions are getting forgotten. With the current registration format “Official” numbers on deer are in no way reliable or accurate. Extending hunting seasons and giving out bonus tags are just silly if the actual goal is to improve the overall hunting experience. Too much of something is always a bad thing. There’s also been ideas thrown around about shortening the crossbow season and extending the rifle season. Reason being that supposedly the people who only rifle hunt have much less of an opportunity to harvest a deer because crossbow hunters are harvesting too many of them before rifle season starts. Obviously if you are a reasonable and unbiased thinker this entire idea is laughable. You want to take opportunity away from a hunter using a more difficult and more primitive style of weapon and give that opportunity to hunter using a much deadlier and much easier style of weapon to use (during the rut period mind you) in order to have more opportunity to harvest a deer. I’d say the majority of hunters when they use a common bow or a crossbow, also hunt with a rifle during the designated season. So you would be putting that easier way to harvest a deer in more people’s hands which would surely allow them the ability to harvest more deer. But would they? Or would you be spreading that opportunity even more thin by creating an easier way to harvest a deer which in turn would just lower the population of deer even further than what I believe it to be already. I learned the love of the hunt from my father and he from his. I hope to be able to pass it on to my children but if you go out and hunt and don’t see anything the interest will never manifest and therefor fail to be passed on. I hope that does not happen.

I have hunted NE Marathon County since 1971. In the 70’s, 80’s, and 90’s I could count on seeing 25 to 28 deer per season. I was happy with that. With the advent of T Zones and Earn-a-Buck, season sightings of deer has diminished greatly down to 3 or 4 a season. I blame over harvest of does/fawns for that result. We hunt 8 days of the season, averaging 70 hours logged in the woods. We utilize hunters in tree stands and guys sneak hunting to move deer, a very effective method for us. We also hunt different parcels of the Hewitt-Harrison Wildlife Area, Ringle, and state owned Plover River land each day, never covering one area in back to back days. The results of deer sightings and deer sign have been very discouraging at best. Marathon County is huge, and to manage it all the same makes no sense to me. NE Marathon County is more like the northern forest regions and should be managed as such. I also feel that antlerless tags should not be utilized on public land for a number of years to allow the deer herd numbers to rebound a bit. You don’t realize the number of “private” land permits that are filled on public land, although they really have to work at it later in the season! Bonus tags are the cause of that last scenario, I am sure. I mentioned deer sightings earlier, but deer sign has been greatly reduced in the past 15 years. You see good sign in pockets, and then stretches of very little sign for quite away. Snow does not lie! When you can walk for over a mile on the gps and not encounter tracks, it is disheartening. Also rub lines and buck scrapes are greatly reduced, you just do not encounter them as compared to the past. This incorporates hunting, and pre season scouting in tag alder swamps, popple ridges, creek bottoms, and hard woods. We hunt it all, seeing the same meager sign and results. I would never have guessed that NE Marathon County could be over harvested, but it has been. Please consider cutting public land antlerless permits for a number of years to allow some rebound of deer numbers.
Please keep the crossbow season as is, and has been since 2014. Do not shorten the crossbow season to appease rifle hunters. Also, I think a 19 day rifle season would be a travesty to our deer herd. For someone who owns land in both Price and Marathon county, the deer numbers are down. Especially around my price county parcel. Predators, and an over abundance of doe permits are what I contribute to this issue. There won’t be a three year old buck left in the state after a couple years if you allow rifle seasons to last that long. Rifle season is, and has been a 9 day tradition for many years. It’s has us focused, and excited to hunt, around a short window of time. Doubling this length would devastate the deer herd, ruin tradition, and put too much stress on deer that are already run down from the rut. If you are thinking that creating a 19 day rifle season will sell more tags, and thus generate more revenue, you are mistaken. The people who are truly purchasing hunting tags every year, care about hunting, and care about the herd, are strongly opposed to this idea. I believe we need to keep our crossbow season as is because it gives more hunters and ethical opportunity to harvest a deer. I hunted with a compound bow for 15 years before changing to a crossbow. I was an excellent shot and still love shooting compound bow. However, I feel I owe it to the deer I harvest to guarantee I make the best shot possible. Crossbows allow people to do this. As a school teacher, I see kids and adults alike being successful hunting rather than wounding a half dozen deer a year with a compound. I know of too many vertical bow hunters that don’t practice, and take their bow out opening day hoping that they are ready to make an ethical shot. They are not. Let’s continue to allow both compound and crossbow opportunities for all those who want them, for equal length seasons. Thanks for all you do!

I am a sportsman. I am a father of five, and married to a wife that hunts. I come from generations of hunters. I cherish our WI hunting heritage. I have sole access to near two hundred pristine wooded/agriculture/swamp land property that I have managed for decades. It has several water sources, food plots, fields, dense cover, undisturbed bedding areas and a rich, rich history of producing beautiful large mature fat deer year after year, until recent years. over the course of the last four years I have seen an increase in predators species (not to say that’s the sole cause) and a drastic decrease in the number of deer I see. I have actually had three of my now adult children lose interest and quit hunting after repeatedly going hunting without seeing a single deer day after day. It is hard to keep traditions and interests going when my children see more orange than deer in a week. I HATE the telephone registration and have seen many first hand accounts of deer being harvested without ever being registered. It is too easy not to register a deer. BRING BACK THE REGISTRATINS STATIONS AND METAL REGISTRATION BANDS. It will only result in accountability and local business stimulation. Bring back back tags. Again, accountability. I would enjoy having an allowance for less than 2 gallons of bait. I abide by the law and in return I see no deer because all my neighbors put out bait. Every gun shot I hear is a deer being killed next door that my family wont see partially due to the laws we are following. I cant express enough how beautiful our land is and the many thousands of dollars a year I work hard to pay the taxes on do not allow for my children to go hunting one week a year with the family and be optimistic about their chances of even seeing a deer. I am not mad. I am disappointed. PLEASE keep my family in mind when proposing hunting regulations. Please.
I have hunted in northeast marathon county my whole life. When I started hunting in the mid 90s there were a decent amount of deer around and on an average day of hunting it was normal to see anywhere from 8-20 deer. I think the biggest factor in the decline in population in that area was when earn a buck was inforced. We have always hunted private and public land and during the earn a buck time lots of people would come to the area and shoot their doe on the public land then go back to their area to shoot their buck drastically decreasing the doe population in my area. The population has started to come back in recent years but still is not where it used to be. I believe that the northern part of marathon county should not be part of the farm land area. I think the southern area population is much higher therefore too many tags are given out which hurts the northern part of the county where the deer numbers are not there like they are in the south. I was and still am a fan of the hunters choice program that was in affect when I started hunting giving you the choice of one deer per tag, letting the hunter decide if they want to use it on a doe or wait for a buck, but only allowing one deer taken for bow and one deer for rifle. I think the deer herd was a lot stronger under that structure and should be looked at as the structure for the northern half of the county and northern half of the state. If you asked hunters their thought on it I think you'd be surprised how many would like that structure back. I am a taxidermist and with talking to my clients many of them are disappointed in the way the deer herd is being managed and feel that they're opinions are not being heard or are being heard but have no affect on the outcome. Thank you for reading this.

Wisconsin could be the best trophy buck state in the union. We could have great hunting for all who want to shoot a trophy on public or private. 1. Stop shooting non-mounter bucks. But in a size limit or stop the buck harvest for three years. Then start on a draw system for each deer zone. 2. Stop shooting the does on public land. Start to put deer plots in on public land to draw the deer off private land. Burn and manage the forests for good new growth. Plant food trees and crops. 3. Stop allowing the deer drives on public land. Large groups are killing our deer and then hunting their own private land. They have good hunting after raping our land. They have a place to go on private land the rest of us sit where they drove and shot everything out. That is why people are stopping hunting. No one wants to sit in the woods and see song birds with no deer. 4. Kill the wolves. There is more of a predation problem than you know. Wolves move up to 50 miles a day to feed on their primary food source which is deer. They also kill deer just for fun. Wolves were exterminated years ago by our forefathers who knew why they needed to be eliminated. 5. I used to o in the woods in the 70's and see 50 plus deer a day with trophies a good potential. Now if I sit all day I might see three deer. Two fawns and maybe a doe if I'm lucky. You will loose me too soon if you don't make the changes suggested. If you do make the changes you won't believe the large bucks you will see and all the hunters will apply for a tag and come back. Wisconsin will again be the state to trophy hunt. If not you will continue to ruin it and I and others will stop hunting. Please listen and make those changes..... Thank you

I have hunted the same piece of land for 24 years with bow and gun and can say with NO doubt that the herd has substantially decreased over the last 10 years when compared to the first 14. I sit in the same stands and see far fewer deer- during both seasons. I used to see deer in the fields around my property with consistency, but rarely do now. Another good indicator is the number of nearby gunshots on opening weekend. It is extremely apparent that others in my area are seeing less deer too as I hear FAR fewer gunshots on opening weekend than I used to hear. Everyone in my hunting party says the same thing and the neighbors I talk to also say the same. I am not relying solely on my memory, but have kept journals since I purchased the land. They reinforce my memory. I do not want to guess the cause, but the solution to me is to issue fewer doe tags until the herd is more populous. I have hunted for 41 years and can easily recall the days of "party permits" and "either or" tags. We do not need to go to this extreme, but please stop issuing everyone a doe tag with every license and utilize bonus tags as the option for those who want to shoot a doe. Limit bonus tags to one possible per license. This will increase your revenue and increase my deer numbers. I know that hunter numbers continue to decrease. Decrease hunters is decreased DNR revenue. The best way to get hunters to STAY hunters is to provide them with opportunities to see deer and the potential for harvest. The generation of today has a very short attention span and unless you keep them engaged while in the field, I fear they will give it up. Help me keep my kids hunting!!
Hello - I hunt on my own private land with my young children and family. The number of deer in our area has been in a steady decline for the past few years to the point where one of my daughters, who is a mentored young hunter did not see a single deer hunting with me last season. This is while hunting in stands that have been great spots over the years. As an avid hunter who is trying to pass on the tradition to my children, it has been very disappointing. I have seen a massive increase in bear and coyote numbers that coincide with this, as well as wolf reports although I cannot say I have seen any myself. Although you addressed predation in the video, I respectfully disagree with the numbers allocated. The deer herd is getting preyed on from too many angles, of which I do not feel the DNR is accounting for. The numbers/models are not indicative of "actuals." Bear tags need to be increased substantially and coyote/wolf kills need to be more accurately accounted for. I know the herd needs to be managed for more reasons than hunting (browse/crop damage, car collisions etc.) but without hunters those problems will exponentially increase. The hunting tradition in WI has been on a steady decline and for those of us trying to pass it on, quality hunting is essential. It does need to factor in as a priority or there will be no hunters to manage the herd. Lastly, I would like to compliment the DNR on the youth rifle hunt. It has been one the finest additions in my opinion. A great chance for kids to hunt in decent weather. Please consider making it a 4 day (Thurs-Sun) hunt, as weekend events limit the time available to hunt for many families. Thank you

The only question I would add to this form is "How many deer do you think were poached/untagged in the 2019 season?" With the silly paper tags that hunters get when they buy a license now, there is a high chance of not tagging. When it was the old green back tags, we actually knew if someone had a license to hunt and we knew they registered their kill because the tag was attached to the animal. Now anybody can hunt their property without having a license and no one would know. We don't have a good amount of DNR officers to catch these people or catch the people not tagging their deer. Personally I know of 23 deer that were not tagged during the 2019 rifle season and 28 in 2018 (I keep a tally of my friends or friends of friends that told me they didn't register.) I won't tattle tale on them because our state made it easier to do it, so the DNR created their own problem. Since the green back tags went away, the amount of unregistered deer has gone way up and you probably already know that. Right? I can guarantee we hit or went over our antlerless deer quota every year since we switched to this silly paper program. Why register when no one has to look at the kill or authorize it at a tagging station? I know there will always be a poaching/unregistered problem but the paper tag is making it easier. The tagging system is the only issue I have with our deer management and its allowing more people to hunt without a license or not register their kills if they do have a license. Bring back the green tags.

I support extending the hunting seasons to make up for the shortfall on reaching the quotas. The Bonus tags need to be increased as well. All were sold, but the quota still was not met for antlerless harvest. I do not support extending the firearm season into early November as I believe that the impact it would have long term would greatly outweigh the short term gains of introducing new hunters. Increasing hunter numbers high priority of mine because I understand that we are the minority, and allowing new hunters to kill a buck with a rifle during the rut would no doubt have a positive impact on the new hunters this year. But it would have a significant impact on the buck population and the buck to doe ration and may ruin it for current hunters and new hunters in years to come. We have opportunity to hunt bucks during the rut currently and it is the best time of year in my opinion.

We need to work to introduce those hunters to that experience and also afford them the excitement of the opening day firearm season. I feel that by extending the season later in the year would allow for hunters who still want to harvest deer that opportunity and although that number would be much lower than the current 9 day gun season, those hunters success rates would be higher I would think as their goals would likely be to harvest a deer and not likely pass on a deer. These would most likely also be your most hard core hunters willing to stick it out to be successful.
I of coarse can only speak to what i saw in the areas i hunt and what i heard from good hunters who hunt the same areas. I dont consider rifle only hunters comments or opinions in many cases they do not spend enough time in the woods. My comments are based on not only sightings but trail cam data and physical evidence, tracks, scrapes rubs and scat. The deer numbers where way way down on all private land around my personal land. Scrapes and rubs and cams showed evidence of 3 small bucks on 160 acres approx 4 does 2 fawns. 3 days after early snow (prior to season) i walked a figure 8 on my land cutting only 4 sets of tracks. The land across the road showed numbers the same or worse. I elected not to hunt my own land for first time in 30 years. One nephew did same. Leaving 5 guys to hunt the two sides of the road approx 400 acres. They each hunted approx 35 hours. They saw 3 deer in total. That included one spotted on a drive. No we do not just sit. Nieghbor crew same thing. The area i hunted 10 miles west of my land had better numbers and i did see deer. That area does not lend itself to drives so all i could do was sit. Sign was way down. I could have taken deer but due to low numbers elected not to. Archery season including rut was worst in 42 years of hunting. Note unless we see a very large increase in deer numbers our 7 man crew will not even consider taking a doe during any season. We talked to nieghbor crew 8 guys about same acrage they plan to do the same.

I believe the deer population is much lower than what is being estimated. My reasoning for this is hunting marathon county for over 22 years I've seen a great change in deer numbers both during deer season but in off season as well. Being in the woods year round I see a lot hire numbers of predators in marathon county then ever before, the last 2 years I've noticed deer staying much closer to residences than normal and have had 2 coyote killed deer 20 feet from my porch. Not to mention I've seen a great increase in coyote numbers moving along the trappe river. I love to deer hunt and use it as a means to supplement meat in my freezer for the winters but with a growing predator population that I've seen and been watching in my area I believe we need to shift to a little more predator control. As in decreasing coyote numbers in the county. I know I'm not the only sportsman who has given up hunting lands I've hunted as a young adult with my parents because of predators taking down the deer populations severely. I'm just hoping the 4 other people I'm talking about in marathon county fill this out and voice their opinions on this. I will be working on predator control on the property I live on but it's only one small piece of the marathon county puzzle. Raising more awareness would be beneficial for the county and people who reside, work , hunt, and enjoy the beautiful wilderness of marathon county . Thank you for your time.

The amount of predators has been increasing over the last few years. On game cameras, I have seen numerous bear and coyotes along with a few bobcats and wolves. If they take more deer then that means that hunters need to take less to maintain the population. Over-browsing is not as concerning as corporate farms and urban sprawl which decreases habitat. The situation where urban sprawl sparks forest harvest to increase financial gain is factor when considering prices of recreational land (the idea being log it and sell it at high price). Selective cut forests don't produce areas where wildlife feel safe to live and thrive, but rather becomes a forest of passing to get to other areas. I've seen some land in forest programs the was selective cut and significantly decreased the number of deer that formerly lived and thrive within it. Clear cut patches seem to allow only fast growing trees, like popple, basswood, and soft maple to grow and then drown out the oaks, hard maples, cherry, and hickory. All forests that are logged should be subsidized with manual intervention of planting of specific trees at low costs that are at least 5 years old to give them a chance. That's the only way our forests will be replenished with diverse and healthy wildlife. Squirrels (fox and gray) were an animal that would plant many trees, but even those numbers are down due to predators like fishers.
I hunt the NE corner of the county on county owned property. There used to be much more ag. In this area 15+ years ago. After the dreaded earn a buck years, the deer population on county land plummeted and never recovered. I worked for the DNR for 34 years as a forest ranger and understand deer habitat. Our hunting group used to see on average between 25 to 35 deer each per year prior to earn a buck. Since then we are seeing 4 to 10 deer each. We hunt the whole season except for the last Sunday, and put in about 70 hrs in the woods. We just don’t stand hunt, but have sitters with others who sneak hunt to get deer moving. It’s a shame when you sneak hunt through all habitat types (aspen-saplings and pole timber), hardwood, tag alder pockets, creek bottoms and are lucky to cross one track after a fresh snow when putting on over 3 miles. And this is day after day! I know what good habitat is, and deer numbers on county property are way below where it could be. Separating doe harvest on county and private property was an awesome move to spread out that harvest across the entire county. I would like to see a 1 year “no doe harvest” on county property to allow that population to rebound. Like I said after the earn a buck years it has never rebounded due to all the free doe tags that are being put out there. Just my thoughts.

I live in the town of Stettin, west of the intersection of County Hwy O and Highland Dr. I have hunted this area for many years. There are a good amount of deer in the area. I have vegetable gardens and trees that are damaged each year, due to the deer eating them. I have to fence the beet and carrots so the deer do not eat the tops off. I can not leave my butternut squash out in the fall to the first frost because the deer start to eat them. The neighbor farms the land to the south and east. He says there are too many deer in the area. And I agree. The deer eat at least 3/4 of an acre of one of his 4 1/2 acre fields of soybean last year. They ate a good amount of his corn last fall and winter too. The neighbor to the west does not allow hunting on his 60 acres. This spring as the snow was melting on the south facing lawn he saw 37 deer one evening. I have fenced most of my Oak, Maple and Butternut trees. The deer have eaten the tops of the Oak and Maple that have low fences around and over them. The area around me is all private land. There are too many deer in the area. I would like a free antlerless tag with my license. And bonus tags for Marathon County. I agree with establishing a holiday Hunt. And dividing the county into different zones to thin the deer population.

I believe the deer population is a lot lower than what it used to be in the area. I used to see 20 times more deer than what I do now. The herd needs to be replenished back up to where it used to be. I believe we should bring back the hunters choice tag, you shoot one deer, buck or die, and that’s it. One deer per season, now or gun/muzzleloader. We should not have an antlerless Hunt nor have a holiday hunt. I don’t believe in extending the seasons either. If the population keeps going down, younger people that are interested in getting into the sport will lose interest and quit hunting all together cause why would you want to go out and not shoot anything or even see anything for that matter. If the population continues to fall like it has been the sport will die off and be at an all time low. So take in consideration of all the new hunters or future hunters and work to bring the deer population back up to what it used to be. That means there will be more licenses and tags sold, also bring back registration stations. Better for the small businesses and gas stations too! All in all, I think these suggestions I stated wold help replenish the herd, get more people interested in the sport, and bring in more revenue for the DNR and small businesses.
I’m very concerned about the predation in the area and land I own in Marathon County. Every winter while shed hunting I find numerous deer that were killed by coyotes and WOLVES!! I’ve walked up on fresh kills where I could see exactly where deer was attacked and how far deer ran before falling. Actually found an ear that got torn off while the deer was still on its feet being attacked and chewed on. Another big concern I think gets overlooked is the high number of fawns that get killed while farmers cut first crop hay. Where my 120 acres of land is located there are like 3 local farmers. Talking to just one of the farmers last year he told me him alone killed 30 fawns with haybine!!!! And I know all farmers kill fawns while cutting hay. It’s the fawns natural instinct just to lay and hide. With the modern equipment farmers have now days they can operate at speeds up to 20 mph cutting hay!! Please consider taking that mortality rate into the equation? Getting back to predators every season turkey hunting in spring while calling turkeys I have coyotes, Fox, fishers and even had a wolf circle me last spring. Way too many predators out there in my opinion!! Thank you.

I saw notably more deer this year than last year. I hunt public land (nine mile) and during the nine day gun season there were even fewer shots fired on opening weekend than any other season since 2000, though I have seen more deer this year than during the last three months of the year. I attribute this to two major circumstances, the late season (20%) and the lack of hunters (80%). In the lot that I’ve parked in for 34 years there has been as many as 27 cars on opening day with 22 being the average. This year on opening day there were 7 with only 3 left at noon. I heard 2 shots all day. The 9 day gun season is the bell cow of deer hunting in Wisconsin. Families have joined together in deer camps for 100 years. I believe the deer count is fine but the hunts prior to gun season are too close to opening day and the deer are still "hunkered down" from these hunts. I would like to see all other seasons halted for a week before deer gun season as it was in the past. I believe this would produce a more gratifying opening weekend for gun hunters. Hunters are discouraged and I think the number of license sold will drop more than last year.

I have been hunting the same private 80 acres in the town of Bern since 1997, both archery and gun. I used to see ALOT more deer than I see today. I used to consistently see deer during archery season hunts. Over the past 5 years I feel fortunate if I see a single deer during a hunt when I used to see multiple. I hunt the same stands and dedicate the same amount of time to hunting, but am seeing fewer deer. It seems a clear correlation to me that the deer population in my area is less. I have two sons who have just begun to hunt. It is very difficult to keep them in the stand when there are no deer sightings to get them excited. During rifle season, I hunt with a group of 5 on the same land. It is now become normal for 1 or 2 of the group to hunt the entire opening weekend and not see a deer- and we are serious hunters who are in the stand sunrise to sunset. 10 years ago that would never have happened. I do not know the cause or the solution- I leave that to you- but I can confidently say there are fewer deer in my area than there were 10 years ago and I fear my sons will lose interest in hunting if the trend continues.

I hunt in the SW corner of Marathon County. The deer population there seems to mirror more closely the populations in Shawano and Waupaca Counties. In my opinion, there are consistently too many deer in this area for the available habitat. In summer, and early fall there is abundant food to support a large deer herd. But in late fall & winter, once crops are harvested, there large deer herd decimates any available browse making hardwood or cedar regeneration nearly impossible. This is harmful for the whole forest ecosystem. I am probably in the minority, but I would support an antlerless only season or seasons to bring deer numbers in balance to the available habitat. Also, in my experience there are always large numbers of does, fawns and young bucks, but proportionately far fewer mature bucks. Deer hunting is very popular in this area, particularly rifle hunting with enclosed stands nearly every 40-acres. Everyone is after a "mature" buck and, as a result not many 2-3 year-olds survive. Very few bucks get the opportunity to grow old.
First of all I am 67 years old and I have hunted in 6 states and Canada and I am a avid Hunter I spend more time in the woods in one year than most hunters do in a lifetime. I receive your outdoor paper and it makes me furious the letters so called sportsman right about what weapons are used for hunting! Thru the years I have seen the controversaty about the improve ment of archery equipment and muzzleloader equipment saying it is unfair. If they want more and bigger antlered deer go to 1 antlered deer per Hunter per year like most of the other states have. Being from Pennsylvania that is the way it has always been here. Ohio, Indiana, West Virginia , Indiana, north and south Carolina are all 1 antlered deer per Hunter per year. Also look at the statistics for every other state the number of Hunter's is down not just Wisconsin.i blame it on the children are on there video games and us older hunters are getting to old . By the way I love the hunting and fishing in your state and I am in the process of moving to your great state.

The CDAC has had a very positive input, but far too limited. Their only input is on antler-less permits, and they seem to get it right every year. I don't always agree with the outcome but at least there was some thought put in. Can someone please tell me why a program that works is so limited? Why not allow the CDAC group to have input on: CDW controls, such as baiting, feeding, population reduction in hot spot areas. Wolves Season lengths, and start dates Hunting safety rules Registration procedures Possible "leave them go leave them grow" rules Youth hunting Hunter interest, how to get more license sold I think I know the answer, by allowing the CDAC hunters to only weigh in on Antler-less deer permits it gives the illusion the DNR want input from hunters and the general public, and that is such a small part of the over-all program, the DNR can appear to be a democracy and at the same time dictate to us hunters how it will be...

The continued issuance of free antlerless tags with each purchase of a license MUST be limited to private land only or halted completely. NW Marathon County has large parcels of public land which are ravaged by rifle hunters in large groups even from neighboring counties. Taylor and Lincoln County hunters are using NW Marathon County public land as their "meat hunt" as public land tags are restricted in those counties. Year after year these large groups have almost everyone in the group holding 1 or 2 free farmland public tags (from bow and gun license purchases) upon license purchase. This area is now devoid of deer beyond anything I have seen in 34 years of hunting the area. I propose not issuing free antlerless tags for either public or private land and only allow for the sale of $12 bonus tags. At a minimum, all free public land tags should be off limits. This area is overcrowded.

I believe that you shouldn't have any bonus tags. I know a few guys that will go out to the woods and lay down every deer they can because, and I quote, "if the DNR will allow me to buy bonus tags, then I will keep shooting" as the family on the other side of the fence don't get a shot at a deer due to the deer being harvested before it got to the fence line. Maybe landowners that own over "X" amount of land can apply for a bonus tag that works like an "ag tag" and for farmers that have a couple hundred acres, they can get free bonus tag per 40 acres to do with as they wish. If they want to give them away, then so be it. Also, the dumbest idea was considering a 19-day gun season and/or not allowing crossbow hunters a chance to hunt during the rut. For every 2 crossbows out there, there is a bow hunter with a bow that shoots just as far and almost as fast as the average crossbow.

It was an unusual gun season. The deer did not seem to move as normal. So the harvest may have been low because of that. The winter was severe as to snow cover in this area, but the temps were not so severe. There would have been some winter kill in this area even though it is mostly farms with woods. The deer in this area (Marathon) had a good winter only because many farmers did not get the corn harvested because of the wet conditions in Fall and the deer did find and live off those fields. But the Northwest area of Marathon County is quite different and the population is not the same as around Marathon-Edgar. Wolves and deep snow would have been a big survival factor there. The problem is the change to County by County management is simpler, but not equal is this big county. Also absolutely get a controlled wolf season back in Wisconsin., It is needed.
In my job I'm able to see the amount of deer crashes that occur and it's definitely down. On top of that I hunt in two areas of Marathon County with approximately 10 people. Through the gun deer season we saw a total of 10 deer. I realize the rut played a factor in the amount of bucks seen, however typically that doesn't affect the amount of antlerless seen. Too me there is a bigger problem outside of just Marathon County. I'm opposed of the use of cross bow for anyone. This is the reason why you see less bucks and the amount of deer. It's plain out too easy. I wish there would have been some restrictions to this madness, but it sells tags and money talks. What was once a great county for the harvest of decent bucks is on the rapid decline. Sorry to vent, but it's true. Thank you for sending this out and I appreciate what you guys are trying to do.

I feel the overall deer population is good. The concern I have since I hunt on public land exclusively is the lack of quality bucks. I would love to see our county have a better buck to doe ratio as well as a better age structure of our bucks. I think if we had a doe only season for 2 years and then implement a 4 point per side requirement for our bucks we would see an immediate improvement in our quality of our bucks. Marathon county has got more than enough food and it also has more than enough cover the only thing it lacks is age. I think there would be some initial concern from the the brown is down groups but once they see what type of quality that could be had with a little restraint in shooting any buck they would get on board. Its nice to shoot a deer but if you ask the majority of the people they would tell you they would love to shoot a big deer.

I bow/gun deer hunt on a family farm in the town (village) of Maine northwest of Wausau. As a side hobby, I have deer cameras setup year round that I like to use to see what’s running around. When I was 12-13 years old deer used to run through the woods 15-30 a day gun hunting. Maybe they were the same deer, but I still saw deer. I’m 33 now, I know other hunters, logging, and predators are factors. However, over the past 20 years, I’ve watched the heard all but disappear and now climb back to a spot I have 4-8 deer on camera. I’m not in a spot where more deer tags offered are a good thing yet. During gun/deer season, family comes back home, out of towners come to visit etc. I’m of the opinion if you offer more tags some people will fill them. Some people don’t care about next year or the year after that. I’d rather have too many deer than just enough.

I would not like the season to be extend for gun deer season the state does not need this the dnr has already destroyed the deer population in these areas with all the bonuses and t zone earn a buck ect. to the point that we cant even get the younger generation out to hunt. I don't blame them how wants to seat all season to see a couple deer. this is also hurting use no out of state people or going to come hunt if they cant see deer this tourism eff. all our local business in the area especially up north restraints would rather shut down for deer season than stay open and this used to be the biggest time of year for them the mistakes our Dnr made is taking year to recover from and now we are and will loose a whole new young generation of hunters once this happens we are going to be down on lic. numbers for many years to come....

One of the biggest concerns I have about increasing the number of harvest permits issued is predators. Counties further north had issued far too many bonus tags in the past, and combined with wolf migration to these counties, it all but decimated the deer populations. I have seen first hand a very substantial increase in the predator population. It is only a matter of time before the predator population and an increase in harvest permits occur together within a couple of seasons. Once these two occurrences happen in accordance with one another, the deer population will suffer as well as the number of hunters buying a license. Nobody wants to hunt in an area that has "pushed" the deer out of that area, or in an area where predators are more than a formidable opponent to a hunters success. Very respectfully, Concerned hunter.
1. Stop allowing large groups to drive deer on public land. They shoot everything and there is nothing left for us to hunt. 2. Stop shooting the small bucks. Put a minimum standard or mounter only harvest for bucks. You shoot em you mount em or don’t shoot. 3. Shoot fewer does to allow for more deer. We like to see deer when we hunt and have a chance for a large buck. 4. Eliminate the wolves - they are eating all the deer. Counting the fawns is not accurate. The wolves are eating the does and leaving the fawns to feed on later. The does draw the wolves away and get ate while the fawns survive to get ate at a later date. The stated of hunting is terrible in this area. All the hunters who hunted up north moved south to see some deer. So now they shoot all the deer and we have none left.

I own property in the North Western section of Marathon County and was born and raised in the county. I have seen the ups and downs of deer population as well and have also been in contact with many hunters within the section. The deer population estimates may be accurate in some sections of Marathon County, but are not accurate in the North western sections. We are closer to Taylor county and have seen significant declines in the herd numbers along with deer sightings. Our deer sightings include visual, trail cams, and weekend deer watch. Numbers have significantly declined and do not align with what Marathon County is issuing in antlerless tags. Marathon County is not the same all over and needs to be managed differently for deer population in the North Western sections.

Good afternoon and thank you for the opportunity to share ideas. As many can identify with, Wisconsin deer hunting is a rich cultural experience that I am deeply passionate about. I will NEVER miss an opening day, rain or shine and have been hunting my entire life. However, I would love if harvest authorizations for bucks were issued with point restrictions. I think a 4 or 5 point antler point restriction would greatly improve the age class distribution of bucks and improve trophy potential. The idea would be to let spikes and fork horns typical of the 1.5 year age group have a chance to reach maturity. Point restriction issued licences are very common across the west and report major benefit in creating a more age diverse buck pool. Thanks for your consideration.

After reviewing the proposed changes I simply ask why? The deer herd is healthy and strong, those that want the changes are not avid hunters. Please, leave the season alone, there is no need for the changes proposed. Archery has been the same for how many years, now what is the purpose for the change? Gun season has been 9 days since before I could hunt, leave it alone, it has worked well for this many years and there is no reason to change it. Crossbow vs regular archery, I have not seen any change in the population because of this. Leave it as it is, if you don’t like crossbow, don’t use it, I don’t, but my dad does and he is finally bow hunting again. Please stop messing with things that work, there is no need for the proposed changes.

I have been hunting the past 35 years, I hunt 120 acres of private land that I own, hunt with 3 others. the past 10 years population of deer has been going down and down. the past 2 years no deer have been taken on this property due to the low numbers. Years past there would be 15 - 20 car kills with in a mile stretch in the past two years less than 3 car kills per year. No need for all these special hunts and bonus tags in this 57A area at all!! Get the herd back up and also stop crop damage tags, everybody that gets them abuses it!! These guys are killing 50-100 deer in mid winter when all the deer in the area have traveled into those areas. You are more than welcome to call me so I can share my feelings.

Having hunted several different parts of the county it is clear the deer that the deer population and maturity of bucks vary greatly from area to area. I have seen far more and better quality deer while hunting towards the south part of county and far fewer and smaller deer in the north central/eastern part of county. There is a greater wolf and other nuisance animal population in northern part of county that is devastating the deer population. Along with people doing deer drives, just shooting deer for fun is also hurting the population and making unsafe to hunt bordering properties of where the deer drives are taking place. And also i strongly believe the deer harvest are really under reported do to current registration procedures.
I am for the holiday hunt to allow people who didn’t fill their tag to get some more hunting in, people just don’t get the time to hunt these days, also a great time for someone to get a kid outdoors to hunt, people aren’t worried about bagging their big buck, but I don’t feel we need to hand out so many tags where some people can just keep harvesting and also killing deer for others, I know certain areas do need herd thinning but that is something that should be applied for and assessed, I spend a fair amount of time out chasing whitetail and feel tag numbers are down because people don’t see deer so don’t have interest to hunt, or a kid won’t find interest in hunting, thank you for your time and effort to support or deer hunting!

Do not change the 9 day gun season frame work. The data presented was spot on indicating we should have expected 2019 gun season to be a down year. To get more deer killed work with local communities and meat lockers to have a deer donation program that the funds come from state to process the deer that are to be donated to the food pantries or less fortunate. Look at Iowa deer donation program. Work better with the land owners based on deer numbers in specific area, have land owner tags that any hunter can harvest doe, not just the number of tags hunter buys with license. We know certain farm fields and areas are more prone to excess deer than others, deal with the specific areas not the entire county or classification zone.

I think 7,000 is a reasonable quota, but with the recommended 1 free tag and 2,000 private bonus tags it’s not reachable using recent harvest history. Giving two free tags would allow hunters that want to fill them in the high deer density areas of the County an opportunity and will increase antlerless harvest by about 16%. I also would be in favor of offering 500 bonus antlerless tags on public lands where tree regeneration has been difficult in some areas of the County Forests. The County should be split somehow to allow for additional harvest in the areas of high deer densities especially south of Hwy. 29 by offering more antlerless permits. The County is too big and has diverse habitats for only one management zone.

We NEED to know who and what groups have influence on the CDAC, the term CDAC was not defined on the questionnaire that I completed last week, therefore I could not answer any question that included CDAC. When surveys or questionnaires are developed any abbreviation needs a definition, otherwise we may know what is being referenced you can’t expect everyone know your abbreviation. The prevalence of CWD is understated, the deer population needs an major decline in numbers, and it extremely important that some time and effort is put in to control and stop the sale of sacks of corn and bait. Food plots need to stop and be made illegal to control CWD. Private landowners are relying on baiting to kill their deer.

I suggest extending the muzzleloader season. Allow it to last a whole 2 weeks from that Monday after rifle season through that following Sunday instead of the 9 days because the deer are so shook up from rifle season it usually takes 3-4 days after rifle season ends for there to be movement again. Then instead of doing the antlerless holiday hunt, have an antlerless hunt last a week starting that Monday after the suggested muzzleloading end date through that next Sunday. I don’t agree with the holiday hunt suggestion because I am a bow hunter too and as a bow hunter, I would prefer to be back to just archery season by Christmas time. I’d rather have the firearms season just last further into December.

I have heard from many visiting hunters that they do not like to come to Central Wisconsin region to hunt public lands because of the poor ethics of other hunters. Deer drives desecrating populations so there are no deer left for other hunters. The amount of injured deer people are seeing is quite high. They do not want the children they are mentoring to see injured and sick animals. Also, I hear many complaints about safety. "Trigger Happy" hunters are not safe hunters and give everyone a bad name. Therefore, I am all for extending the archery season, eliminating group hunting/deer driving. And believe we need to fine more of those people who are not being safe or following laws.
The percentage of available antlerless harvest authorization for should match the Public land 8% vs Private land 92% percentage. Which is 1840 for private and 160 public. Wisconsin's wildlife is for all the residents to enjoy not solely the private landowners. The US and specifically Wisconsin is steeped in tradition and statutes insuring public access to land. A few examples are County Forest Lands, State of WI lands, Wisconsin's Navigable Waterway statutes, Tax laws such as Forest Crop Law and Managed Forest Land Open. Don't hamstring those hard fought access opportunities by such a severe allocation discrepancy of 2000 private to 0 public antlerless harvest authorization.

When you guys are talking about a "antlerless only season" in this survey, would that include regular bow and gun seasons??? Or are you talking about a separate "T-zone" type of antlerless season? If you are talking about the regular seasons, I think you would upset A LOT of people. If you really thought that was best, I would recommend at least offering buck tags through some sort of lottery. I am pretty supportive of the decisions made by the DNR but I would not be supportive of an antlerless only season. If it is a choice between a complete antlerless only season and earn-a-buck, then by all means bring back earn a buck!

I would like to see opportunities for people to hunt more private land that is open to the public where the landowners are able to receive some sort of benefit from the government. The aging farmer population could use some assistance by opening their land to the public if there was a benefit from the government. Additionally, I would like to see people have to register their deer at a location again to help boost local economies of the small towns in Wisconsin. While the new way of registration is a convenience I do not think it is providing an accurate picture for the DNR to make sound decisions on harvest numbers.

I am 100% in support of an antlerless only year for Marathon County. I have hunted this zone for 24 years and the number one complaint I hear from other hunters is that the bucks should be bigger due to the amount and quality of forage available to them. The problem being any buck with identifiable antlers is nearly immediately harvested during the rifle season. A doe only year would absolutely demonstrate the benefit of "let em go, let em grow." Marathon county realistically could rival Buffalo county in the average size of bucks harvested if hunters could see the benefit of allowing smaller bucks to live another year.

I see so many antlerless deer it is ridiculous, I feel our area in SE Marathon County has turned into a nursery for does and doe fawns. Big farm large crops have pulled the population to pockets of the immediate area. I have seen 1 buck to 20 or more antlerless animals over the past 5 or more seasons. In fall, just before the rut I witness 20-30 antlerless animals on my small hay field (4 acres). I feel there is a real imbalance on the buck to doe ratio. Don’t have the answers to swing that the other direction. Big farm fields have definitely made all the large bucks, the few around, to forage through the night.

Is there any way that we can limit the free antlerless tags on public land. I personally feel that by having multiple antlerless tags ( 1 archery/crossbow and 1 rifle) is over harvesting on public lands and is a contributing factor in the continued low harvest rate of antlerless on public lands. Free antlerless tags on private land are controlled by the land owners as to amount of harvest. There is also a safety factor to consider on the much harder hunted public lands. in my 40 years of hunting on public land in Marathon county I am seeing only about 20 % or less of the deer I saw in previous years.

I believe Marathon county could sustain a slight to moderate increase in deer population. Private land may hold plenty of deer but the public land does not. There should be no bonus tags allocated to the public land. One Metric I didn’t see mentioned in the video was hunter numbers ( which I may have missed ) which are down. If people aren’t seeing deer it’s going to be harder to get younger hunters interested and veteran hunters satisfied. While insurance companies have a stake in the game I hope they don’t have an OVERBEARING influence in the decisions being made in Madison regarding deer populations.
I believe Marathon county could sustain a slight to moderate increase in deer population. Private land may hold plenty of deer but the public land does not. If people aren’t seeing deer it’s going to be harder to get younger hunters interested and veteran hunters satisfied. While insurance companies have a stake in the game I hope they don’t have an overbearing influence in the decisions being made in Madison regarding deer populations.

Private land 10 miles west of Aniwa just north of Hwy 52. I bow hunt every weekend up to the gun season. I seen just as many deer the last couple year as I did last year. Please don’t go all antlerless! Been doing QDM for a while and finally getting some nice bucks. Could I shoot deer every weekend...yes, do I...no! I feel does are plentiful in that area, so to fill the freezer I’ll take one a year either bow or gum. Mainly now hunt for a buck outside the ears. Lots of small bucks in our area, I feel that a good thing. Again I’m definitely not in favor of an all season antlerless hunt and holiday hunt.

I gun hunted public land in Marathon County for the first time in 2019. Turns out the 3 tracts of public land I hunted were driven by the adjacent private landowners. The biggest problem with hunting is the lack of ethics, and the "my deer" mentality that persists, especially that of private land owners. Ban food plots! Level the playing field! There is an obviously disproportionate deer density between public and private land. Make hunters hunt again, enough of the "deer ranching" and calling it hunting, it is giving hunters a bad name and is extremely detrimental to the spirit of true hunting.

I have many seen bucks during the last 10 seasons and let them all walk just to see them blasted by a rifle hunter, that’s fine and dandy but they can quit there piss’n and moan’n that they don’t see any deer the rifle hunters shoot all they see. Most of them talk that they let them go they will grow. My neibors all talk but kill all bucks that I let go. What ever happened to the hunt no matter what you use for a weapon? It’s all about fillin the freezer now. I’m just tired of listening to all the grumbling that goes on, shut up and hunt! Drop deer shining on land that you don’t own.

We need to address the white deer population in south western marathon county. Areas south and west of Stratford are out of control. Last week I counted 5 white deer out of 40 in two fields in an eight of a mile. Last year it was 6, and I’m sure in a month it’ll be close to 10 when the fawns are born. We can’t continue to protect a genetic defect in whitetail deer as we don’t in other species. As the number of white deer increase the chance of shooting a legal deer decreases. Please consider opening up white deer for harvest, irregardless of the public's emotional opinions.

Extend the gun deer season to open earlier than it does now, as in, open November 15th to run to the end of November. There is too much prime deer season dedicated to bow/crossbow hunters. Did you know that many bow/crossbow hunters, especially those who hunt on private land, do not even purchase a license until they obtain a deer? This is not helpful to supporting our natural resources. Get the wardens back out there so there are eyes on, hands on management of what we consider valuable. Unit management was more effective than county management. The list is long......

Deer now days don't get the chance to grow sometimes it hard to tell which is the doe and which is the fawn. Bucks are tiny no real size or quality lime there use to be. You just keep handing out more and more tags and over half the hunters shoot anything that moves to fill them. My dog is bigger than some of the deer I see being taken. No real pride or standards in hunters or the management of them. What ever happened to buck only and had to apply to get a doe tag. And only one deer per season(gun/bow). There's more predators around now that can help keep herd in check.
I feel that the bow/crossbow season is too long. I also feel that if you feel it necessary to buy an additional tag for an antlerless deer, it should have a price set the same as your original license fee. The few dollars to buy more tags is not enough. Many people buy these just for the sheer thrill of killing an animal. I also think the tagging system and back tag should be like years before. This allows wardens to find poachers and trespassers. It is a poachers dream with no back tags and phone in registration and not needing any verification for processing.

I also hunt in Lincoln county on private land adjacent to thousands of acres of county land. There are a lot of wolf activity there which I believe has lowered the deer population considerably over the last few years. I don’t think there should be any antlerless tags available for Lincoln county also there should be a wolf hunt. Last year I think my party seen a total of two or three deer for both gun and archery seasons not to mention a few pictures on camera. I honestly don’t think that the population estimates are remotely close to the actual numbers.

Don’t let people crying they didn’t shot a 10 point buck in first 5 mins of hunting way in on making choices. People who never see deer most likely put next to no work in and they want it easy. If I shot a big buck every time I go out or even every year it wouldn’t mean as much. When I was younger I didn’t put much into hunting and I didn’t see much. Now I work hard, hunt smart and now I see deer way more and being able to use a crossbow got me to hunt more than just rifle. Please don’t add more days to gun season and please don’t mess up me using a crossbow.

Harvest numbers drop dramatically after opening weekend of the nine-day because the pressured deer move into private lands were hunting is not allowed. Many of these areas are owned by non-hunters who look at deer as being “Bambi” (cute and non-destructive). I would suggest an expanded education program on how excess numbers of deer affect their environment and how hunting is the only economical method to manage their numbers. Adding a surcharge to the license could fund a program to pay private land owners a fee to open their lands to hunting.

You Know, I don’t get why don’t you do the muzzleloading season be before rifle. Also I hear you guys are going to do something about crossbow season. I use to bow hunt but I can no long pull my bow back. If this is true I will no longer by a archery license. If you cross bow on your own land then the bow association should shut up. I pay taxes on our land and hunt with the weapon of my choosing for the season I am hunting in. Wither it’s bow, muzzle, or rifle. If that’s the case I’ll keep going out of state to hunt deer. Thanks!

In my opinion illegal baiting is terrible. I would say 9/10 hunters it seems. Nobody hunts deer anymore, it is just guarding corn. Private land is where almost all is happening. The legalizing of crossbows has only made it worse. I am not opposed to baiting if legal, but if is legal or illegal should be state wide, not on one side of road or county or another. Fines seem to be no deterrent from this activity. The guys that do it right or public land hunters suffer the most, it is no wander people are losing interest from deer sighting.

I don’t have much to say other than we need to let the deer populate and shoot less does in this county because when I was 12-13 years old I used to see multiple deer a day (like 5+ an evening) while bow hunting now days I’m 26 years old and hunt more than I ever did before and well I’m lucky to see even one deer a day while bow hunting! A lot of times when I go out I don’t even see a doe or fawn much less be able to shoot a nice buck. We gotta do something to help our deer population in this state/county its way down in my opinion.
I want marathon county to be an 8 point buck or bigger. Unless you are a first time hunter or a child under the age of 16. We can not solve the problem of losing hunters by lighting the hunting restrictions. But if you increased the number and quality of deer seen by hunters each year many home people would seek to be hunters. I don’t shoot bucks unless there 8’s or bigger but is doesn’t matter if I let the small ones go because my Neighbors in the Surrounding area will shoot what ever walks but further hurting the deer population.

We should be considering point restrictions on buck harvest. With the possibility of harvesting TWO bucks (archery and Firearm) there really needs to be a consideration on restricting the age/size of bucks that are harvested. Otherwise, we will always struggle to balance the Buck/Doe ratio and the "average" size of bucks that are harvested. Public lands should be managed specifically and distinctly from private lands. I haven't harvested a deer on public land for the past SEVEN (7) years in places I used to harvest 2‐3 every year.

No changes for 2020 - people have to schedule vacations in many jobs at the beginning of the year and this would be a major upset to their plans and lives - wait til 2021 to implement any changes. Any change will cause concern of some people - most likely these days to have them drop from the sport or their desire to hunt and would affect their choice of vacation schedules. Younger people will be dis‐illusioned from any date /timing changes since they are pretty much locked into the Thanksgiving schedule of holidays.

I hunt deer every bit of free time that i have from bow opener until bow close usually, on many different parcels of public and private land in Marathon county. The simple fact is, is that there is not very many deer. The deer i see are the same ones over and over, The dnr in my opinion should go back to the multiple deer management units, go back to hunters choice permits, and no extra doe hunts etc. At the rate we are going there will be no deer or hunters left, who wants to hunt when there is no quarry to hunt!

I think baiting should be allowed in the whole state, I don’t see a direct connection with CWD. I think the Holiday hunt is overkill. With the options of getting bonus tags during the regular season there is no reason for a holiday hunt. I see way to many farmers having the ability to really hurt the populations with crop damage tags. They are planting fields outside, and that's where nature lives. Ducks, geese, turkeys, and deer. If they want more protection they should fence the fields in.

On several 20 acre farm fields near our home we count in access of 40 deer. All within one mile of our home. Many deer kills by vehicles never seen so many deer on Hwy Q south of Ringle. We had a 4 acre field planted with soy beans and the herd of 12-17 deer per day, ate it all, farmer never came to harvest only stubble left, our landscaping plants destroyed. An infestation of tick population!!! A farm near Ringle a 40 acre field has as many as 65‐70 deer on it.

We keep saying the same things every year to no avail. Are you even listening? Marathon is a large county but the deer population isn't proportionate to the county size. We see less and less deer every year with more signs of predators but no acknowledgment from the DNR. It just doesn't make sense to have the harvest numbers so high, especially if you aren't going to review the facts for each quadrant of the county. What is good for part is not good for all.

I believe the state of Wisconsin should have a combined gun and muzzleloader season starting the Saturday before Thanksgiving and continuing 14 days no separate season and extending the 9 day season for gun to combine muzzleloader and gun to 14 days from a line south of HWY 64 south north of 64, 9 days. I believe this will provide more hunting days with weather conditions that can hinder a 9 day season revenue would probably go up with this plan.

Please go back to registration and tagging of deer. The honor system that we have now is not working. The number of deer not getting registered is having an effect on harvest numbers. It is way too easy to harvest a deer and not register it. We also need to go back to a tag system at place of harvest. Is there any concern out their for the albino deer herd in this county? The numbers are rising and i know others are concerned at their numbers.
You are proposing to give out 2,000 private and 0 public Bonus tags. So I as a hunter that hunts on public land can only get 1 antlerless tag with my license. I am not able to get a second tag for antlerless deer on public land. I feel you should allow more tags for public purchase. That, or give two antlerless tags with each license and let the hunter decide public or private. The wildlife is for all, not just private land owners.

I think the current cross bow and gun deer seasons should not be changed. Leave them as is! / I think the youth hunts, holiday antlerless hunts, and any other antlerless hunts should be eliminated. / The reason there are fewer deer harvested during gun deer season is related to other predators harvesting deer and the youth hunt causing deer to become more wary. DNR is too concerned about making money on antlerless tags. Thank-you!

I believe there are not as many deer as what the DNR estimates. We need to get the herd back up in order to keep and recruit young hunters. I believe that is a person wants a doe tag he should pay at least 5-10$ for it not getting it free. It would be nice if all people registered their kill but they don't Wisconsin Outdoors paper has more not registration violations in the paper now than before. A lot of poaching going on in state.

Overall I think the Dnr is doing a decent job of maintaining the deer population my main concern is the huge population of white deer in not only my hunting area but throughout the state. Its common to see over 15 white deer just driving around the block and some of the white bucks are very dominant and run the brown bucks off. Its getting hard to take my kids out and harvest a deer when most of the deer we see are white.

Predator populations are out of control. Bear sightings have increased dramatically over the past 8-10 yrs. poaching continues to be a problem in certain areas. Again, I would fully support a point system for antlered. 4 or more on one side ect. Quality deer lack and I firmly believe if Wisconsin wants to lose it's brown is down image, a change needs to happen. Farm tags are a joke and abused.
Deer baiting should be allowed as it is no different than standing crops or natural fruit trees and acorns. The CWD scare is false and used to restrict our hunting with little to no data supporting bait restricting. Extension of hunting seasons should be allowed due to warmer weather during hunting seasons made the deer more nocturnal than past years thus seeing fewer deer during hunting hours.

Would keep 2020 Deer hunting Season the same, except the youth hunt. Kids are too young to appreciate the tradition. It seems its more for the parents to be able to bag a larger buck, under the pretense of going with their children prior to rifle hunting season. Also crosses with bow hunting season. If anything the state should replace this Youth hunt season, with a Handicap Hunting season.

There should not be antherless season in marthon co. Because there r lots of bucks and buck sign in this county. More then ever I have seen in 15 yrs. I just pass up the small bucks. For the whole wis gun hunting. There should not be a 19 day gun season. Keep it the way it is. But take out the antherless season out in Dec. Because they are the ones we need to have fawns the next season.

My comments relate to the season itself. Many have been pushing for earlier and longer gun season. Two things come to mind with this idea, earlier means less access to wet areas due to warmer weather and making the season longer may provide for excessive harvest in easy to hunt areas. Everyone would like to harvest deer every season, but that is not a practical expectation.

Definite rise in the amount of white deer in my area. What measures are being considered to decrease or "maintain" this population? If nothing, this defeats the purpose of wildlife management due to the fact that if they can't be harvested then they aren't being managed. It is time this is properly addressed. Called several times for answers but never given a true response.

Hunters over the age of 65? Should get special considerations... ie. a discounted or free license, discounted or free extra tags for deer and turkeys, special seniors hunts. After all, there are youth hunts and senior discounted fishing licenses. The dnr shouldn't age discriminate against us old farts. We are mostly on fixed incomes, and could use a break. Thank you.

You need to consider going back to hunters choice per license and stop causing the deer herd for our state to head for extinction. Yes extinction is a big word but the deer population is not what you think it is. Your theory covers all the areas of high populated private farm areas that most people can't hunt. Thank You for allowing me to participate in your survey.

We have a ton of forest crop and MFL open lands in marathon county in addition to other public lands, and they get hunted, so more public land deer tags could be reasonable. Incorporating these type of public lands into more mapping apps would be helpful, such as the hunt wild app. Most people I talk to do not know of forest crop or MFL lands or how to find them.

Thank you for your continued support of the outdoors. I have enjoyed archery deer hunting throughout my lifetime and hope to maintain this valuable resource for future generations. God Bless you and please continue to do good work for God s critters and the people who love the Outdoors of WI. Focus on that,... and you will be successful.

I would like to see some type of point restriction to increase the chance of larger animals being harvested, I believe it could help draw more people to the state if your shooting trophy animals. If your having trouble with hitting doe numbers in the farmland offer an extra doe tag after harvesting the bonus one, some people won't spring for the $12.

It is 100% impossible to regenerate oak via planting in this management unit, unless they are fenced. White pine is also very difficult to regenerate due to deer browsing. I have multiple trail cams out and have seen literally thousands of pictures of healthy deer to date, with no apparent fawn mortality, even though coyotes are present.
I went through it pretty fast but, I feel as if every hunter should get two antlerless tags and can harvest them with either a bow or a gun and cut out extra bonus tags! And as for crop damage them should just be wiped completely considering a lot of the deer in my area are shot in the spring/summer and the bucks don’t have horns.

The proposal to extend the gun season will have lasting negative impacts. 9 days is long enough for the season. We also have muzzleloader following the 9 day season which is an excellent opportunity to punch a tag you weren’t able to during the 9 day season. As for crossbow hunting, they should be treated the same as compound bows.

I’m taking my 8 yrs old grandson this year and if he doesn’t see a fair share of deer I doubt he will stay interested. We don’t need to shoot more but we do need to see more. If we continually see deer on opening weekend he will stay alert and stay warm, if not we go home early. Keep the tradition going. Thanks for your help.

Hunting is on the decline and we continue to see major damage to crops and our forests due to high deer densities- so please do not limit the number of opportunities available to hunters. Please look forward to the future and consider the impacts of CWD on the deer herd. There is a lot we can do now to limit future impacts.

I hunt a lot in this unit from small game to deer and bear. the biggest problem that I see on my hunts are guides that try to take owenership of public land and the problem with hounds men running bear where they cannot hunt this needs to be addressed. Deer hunting is not always about shooting deer it is about the hunt.

Deer sightings were way down from last year both for bow and gun season. I hunted about 35 days. Even during the rut deer numbers were about half of what we saw during prior years. Same was true for neighbors and together we have over 1500 acres of prime property. You must get a better handle on the actual deer numbers.

Deer population in marathon county is causing lots of damage to the forest areas with over browsing. I owe some woods and when I walk thru looking at young trees the tops are all chew off the land was just harvest three years ago, any young hardwoods show sign of deer browse. The farmers are saying too many deer.

I hunted mcmillian marsh and the numbers seem to be going down every year for the last 10 years. Rifle hunter allowed to do drives through the woods are killing this area. I would like to see driving illegal in our state completely. I know other states have done that and it has helped the herds to grow their numbers.

Deer population in marathon county is causing lots of damage to the forest areas with over browsing. Keep the season structures as is. (Bow, crossbow,rifle,muzzle loader) ….if it’s not broke don’t fix it. Also please keep rifle season dates as is. You don’t need 3 weeks to rifle hunt deer. It will not increase harvest. The deer have it figured out after opening weekend that they need to be on extra high alert.

Maybe consider earn a buck for a year or two. This will force the doe numbers to be killed, however it will also help prevent too many doe kills. It may also help preserve the number of younger bucks for future years. Maybe consider a point or spread limit on killing a buck as well to help deer survive longer.

I believe the wolf packs are increasing, therefore less deer. And, with so many bonus options each year it just adds to the decreasing population. I think the hunters realize this, and in turn may hesitate to get a license because of the DNR’s questionable choices and not paying attention to hunters views

It is unreasonable to provide zero bonus tags for public land. The bonus tag allocation should follow the ratio of public vs. private hunting land. I understand there is a lot more private land than public, but there should be some tags available for Kronewetter, Leathercamp, 9 Mile, Hewitt-Harrison, etc.

Legalize baiting. Deer are a herd animal and constantly lick and groom each other and chew on the same branches, and are constantly swapping spit. Eating out of the same bait pile is but a drop in the bucket to help prevent the spread of CWD. It only causes hunters to stop hunting from lack of opportunity.
We have been seeing less and less deer every year. In central Marathon county we have seen 2 deer so far this year. (since January) Its sad, we used to enjoy seeing deer come thru from time to time. Now we are surprised if we see a deer. During the 2019 rifle season we saw a total of 3 deer!!!!!

I feel that crossbow (intially a two year trial) is taking two many quality mature bucks and has sharply increased the wounded, but not harvested statistics. I bow hunt and enjoy it immensely but the bowhunters are pushing their opportunities at the expense of the gun hunters.

Please consider managing the large tracts if public land differently than the private and small public sections. Large tracts of public land CANNOT sustain significant antlerless harvest. Deer numbers, and therefore quality hunting, will never rebound in these areas if changes aren't made.

Don't agree with use of crossbows unless handicapped, don't agree with youth hunt. No one should be out in the woods during the time of year of the youth hunt with rifles and the youth should learn to hunt in the same conditions as they would during rifle season if they truly want to hunt.

We don't need a holiday hunt at all. Let our hunting seasons alone, Don't change anything. Deer hunting is a Wisconsin tradition a 9 day Gun deer hunt during thanksgiving is a must. Keep Regular bow and crossbow hunts together neither one should get preference. Don't change a thing.

The only point I wish to make very clear is that extending the archery season to January 31 is very disturbing. Snowmobile season is very short already and if you would extend the season, this would seriously impact the economy of many small businesses. Thank you for listening.

Rather not see anymore holiday hunts. Keep nine day gun season the same. Open bow back after gun but have muzzleloader run the last two weeks of December allowing things to settle down following the traditional nine day gun season. I believe this will increase hunters success.

Marathon county is too large to manage with the same outlook across the county. The deer population is way too low. How do we get youth interested in the sport when you struggle to see deer when you take them out. There should be no doe permits handed out for at least 2 yrs.

Nothing was mentioned that I recall, about the drop of license sold? And we made drives in swamps and dry land and still could not scare any deer 😔 As far as car kills, going back to the glory years of the early 80's, there aren't to many deer, there are to many cars 🚗

I deer hunt with bow and gun every chance I get and I feel there is way to many hunts. Youth hunt, doe hunt, muzzleloader hunt and such. I have not shot a doe in 30yrs because everyone else around me shoots them and I look to the future and keeping deer where I hunt.

Your deer harvest count is way off. People kill on public land and claim private. People kill and don’t claim at all. The registry system is a very weak link. Private land owners don’t shoot Doe's till they hunt public land. I have seen it and heard people say so.

I feel the deer numbers are still very low and to get new hunters and youth involved maybe we should stop the doe killing and let a few make the spring fawning time. It’s a true joke to hunt for a week and not see a deer Wisconsin needs a wake up call and fast

The deer hunting season is too long now. They shoot day and night and no warden will come. We cannot access our own land without being chased off by hunters aiming at us and bullets in trees and buildings. Bow and arrow is cruelty to animals to the highest degree.

Please continue to keep crossbows for all for the entire season. Many of us have now invested thousands of dollars in equipment to pull the plug now. Don’t give in to the whiny and loud minority about crossbows. We should have the right to choose. Thank you
Keep Wisconsin tradition of a 9 day gun season on Thanksgiving week and not extending it. I also think we need to go back to registration stations and registering deer like we used to do. I think too many people are not registering every deer they harvest.

Wisconsin in general needs to bring back backtags and in person registration. People are taking advantage of hunting deer and either not registering there kill or forget to do it. Also bring back the wolf hunt there getting bad in the state of Wisconsin.

I believe the deer seasons are much to long when the muzzleloader season is over all seasons need to be completed we do not need to run into January!! I also think you would have a more accurate count if you went back to the registration stations !!

Why not go back to the party tag? My reason is it would take 3 hunters to get a doe tag and it would help the parents to get the younger generation in the woods to hunt. You can always offer extra tags to each party for more kill tags. Thank you.

Mostly I think the council does a good job and there are lots of deer and good hunting in our county. I listened to the call and think the guy supposed to be representing hunters. One person was very disruptive and disrespectful to the other members.

I think that the deer herd in northeast Marathon County where I hunt is up slightly from last year, but I don’t think that we want/need to change any of our harvest goals for 2020. I think that the CDAC committee made the right recommendations.

we need to find a better way of balancing the kill in blocks. I could envision a quota system like sturgeon spearing, hit a quota and shut it down. Or keep it open until kill is achieved. Now we just open more season hope for desired results.

I think overall the herd is decent. I personally would like to limit buck harvest to one per year to increase the age structure. I also believe there is more than enough opportunity for hunters to hunt in the current season structures. Thanks

Stop giving out ag tags. They are shooting anything brown and don't care too many big big bucks are getting shot with a rifle early in bowhunting because they can do whatever they want. Wolves and coyotes are too high and killing many deer.

I do not think it is right that they are talking about shortening cross bow season and not the compound bow season. It should be equal. If they are going limit the seasons then the license fee should be less. Not the same as it is now.

We have a LOT of deer in SE Marathon county. Last year some of the hunters in our group wanted to purchase additional antlerless tags and could not because they were sold out. Please increase the tag numbers on private land for 2020.

Over the past 10 years this county's deer population had gotten steadily worse, years ago you could go out and see deer almost every time one hunted now its lucky if you see any in a weeks time frame. We need to raise the population.

Please do not limit or decrease crossbow season. Myself and many others that only crossbow hunt would give up hunting altogether if that happens. I use to gun hunt but, found crossbow hunting more enjoyable with much nicer weather.

We are seeing a definite increase in deer damage to forest regeneration on our private land and increased deer numbers throughout the year. Recommend that the CDAC move toward more antlerless permits rather than the same number.
Southern Marathon county has a strong deer herd from what I see. I hunt the county line of Portage and Marathon. I am in the woods three days a week all year long, so I see many animals, but the deer herd is strong where I walk.

I would much rather see the overall antlerless quota for Marathon Count be set at 6,000. I would also like to see the private land antlerless bonus tag quota set at 1,500 I support "0" antlerless bonus tags for public lands.

Public lands are over harvested in general. Female harvest should be switched to buck only units. Private land owners and all others flock to public land so that they don't have to shoot the deer on their private lands.

Using corn as an attractant will provide larger numbers for harvest. If you can't do a food plot and deer are attracted to farming crops, damage is bound to be more. Therefore allowing baiting again would be a good idea.

Some of these questions are non-applicable. I cant answer questions regarding the number of deer I saw outside of open seasons because I don't live in Marathon County, and do not visit there often when season is closed.

The impact of predators, wolves and coyotes has risen significantly. Wolves in particular have increased dramatically. We need these animals controlled or let hunters take care of the problem without DNR interference.

You can not base a counties zone on such a big area. You should deal with each county Individually. You should also limit the number of tags that can be sold not in each individual county but each individual township.

I'm a nurse and in my opinion hunting is a great way to socially distance. Hunting should NOT be cancelled for any reason this fall. The meat we get from these deer is now safer than what we can get it the stores.

Id like to see baiting come back. It’s tough for people on public land to find deer. Saw my first deer in 6 years this year. Don’t see to many deer. While people on private land are allowed to plant food plots

Please consider this GMU for trophy buck management. I recommend that we only shoot bucks 8 points or larger with a minimum of 16 inch spread starting in 2021. Let's have an antlerless only season for 2020.

Far too many deer. In my section, I observe this 2020 spring, herds of 30 and more numbers of deer each evening in the fields. Open a holiday season for all deer. Increase the number of deer permits.

No crop damage tags unless hunters get free antlerless tags.10 or 12 years back I did not get a antlerless tag and my neighbor got crop damage tags. He got paid to shot the deer I could not shot.

Salt blocks should continue to be illegal. Mineral beds should be allowed just like food plots are allowed and bait piles are illegal. Deer need minerals for maintaining proper health.

You need to find a way to police baiting. Baiting is rampant yet in counties like Marathon where it is banned. Baiting is the single worst thing to happen to deer hunting in WI ever.

I own 160 acres and my family seen the lowest number of deer in years. Also with all the doe tags given out there are groups that dive their properties out and shoot ever moving deer.

If an antlerless only season is approved, I would rather see it in October rather than December in order to lessen the chances for it being impacted by poor weather, heavy snow, etc.

During the gun seasons of 2018 and 2019 I did not get any deer. That is mean not have many deer in Marathon County. DNR should reduce the bonus for saving the antlerless deers.

There are shots at all times of the day and night during deer season. No warden will come to investigate illegal poaching. And the shots continue for days after the season closes.

Let the herd build up. If one of your objectives is to get youth involved, it is hard to compete with cold / weather and boardom from not seeing anything, and computer games.

There are too many does and nearly enough full grown bucks to get and keep. People excited about hunting. Way too many little bucks getting shot and not nearly enough does.

<tr>
<td>5621</td>
<td>We had 4 gun hunters here on our land, saw 1, 4 point, 2 does too far away to shoot. Had 4 bowhunters out this year, got 1 small 8 point. So for 8 total hunters we got 1 deer.</td>
</tr>
<tr>
<td>5622</td>
<td>There are a lot of deer on private land where no one is allowed to hunt in this area so I think some of these areas get over populated, the deer know where they are safe.</td>
</tr>
<tr>
<td>5623</td>
<td>Wolves are becoming more of a problem. I won’t be the only one to say it. You are wrong of the wolf numbers, everyone agrees. Extending the 9-day gun season is a bad idea.</td>
</tr>
<tr>
<td>5624</td>
<td>Hi I wish we could try to get the buck count up by maybe having to shoot forked bucks or bigger to let the small ones go and get the buck to doe percentages up. Thanks.</td>
</tr>
<tr>
<td>5625</td>
<td>I would like to see register deed back in bars gas stations and I would like to see 4 points on one side like other states I believe it’s safer and leave it at 9 days.</td>
</tr>
<tr>
<td>5626</td>
<td>Concerned that if they do extend the archery season that it would have a bigger impact on the buck kill and would not be able to sustain the additional bucks taken.</td>
</tr>
<tr>
<td>5627</td>
<td>The number of tags for public versus private land needs to be adjusted. If this continues I would see less people hunting and this being a right of only the rich.</td>
</tr>
<tr>
<td>5628</td>
<td>This is great for overall herd numbers. It would be nice if this county could take the next step and put practices in place to allow more mature buck harvests.</td>
</tr>
<tr>
<td>5629</td>
<td>Do away with the stupid public/private land choice for antlerless tags. For people who hunt both types of land it ties our hands on what we can harvest where.</td>
</tr>
<tr>
<td>5630</td>
<td>Obviously we would all like to see more deer while hunting but overall I think Marathon County is at a good place and it’s regulation can remain unchanged.</td>
</tr>
<tr>
<td>5631</td>
<td>Allow bow hunters to hunt during any gun season and fill their bow tag. Follow hunter orange rules Too many gun seasons Same with youth hunt. Gun or bow.</td>
</tr>
<tr>
<td>5632</td>
<td>I would like to see a later muzzle loader season. It takes a week after the deer gun season for the deer to calm down enough to start seeing them again.</td>
</tr>
<tr>
<td>5633</td>
<td>Please consider researching and testing a safe and ethical way to control deer herd population by use of sterilization and/or contraceptives. Thank you!</td>
</tr>
<tr>
<td>5634</td>
<td>You guys are ruining this state with how you are running it. Time to wake up and listen to the hunters and not do what you learned in a book!!!!!!!!!</td>
</tr>
<tr>
<td>5635</td>
<td>Keep a 9 day gun season, let the deer rest for a week after gun hunting. The. Open up muzzleloader season until 12/31 the. Close all whitetail hunting.</td>
</tr>
<tr>
<td>5636</td>
<td>I noticed a lot of hunters harvesting small racked bucks, would like to see restrictions of rack size such as at least 3 points on 1 side minimum.</td>
</tr>
<tr>
<td>5637</td>
<td>Worried about any expansion of CWD. Want to have mandatory testing for CWD within the county and would like all Deer/Cervid Game arms to cease.</td>

<tr>
<td>5663</td>
<td>Crossbow Hunters Take To Many Big Bucks!!! Stop On Line Register ing!! To many people don’t register Deer!!</td>
</tr>
<tr>
<td>5664</td>
<td>I would have a extra muzzle loading season n purchase another license. One deer Could b buck or foe</td>
</tr>
</tbody>
</table>
I would support an antler size restriction to promote more mature bucks surviving to older age class.

I believe that predator numbers have increased to where an effect on the deer herd is visible.

Need to have some public land bonus tags...please!! Two antlerless tags with each license!

I only saw one small antlerless deer in hunting every day of the 2019 season?? How is that??

I would love to see a size limit on bucks needing 3 or 4 points on one side to be harvested.

KILL more WOLFS and bear and coyotes. I do not know why we need WOLFS in WISCONSIN.

my #1 concern is the spread of CWD and I would like to take all precautions to end spread.

Too many predators (wolves) in northern part of Marathon County public and private land.

In my area we are seeing about a 3 to 1 ratio of does to bucks. Perfect! Well done.

I wish that deer still had to be registered in person to discourage illegal hunting.

To many antlerless permit are given out. Lose of deer population do to predators.

when a game farm has over 100 cwd positive deer why hasn't it been depopulated?

Baiting should remain in this area. Everyone is baiting regardless of the Ban.

You can eliminate all youth hunts, they can with their parents, how I learned.

Significant deer kill with fawns found 5 dead fawns shed hunting in 120 acres

Allow airgun use during archery season. Promote suburban deer management.

Get rid of no minimum age hunting and any blow smo can use a crossbow.

No comments other than thank you for the opportunity for online input.

Cross bow hunting should be limited to handicap and over 65 ONLY!!!

legalize baiting again lower the cost of bonus tags to $5.00

I feel you have a good grasp on what's happening in this unit.

Only thing I was concerned with was a limited crossbow season

Raise tags prices. Double for residents, quadruple for non.

There are way too make deer in my area of Marathon county.

To high of predator animals hunters can’t harvest(wolves)

We can't find a deer on our 80 acres, where did they go?

I suggest extending the gun season to more than 9 days.

I would like to be able to bait deer again in Marathon.

I think we should extend muzzeloading through December.

Do not change the bow or gun hunting season dates!

Right now I think every thing is going as it should

Cross bow should be for handicap and Seniors ONLY!

No bonus doe tags, no shooting nub or spike bucks

I do not like the method of deer registration.

Please leave the 9 day season as is Thank You

We need to extend the gun season by a week.

</table>
The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 451
   - Bow: 246
   - Crossbow: 213
   - Muzzleloader: 155

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 25.06
   - Maximum: 65

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 318
   - Mostly Private Land: 70
   - Public and Private Land About Equally: 34
   - Mostly Public Land: 19
   - Exclusively Public Land: 28
   - I did not hunt in this unit last year: 2

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 12
   - Not too crowded: 42
   - Neither crowded nor un-crowded: 28
   - Somewhat crowded: 34
   - Very crowded: 25
   - Not applicable: 10

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 105
   - Fewer: 150
   - Same: 188
   - More: 51
   - Many More: 9
   - Unsure: 4

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 205
   - I visit this unit for non-hunting purposes: 118
   - I hunt in this unit: 471
   - General interest in this unit: 85

Section 2: Perceptions about the number of deer in the unit.

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
- Implement an ANTLERLESS HOLIDAY HUNT: Support 174, Oppose 277, Unsure 56
- EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: Support 259, Oppose 189, Unsure 59
- Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: Support 46, Oppose 435, Unsure 26

If a Holiday Hunt is held in a Farmland unit...
- If the Population Objective is not "Increase"...
  - Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: Support 46, Oppose 435, Unsure 26

If a Zero Quota (buck only season) is adopted...
- Should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? VALID 46, NOT VALID 435, Unsure 26

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit? Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

Note: the comments presented in this report are the unfiltered opinions of individuals who responded to an online public input form. The viewpoints expressed do not represent the views of the state of Wisconsin, the Department of Natural Resources, or its employees.

5714 Only seen two deer during hunting hour I hunt public land most of the time and with out baiting I was hard pressed and felt very lucky to have harvested 1 adult doe. In past years my wife myself and my boy did fair over bait my wife never saw a deer all season in 2019 and is probably going to give up the sport. My boy hunted on a buddy’s private land a got a buck heading for a corn field. if you have land for planting food good for you. Public land with no bait sucks. To many people to few deer. I think after 43 years hunting the last 5 have been the worst. Going to stop wasting money in Wisconsin and go out West every couple years, at least I seen deer out there in 2014. I have only shot 1 decent buck in the last 10 years and it was when a buddy let me hunt his land. I love venison and hunting but tag soup sucks. And it has been turned in to a rich mans pleasure. I do it for the food but the price is getting out of control. We used to lease but it cost to much now. So I believe it’s about over for us here. That’s 5 more that got tired of it. I am pretty sure that’s what it will be really sadder’s my heart to even think like that but my kids are quitting, my grandson sat with me a little last year and seen nothing. Hard to keep them interested when there is no place to go shoot or even see deer. He would not go back out after 2 days of nothing and I could not blame him. Rant over, sorry but extra seasons don’t mean a thing if you don’t have a place to at least watch deer. And they really miss up archery season. I love bow hunting and stopped doing that 2 years ago. Heading for the woods and kids wackiness at deer with rifles. Blaze orange and guns made me hang up my bow. Not just youth but all 4000 seasons out there. Try getting close enough for a bow kill with no bait and people running around shooting everything that moves every other week of archery season. We used to take 3 to 4 deer every year now it maybe 1 if you get lucky. If it’s that important for the state of Wisconsin to drive me away from the greatest sport in the world then so be it.

5715 Over the past 10 years there has been a steady decrease in deer numbers in our area in Middle Inlet. For a number of years my family has only been able to harvest very few deer, even though many hours and time were put into it. Every weekend was spent and during the week of hunts with very little to no success. You know something is wrong when for the entire gun deer season, with four people hunting on 40 acres, only 3 deer were seen the entire time from sun up to sun down. We have watched the numbers decrease over the last few years in bigger numbers over any other years. We even hunted the entire Antlerless only hunts and holiday hunt with my children and never seen a single deer the entire time. It was very disconcerning. I am trying to put the interest into our younger generation and it is extremely hard when they sit 4 days straight all day and not see a deer at all. In my opinion predators have taken over our area in extreme numbers. The woods are filled with coyote tracks and with numerous sightings during the day, which is rare, as well as rediculous amount of howling and yelping all night long just goes to show how there numbers have risen. 4 years ago I could sit in my stand, as well as any of my family members, and at minimal 3-6 deer a day could be seen any day of the week. There have also been a lot of black bear activity in our area as well as seeing them all season long. I am by no means a wildlife expert or have any personal knowledge of wildlife management but I feel that something is going on and that there is a very small deer population in our entire part of the state in general. I have a large amount of friends and family that hunt all throughout the state and the consensus is the same. No deer, dont even want to hunt anymore because of low numbers, cant afford to spend weeks hunting for no deer to harvest, etc...etc. Thanks for letting me speak my opinion and wmlenting the public's voice be heard.
In just a two year period, 2018 and 2019, deer numbers/deer seen the SW corner of Marinette county, has dropped. 2018, 23 does and 3 bucks seen, for four hunters. Zero harvested. 2019, 6 does and 13 bucks seen, for four hunters, 1 buck harvested. Very little hunting pressure and crops up late, that would figure into some of the decrease of does seen 2019. In 2018 days hunted = 7. 2019 days hunted = 7. It is obvious that the state is pushing back against the traditional 9 day gun deer season, extending and adding more seasons into the mix. Since the days when I started deer hunting in 1969, the state has added: Youth deer season, Muzzleloader deer season, and holiday antlerless deer season. That is three more seasons and correct me if I am wrong, the possibility of another 21 days for people to deer hunt. In our group of 4 hunters, two are Wisconsin residents and two are former Wisconsin residents, who still deer gun hunt Wisconsin, November of each year. We understand the sw corner of Marinette county is primarily agricultural. And that high number increase the amount or deem damage as well as car/deer accidents. Poaching too, has to figure into the factor, somewhere. I know we have had the wardens catch poachers on our property in the past. But, I cannot tell you why there seems to be a big disparity between 2-18 and 2019. And not, the proposal for permits in 2020, remains the same. In years past, I have attempted to obtain deer damage permits from farmers, who are being reimbursed for deer damage, only to be turned down, with the reason being, "I have too many hunters on my property." And yet, their tags do not get filled. Maybe the solution to deer numbers/car-deer accidents/crop damage, is to limit more human infringement into the land/areas where deer live.

I understand that the objective in the Marinette Central Farmland Zone is to decrease the deer population...specifically the antler less population. I agree that this zone has a "doe problem." What I cannot fathom is any talk of limiting the crossbow season. If our objective is to decrease the population then how is taking away an extremely effective tool in managing the heard in line with this objective? If we need to kill more deer, why would we take a step back and limit a popular method for killing deer? I hope the DNR and state officials would use the logic of keeping as many hunters interested in the sport as possible, not limiting in any way a popular method that attracts more people to the sport. I also hope the decisions on this are based on logic and common sense and not the lobbying of the WI bowhunters association. Unite all hunters no matter their legal weapon of choice. Also, I would prefer to start the WI Gun hunting season on the weekend closest to November 15th every year. Neighboring states do this (MI specifically). It would avoid the late start to the season that sees hunters in the woods during the lock down phase of the rut, and would put hunters in the woods at a phase of the rut that would give them a better chance of killing a deer. Again, if the objective is to decrease the population, why are we not allowing hunters to be in the woods when they have the best chance of doing that? Again...who cares what the WI bowhunters association wants for their little niche of the hunting community. I am a vertical and crossbow hunter and find myself gravitating more and more towards my crossbow for its accuracy and the ethical manner in which it kills deer. Please open up the gun season earlier, and do not limit the crossbow season or hunters' rights.
I have hunted in this unit for 46 years, I've seen the seasons evolve from a standard 9 day gun deer season back to the mid 70's to what seems like an endless amount of gun seasons from October to January 1st. I am mostly an archery hunter, I enjoy hunting alone, with out the large volumes of people in the woods. I love to hunt deer in their natural state, not pushed back and forth by endless gun shots and people parading around the woods. I was very disappointed when the decision was made to open crossbow use to anyone. I have no issue with crossbow use for handicap, elderly or other hunters with medical limits that don't allow them to hunt with other archery equipment. I can honestly say I've heard multiple, dozens of people say, "the only reason they archery hunt is because they can use a crossbow and its as easy and using a gun". With that being said, I've heard those same people say " I shot 70 or 80 yards at deer with a cross bow because it shoots like a gun" and wounded and never found that deer. Call me selfish, I don't think a lot of these people should be in the woods. I get enjoyment by trying to pattern and figure out the deer in the area, since the addition of crossbow use by anyone, the volume of people in the woods has definitely changed the deer behavior during the archery season. I would welcome the extension of the archery season to the end of January because there are very few people who would brave the elements and be out hunting that late. Except for the fact that the deer are pressured so much with the endless gun seasons, by the first week of January I feel we should give them a break to relax before winter. I DO NOT bait, and was very pleased when baiting was ban in this unit. I hope baiting remains banned.

In my hunting experience over the last 45 years in marinette county I have noticed a dramatic drop in seeing deer. back in the 70's, you would see 20 deer a day going past your stand. Now you are lucky to see 1. The Whitetail have slowly been adapting to our hunting routines, (Sunrise to dusk). Most deer especially the big bucks come out after and before we hunt. I would like to see the hunting hours extended, but only on private land for obvious safety concerns. I would also like to see the muzzle loader season to include using rifles.I have daughters and grandchildren that i want to have experience the Hunt. The issue is i have when taking them on a hunt is they dont see deer. this in turn drastically diminishes there return to hunting. I dont believe your count is accurate, I believe your estimate is to high. you go by harvested deer to determine the population. why dont you try using helicopters and count the herds in the winter when there herded up in the deer yards. Also the wolfs, how many do the eat? I was in amberg two years ago for a month and got to know the locals and wow was i stunned on how many of them shot deer at night. They say when i need venison i just get one. I believe there are far less deer then you show on your reports. especially bucks. I also know the bear population is exploding, there are not a lot of hunters hunting them on private land, and permits are to hard to get. We have bears every year know on my property. we never had bears. well that's my two cents worth.

We hunt (myself, 2 friends and 3 of my 4 children) bow and gun season, also small game on 140 private acres. The property is on the border of central farm land and northern forest of Marinette county. 6 plus years ago we were lucky to see a deer! This prompted my daughter to put up signs " Please don't shoot the does, their are hunting future (for now). Are neighbors so liked the signs that we had more made. Slowly we started seeing deer again. More deer were killed by Highway 180 then humans and predators so when I say slowly I mean slowly. The family groups finally got bigger to support the loses and we all are excited with a reasonably chance to see deer again after a long day in a stand. The daughter that made the signs years ago got a buck in 2019! Point is deer management units are to large. 2-3 sq miles will carry several family groups. As they thrive the adult does will kick out the young does and bucks and our neighbors then saw more deer too. It takes cooperation, restraint and lots of time. Yes there are areas where deer need to be thinned out but not by large management units. One size does not fit all. I think working with private landowners is fantastic but public land is where the real attention is needed with better land practices for wildlife. Everyone loves to see deer, its magical!
First off do away with the crossguns. Oh excuse me, crossbows. It’s one thing for handicap or elderly to use em. But when there’s ten year olds using em. Give me a break. And not to mention there a violators dream. Keep rifle season nine days over thanksgiving. Like it’s always been, tradition! Would love to see wi go to one buck tag. To be used for gun or bow. Double the cost of it. So there’s no lost revenue. Because we know y’all manage for money. Not the game. Anyway one buck tag would do wonders for trophy quality. And would do away with the argument of bow/gun guys. Would make a lotta guys think twice about shooting a spike! Keep the holiday doe hunt. It’s really fun and relaxing to get out over the holidays. The other doe season, what’s the point. Just confusing. And don’t need to be bow hunting till end of January. Bucks do loose there horns! And another thing. Bring back, back tags. How do we turn in trespassers? And bring back actual tags and tagging deer. I can’t even imagine how many deer get shot and not registered. But it is nice not having to go and register em. The online or call in is very handy. And the no baiting is nice. Just gotta enforce it.

I think with bow hunting, rifle, muzzleloader, and the 4 day antlerless hunt there is ample amount of opportunity for people who want to harvest does to be able to do so. I think the holiday hunt just takes away from late season bow hunting. With rifle, muzzleloader and the t-zone, you get one weekend to bow hunt for a buck. Then the holiday hunt starts and by time that’s over you get one more weekend to bow hunt, then season closes. If you extend the bow season you get a lot of bucks that shed so you can't hunt them or they mistakenly get shot think that they are does. Again you have plenty of opportunity to hunt does with the gun during the rifle and muzzleloader season that you don’t need to take away from bow hunting to meet the doe harvest quotas. There’s a lot of people in this county that don't believe in shooting does so they will never take part in these extra hunts. You're hurting the bow hunters with a hunt (holiday hunt) that not many people take advantage of. Late season is one of the best times to get a buck on his feet going to food and now you can't harvest him because of a doe hunt that not many people are using.

I have strong feelings on CWD and the baiting ban ever since I wrote my senior thesis paper in college on “The spread and effects of CWD across the United States” back in 2010. Bring back baiting in Marinette Co., there is so much farmland around our hunting spots that we are seeing far less deer because there is an abundance of food in the fields. I know cwd is an important issue, but they are just as likely to spread the disease in the wild as they live and graze as they would eating from bait piles. Eventually the baiting ban will affect the farmers who sell the bait and the dnr revenue because people will give up the great tradition of hunting. The ban came from deer testing positive on deer farms, where they import deer from all over the US where CWD is more prevalent, how is that fair to punish hunters hunting natural living deer? I do believe we should be monitoring the spread of cwd by increase testing on the kills and somehow make testing mandatory on the direct areas where there have been cases so we can study trends on the disease.

I have been hunting the same area for 36 years. I have seen the prime hunting and actually seeing deer decline since the mid to late 90s. This was all due to the countless farm tags and T-zones that were done. The introduction of the wolf in the area took a toll on the heard! I have seen more adult does with out fawns in the past 15 years then ever before. I truly enjoy my time in the woods for the nature, not always the harvesting of animals. But, it has gotten to the point where I can sit for a week straight and see no deer. If makes it frustrating that you increase predators population and leave us hunting with nothing to see in the woods. Also, the banning of baiting and feeding is not the answer to CWD. Try removing all of the game farms that the CWD has been linked to coming from. Why should the average outdoorsman who wants to enjoy the hunt per penalized for these private game farms that do not follow the rules. Just another frustrated citizen!!

<td>In my opinion there are too many antlerless permits given out for this unit already and there is absolutely no need to have extra hunting seasons or to lengthen the current seasons. I hunt every weekend from September through November so I spend a great deal of time in the woods and I don’t see the number of deer to justify a need to harvest more antlerless deer. I’ve hunted with the same group of hunters for the last 33 years on the same 200 acres which is part of the DMap program and we keep great records of our deer sightings and harvests which have been declining over recent years. Our group is very disappointed with the way deer are managed in the state especially in our unit and we hope the board reconsiders any increase in harvest quotas and seasons. It my belief that the deer population in this state is much lower than is estimated and there needs to be a change in the way that number is calculated. Thank you.</td>

<td>5726</td>
<td>I feel it is wrong and not fair to us to have a holiday hunt and not extend our bow or crossbow season. How can it be OK for Oconto county but not us? I buy a patrons licence every year and really felt slighted last year. I choose to pass on a lot of young bucks, but I also love to bow hunt more than any of my other outdoor activities. I understand the need to harvest does, so I’m not against a holiday hunt. But is it fair to keep myself and others from bow hunting because we hunt Marinette county. If violating is a concern, we opened a whole can of worms when we went to online registration. I’m not against that either! But why are we penalizing our honest sportsmen/women? We buy our licences to participate. We had (if my memory is correct) 4 days to Bow hunt late season (for a buck). My years are limited, but I still intend to continue to teach my grandchildren and enjoy the years I have left. thanks</td>

<td>I feel that there are just as many deer in this unit as the previous few years, if not more. I have been seeing more clusters of deer throughout the winter with larger numbers in those clusters. I think the late gun season dates this past year played a role in reducing the harvest and has created a larger population this spring than is probably desired. For that reason, I support a holiday hunt and an extended archery season since the true goal is a population reduction. These extended seasons could lead to a greater chance of hunting days with snow on the ground, which increases deer movement and harvest. I think the CDAC has done a good job of managing the population and has a good handle on what needs to be done to manage the herd. I believe their decisions are based on science, data, and hunter observations, not opinions. Thank you for considering my comments.</td>
</tr>
<tr>
<td>5728</td>
<td>I personally believe your harvest numbers have become skewed since you went to online registration. I also believe people have learned how to “cheat” the registration system and it has now become easier for individuals to do this. Bring back the back tag and registration stations. The holiday hunt is a joke in my opinion along with the antlerless seasons. You want to reduce the herd then go back to earn a buck and force people to shoot does or better yet go to a No Bucks/Does Only season. My biggest complaint with the holiday hunt is that these kids are on Christmas break from school and DO NOT have an opportunity to shoot a buck late season. I have already made up my mind to hunt different states this year and every year hereafter until these seasons get changed which is sad to say considering I am a landowner and taxpayer.</td>
</tr>
<tr>
<td>5729</td>
<td>The 'Earn-a-buck' deer management plan should be revisited for consideration in DMU's that have an excessive population combined with repeated years of inadequate harvest management-control numbers. Proper population control along with statewide baiting bans are responsible proactive measures to attempt CWD management. If CWD is not prioritized, and some type of control, or serious attempts thereof, shown to the public the hunting population will adversely react with more dwindling participation. The obvious next shoe to drop will be dwindling revenues from the proverbial cash-cow that deer hunting has been to Wisconsin. Please stop kicking this can down the road and make some smart, but probably unpopular, science-based decisions now while we still have a substantial hunting population base to correctly manage the herd.</td>
</tr>

I think you should allow people that hunt public land to use two gallons of bait. It doesn’t make sense that people that own private land are allowed to plant food plots and farmers can sit over hundreds of acres of corn field. By not allowing baiting on public land the DNR is discriminating against hunters that are not wealthy enough to own private land. The number of hunters in Wisconsin is steadily decreasing and I think that is because without deer baiting no one is seeing deer and people don’t want to hunt. If the DNR wants to continue the Wisconsin tradition of deer hunting they have to change the baiting law. Outlawing deer baiting on public land is not going to slow down the spread of CWD. All the deer gather together in corn fields and food plots so CWD is going to spread anyway.

Take all the extra seasons out. Bow hunt, nine day gun, then the Muzzle loader, bow hunt is done on December 31st every year. These deer have it rough not allowed to bait or feed the winters are bad up there not to mention bear kills, wolves that are killing machines, and coyotes and the bobcats. When I started hunting 22 years ago I’d see deer all day long on stand now I’m lucky to see 5-10 in nine days sad sad sad, and you want us to get kids involved, go back to what it used to be and let the hunters have an actual voice not just allowing us to think we do!! Remember there’s more of us then you and we have a better shot of getting all on the same page to not hunt which in the end helps pay your wages! You work for us so take what we have to say and listen to us is it that hard??

I have been writing my opinion for years about managing for quality not quantity, and every year its the same; manage for quantity only, ask questions about quantity only, analyze data for quantity only... We need to address the major imbalance of does to bucks within this unit, as well as the major imbalance of age distribution of the buck population. People directly correlate a good quality hunting experience with older aged bucks. Merely shooting does, and talking about how many does should be shot, while shooting every buck in the county, accomplishes absolutely nothing. Why do you think the majority of our hunters leave to hunt Michigan every year; the chance to shoot a QUALITY buck. You need to address management off of does and into the buck population dynamic.

Parts of this unit fit the DNR model for management but other parts do not. I unfortunately live and hunt in the northeast section of Marinette County where I have owned land for many years. Over the course of enduring three years of earn a buck seasons, the area has never recovered. There are little to no farms left in the area and the fawn production is almost next to nothing. If the does are able to fawn, the weather or predators seem to wipe out the majority. I have gone to the extent to travel to other parts of the State and out of State to once again enjoy my hunting experiences. I believe the central boundaries should be adjusted and the northern woodland should be brought down to bring the area back into giving the deer numbers a chance to recover some.

OUR PROPERTY IS LOCATED ALONG THE NORTHERN EDGE OF CENTRAL FARMLAND IN MARINETTE COUNTY. WE HAVE NOT SEEN A TOTAL OF 10 DEER IN THE LAST 5 YEARS OF HUNTING. LAST YEAR 0. I TRY TO AGREE WITH WHAT THE DNR RECOMMENDS BECAUSE THEY HAVE THE PEOPLE WITH THE KNOWLEDGE MAKING THE RECOMMENDATIONS. I LOOK AT OUR PROPERTY AND DO NOT SEE OVER BROWSING, DO NOT SEE DEER, DO NOT HARDLY HEAR A SHOT BEING FIRED OPENING WEEKEND WHEN THE MAJORITY OF PEOPLE ARE HUNTING. ADD THESE ALL TOGETHER AND IT IS NOT HARD TO SAY THERE ARE DEER BUT SO FEW WE HARDLY SEE THEM. I HAVE SAT FROM DAY BREAK TO CLOSE OPENING WEEKEND EVERY YEAR. I AM NOT SEEING THE DEER. I KNOW HOW TO HUNT, I GO TO ANOTHER COUNTY WHERE I GET A DEER ON AVERAGE EVERY YEAR.

I am concerned about the way we are registering deer in the last 2 years online that we are not getting the actual numbers of deer kills across the state. Without having an actual tag for a deer it is allowing people to not register their deer. Even when you take your deer in for processing they are not asking for your registration number you get when you register it on line. This would allow people to process their deer by themselves and not have to register their kill. It would also allow them to shoot more then heir quota. If we went back to tagging deer and registering the way we used to you might see the numbers increase. I think the reason for the decrease in kills is because of how we register deer on line.
I request all deer hunting seasons (for all legal weapons) be left in their present forms. Including set hours, Days of harvest, and zones. I know your trying to bolster the hunting license sales, but I think your biggest factor for the drop in hunters is the not so dedicated hunter who were angered by the no baiting laws. I think it behove the Department if they would change this to a limited amount of bait (say, a 5 quart pail broadcasted instead of piled.) This should get the deer to frequent certain areas with-out having grocery store for the deer and also it would make the deer browse more naturally without any more animal to animal contact from browsing beneath a food plot or food plot orchards. Thanks

The baiting ban due to CWD in a private deer farm makes no sense. The private deer farms should be banned. They are the reason for CWD in the county, it is not present or being transmitted in the wild population. Also not being able to transport a carcass across county lines makes it difficult to properly dispose of it. When searching the DNR website I see only 1 county dump to dispose of the carcass. That dump is only open every other weekend and not at all during the gun hunting weekends. If we are required to dispose of the carcass in the county then the county should have more easily accessible locations to properly dispose of them. Or at least deer carcass only dumpsters available to hunters to use.

where I hunt the deer numbers are not as high as around the farms if they have a problem there the dnr should give them more doe permits shot the deer where the problems are and let the people who hunt in areas not by farmers fields see some deer you wonder why young people are not hunting they sit all day and see nothing and they say I have better things to do and hunt no more young kids today have so many things to keep them busy that if they go out and see no deer they do other things same reason many older people are quitting also why go out and freeze and see no deer so if you want more hunters shot the deer where the problem is around the farms thank you for listening to my views

The over harvesting of antlerless deer is hurting the population of mature deer and as a result I feel this is going to have long term effects on a health deer population. Hunters enter the woods every year with a fist full of tags and most feel as though they need to fill them with every deer that walks by and in a hast to complete this mission more deer wounded, hunters are at risk. If antlerless seasons are going to continue there should be a point requirement for the buck population or this is a brown it is down type of hunting. Not to mention I don’t feel last years counts are accurate since you are relaying on all hunter to report their harvest.

I saw 0 deer on my own private property of more than 40 acres. Adjacent to my property is state lands. I have 3 to 4 people sitting in trees, on the state line and my property. With the elimination of bait piles or food plots, I did not hear a shot nor did take one. All I heard were people going into and out of the woods, and I could hear them 40 acres away. You would think people hunting public land would hunt the public land rather than sit on the fence line next to private property lines. I was a bit upset when, all I saw was 3 gray squirrels, and about 30 turkeys. It would have been nice to have seen more than small game.

I personally have seen fewer and fewer deer over the years in the Peshtigo area. In my personal opinion the private/public doe tags are filled wherever. People do not fill their doe tags on their private property. The majority of the deer are in or right around crops and crop damage permits should be used to manage such properties, not giving every body two to four antlerless tags. My family alone had 10 antlerless tags, very excessive. In closing I’d like to see no extra antlerless seasons, hunters choice tag, or strictly either or tags for archery and firearm, and lastly crop damage dealt with on site. Thank You for Your Time

I am totally against the Holiday hunt, especially on private property. Pretty frustrating to purchase land and pay taxes, only having a chance to bowhunt during Christmas vacation and when a Buck of a lifetime passes close enough to harvest….unable to shoot because of the Holiday hunt regulations. We are losing hunters at an alarming rate. The main reason my children, grandchildren, and nephews deer hunt is to experience the family time with me. Sadly this may be the last year that I and my family hunt if the Holiday hunt continues to deny us on private property to harvest the deer of our choice. Thank you for your time.
Moving here from Wyoming I find the deer management a tragedy. Always wondering why young hunters aren’t coming to the field anymore? There are no deer to see and they lose interest to quickly. We need to scale back harvest to especially antlerless harvest during gun season to get numbers back up so people have deer to see again. The mentality here sickens me that you always have to kill something at the cost of true conservation. Need to start hunting in Wisconsin not just killing. You have taken a great sport and tradition and ruined it because we are more worried about money coming in that anything else.

Season Types: Suggest establishing a tag system that recognizes Compound and Re-Curve Bows separately from Cross Bows. Cross Bow is very accurate and increases the opportunity to harvest deer substantially. Establishing a tag quantity for Compound/Re-curve bows and a separate tag quantity for Crossbow may provide a more dynamic hunting experience and also establish harvest numbers more reflective of hunting device utilized. 1 doe/buck Compound/Re-Curve 1 doe/buck Crossbow This would result in an overall license potential harvest increase of 1 deer per hunter who registers for both Bow and Gun seasons.

I do not like the wide open crossbow season. I am for even hunters between the ages of... let's say 15 to 40 should NOT be able to use crossbow in archery season without a health issue. Or... maybe only October and then the start of gun season to end of archery. Or... read a state is looking at.... crossbows CANNOT have more than 1X optics. Also like a FPS limit. Up to 350 fps is enough. By what I have seen in my shop... many XB shooters do not fully know their crossbow. A required class would be great. Muzzleloading... with today's gear.... get rid of it.

You estimations of the deer populations is way to high. You need to look at the whole area. The number of deer is very low. 8 years ago we would see deer all day. This year over 40 days of hunting I saw 8 deer. 4 were the same deer. Predation is very high. Allowing extended hunts is only killing the population to very low limits. After november we killing pregnant does. You can not know whether she is or is not pregnant. Please reconsider the age limit on purchasing license. To many times people are using this to get extra tags. We hunters are not blind to this.

Hunting in this area was forever changed for the worse when earn a buck was introduced 26ish yrs ago, since then it seems like it has been the DNR's objective to ruin our hunting tradition by being influenced by outside parties and not listening to the hunters/conservationists themselves... the ones who pay for everything! Keeping a healthy heard with good Buck to Doe ratios is one thing, genocide on the species is shameful! Listen to the ones who sit in the woods from dusk to dawn everyday of the season and no longer see a single deer. You have failed!

I am, and have been, completely against the Holiday hunt since it was implemented. There is no need for it in Marinette county. Having a successful hunt, one where an animal is harvested, is an awesome experience. However, there are not nearly the amount of deer that the DNR says/believes there are. Seeing deer while hunting keeps people coming back for more, so less deer equals more frustrated hunters and those hunters have tendencies to lose interest in hunting. No reason or need to have the Holiday hunt or any of the extra antlerless seasons.

My personal experience has been, the declining numbers of hunters is because of a declining deer population not a decline in interest. In the late 90s and early 00s everyone seemed to at least see deer every day while sitting all day during rifle season. In recent years several members of our camp have gone all season without seeing a deer. We have also had a couple members of our camp quit coming for that reason. Not sure why exhausting the deer herd is the current objective. You continue to loose the public’s interest by doing so.

IWould support one buck per hunter per year no matter what weapon way too many does which in my opinion results in very small bucks hunted in areas before all we did was shoot does for two years antler growth looked a lot better sick of people complaining that bow and crossbow shoot too many deer either allow baiting or actually enforce laws the people that are baiting really hurts the people that follow the rules amazing that a gas station can sell 200 bags of corn in two days every weekend from Labor Day until the end of December
It is finally nice to see deer. We live next to a farmer who when does utilize the crop damage program, will take as many as he can, then we are left with nothing, it is nice to see the amount of bucks now on our property which is not very big, I also feel and of course can’t prove it but I also feel a lot of bucks are harvested with crop tags because of no location registration, I feel the phone in system is showing inadequate registration because many don’t phone in their harvest. Many don’t buy licenses and just hunt.

I always felt muzzleload season should be placed before rifle season because of needing to be closer for shorter distance shooting! I also bow hunt but feel muzzle & rifle hunters do not get a fair shake on the deer rut time table. I’m seeing more does then bucks the last couple years and feel that now with more powerful bows and crossbows on the market that more bucks are being taken during the bow season framework. i feel the need to bring back earn a buck to control deer ratios. Thanks for letting me voice my opinion!

North of CTH X should be considered Northern forest zone and not central farmland. It is clear on a map that the farms ate from Porterfield South. I hunt in McAllister mainly. I have seen significant reductions in the deer population since I started hunting in McAllister. I also hunt in Wausaukee and I easily see 10:1 more deer in Wausaukee that is why I believe McAllister needs to be considered Northern Forest Zone. If nothing it's done to increase the population their, I will unfortunately need to quit hunting.

I would like to see DMU go back to county by county. The part of marinette county is in the central farm zone. I believe because that there far to many antler deer tag for the area. In the last three we are seeing less and less deer. I've hunting the same area for over 50 years so I know what going on in the area. At this point 2020 will probably be the last year I hunt.The time,money,and effort that I put into with nothing to show is not worth it to me anymore. My sons and grandson are start to feel the same way.

I feel the herd is plentiful with the buck to doe ratio slightly off. There are more doe than buck but the balance is not too far out of proportion. This is why I support issuing some bonus antlerless permits. I also support and antler restriction for buck harvest. Doing so will in my opinion require hunters to make better choices in the field, take more time in their decision of what to harvest and it will also give many younger bucks an opportunity to survive which will help increase the buck to doe ratio.

How about starting firearm season earlier and dropping the youth hunt? Some eastern states have a very long deer gun season I believe if you started much earlier you might get more younger persons out hunting as I'am getting older it rougher on me some of us old timers might hunt longer. Another Idea if the bow hunters get upset why not move the muzzle loader season earlier after all it to is a one shot challenge. Or flint lock season in early fall. Lets go back to open sights on muzzle loaders?

I believe with the lack of die tags available in the forest zone it increasing the hunting pressure on public land. Which is making for poor deer population on some of the public land in Marinette farm zone. I have hunted the same portion of public land and the deer numbers are down really low compared to three to four years ago. I really feel does permit should be cut way down and get ride of free public land doe permits. Put them up for sale only with a very limited quota.

The private property I hunt borders the northern forest zone with little to no agriculture near by. As a result we see more of a need to increase the population than to decrease it. We try to limit our harvest to mature bucks but see a good number of does. The public land to our north has no where near the number of deer it once had. We are not seeing signs of over browsing but the deer tend to migrate from the property in the winter so the problem maybe somewhere else.

As to having antlerless only hunts such as the holiday hunts: closing buck hunting to archers at these times limits ability to bow hunt during time periods when those who have jobs are off work and able to hunt (holidays). Please, consider this when scheduling such hunts. I won’t pretend to know more about deer populations than your biologists, but longer seasons and antlerless only hunts take away from a a very dedicated group of conservation minded hunters. Thank you
I see less and less deer in Wisconsin every year, back in the 2000-2006 I remembered seeing 30 deer a day so a person could sit all day. I sit all season for a chance to see one or 2 deer. I actually have been bow hunting out of state because of better hunting. I seen good hunting before and now it’s tougher than ever with little rewards. This could be the reason more people choose to go out of state. The tradition is being lost in my eyes. Less deer, less deer hunters.

No to the holiday hunt and extended bow hunting. I visit this area and no one ever is seen hunting late season. Farmers are not hunting in December and January, who are they trying to kid, they are not hunting it is too cold. Just and excuse, because they don’t want snowmobiling yet, just to piss off snowmobilers. Open trails to snowmobiling and other recreational activities. Snowmobiling would bring in more tourism dollars than the handful of hunters.

This unit now contains a vast area that used to be northern forest zone and I believe that it should be moved back to the northern forest zone. Way too many doe tags on the private and public lands that are available. Doe tags should be at around 375 for public lands and 1200 for private lands. No bonus permits and no holiday or doe specific hunts. Way too many Doe tags available along with all the people who are no longer registering there deer.

Please do not mess up deer hunting. It is all I have left! 66 years old not at all in good health for walking And No Climbing anymore but to sit in my blind and watch the day come alive and the sun rise come up is awesome! This will be my 54th. year of hunting! I do not like things messed with. I and my grand kids want to be able to hunt deer to see deer& turkeys. that is way God put them here in the first place!! Thank you for your Hard Work!!

Wisconsin needs to raise the out of state tags by a considerable amount. We are regarded as one of the top whitetail destinations in the world but are much cheaper than other leading states. Take a close look at how Iowa and Illinois manage their herd, and how much more expensive it is for out of state residents to get a license. Other states are catching us in trophy whitetails harvested and we don’t need every person coming here to hunt.

CWD never killed anyone in Wisconsin. DNR must realize that people been eating venison for a long time. Baiting should never be banned. The economic impact is too great that no one totally realizes what it does for stores and farmers. No one says you have to bait, should be left to individual. I hunted marinette county for 35 years, best deer numbers where in the late 80’s and early 90’s. Need to leave population come back.

My one comment is to let us bait again. The public hunting community is not the reason these deer had deadly diseases in them but it is the deer farms. It has been proven and there is no reason to ban the public from baiting and not ban deer farms. With the lack of baiting I saw 1 deer all season long. Usually I see at least 10 the first day and then some. But the fact that I only saw 1 deer ALL SEASON is ridiculous.

I don't believe the bait ban should of been enacted. All the deer on the deer farm should have been kill and that would be the end of it. How do deer in a pen in Dunbar matter if I'm hunting in Porterfield. You also believe there are alot more deer than there actually are. The last 2 years was the least amount of shooting in my life. Years ago opening day had more shooting then the last 2 seasons combined.

Although I live/hunt in the Central Farmland portion of Marinette Co I am located near the Northern Forest area DMU. My experience over the last 5 years has been that the herd size is too large and should be reduced more. Even though the last two winters had more snowfall than normal there did not seem to be an adverse effect on the herd. I am seeing a lot of deer in the area. For what it's worth.....
If a doe only holiday hunt occurs, the archery season should also be extended to make up for lost time in December. Having an extra four weeks of hunting will also increase the doe harvest which seems very important in the DNR priorities. Support purchased doe tags which will increase revenue. Buy as many as you want $$. Support antler point restrictions. Support non-resident tag cost increase.

I think all the extra antlerless hunts are hurting the hunting community do to us hunters that look forward to the late season and snow hunts, and now as the format was from 2019, hunters get weeks taken away from bow hunting, not added anywhere but lost, I am for the idea of extending the season to either sex with archery or crossbow till January 31st and removing ALL “special” hunts.

The one recommendation I would make that I didn't see in this survey would be to implement a “three on one side” rule. I feel that would create an abundance of larger bucks. In addition, I think that it would help people to shoot more does, because if hunters who generally shoot spikes and forks can't harvest them, they are more apt to shoot a doe if they want the meat.

I do not support the talk of a longer rifle season. I feel this would over do what we try to do. Lengthen the archery season if anything. I don’t mind your doe only weekends but the holiday hunt is during my time to bow hunt steady and I have no problem shooting a doe or two but I would also like to shoot my buck at this time and again would be restricted from doing so.

I hunt the very northern fringe of this zone. I always felt the area was more suited to the northern forest zone than the farmland zone. I understand the trials that farmers have with the deer population. I don’t see us ever getting into the northern forest zone; however my answers are influenced by the deer numbers I see though the many hours I spend in the woods.

I am not sure where to put my thought on baiting. My biggest complaint is the amount of deer that I see now that we can not bait. I strongly believe that hunters in my area still bait and we do not any more. Last year for gun season I saw one fawn deer in 9 days. we used to see anywhere from 5-6 deer a day. I think you need to open baiting back up.

We need to build the deer herd back up. Are future hunters don’t want to sit in the woods and not see any. If we don’t take action now many hunters will not be interested anymore. We have to also take care of some predators there’s an over abundance of wolfs, bears and cougars. They also prevent seeing deer. This needs to be taken into action ASAP!!!!

I don’t understand why we need to consider an antlerless only holiday hunt? What’s the point of it? Start the bow season the end of September, end it the end of December, everywhere. The 9 day gun season should be any weapon, the bow season should not include crossbows. Stop all the extra seasons, and special event weekends. Its too confusing.

Consider moving the northern boundary of the Central Farm Zone to the South some. I believe north of Crivitz or there about should be part of the Forest Zone as Farm and crop fields are very minimal compared to forest property. Marinette County is large and the current designation of Central Farm to Forest zone is incorrect in my opinion.

I would like to see season start earlier so the rut would still be on. Post-rut the deer are not moving around near as much. The deer are spooked by the earlier hunts allowed (youth hunt and bow/cross bow). I only saw 1 antlered deer in the last season, and it was a spike and 200 yards away. Does were also on the run most of the time.

Ive been hunting all my life but I am done. I’m sick of not seeing any deer. there is too many hunts before gun season!! why do youths get their season, when I started I went with the big boys in November. are our kids so soft they need their own season? Now one year old kids can legally hunt I’m done cause of your money hunger.
I really feel wis could be better with a 3 or really preferably 4 antlers one side to get more mature bucks specially would make public land hunting better way is now brown down so people don't hunt just for antlers but meat and bigger bucks would be nice I think public and private lands should be changed to 3 or 4 on a side.

I would like to understand why I have many quality Bucks on trail cams right until gun season opens. When gun season starts they are all gone... I guess they go underground. Would it be possible to try and have gun season coincide with the rut? Just wondering aloud. Thanks.

The only comment I have is monitoring for poaching at nighttime. The land that we hunt is private but we still could see someone overnight took a deer and gutted it on the main track to our stands. I know it isn't possible to patrol everyone but it would be nice to see at night some of those poachers being caught.

I hunted for 4 days during the gun season I saw 1 deer, a doe. My son hunted for 3 days during the gun season he saw 0 deer. A friend hunted my land for 1 day during the gun season he saw 0 deer. 8 man days hunting on 50 acres in the Marinette Co. Farmland Zone. 1 deer viewed. Need I say any more.

Would like to see an earlier start to the gun deer season (maybe in place of the Holiday Hunt?) 4-7 days earlier start and added days. More people could get the days off to hunt well. It could help spread out the hunter congestion. It could also help with matching up with the rut better.

I disagree with the early and Youth hunts. by the time I get to hunt rifle the deer are already pressured So much that we don’t see any deer. They bed down for the next 9 days or more. A lot of my friends just stopped hunting rifle. I myself am starting to look out of state for better hunting.

Please keep the Holiday Hunt. I feel that the woods has a chance to settle between the 4 day antlerless hunt and the holiday hunt. The last 2 years I have harvested a number of does during the holiday hunt due to the lack of other hunters and the woods having a chance to settle.

It seems that predators are making deer more nocturnal, except in spring when they are very hungry and food sources more limited. I also think that banning baiting in Marinette Farmland wasn't necessary as CWD was extremely limited in the county, nor have I heard it spread.

I am fortunate to be able to go on numerous out of state hunts for white tails, many of the people that live in these other states and that I hunt with look at Wisconsin as what not to do in whitetail management. Less is more, listen to the hunters not the money, thank you.

Keep crossbow and make “archery” a single tag to be used for crossbow or archery. There should not be a distinction. Crossbow allows 4 out of the 5 hunters in our house to hunt. Without crossbow we would only have one person able to hunt due to age or medical reasons.

When you got rid of baiting in southern farm land the population of deer went up now you want to reduce the population. There is no CWD in the county so let people on their own land bait. You guys don't even know without a doubt that baiting has any influence on CWD.

Baiting needs to open back up. All the antlerless only hunts in December absolutely destroy any chance for late season archery. This needs to end. Keep seasons open to all sex all season long. I would much rather see earn a buck than all the stupid antlerless hunts.

Far far far too many coyotes. The are I’m in, near wagner, is much more like northern forest than central farmland. I understand it’s an arbitrary line, but there is comparatively little ag within 20 miles compared to places like crivitz, Coleman, etc.

The only thing I ask, get rid of this “public" and "private" b.s. on tags! I have several places to hunt, depending on weather and hunting pressure. But, I get limited by this b.s. of public/private. Just make tags for the units, and leave it alone.
I would like to see the antler less holiday hunt changed to a late muzzleloader hunt where hunters with unused buck rifle tags could harvest a buck. Also, allow archery hunters who still have a buck tag to harvest a buck during this timeframe.

Not sure where you get your numbers but I never saw a deer this year. I hunted in 6 different spots. I feel we need to move the season earlier like Michigan is. I am thinking about hunting in Michigan this year since our season is late again.

Please consider APRs in the future. Other states have successfully utilized APRs (Lower Michigan Big 12). It actually builds hunters interest and youth interest. Results in the same amount of deer harvested and makes for a more enjoyable hunt.

If a holiday day hunt was to occur please allow archery hunting for antler deer during that timeframe. For a lot of us that is a time frame that we have off of work and have the time to hunt, but not the opportunity do to the holiday gun hunt.

There are plenty of does to harvest and plenty of tags and time to harvest them. I will never support harvesting does after they have been bred. If you really want to reach your doe harvest number, stop charging extra dollars for bonus tags.

Need to increase the amount of science in managing the Wisconsin deer herd. For as much money as hunter licenses provide, funds need to be used to study deer, deer biology, deer habitat, and habitat carrying capacities.

Am a little puzzled about predicted numbers of deer. When gun hunting in our usual area, our group of 10 hunters did not see many deer as in the past 5 years. Only 2 antlerless were harvested, versus an average of 5.

I saw 2 deer last gun season. There are too many early gun deer seasons before the traditional gun deer season. Hence by the time the Traditional Hunt starts, all the deer are hiding in the swamps & Not moving.

Hunters cannot bait deer, so deer farms should not be able to feed deer either. All hunted animals must live off the land. All game farms must go. They created CWD and are not responsible for containing it.

Please publish results from this and other surveys to see if hunter’s input was really taken into consideration. Deer numbers are seemingly much lower than they ever have been despite what experts say.

I would like to see crossbow and vertical bow stay the same as last year. I do not think there should be separate seasons. I would like to see the gun season stay the same as well.

Go back to the standard 9-day gun hunting season for buck only. Get rid of all the extra hunts. I don't see hardly any deer like I used to. Go back to the standard seasons.

I personally feel there should one buck harvest permit allowed per season. Any legal weapon. Doe permits also to be issued for any legal weapon throughout the open seasons?

Hunting on our private land has got worse the last 10 years we see fewer to no deer at all it is hard to encourage the young one to hunt. Not enough deer and to many coyotes!

There’s no need extra doe hunts and get rid of the holiday hunts. There no need to extend the hunting either 9 days is enough can’t get a deer in 9 days you shouldn’t hunt.

The farmers do not shoot does during the season because they wait to get paid for their crop permits. There’s too much bait also. I would like to see earn a buck.

Deer vehicle collisions are more a result of much higher vehicle traffic in our area than higher deer numbers! That has been progressive over the past 46 years.

I noticed extreme browsing on cedar this spring. If there is another bad winter, there will be a high mortality rate next spring on the deer head in this area.

</table>
I feel that there should be only 1 anterless permit given per license
I support a 15 day gun season. Should have had one years ago.
Bring back registration stations!! It keeps people honest.
Strongly disagree with extending the firearms deer season
continue to maintain or grow the population slightly.
do not support extending the gun season to two weeks
Eliminate all pre-gun season hunts, (youth hunt).
Reduce impact of crossbows on archery season.
Bring back baiting for private land owners!!!!!
OPPOSE restrictions on crossbow hunting.
Would love to see a four on one side rule.
Bring Wisconsin back to what it use to be
baiting should be allowed on private land
Please Ban Baiting state wide!!!
Make the units less confusing
I never saw a deer in 9 days
Keep up the good work.
Way too many coyotes
End the baiting ban
Marinette, Northern Forest

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

865 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 160
   - I visit this unit for non-hunting purposes: 289
   - I hunt in this unit: 834
   - General interest in this unit: 147

   The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 791
   - Bow: 377
   - Crossbow: 391
   - Muzzleloader: 232

3. How many years have you hunted deer in this unit?
   - Minimum: 0
   - Average: 26.83
   - Maximum: 99

Section 2: Perceptions about the number of deer in the unit.

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 249
   - Mostly Private Land: 105
   - Public and Private Land About Equally: 137
   - Mostly Public Land: 111
   - Exclusively Public Land: 221
   - I did not hunt in this unit last year: 11

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 29
   - Not too crowded: 128
   - Neither crowded nor un-crowded: 125
   - Somewhat crowded: 148
   - Very crowded: 136
   - Not applicable: 8

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 231
   - Fewer: 274
   - Same: 241
   - More: 83
   - Many More: 26
   - Unsure: 10

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

Report Generated: **Friday, May 01, 2020**

Marinette, Northern Forest
I would like to see the deer population increased through fewer tags and the predator population decreased through increased tags. There is an abundance of bears, wolves, and coyotes. Since coyotes are not hunted as much due to the fur cost being down there needs to be an incentive to get more hunters out in the woods trying to harvest them so they don’t over populate more than they already are. I saw 2 deer all bow season last year and I hunted every weekend. I saw just 4 deer all gun season all in one day and I sat all opening weekend and Wednesday, Thursday, Friday, and Saturday Thanksgiving week. My brother didn’t see a deer all bow or gun and my dad saw none during bow and two during gun. It’s hard to stay interested in a sport where you have no success even seeing deer. At this point I would be the happiest hunter if I saw a deer all weekend but if you ask people who hunt in central and southern Wisconsin they would tell you if they saw one deer all weekend it was their worst hunt. I don’t expect to kill a deer by walking in the woods and not putting in effort scouting, but I’d like to see more deer than I am right now. I put in a lot of hours scouting and it doesn’t even pay off. It’s hard as a young adult to sit and see nothing and if this keeps up we won’t have any new people hunting in northern Wisconsin because the kids will get bored and angry they can’t see a deer. A majority of the revenue comes from deer hunting not from hunting bear, wolves, and coyotes so there should be more tags for them to lower the predator populations so the deer numbers can grow and the state can make more money by keeping deer hunters around. Also where I hunt in Dunbar they are logging all the oaks so all we have left is pines, popples, and swamps. They are not removing the limbs on the ground so you can’t even walk through the clear cuts and they grow up with popples or pines so future generations won’t have new oaks to hunt in. The county should be planting oaks and cleaning up the brush left on the ground so the land can be used again for years to come. It’s forcing deer into pockets and hunters into those pockets so it’s harder to find a spot with deer where other people aren’t already hunting. Northern Wisconsin counties have a lot less food (limited crop fields) and public land is even worse. We have harsher winters and more predators than anywhere else in Wisconsin. It will take a long time to get the deer populations to where it needs to be (same as in central and southern counties) so that hunters in northern Wisconsin can enjoy the sport like their fellow hunters down south.
I have been hunting in the Marinette Forest Zone for about 14 years. Never have I saw so many fewer deer walk through my property during the 2019 bow season. It is to my understanding that baiting was deemed "illegal" due to the CWD outbreak on a local game farm, which in some cases may help specific hunters acquire their goal of harvesting a whitetail. What I want to know is, how many deer have tested positive for said "CWD" during the 2019 bow/gun seasons for our DMU NOT including that specific game-farm in which the CWD was originally detected? Also, I do believe the timber wolf populations, as well as the coyote populations have rose a great deal in my area over the last 3 years, hence helping push away our once established deer herd. I, along with many other concerned hunters have expressed a great deal of concern about the predator population numbers and how they essentially need to also be controlled, but have yet to hear from the DNR about our concerns. I also believe that the cross bow season should, in-fact be shortened to its own season, unless you have medical documentation that deems you unable to bow hunt, therefore affording you the opportunity to harvest deer with said crossbow. It is in my opinion, unfair to deer, and to the "Bow Hunters', who's whole goal is to harvest a deer with the challenge of regular bow hunting, just to have that taken away by crossbow hunters where the challenge of regular bow hunting is essentially taken away to make it easier for hunters to harvest a deer. I ask you to strongly consider making crossbow its own season, and to keep both crossbow season and bow seasons separate. I would also like you to consider how the local populace can help sustain our deer herd through the tough winters we experience here in our DMU. Since baiting is now deemed illegal, may you communicate better with the local populace to help educate us on how we can help sustain our deer herd during the harsh winter months? I think their should be a program in which private landowners may apply to in order to "legally" help supply our herds with specific food types that are approved from the DNR. If there is already a program for this, may you educate the locals on this topic more frequently?

In the past ten years I’ve noticed a decline in the deer population even with more forest harvesting especially in the last three years. Marinette County's deer populatio/harvest was managed in more specific divided units like 45, 51a, 51b, as an example and being more specific to the type of terrain. Such as farming, some farming, cottage populated area, forested, and heavily forested such as the thousands of acres of the Marinette County Forest areas. The area that used be unit 45 was north of Cty. C, west of Hwy. 141, south of Hwy. 8, and east of the Marinette/ Forest county line. This area is heavily forested mostly public especially from Cty.A west to the Forest county line. I've seen and heard wolves, coyotes packs, and spring bear/fawn predation. Then you add to that mix the last two years a recently higher than normal snowfall. This area needs to be divided out and managed differently than the eastern side of Marinettes Counties Northern forest Zone. Last season I hunted the first four days of gun season around the Harper Sweed John intersection area dawn to dusk. Then discussted I only hunted mornings. No sign, hardly a shot fired around me for miles, one lone track in the snow even Road driving it after gun season. This area is hunted by many for bow, crossbow, gun, and muzzle loader. Another problem is guys cheating by spreading corn out undetectable. I walked on the second half one windy day to find deer stands baited along Harper, Sweed John, and FR1512. I abide by the law and because some have been baiting since opening of bow I have nothing coming my way. The few deer stay close to the hidden bait piles. At my age of 68 I love to be out their and look forward to hunting but because of the mentioned above managed process and I realize our wardens are busy I am starting to realize as many who hunt this area have told me it hardly pays to hunt something that has no deer herd to speak of. I suggest divide this area (Marinette County Northern Forest Zone) up again to be specific as past years DNR practice as I mentioned above as the Unit 45 boarders were and no public antlerless permits to compensate for the predation, hunting, and winter severity.
The northern forest area of Marinette County used to be one of the highest deer producing areas in Wisconsin. It was over hunted in the early 2000s and the lower deer population adjusted the predator prey balance. I feel that now predators seem to be keeping the deer numbers in check more than hunters (predators kill more than 2300 in this area would be my guess). We have struggled to get deer population back to a more enjoyable hunt with opportunities to harvest bucks and does. Based on my quick calcs - this area is about 460,000 acres and only produced 2,300 deer last year (sad - this is what is upsetting folks because they used to be able hunt this area with success on the giant chunks of public property). Now we average 1 deer harvested per 200+ acres (with most of those harvests on private land with foodplots etc). I would like to see harvest be closer to double that in my lifetime and it doesn't seem possible unless we take action on a number of fronts. 1.) 0 doe quota 2.) reduce predators (coyotes, bears, bobcats) 3.) increase buck age structure (antler restriction to protect yearling bucks) If we can protect the bucks I think hunter moral will be better in 3-4 years once that starts paying dividends more deer in the woods will be spotted as you will have to pass small bucks and at the end of the day - when someone shoots a nice respectable buck it will bring great moral to hunting camps vs the one yearling buck that's shot in every other camp in this area. The biologist indicated that we can only expect a 2% increase in population with a zero doe quota. So we can talk a lot about doe quotas and trying to increase the herd but its not really helping much unless we act on a few fronts. I understand CDACs don't have that power but I am ready to back that sort of environment if we can get traction - otherwise you wont be able to get deer numbers back to a level where quality hunts can be had on the 200,000 + acres of public land in this area.

I have deer hunted with both bow and gun on public land in the Athelstane area for over 40 years. I put out about a dozen trail cameras starting in July and all through the bow season. Last season there was a better acorn crop so I had anticipated having a number of bucks on camera. Unfortunately that was not the case. Over the years I have identified every major stand of oaks from county C to the south, the Forest county line west, the Florence county line to the north and from Dunbar down through Athelstane to the east. I place cameras out on Sunday and pull them every Friday during the archery season. I also move the cameras weekly within the area described earlier. I have been doing this the past 10 seasons or so and last year a few things become obvious. First is the wolf numbers in my opinion are much higher than what is believed. Last year was the first year I had wolves on camera at almost every location. Second in typical years I would see 3 to 4 yearling bucks for every older buck, last year that number was closer to 1 or 2 yearling for every one adult buck. This was not because I was seeing more adult bucks but rather I was seeing limited number of both. I concluded the most likely reason was the prior year winter kill was more severe than anticipated. I agree that this unit needs to expand the herd size I would just recommend bucks only for a few years. I disagree with those that argue over browsing of the county forest is a problem. A couple of seasons ago I came across one of the deer browse survey areas near Swede John road. The funny thing is there was less browse growing inside the fenced in area than there was outside. No rational person would conclude that deer over browsing is a problem anywhere in the area I described above. The quickest way to grow the herd is do not shoot any does.
We had 2 antlerless tags for the northern forest of Marinette county. We saw doe but all had small fawns with them so we did not fill any of those tags. There didn't seem to be a lack of deer but the antlerless deer we did see were on the small side. I would attribute this to the feeding restrictions put forth. I believe this is hurting the deer population greatly as food is not as abundant. Also there is a large amount of logging in public areas adjoining our private property which is affecting deer migration. If the idea is to limit the amount of out of county/state hunters traveling to public lands then I believe the plan has worked as there has been a serious decline of hunters in the public areas surrounding our land, which in turn allows deer to bed down and not move during the day. This should result in an increase in deer population. I am a proponent of lengthening the gun season to increase selective mortality decisions. I like seeing deer but I like taking my time and not feeling rushed if we get bad wind for a couple days and I passed on small deer early I now feel I have to take a deer I normally wouldn't. Also If the season were longer we could put a stop to driving in the northern forest zone until the latter part of the season. I have already been sitting on my private land and seen hunters passing in front of me on the second day of the season driving the woods. I believe driving is ineffective without the adequate amount of participants and from what we have seen there never seems to be more than 3 or 4. Also driving adds a level of danger that i believe doesn't need to be involved in the hunting season. In southern parts of the state I get it, but in heavily wooded public areas there doesn't seem to be respect for other fellow hunters.

Overall nice presentation, but incomplete. Data in presentation does not describe overall buck exploitation rate or hunter densities. That would be relevant data to assess whether there is capacity to host more hunters or sell additional buck tags. Furthermore, the data should also reflect wolf and bear population estimates in the County each year. Predation rates are density dependent on the predator side as well as the deer side. Season structure should also consider hunter R3 strategy. There is a loss of participation in many long-standing deer camps. This means less hunters to some degree, but a more significant loss in number of days and hours each hunter spends afield. For many, deer gun season is all about opening day and traditions. It is important to maintain the traditional opening day and Thanksgiving week hunt for family travel and congregation. However, late gun openers are problematic for biological and social reasons. Those years are especially well-suited to an extra early 1 or 2 day gun hunt to compensate and help retain more hunters. Very short (1-2 day), early gun / muzzleloader hunts would offer options for more hunter engagement. Also, given the harvest numbers, I feel muzzleloaders should be allowed to hunt concurrent with archery / crossbow hunters after conclusion of the gun hunt. Lastly, I have observed that elimination of bait is a negative factor for hunter engagement and participation. Baiting elevates engagement before and during the seasons. Alternatives should be evaluated for limited use of Bait in CWD affected areas as a means of hunter retention and engagement.

 Been hunting the Dunbar Goodman are for over 40 yrs Last yr was disappointing The 2017-2018 seasons were encouraging but things took a downward cycle again /I know the season opened late so that is a factor Another fact that can’t be denied is the pressure of cross bow users Their season Has to be adjusted I know for a fact of at least 8 more cross bow users in both the private and public land areas I hunt that never bow hunted before While this may seem like a good thing ,this is putting more pressure on the deer herd before the gun season I fear this is going to be the end of all the gun season traditions that I truly cherish because the gun season will be totally meaningless.I am not totally against cross bows as I have 2 brothers who shoot them (Age 72 and 70 ) so they have their place, I just don’t like the excuse that kids and women need them Daughter shoots a compound at 43 lbs and has killed several bucks and does .It takes practice and patience to let the deer get close which bow hunting should be .Way to many kids nowadays just want the easy way for everything and instant gratification Time for them to put down the phones 📞 for a while and put in the work Another thing that bothers me is how many yrs a youth can keep shooting a buck in the youth seasons Some of these kids have shot many trophy bucks by the time they are 17 ,putting unrealistic expectations for when the hunt the reg seasons ,9”Once they shoot a buck they should move to the reg season like we did as kids You have varsity football players still hunting in a youth season (come on ) Thanks for allowing my input
We are on the western edge of MARINETTE county and started hunting up there after buying a cabin 20 years ago. I have 3 sons who I hunt with and another 8-10 people that stay at our cabin for gun season and almost all of us hunt. Half of us are on private land and half on public but unfortunately the results are the same. We all see very few deer. Sometimes wolf sitings equal deer sitings. Not uncommon the last few years to sit all opening weekend and see 1 deer or even none in our group. It’s difficult to get a kid to want to hunt when there’s nothing to see and less to shoot. I’m amazed my kids have stuck with it to be honest. They are all 18 or over now, but I would only allow 18 and under antlerless tags to be available. I told my boys when they started hunting they could shoot anything until they shot their first deer, but bucks only thereafter to try to increase the herd. I don’t need to shoot a deer every year to just shoot a deer. I would like to see the herd size increase. It’s been getting worse the last few years and coincidentally the wolf population seems to be increasing. There are too many predators. I realize it’s natural selection, however, we can eliminate some of the antlerless tags given out to return some balance to the population. Let’s get kids off the couch and into the woods. We need to make it exciting by increasing the herd size by minimizing the number of antlerless tags to adults and giving the opportunity to shoot bucks or does to the kids. We need to increase wolf harvest tag amounts before they completely decimate the deer population. Thanks for listening.

I have hunted the same area in Silver Cliff for 40 years. In the early 80"s I counted 28 doe opening morning. I also remember counting almost 60 vehicles as they drove down the dead end gravel road. Now I count 8 cars or less. It took 5 years to get my 1st doe tag. Years later, doe tags were given out like candy. A bad winter followed and the population has never recovered. Once this happened, the hunters have no longer returned to this area to hunt. Fewer deer means fewer hunters and less hunters to push the deer. Crazy cycle. But I like heading north for the opener, tradition you know. I live in Marquette county and it looks like a pumpkin patch. One year we counted 38 hunters in 1 square mile. I always head north for peace and tranquility. I really enjoy the quiet time in the woods. I never see orange unless I want to. Within recent years, I have seen sows with 3 cubs, the fawns provide food. I spot them when I head to the river to trout fish in the spring and summer. I am unsure how much impact the wolves have in this area. About 10 years ago there was a Gypsy moth invasion and it wiped out a lot of mature oak. The worms were so numerous, the droppings sounded like it was drizzling rain. The last few years the loggers have been cutting the remaining acorn bearing trees. Very upsetting. The Poplar tree will only provide a few years of browse and then what? I don’t envy your job trying to keep all the hunters happy. In my opinion the population is small where I hunt but I usually get to see a few deer every year.

Since none of the 231 wild deer sampled tested positive for CWD, why are you still proposing a baiting ban? It was sold to hunters as a 2 yr ban only and now it seems like the norm! How can you justify large land owners with either food plots or crops for cattle that have hundreds of deer coming from miles around congregating in one location but prohibit me and others from throwing out 2 gallons of apples to attract 6 deer? It’s unrealistic to think you can walk into a National Forest and sit from dark to dark and see adequate numbers of deer to keep people interested in the sport without bait. Not everyone is a land barron, has private property, or equipment to build food plots etc. You would attract more people to the sport especially the youth if you lifted the baiting ban. In addition, people would make and take more ethical shots resulting in more success and fewer wounded deer in the woods. Let’s face it, nothing gives hunters a worse name than when the beautiful 8pt crosses the road in front of a family going to Christmas at Grandma’s house dragging a partially blown off leg. Use your heads, you can’t stop private property owners from planting crops for the deer and attracting lots of them, nor should you basically discriminate against the public land hunter by not allowing them the same advantage. Bring back baiting and watch license sales sore once again or continue to watch the sport so many of us love die off to lack of interest!
I have hunted 57 years in this Northern forest unit 2019 1st time I did not see a deer on opening day of gun season. your numbers are wrong the fawn mortality rate are much higher start to control the wolves , bears and coyotes and you will see more deer Stop shooting antlerless deer in the northern forest and put an antler restriction on bucks. That would at least be a good start, I saw more wolves than deer in 2019 stop it now, start to control them now. Your baiting ban is a joke if you stop deer farms the cwd will go away, If your native american you can bait so your ban does nothing, every farmer I know and I know some own property in the northern forest zone leave up several rows of corn and the spills a little and the deer come every day, so thats not baiting, another joke, on the hunting public Deer lick each other all the time if you spent time in the woods you would know that if its in their saliva the spread it every day not from bait . After 57 years of hunting I would like to take my grandson hunting and hope he sees a deer. It's not going to happen if you continue down the path of less deer. I hunt about 40 days a year and these are personal observations when I was growing up we saw 20 deer a day now 1 if your lucky, with all the logging there is more brouse than ever in the forest, please increase the deer population and stop shooting small bucks and antlerless deer.

If your serious about eliminating baiting in this area please eliminate the feed you can buy at gas stations and stores. Driving through the towns in this area all these people have done to eliminate deer baiting is change the signs in front of the businesses from "deer bait" to "wildlife feed". Increase timber cutting! Nothing will increase the deer numbers more than creating a younger generation of regrowth. Most people I have come in contact with aren't putting deer bait out. The corn piles in the woods are now for squirrel bait piles. I personally enjoy the no baiting regulations but if they are not enforced or access isn't reduced the people in this area are still baiting because it changes your odds when their are so few deer. So I still need to pattern my hunt around who is still baiting. Hunting deer trails on public land used to mean travel routes. Now if you find a deer trail I can pretty much assure you 95% of the time they will lead you right to a bait pile. The deer sightings/numbers in the last ten years have dramatically dropped off. It has been increasingly difficult to keep my kids interest up and wanting to go into the woods when you can go for days without seeing deer. Fortunately for me, my kids have come to understand that their is more to our hunt than just killing a big buck. But I would still like to have them at least see more deer.

I know this is not a CDAC issue but I believe the days of hunters going "up north" to hunt are coming to an end. The deer have adapted to the southern part of the state do to the farm fields, climate and lack of predators, and so have the hunters, and who can blame them when they sit all day in the northern part of the start and do not see a single deer. I have hunted the same area for 30 year and every year the deer and hunter sighting go down. I realize that less hunters in the woods equates to less deer movement but even the trail cameras aren't revealing nighttime movement and also very few road kill sightings. Further evidence of this shift is that wooded land prices in the north have froze for several years and are actually starting to decrease compared to the southern part of the state. I'm not sure what the answer to this problem is without wolf population control, I know there has been some timber harvest on county lands which should help to hold deer but a couple years of 0 Doe harvest (including youth) should help. With no back tags and no in person registration I know for a fact that there has been more deer being taken from the landscape then reported. Both of these issues have been requested to return from sportsmen at the spring hearings but have fallen on deaf ears. (Again not a CDAC issue but needed to vent.) Thank you for your time.
Long time hunter and land owner (30 years) in Marinette county northern forest. I see a decline in the number of deer over the last 10 years and your graphs i looked at show this. Deer have been on the decline and there was way to much over kill from to many season options other then the 9 day deer season and bow season you have been playing with. You showed that you plan to increase the deer population is not working. Why focus so much on killing so many anterless deer? This is factor in the decline of the herd. You need to get back to basics and just do a bow season for both regular and cross bow at the same time. Stop bow season over the 9 day gun season. Get rid of the all the extra hunts. youth, Holiday etc. Limit the number of doe permits to a lower number then last year to give the deer a chance to increase numbers. Please look hard at what i stated on the seasons. Also predators are taking more deer that you think. wolf, coyotes are running all over the northern forest. The last weekend of gun season snow did not effect the deer harvest as much as you think. I have hunted in a lot more snow many times in the past and more deer have been taken. So do not use snow as a excuse. I talk with money group camps that have land by me and they all say the same/ where are all the deer gone.

Our crew of five sat all 9 days of gun deer season plus we crossbow hunt. During the 9 days gun season we saw a total of two deer between all of us and no chance of a shot even if they would have been considered harvestable in our opinion. We did not see see anything that we would have harvested during crossbow hunting either. When I first started hunting as a teen we at least seen deer on a daily basis while hunting, now we are lucky if we see a deer during the whole 9 days of the season. And I don’t like the idea of changing crossbow to just a short season. It should remain the same as regular archery season. And the possibility of the no hunting of any kind the week prior to the 9 days don’t make sense. Neither does extending the 9day gun season. Not to mention all these extra hunts don’t need to be happening. When we were growing up and starting to hunt we didn’t have a special youth hunt season or the ability to harvest an anterless. We were just like all other hunters. I’m all for getting youth into hunting but why the extra season. Also because of where I work I can talk to a lot of hunters and they were saying the same thing. That they were not seeing anything and ended up getting nothing or their group ended up with maybe one. Most that I talk to hunt archery/crossbow and gun deer seasons.

Crossbow hunting 2019, was a late start for me. I hunted some in the farmland area of Marinette County, but overall my chances to hunt were very limited. The 2019 deer rifle season was the first time since 1976 I have failed to even see a deer sitting in my blind during the entire deer season. I sat daylight to dark on opening day, opening Sunday, Monday from noon to dark, daylight to dark Tuesday, Wednesday was the storm, Thanksgiving the afternoon to dark, Friday morning only. Gave up after that! Opening weekend I sat in the same blind I have for the past few decades. The other days I sat in different blinds to at least look at different trees. But they were in a few square miles of one another. The past few years I have seen more and more wolf sign, and less and less deer, turkey, and coyote sign. Use to always see several deer crossing the road driving from camp to the deer hunting area. This year I saw three on Thanksgiving Day, otherwise nothing. What I did encounter a lot of were wolves. Opening morning before sun up they were howling. Tuesday more right after sun up I heard them again closer by. Saw more wolf tracks in the snow than any other animal, except man. Muzzleloader season in Marinette County was done in the farmland area.
As a female hunter, I have a huge passion for hunting for both bow and gun. Over the 15 years that I have personally been hunting I’ve seen the deer population low on many occasions. The best years of my hunting experience was when The DMU was a buck only unit for a couple years to repopulate the deer. It made a huge difference and I would love to see that happen again. A few things that don’t seem to be brought up with deer numbers which include poaching because sadly it happens and there is no accountability anymore with doing online registration for harvested deer. Another issue that I have is with private land anterless tags. You should have to prove that you own property in that DMU in order to purchase anterless tags, because sadly when public land tags are gone everyone starts buying the private land tags and again there is no accountability for it. I own land in Marinette County, but I also hunt public as well and for the 2019 deer season after only being in line for 10 minutes online to get an anterless tag, all the private tags were sold out and usually it doesn’t happen that fast. I would Also like to see crossbow season shortened considering it’s just like using a gun. Thank you for allowing me to voice my concerns!

I would like to have a doe permit for either bow or gun!! I’m a blue collar worker an do not have time to buy extra tags when they go on sale! It’s unfair to us who spend the money an time in the woods!! Most of these tags are sold to retired people who can be there for the sale but won’t spend any time in the woods!! And all buck movement I see from September through January are all night time pics!! The predation is terrible!! Bear, wolf, coyotes!! We need to fix this!! Plus the coyote hunters an bear hunters with dogs is unbelievable in my area and those deer have no peace from dogs, bear,wolves, coyotes!! There are constantly being chased!! I was awarded a bear tag last year an I was unsuccessful because of the dogs running an i applied the last 3 years an they awarded me last year!! Unfair to us guys that want to sport hunt for our game!! Skip years between the dog hunters for bear an sport hunters!! I mean every other year not the weeks rotation!!!! I’m tired of the souther people coming up here to chase bear and littering all over our roads also! Beer cans thrown out the windows!! I wish I had authority to enforce some of the BS I see on the back roads an in the woods!! Give me a badge an I will enforce the laws!!

We need to control the predator population. I've seen more coyotes and wolves than deer while hunting the last two gun seasons. The County needs to look at the cutting of so many the large oak ridges in northern Marinette county. Especially all the areas replanted in pines. What are all the animals going to do that use the mast crops for food? The two year ban on baiting needs to be lifted. With limited time, no mast crops some years, and the limited hunting pressure some areas see there is no deer movement, even if they are there. The kids and old folks need to see some deer to get them interested, or to keep them interested. Not seeing deer for multiple years is no fun. What is wrong with happy hunters? The argument about carrying capacity has me wondering. If the land couldn’t carry the animals they wouldn't be there in the first place. It's not our duty to kill them off to a certain carrying capacity just "in case" there is a bad winter. The bad winter will do that for us. If that is the case we should wipe out 75% of the world population, so that we are all 6' apart "in case" another pandemic spreads across the globe, sounds pretty ridiculous right?

One of the special times of the year is deer camp you get to spend with family and close friends, up north has always been the place to be but when you sit for a week straight and dont even see a deer and you see more predators than deer its a little absurd. Deer camps that have been running for 50-70 years are breaking up and selling because no one wants to come up any more because there is nothing left, something needs to be done up here predator check, no antleless deer for a couple years and when the herd gets healthy dont give out more tags than what people can shoot, more bear tags taking 11 years to a shot at one bear is outrageous when they do just as much damage as other predators, wolves run unchecked and destroy the deer herd. Something drastic needs to happen to help the deer herd in northern counties because if nothing is done to help more and more deer camps, traditions, and hunters will be done hunting. I hope the DNR does something because watching old timers talk about how things were and how they are now is extremely disappointing along the way people have fail the hunters of northern wisconsin.
Bioligist mentioned seeing deer of private vs. public in northern forest. These are 2 independent categories. People and seeing and harvesting deer are the private landowners that can put food plots in and hold deer (pull deer form neighboring public areas). Its obvious to me that skews your numbers. Area I hunt I have had to adjust. I used to walk in 1 mile and see no deer. I now hunt 100 yds off the border of private land and of the few deer I see. They are all heading to private land withing 1st 2hrs of the season and then see nothing after that. Now lets talk predation. I feel there is High predation rate. Why does it take 9-10 year in this zone to get a bear tag? I have literally have seen just as many and in some cases more predators than deer. I used to spend all 9 days supporting marinette economy. Now I leave after 2 days and hunt near home to see and harvest deer. I am going to retire in 5 years and have the ability to spend alot of time in marinette county. I am considering selling my property and going to oconto county where the numbers are better. I can also get bear tag much sooner.

Since the the November 2017 deer harvest, I have notice a significant growth in the coyote population. This past march I have found one recently small deer killed off County C outside of Wausaukee taken down buy coyotes. Off long lake road you can still see 5 rib cages of small to medium deer taken down by coyotes. The huge growth to predators of the deer population north of county C, which I believe is the Marinette Northern Forest DMU, is reducing the deer herd in our area. The taking of more deer will reduce the herd smaller than what they are already. It is extremely frustrating to hear about people wanting to reduce the deer herd when they are already severely impacted. Going up north deer hunting has been a tradition in my family for over 50 years in the area. Back in the 70’s we had the issues with poachers and the herd recovered in the late 80’s. Now it appears we are going thru a similar issues just with different predators. My question or concern is this: Is the DNR taking into consideration the coyote impact on the deer herds in the Marinette Norther Forest unit??

I have seen packs of wolves the area I hunt the last 4-5 opening weekends. The wolves have 100% decimated the deer populations. I used to see 10-20 deer opening weekends. Now we are lucky to see 1-5 deer. I hunt near a bedding areas with large game trails surrounded by water sources. Everytime I see the wolves they are chasing yearling deer. I usually here them howling at dusk and hear 7-15 calls in the surrounding area. Depending how close the wolves are other deer in the area are frightened and we see them sneak out. They don’t come back for days I would also including suspected poaching of larger bucks by local hunters. They shoot deer out of season for sure. Most of these hunters appease the DNR by portraying themselves as rule followers and outdoorsman but are sneaky criminals. I’m a novice who treasures my peace and hunting time over opening weekend. Our family has hunted the public land since 1950s. It’s really sad to see things get this bad. Sincerely Concerned Please open a wolf season and catch the dirty local criminals ??

I think the department is moving in the right direction keeping antlerless permits low in this unit. This unit is a very diverse unit with many changes in ecology. I hunt in the northwest corner of the unit where it is largely big woods. This area continues to suffer with very low deer numbers. So low in fact that we are seeing cedar regeneration in nearly all of the swamps. Last year I saw only a handful of deer in an entire gun season. During bow season I hunt further east and do see more deer. However the areas further east recieve significant pressure on public lands, especially during the gun season. The lack of respect of other hunters frankly makes it not worth a better chance at seeing a buck. When you spend all fall scouting, pick a few areas to hunt and still have multiple people set up within 50 yards of you it just isn't safe or fun. I am accustomed to hunting heavily pressured areas in the fox valley area during bow season. It seems hunters down there are much more respectful in giving each other adequate space.
Public Input on CDAC Preliminary Recommendations - Spring 2020

I feel that there needs to be more deer in our area. The population is so low that I barely see deer anymore. There once was a time when this area was known for their deer population and it was great seeing them. I would suggest that they bring back the "party permit" it gets people hunting together and that way even if it is 3 people for one permit instead of 3 permits for those same 3 people. There should not be so many permits out there, let people share! I also feel that there should not be a youth hunt etc. Kids need to learn the old fashioned way like all of us did. You wait until your legal age to hunt and then go out with your parents in the chilly weather and try to harvest a deer. Show them what hunting is really about, not that they get to do it when it is warm out and then when real deer hunting comes they don't enjoy it because it is too cold for them due to the fact that they were able to do it in the warmer weather. All these special seasons are killing all of our deer population.

No baiting because of the CWD is dwindling the number of people hunting. The number of deer seen has drastically gone down during season, prior to these sanctions. People young and old are starting to lose interest in this beloved fall past time. As patrons who love the outdoors and take pride in their property. It is our responsibility as a landowners to pass on any information about issues that may correlate with CWD and get qualified individuals involved to take immediate action. To pass down sanctions for whole counties and most times adjacent counties as well is taking the landowners out of the picture. Landowners who are part of programs such as QDM, Property management, etc. Should be held to a higher standard and given benefit of the doubt when these county wide sanctions are brought down for consecutive years. As a responsible landowner who takes pride of the well being of the property, these CWD sanctions need to be looked upon with grave detail for our upcoming outdoorsmen and women.

I own and hunt on both my 80 acres and the public land which joins my property on one side and I have been hunting off CTH K for the last 45 years. Which means I KNOW MY PROPERTY and the PUBLIC LAND next to it. The DNR Big Game Specialist and the "Local" appointed DNR Representative are DESTROYING deer hunting in my area by allowing the constant harvesting of does. My land is ALL woods and there are very FEW deer on it. The Family Tradition of Deer Hunting as and is being destroyed by the "Brown is Down" Policy PROMOTED by the DNR. When you hunt with 6 hunters for 8 of the 9 days of the season and hunt from 5:30 Am until dark and you don't even see a deer it's really sad. What Grand Child wants to go sit in the woods all day on a stand and NOT EVEN SEE a deer. There are too MANY deer seasons..from the middle of September to the end of January..bow-crossbow-youth hunt-gun season- muzzle loader-Holiday hunt-and Bow Season again ..Is the deer Population endless and bottom less...Are you NUTS ?

I watched the video provided (graphs,numbers ect.) and it helped me with my decisions. In my area I have noticed a definite decline! The area I'm talking about is what used to be 49B. I have lived, hunted and watched and listened to people here in this unit for 45 years. What I have learned is first off the pressure on community and wildlife has grown extremely--- to the point of over harvesting our wildlife. Last year my population of deer has DROPPED greatly to say the least. The 2019 deer season I saw 5 deer the total gun season----9 deer bow season and I'm sure those 5 deer where part of the 9. Just for general information my land borders appox. 3 square miles. What I have noticed is in the last 10 years the population here is crashing more and more each year mainly, I believe is to over hunting! Just way to many people in this UNIT and NOT enough management or enforcement!!! I hope this helps you people---I know I would like to see some help with this problem here and I'll help if I can.
Last year we observed some hunters who harvested deer and found bait piles and others who didn't but we're baiting. I own private land and for safety factors, hunters shouldn't be allowed to face into someone's property to hunt. I don't think trying to get rid of CWD will be accomplished by wiping out large deer populations or banning baiting. If game farms with infected deer are allowed to operate because you don't want to destroy someone's business, then what about struggling farmers who sell deer feed. Healthy and well fed deer can fight disease and reproduce better than sick or starving deer. Driving past a corn or hay field doesn't reflect deer population too well. Whatever a very small select group of DNR personnel decide what is to be, we will be stuck with. Just like the meeting on the Oxbow recreation area and wanting to rip a dam out and not let people use it, it is more about a few trying to control people with very narrow minded objectives.

I hunt Minnesota and Wisconsin wolves have more influence on deer population than anything man is doing besides antlerless permits at this time. Farm tags nearly annihilated the deer in the area I live in and hunt in the farmland zone of Marinette Co. Crossbow season should have been limited to an actual licensed season aside from archery season that is the only way to get an accurate count of crossbow kills by the way bear baiting season and bear dog season should have been conducted the same way. What dictates Wisconsin hunting is money that is why the deer population is dropping youth hunting is declining and wolves and special interest money is growing this will never change in Wisconsin as long as money is the prime objective of the state also, I am a hunter safety instructor. PS The wolves introduced in Wisconsin are not natural the gray wolf was the natural predator in Wisconsin not the Timberwolf God for bid the truth be told to the public.

I've hunted this area for quite a few yrs and have sat with my dad for many before. The numbers are not changing in the woods. I see the same amount of deer every yr. I have seen many more hit by cars tho. Including ourselves. I travel from southern Marinette county to my land in northern Marinette county every weekend. The predator and bear population has been up since this management unit stuff has begun because they don't have laws to stop them from taking what they need. We hunt hard and have a family of three in the woods. We would like to see more antlerless tags so we can put food in the freezer. It's so costly that we might as well just buy a cow. I would like to pass the tradition down but this limit of tags is pushing many away. I’ve had four friends quit hunting in the past three yrs because of it. Could even bring back the either sex tag. That was our choice on what we wanted. Thank you for hearing me out. And have a great year.

I have been hunting for 45yrs on the same property which is joined with PUBLIC HUNTING LAND along an 80 Acre line.. PUBLIC HUNTING PRESSURE and KILLING OF DOES IS DESTROYING DEER HUNTING ON MY PROPERTY...I have more BEAR on my property than I do deer...Why would my Grandchildren want to come up and Hunt with me...WE SEE NOTHING IN ALL DAY...Public Hunting pressure is HIGH...The DNR Big Game Specialist have pushed for the Antlerless Doe Killing since the late 80's...The deer population in my area CTH K is tanked out, and YET you are setting the doe harvest numbers at 500 for deer gun...How about BUCK ONLY archery, crossbow and deer gun. Let the numbers come back. There are enough of the neighbors up by me and family members that are not buying deer licenses. You..the DNR..are destroying the hunting tradition..The family tradition of hunting...You can NOT HUNT what is NOT THERE...You can NOT Harvest deer if there ARE NOT ANY...

Too many antlerless tags are given out. This area should be buck only. Also, add a minimum points to stop the slaughter of so many small deer. The public land is hammered and they shoot every deer they see. Stop the antlerless tags and make bucks with 3 points on 1 side only. Private property owners have leased their lands to others who slaughter the deer there too. Too many people on the public lands and then the road hunting starts when they don't see deer where they hunt. It's a stupid cycle. I hunt private land but we kick people out every year. It's posted with lots of signs. We've thought about posting it public to keep people out. That's right. Post private land as public so people drive past due to lack of deer on public land. We're close to that thought. Police won't ticket trespassers. Telling us to talk to the offenders and work it out! Really? News flash! That doesn't work.
In my opinion northern Forest zone should be buck only with a four point on one side minimum Marinette county has some good deer genetics I can see it in some of the few bucks registered but they never get to get mature because of a kill everything mentality we need to encourage quality over quantity I think this would bring in younger Hunter interest if we had bigger deer. Also I own 100 acres and see very few deer in general in a spot we’re deer should flourish? I spend about a lot of time in the woods each year please take my advise and consider buck only with a four point minimum, many other states have this program and it's very successful and they have larger bucks in general which brings in more tourism and generates younger interest which in the end that's what the future of hunting is all about. It would bring controversy at first but once hunters see the results they will much appreciate it.

CDAC Committee, I have hunted in Northern Marinette county for almost 50 years. I’m more of a walker than a sitter, so harvesting a deer is not that important to me. However, I am concerned about the declining deer numbers are having on the rest of my hunting camp. We have four young hunters who hunt hard all day, but have little to show for their efforts. Only two bucks harvested in the last decade. I dreaded last deer season because only three deer (Doe and fawn, Doe- without fawn) were showing up on my trail cameras. Only one hunter in our camp saw a deer. The six of us hunt both private and public land. There for, I would recommend that this committee make the Marinette County Forest unit a "Bucks Only" unit for the gun season. If the DNR needs to have does to evaluate the health of the herd, they should require the bow and crossbow hunters to bring in their deer for examination.

I do not believe this area too be over hunted. During the rifle season opening day I heard three shots (all day) I saw one doe for the whole week of hunting. We have way too many predators around here. I do not understand why so few bear tags are available for this area. Years ago you saw no bobcats. Now I get them several times a week on my game cams and it is almost impossible to draw a tag. It is not uncommon to see coyotes in the middle of the day. I hunt them and it does not scare them away. Wolves are showing up more lately then other years. You can hear them howl at night. I have not shot a deer in years because I will not kill a doe or small buck. The difference between now and 20 years ago is unreal. My Son and I filled bow and gun tags on Bucks almost every year then and passed by a lot of Bucks. We would take doe also as they were in abundance. No more!!! Time to take action on predators.

Bring back baiting!!! A lot of people I know are on the verge of quitting deer hunting, including me. I already quit bow hunting. If it wasn’t for loving the outdoors I would be done, but if I’m out there I may as well carry a gun. What difference does it make if the deer are eating under all the apple trees in Wisconsin, or eating off the same trees in a logging operation, or if I throw a little bait in the woods? There isn’t any!!! CWD is here to stay. You keep talking about the drop in license sales but yet you keep driving people away with more laws that are absurd. Once my sons generation is gone there will be a big drop. Most kids now a days don’t want to be in the woods, especially if they’re not seeing anything. Hard to keep them interested. They’d rather be on their phones than out in the woods. So you just keep driving people away, or get some common sense!!!!!!

When I first started hunting this area 40 or so years ago, there were deer to be seen while hunting. I was able to keep interested in the sport. Now time has passed and there were a few large bumps along the way with over harvest, which I do not feel we have over come yet. I have tried to get a few others out in the woods to enjoy the sport, but do to the fact that the numbers are down, they do not hold an interest for hunting in this area. Hard to get people interested in deer when they sit for days on end and see nothing or very little. My family has kept records of our hunting sighting to include, number of hunters out that day, number of deer seen, sex of deer seen, number and sex of any deer harvested. All numbers are down. For the last few years I as a die hard have had to hunt alone. Now I have a person interested, but 2019 season did not show any sign of change.
I have hunted here for almost thirty years and have witnessed many changes ranging from wildlife management to forest management and predator management. Of these, I believe forestry management practices have changed for the better, providing better and more suitable/abundant habitat that ALL animals benefit from. I have also witnessed a drastic decline in the number of animals both in the woods and along the highways. I believe predation is of the greatest concern. This would include the increasing number of wolves that require better management, bears, and over predation by humans. While I opposed the antlerless tag use for youth, it is because I have witnessed what I believe to be abuse if not outright illegal use of it by unscrupulous adults that only care about harvesting an animal, rather than their child learning fair chase and ethical hunting/harvesting.

I own 33 acres bordering county land. I have 3.5 acres in food plots. I know I attract deer because of the plots. Three years ago logging was done. I plant trees every year. The new growth and several planted oaks are browsed on very heavily. My observation is if people can't put bait out and shoot deer by walking just off a logging road they don't go. I see deer all over in the county land. People have gotten lazy. Do some scouting. Find the oaks. Hunt river and creek edges. I see deer all the time. Am I lazy? No. Three does and four yearlings were observed in the winter wheat and alfalfa plots before the last snow storm. Now the snow has melted again and 11 deer are in my plots. I'm sure you can imagine the browse that's happening in my woods. I was on line to get doe tags last year 15 minutes early with none to show for it.

With the amount of deer up there i wouldn't bring my grandchildren up there to just watch empty space. This year gun season I saw 4 deer for about 6 seconds total. I sat sunrise to sundown the first two days Spent three more days sitting at night and walking in the mornings. Saw one deer walking. The baiting thing is a total joke. Either it needs to be enforced or let everyone bait. If the DNR is really that concerned about the baiting/feeding of deer for the health of the herd why don't they take a ride around in the winter when there is snow. It doesn't take long to figure out who is feeding and who isn't. All the same people are still feeding all winter long. I found 12 stands the weekend before gun season 8 had bait. The entire gun season has become a one morning hunt again. It saddens many of us up there.

I am retired and can spend hours hunting in this unit. The only bucks I saw were on camera. I went in farmland zone adjoining forest zone and saw 1 doe. I did see tracks and sings of deer. I also came across bait piles when non are allowed. Last year one question concerned baiting and I believe majority said to get rid of baiting state wide and I feel this should be done. Also having a county split by forest and farmland is confusing and have talked to hunters who say they have doe tags and they are hunting forest zone and don't know that the tags are no good. I do see fewer hunters every year and hunters are needed to move deer. I actually liked the old way of sending in your money for a draw for a doe tag rather than spending 2 hours on computer and waiting to see if you have a chance for a tag.

For years the DNR gave out way to many does permits in this area, so along with all the coyotes, wolfs and black bear in this area the only place I see alot if deer are in and close to town. We need to end all the additional hunts for everyone and go back to Now and gun season, if people want to use black powder they can do it during gun season, and the youth hunts and antlerless can be gone to seeing as though any child of any age can by a tag which seems to be just plain stupid and unsafe. Either end baiting in the entire state and enforce it and not let places sell bait or allow it every where it is not fair to the guys that are being legal, the place in my town sold tons of apples and corn so it makes it very tough on me because there's still a load of people baiting.

The survey didn't touch base on CWD. It is my belief that not enough regulation on game farms are implemented and we all know this is why it popping up in areas as opposed to spreading in a natural manner. Anyway here is my take on CWD and how it affects my hunting, when I feel CWD has spread to my area I will be giving deer hunting up unless there is irrefutable proof that consuming the meat is not harmful. I'm not the only one that feels this way and that could have a negative economic impact as well as uncontrolled growth in the deer population should a majority of hunters feel this way. I do not hunt just for trophy or for the kill, tradition, family & friends and the meet if lucky enough to see a deer, in 2019 none of the 4 of us saw a single deer where we hunt.
I own a cabin on Jones Road in Town Of Athelstane but hunt on public land in the Marinette County Forest adjacent to my property. Our hunting group at one time consisted of 10 hunters. Last year we were down to 5 due to some hunters giving up because of lack of deer. Our group of 5 hunted 3 days and saw a total of 3 deer and no bucks. We have not harvested a deer in 3 years. While I understand that there may be many deer in other parts of this unit I do not think this area has enough deer to sustain interest in our continuing to hunt there. Continuing to give out antlerless permits on the public portion of this unit will only make the problem worse. Your proposal of 375 is an improvement which I appreciate but why give out any? Thank you for your time...

I have seen fewer and fewer deer every year over the past few years. I have also seen more and more wolves and wolf sign. This year I literally saw as many deer as wolves. I think this is a direct correlation. Based on the tracks I’d say there is definitely more than one pack that frequent the area as well as individual wolves that stick around the areas. I also think that the baiting ban is the reason I’m seeing many more hunters since we all seem to gather to feeding areas now to hunt. Probably why we see more wolves since they too would be flocking to those areas looking for the same thing that the hunters are. Instead of spreading out the heard with baiting all over they congregate to locations of natural food sources such as oak ridges.

I own 45 acres by Amberg Wisconsin. I am never able to get a answer list deer tag for my property which I pay taxes on because everybody else always has them all right away in the morning. I work first shift so by the time I have time to even get online they are all gone. We feel that landowners should get priority On the Antlerless tags. People like myself that work very hard all year to get the deer population where it is don’t even get a chance to harvest one of the doe’s. This problem happens year after year. Please ask the landowners in the county if they would be interested in harvesting a doe once in a while. Thank you for your time.

Thank you for your out-reach and efforts. I generally rely on what I see/experience from one year to the next in forming my opinion(s). For example in 2018 I know for certain (as can be verified through my Snapshot program participation) my immediate deer population in the Northern Forest zone of Marinette County sustained vast fawn mortality primarily due to a resident coyote population. In 2019, the fawns fared much better from a survival standpoint. Neither of these events appeared to have any effect on the overall population. The not overly adverse winter has helped as well. I’m simply using those very basic examples to say the population appears to be doing well regardless; and your modeling and research efforts prove solid.

One of your proposed rule change is to not allow crossbow hunters to hunt during the rut is JUST PLAN WRONG. WE have just as much right to hunt during this time as anyone else. We pay for our license just like everyone else. We paid good money for our crossbows not to be able to hunt with them during the one time of year that we can actually see deer. Since we are unable to bait right now that’s just about the only time I started to see deer was after October 31st. I KNOW SOME HUNTERS THAT TOLD ME THEY WOULD QUIT HUNTING if that rule would be passed. I myself would probably quit crossbow hunting because I can’t afford to go out and buy a new vertical bow. SO PLEASE DO NOT ALLOW THIS RULE TO CHANGE YOU WILL loose A LOT OF HUNTERS

I have seen a lot less deer over the past 30 years. I feel it’s a direct result of high doe quota’s. Reduce the number of doe permits for a few years and lengthen the gun season so hunters don’t have to compete so much for vacation time to hunt. You want younger people to hunt. Well and good. But their the ones without seniority in the workplace. Make a 3 week season and even if they can't get off, more will go on their days off. This could also increase the opportunity to hunt the rut and reduce competition for hunting areas as well as improve hunter safety with fewer people in close proximity to one another. There’s a good chance the deer won't be as skiddish and bedding down and staying put in a safe area so to speak.
I would fully support an antler limit being imposed on the northern forest zone of Marinette County. I would also support this state-wide. I believe we need to get young people EXCITED about deer hunting and the best way to do that is to ensure a healthy, mature buck population with proper QDM age-structure. When a youngster sees a large set of antlers it will get his or her heart pumping faster than any yearling spike or doe ever could. I truly believe that feeling is what will get an outdoorsman hooked on hunting for a lifetime! I would appreciate any DNR official to at least consider this idea. I also believe more hunters state-wide would support this than one might think. Thank you for your consideration!

I think the DNR is catering to the rich people who own their own land. When they say that my 2 gallons of corn is leading to deer swapping spit. Very seldom have I had more than 1 deer come into my bait at one time and if they did it was a doe with her fawn. Take your food plots and tell me when 10, 20 deer come into it they are not swapping saliva. You and I both know the answer. Another thing is even when you go up north you see lots more deer around the private land then public. Why? Last deer season bow hunting I saw 2 deer Gun season I saw nothing I put in hundreds of hours in the woods Good thing I enjoy the peace and quietness of the woods. I saw more bobcats, bears and coyotes than deer.

I have trail cameras up year round including one that is part of the snapshot program. I have seen fewer deer in recent years. I believe this to be caused by several factors. Many of these factors are hard or impossible to control (road kills, predators, winter). The easiest way to improve the deer herd in the area is to completely stop taking does for the time being. I personally have not taken a doe in years because of the drop in sightings. The easiest factor in all this to change is the amount of doe tags. Also the deer I do have in camera tend to be young. It is very rare to see a mature buck or doe on camera. The deer are not surviving past a couple years of age. Thanks

The fact that you are even considering giving out antlerless permits in the northern forest is completely irresponsible. You can make all the excuses that you want for the numbers being down but one thing to consider that none of you seem to talk about is the fact that there are not many deer in the woods. That is what my observations are anyway, along with 90% of other hunters that I speak with in the area. A ZERO quota should be put into effect for this year! Follow the lead of Forest County, directly next door with very similar topography as they push for zero quota this year. Give the herd a chance to make a legitimate rebound we will all be better off in the long run.

Thanks for the work all of you people do. I hunt county land exclusively in northern Marinette County as I have for 49 years. The county is doing logging operations on this land all the time which I would think would be great for deer and all other species. Every year for it seems like at least 5-10 years not only do I not see any deer but I don't even hear much shooting. Maybe 5-6 shots all day. I know there are some deer in the area, I can see the tracks. Is it that there are less or do they just not move around as much? Maybe there are not (enough) hunters to move them. I'm not sure. I just enjoy being in the woods but it would be nice to see a deer once in a while.

Been hunting up their my whole life. It would be nice if the DNR would go back to the $2.00 application fee for a chance to get a doe. Like the lottery. So if we do not get one this year, within at least 3 years we would get a doe tag (as long as you keep applying every year for that unit) How you have it now being at 10 on the computer, first come first serve most hunters get really disappointed because we never will get a chance to shoot a doe. Myself and my hunting group of 12 are meat hunters. Sure would be nice if we could shoot at least 5 does to get some meat for the freezer. Thank you and hopefully you and your staff will put this into consideration.
The deer herd is much too high, especially within the forest/farm boundary area. We own 80 acres and have significant damage to native flora and tree seedlings/saplings. Performing effective forest management is difficult, as herbivory is high. Hunting pressure has all but disappeared in +/- 20 years on the county forest surrounding our lands. Deer hunting is an important family tradition for us. We don't care about bagging the biggest buck, we want to manage the herd effectively and have healthy forests. We want to kill more does and feel hamstrung by the direction of Marinette and most other counties in northern WI wanting to increase the herd.

There are at most 20-25% of the deer there were 35 years ago. Even 20 years ago. Yet, your moronic numbers say the population is many times higher than it was back then. Stop killing antlerless deer and severely limit the buck harvest. When the population is 10 times what it is today your current numbers will then be correct.

I hunt in northern forest Marinette county for 30 years I will say 20 years ago it was normal to see 15 plus deer a day we stopped shooting does around us about 7 years ago because we were seeing less and less deer in the 2019 gun season I hunted 8 straight days and saw 4 does 2014,2015,never saw a deer 2017,17. 6 guys hunted private and public and saw 9 deer total in 8 days 2018 5 guys saw 7 deer in 8 days over the 30 years of hunting here we are seeing fewer and fewer deer in the 2019 season we saw more bears than deer I would say no doe tags gun or bow public or private for at least 3 plus years thank you for your time Sean fitzwilliams

I hunted gun season for 7 consecutive days. I had seen 4 deer. I use a climber and enter before sun up and come out by sun down. I don't leave for lunch or weather. After hunting for 40 years I find it becoming more discouraging to want to spend time when you don't even see a deer all day. Extremely unlikely to entice the next generation to get engaged in hunting. Please lower the public land quota to zero. Ran into others that were hunting forest zone with farmland antlerless permits. Told them they were in the wrong unit. They didn't seem to know the laws or boundaries. frustrating when I know we have been trying to raise the herd.

I think people that hunt public land should be able to hunt with 2 gallons of bait. Hunter's that own private land are able to plant food plots and farmers can sit over hundreds of acres of corn fields. This no baiting law discriminates against people that are not wealthy enough to own private land and is not fair. The number of hunters in Wisconsin is steadily decreasing. Part of that reason is because without baiting hunters don't see any deer and don't want to hunt. If the Wisconsin DNR wants to see the numbers of hunters increase they have to allow baiting. Making it illegal to bait deer is not going to stop or slow down CWD.

After hunting this unit for several years it's clear to see the lack of doe tags has severely upset the buck to doe ratio !! The number of does is tremendously compares to the bucks. By not having doe tags the hunters that were perfectly content shooting a doe verses a small buck are now forced to shoot that small buck if they want meat in the freezer. My recommendation is to have a limited number of doe tags and at the same time implement a point restriction of four points on one side to keep all the small bucks from being harvested. This will be a rough two year wait to see the results but it will have a definite pay off !!
5922 The wolf and winter kill is helping ruin the deer population as well as clear cut deforestation. The wolves are getting the benefit in areas where clear cutting is practiced. There are more wolves than the state of Wisconsin and the dnr realize. I'm hoping other hunters will tell you this as well. Having hunted the same area for 20 years I am finding the deer population rising in areas of large swamps where they can hide from predators, and decreasing in more open and hardwood areas where wolves and coyotes can hunt. Wolves need to be hunted under strict rules, and clearcutting needs to be limited in order to better conserve.

5923 There are simply just too many deer in the northeast part of the county. We can't drive down the road without constantly swerving for deer, can't keep a garden or apple trees. My property is over browsed. I planted 1700 Norway pine trees and the tops are all chewed off. I think a private property owner should automatically get a doe tag for any season to reduce the herd in this area. I also think the deer in Michigan testing positive for cwd was a political stunt of some sort. The only wils deer in hundreds of miles happens to be on a politicians farm. Sounds fishy to me. Then Michigan thinks it came from Wisconsin.

5924 I hunt and live on 40acres of what used to be unit 41 in Marinette co. I don't think the number of doe permits is sufficiently helping hunters or the herd. Not in my area any way. The number of doe permits needs to be raised, especially with us residents. The deer are so abundant, they trashed my cedar swamp. They eat all the seedlings. Then come to my yard and eat all the shrubs. It’s nothing to see 30 or 40 deer roaming the back roads on any given night going from yard to yard destroying gardens in the summer and shrubs in the winter. Give residents doe tag preference if you live on 40 acres or more in 1 parcel.

5925 This was my first time listening in on the CDAC meeting where recommendations were finalized. It was quiet alarming to me the "shot from the hip" approach to making decisions based on hear say, small sampling of sighting (by a few loggers) and gut feelings. In other words, quotes and decisions were made with there little actual evidence or true actual facts. There was one senior (maybe to old) coming up with his opinion based on the non-factual evidence mentioned above and the rest of the people in the forum feel in line and approved. So I was very disturbed by the DNR allowing this type of practice to be official.

5926 The DNR does not listen to people who live up there. The deer numbers are way down. Every year is a new batch of excuses like "the weather didn't afford people access", or "the rut was early". Trail cameras dont lie. Snowshoeing and observing deer yards in the winter dont lie. The deer are not there. Predators take the numbers down, winters take the numbers down, and you still have to get your money from the doe tags. It's really about money for you guys, not quality of deer hunting. And the 19 day gun hunt?! What an absolute joke. I hunt in Colorado and Wyoming also......this state is a joke compared to them.

5927 Over the past few years the deer population has declined greatly. Part of the reason may be the release and increase of the number of wolves. There is also an increase in the bear population. It almost makes hunting less fun because you may not even see a deer the whole season or you may see one or two and thats sad. I feel like better measures need to be taken to help increase the deer population because if we don’t take care if what we have now, we won’t have anything in the future. I also feel like the number of farm tags should be regulated. A lot of farmers take advantage of being able to get so many tags.

5928 Personally I believe that preventing hunting the week before the 9 day season would be extremely detrimental for the archery season. Even though the archery season is the longest deer season out of all the deer seasons most of the archery deer are harvested during this week. As to the extended gun season, I do not believe that it is a length of season problem. I believe that it is a timing problem. Having the gun season so late in November is the reason for the 2019 lack of harvests. As many people saw the rut was practically over before the season even started. Thank you for your time and consideration.
Public Input on CDAC Preliminary Recommendations - Spring 2020

Our hunting group of between 20-25 has been hunting the same Marinette county forest area for over 50 years and several generations. Four or 5 deer (mostly bucks) used be the norm for opening weekend. The past number of years that average has dropped to maybe 2 with occasional years that we don’t harvest any. I personally believe that it has to do with a higher predator population of which we see more wolf and bear tracks in the area. Most likely these predators may need more population control in order for deer numbers to rise namely, the grey wolves and possibly bears and coyotes.

The wolves, large coyote packs, bobcats, and of course bear are much more of an issue than back in the 1970’s when we began hunting the Dunbar area. Coyotes and some bobcats and bear have been there all along, but the wolves have absolutely made an impact. We often see pair of tracks and packs of 4 tracks that come out of the Coleman Lake Club. The deer herd now is a fraction of what it was in the 1970’s and 1980’s. We are overrun with bear as well, since it takes 10 to 12 years to get a shooting permit. The spring fawns have an uphill battle against the predators.

As i have hunted there the past 25 years I have seen the deer herd going down the last 2 years, I see way to many wolves and bears in the woods when I am hunting. I believe there should be more bear tags handed out and no one should be waiting 12 years for a tag the bear are as thick as rats. Also someone has to wake up and start eliminating some of the wolves in the north. If everyone thinks they are so great then lets transplant them to the Madison area and watch the herd grow. I believe the deer herd struggles enough just because of the winters that are in that area.

When applying for the public land antlerless tag, the process is concerning. I have been trying for many years to get a tag and get on the site early the application process only to miss out on a tag because they seem to be gone in seconds..this needs to be fixed. Or give everyone who buys a license to get a doe tag..many of us hunt for sport and meat..it is great to get a buck but not necessary to hunt just for big racks..big racks are big business and it creates land access issues and a terrible attitude against hunters who don’t mind taking a spike or a doe...

Other than someone feeding them out of their backyard, the deer are few and far between in this area. It’s kind of sad trying to get my kids into the hunt in this area. We have resolved to just knowing that we will hunt opening weekend and not get anything and then hunt around our house in Waupaca County to harvest our deer. It’s too bad that they might never get to know the experience of going up north for the hunt with high expectations. At least we have a few options. I feel bad for all of the people that come up north only having this area to hunt.

Haven’t hunted in Wisconsin consistently in 4 years due to military service. I have been home and have been to the family cabin and have walked the area where I gun hunt. Nowhere near as many deer as I used to see. Would just like to let the numbers higher because my brothers stopped hunting because of it being too boring when they sit all day and see nothing. Even seeing a deer whether it be a buck or doe makes young hunters excited and want to keep up with the sport. I truly think there should be an antlered only unless the hunter is under 18.

The state needs to work to get back management of the wolf population. When re-introduction was done, there was a population goal set and in all honesty I believe your wolf numbers in the state are 30 to 50 percent low. The last time the state had a hunting / trapping season some areas didn’t even make 2-3 weeks open (if I remember correctly) and the quota was reached. That is a good indicator our population is high. I know people who quit hunting northern Marinette county because of high numbers of wolves and the lack of deer in them areas.

I would recommend considering extending deer gun season to 16 days which would allow 3 full weekends giving more people opportunity to hunt. We have noticed that in our area the seasons tend to be too late (post rut) and there are fewer hunters moving deer resulting in seeing fewer deer. This is discouraging especially to younger hunters. Start a week earlier than traditional opening and remain open thru the Thanksgiving week. I feel expanding the season by one week might very well encourage more people to participate and aid herd control.
I personally think you should get rid of the holiday hunt. Leave the rest of deer season the same. Leave the crossbow season the same. And leave our 9 day gun season the same. I think the reason the 2019 gun season was down was because the rut was mostly over. I would also like to add I think more people enjoy crossbow hunting do to the better weather conditions. So I would personally leave the crossbow season the same. Younger hunters are starting to get into hunting since we have a longer crossbow season. Thank you for allowing my input.

With all the Bears, Wolf's, Bobcats, Coyotes we need to keep the deer population higher until they lower the number of predators. Hunting the public forest land for 37 years I have seen the deer heard go down and the predators go up. When I first started hunting if you saw a bear or bobcat, even a coyote you would tell that story all year long to your friends. Now when you enter the woods you see 1 of these predators 3 out of 5 times. Please keep the antlerless permits low in the northern part of Marrenitte county low. Stay Healthy!!!

In northern forest of Marinette county the deer population has been decimated over the years by harvesting to many does, by heavier snowfall than usual, and predators namely wolves. Last season was the first year I hunted with my 10 year old son on opening weekend. We saw one deer. One! I have sat in the same spot for 25 years and have never seen only 1 deer on opening weekend. Back in the day I would see at a minimum of 10 deer each day on opening weekend and would harvest a nice buck almost every year and letting smaller bucks live.

I don't like the antlerless tag purchase option ..the license sellers near us take names and same people get them every year and don't stand in line like everyone else ! lower the amount of land needed to get land owner antlerless deer tags to 35 or something less than 40 acres . In our area there are three of us land owners with 36 to 38.75 acres due to listed county right of way easements . Then we have a landowner that owns 8 forties and doesn't hunt so we have an abundance of does that we haven't been able to thin out.

I spent a lot of time hunting in the area. I saw more deer in 2019 than 2018. I strongly believe that 2020 is going to be a better year. With short winter a a lot of acorn on the ground for picking. There are also a lot of standing corn into the middle of winter. I have never seen this much standing corn field in wisconsin in my recent memory. I also hunt western part of the state and I saw fields with standing corn over there too. I strongly believe that with the abondun of food many fawns should make it through the winter.

We have hunted the same forest area for almost 50 years- this season was 1st time I saw only 3 deer in about 10 days of bow season AND not a single Deer in 31/2 days of Gun season. Marinette County needs to be split so Farmland may have Antlerless tags BUT the Western County forest public land needs to be ZERO antlerless tags for few years and place a minimum 3 points on a side for Buck tags as was done many years ago- this will stop hunters from shooting too many yearling bucks that never get to mature into mature bucks.

There's a big problem in some of the areas of Marinette County. With not being able to harvest does for so many years we have a overpopulation. In my Area I would say I have 15 does--to one buck I really believe as Hunters we have a responsibility control are heard in our area. I just wish that there are more Hunters that we could count on to do that correctly. Too many people out there think that if you give them five tags they should kill five animals. I honestly don't think half my does get bread every year.

I want to see bigger bucks. We need some way to protect bucks. Everyone shooting spikes and forks is not good. I know some Michigan counties have an antler restriction to 8 points or above. That would help. Also, I feel a hunter should only be able to harvest one buck per year. Not one buck per weapon! Also, the group party hunting should stop. I have a friend that shot multiple bucks to fill others tags. This is not sporting and hurts on the age structure of bucks. I think every buck he shot was a spike!

We have to start saving up for the kids to go hunting because my cuz. Kids are lossing interested in hunting because they don't see anything now. When I was hunting when I was a kid hunting with my dad you seen herds after herds you don't see that this days. I'm almost ready to stop going hunting because there's no deer out there. I think that go back to the way we use to hunt in stead of making more days to hunt. This goes for the youth hunt for bow and gun. I do not see to extend or make the season longer.
I wish Wisconsin could get over their carved in stone annual nine day deer season and go to a 15 day deer season like Michigan. This gives all hunters a better chance to enjoy the sport of hunting deer when their jobs or other circumstances stop them from doing so. This is also true for the spring turkey season which should have been changed to allowing hunters to hunt any season & zone between April 15'th and May 27'th. It's quite surprising to me that with the Covid 19 that this wasn't done!

I am very concerned about the NRB's proposal that would do away with the Northern Forest/Central Farmland units in Marinette County. For as long as the CDAC system has been in force, the goal for Northern Forest has to increase the herd and the goal in Central Farmland has been to decrease the herd. Obviously, no "one size fits all" county-wide plan would accomplish these diametrically opposed goals simultaneously. I would strongly support keeping the present structure intact. Thank you.

Baiting is still an issue even though supposedly stopped. Check out the amount of corn and apples still being sold at convenience stores etc. I am not a baiter and have never been, but do use scents when appropriate. Hunting large public blocks is what I prefer, but it seems that my 60 + years of hunting skills are not on par with trucked in corn and apples. I would also like to see the rut season swap between bow and gun season to hunt the rut as a gun hunter.

Where I hunt on private land, we are overrun with bears. We see them all the time. I've had 2 adults and 3 cubs in the same frame on my trail camera. I understand we're supposed to be talking about deer, I think we NEED to reduce the bear population to allow the deer herd to grow. On an average year, I normally see 2-3 adult does with assorted fawns, usually 1 and an assortment of bucks on my camera. Last year the biggest buck was barely a 6 pt. thank you for reading my comments.

Hello, I am a private land owner and hunt public land in the northern forest zone. When I hunt public land (Marrinette County Forest) I notice it is not that busy except for the opening weekend of the deer gun season. I've yet to be able to acquire an antlerless tag for private or public. I'm fine with that, but have you considered more public land antlerless tags for archery and gun seasons? As far as the private land antlerless tags, according to the numbers, looks spot on.

The deer population here is higher than the reasonable environmental carrying capacity. The deer are not allowing trees to regenerate in forests. The deer paths are so beaten down they look like cow paths. Predators are not even putting a dent in the deer population. There are deer vehicle accidents in Marinette County daily. If hunting is not used to bring down the deer population, disease will do the job. Better to use hunters to lessen the deer population than using disease.

I have been in the Goodman Park area for 32 years and our camp for 67 years. This was one the worst years ever up there. There is 4 camps of hunter which is around 60 hunters, 4 bucks and 7 does were taken between all of the camps together. Nobody is seeing anything and there isn't much sign either. There is ALOT of wolf sign and you can hear them alot too. Lots of wolf tracks and also cat tracks. Until the wolf population is controlled, there will not be many deer.

Hunter population on public land has dwindled severely over the past 35 years. This was not due to hunter population situation, but the lack of animals to harvest, which in-turn, led to less hunters. The remaining deer population has seemed to become nocturnal with the slightest presence of human activity in the woods. Wolf activity has also changed their behaviors, almost cyclical to sightings/hearing wolves, the deer seem to disappear from area for a couple of days.

The deer season structure and weapon specific seasons the past few years have been very good. I would not be in favor of any major changes to weapon use, especially reductions to crossbow seasons. I am a conservation patron license holder who hunts with all types of gear. With the loss of Hunter numbers nationwide anything that might infringe on Hunter recruitment is not good. Crossbow seasons are a great way to get new hunters involved with a short learning curve.
I have heard of some regulations proposed to boost the harvest numbers during gun season. I heard that there was talk of closing the archery season the week before gun season. This is one of the worst ideas I have ever heard of, and many others have now hunted for years and the rut it one of the most thrilling and fun times to get out there. Closing the season for literally the best week of the year often would decrease the kill and leave many hunters upset.

2019 was Terrible hunting season! spending many hours in the woods only to see very few deer. Baiting still going on widely even though illegal. predator are on the increase especially bears. it seems on my trail cameras i get more pictures of bears then deer. I been coming up here my whole life hunting and believe the bear population grew a 100%. Must continue to keep alantenerless tags low until population increases or make buck only for a year or two.

I have been hunting the same area for 38 years. I up until about ten years ago I used to get a buck every year. the group I hunt with would tag out most years. its not that way today. we ended up with 3 bucks and 1 doe for 26 hunters. Back in the day we had no wolves and very few bow hunters. the deer have gotten very nocturnal from being bow hunted. the youth hunt doesn't help either. we cant be killing does until we get rid of the wolf.

I think the baiting ban imposed is a joke and the DNR knows it. Deer herd up in the winter and always have and that has never caused CWD. The DNR and anybody with a brain knows where CWD originated and where it continues to spread. It was never seen until the start of corporate deer farms. Do your job and eliminate them, root cause, and it will make controlling CWD much easier, don’t blame baiting for the spread of it, it’s a joke and you know it.

I am sick and tired of paying for expensive licenses, and the costs to get me to the hunt. Tired off seeing wolf’s constantly !!! Two years ago had 4 different wolves run past me on opening day, within 40 yards!!!! And not at the same time!! And other sightings through the years.. Thinking about quitting deer hunting like many other people around me. When you sit for days from dark to dark and see nothing.. What do think is going to happen?

Hi, I think at the moment it would be best to leave as is and let the population of deer come back to its natural order. I’m all for giving kids and first time hunters the ability to harvest either a buck or doe like the hunters choice back in the day. I’m getting a little older myself so harvesting a deer isn’t so much important to me but growing up having that thrill every morning was amazing. Keep hunting alive in Wisconsin!

The goal for this DMU is to increase deer population. The CDAC has not met this primary objective to date. Dave stated - if we issue antlerless tags - the kill will happen. So, if the tags are issued we can expect once again to not met the prime directive. So, the CDAC would purposefully be making recommendations counter to its purpose. If the CDAC refuses to do their job - which is to increase the deer population in this DMU, then .......

I would like to see a early gun hunting season and a longer one. Maybe nov.15- nov. 30. It works in Michigan why not Wisconsin. I feel that the junior hunting season should be suspended for 3 years to let all hunters have a chance at harvesting deer. I would like to see more deer in the woods like I did when I was a kid. Early hunts should be for everyone not just for kids. We are not showing our kids of the true meaning of deer hunting.

I have been hunting "Up North" my entire life. It is something me and my family look forward to every year. I am quite disappointed with the mismanagement of the deer population in Marinette County over the last decade. With all due respect to who reads this, the number of deer hunters will continue to decrease until something is done with in regards to providing a better opportunity for deer hunters to be successful in Marinette County.

The quota was 500 last year and you gave out 1425 tags total between public and private. This year you're saying it will be a 500 quota again but you're giving out a total of 1625 tags. Check your math, that doesn't add up. Regardless, there should be no tags allotted this year in the northern forest zone. Back to back winters with deep snow. Everyone is seeing way less deer the past few years. And the harvest numbers support that.
Predator is at an all time high especially with coyotes it would be nice if all land owners could participate in control which at time spooks the deer population and makes it hard to hunt deer. I also believe there is an abundance of deer on the north side of hwy 180 in wausaukee changing deer management units would help and it would be nice to actually get a doe tag for up there instead of buck only every year. Thankyou for your time

I strongly believe the youth doe tags are filled as often or more by adults, which is very difficult to police...however, when bonus tags are very limited, there is more incentive for adults to use those tags and showing youth that there is grey area in “ethical hunting”. I get increasing harvest opportunities for youth but the hunting culture that I see in northern Marinette county is not conducive to ethical use of youth bonus tags.

Allow 2 gal of bait for hunters over 65 and handicap hunters. If you want to keep the elderly hunting and introduce young hunters the grandparents do it. They no longer can beat the brush like they did years ago so they have to bring deer to them with the use of some bait. If something isn’t done you will lose both young and old. I’m 76 with a bad heart and pad in my leg arteries. I like to hunt but is getting awful hard lately.

Close all deer hunting seasons December 24th to allow families to enjoy all winter outdoor activities in the northwoods for the holiday season and beyond. The hunters, which I am one of have more than enough time to harvest a deer. The long seasons especially interfere with the snowmobile season at holiday time when families are able to get together. This also cuts in to the amount of money spent for recreation in the northwoods.

I am against the baiting ban in Northern Marinette county. This makes bow hunting public land much more difficult. Many private land owners can plant food plots to attract deer within bow range for a clean shot. This is not possible on public land. I have 4 boys that I am trying to get interested in deer hunting. Without the opportunity to see a fair number of deer and a chance to shoot one, they will quickly lose interest.

I have 2 sons and only reason they come to our cabin for deer hunting is because of my father and myself if we pass away they won’t go. As for last 3yrs the 2 boys together have seen 3 deer. No bucks and i won’t let them shoot a doe as we haven’t seen enough deer. I been hunting here for 38 when i started hunting at 12yrs i would at least see 5 deer opening weekend now i sit all day and maybe see 1 deer. Kids need to see deer.

I hope the DNR/NRB/Legislature does not consolidate Marinette county into one DMU. If they do I suggest all members of the CDAC should resign since they will have made your job impossible. There is no reason to have a local council if they are not going to allow decisions to be made with local knowledge. I cannot imagine the DNR staff from the Wausaukee office want this change since it ignores their input as well.

Get rid of farm tags my father and I have 80 acres of property next to a farm that has turkey and deer crop damage tags my dad had a turkey tag for the first season and we couldn’t even hunt turkeys on our property due to people shooting turkeys days even weeks before the season even started it’s pretty depressing that we pay so much in taxes for recreational property and can’t even call in a single turkey.

Cut out antlerless hunting and decrease the total number of Wolves in Norther WI. The deer populations are far lower than in the past and I would say that the deer are being targeted by Wolves. I would only allow young hunters to take antler less deer to keep them involved in the sport. But hearing Wolves every year for the past 5 or so makes me feel that they have taken more deer than anything else.

I believe there are a couple pockets of Deer herds in this unit that should be allowed to harvest Antlerless deer on private land only North or 180 east of hwy 141 and south of county highway k in Amberg “One example” but i don’t think there should be any public land doe tags available for this entire unit. Private tags should be limited to around 500 and the farmers that have crop damage can get permits.

Why so many buck permits. My property is overrun with does. I hunted cross bow, muzzleloader and rifle and saw one buck, A small 6 pointer that I harvested. Half the does that I observe from my living room window, do not get bred. When I lived in New Mexico, you got one buck permit. If you used it to harvest a buck, that was it. Stop thinking in $$ and give the bucks a chance to mature.
You need to allow bow hunters to be able to harvest a buck or a doe like they could in the past. I bow hunt an area that there are very few hunters and I never see a buck during the day. It is extremely frustrating never seeing a buck. I am never able to get a doe permit and I don’t feel a bow hunter should have to. The should have a choice. It is hard enough to get within shooting distance of a doe.

If your going to limit the number of doe tags in the upper county's as much as you have the past few years. I would like to see the tags put in a point system like bear hunting. The gamble of getting a tag with the go wild system sucks. A lot of hunters are at work when they go on sale. I gone several years not getting a tag through this system. I would like to have a fair shot at getting a tag.

Give everyone in the county one doe tag for the year and then a buck tag for bow season and a buck tag for gun season. Or one doe tag and one buck tag for the year to be used during either gun or bow not everyone that hunts is looking for something to put on the wall but being able to harvest a doe would be able to put meat in the freezer for the year and still allow you to wait on a trophy.

My proposal would be to have a camp deer harvest of one doe per camp until you reach a certain number instead of bonus or youth hunt deer! A lot of these youth hunt deer are shot by adults! Also I would like to see more than a piece of paper for a license! Not waterproof or tear proof! For the amount we pay for a license we should get a better Thing. To prove we purchased a license! Thanx!

Their should not be a separation of doe permits between private and public lands. The deer don’t know the difference between private and public land. Why should somebody who hunts on 20 acres of private land surrounded by public land have a greater opportunity to receive a doe permit over somebody who hunts on public land. This just does not make sense and needs to be corrected.

I like the season framework as we currently had in 2019. I like the opportunity of being able to use my crossbow during the archery season. I wish hunters supported each other more and their choice of weapon instead of different groups ganging up against each other. I enjoy seeing the sighting of deer on a hunt but understand that we need to consider the impact of the herd.

I have said this in the past not enough deer we have tried to increase deer numbers in our area by only shooting bucks and that is maybe 1 per 10 guys we might get 1 and no does and this year didn’t see a deer all gun season and you want to increase antlerless numbers you are nuts we all need to see more deer cut back on the antlerless permits I do hunt in northern zone thanks.

One problem I have heard of: A person I worked with would hunt antlerless deer on public land but not on land he owns. He did not want to kill "his" does, but still wanted to harvest a doe. His thinking being it was easier to kill a doe. (He does not hunt in the same DMU as I do.) I know this doesn’t pertain directly to Marinette county, but I think it is a problem regardless.

Concerned over how low the deer population has become over the last few years for our specific area. Hunting party of 10 had only six sightings during the entire gun season. No shots taken. There have been rumors that the dates of the future hunting season may change and/or be extended. I feel that these changes would not improve our harvest nor our hunting experience.

Did not see any deer at all in the Northern Forest Zone. Neither did any of the 6 people with me. Numbers of sighted deer are significantly lower during the past three hunts than they were previously. Our overall harvest is down 75%, when compared to just 3 years ago. Human habitation has increased in our area (just south of Niagara). I really appreciate your efforts!

More hunters are looking for trophy bucks and if you would start shooting bucks with at least 4 points or more on one side in a couple of years you would have awesome bucks and would draw more hunters even more out of state hunters right now with the wolf problem and high bear count the deer population is down so shooting less does and let smaller bucks go would really help.
I am a disabled hunter now and can't use a compound bow anymore. I want to be able to crossbow hunt from Sept to Dec. I see 25 doe to 1 buck on my property. I have 15 acers and believe I should be able to take a doe or 2 every year without the lottery system. I also believe we should be able to bait the deer. Since most of the deer on my cameras are from 11pm to 4 am.

I went to the meetings every year trying to get area 45 split up into two units forest in farmland with no results for years. Now you went to Counties , private and public farm land or forest, my opinion you went from doing nothing to totally messing up the units, 2020 I’m hunting in Indiana, Wisconsin made such a mess of the deer hunting I will no longer hunt in Wisconsin.

Please allow baiting again in the northern forest zone. I take my grand son out with me to get him interested in hunting but it's very hard to get him interested when we sit for hours and sometimes days before seeing any deer even does. IT WAS'NT LIKE THAT WHEN WE WERE ALLOWED TO BAIT. At least than we could watch does come in and that would at least keep his interest.

DMU 45 should be two separate units. The northern part is mostly national forest with very little crops. While the southern part is mostly private land with many acres of crops for deer to browse. I feel a lot of the hunting pressure is in the north on public land where deer populations are much smaller than in the southern part where it is mostly private land.

2019 our hunting group of 5 hunted all week of the gun season. We never seen a single deer. Could barely find a track after it snowed. Had 4 trail cameras out for a month before the gun season and saw only a couple deer on them. But did get lots of wolf pictures. Make the antlerless permits 0 for 2020. Very few deer in the northern forest zone on public land.

the DNR and governmental authorities need to strictly enforce the ban on feeding / baiting deer. It is out of hand. In my area, almost all the private landowners have feeding stations set up. Nothing is done about it. I know you are spread thin but maybe we should deputize others in county govt to enforce. Its really bad for hunting and for the deer.

We have seen considerable drop in numbers of not only bucks and does also, seem to have an increase in predators, see bear on a regular basis compared to previous years on cameras regularly, also bobcats and coyotes seem to be increasing. Have been wolves but not regularly. Disappointed to find several does that did not make it through the winter.

My "opinion" is there might be enough deer, but to many hunts that force the nocturnal movement for regular seasons. Propose moving gun season earlier, joining with youth and handicap hunts. Then extend season for 3 weeks. I have been hunting for 30 years and the last 10 have been pathetic, probably our party's last year if something doesn't change.

There isn't enough hunters on County Forest land. On our 80 abutting 4000 - 5000 acres of County Forest, the red oaks have multiple tops from continually getting bit off in the winter and the deer are out in the cornfield looking for leftovers even after a foot or more of snow and first thing in the spring because there isn't enough to eat.

Deer populations north of highway 8 are much lower than to the south. Wolves are becoming quite populated on the north side of 8 as well. For this reason amount of doe tags need to be dropped lower. Private land tags can stay the same because south of highway 8 where deer populations are higher have a higher concentration of private land.

The herd is slowly rebounding in my opinion. We had over 18 inches of snow in the middle of march and that made it hard for deer movement. It gradually melted over the next couple of weeks, But definitely put a stress on the deer-which means some fawns will not be born, or born in poor shape. I recommend 0 antlerless permits for 2020.
I believe the bear population in northern Marinette county is much higher than past years. Bears along with coyotes and wolves are having a noticeable impact on the deer population. Without increasing the number of bear tags or allowing wolf hunting the only way to offset their impact is to reduce human impact by taking less doe.

It seems like the deer population has us increase tremendously in Marinette northern forest. I could not receive a tag last year for Doe On public land even though I saw many more deer from the previous year. So far through the spring I have traveled several times throughout the county and have seen more deer than most past years.

I just feel we could back off on the doe tags a little. We've had two consecutive winters of deep snow. We always seem to exceed the quota with all the extra tags (junior etc.) in addition to the regular antlerless permits. The deer numbers don't seem like they are increasing much in my area. If anything, they are going down.

Predator populations are out of control. The time to get a bear permit is excessive especially when compared to heavy deer population units that could use more natural predators. I believe the current wait to get a bear permit in marinette county is over 9 years where it is under 3 in units with out of control deer populations.

I am a land owner in Marinette County. I can hunt both Private and Public land. My concern is on how the Anterless Tags are sold. With the sale being online and starting at 10:00am on a Monday Morning, it is very difficult, if not impossible for some people to step away from their jobs and log in to the Go Wild site.

I have noted the lack of Sugar Maple regeneration due to sapling removal presumably by deer after the saplings reach about 6 inches tall. Some people blame earthworms but but that, I think, is disproved by maples growing within fenced areas around apple trees. I do not know whether this is true on public property.

Thank you for all that you do, I feel that we need to continue with the the direction we are heading for the northern part of the Marinette county. To make big changes in our deer season length ect I believe is a knee jerk reaction to a poor gun season that had many contributing factors coming together all at once.

I hunt in the national forest. Near chickadee road. Last year i saw a lot more padded paw prints than hooved prints. In the last 3 years there has been no gun shots in the area. When i put my deer camera up last year. I only got pictures of Black Bears. You need to increase the bear quota in this area.

If most of the deer are being shot on private land than there should be some way of encouraging an increase in population on public. If private land owners own more than 20 acres then the public should have limited access during the gun deer season to hunt on private without permission. No favoritism.

I used to be a avid hunter on public land in the area. Since the adaptation of youth hunts and seeing wasted animals lying around, I have really no desire to be in the woods after the special hunt. in conjunction with hunts the devastation of forestry to the area. Really took the joy out of it for me.

I believe it would be beneficial to decrease the number of anterless permits available as well and finding a way to increase the number of bear permits available. I see bear on a regular basis while bow hunting and also during the gun season this past season. A wolf hunt is necessary as well.

Bring back the back tag. It helps with trespassers. Can get their number without having to confront anyone.

Very important Allow baiting. Many are still doing it, and the ones who follow the rules are the ones who suffer. Deer go to the bail piles Limit the amount you can put down.

There is not the number of deer in this unit that the DNR say’s there is. The only way to keep people hunting and especially the younger generation is to have more deer to see and bigger bucks with all the doe tags many young bucks are killed and don’t even have a chance to grow up.

I do not see any significance to increases in CWD from baiting deer! Deer are normaly social animals with each other. So there is always close contact, whether it be licking, rubbing or playing with one another. If you keep making more rules you are going to lose more license revenue.
I am very against having a doe (antlerless) hunt following the rut, it's makes no sense to me. I also believe the only special hunt should be for the Veterans... you may like the youth hunt, but there aren't that many honest hunters out there... Thank you for the opportunity.

The deer population has yet to recover from the deer slaughter of the 1990s. Cedar trees have not been eaten on. Unless you are feeding your lucky to see more than 5 deer during the rifle season. CLOSE THE DEER HUNTING FOR AT LEAST ONE YEAR. A the very least stop antler deer seasons.

In the last 10 years the deer herd is significantly reduced I have hunted for 40 years with friends who have hunted for 55 years - we just don’t see many deer. My friend has 80 acres and the change in numbers is huge. But we also see many many bears. Is there a correlation? You tell me.

There are a ton more predators in the woods. We have seen many more wolves and coyotes in this unit. We need to open a season on wolves, and allow the deer population to overcome this predation. The businesses in this area depend on hunters. We need to keep the population thriving!

Been seeing less and less deer every year. People are harvesting doe in late season when that doe is pregnant and will provide us with more deer next season. Stop giving doe permits in certain counties. Giving doe permits where the deer herd is low is just plain old stupid!

With the new way of going online on certain days and times depending on what unit you are in, I feel hunters are frustrated with the process. I believe going back to the application with a deadline for antlerless tags was a better process. It gives everyone a fair chance.

Stop the baiting! In the snow you see deer tracks going from house to house cleaning out the bait piles and back in the woods you can't find a track. If you don't stop feeding the deer, then the hunter should have the right to road hunt because that is where the deer are.

I believe the DNR should eliminate all the special hunts as get back to the standard bow season, 10 day rifle and muzzleloader seasons. To hunt every day of the gun deer season in 2019 and only see 2 deer is unacceptable. The amount of tags given to each hunter too many.

There are fewer deer on public land for 2 reasons 1. Bear hunters chance all deer onto private land where they can stay underestedered. 2.4 wheelers do the same. But we both no it's not about the deer, it's about the money, an bear an ATV's mean more money for the state.

I've hunted in this area for the past 30 years. There is absolutely no shortage of deer by my. The biggest issue is the buck to doe ratio. It's somewhere around 20 to 25 doe per buck. Permits are way to limited for antlerless deer and are difficult to obtain.

With limited permits we need the preference point system back. I mean really what are the odds of ever getting a chance at a permit when they go on sale on a workday with 375 permits they are gone in minutes. just asking for a fare chance at a permit. PLEASE.

I seen one deer over opening weekend. I do not like the system in place to register your harvest. I think too many hunters do not register there deer and are taking multiple deer. I also think the bow season is too long and forgo the extra antlerless season.

According to photos on our trail cameras, there were fewer deer on our 17 acre property in 2019 versus 2018. In 2018, we viewed 5 different bucks throughout summer/fall. In 2019, only 1 occasionally was photoed. Was an interesting and curious change.

Friend hunted on public forest land. Surprised by deer on the run from behind, no shot attempted because of surprise and shocked again when spotting either coyote or wolf on trail of deer. I believe the deer population is way down from predators.
I personally think the northern forest boundary should be moved north up to hwy. 8. Where I hunt just north of the boundary, there's many, many deer. Does have to outnumber bucks 5 to 1. Trying to get a bonus tag is like trying to win a lottery.

Bring back the baiting small amounts. It's been 3 years and you said it would be reviewed to open up the baiting again. If you want to control the heard this is needed because the deer have gone to moving at night only. Baiting helps make them move.

Antlerless permits need to be distributed through a lottery in order to give all people who would like to get a permit and equal chance at getting a permit. The first come, first served policy currently is discriminatory against people with jobs.

I believe the Predator kill is underestimated in Marinette Forest unit we are seeing less deer sightings with investing more hours in the tree stand I believe 0 antlerless tags to be given out to increase the deer herd at a faster rate thank you.

The high predictor population in this zone is having adverse effect on deer numbers. Extremely high number of bears. It is very difficult to pattern deer with out the use of baiting. Bowhunting is difficult with the bear dogs running constantly.

Get rid of the baiting ban your only making deer hunting a rich mans sport rich people don't need to hunt public land they own their own or lease land I've hunted in a lot of Wisc and am sure cwd has been around a lot longer than the DNR knows.

I hunted Goodman Park area [east] for gun season and saw only 3 deer Also other hunters in area said there were lots of wolves around This was not a good season Our hunting group got 1 buck out of 12 hunters wolves need to be controlled more

I don’t hunt simple for the harvest. I enjoy the outdoors and love the challenge that bow hunting provides. I don’t have a lot of free time to hunt as much as I would like, so when I do have a chance to go, it would be nice to see more deer.

I don't believe there should be any antlerless quota in the Northern Forest unit since deer killed by wolves and bears is already too high. WE need to build the herd up and allowing an antlerless harvest makes this even less likely.

The area I hunted had much fewer deer this past year. I think a good indication of this was we saw very little sign and no wolves. Normally we see several wolves throughout the season and throughout the area we hunt south of Goodman.

I would eliminate the private/public permits and simply allow land owners first chance at purchase. After all our taxes pay for the public land as well. I have land to hunt on. I would be nice to also hunt on the nearby public land.

Much of the lower populations in northern Marinette county is due to violators. Especially in the Pembine and Niagara areas. Increased Warden presence in these places could hopefully prevent a portion of these illegally taken deer.

The deer herd seems to be coming back slowly as your presentation suggests. Lasts couple of winters have been tough but I have seen less wolf but more bear. I have seen good amount of both buck and doe early bow season last year.

I think the DNR needs to leave the deer season alone and let be the same every year. Tradition for the gun season before Thanksgiving is a way for friends to be together and the bow/crossbow season needs to stay as it has been.

I dont like the talk of limiting crossbow hunting. I'm a crossbow hunter and this would affect the number of days I could hunt. It's not any easier to get a deer within 40 yards of you with a crossbow, than with a compound bow.
I believe the predation by bear and wolves are higher than people think. I also believe the DNR should STOP giving out multiple tags for all these units. It is very frustrating sitting in a woods and not seeing a single deer.

There should be a limit on the size of bucks shot in this area such as 3 or more points on one side. To many small bucks are being harvested by people that come from out of town and do not care about the deer population.

We both use walkers. We’d like to at least feed 1 quart of corn so that we could actually have a shot at seeing a deer coming in with the range since we can’t go chasing after them. We have not seen a deer in two years.

Eliminate public, private, forest and farm designations for antlerless permits and just have a number of permits for the management unit as was the case before this new complicated and failing system was introduced.

We need to see more deer. Hunted public land saw few hunters and few deer. Saw bear and coyotes on trail cameras. The few does I saw were average size, no young deer. It appears fawns are not making it to the fall.

I would like to see landowners get a preference to obtaining 1 bonus antlerless tag. As a landowner, it is really hard to get a tag with the limited number available and the huge number of non-landowners applying.

Getting a doe permit is rather difficult for this zone. Can't it be a points system rather than first come first served? I've been trying for years with no success. I see doe every year but never a permit.

The problem I have with the way we have to get our tags is very wrong. I don’t have the ability to get on line to sit there to get a permit. I Have to Go to Work. That’s being Selective to a few not all people.

Very few hunters in the Marinette county forest land I hunt. Love the area but deer hunting has been very poor for 5 plus years. We are finally starting to see the deer coming back in our area don't kill every dam doe like the dnr did years ago we have enough deer killed by coyotes and wolves on our 30 acers 2 this last winter. 

Thank you for the excellent information. The only thing that has ruined our deer hunting in northern Marinette county are the wolves. What happened to the supposed 250 wolves for the entire state?
I think people should be able to use corn as bait because the deer still eat from the same fields and food plots and drink from the same watering holes. Banning baiting doesn't make any sense.

I have been hunting in northern Marinette County for 35 years. I have seen the deer population go DOWN over the course of many years. Stop the harvesting of does during bow and gun seasons!

Let's try to rebuild the deer population to much larger numbers, the new hunter's are are going to become discouraged and not hunt. I feel the same way about the south east areas as well.

We need DNR enforcement presence. How many deer were also harvested illegally. When 8 people gun hunt for 7 of the nine day season and do not see a single deer there is a problem here.

The gun deer season needs to be lengthened to a 14 day season with a buck and doe tag issued to each license holder with a earn a buck option if tag is used for an extra buck to shoot.

Predation from bear on fawns is up from a larger bear population along with no control of wolves and less hunting of coyotes has lead to less deer sightings and less turkey as well.

There are no damn deer in this unit!!! Theres too many wolves, no one is harvesting trees, there are no hunters because there are NO DEER Stop with all the damn different seasons.

During the 2018 and 2019 gun deer season I saw more bear and wolves than deer. I've hunted these same woods 40+ years and the deer population is NOT growing; it is shrinking.

Do a manual verification of deer numbers not a best guesstimate. I am certain the numbers will vary significantly and then allow you to adjust accordingly for permit numbers.

Based on my 23 years experience hunting the North Eastern section of this unit, if we want the deer population to increase, we should make this unit a 0 quota area for does.

Antlerless tags on public lands should be zero. Get rid of on-line registration and go back to a tag and registration Close all deer hunting the 5 days before the gun opener.

2019 was abnormal deer season for deer movement so the general public will react to that. However, deer population is likely greatly affected by bear population in spring.

Always concerned about diseases within the unit and nearby units. Am weary that we are about to see a resource being subjected to high rates of CWD in the future.

I think to get a actual reflection of how many cwd cases there are , you need to allow baiting and increase the number of deer shot and compare the numbers then.

Should allow crossbow hunters to hunt the month of November. This should not change. People spent their hard earned money on these. And to hunt the prime months.

Way to many small cabin s . That people use private kill tags on public land are possible. Do something with wolf's. Bring back baiting people want to see deer.

Current landowners/ residents unable to purchase extra deer permits, phone system part of the problem, outside the area people wind up with most of the permits.

You are not harvesting enough Bear in this area. You have to increase kill tags to significantly decrease the bear population. To many fawns are being lost.

Hard winter, no feeding, I guess it would be an indicator of a very high probability that there are less mature deer now than there was in the fall of 2019.

All of Marinette County should be included in the farmland management zone authorizing buck and antlerless deer - to difficult to determine break in zones.
Hunting participation at our cabin continues to fall because of no deer being seen in the woods during season. Nearby baiting does not help out either.

Thank you for taking my opinions. That means allot. Overall I’d like to see deer numbers up and wolf/coyote populations down. They kill a lot of fawns.

Do not allow new roads to public land after tree harvest. They should be block after tree harvest. A deer season starting first weekend of October.

I’m in favor of no antlerless in the wooded areas west of 141, except allow the youth hunter only to harvest an antlerless deer for northern Marinette.

I presently own 42 acres completely surrounded by thousands of county property why can’t I apply for a antlerless tag when I only hunt on my property?

I would like to see the DNR go back to a lottery system for antler less permits, instead of waiting on phone to be told we just ran out in your area.

The antlerless tag availability for private lands was far too low. Over six days of hunting our party saw ZERO buck and close to 45 antlerless.

Not enough deer no doe permits please in Northern Marinette co. Keep northern unit separate. Ok allowing junior antlerless but that’s it.

Would like to see the deer population increase in the Marinette northern forest zone so if that means less antlerless permits that would be fine

Highway C is too far north for the farmland zone. My hunting partner and myself see more bear on camera than deer. Need to kill more predators.

We need to also eliminate farm damage tags. Big problem. And in person deer registration is a must. There are no deer in northern marinette Co

Stop the antlerless and youth hunts. These are just hunts for meat predator's. Lengthen the hunt by starting earlier in the month of November.

This past year the presence of predators that affect the deer population was much higher per visual confirmations and game cameras in our area.

Please consider a hunters choice option in this area to allow hunters one tag person and the choice of either a buck or a doe with that tag.

Too many predators in this unit. Open bear hunting again with no waiting period. Increase the bobcat bag limit and rid the state of wolves.

I just have not been seeing the numbers raise in this unit and there are never many if any antlerless permits in the northern forest area!!

Give power back to the DMR rangers. Complaints are not being addressed and none are in the field anymore or have no power to do anything.

Do not add additional hunting days in the year and keep the beginning day as the Saturday before Thanksgiving for the 9 day rifle season.

Gun season should begin on Nov.15th and run till the end of Nov. Last year we missed the entire rut because of how late the opener was.

There is to many doe being taken in Marinette, Northern Forest. I would be for the buck would have to be at least a 6 pointer or more.
I think there should be more antlerless tags available because there seem to be higher numbers of does compared to bucks in our area.

There should not be any antlerless tags except for youth. None on private or public lands. Deer numbers in the forest are very low.

Baiting during the hunting season is a major issue. Fines and penalties need to be increased dramatically as well as enforcement.

I believe there is a very big need for wardens presences in this DMU in the fall. Lots of ATV problems and potential poaching.

Seeing more deer. What ever you are doing keep doing it. Bad winter will sway things one way or the other. Can’t predict that.

Based on the number of does and fawns that I saw while hunting I believe more antlerless tags should be available on public land.

The last few years we have had a lot more doe’s in my area, but have seen the number of bonus permits go down. Why is that?

Do not change the cross bow rules and do not change the season for either bow/cross bow or the gun season. Leave it as it is.

The only way the deer herd can increase on public land in the Northern Forest is to go with 0 doe permits. Stop delaying this!

The DNR needs to get a hold of the wolf population. It is depleting the deer population and creating more danger to hunters.

We (our hunting group) have hunted this area for a very long time, and are seeing less and less deer as the years go by.

I believe you should minimize hunts. There are too many early hunts before gun season. Do the youth hunts after gun season.

Deer numbers are way down from the past. Too many being taken with extra tags and also too many being taken illegally.

After Covid 19 and the virus let’s make the season like MI starting 1–15 for 15 days. It’s time to switch and this year.

I’ve been hunting this area for 42 years and the deer population is no where near what it was in the 70 and early 80’s,

We don’t see deer like we used to years ago it’s hard to keep the young hunters interested when you don’t see deer.

The wolf population is way higher than u claim it to be. Marinette county should be buck only like forest county.

would like to see a minimum antler point provision to decrease the amount of immature bucks from being harvested.

I would like to keep the younger generation’s interested in hunting and seeing deer while hunting would help.

If you want an increase in buck harvest why don’t you consider and early muzzleloader season during the rut?

Last gun season hunted 8 of the 9 days our hunting group did not go a day without seeing or hearing wolves!

Deer numbers are way down in on the public land in the northern forest. We need 2 years of no doe tags.

There are way fewer deer and way more predators That I can remember in my 39 years of hunting this area.
Marinette Northern Forrest is in dire need of increased deer population to keep this tradition going.

A large concern on predator control needs to be looked into. Wolves, coyotes are a serious problem.

Wisconsin should have a gun deer season that runs from November 15th to November 30th every year.

Stop shooting does, stop special interest hunts, shoot wolves. There are no deer in this county.

Hunt entire season, lucky to see a deer, young hunters have to a deer, not tales of yesterdays past.

To many local people shooting deer all year and don’t even buy a license during hunting season.

Eliminate food plots, there is no scientific evidence that supports deer need these to survive.

Bring back in-person registration, bring back back-farmland/northern forest designation.

Get rid of the farmland/northern forest designation. Go back to one unit.

This unit needs to be buck only. And baiting has to be made legal again.

Keep up the quality job, be Safe, stay healthy!

Keep up the good and critical work! Thank you for allowing my input.

Stop cutting trees down in units sooner than the week before hunt.

Let crossbow hunters hunt the full season and overlap gun season.

I would like to see a 4 points on one side buck limit.

If we don’t get to see or shoot deer why go hunting?

Ecosystem can support an increase in the deer herd.

Public Input on CDAC Preliminary Recommendations - Spring 2020

Marquette, Central Farmland

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

648 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 217
   - I visit this unit for non-hunting purposes: 164
   - I hunt in this unit: 602
   - General interest in this unit: 125

   The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 570
   - Bow: 369
   - Crossbow: 247
   - Muzzleloader: 222

3. How many years have you hunted deer in this unit?
   - Minimum: 0
   - Average: 23.58
   - Maximum: 63

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 440
   - Mostly Private Land: 77
   - Public and Private Land About Equally: 36
   - Mostly Public Land: 12
   - Exclusively Public Land: 32
   - I did not hunt in this unit last year: 5

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 31
   - Not too crowded: 50
   - Neither crowded nor un-crowded: 29
   - Somewhat crowded: 25
   - Very crowded: 12
   - Not applicable: 10

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 109
   - Fewer: 188
   - Same: 257
   - More: 71
   - Many More: 13
   - Unsure: 10

Section 3: Feedback on the CDAC's 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>

</table>
Reference deer population; I had many hours in the woods as I have other years before. There was a 50% drop in sightings for me 2019. Coyotes are an issue. I will also admit that the private area I hunt, the outlying farm crops were either harvested early, or the crop was not the preferred food. The amount of rain also changed the routes the deer took due to standing water. New tactics this year as the water is still there. I hope you leave the seasons alone. We don’t need an early gun season. I love tradition. I would hate to lose that. Leave crossbow season alone. I have used one out of necessity due to a bad shoulder. I am female and 62. I use to hunt with a stick bow but injuries and age has changed that. While I miss the challenge, the crossbow gives me time in the woods as before, and that means something. I would hate the opportunities to change because some strictly gun hunters say the crossbow hunters are harvesting all the bucks. I love my time in the woods. When I had a low paying job and was looking for meat because a gun license was not enough, I learned to use the bow and then purchased a used muzzleloader. Meaning: if the gun hunters are upset, maybe they should take up a bow to. I am sure in my lifetime I have harvested over 100 deer. So many good memories, but no all. Wisconsin is a great state with many opportunities to harvest deer, and we have choices how we chose to do that. I have also hunted the public northern area since 1978. My point is, if hunters are not happy, they have choices to search for another place, or use other weapons. I have hunted since 1978. I picked up bowhunting and muzzleloader years later for an opportunity of more time in the woods, and meat on the table as a single mom. Time and patience always pays off. If gun hunters are upset because the rut window was missed, then I suggest the next time the rut season falls late, make gun season a 16 day season which would keep the tradition of Thanksgiving with gun hunting. If you recall, the DNR extended the gun season in the 80’s an extra weekend due to the heavy snowfall. I don’t remember if it was just the northern counties, but I had a doe tag for unit 45. I hunted the opener as well as that 3rd weekend. I did get a doe. Just a thought. Thanks for your time.

I have 2 land parcels in Marquette County, one is just south of montello and the other is on the north side of puckaway off hwy c. We do many management plans on our properties, planting trees food plots we add water holes etc. My family and I love managing our property for white tailed deer and all other wildlife. We are outdoor enthusiasts. I have 2 concerns, the first is cwd and it’s impacts on the deer herd and how we manage the deer herd because of it. The 2nd concern which I believe is of higher importance than the first is the mis management either under or most likely what i have witnessed many more times is the over harvest of our whitetail deer population. I have seen over harvest of white tail deer in Northern Wisconsin, in dodge County and other surrounding counties where we are instructed by the dnr and wildlife biologists that we have to reduce the deer populations because they are way too high. So we did what we were told we had to do, we reduced deer populations with earn a buck in those areas. Bayfield and dodge counties were the two I had the most experience watching deer populations get reduced to very low numbers. With the population decreases comes the decreases in deer hunters because people want to see deer when they are deer hunting. My worry is we will do the same thing that I witnessed in those other counties in Marquette County. I understand that the data points to we have to do this or we have to do that but I was fooled with this exact sort of stuff before. I am not sure what the best plan for managing white tail deer is in the future but I will say this as loudly as I can. HOW WILL YOU MANAGE WHITETAIL DEER POPULATIONS IF YOU HAVE VERY LOW HUNTER NUMBERS? I know this is a very long response but I am near the end of my road with wanting to help control deer numbers. I am an outdoorsman through and through my family and I enjoy the outdoors and all it has to offer, we will continue to do habitat improvement but if new laws and regulations become too much for us we will find something else to do in the fall and you will loose more participation in your herd reduction management plans.
With the large presence of predators both coyote and wolf in this unit the deer herd may never recover. A previous unit we hunted in was part of the T Zone years ago. The deer herd was slaughtered by out of town people and never has come remotely close to recovering. Between the wolf presence and some harsh winters it could be a recipe for disaster. There is a vast amount of landowners doing logging and practicing good land conservation practices to bring back young regeneration herbaceous growth to properly maintain the herd. Nobody needs to harvest 8+ deer in a year for any reason other than just being greedy and wasteful. The over abundance of tags leads to a lot of wounded and not recovered deer because careless hunters shoot at any deer even if it is not a good shot because they feel they need to fill every tag. The neighborhood we hunt most land owners and hunters talk regularly and harvest does regularly to keep the deer herd we all watch and monitor all year in check. The problems come in when you have a few hunters in the area who hunt land they don’t own, manage, or care about and is typically a relatives property. These are the people who do not know the herd, population, or conditions but come out to fill every last tag they are issued because they have them. I would prefer one antlerless tag with each license and everyone has to pay to buy additional tags if needed. Right now most land managers and hunters of private lands would likely be harvesting more does but knowing they have a neighbor that has 24 tags and is going to do whatever they can to fill every tag they got the regular landowners refrain from shooting more does. This is because they are afraid if their neighbor shoots all 24 which is unlikely they shouldn’t shoot any to protect the herd for what’s left. Change it to one tag per license and watch the doe kill go up if the fear of the herd being decimated is eliminated by minimizing the number of free tags.

The dnr/cdac needs to keep things the way they are. In their mind they want to slaughter all the deer. It doesn’t make sense to extend rifle season or start it earlier. There is plenty of time and plenty of deer to harvest within the seasons we have now. One proposal that really makes me sick is the starting of rifle season early and then making it so we can’t bow hunt the week before. Why take away the rut from the bow hunters. We are already at a disadvantage using a bow. The problem is that newer hunters don’t wanna take the time to learn how to bow hunt and rather just sit in a shack and shoot at deer at 500 yards. Our gun season has been like this for years, the 2019 gun season harvest numbers shouldn’t even be considered in this since it was almost a week later and the weather wasn’t favorable. It happens, it’s only going to make the 2020 season better. Everyone loves seeing deer. If you guys want more money from the purchases of tags, you need to bring back in person registration. That was the downfall of this whole thing, you took away a lot of tradition and local economy from local establishments, also you can’t tell me you don’t think people aren’t registering deer since they don’t have to go anymore. And up the prices of our of state licenses! Look at Iowa, some of the best deer in the country and not every out of stater can show up every year and buy tags. Imagine doubling the price of the non resident tags, the money that would be coming in would astonishing.

To me its pretty obvious that one of the issues is the number of both sexes of deer on private land in the county. I hunted for 4 days with three other hunters on public land, dawn to dusk and we saw 1 doe! This has been the story for over 5 years. We did see at least one and half dozen other hunters walking through where were hunting (another problem). There is NOT enough public land in the county to support the number of hunters who must hunt public land. You can give every hunter 50 anterless tags and it won’t increase the harvest if no deer are seen. If public landowners want to harvest more deer, let them open up their lands to public hunting, even if they want to charge for leasing it? Does the DNR have a website for landowners to publicize available land to hunt? I also think the CWD issue has been blown way out of proportion! 2 deer out of 500 sampled in Buffalo County? I will probably stop gun hunting in 2020 as I will be 71 years old and tired of not seeing deer! I you shorten the crossbow season for whatever reason I will give that up as well. A little story...I have a good friend in Lincoln County whose group owns well over 900 acres which is managed by a biologist for tree harvest and deer management. That group of 12-15 hunters have killed less than 10 deer in the last 10 years because of the wolf population! Maybe you can trap some of those wolves and release them in this county in order to decrease the herd size. A very unhappy old hunter!
In my opinion just by extending and adding additional seasons isn’t the only way to reduce the deer herd. I do agree that we should keep the youth hunt. This gives the younger hunters a better chance to bag a deer and get the hunting bug for future years of hunting. Yes by extending seasons it does give people more options to make it out in the woods. But with this guy going out on day one and sits in his stand all day. Just to wait for "the big one". And then his neighbor across the fence who just didn’t want to or couldn’t make it out on the first day. Does the same on day two. There isn’t as much hunting pressure at the same time in certain areas. Deer are smart and just move around between the hunters. Years past when we only had a shorter season available. If you were a devoted hunter and wanted to bag a deer for the meat. You didn’t have such a long season to wait for the right one to come by. You would take a smaller deer and would make more effort to get into the woods. If that meant taking vacation days or going out on the less desirable days. You would do it. With more people out at the same time. Deer don’t have so many areas to hide or and move around between hunters. Another option that may help is extending season but earlier in the calendar. Thus would get a chance to kill some of these deer prior to the rut. Shoot them before their bred.

I voted the bonus and antlerless numbers were too high because there wasn’t anywhere near the demand for those tags as what the quotas were. The quota could be 100,000 kills, but if only 6,000 are going to be harvested it doesn’t matter. The season needs to be adjusted to allow for more harvest, the amount of tags available has not affect. I support extending the firearm season, but not during the rut, unless it is antlerless only. Hunting with a firearm during the rut may have a one year increase in hunter participation, but the amount of 1.5 to 2.5 y/o bucks that would be killed when they are the most vulnerable would severely limit the amount of mature bucks and the buck to doe ration for years, further affecting the quality of the herd. I think the seasons should be extended for antlerless deer, and programs should be promoted for donating meat which would help with the hunter image in the community. Also, there should be more invested in programs like the Turkey Access Program that give hunters more access to private land, maybe just with archery, and possibly just for antlerless harvest as that is where the majority of the deer population is. Hunters could get written permission from the land owner to harvest antlered deer, otherwise just antlerless harvest if hunting under the access program.

My advice is if you truly want to increase the doe harvest I suggest a holiday hunt again in Marquette county, which I am not a fan of, and under all circumstances include crossbow and bow season until Jan 31st. This is a must. I manage my farm for quality deer and I tried my dangedest to kill a doe, does of which I could not. In January when it got colder and the archery season was closed I had deer all over my beans. I would have gladly shot at least 2 does at this time as they were all over my standing beans and my Dad would have taken 2 does as well. My Dad harvested a nice buck in 2019 with the crossbow but we both wanted at least 3 more does in the freezer. The holiday hunt proved worthless only due to the fact that they were not hitting our beans as they were high in moisture yet. This extended crossbow and bow season in our area could well be the ticket for us to be able to fill the freezer with does as in January they are hitting the standing beans hard and are much easier to pattern when it is cold and they need to eat. My father and I manage 108 acre farm in Northwest Marquette County and believe me we do everything in our power to fill the freezer with does. Please give us the month of January to allow us to reach our herd management goals.
I am a snowmobiler and oppose the Holiday Hunt! In my opinion, if you can’t harvest your Deer from September to December, you don’t need to be in the woods. The committee has no idea the time and effort our snowmobile clubs put into trail maintenance nor do they consider the revenue that snowmobiling brings into our country. It is much more than the Holiday Hunt brings in. This yearly fight gets old and for the harvest of 140 some deer taken during last years Holiday Hunt it doesn’t seem worth it in my opinion. Why can’t we bring back the "Earn A Buck"? As it seems, the committee already has its mind made up before these meetings take place. Last year it was suggested that we alternate years. That’s about the only fair way this can be resolved. Somehow, I have a gut feeling other members of the committee won’t even consider it. Why does the committee have to find the smallest room possible to hold these meetings? They do that because they want to limit the public input. Unfortunately, I’m sure this will be a yearly fight and be guaranteed the snowmobilers will be there to stand their ground.

There are definitely hot spots within the county that there are too many deer and those are primarily on private land. The holiday hunt is a good way later in the season to assess the heard in those areas and let landowners shoot some additional antlerless deer if they feel the need to reduce the heard. An option to increase the antlerless kill would be to extend the archery/crossbow season to January 31 and only allow antlerless deer to be harvested. Maybe end the late archery buck kill season the first weekend in January like it is now or around January 15, but allow continued hunting of antlerless deer till the end of January. Another option is a spin off the earn a buck season and maybe allowing the earning of one additional buck if you harvest 3 anterless deer - this would create some logistics on registration and probably require in person registration of some sort, but an option to increase the antlerless kill. Also the addition of a deer donation program in the county would give hunters an opportunity to donate meat for extra deer that are shot and they can't utilize, but know they need to harvest more antlerless deer.

I come to you as a representative of my family who owns 200 acres, and has over 15 hunters that go out every year. I also come to you as a representative of Marquette County Snowmobile Association. As hunters, and snowmobilers, we do not agree with decreasing the herd and having the holiday hunt. Our snowmobile trails could not open to due to the holiday hunt in 2016. A lot of my friends did not even hunt during that time. Snowmobile trail openings are extremely limited due to time frame. I heard a lot of complaints from community businesses, and fellow riders about them not being able to open. The hunt is from 24th to 1st, but we could not open at all during December due to 1 landowner not wanting them opened before the hunt. Due to 1 landowner out of 74 that said no, we respected his decision and closed them prior. And once Jan 2nd came, all the snow was gone. There are so many other hunting opportunities in this great state, I feel the Holiday Hunt is not needed. In Summary I respect all our landowners, without them we could not trails. 2nd, I am against the holiday hunt.

Instead of all the extra anterless seasons. Extend the muzzleloader in conjunction with archery to the end of the year. The archery season can still extend to Jan 31 if warranted. The anterless only seasons just makes myself and the guys I go hunting with not go in the woods. We fish instead. Too many changing seasons and regulations pushes avid sportsmen away instead of the goal you are trying to accomplish. I am very passionate about getting kids into hunting, my son harvested his first buck last rifle season and it was just as exiting for me as for him. We do not participate in the youth deer hunt, I want the experience for him to be part of the group of getting up with the guys and be a big boy. If Marquette county was made anterless only I would think it would be a reverse effect, and you would have less interest and less hunters providing food plots on the chance of a trophy walking past. Hunter interest is going down and trying to force the group that is still passionate is a mistake.
The gradual spread of CWD is, in my opinion, inevitable. Millions of dollars have been spent for the last 18 years, to monitor this progression. Populations are increasing in those areas even with all the money spent. Reducing deer population may slow the spread. I encourage the DNR to use some CWD testing money to enhance the use of the deer, (meat and hide) so people may be more willing to harvest, and utilize a deer, as opposed to just killing a deer because we are told we should. Make the ability to donate to a food pantry easier through meat markets and small "mom and pop" start ups interested. Promote use of the hide, which in my eyes Many get wasted, through finding someone in each area to accept them. Promote and encourage utilizing the wonderful resource, instead of telling people they have to kill more. (I know there is a push for Earn A Buck again and people Hate being forced to kill ) The DNR has promoted a fear of CWD into peoples minds and that needs to stop.

Having hunted 14 years in this unit and on many different public properties, with what I would consider a good amount of success, I think there is a large difference from private and public Antlerless populations based solely on personal observation and opinion. While I do think there is good opportunity for success on public land hunting, I think the population of antlerless deer on private land is very high compared to public. I have observed both private and public lands during the same hours of day and have noticed some private lands to be holding 50 plus antlerless deer at any given time and then see the same thing a quarter mile down the road. I know deer are free to roam and could be on either type of land, but I think to help decrease the population, the landowners have to play a big part and not the public land users where there is a lot more human pressure year round due to various outdoor activities including all hunting seasons.

You want to keep killing off all the doe. All you need to look at for our county is the kill ratios from private to public. I hunt a public area and the private landowners have elevated permanent stands surrounding the entire public area I hunt. Because we are below hwy64 you can't put up a ladder stand in advance of the season and you must take it down AND OUT of the woods each day. You know that makes it impossible to use those stands. If you were really concerned about heard size you would change the regulations so that public hunters have in our country are afforded the same ability you allow the hunters north of hwy64 to use. In the 80's I used to see groups of 8 or more deer wandering the woods. Now, I'm lucky if I see one every season. It's time to change the stand rules if you truly want public hunters success. I believe that one of the reasons we continue to see a drop in hunting is because of the success hunters have.

In all the years I have hunted I have watched the deer population dwindle. I have also seen the number of hunters decrease. We used to have many people hunt both private and public land. I know deer and hunter numbers have dropped from the number of deer sightings, and the number of people I see hunt. I used to see several deer opening weekend. The last 15 years since we abandoned having to send in for a possible antler less tag I have seen one or less. This recent craze to issue numerous extra tags is killing hunting. I expect farmers and home owners to see something that has already existed as land is shrinking and the person population is increasing... It is unreasonable at this point for them to want more deer dead. If you plan to issue numerous tags, expect to see the decline of deer hunting. My family at one point could legally shoot over 20 deer. Our ecosystem cannot handle that. Thank you.

The wolf situation needs to be address. They are on the Endanger Species List. The law is for species that are endanger of becoming extinct. With an estimate of 150,000 wolves world wide, they are not endanger of becoming extinct. A BIG reason hunting license sales are down is because the wolves are killing the deer. I have friends that gave up hunting deer because all they see is wolf tracks and no deer tracks where they hunt. When they hunted, they heard howling and saw pack of wolves. Where is the control. I though a population of 300 was all we were going to have in WI. With all the sighting reported, there must be 3000 in WI. That is a big concern. CDAC should be active in getting a wolf reduction season in place. I also send my thanks to each of you for your time involved in deer management. I believe we should start gun season closes to the 15th of the month for a 9 day season.
As hunting pressure continues to increase on public lands, the deer hunting on these limited properties will suffer without effecting the overall deer numbers. Public land is quite limited in the county, so the only activity that is going to affect deer numbers is that which is done on private land. Many private land owners are implementing various forms of buck management program to increase the size of the bucks on their property. Since I am 100% in favor of people doing what they want on their private land, I have no real problem with their game management practices. However, the numbers of deer will remain high in the county. The deer on public lands will be increasingly harassed and reduced while doing little to change the overall deer overpopulation problem in the county. Figure out a private land partnership with the public hunters, and it is possible that herd numbers can be managed.

While I love seeing a lot of deer while hunting, I am not a proponent of judging populations based on the number of deer seen during a particular season, as this can vary widely from year to year regardless of real population numbers. In my opinion, the amount of deer viewed throughout the year, as well as the number of dead deer laying along the county's highways/town roads reflect a large population. There seems to be no easy way to address over-population and I appreciate the DNR's attempts to find a variety of ways to lessen numbers without decimating the herd. The focus has obviously been on harvesting antlerless deer. However, after filling my crossbow buck tag, I did not fill my gun buck tag. I would have been more apt to hunt more hours and later into the bow season had I been allowed to use my gun buck tag for another crossbow buck. Thank you for the opportunity to provide input.

Wisconsin should give out my landowner tags depending on acreage size. We own and pay for 168 acres and high taxes and can't shoot deer cause all the neighbors kill EVERYTHING. One neighbor has 18 acres, 6 tower stands and invites the whole town of montello to hunt. They killed/wounded 21 deer 3 years ago. 2 years ago 15, last year 5. It's obviously not working, we see very few deer. If the state gives out 4 tags for antlerless, stuff is going to get scary stupid. I don't know how a whole county can be blanketed w one rule. Rather than figure out how to increase doe killing, the wealth should be spread out in a better way. We are hurting from this and not shooting deer because we are trying to increase or save what we have due to neighbors that don't have any conservative ways. I can't fathom thinking there could be 24 antlerless tags for 18 acres. It makes me want to puke.

We keep the same recommendation to decrease the heard and I am in full agreement. The problem is that the DNR is not implementing or insuring that the goal to decrease the herd will be met with programs or regulations to manage hunter behavior. - We lost 2 of the key deer processor's in the county due to increased regulation and as I understand, the classification of a deer carcass as hazardous waste. - There are no processor's in the county to support and receive deer for the deer donation program. - Both of the above limit the # of deer a hunter will harvest. I think they will also impact the 2020 season negatively. - You will not increase the harvest totals until you change hunter behavior. Earn-a-buck is the appropriate tool to manage & increase the harvest totals as it insures more hunters will take multiple deer. The DNR's own harvest data supports this.

I would like to see less doe tags given out per weapon, I feel doing so would still maintain or decrease the population like the goal is. I think it would give more hunters a chance at being successful during the season because people aren't filling 10 tags. Even if you drop the tags given per weapon to 2 and still keep the bonus tags you will see similar harvest throughout the year. I personally feel with the doe tags given out right now and the wolves coming in it's going to really thin the heard out to extremely low numbers. I did a t-zone hunt a couple years ago on a bigger public marsh and saw more wolf tracks then deer tracks. That same public from 2013 to about 2015 I saw a decent amount of deer 17 a year average for gun. Since then the numbers have drastically dropped to seeing 5 all of last year on that public. Thanks for your consideration.
You can give every hunter on public land 20 antler less permits but if you never see a deer, they will not do you a bit of good! The deer, doe and buck, are on the private land which is primarily who own the vast majority of the land in the county. It is posted and rarely can you get permission to hunt these lands! So, keep giving the antler less tags to the private land owners as they will be the only hunters capable of harvesting a deer. Last year, we had 4 hunters who hunted all day Saturday, Sunday and Monday of opening weekend on public land and they saw a total of one (1) doe. That has been pretty much the standard for the last 10 years. I am 70 years old and quitting deer hunting and will spend my time cooking and washing dishes rather then wasting it sitting in woods occupied by 10 hunters per 40 acres and only 1-2 deer.

I think the only thing that I have feedback is three things: 1. no back tags or way to tag your deer. When you are hunting out in the elements how practical is it to carry around paper? I have not liked this change one bit! 2. No talk of illegal harvesting of deer due to not having to register them at a registering station. (how do you know people aren't cheating the system?) If you want to boost our local businesses how has that helped? People miss visiting with friends or strangers asking about their hunt and etc. It hasn't helped our businesses its more for convenience - 3. Increase the licence price for out of state hunters. I feel Wisconsin is too lenient on the pricing. It would be another source of income to help support the DNR staff. (if that is even where the money goes?) Thank you for reading my feedback.

Stop issuing so many tags. I can not understand why the quota for harvest is so high when I can sit in a deer stand night after night in Marquette county and not see a dam thing. The sampling method for counting the heard is subjective and does not accurately reflect the dear heard. This is why the DNR/CDAC is not meeting their harvest quota, because there are not enough deer to harvest! The antlerless hunts are not necessary. Stop issuing so many tags. Go back to the traditional archery season and 9 day rifle hunt. All these extra tags are ruining the sport and tradition of hunting in Wisconsin. Stop issuing so many tags. The extra tags promote trespass issues on private lands. Stop issuing so many tags. The car/deer crashes are way down from what they where prior to CWD. Stop issuing so many tags.

While it's understandable to want to track which type of land, public or private, a deer harvest comes from, it's ludicrous to force a hunter to buy two licenses just because they hunt on both public and private land. There either needs to be an option for "Both - Public and Private" on the license purchase page or the ability to report as Public or Private when registering the harvest online. The ability to use one of these options would also probably result in much more accurate harvest numbers, especially when a hunter, with a Private license, also hunts on public land adjacent to, or contiguous with, that private land. And, because many hunters that use private land do not also hunt public land, this would give those that do an option for doing both and offer better, maybe more truthful, harvest reporting.

I hunt on private land. Last year I hunted 13 days with Rifle and muzzle loader. I saw a total of nine deer. I had three members of our hunting party never see a deer during the rifle season. That's never happened before and I've hunted in Marquette county for 39 years. Had, I had the option of using my antlerless tags on public land, I would have continued hunting. In my opinion if we want to decrease the deer population, having land specific antlerless permits is detrimental to that objective. Also why not run the Holiday hunt for two full weeks of antlerless only? Or have a doe only season from Dec 15th to the first Saturday after Jan. 1st. However both of theses options would not have kept me in the woods because I only had private land antlerless tags and was not seeing deer on our land.
What I noticed is a large number of hunters I know investing in crossbows and hunting earlier better weather and wanting a chance at a bigger antlered buck. Not willing to hunt for doe and eat meat due to CWD fears. So I would recommend as much positive truthful information on CWD be continually sent out and secondly maybe encourage some how giving meat to the needy by hunters programs can be a real advantage when we need to reduce the herd size. Lastly Doe only hunting opportunities to increase I really like them because I have young grand children that can have more opportunities to harvest a deer and enjoy the outdoors. I also really think venison is a wonderful meat to enjoy with my family and friends. Thank you for all you are doing to keep our deer herd healthy in Wisconsin.

If you impose an 10 day extension to the gun season or holiday hunt I will not be hunting at all. This needs to stop I’m an avid bow hunter and practice QDM and I’m sick of the holiday hunt. All it does is screw up the late season bow hunts. I’m also against the youth hunt in early October. I never had this as a kid and I can see it is nice to get young kids out early when it’s warmer but all this does is educate the deer. I’m so sick you mismanaging the herd you have no clue what you’re doing and I know all you care about is the money. One thing I wanted to add is my brother lives in upper Michigan and can get a bear permit every year but we must wait sometimes 10yrs to draw a tag. Wake up and do what you're paid for or get out and let someone else attempt. Thanks and be safe...

During the 2019 Gun Deer Hunt, I harvested the 1 and only deer I saw, outside of a lone fawn. Deer sightings were way down, I think due to the 'rut' being over the previous 7-10 days prior to the opening of Deer Gun Season. Bow hunters see the greater share of the 'chasing' activity each and every year. They have much more opportunity-half of Sept, all of Oct, most of Nov, Dec, and now Jan?? I allow people to hunt my property, but some will not consider shooting a doe unless required to. I would have shot a mature doe, but then again I didn’t see one. As I near 70 years of age it is tougher trying to dress out and drag a deer all by yourself if you take one after everyone has left after opening weekend. I like venison, but processing a carcass is also not easy by ones self.

I would like to see a earlier gun season that is during or before the expected rut season. Gun hunting is easier and more efficient to take a deer. The weather should be better allowing more time in the field and daylight hours are longer. Older and younger hunters would also enjoy hunting in better weather. Perhaps a late October doe week similar to earn a buck but without the requirement to earn a buck. I have noticed fewer hunters last year 2019 and I wonder if the out of state license fee is a deterrent. If you want more deer taken, make it easier to be successful and cheaper. Also given the economic downturn caused by the pandemic we need to make hunting more affordable to all. If the decrease in hunters continues we cannot achieve the goal of taking more deer.

I highly oppose the holiday hunt! If you can’t fill your tags from September to middle of dec you probably shouldn’t be hunting! I am a snowmobile and it cuts into us being able to open the trails! I don't believe you have any idea how much time and effort go into getting trails ready. The amount of revenue that comes into local businesses when the trails are open is much higher then what the holiday hunt brings in. And it is getting old having to go to these meetings every year and fight for are trail system! The committee seems to have there minds made up before these meetings and don't want to hear anything from anybody on the outside! We have been at the meetings the last 2 years and they seem two find the smallest room to hold there meetings so nobody shows up!

It would be nice to able to tag another buck. Even if a person had to pay a respectable amount for an additional tag. Only one additional tag per deer year. Meaning, your additional buck tag, is to be used in the archery, or rifle. It doesn’t mean you get one additional for archery and one additional for rifle. Just something that would be nice to have in the outdoors person’s pocket, for that moment when you approach your kill and see those two numbs on his head. And they just happen to qualify as a legal buck, and the next morning. Your “30 point” buck comes out broad side and you can’t shoot. It’s just another tool to in you gear case, and if priced right. The state will make money on it. Thanks for listening, and I hope this matter is at least talked about.
6210 Bring paper tags back as a mandatory. Your numbers are very much so off because anyone can poach without using a tag. I rarely see game wardens out policing public land checking licences and non locals very much so could just poach their private land and get away Scot-free. I also do not support the extension of gun season as it just allows excessive amounts of deer to be harvested. I heavily track deer activity on our 70 acres and we do not have a large population. Bring back paper tags, help support local sports shops in that sense, charge more for non local licences, and decrease harvest counts. If you want to exterminate the deer population completely, keep pushing for a larger harvest number and a longer season; but I do not support that idea.

6211 Get rid of the antlerless only extra gun seasons and holiday hunts. Keep the gun season 9 days and around November 20th opener. The key to more people hunting is people a large deer herd. People don’t go anymore because they don’t see enough bucks. Especially up north. Manage for trophy bucks. The best deer hunting states have implemented antler point restrictions in at least part of their states. Stop killing all the does. Preference points and increase out of state license fees, like Iowa. Turn Wisconsin into a trophy state and you’ll see young and old come out in droves to hunt. If you lower the deer per square mile, people won’t hunt any longer. It seems you guys want a Michigan deer herd. Well new flash Michigan hunting sucks.

6212 Expanding available venison donation sites within the county would personally expand how many antlerless I would be willing to harvest. I can imagine increasing ease of donation locally would increase participation in the program and therefore harvest. Continuing to offer more antlerless tags has not worked so I dont understand how continuing to change that would have any impact. Most archery hunters I know dont desire to hunt with a bow past rifle season so I cant imagine extending that season would expand antlerless harvest. Incentivizing hunters to harvest does may help, EAB is widely unpopular i'm aware, but maybe consider offering a 2nd buck tag if someone registers two does until the population is under control.

6213 I think we need to stop having all these early and late hunts and let the deer get back to the normal rut. The deer are getting so chased around during rut that 20 to 30% end up getting bred so late that there fawns still have spots at gun hunting time. I believe it because of all the extra gun seasons making it impossible for the deer to live a normal rut. When we had only a 9 day normal gun hunt this was not a problem, but every year they add another hunt and chase the deer around just to satisfy the insurance company's who would like all the deer killed off. But as we all know they have the money and get what ever they want.. JUST PAY SOMEONE OFF.. politics controls it not science.

6214 Deer management needs to be science-based and biologically sustainable. Wisconsin needs to develop policy supporting return to healthy balanced natural ecosystems which includes returning top tier predators historic role in achieving this. Humans need to work to protect & restore biodiversity of the natural world - we need to be part of nature, in balance, not ruling dominion over it. Nature, water, air, land, forests, prairies, wetlands and the predator-prey balance was in pretty darn good shape prior to European conquest, settlement and presence in North America. Let’s continue making progress in restoring this natural balance, particularly during this 50th anniversary of Earth Day.

6215 It is high time that we allow the DNR experts in forestry, biology, zoology and environmental sciences to do their job in managing the deer herd and other natural resources based on fact based science! Politically and economically motivated parties should not be the ones to tell us how to manage our natural resources. It is sad to hear the grossly opinionated, misunderstandings espoused by fair weather "hunters" who decry for example that coyotes and wolves are devouring "their" deer. These predators play an important and effective role in maintaining a natural balance in our ecological landscape. I cannot say the same for the starry eyed "trophy" chaser sitting on his ATV.
Please stop with all the extra deer hunts. It's pretty ridiculous what has happened to WI hunting. The 9 day gun season used to be a big deal. Everyone looked forward to it. Now with all the special hunts it lost the magic of what is WI. Look at the north. Hardly anymore deer camps. You wonder why gun sales are declining? Look at all the changes that's been made in the last 5 years. People are sick of the changes and not seeing deer. Xbows have also made many gun hunters now in the woods during bow season. The woods are way more crowded. As far as Marquette county. I see a good amount of deer. Usually at least 1 or 2 per hunt. If I see 5 or 6 then that's a great day.

Tags or authorizations should be by private land units or property units. If there are 4 people hunting on private land they don't need 4 each. If one shooter has a good couple days/week he's done and not contributing to the control. If the land users, hunters, as a total received 16 tags, you might be able to actually fill those 16 and contribute something. Last year for us 2 locations on our land were active and the others saw nothing. Had we been able to "share" tags as a family on our property we could have made an impact on the county/state numbers. If we get 20 tags as a family to contribute to the numbers, why not give us the best chance as a group to contribute.

I have hunted with a bow and gun in Maquette county since 1976. We do have as many deer as ever. With that said most are on private ground that is not accessible. There is a need for more deer taken on private property. The harvest of bucks has risen with the use of crossbows, but the doe harvest has not. It's time to issue one buck tag and maybe earn a buck with one buck tag. In my opinion we have gone backwards with all of our regulation changes in the past several years. Yes it is very handy to register a deer in the field but with that change and others like no more back tags, group hunting, no age limit etc. Wisconsin has become a poachers Paradise!

Thankyou for the opportunity to discuss this. In a world where we continually have new ways to communicate, however seem to have less meaningful relationships between individuals. We should use any and every opportunity to foster simple socialization skills. Hunting is one of those opportunities. And all of the traditions and experiences that go with it. One of those traditions is the tagging and registering of our animal at a local business. With out going on and on about how this tradition is a positive for the future of hunting. I will leave the particulars to our Leading council. Thankyou again for the chance to discuss.

The hypothesis that an Antlerless only season would finally reduce the deer herd to desired level is faulty. Reason is that there would be far less hunters taking part in Marquette county, as many would go to adjacent units or somewhere else in the State in order to have chance to harvest a buck. End result, you would end the season with even less antlerless deer harvested than in average season as of late, you would have not reduced bucks even by one, many hunters would be very upset, would affect future years harvest negatively as some hunters may like new area they chose to hunt buck in, and therefore not comeback to hunt Marquette county.

Well now you have a radio ad saying you want our input and want us to have a say in our deer herd management, what a crock! You have and never will listen to us. We are the ones spending time in the field watching our deer herd disappear before our eyes but that doesn’t matter. You have an agenda and will stick to it no matter what. That agenda is simple, to eradicate our deer herd. I’m done listening and paying for licenses that just give you the funds to destroy our herd. I will manage my property as I see fit and that means through any means I feel appropriate including hunting!

I would support extended vertical bow archery season through January 31st. I would disagree with including crossbows during an extended season when deer are more susceptible to overharvest due to being hurded up. I believe a 1 year antlerless only season or earnabuck season would be beneficial. More hunters would harvest doe implementing EAB and I recommend implementing this structure until populations are reduced to 40 deer per square mile. If the DNR lays out this plan and strategically markets the reasoning, hunters would participate to hit target populations quickly so seasons can return back to normal.
As a person who farms in Marquette county, I believe ag crop damage is an over abused term. Deer take the blame for most if not all damage to ag cropland. However the reality of working farmland and observing the growing season, reality is 2 other species of animals do far greater damage than deer. They are TURKEY & SAND HILL CRANES! Typically deer will only stay in the outer edges of fields to eat. My wish and hope is for the DNR to quit using deer as the cop-out for crop damage and look at the other sources of damage to crops and do something to reduce those species in the area.

I do not support the holiday hunt at all. I would like to see the deer season extended and then allow the bow hunters to hunt late season. I am a dairy farmer in the area and have no problem with the deer eating crops because I enjoy hunting. If you do your job as a farmer and plant your crops properly the deer will not destroy them. Plant food plots for the deer. I do not want to see any other rules and regulations on how we hunt deer. The way we have done it in the past is fine. I’m willing to lose a little bit of crops to go hunting because it is a very enjoyable. Thank you

I am concerned about the high population of deer and how it affects the spread of CWD and over browsing of valuable plant species. I would encourage you to promote the use of efficient weapons to help control the deer population. Crossbows, compound bows, and rifles and shotguns should be used as much as possible by hunters. The holiday hunt, if implemented to get the doe population down, should allow the hunter to use their weapon of choice. Good luck in achieving the goal of decreasing the deer population which will improve the habitat and the health of the deer herd.

I am greatly concerned about the use of my land and surrounding public land for activities other than deer hunting. Expanded seasons take away the safe ability to snowmobile, cross country ski and hike/snowshoe. Start the gun season early and let it run though November. You will get closer to your unrealistic harvest goals while leaving months with snow activities available for use for those activities. You also do not have the hunting base that you had 50 years ago. Younger people are not interested in shooting a deer and eating it like the “old” days. Get real.

We do not have too many deer. We have an appropriate amount of deer in general in this county. Bring back the requirement of checking deer at a check station and then reevaluate your deer kill numbers before you try and deplete our deer herd. Also DO NOT extend the gun season, it’s long enough. And limit crossbows, at least on public land, until the beginning of gun and then allow them through the rest of archery season. The regular bow hunters deserve to have first chance at the least pressured deer. Thank you for reading and considering this.

You're not going to make any progress decreasing the deer herd unless you go to Earn-a-Buck or antlerless only. I checked that the antlerless quota and four harvest authorizations were too low but actually they're rather meaningless as the harvest is always so far below the authorization. I would like to see more opportunity for gun hunting earlier in the deer season. Opening it up closer to the rut may upset the bow hunters and traditionalists but it will increase the harvest. Even if it's primarily bucks it will still make a bigger hit on the herd.

I have gun hunted from the same stand since 1988. Deer I see during season have decreased drastically through the years. I don't see the increase from my stand or my cameras. There comes a point when your freezer is full. For some that is 1 deer, for my family it is 4 or 5. That is all we are going to take. Handing out more tags may not be the answer. I'd like to think most hunters are only going to take what they can use. I will Not hunt an antlerless only season. Forced to possibly have to pass on a buck of a lifetime is not what I am looking for.

Please consider an elderly hunt, in the early part of the season, when the weather isn't as cold. There is currently a youth hunt, I would like to see an elderly hunt. The elderly need special consideration, usually help getting them to and into their blinds, it is harder for them to hunt in colder weather. Physically they are less able to hunt by themselves and require more attention and care while hunting. Normally they have hunted their whole life and are due special consideration and a season of their own, like the youth hunt is. Thank you.
abolish holiday 'poacher / violator' hunt abolish 'poacher / violator' youth hunt bring back, back tags and real
carcass tags let elderly and disabled shoot crossbows... make rest learn how to shoot archery or not hunt. in fact
I'd like to see a 'primitive weapon season' line Pennsylvania's...real bows and arrows (recurve, longbows) and
flintlocks w/ patched round balls ONLY. deer hunting in Wisconsin has become a joke and is worsening. People
don't hunt deer any more they just want to go out and shoot them. sad state of affairs

I am using this space to make note of my personal observations a to how the current crossbow season affects the
deer herd. Although I feel the herd size has maintained about the same level the last few seasons, I have noticed
fewer bucks by the gun/muzzle-loader seasons. I believe the last few seasons of harvest data will support this. I
fear the increased number of hunters switching to the crossbow, coupled with the long crossbow season has had
a negative affect on the overall quality of the Marquette county/Wisconsin deer herd.

The DNR finally got our season structure correct. All hunters now have ample opportunity to harvest animals. Any
changes made to the current structure, with regards to weapon choices, would be a step backwards. Maybe the
addition of a second rifle season after muzzleloader would help. Not just 4 days to hunt, but, 2 or 3 weeks
following muzzleloader being open with a rifle. My group likes to shoot does during late season, but the weather
doesn't always cooperate. More options late December and early January would be nice.

I am very pleased that you are recommending the holiday hunt again this year. With out other tools to reduce the
deer herd I personally believe that this season helps land owners with primarily agricultural land harvest deer
under better weather conditions, when deer are moving looking for food. I don't agree with extending the gun
season to run the length of the muzzleloader season to have as much of impact as having the holiday hunt, where
it gives the deer a rest period between the gun season and the holiday hunt.

There were far more deer in the 1970's and early 1980's in Marquette County...population of people has
skyrocketed resulting in in perhaps more collisions...it is not that there are more deer because there are far
closer...barely hear a shot at any distance after the first couple of hours of gun season...no hunters vehicles
parked in the ditches during the week and rare to see anybody out the second weekend - this is because of the
low deer numbers - nobody is seeing anything like in the 1970's and 1980's VERY SAD!

More does need to be removed from agricultural areas somehow you have reached the saturation point of giving
away doe tags i'm afraid you'll have to use to earn a buck program to force people to shoot more does. Would
not support extending deer seasons past January 1 as the bucks start losing their horns at that time. Definitely
support antlerless seasons after the gun hunt. Would like to see only one buck killed per person per year and
choose the weapon you wish to use to shoot it. Thank you.

More time in the woods trying to fill unused Buck tags would increase the chances of also taking an antlerless tag.
Personally I won't go out to just shoot a doe. But to go out with a buck tag in my pocket and the opportunity
presents itself I would fill an antlerless tag. Having a second later muzzleloader season, around the first of the year
after a break from 9 day rifle season/9 day muzzleloader season then extending the archery season until the end
of January for either sex I would support.

Hi, As a hunter (gun and bow) and a farm in the county I would like to see a longer archery season through
January 31 or a longer gun season. In the first two months of this year I observed in one 50 acre field on average
120-180 deer a night. I consider this devastating to crops and the health of the deer herd. A third option would
be to have to shoot a doe before a buck. You could register the first doe in person then receive the buck tag then
do any remaining tags on line. Thanks

I am very concerned about the NRB's proposal that would do away with the Northern Forest/Central Farmland
units in Marinette County. For as long as the CDAC system has been in force, the goal for Northern Forest has to
increase the herd and the goal in Central Farmland has been to decrease the herd. Obviously, no "one size fits all"
county-wide plan would accomplish these diametrically opposed goals simultaneously. I would strongly support
keeping the present structure intact. Thank you.
I have hunted in this DMU unit a very long time. The population and deer sightings for bow and gun hunting have been very low the last 4-6 years for me and my hunting partners. I am starting to see a rise in number of animals sightings and would like to see that trend continue for a couple more years. If that occurs I would then possibly favor a larger harvest quota. I grew up hunting and fishing in this area and to me it is a treasure! I want to pass this on to my grandkids one day as well.

No more youth hunts. early bow season ends 10 days before gun season. No more muzzle gun season. All deer hunting stops November 31st for all deer. Way to many days to hunt and kill deer there are not many deer this has to stop to maintain a future of deer hunting when it becomes necessary to hunt more deer because of population we will discuss that when it happens my opinion and raise the License for all 50 $ more for all wi residents and 300 more for none residents my opinion you asked

I and many neighbors work all year long to create exceptional habitat for all wildlife, especially whitetails. Altering the harvest seasons would significantly change how we all view the hunting seasons and how much work we put into maintaining habitat; most likely negatively which in turn will create other herd issues in the near future. If a change has to be made, I suggest altering the number of antlerless tags awarded and not altering the seasons, harvest methods or species harvest.

I would like to see the season from Jan 1st to Jan 31st a antlerless only. Also if out of state land owners could see a reduced price for their deer license. Maybe more people would come and hunt. This would bring more people and money into the state. Go back to check in stations. I feel some people are not checking in deer that are shot. Do the same people sit on the CDAC also if so maybe a person can only be on it for only 2 or 3 years. So new ideas can be introduced. Thank you

I understand how deer browse on native species is influencing regrowth because of high deer populations. I do think an antlerless only season might be extreme though. Why don't we implement earn a buck again to be a middle ground between a normal season of shooting either sex and an antlerless only season? The antlerless kill will be higher. We need to have a better way of registering deer accurately and proof of an antlered kill to earn a buck. Not sure how to combat that issue.

Do not restrict crossbow hunting. Allow bow and crossbow hunting to extend to Jan 31 regardless of any holiday hunt. If you believe the herd needs reduction to the degree that various antlerless only hunts are instituted, why also restrict bow and crossbow hunting? Allow bucks to be taken by bow and crossbow during various antlerless only hunts. Wardens are skilled enough to determine what instrument was used to take a deer. Many policies contradict the stated goal of herd reduction.

I am a snowmobiler and we had a discussion last year about the holiday hunt, about doing it every other year and this should be the year for no holiday hunt so we could open trails in December. But I guess every body on the committee for got about that this year? The few deer that were shot during the holiday hunt doesn't make that much difference in my book! If you haven't fill your tags by that time your not a very good hunter and I don't want you hunting by my property!

No additional amount of tags will increase the overall harvest. Go back to the traditional 9 day gun season with with no additional gun harvest opportunities with the exception of the youth hunt and maintain a traditional archery season. Hunters by nature are traditionalists and the constant change of the seasons as well as in person registration stations has eliminated alot of those traditions. Unless we focus more on maintaining hunter numbers the population wont change

We need to look at not letting everyone from other states come in and hunt. The out of state hunters need to be put on a drawing system. We also need to be able to let hunters If they choose to shoot both buck tags with the bow. Gun hunting has way to many out of state hunters. In marquette county the numbers are way lower over the years because of the amish killing everything off. It's sad when the amish are trying to give away deer because they killed to many.
Stop messing with plan to change the crossbow season. I'm sick and tired of having a bunch of whiney gun hunters trying to reduce MY hunting season just because they don't feel like getting out there more often and taking advantage of the archery season times. Most of the whiney gun hunters don't hunt more than two or three days throughout the entire season. Why should they get more attention than those who spend many days afield and work harder for their game?

Let's not put a 49 minute recording in a survey most people won't spend 5 minutes to finish. I don't have the time to listen to all 49 minutes...how about a 3 minute cliff note version? 4 free antlerless tags is too many. I see pockets of an area wiped out for the whole gun season because a couple people can wipe out all the "local" deer before the season even ends. I'm not against giving a couple away free, but make people pay a little bit to get more tags.

The four of us that hunt private property in Marquette County saw very few if any does and or doe fawns last year. The fawns we did see were predominantly buck fawns. If we saw deer during our sits, we saw bucks or buck fawns. In our area the buck to doe ratio seems to be much higher on the buck side. We would like to see more does. If we did see more does we would feel more comfortable about using the antler-less tags that we have been provided.

The county has a good deer herd. The last 5 years have been hit and miss on if the group will even harvest any deer. We hunt long, hard and smart. The group is meat hunters we harvest both doeS and bucks. The numbers of deer seem and harvested have dropped majorly over the last 5 years. Large swamps and thick timber allows the deer to reproduce well and hide well. The number of coyotes and wolfs in the county have done great damage to the herd.

Extending the gun season to 19 days and all these antlerless only hunts is a terrible idea and should not even be considered. We need to embrace our deer population and stop trying to find ways to lower and destroy it! You are going to lose more hunters and more revenue from licenses when people stop buying them and stop traveling to come to Wisconsin to hunt if there are bad deer numbers. Lowering the deer population is not always the answer.

Having Hunter the same property for 42 years I've seen a dramatic decrease in deer production and quality. Current management techniques are opposing and are contradictory to good health management and welfare of future hunters and promoting the continuation of existing hunting individuals. Many individuals have gone to the deer council meetings representing my individual opinions only to be shot down or yelled down by the council members.

I am opposed to any and all recommendations made by this or any CDAC. You do not live in the reality that we as hunters live in. Your suggestions are not suggestions as you DO NOT listen to our thoughts or opinions but rather just do what you want. I suppose next you'll suggest that we have a year round antlerless season because of the China Virus! Wake up and hear what we have to say!!! No more antlerless only seasons of any kind!

If the DNR (Marquette County) is going to have a Holiday Hunt, move it to the beginning of January. Have the Antlerless Gun Deer hunt January 1st thru the 10th. Allow for bowhunting/Crossbow of Antlered Deer thru December. I bow hunt and I usually have some time off between Christmas and New Year's Day. I would like those days between the (2) holidays to go back to how it use to be, being able to hunt Antlered Deer with a bow.

Best idea I heard lately, was extending the deer gun season by 7 days [one full week]. Let us enjoy and savor the experience of being out in the woods, with family, friends, fresh air, and the wildlife. And hopefully give some of us a better chance to harvest a nice deer. Thanksgiving with family and travel reduces my time in the deer stand that week. And adding that one extra week, could be the week before the regular season.
6259 I believe the crossbow season should be shortened due to the DNR information that those hunters are harvesting more buck than vertical bow hunters which is affecting the quality of the rifle hunt. Further a antlerless only season or bringing back earn a buck (which the republicans made illegal) should be used. If the population is truly out of control hunters need to work together in the short term to help th long term.

6258 You covered the info I was going to share in the survey and questions. Specifically, I don't like the Holiday Hunt or the early December gun hunt. Those are the last opptrys to bow hunt and usually it's doe only. Also, the predator kill rate has be factored into the deer kill recommendations better. I'm seeing more bears, wolves, coyotes and bobcats in the area over the last 10 years. They certainly have an impact.

6260 I do not understand how the amount of deer being seen on my property has decreased to the point of not seeing any deer during gun season for the last 3 years. I can drive 2 miles away from my land and see deer all around. I seem to be in a pocket of low deer population, I do not know how this has happened. Very hard to get excited about hunting and getting my kids and grandchildren excited when very few deer are seen.

6261 I think between the youth gun seasons and hunting seasons they are chased and shot at for about 5 months. I know the deer are there, this pressure has made them nocturnal. I sat in my stand and saw 5 deer and shined the field at night and there is 25 out there. they know wait till dark and pile out of the woods. I also think and iam one of them, the crossbow has added bow hunters and pressure to be nocturnal

6262 The number of deer that we normally see was way down this year than past years. At least on our 200 acre property & according to our neighborhood property owners. Numbers were way down. Our hunting party was able to harvest one doe off our property this year & luckily he shot it on opening day otherwise we wouldn't have gotten anything. I highly disagree with reducing the amount of deer in this management unit!!

6263 The number of deer I have observed during the last few years has decreased significantly over each year. I credit this to the number of wolves in the area and to poaching out of season. The area I hunt in and have hunted in for 62 years has adequate food supplies, water, areas of good cover, and plenty of space. The location of these four items is such that it should support a flourishing deer population.

6264 I am strongly opposed to an antlerless only hunt. It would drastically disrupt the quality of the deer hunt for most everyone I know. In a time where we need to recruit more hunters, I believe this is a counter productive measure. Just the thought of the possibility of a buck sneaking past your stand at any moment and having a chance to harvest it is very special, and what most hunters live for.

6265 I like how we used to get a buck tag and a doe tag for all management zones and if you need more then apply for another doe tag instead of having to get a doe tag for every zone you plan to hunt. I hunt several properties, some private and several public lands. I like to have a buck tag for a buck and a doe tag good for all counties instead of having to buy a doe tag for each county I hunt.

6266 I am concerned with the practice of selling different antlerless permits for public or private lands. I frequently hunt private land that borders on public ground (French's Creek) and this practice makes it difficult to be 100 percent sure of legal compliance. Just sell antlerless tags for the area. I can’t see the benefit in apportionment being rationed between private and public grounds.

6267 I strongly recommend shutting down all deer farms!! I would encourage extending bow and crossbow season. Setup more deer donation facilities to encourage more antlerless harvest and provide food pantry areas for Marquette county. Stop charging for bonus antlerless tag I hunt two different countries but all my antlerless tags must be for one county. Why?? Thanks good presentation.

6268 Most large (200+ acres) land owners do not harvest does because they feel those lead to next year’s herd of bucks. Until those land owners agree to harvest does, there will not be a significant change in the numbers harvested. I also have a concern that bucks can be harvested and registered as does under the current system where there is no visual verification of the harvest.
I just think if the antlerless seasons were imposed the total kill numbers would go down and the antlerless numbers would stay about the same. It appears you may feel the same way since you are not recommending the antlerless only seasons. Have found a few winter kills but less than a bad winter. The deer we see in our area look in great shape. Thank you for the presentation.

Based on numbers I believe the quota is unreachble in the current format. I am totally against antlerless only season. But to be so far off in numbers. Something else has to change. Or set reasonable quotas that are attainable. I have high number of deer in my area. But my neighbors and I like that. The landowners are who should decide as long as not harming environment.

I would like to see the time of sighting rifles/guns in before gun deer season stop the weekend before gun hunting on private property. After that they should go to a gun range. There are so many shooting guns that the deer start hiding before gun season even starts. We loose the element of surprise. I believe more deer would be harvested if this were to happen.

1. Bring deer tagging/registration stations, and back tags back to bring our hunting heritage back. 2. The hunting tradition and being honest and responsible while hunting has been deteriorated. 3. Make elevated stands and box stands illegal so hunters move around which moves the deer to allow more harvest opportunities. 4. Eliminate baiting!

Many hunters will not shoot does in this unit. I noted this during conversations with other hunters, and the moderate volume of bucks I viewed as harvested at local processors. We shoot both does and bucks (quality mgmt) and donate the meat to others in need. The farmland we lease has moderate crop damage every yr so we already shoot does.

I met some hunters in the woods. They said they were from the four corners area [Hy. 21 and 49]. In that area they got hunters to agree don't shoot does or bucks with less than six points. So there hunting this area to clean out the deer. If there thinning the population in a specific area they are over populating another. Thank You

Hello, I do respect what you all are trying to do, but I believe the management zones are to big to have an accurate count for the individual counties. I assume the old deer management units were to small and took to much time to adjust herd numbers, I do not have an answer and I apologize for that. Thank you for your time

I do not support the current crossbow season being the same as regular bow season. I would like to see that go back to special circumstances only (i.e. age, medical, etc.) even though I recognize that cat was let out of the bag. I do not like my buck chances during rifle season being diminished by crossbows during the rut.

I oppose the holiday hunt. I looked at the harvested deer during 2019 season: 269 killed That ’s 0.065% of total harvested! Such a very low number. Why even have it? Let the snowmobilers have their season! If trails are open, the economic impacts are far greater for this community compared to a gun hunt.

The environment in the area where I hunt is continuing to change to denser cover which makes the deer harvest more difficult and leads many hunters to assume that the deer population is lower. The deer are still there but we have trouble seeing them. (Or they are getting smarter, or we are getting dumbber.)

To aggressive of an approach the number of deer have gone down already over the years. This proposal is leading to the type of hunting that is experienced up north thus no deer no interest in hunting especially young hunters. There are already enough gun seasons give the deer and hunters all a fair shot.

The only request I have is in regards to extending the gun season and reducing the crossbow season. My personal preference is to leave the current structure in place for gun hunting since it is a Wisconsin tradition. Extending it takes a lot of the mystique out of it an makes it even less appealing.
The deer numbers in this country vary greatly between north and south parts of the county. Private land owners in areas where deer numbers are down will not participate in any extra hunts due to lack of deer. In some places people will stop hunting period. More needs to be done to remove predators.

I would be in favor of an every other year holiday hunt to allow for the possible use of other recreation during the holiday time period. Another favorable option would be to extend the regular season the 10 days proposed and eliminate the holiday hunt. I think this would be the better of the two.

Due to the aging population of the hunter base I think that opening up the gun harvest season 1 week earlier to extend the season to 2 weeks would be very helpful to meet your goal to reduce the population in Marquette county and elsewhere. After all how many 60+ year olds want to hunt with a bow?

My hunting partner and I are trophy buck hunters only. Neither of us will hunt if it is a totally antlerless season in Marquette County. I know of a number of other bow and gun hunters that will not hunt also. I personally will seek to get a refund for the gun license I have already purchased.

I think our deer harvest season is plenty long enough. I am against deer hunting beyond the 9 day rifle season. I live, work, hunt and own land here and I don’t see the numbers of deer that the DNR is reporting. If your goal is to decrease the numbers, make it antlerless only or earn a buck.

Early drive deer’s during the 9 day gun season on public lands to private lands. (1) drive deer’s a day before from public lands to private lands. (2) Drive deer on Public lands the first two days gun season. (3) Private lands owner’s TAMPERS on public lands days before hunting season started.

Allow crossbow hunting during entire archery season. Do not restrict crossbow hunting any further than it was during 2019 Wisconsin seasons. I find it very challenging to harvest a quality buck with a crossbow during the archery season. Anyone who thinks that is an easy sport should try it.

I believe we as hunters are the best input you as the law makers can have. Please let us decide on how we manage our resources within good reason. Leave bow season be, keep 9 day gun season as it is. Keep muzzle loader as is, and the youth hunt keep as is as well. Thank you

THERE ARE MANY ANTLERLESS TAGS LEFT OVER EVERY YEAR DOESN'T THAT TELL YOU THAT THERE ARE ENOUGH TAGS OUT THERE? PUBLIC LAND IS THE ONLY PLACE THEY ARE HUNTED HARD THINGS HAVE CHANGED IF YOU TRY TO FORCE PEOPLE TO DO WHAT THEY DON'T WANT TO YOU WILL CONTINUE TO LOSE HUNTERS SIMPLE AS THAT.

Hunting in Marquette co.should stay as is, the numbers of deer to hunters is just fine. We have to maintain some sanity in these decisions. Extending preexisting seasons is NOT a good idea. The rules and regulations in Marquette co.are a good balance and offer a fair chase for harvesting.

In order for younger kids to get involved in hunting they need to see animals. I feel we have over-estimated the true herd number and have to relax for a few years on the amount of antlerless tags being handed out so that the herd numbers can grow to a healthy number once again.

All you guys see are numbers got to kill the deer population. Finally since earn a buck the polustion is good and the bucks and deer population is finally doing good. Stop trying to find ways to screw with my passion go out and ask hunters what they think not what you want...

North of Westfield there are no deer the Springfield swamp was awesome at one time now you can't see a deer. 4 tags are to many lower the quota reduce the tags quit this non sense half the deer are getting shot in Adams county because they have forest zone No holiday hunt

Your deer metrics system has zero logic to it, you might as well call it scientific assumption! You simply once again are looking to wipe out the deer herd with your delusional ideas and proposed seasons. I am opposed to ALL bonus tags and extra antlerless seasons!!
| 1627 | I totally disagree with the CDAC opinion of not extending the Bow season if a Holiday Hunt is held. Once the gun season starts, buck hunting with a bow is for all practical purposes over due to blaze orange requirements or doe seasons. Extend the bow season. |
| 1628 | Way too many tags are given out. With the number of tags all it takes is one or two bad landowners to wipe out an area of deer which is what is happening. We have multiple neighbors who are killing every deer that they see so there are very few deer remaining. |
| 1629 | I farm 400 acres in Marquette Co. In the town of Shields and Mecan there are so many deer in this area that they are destroying one third of my crops. It is getting worse every year. No one wants to harvest any doe. this would be a spot for doe only. Thanks |
| 1630 | Get rid of youth hunt, it disturbs the deer for regular hunters to harvest deer. Divide counties in half for the unit to get better whereabouts as where the majority of the deer are. Bring back the deer baiting to all counties with a amount restriction. |
| 1631 | I am concerned for the future of Wisconsin deer hunting. It seems that the costs are up while the quality of the experience has decreased. Sitting in the woods watching squirrels doesn't constitute a quality deer hunting experience in my opinion. |
| 1632 | I want to know when the wolf population well get taken under control! yes we have wolf in Marquette County, I don't want a reduction of the deer hurd I dont believe your number count is correct for Marquette County. I want a health hurd . |
| 1633 | I don't understand why a hunter needs to indicate that he/she will be hunting on private or public land. A deer will cross the boundary of private to public land. Does it have something to do with hunting pressure on private versus public land? |
| 1634 | Consensus talking with fellow hunters that have stopped hunting is due to lack of deer being seen. Giving away so many antlerless tags makes no sense to me when again, way more people seeing just a few deer vs the few seeing several. Thanks! |
| 1635 | Open up the grand river marsh for archery. Put the muzzle loader season before gun season. Let gun season run from November to the holiday hunt. Reaching only about 1/4 of the quota in this unit...lots of vehicle collisions. |
| 1636 | there sure are a lot of small deer in marquette county. even the mama does are barely 100lbs. having hit 5 deer in the past 3 years,i feel the number of tags should be increased,as well as the extended bow hunting season |
| 1637 | Something shifted last year and we saw fewer does, bucks, and young deer in both archery and gun seasons. First time we did not get a buck outside the ears in gun season for 4 hunters who hunted most days of gun season. |
| 1638 | how about a trophy management zone for these two counties. I will take all the doe permit you give me. Do a lottery for buck tag 4 points or more on one side but would require manual registration of harvested bucks. |
| 1639 | forest regeneration is affected by more animals than just deer such as turkeys squirrels hawk owls and so on also don't think deer # s are eqeal throughout the cty as I believe the north east part of cty has lower # |
| 1640 | You all are doing great! However with the over population in Marquette county I think extending the season and offering more antlerless with the license and more available for sale as you have been doing. Thank you! |
| 1641 | i hunt and i snowmobile and you charge me for tail passes to which i am fine with but then we cant open the trail until after new years which is bull the regular gun season should be the end of hunting for the year |
| 1642 | Reduce the crossbow season to one week prior to the gun season (concurrent with the vertical bow season) and allow crossbows during the late seasons (Antlerless only holiday hunt and extended archery and crossbow). |
| 1643 | Farmers with issues or concerns should open land to hunters. I've done plenty of door knocking and could not get one approval from at least 20 farms. So to have sympathy in the crop damage concern is not valid. |
4 tags nobody is shooting even 1 deer because it is the only deer they saw last year. To many tags, cdac needs to quit listening to the DNR and use common sense. There are no deer anymore !!! No Holiday hunt

one tag per license, you don't need four tags per. if you slaughter the herd you are going to have a problem like during earn-a-buck and the population will take such a dip and you will anger hunters.

if you really want to increase doe harvest... offer free processing for does or a discount to be applied toward next years license. Everyone passes on does, nobody wants or needs to fill 4 tags

4 additional tags with every license purchased? Really? A group of hunters can shoot anything that moves because they have an abundance of tags to fill. So much for quality deer management.

we need a hunt for hungry program. have the sportsman's clubs, rent a freezer trailer and haul them to a meat processing plant that can/will cut them up and donate them to food pantry's.

We need all the hunters we can get do not limit hunting based on weapon type. And do not have a quiet period during prime hunting time especially for hunters with limited time to hunt.

If 10k is the goal an 6k plus was result you need to have a doe before buck rule in place. And as a state we should be charging non resident 4x as much for a license as we do currently

Please ensure that the rifle season more closely coincides with the rut. The 2019 season was abysmal versus years past in regards to deer activity, because it was so far past rut.

TOO MANY TAGS There are no deer especially in the Westfield area North. Most of the public land is in northwest corner of county and deer numbers are very low. No holiday hunt

There should be a lot less does shot. 2 of our group of 5 are looking for a different area to hunt. Have seen few deer the last 2 years. I'm giving it 1 more year, maybe.

4 tags are to many go to maintain what you have left of the deer herd.

Bring back Earn-A-Buck. I feel it is the only management tool that has been successful in Marquette County. It allows normal buck hunt seasons for all weapon types.

Holiday Hunt and extended gun seasons are unnecessary. Give the deer a chance to live and let hunters who appreciate the sport have an extended bow season.

Predator control, wolf, coyote bear are out of control. We desperately need to control the wolf population weather you want to believe it or not

Make an senior citizens hunt. Same time as youth hunt. Much easier for older hunters, to get deer, when it's warm enough to sit on blind.

I would not be opposed to bringing back the "Earn a Buck" requirement of harvesting a doe first, then getting approval for a buck.

I think you should be able to party hunt deer with archery equiptment under the same rules as you can with firearm deer hunting.

I completely disagree with an anterless only season. I feel a lot of hunters would either lose interest or not hunt at all.

No deer. They are all on farm property where family members only have the opportunity to shoot select deer. Trophy hunting.

Quota to high, success rate stinks because there are nondeer. Don't have a Holiday hunt!!!Don't have a Holiday hunt !!!

I recommend continue doing what is necessary for a balance between deer herd size and hunter success. So far, so good.
southern Marquette county is not the same as northern Marquette and has TOOOOOOO much influence on the deer harvest

PLEASE bring back back tags we have no way to id interlopers or poachers or any other types of illegal activities!

I strongly oppose a antlerless only season it would reduce hunting and result in a huge increase in population.

Keep the nine day gun hunt, and allow all archery including Xbow. Maybe look at hunter success in Illinois

I think if you want to decrease the population then it would make sense to extend the bow/Cross bow season.

To many tags quota is to high maybe one tag not 4 more tags are the answer when most people don't see a deer

As per the question in the CC questions we need to reduce the crossbow season to three weeks in October.

Extended muzzleloader season only. Early muzzleloader lottery, early November. Extended youth hunt.

There are not that many deer in marquette county. The deer herd is being killed off to far here.

2 tags are too many 4 is nuts people can't fill them if the deer aren't there No holiday hunt

Please do not extend bow or rifle season. Deer numbers get hit hard enough in WI as it is.

Traditional 10 day gun season should no change and the early youth hunt should not change,

Way too many car kills, especially fawns and yearlings, big waste of a wildlife resource.

i would rather see extra doe tags with license than have a special doe, holiday hunt

Must have a anterless session or we will never be able to regenerate our forests!

If you bother having a holiday hunt, remove the antlerless only requirement

I would like to see Earn a Buck brought back as a tool for the CDAC.

The gun season should be before thanksgiving end thanksgiving weekend

Leave it the way it is except elongate archery/crossbow seasons.

There are too many types of hunts/seasons. We don't need any more.

keep killing all the does and you want have a deer harvest!!

No special firearm season prior to the usual Gun Buck season

Go back to immediately tagging deer, and back tags.

Have the crossbow season during or after gun season.

Not in favor of longer gun season. 9 day is good.

Deer population is down. Please kill the wolves

Too many agriculture damage tags are given out.

Extend the crossbow season to January 31st.

Thanks for all your work on deer management

Thank you for allowing me to participate

gun deer should end thanksgiving weekend

Leave the 2020 season the same as 2029.

I would like to see the return of EAB.

Not as many deer as in the past

More focus on cwd checking
Go back to the old ways
Milwaukee, Southern Farmland

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

22 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 15
   - I visit this unit for non-hunting purposes: 5
   - I hunt in this unit: 17
   - General interest in this unit: 5

   The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 1
   - Bow: 13
   - Crossbow: 6
   - Muzzleloader: 0

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 7.82
   - Maximum: 28

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 15
   - Mostly Private Land: 1
   - Public and Private Land About Equally: 0
   - Mostly Public Land: 0
   - Exclusively Public Land: 1
   - I did not hunt in this unit last year: 0

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 0
   - Not too crowded: 0
   - Neither crowded nor un-crowded: 2
   - Somewhat crowded: 0
   - Very crowded: 0
   - Not applicable: 0

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 3
   - Fewer: 5
   - Same: 11
   - More: 1
   - Many More: 1
   - Unsure: 1

Section 3: Feedback on the CDAC's 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

   The Antlerless Quota is...
   - Much Too Low: 0
   - Too Low: 2
   - About Right: 14
   - Too High: 2
   - Much Too High: 3
   - Unsure: 1
Section 3 (continued): Feedback on the CDAC's 2020 preliminary recommendations

8. In your opinion, how would you rate the number of $12 Bonus Antlerless Harvest Authorizations recommended for this unit by the CDAC for the 2020 season?

<table>
<thead>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...

Implement an ANTLERLESS HOLIDAY HUNT: 9 Support 10 Oppose 3 Unsure

If a Holiday Hunt is held in a Farmland unit...

EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: 20 VALID 2 NOT VALID 0 Unsure

If the Population Objective is not "Increase"...

Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 1 VALID 16 NOT VALID 5 Unsure

If a Zero Quota (buck only season) is adopted...

...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC's recommendations for this unit?  

Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

<tr>
<td>6326</td>
<td>I hunted for the first time in Franklin, Wisconsin. I’m hunting on land that borders MILWAUKEE COUNTY ROOT RIVER PARKWAY land. My first year in Franklin I counted 25 different bucks in just the small area I bow hunt. I figure there’s over 50 deer within a square mile of where I bow hunt! I KNOW a vast majority of these bucks come out of the Milwaukee County land. I know you’re trying to get Milwaukee County to open some of their isolated and uninhabited (by people) county lands open for bow hunting. I’m being allowed to bow hunt private lands in Franklin because neighbors are pissed about all the deer coming off county land to forage on their gardens, bushes and flowers. I know bow hunters could safely hunt these county lands. Just ‘limit’ the number of hunters thru a permit system. Only allow certain (picked by lottery) hunters to hunt in specific spots. There’s plenty of isolated county lands in both southern and northern Milwaukee county to allow all to hunt.</td>
</tr>
<tr>
<td>6327</td>
<td>Unfortunately for my opinion is the fact of crossbows being used in the metro area I hunt has had a big impact on the deer herd. Not sure if the hunters on the land are harvesting deer and not registering them or the hunters shooting the deer in nonethical distances to just shoot to get the antlers. I have complained about this to the DNR and land owner. I would like the metro unit to return back to compound bow use. I find to many deer wasted just for the racks, headless with all meat in tactic. Thank you for your help. I appreciate it.</td>
</tr>
<tr>
<td>6328</td>
<td>I think that Milwaukee unit should have separate from the doe tags received from regular/patron license. I also think that county owned land that is not parks should allow trappers to use this to reduce coyote to help with fawn survival rate. I am not sure if the DNR can influence any of that or not.</td>
</tr>
<tr>
<td>6329</td>
<td>The Holiday hunts in the bow only area is a joke. This needs to go away. Just let hunting be open until January 31st. If a person wants to shoot a doe, they will and they can also get a buck during that time.</td>
</tr>
<tr>
<td>6330</td>
<td>Let’s ban all compound bow Hunting in Wisconsin. Keep the crossbow season as is and shorten the regular archery season for guys using compound bows!</td>
</tr>
<tr>
<td>6331</td>
<td>I’ve passed on does in the past, but will do my part to bring population down in 2020. Would like to see clearer documentation on rules for Metro Units.</td>
</tr>
<tr>
<td>6332</td>
<td>Reduce numbers of deer to slow down the spread of CWD</td>
</tr>
<tr>
<td>6333</td>
<td>Recommend incenting landowners to allow hunting</td>
</tr>
<tr>
<td>6334</td>
<td>Too many free antlerless tags are given out.</td>

Monroe, Central Farmland

Note: the comments presented in this report are the unfiltered opinions of individuals who responded to an online public input form. The viewpoints expressed do not represent the views of the state of Wisconsin, the Department of Natural Resources, or its employees.

Monroe County farm land zone is in a deer over population situation. On my farm in southern Monroe County white pine browse lines are as high as the deer can reach, oak regeneration is abysmal. CWD is on our door step and we need to do everything we can best manage our herd. I believe we need to reduce our overall target population and we should be in a population reduction zone not maintain. As I listened to the Monroe County CDAC presentations and those of the surrounding counties it appears biologist agree that the deer herd is growing and we need to be aggressive in the antler-less harvest. I also understand the frustration in trying to motivate hunters to take more deer. Few counties with high populations have been able to achieve their quota. The single best deer population reduction method we have utilized to date has been Earn-a-Buck. We need to argue counties need the EAB tool but that's not a choice for 2020. If we don’t give hunters the right signals we could find ourselves in an antler-less hunt for all seasons in the not to distant future and that will be far more unpopular than no buck season at all. Coulee Country QDMA has sponsored raffles for deer donation and CWD testing which has created interest but its still not enough. One of the tools we do have is the Holiday Hunt. Its easy to compare the number of deer harvested in 2018, (153) when we had the Holiday Hunt vs (4) in the similar period in 2019 when we did not have the Holiday Hunt. I strongly encourage the adoption of the Holiday Hunt! I also recommend increasing the farmland tags from 2 per license to 3 per license. I know this historically hasn’t moved the harvest much but its a signal we need to send. The no change and herd maintain message is giving a signal that "all is well" and its not. Families are economically struggling and food pantries are seeing record demand during the Covid 19 pandemic. We have high quality protein in abundance we can share. We can anticipate that more families would appreciate the opportunity to receive or harvest for themselves venison for the coming year. The silver lining is that Covid 19 may give us the opportunity to come closer to our harvest quota if we as hunters take herd health seriously. I’ve heard suggestions of offering a "Reward" for does harvested, perhaps local sportsman clubs could offer this as a contest, for each doe harvested or for the smallest, the largest, the oldest... I encourage the county CDAC to use "virtual Meetings" as some landowners do not live within convenient driving distance from Sparta. More sportsman want to participate in your decision making process, using the Internet or some other technology such as ZOOM should increase participation. Thank You for the opportunity to provide input.
I would like for the Wisconsin DNR to strongly consider going to 1 buck tag per hunter per year rather than the current 2 buck tags that are allotted. That 1 buck tag would then be valid in Archery, Rifle, or Muzzleloader season or until the hunter tags out. If you think about trying to control deer number the 1 buck tag makes far more sense. Take myself for example. I like to try and shoot 3 deer each year for my meat supply. Now since I’m eligible for 2 buck tags its unlikely that I will shoot more than 1 doe. However, if I only have 1 buck tag I'll be shooting 2 doe and possibly a 3rd if I don't fill my buck tag. And just like that you start to control the doe numbers better so you can avoid going to a doe only season. The buck to doe ratio is way off in my opinion. This 1 buck system would help balance that. In addition to that, you will create a hunting environment that people desire to hunt in when you have a better balance. This will help our tourism and Non-Resident hunting. Non-Resident Hunting should also be changed, allow fewer Non-Resident tags and make a draw system if the allotted number of tags get sold out. Also raise the price of a Non-Resident tag. If we have a good hunting environment the people will come regardless of price or tag availability.  

Take the State of Iowa for example. Known for some of the best Whitetail hunting in the Midwest, they have a draw system and the tags for a Non-Resident cost in the neighborhood of $600. 2020 will be 4th consecutive year applying for a coveted Archery tag in Southern Ia and I am very hopeful that I will be awarded a tag. As you see, the hunting environment is so good that so many people want to hunt there that I am willing to spend $50 per year on preference points and the $600 on a tag and am also willing to wait 4 years to go because I know how exciting the hunting will be along with the higher odds of bagging a trophy deer. The same cannot be said for Wisconsin. That is why we need to change our buck to doe ratio. It doesn’t mean increase our herd, it simply means to balance the numbers. I would love to participate in a study where we conduct research on the deer numbers, license & season structures, and license costs of other states so that we can compare the data and make an educated decision to move Wisconsin forward as a desirable state to hunt in again. The declining license numbers in Wisconsin are a sure indication that we are no longer the Best in the Midwest when it comes to trophy Whitetail hunting.

Monroe County farm land zone is in a deer over population situation. On my farm in southern Monroe County white pine browse lines are as high as the deer can reach, oak regeneration is abysmal. CWD is on our door step and we need to do everything we can best manage our herd. I believe we need to reduce our overall target population and we should be in a population reduction zone not maintain. As I listened to the Monroe County CDAC presentations and those of the surrounding counties it appears biologist agree that the deer herd is growing and we need to be aggressive in the antler-less harvest. I also understand the frustration in trying to motivate hunters to take more deer. Few counties with high populations have been able to achieve their quota. The single best deer population reduction method we have utilized to date has been Earn-a-Buck. We need to argue counties need the EAB tool but thats not a choice for 2020. If we don’t give hunters the right signals we could find ourselves in an antler-less hunt for all seasons in the not to distant future and that will be far more unpopular that no buck season at all. Coulee Country QDMA has sponsored raffles for deer donation and CWD testing which has created interest but its still not enough. One of the tools we do have is the Holiday Hunt. Its easy to compare the number of deer harvested in 2018, (153) when we had the Holiday Hunt vs (4) in the similar period in 2019 when we did not have the Holiday Hunt. I strongly encourage the adoption of the Holiday Hunt! I also recommend increasing the farmland tags from 2 per license to 3 per license. I know this historically hasn’t moved the harvest much but its a signal we need to send. The no change and herd maintain message is giving a signal that "all is well" and its not. Enter Covid 19. Families are economically struggling and food pantries are seeing record demand. We have high quality protein in abundance we can share. I think we can anticipate that more families would appreciate the opportunity to receive or harvest for themselves venison for the coming year. The silver lining is that Covid 19 may give us the opportunity to come closer to our harvest quota if we as hunters take herd health seriously. Thank You for the opportunity to provide input.
At a minimum go back to 1980s - 1990s of 9 day deer gun with first 2 days either sex and the last 7 buck only. This makes the hunter decide to take an antler less deer earlier when the hunting pressure (more people in woods) is highest. The use of longer and extra seasons will not bring in enough hunting pressure to make for a stable predictable deer harvest like a shorter well run season of either sex first two days buck for the last 7 days. If there is crop damage to deal with that should be free landowner either sex tags as needed. The long term goal should be to develop a plan to get to a point where there is a single deer gun hunting season (9 days or less hunt) without tags, limits or licences. Today we effectively do not have age restriction so the closer we can get to no licences and no limits with same day on line reporting will dramatically reduce the cost of implementation and enforcement. If you compare today we already receive three tags for one licencee and by the DNR numbers are hardly ever filled full for one person in deer gun so the risk of over harvest is low even without licences or bag limits. Often times the cost of processing the meat of more than one deer is to expensive for an individual. A hunter safety certificate is all that each hunter would have to carry if they were born after 1973 or whenever that law was enacted. Focus on hunter safety, enforcement of existing trespassing laws, self reporting deer registration on line and a shorter more focused hunting season to increase success which would increase interest in non hunters or youth hunters. If this open policy was too successful you simply shorten the season to 7, 5 or X amount days as needed. With same day on line or phone deer kill reporting the DNR could simply stop the season once goals are met by management unit.

With research (Czub, et al) suggesting the possibility of CWD jumping species to primates eating small quantities of CWD contaminated venison (https://www.cdc.gov/prions/cwd/transmission.html) I would like to see a serious effort at controlling this devastating disease in Monroe County and throughout the state. I find it insulting that large game (deer) management experts have seemingly ignored the threat to not only those of us that enjoy harvesting and eating venison, but also the impact it is (and will increasingly have) on agriculture. I now have customers asking whether our beef is grazed and/or comes in contact with CWD carrying deer. What do I tell them? I can not in good faith say no, and the more I read (at first in an effort to discredit their questions) the more I now share their concerns. If prions can exist in the soil and our forages for unknown amounts of time, the economic fall-out (agriculture, deer hunting tourism, land prices) from CWD will be inevitable for Wisconsin if we do nothing. I don't want the blood of not doing everything we can to stop CWD of my hands, and I sincerely hope those in a position to make a difference will have the courage to speak out on this issue. I do not see the point of a 3 year management cycle while the destruction will be eternally catastrophic. I do, sincerely, appreciate the work being done by the DNR and supporting agencies, however can not understand why this issue is not at the forefront of our management discussions. Again, thank you.

I have been hunting deer for 30 years straight. In our area, I have undoubtedly seen the number of deer decline, but for many reasons. Predators, overkill for too many years, and migration. The deer go where there is no pressure. This aspect has also changed. There’s not the same kind of pressure these days because there's less hunters in the woods. The deer know exactly where to go and hide. This has become a major problem for the hunters in this area like myself. We simply do not see the same kinds of numbers that we used to. A final thought. Bow hunting. It's become huge. And as far as I have seen, the deer have become educated over the years because of it. I see deer looking up in to trees now. I see the major population coming out at night almost entirely once they figure out there’s hunters in the woods. That may sound odd but I believe there’s some truth to it all. I don't have a recommendation to combat this problem but deer behavior has definitely changed over the years. Last thing, I strongly support the youth hunt, but I also strongly support pushing it back in the year a little bit. The biggest aspect we teach our youth is safety. The youth hunt occurs during a time of year where you can't see hardly a thing beyond your target because there's so much vegetation left on the trees and ground. I really think the hunt should be the first part of November and the start of the regular deer hunting season should be pushed back another week. Thanks for reading.
My first year hunting was the best. It was the year 2000 and I was 12. I believe the rules and regulations were fine. Ever since then, everybody thinks this or that and rules get changed. Kids looked forward to going hunting because they couldn’t, until they were 12. There was an archery season that did not! Include crossbows unless you were disabled or a certain age. There was one single guy season with the first 2 days being shotgun only, which was cool, different, challenging. No youth should hunt till they are 12 and safety certified. There should be no youth season for anything. There should be no other gun season other than the traditional 9 day. There should be no deer farms or commercial deer anything. Go back 20 years and stop tinkering with what worked. The sport has become so catered to everybody. It has turned thousands of people away because it is not what it used to be. So go back to what it used to be! There isn't enough land or animals for everybody to be successful, but yet the DNR thinks more people need to hunt. That's nonsensical. If you haven't realized that making more seasons, weapons, younger hunters hasn’t improved license sales then take a note from the history books and go back a couple decades. Frankly, the sport is in shambles. Wisconsin conservation is terrible. It is owned by private interests and corporations. Anybody that took part in this last 20 years of changes should be very ashamed of themselves.

As a lifetime hunter and retired DNR employee I believe the agency is missing the boat in its' managing some issues associated with the deer herd management. It is quite apparent that the numbers of deer licences sold has been a long focus because of the revenue generated. It is also well known that the insurance industry has had an influence as related to the number of car killed deer each year and their supposed losses in revenue due to said accidents. If the agency wants to reduce herd populations it would seem reasonable that with the decline in hunter numbers the seasons need to be opened up to allow the current hunting population to increase the kill. By opening up I mean extending seasons where needed. For example, weather plans a critical factor each year and is so variable. The agency needs to be able to extend the seasons as the deer kill numbers come in to meet the projected target quota. I am all in favor of extending the muzzle loader season through the entire month of December (as Michigan does) since it is a more primitive weapon and many who would try hunting in this way don't because the season runs right after the deer gun season and the timing is wrong with work and family obligations. By extending the muzzle loader season more deer would be taken. I personally purchase a Conservation Patron license each year to support my outdoor activities and don't use all the privileges allowed under that permit.

I think we are getting to a point in our county where we should seriously consider ways to decrease the deer population, especially in the Central Farmland Zone. I have no issue with the current CDAC recommendation of maintaining our population. Quite frankly, with the constraints placed on them they really have no power to reduce the population anyway. We know that adding addition days to our current deer seasons, adding additional special antlerless seasons, giving out more antlerless tags, and focusing on filling every buck tag has never worked, and will never work in reducing deer numbers. The only option available to us at this time to reduce the deer population is by not issuing any buck tags. Let’s shake things up! Let’s be the first county in Wisconsin to truly commit to reducing deer numbers by focusing on increasing doe harvests this fall by not issuing any buck tags. Other options to reduce the deer population currently not available to CDACs to consider, but should be, include: Earn-a- Buck, Antler Point Restrictions and changing our deer management style from a "traditional" approach to a Quality Deer Management approach. These three options will need to go through our state legislative process for approval. About the only way to get the attention of our legislators, and let them know we are serious about reducing our deer population, is by not issuing any buck tags this fall.
Extending hunting seasons are completely absurd. The main reason for it is because of lower kill numbers. Well guess what, I bet the kill numbers are close to the normal or even slightly higher. But when the genius's in the DNR decided to first go away from back tags, now less people are buying tags because they don't have to worry about someone seeing them with no back tag. Then those same genius's decided to go away from registration stations. Not only hurting small town economy, but now less people are buying tags because they don't have to go in and register them anymore. So why even buy a tag? I live in a high amish community, they have no internet to register deer, no phones to call them in. Few years ago they would bring wagon loads of deer to the local bar to register. Now they don't have to and they are killing the same amount of deer. For some reason the dnr thought they could save money by implementing these changes but all they have done is taken more money out of there pocket by less LEGAL hunters. And in my final complaint, the deer numbers question on the online registration... worthless, if someone sees 30 deer while hunting, they put that they saw 3. Why, because they don't want a mandatory earn a buck, or a holiday season, or even an extended gun season. The old way wasent broken. Why change it.

The deer population in Monroe County is overpopulated and continues to grow. With CWD knocking on the door of the County I believe it is important not to just maintain, but to decrease the local deer population. Decreasing the population will both assist with slowing the spread and prevalence of CWD, but also decrease the impacts of overpopulation on local habitats. I've been impressed with the efforts by local groups such as QDMA to try and increase participation in both CWD testing as well as donating deer to the local food pantries, but I think Monroe County needs to do more. Anything we can do to increase the harvest of antler-less deer needs to be encouraged. I'm fully supportive of a holiday hunt and believe it provides a valuable tool for increasing the total number of antler-less deer taken and provides an opportunity to hunters who may have time and ability to get into the field during this time period. I also believe increasing the number of antler-less tags issued per license would be beneficial, especially if it is coupled with an active deer donation program within the County. Increasing tags and increasing donations to local food pantries provides an incredible opportunity to benefit both the people of Monroe county and to maintaining a healthy deer population.

C.W.D is not a problem that is why the Wisconsin D.N.R brought back the wolves, and introduced the mountain lions to the state to take care of the sick deer? I hunted from the middle of November 2019 to the first weekend in January 2020 On average every 3 days and saw nothing. The deer population is down. I drive a well known road for deer every day I have seen very little compared to other years. I have my share of deer accidents and I have had none for over a year. I am not complaining but the fact lies far less deer. If there are people complaining of too many deer, that live in these areas then maybe they should let people hunt their land. Example a farmer down the road said there is too many does I asked him to hunt and the answer was no. He said too many does he will not let me hunt do not complain. If you think that you are controlling the deer population wrong it is the land owner. The problem with the state stepping in to change this is it will cost the tax payer more money like usual. You want me to make more habitat I have 10 acres HA.HA. My solution is stop building problem solved. Do not worry the governor will take our guns away then that will end hunting in Wisconsin or the lack of land because of too many buildings.
Monroe County Farmland is over populated with deer! In the north central area of the county, you can not plant any tree species of wildlife value with out protecting them or the deer will destroy them. Oak regeneration is poor at best and some herbaceous plants have become rarer or disappeared just in my 12 years of ownership. Monroe County's goal is to Maintain the herd for this current term. We are now in a situation where we need to reduce the herd just to maintain. It is estimated that Monroe County has 49 deer per square mile of habitat. That is 2-3 times more deer than a habitat, even with ag land and food plots, can support. We have shown that the Holiday Hunt helps (153 deer in 2018 with and 4 in 2019 without). Even though additional authorizations only increase harvest 5% per tag, that is still another 150 deer per authorization. I would recommend harvest authorizations double to 4, that we have a Holiday Hunt and extend the bow season. Keep in mind, when you have a Holiday Hunt you need to increase the number of authorizations available for the general public. The hunt creates an "island of opportunity" for hunters who don't have the hunt in their county.

In my opinion the CWD has always been in the state. I have been around deer hunting in the state since 1976 and have seen deer that have been sick. Baiting deer or feeding deer is no different than if a deer eats from the same corn cob, apple, lick a licking branch or groom each other. When it was legal to bait I harvested the same amount of deer as now. The positives, allows young hunters to see more deer, helps the deer and it allows a hunter to be more selective on what they harvest. The number of deer harvested by firearms is lower now than years past because the hunting has changed. When we used to hunt we did deer drives and we also shot or used the phrase, brown is down. Most hunters now want to shoot a mature deer. That's hard when everyone keeps shooting the young bucks. Most people with private land use many trail cameras however because of the DNR's practices of years past do not trust the DNR and do not care to share there information. 99.9% of sportsman would love to share there pictures however they do not trust the DNR.

If the goal is to maintain the herd in Monroe County (central farmland zone), I question the rationale behind suggesting that the antlerless quota be increased by 35% (from 4,000 to 5,400). I watched the entire video provided for background information, and there was no statistically significant difference in the population estimate for 2019 compared to the two previous years, and the 2019 fawn:doe ratio was also not statistically different from 2017 or 2018. So if the population estimate appears to be about the same, and recruitment appears to be about the same, I do not understand why it would be recommended to increase antlerless harvest by so much. The only way this would make sense is if mortality was estimated to be very low, leaving more animals on the landscape. Additionally, hunters only harvested about 3,000 of the 4,000 antlerless quota in 2019, so if we didn't even come close to the quota and the goal is to maintain the herd, recommending more antlerless deer be harvested doesn't seem to make a lot of sense to me.

The above questions do not provide enough information. For example, the number of CKD is rising. Is the traffic or road usage also rising? Oak regeneration problems. How is this measured and what is acceptable? Deer are browsers and they feed on the leaves and twigs I’d think moreso in the winter. Lastly, the numbers themselves that are used in your metrics. Just how accurate are they? Especially the registration numbers? Are people registering as diligently as they used to? I think not. My frustration is that I see the number of antlerless/bonus permits rising each year and the number deer sightings dropping. In '19, I saw 0 deer for about 20 hours afield (opening weekend). This year in the first 2 1/2 days, I saw one deer, a buck fawn that I let walk. That would in about 25 hours of hunting. I used to be in double digits for an opening weekend when I acquired the land some 16 years ago. Land usage, farming has not changed.
I hunt on approx 200 acres of private property and hunted all of last years 9 day hunt (unfortunately I was unable to bow hunt last year) and saw 4 deer, 1 yearling and 3 mature does. This property is near the interstate and a major highway so I know the mortality from car-deer accidents is a big number (I've had more hit by my house this spring than what I saw all of last season). However, I don't think there is much that can be done about this issue. So, I would really enjoy seeing an antler restriction on bucks similar to southern, Minnesota. I know several hunters that are no longer hunting in this area and now hunt in MN for the large bucks. I would love to see a large buck but due to the car accidents and neighbors shooting everything in sight I don't think I'll ever get that opportunity here and may have to go over the river to MN (please don't make me hang out with my brother in law).

I am a passionate deer hunter with bow and gun and try to take 2 does for every buck but the last 2 years the coyotes have been an issue where we hunt. I have witnessed coyotes chasing deer like they were in a cattle drive. In 2018 A deer I harvested and had to wait 5 hours to retrieve due to a bad shot had 1 hind quarter devoured by the time I recovered the animal 150 yards from where i initially shot the deer. We harvested 7 coyotes out of the parcel I hunt in 2018/19 and 4 more this last season. Lack of Snow fall this last year has caused our local coyote hunters to not be able to drop dogs on fresh tracks unlike the 2018/early 2019 winter. This has caused a lot of deer population drop on my parcel I hunt. We found 2 dead deer this spring while walking the woods and field edges on the parcel I hunt also. No other hunters hunt this parcel but me. So I'm guessing they were predatory kills.

I would like to keep the current hunting season’s the way they were in 2019. Keep crossbow season the way it is and rifle the way it has been for years. I feel there are way to many antlerless tags available. My father has 80 acres of private land with all being forest. He see’s very few deer, the last 10 years on opening day he only see’s a couple deer opening weekend!! Terrible in my eyes!! My nephew only goes a few days out of the 9 day season. Can’t keep a relatively new hunter interested when you see nothing. My family has faithfully hunted every year, but even a dedicated hunter as myself is seeing fewer hunters and deer. Sad. Hunting is nothing compared to the 90’s. Seemed to be more deer. Way, way to many doe tags handed out like candy at a parade!! Let’s bring the number of deer back up for younger hunters to see at least some does..

I strongly feel that the deer population in the western part of Monroe county, say from city of Sparta to LaCrosse county line is too high. I live and hunt this area, my father owns land since 1972 and I am close to many other landowners and hunters for this area. Deer numbers are high. With less hunters each season and less hunters willing to shoot doe, I feel more bonus tags(free ones) should be given out so that those willing to shoot doe, can. Many will not pay to get extra tags. In light of CWD any encouragement to bring the population down some should be done. I love seeing a lot of deer when i hunt but this area has as high of deer numbers as I have ever witnessed. Many hunters enjoy seeing a lot of deer also and I feel that is why they want to "maintain" the population, but that is what is best for the deer herd or the landscape.

I oppose not having the holiday hunt. This provides an opportunity for families with members that live long distances away to hunt when they get together for the holidays. It also provides an opportunity to harvest more antlerless deer. The four day antlerless-only hunt is too short to remove antlerless deer especially considering the possibility of bad weather. This is often the only time you can get on private property to hunt as landowners restrict access other times to protect their bucks. I was sad to see in the comment section as reasoning for not allowing the hunt was that archers like to hunt this last week to fill their tag. How many more weeks do they need? The state needs to look at providing more opportunities to gun hunters if it wants the slow the decline in their numbers.
Hunters are going to take what they feel is necessary to maintain their deer herd health within legal limits. Simply giving a person more tags would not justify me taking more animals. If such a thing as an antlerless only season would come into fruition, it would only deter me from hunting. The proposed 19 day gun deer season would only benefit out of state individuals who do not care about our local area, I can take just as many animals in 9 days as I can in 19. Want to make more money? Charge out of state individuals more money for their tags so that we are inline with other states. It's time to take a step back and analyze individuals hunting habits more by implementing size restrictions on the antlered animals that they can take. By all means stop trying to mess with our traditions! I

My brothers and I own 350 acres of hunting land in northern Monroe County. We began hunting this property in the mid-80's. The first ten years we saw a lot of deer - double digits each day. That ended with the proliferation of doe harvest tags. A group next to us on private land shot over 12 does per year for several years. That is just one example. We have not harvested a buck the opening weekend of the gun deer season in the past 3 years. The next generation of hunters in our family have never seen a group of deer totaling over five animals. We have nine hunters and every year we have members of our group who do not see a single deer opening weekend of the deer gun season. This is ridiculous. We have the habitat and no deer. This is unacceptable and needs to change.

I think it would be excellent for more dnr biologists to hold these "podcasts" so we the hunters can stay connected with what the conservations/management side is doing and learning so we can use data to inform our decisions. There are too many assholes with opinions that are truly uninformed by data. I appreciate the work the DNR does, however, I feel like the gun deer season was ungodly bad this year (no I'm not a trophy hunter). To give background, I hunt fort mccoy so im not sure if that has anything to do with the low numbers I saw this year. Would love to hear back to see if there are any other resources I could access or people i could contact with my direct questions for a prompt response. Thank you for all that you do to help preserve our natural resources!

We need to review the youth season if we think that gun harvests are too low. I have not seen any numbers regarding the youth season, and how many "new" hunters it is actually providing opportunity for vs. just allowing young hunters out in the field earlier than everyone else. This definitely impacts deer movement, resulting in lower numbers of deer being seen during the remaining bow season and the regular gun season.

In Central Farmland, there are way too many deer. Farmers are loosing excessive amounts of corn and soybeans. We see deer and pasture fences and causing issues with cattle escaping. If you hit a deer, your insurance pays for it. If someone hits a cow, the farmer is responsible. Family farms are struggling to stay in business. Is a large deer population, which makes hunting less exciting, more important than keeping family farms alive? Rich hunters seem to make all the decisions. Farmers are trying to feed the world. Who should be supported?

I have been hunting this unit my entire life. The deer population is nothing compared to what it used to be. It is very sad watching my son get so discouraged hunting that he does not show much interest anymore. When I began hunting, we had to apply for an antlerless tag. I know that will never happen again, but these bonus tags are ridiculous. The land around us is getting bought or leased by new hunters for the area. They shoot everything that moves because they have almost unlimited tags. Every time I allow a small group of anterless deer go by me, they are soon shot at the moment they cross property lines. I am very concerned about the over harvest of anterless deer in the unit I hunt in.
In my opinion there are not enough hunters hunting the big farms to move deer around on the private lands. Most are shooting a couple bucks and no does. In the past 3 years my business has not allowed me to get out and hunt much, but I spend a lot of time talking to hunters. I have noticed that most does have twins and triplets, it is rare to see a single fawn with the mom for the past 3 years. The amount of predators is bad too. I have had very large packs of coyotes keeping the deer hunkered down for 3 to 4 weeks at a time. I have come across many fawns killed by predators in the past 5 years. I think the archery season should be extended to the end of January no matter what.

I have been hunting over 40 years with a bow and gun. There is no need for any more bonus tags or special hunts. I have no problem with someone shooting does with their deer tags, but one with gun and one with bow is plenty. Two deer a year for each hunter is enough. There is no reason to be greedy. There is not as many deer now as was in the 80s or 90s and if you want people to keep hunting there has to be game to hunt. If young people go out hunting and don’t see anything there not going to hunt long. Public land hard enough to hunt so it’s nice to go out and see something. You keep shooting 3 and 4 does and year hunting will get harder.

I continue to fail to understand how the DNR and NRB thinks that Antlered and Antlerless deer are two different sexes of deer. Male and Female, Buck and Doe, but Antlered and Antlerless? A good friend of mine who ran one of the largest deer registration sites in Vernon Co. told me year after year that well over 50% of the Antlerless deer they registered were in deed “Buck Fawns”. Why in the world can’t these buck fawns be entered into the statistics as male deer / bucks. Why are they still being recognized as female / does? I just do not get it. All of the data concerning sex ratios of deer harvested are worthless and meaningless.

The DNR should come and hunt with me and see how badly you doughheads are doing on managing the deer population. THERE ARE SO FEW DEER THAT IT IS ESSENTIALLY USELESS TO PAY FOR A LICENSE. I sat quietly in my ground blind for 7 days of the season last year and saw a total of 3 deer. You have just about eradicated the species and now ask dumb questions about how to manage the deer. If you were hunting in my area you would know how badly you are doing. THREE DEER IN 7 DAYS OF DAYLIGHT TO DARK IS TERRIBLE. Victor Eirschele and I own the land which cost me over $810 last year and can’t get a deer. You people tick me off.....

The number of predators in our hunting area have been on the rise. I am close to Ft. MCCOY and there are wolves established. Bobcats, coyotes, and black bear are consistently showing up on our trail cameras. This was not the case 5 yrs ago. I have been going to the woods since I was 5 yrs old. I have passed the love of this along to my children and my 15 and 13 yr olds both hunt. It is difficult when sightings are going down. I would support a one buck rule per year regardless of what weapon. Thank you for all the work you guys put in. I know it’s hard to achieve balancing science and social issues.

I have seen a good three year trend of a decrease in deer sightings on my property which includes both bow and gun seasons. One observation that particularly concerns me is the decrease in doe and fawn sightings. The trend on our property has been to sight equal or more antlered deer as we do doe/fawns. We used to have a much higher ratio of doe/fawn to buck sightings. This leads me to wonder about the health of my local herd and if their truly is an imbalance? I would like to see us reduce the harvest quota numbers for antlerless deer to one per license for the 2020 season and continue to monitor.

I believe the way things are is a very good way of managing the heard. A couple of points to consider though. 1) Do not increase the gun season. Nine days is plenty of time to harvest deer with a firearm. And do not make it earlier in the year. 2) Do not create a crossbow only season. Keep crossbow and regular bow the same times. 3) If it’s money you are looking for (which it always is), why not work with groups that promote public land hunting to draw in more tourism. Reach out to people like The Hunting Public group on YouTube. Their influence could have great effects on the sport in Wisconsin.
We have seen a three year trend of a decrease in deer sightings on my property which includes both bow and gun seasons. One observation that particularly concerns me is the decrease in doe and fawn sightings. The trend on our property has been to sight equal or more antlered deer as we do doe/fawns. Alot of the public areas seem to be hunted out. Also I feel that wolves and coyotes have also played a factor in this. I feel not being able to dispose of deer carcasses to the area harvested also jeopardizes deer population in those areas as wolves and coyotes then prey on the living animals. I feel the new way to register deer also does not give you an accurate kill count. Many people hunt in other countries and register them in Monroe County. Many deer just plain dont get registered either. Please review the registration system it needs changes to hold hunters accountable!

I simply form my opinion based on how many deer my 3 hunter crew sees each year during opening weekend. So, my thoughts are not thoroughly vetted because of the short hunting time. I do spend lots of time during turkey hunting in April&May, and visits during June at this camp ... so i am observing the property during Spring. The fact that we see quite a bit fewer deer in our 40 acres the past 5-7 years tells me the count is down - we see deer on neighboring properties as well, but in smaller numbers the past 5-7 years. Thanks for the work you do in preserving our hunts!

Seems like deer numbers are high and cwd is a threat. I hear talk of crossbows being band during the rut. Traditional bow hunters are known for passing on deer and seem to only care about horns. Personally I'd like to see crossbows go though the rut and the gun season last through December. Deer numbers need to go down! Stop catering to traditional bow hunters. I own private land, pay a large amount of taxes why can't I use a gun through December? If you want people to fill their tags let them hunt how they want to on there own land.

Do not change time of regular gun deer season. To many changes have already been made and in my opinion most were not good. The regular gun season is about the only tradition left so lets keep something! Hunting has been made easier and more high tech over the years, cameras, crossbows, comfy hunting blinds, etc..etc... And it seems no one is happy! All most want to do is complain about others having the advantage! Lets keep regular 9 day hunt at the same time, through thanksgiving. Lets keep some tradition!

Seeing 20-30 deer in a field can be exciting. When you think about how much foods it takes to support than many deer it is disturbing. It is our farmers and woodland owners that are feeding our deer herd. I don't think we need to increase harvest permits, but I do think we need increase opportunity. This is why I support the holiday hunt. It provides hunters an opportunity to hunt deer when they are back to a more normal feeding pattern after the pressure of the 9-day season. Thanks.

Too many antlerless tags being handed out or sold. Seeing vehicles piled full of does, doe/buck fawns and then the same people complaining of not seeing any deer. Stop giving them tags to fill and maybe deer will be able to grow. Not seeing hardly any deer compared to 15 years ago. It’s not the weather or time of year. I’ve hunted the same private land with the same family members and no one is seeing any deer like in the past. Deer numbers are not as high as what is being told to us.
6377 Keep regular 9 day deer season. Give the kids the doe tags. Don’t mess with the seasons or Wisconsin will loose many hunters. Get rid of these early doe seasons, very unfair to bow hunters. Let the insurance companies pay for car versus deer collisions, that’s why we all pay for insurance. Don’t let them sway the DNR to create more seasons and hand out more tags. Non resident licensing should cost a lot more, look at what we pay to go out of state. Thank you

6378 All the special hunts have caused the deer to go nocturnal by the 1st. of November they do not come out of it until into January. Extending the regular rifle season will not solve this. I have been hunting since 1965. Started in the southern Clark and eastern Jackson County in its hayday. I have seen many changes but none have had this same effect. Since I have started hunting the only act that has not been legalized is hunting at night.

6379 I think you should utilize the holiday hunt and extended archery season to expand opportunities to harvest deer and get the numbers down. I would much rather have that, than to see the NRB implement a 16 day deer season or other options related to the questions asked on the spring hearing questionnaire. Use all the tools in your toolbox to reduce deer numbers or the DNR/Legislature will do it without CDAC input.

6380 I think that there is an abundance of deer within the county, there is definitely a need to harvest antlerless deer. I would like to see a “holiday antlerless season” with also a January extension for bow and crossbows. The more opportunity to hunt the more chance to harvest antlerless deer. The only thing is that if there is a holiday hunt there needs to be a January extension as well!

6381 I have only one opinion at this time, that’s why I answered no opinion to most of the questions. My opinion is that the gun season should also have some of the season during the rut. It is not fair that all the rut season is during bow season. All gun and bow hunters should have a chance at seeing big old bucks during the rut rather than just bow hunters having this opportunity.

6382 Please keep the status quo. Monroe County is an amazing place to hunt, managed by reasonable people. Please keep things as close to last year as possible. I wouldn’t mind a Holiday Hunt as it offers people that might not be able to enjoy the 9 day gun deer season a chance to put some meat in their freezer. Deer numbers are steady, I hope we keep ourselves steady as well. Thank you.

6383 there are so many different habitats with in the county, crop lands, la crosse river, meadow valley. be careful with your fixes for on area type as it effects all area’s. I hunt la crosse county with in a mile of where I hunt in Monroe county and don't see any deer. Don't confuse deer management with generating revenue. I hunt for the family fellow ship passed on for generations.

6384 The 9 day gun hunt should stay exactly the same. The holiday hunt should include buck and doe rather than extending the 9 day traditional gun hunt. Land owners should be required to take a certain amount of antlerless deer per year, or risk not getting buck tags. Size of property and amount of antlerless quota should be determined by the cdac if in maintain or decrease rating.

6385 I feel there are a lot of deer harvested that are not registered. I feel we need to bring back back tags and in-person registration to better enable enforcement by wardens and have a better idea of true harvest. I also am TOTALLY OPPOSED to opening Gun Deer hunting earlier than the present structure. I also feel crossbow hunting has had a negative impact on our deer seasons.

6386 Still haven’t forgiven the miss management from the dnr and Cwd back in early 2000 with their earn a buck program that devastated the deer herd for years. Still haven’t gotten back up to years past of hunting levels since then. Harvesting one less deer each year hoping to see the population grow for future years. Stop killing all the does!
Deer license prices need to be lowered along with all licenses. It is too expensive to be a hunter nowadays and there are too many restrictions/complications. Costs for guns, bullets/shells, other equipment and meat processing has skyrocketed. It is no longer a cost savings to hunt deer for meat rather than buy hamburger in the store.

In the last three years, I have seen less deer. I think there are too many permits given in this area and not enough deer. I think there are too many seasons for deer harvesting. It's amazing that any deer survive. Predators are on a rise, more seen on trail cams. I have yet to harvest a deer since hunting this area.

Move the gun deer season to coincide with the deer rut. That is the only way to control the deer herd. The bow and arrow hunters don't kill enough deer during the prime time of the rut. Every thing changes with time and it is time to adjust with the timing of the rut for a better and more efficient deer harvest.

I think the predator population in the Fort McCoy unit needs to be studied further and addressed. The wolf population is larger than what I have read about and I believe it to be adversely affecting the deer population. While they are not the only predator in the area I believe they are causing the most harm.

I personally hunt 60 to 100 hours a year. Im seeing less and less deer i dont stricty hunt for horns i do like the meat but when you sit for 8 to 10 hours straight and see 1 to 3 deer when just a few years ago it would be 5 to 10 the deer are not there. If you keep killing does there we be less and less

Been hearing about the possibility of earn a buck again, I have no problem with this. We've all heard about the group of multiple people who all register the same doe. If this happens and they are caught and convicted they should all be fined for an illegal deer and loose hunting license for 3 years.

Bow season starts too early with warm weather and then wounded/down deer spoiling before getting processed. Recommend starting bow season at least two weeks later and because of smaller deer numbers stop extra hunts. Bow season and gun season are enough for Monroe County deer herd.

It would be interesting to see if with the way the Global climate has been changing if an earlier season would be considered as the past few years it seems that the Rutting season continues to come earlier and earlier. Leaving less deer movement during 9 day gun season

I know it's always during Thanksgiving week. When Thanksgiving lands at the end of the month, it should be earlier. Or have a set date it starts, not just aligning with Thanksgiving. The later in the year hunt is why not as many deer had been harvested this year.

I really enjoy the deer gun season. I own a little farm and have family and friends hunt. Last year the numbers harvested were les, but I believe it’s based on corn crop stil on the fields. Thank you for all you do to make this possible. Keep up the good work!

Leave the 9 day gun season alone and stop trying to cater to hunters that complain and don’t harvest something every year. IMO, there is no reason to change it. Bow and crossbow season is the same thing and should be treated as such. Plz, leave it alone.

I would prefer everyone to get one buck tag per season that can be used for Gun, Crossbow, or archery. Personally, I would shoot more doe's knowing that I can only shoot one buck per year. As I depend on 3 or 4 deer per year for my food supply.

I feel that the harvest numbers will continue to decline every year for these reasons. Hunting styles have changed drastically. Hunters don’t push the deer like years past, more trophy hunters that aren’t interested in shooting antlerless deer.

Deer sightings and overall deer counts have dropped substantially in my area over the past 8 years. I would prefer a buck only hunt, with a minimum point count of 4 on one side, for the next three years to attempt to raise the deer population.
I do not agree with any notion of moving gun season a week earlier if to extend it it should go later. October 25 thru November 20 is our prime bow hunting and gun season earlier would ruin our rut hunting with archery equipment.

Bring back back tags!!! We’ve had trespassers on our property ever sense you’ve gotten rid of the tags. There is no good, solid way to report trespassers if you can’t give them their real name or number to the authorities.

Not specifically this unit, but I’d like to see the gun season start a week earlier and be a 16 day season instead of the 9 day season. This would help with the effects of weather & holidays, etc on the season.

The Amish are destroying what is left for good deer hunting by me. Put a limit on how many kids they can have this may help bring back the herd in these areas. 4 points a side should be standard for buck harvest.

There does not need to be longer gun season with more tags. People just need to shoot more does with the tags they already have. Adding tags will not help because people aren’t using the ones they already have.

I recommend adding a purchase option for additional antlered tags for archery season. To increase revenue for WDNR, increase hunting experience and to eliminate non-desirable gene’s from the herd. Thank you.

If you push gun hunting into the rut, you will kill half of next year’s fawns. Please don’t. Archery is open then. Archers are far fewer in number, and in general more selective, and definitely quieter.

I would like to see an early muzzleloader season, either through a earn a point draw or coincide with the bow season. Not interested in inline muzzle loader but a true muzzle loader with open sights.

Please STOP the December doe hunts/holiday hunts. Too many shed bucks and buck fawns are being killed. Bring back traditional late season bowhunting. We want hunting like it was 20 years ago.

You are turning Wisconsin into the wild Wild West, there’s is more pouching going on then ever before there is no accountability and your letting violators teach their kid that there is no rules. 😞

Thank you for all your time and effort in keeping a reasonable deer population in our state despite the many problems like CWD, wolves, bear etc. I really appreciate all you do!!!

The public/private tags are incredibly inconvenient. The antlerless only season is frustrating and leads to lower hunting numbers. CWD has been an excuse for some bad laws.

My answers are from what I see on my land. I do understand that 10 miles away people see 25 deer on opening day but I may not see any the whole season here. Thank you.

I personally believe DNR estimates of deer numbers are inflated and wrong. I also think a lot of the decisions made for the season are based on selling licenses.

I’m satisfied with the present quota system as in it’s present form. My present thoughts are that the dnr should not increase the doe harvest numbers.

I believe the back tags need to be brought back... it is far too easy now for people to hunt without tags and for people to not even register deer.

Everyone wanting to hunt with crossbow has left fewer bucks for gun season. Maybe you could add 22cal and shoot all of the bucks.

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

104 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 39
   - I visit this unit for non-hunting purposes: 22
   - I hunt in this unit: 92
   - General interest in this unit: 15

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 85
   - Bow: 45
   - Crossbow: 25
   - Muzzleloader: 29

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 23.71
   - Maximum: 60

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 49
   - Mostly Private Land: 6
   - Public and Private Land About Equally: 8
   - Mostly Public Land: 5
   - Exclusively Public Land: 22
   - I did not hunt in this unit last year: 2

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 6
   - Not too crowded: 7
   - Neither crowded nor un-crowded: 6
   - Somewhat crowded: 12
   - Very crowded: 8
   - Not applicable: 2

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 25
   - Fewer: 20
   - Same: 36
   - More: 14
   - Many More: 6
   - Unsure: 3

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
Implement an ANTLERLESS HOLIDAY HUNT:
Not applicable in this DMU

If a Holiday Hunt is held in a Farmland unit...
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021:
Not applicable in this DMU

If the Population Objective is not "Increase"...
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons:
Not applicable in this DMU

If a Zero Quota (buck only season) is adopted...
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?

6446 There are some proposed changes that I do not see listed above, but I would like to express my opinion on. 1. limiting crossbow hunting to October. Archery hunting should be open to all. I have a hard time telling a person that does not possess the physical capacity to draw a bow that can ethically kill a deer, but could archery hunt with a crossbow, that they can't hunt. It isn't right. That being said, I don't love that a number of folks have switched to crossbows for increased range. The ethical kill range of a cross bow isn't really that different from compound bows, so better education about ethical use of crossbows is my recommendation. 2. No bow tags filled during rifle season. Hunting with a bow during gun season doesn't negatively impact rifle only hunters in any way. If your neighbor is limited to half the range to effectively harvest an animal compared to you with a rifle, isn't that advantage rifle hunter. This sounds like upset and jealous rifle only hunters. 3. Extending rifle season an additional 10 days on the front end of rifle season. Honestly, I think this would be an absolute travesty. If the rationale is that not enough deer were killed in the 2019 rifle season, look at the timing and weather conditions. Terrible weather for the majority of the state on opening weekend, the only 2 days the majority of rifle hunters hunt, hampered deer harvest. It was also November 23rd for opening day as opposed to November 16th the year prior. November 23rd is absolutely out of the rut and when the deer normally hunker down to recuperate following the activity of the rut regardless of hunter pressure. November 16th is at the tail end of the rut, making daylight deer activity higher. The massive hunter pressure that pushed deer to mostly nocturnal activity following opening weekend of rifle season occurring during the rut would negatively impact breeding in way that can't be predicted. I would hate to see the deer herd decimated and reduced tags sold to build the deer herd again. These changes seem to be pushed by rifle only hunters who feel that bow hunters having a longer season gives them an unfair advantage. I would encourage those folks to pick up a bow and join us rather than trying to take hunting time away from bowhunters. Learn to be a better hunter and a better deer conservationist rather than blaming the neighbor for getting the buck you wanted 1-2 weeks before rifle season. These changes listed above seem ridiculous and I am disappointed to see that there is even debate around them.

6447 There are several reasons that see fewer deer. Too many does have been harvested over the pass 15 or more years and the wolves have moved back into the area. I can recall seeing a herd of 12 doe running together. Now if we see 2 deer all day its a good day. I have seen more predators in the pass few years then deer. Last year I was lucky to get a buck, but I was the only one out of 14 hunters in our area to see a deer. We have several new hunters in our area including my 14 year old grandson. He is getting discouraged not even seeing a deer. When we return to the hotel and see empty racks we start to wonder if this is worth the cost of a hotel, meals, license and gas. I know it will take time to rebuild the herd, but it must start with resolving the problems. Some of my fondest memories were hunting with my dad and hunting with my daughter. Now they are all getting discouraged. I hope management can resolve the problems so our kids can enjoy creating those same lasting memories with their kids for years to come. Our group is on our 4th generation of hunters in this area, the oldest even passed in the woods while hunting. Please let's continue to the 5th generation.

6448 Within the last 5-8 years the deer population has risen greatly with little to no antlerless permits. I have personally seen a rise in the deer population in those years... however I think the deer population should/could be more with more strict regulations on antlerless harvests... it would be nice to have public land where you see multiple deer even though you wouldn't be able to harvest all of them... I believe many hunters would value this higher than being able to shoot what they see until the population is to where to land inhibits max population, without causing damages to over wildlife and vegetation.
I am also worried about the clear cutting happening. Where it was clear cut a few years ago on EW between Mather and Warrens it looks like the forest floor is covered in a white pine carpet. You have ruined this forest. It used to have a big oak ridge, now there are no oaks coming up only pine. I have hunted this area for 40 years and I have watched it decline over the last 20. I have not seen a deer in this area in 4 years. And now there are barely any hunters either. What does that tell you about the deer population? There aren't hardly any deer left in state land, there are plenty of deer on private land.

The single largest threat to growing the deer population to ideal capacity is the ever growing, ever expanding, unregulated and grossly underestimated wolf population. Until you have a tool to effectively control their numbers, further growth of the deer herd to desired carrying capacity-on both private and public land-will not be achieved. While I praise the efforts of the CDAC, I strongly believe your hard work and planning will be all for naught. Please continue to demand state oversight of the wolf population from our state and national legislators.

Personal opinion: I would prefer a buck only season or an antlerless quota of no more then 5% of the total county harvest. Hunters and landowners mistakenly believe that less deer on their property is beneficial to the herd rather than a threat to the social stability of the deer groups that their property supports. And for a conservative hunter it's troubling to observe or hear of other hunters harvest antlerless deer at high numbers with no regard for population density variables.

I think the amount of antlerless tags available on public lands should be cut in half along with reducing the quota. Between the bears, wolves, coyotes and bobcats there are a lot of mouths to feed, esp in the north eastern part of the county. From my own experience bear baiting in the summer, I see few deer, while the deer I do see seem to be good quality deer, mostly does, I see very few fawns, even in the fall while hunting, again very few fawns.

Farms as far as the eyes can see and beyond yet our part of Monroe County is considered “forest zone” Somehow the magical boundary of the 90/94 Interstate four miles to the south allows those residents/hunters to obtain ample antlerless tags while we have not been able to purchase additional tag for 4 years now. Three nights ago FOURTEEN does/offspring walked across the field at 6 pm. How many more do we need before we have “enough” to harvest?

Restrict and limit deer farms, my concern is the spread of CWD that has occurred. At the very least enforcement of substantial testing and secure containment. I believe the removal of the bag tag requirement has increased the potential for game violations and absolutely trespass violations. Your staff at the DNR has been very helpful and professional when I have called for advise or assistance. Thank You

I don't like that back tags were taken away. To me those were for our own protection n served as information incase something happened to them and also proved the hunter had a license. I also don't agree on online registration. took alot of business away for the local community. People like to gather and show their harvest and it also created revenue for them.

I have owned land in this unit for 42 years and seen the deer population go up and down. Last deer season and this soring I have seen many deer. I have a small food plot in the woods and have a picture of 13 deer in that plot that measures about 40 x 60 yards. I think a few more antlerless tags on both private and public land in this unit would be advisable.

I feel that since the 2000s kill every deer in the county, that the numbers have not really changed. I still see low numbers of deer in my area since then. I believe we need to cut back on the does being shot so this can happen. I also hunt in 2 different locations in the forest zone and see close to the same numbers in each location.

Reccomend going back to a draw for antlerless permits. Not everyone can be at a computer or Point of sale when permits go on sale. This would give everyone an equal chance to get a permit. Also, remove the public private land from youth antlerless permits. Let them shoot a doe wherever they choose.
The DNR totally messed up the deer population in this area with years of unlimited $2.00 bonus tags. It became rare to see a deer. Then the wolves moved in. The deer population is finally coming back. Let's keep it going in that direction by limiting antlerless tags. Thank you.

The proposal to extend the gun season would further decimate the public deer and would have little effect on private. Private ground will get better and public will get worse, making hunting too challenging for young hunters that are forced to hunt public.

We have hunted private land exclusively for 40 years in this county. The deer population is not anything like it was. We have deer cans that show very little wildlife activity and each year less and less. Harvest rates are way low!

There shouldn't be any late-season antlerless hunts allowed on public areas in the central forest zone. As long as the antlerless tags are LIMITED there should be no antlerless season allowed.

There are plenty of doe now in northeast Monroe County. However, ZERO doe tags available for the public land hunter. Please change this.

Stop cutting down all the trees on public land throughout the state. I've now lost two good hunting areas because of this.

The number of antlerless tags is acceptable for this unit but I would like to see a few more. Thanks.

Happy to see the increase from 350 to 550 for the Central Forest Zone for private land.

Please allow crossbow usage for everyone for the entire duration of the archery season.

See very few deer anymore in my area, about ready to give up on hunting.

We continue to see wolves every year - 8 years in a row now.

Tough job to make everyone happy, keep trying! Thank you.

Please do not change the 2020 deer season.

Stay with traditional 9-day deer gun hunt!
Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 249
   - I visit this unit for non-hunting purposes: 118
   - I hunt in this unit: 531
   - General interest in this unit: 92

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 498
   - Bow: 283
   - Crossbow: 268
   - Muzzleloader: 203

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 22.04
   - Maximum: 66

Section 2: Perceptions about the number of deer in the unit.

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 339
   - Mostly Private Land: 87
   - Public and Private Land About Equally: 37
   - Mostly Public Land: 24
   - Exclusively Public Land: 42
   - I did not hunt in this unit last year: 2

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 19
   - Not too crowded: 63
   - Neither crowded nor un-crowded: 44
   - Somewhat crowded: 20
   - Very crowded: 33
   - Not applicable: 11

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 103
   - Fewer: 159
   - Same: 216
   - More: 50
   - Many More: 17
   - Unsure: 12

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
- Implement an ANTLERLESS HOLIDAY HUNT: 224 Support, 266 Oppose, 67 Unsure
- EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: 337 Support, 171 Oppose, 48 Unsure
- If the Population Objective is not "Increase"...
  - Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 70 Support, 457 Oppose, 30 Unsure

If a Zero Quota (buck only season) is adopted...
- Should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? VALID, NOT VALID, Unsure
- Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit? Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

Comments for  Oconto, Central Farmland

Note: the comments presented in this report are the unfiltered opinions of individuals who responded to an online public input form. The viewpoints expressed do not represent the views of the state of Wisconsin, the Department of Natural Resources, or its employees.
I read, listen too the earlier discussions on season structure. I am strongly opposed to any change in the Gun Deer season structure or the Archery/Crossbow structure. My opinion here is this. The DNR isn't worried about deer numbers, lets face it, no matter what the data shows, deer numbers are way down from 20 or even 10 years ago, when QDM was pushed, telling hunters to kill as many does as possible in order to see bigger bucks. What this has done is not necessarily increased the opportunity to see bigger bucks, it has decreased the opportunity to see any deer in general. I am hunting properties that 20 or even 10 years ago, I could sit opening weekend of rifle season and see deer all day. Now, I have to sit all week and will maybe see the same group of 4 or 5 does/fawns a couple times that week. Does that really sound like fun for a new hunter? The DNR is concerned with revenue (which it should be) and revenue comes from Tag sales. The only way to get new hunters interested is if they can go out and see animals. Young hunters have so many other things they can do, sitting looking at the same tree and not seeing deer is not something they will do. Continuous decimation of the doe population creates less deer for hunters to see. Fact! Now for me its fine. I have hunted for 25 years and I will sit for 2 weeks straight all day bow hunting just to see a nicer buck. But that is not how newer hunters (new revenue) will want to do it. Having an antlerless only season. Where for a whole year or two no bucks can be harvested, would also not increase Tag sales (revenue) and will most likely turn hunters away. You might get more does killed, but you also will probably lose revenue. Most hunters that want to shoot a doe are already doing it. About the proposed changes to the Gun season structure: I am strongly opposed to any change. Moving the Gun season into the RUT, not even giving the animals a chance is the wrong answer to more Tag sales. Making Crossbow hunters not hunt the RUT is not going to increase Tag sales. Making Bow hunters stay out of the woods the week before Gun season is not going to increase Tag sales. Rather than dividing the hunting population, you should be merging it. The DNR made a concession to allow anyone to crossbow hunt during archery season. I was opposed but now I am not. Crossbow is a great way to get a new or young hunter into the sport when they can hunt when its nicer out and when deer are moving and have opportunities at harvesting an animal. My daughter wont be able to pull a bow back with enough weight and accuracy until she is maybe 16 or more because she is small and petite. But if she can get behind a crossbow at 10 or 12 (when I feel she is ready) she may get into the sport. But if she has to wait until 16 or more, that timeframe when she may have taken up the sport might be passed as more things are there for her to do. You should be promoting Crossbow hunting to Gun only hunters as a way for them to hunt without the need for all the practice a bow hunter (should) need. A way for them to hunt the prime time of archery season while still giving the animals a chance. A crossbow hunter must still get game in range (although slightly farther than bow) compared to sitting in a field and blasting love sick bucks. That is how you get more Tags sold. By getting those that only purchase one gun tag now, to purchase a crossbow tag also. If you look at other states season structures, then always allow a lesser method of take to happen during the rut. Colorado Elk season for Archery is 1 month. During the times when elk are herded and starting to break off and get ready to mate. They don't allow rifle hunting during this time, that would be foolish. The rifle seasons are 1 week. It just makes sense. Don't divide our hunting population, which is always under fire from anti gun/anti hunter, Vegan/vegetarian, PETA, animal rights groups as it is. Hunters need to be united and ensure a season and animals are always there. My last thoughts are ways to get the younger generation into hunting, especially archery. The DNR should be promoting NASP and other archery in schools programs religiously. They should also be pushing to get gun/firearm safety into the schools. Schools are mostly left leaning entities that if you ask the general majority of educators, are antigun/antihunting. The DNR and government (which I feel should stay out of the schools, but that will never happen. So if they are going to mandate things then they should do something positive) should be educating kids on the good things that hunters do for the community. Most don't understand that the reason a park or DNR rec area is open and running and clean is from the money hunters pay to hunt. The wildlife refuge and park areas are not funded by the couple dollars a family pays to park their car. Hunters pay for it. Just like those without kids pay for others' kids to go to public schools. But this is never taught to kids or to the public in general. Animal rights activists don't fund state parks and refuge areas. Hunters do. Why is it so wrong to get this said to the masses. Get kids interested and the states hunting legacy might stay alive and not go by the wayside. I don't know if this whole email will get read, or by whom, but I would hope it does and I hope I...
I propose an antler restriction for adult hunters. An antlered deer must possess at least three points on one side before you can shoot it. Youth hunters (a hunter that possesses a junior license) is exempt from the rule. I have hunted this unit for the past 5 seasons. The first 3 I didn't spend a ton of time in the unit just some early season scouting and about 5-7 hunts throughout each season. The last 2 however I've spent countless hours in the tree and driving around glassing fields and clear cuts. Also running trail cameras throughout the season. I feel as if I have gained a pretty good understanding of the deer herd in the area. I would agree that the deer population is strong and abundant however I have not filled my buck tag in 4 years now. The deer population though strong seems to be a very young deer heard that is not maturing. In my findings bucks rarely making it past the year and a half mark. In all my hours in the woods the last 2 seasons I've counted only 4 2.5 year old bucks, and 1 3.5+ year old buck from the stand and dozens of 1.5 year olds. I don't consider myself a trophy hunter I'm not looking for a monster buck that I hang on my wall and brag about, but I do love to hunt and I love to spend time in the woods so I challenge myself to only take a buck 2.5 or older. But spending countless hours in the woods for one or two 30 second glimpses of deer of that age each season can really get a guy down. So yes my point restriction proposal wouldn't totally fix this issue because yes some younger bucks can have bigger racks then others and yes it makes it sound as if we're trying for trophy animals. But I do believe this is the best way to mature the herd. keeping the restrictions off for youth hunters as to help grow this proud Wisconsin heritage.

The more amount of car deer accidents isn't higher because the deer population is higher. The car deer accidents are higher because of more automobiles on the road. I know loggers that spend everyday in the woods they don't see deer. Everything is about money and is turning political. Statistics are awesome and helpful if and only if they are gathered honestly and truthfully. Majority of the people I've talked to don't see the deer they used to which contradict your statistics. The WDNR and CDAC I are handling this like Democrats, wrong people in high places lying and cheating about facts. FYI it has to be embarassing knowing that you had to put a warning to people commenting that personal attacks or offensive language will not be considered. That right there means you are liars and cheats and you know your wrong before you even sent this out. If you were actually for the deer herd people wouldn't have to be swearing at you. As a mechanic fixing the wrong thing doesn't solve the problem. Entering the predators in the woods to lower the deer population isn't the answer to solve the car deer crashes when the problem is more automobiles are on the road. Your statistics and strategy are wrong, I'll dangle a money situation in front of you, hunters are going to quit buying hunting licenses if they don't see deer. How will the WDNR like less money coming in?? When you watch hunting shows very few hunts come to Wisconsin, ask yourself Why is that???? I think deep down we all know that answer. Just think if hunting was better think of the out of state people coming for hunts and the money you can charge for out of state licenses. Lets take the horse blinders off and stop being greedy.
I believe in giving constructive, meaningful feedback. If that is not your thing, stop reading this now. The reduced buck harvest seen in this unit is directly related to changing values shared by hunters and landowners. Where it was once very acceptable and common to harvest 1 1/2 year old bucks, this practice is now being looked down upon by many hunters, hunter groups, and landowners. Many hunters will simply not harvest young bucks, reserving this right for first time hunter (basically kids) who have never harvested a buck before. I believe these changing hunter’s values are not being considered nor accurately represented in your calculations. I believe the DNR would have a much easier time meeting quotas within this unit if they put an antler size restriction on bucks. Look at moose hunting in Alaska as an example, obviously done for different reasons, but definitely effective. Promoting quality deer management by discouraging the harvesting of immature bucks will undoubtedly restore hunter’s faith in the DNR. There is also an unintended result of placing an antler size restriction. With a restored faith in the DNR, hunters will soon open up to the idea of harvesting more antlerless deer without the need to issue 3 or more antlerless tags to each and every hunter. Hunters will begin to feel part of the management team and begin to take ownership. The DNR seems to be very good at collecting data and entering it into spreadsheets and creating charts and graphs. Your weakness appears to be understanding human nature and the current mindset of today’s deer hunter.

Please DO NOT change the archery, gun and muzzle loader seasons. Keep those seasons the SAME. Get rid of all antlerless, holiday and youth hunt seasons. They are useless. DO NOT EXTEND GUN SEASON. That’s one of the dumbest ideas the DNR has had since earn a buck. Keep the gun season during Thanksgiving week like it has always been. So what if more bucks are shot during archery season. More people are hunting archery now since crossbows were legal for everyone. DO NOT restrict crossbow hunting to those without a handicap or not 65 and older like you are talking about doing. Bring back hunters choice. One tag for archery and one for gun and one for muzzle loader (all separate). You can shot either one doe OR one buck with that tag. DO EVEN THINK ABOUT BRINGING BACK EARN-A-BUCK!!! EVER!!! Stop giving away free doe tags. This goes with hunters choice. If you want extra doe tags, you buy them. Have size limits on bucks. 3x4 or 4x4. Get rid of the 3"x3" rule. If it has nubs or bigger, it must be registered as a buck. Allow baiting up to 2 gal. The baiting ban is useless and unnecessary. Listen to the hunters for once. THERE IS NOT THE AMOUNT OF DEER IN THIS STATE THAT YOU (WI DNR) THINK THERE IS. Not even close. Learn how to manage deer the RIGHT WAY (QDM). You people have no clue what you are doing. And you wonder why the number of hunters in this state goes down every year. CWD is NOT a problem in this state. Its been around for 100+ years. Worry about more lethal viruses like EHD.

Would like to see the boundary line of farmland zone and northern zone of Oconto county to be shifted to county road M instead of AA and 64. The amount of deer south of that line is much higher. There is also a lot more public land between county rd M and the current boundary line. These public lands get over hunted and harvested due to the current regulations. I believe changing this line will give a better opportunity for hunters in the area and keep hunters from crowding the public ground with the lesser restrictions. The predator prey ratio is also in a better balance in this area being closer to larger and undeveloped areas. I have hunted this area for a long time and have not harvested a doe in over 15 years. the deer herd has never been over populated. I would also like to see the cancellation of the holiday hunt and just turn it back to regular bow season. There are many hunters with bow tags left over and would like to use them late season but the holiday hunt and late antlerless season force them to only hunt does. Where as if more hunters are in the field targeting bucks. I feel the doe harvest numbers will go up as well just out of opportunity. Extending the bow season even later into the season will help harvest numbers increase with the lack of pressure and making the deer easier to pattern.
I am very disappointed with the public hunting. When I started hunting in the late 90's in the central farmland zone, we used to see herds of deer in the fields and many nice bucks every year. Every time you went out hunting for the day, you’d see a few deer and could actually let certain ones go. Now days you can’t let anything go because odds are you won’t see another single deer for the whole season. The motto in that area is brown its down. I personally don’t hunt that way. I’d like to see nicer bucks and a lot more doe. But people know they have to shoot what they see because it might be the only deer they say. I’d like to see some much better deer management, because I know that area has potential to produce quality deer! Its just frustrating to watch the deer population and quality go WAY down every year for the last 19 years. And I have access to hunt other county’s throughout Wi but I choose to hunt in Oconto because that’s where my family cabin is and that’s where my grandfather, my father, and family has hunted there whole lives, and its just tradition to me. But I would really enjoy the way it used to be...

I herd something about not allowing cross bows in the month of Nov because archers take to many bucks. You already took away baiting so it’s harder to see deer with the limited time a lot of hunters have.I know that I hunt more in November because of the rut and cool temps and see more deer at that time of year. I have good success too. If you want to stop hunting with crossbow in November you will have a lot less hunters and deer taken. I would consider not even buying a license if that’s the case! I have been buying the patrons license for 20 years or more and don’t even use most of the opportunities to hunt anything but deer and turkey. The only thing I don’t like about hunting does in late Jan is they are caring there young and it bothers me knowing that when dressing them out. I took 2 does last year and deal with that issue but wanted to do my part to help get deer numbers down. I also gave 1 deer to a disabled friend that can’t hunt anymore. Then I gave a lot of the venison to other family members after I processed it. Thanks for your time

Considering the speaker noted a substantial increase in the number of calls from farmers and other land owners about damage caused by deer, it would make sense to make it easier for responsible hunters to be allowed access to private lands in order to both reduce damage from deer as well as offer hunters better hunting options. Regarding the holiday hunt, I am and always have been firmly against it. The 9-day rifle hunt provides plenty of opportunity for taking a deer with a firearm. Just about the time deer are starting to switch out of the nocturnal only mode from the 9-day season, the holiday hunt reverts them right back to nocturnal which makes the late-season bow hunting impossible for law-abiding bow hunters who limit hunting to legal shooting hours. And it seems most holiday hunting activity occurs on public land which is already stressed too much. I believe many of the registrations listed as private are actually taken on public lands during the holiday hunt. This is very frustrating for a bow hunter who is primarily limited to hunting public land.

I fully support the proposal to use all the tools that are currently available to the council to try to meet the objective of decreasing the population. I have 40 acres on Fireside road where I have been weighting the deer I shoot for 20 years. The dressed weight on an average doe use to be 120-135lbs. Over the last 5-7 years I am seeing average doe weight slip to 103-110lbs. It is obvious these deer are not getting the nutrition due to over population. I am fully in support the council to introduce support to the state legislators to bring back the earn-a-buck or some similar form of this very effective tool to increase antlerless harvest. Unfortunately very few hunters prioritize their hunt to manage doe populations. I do not have all the answers, but in my opinion there need to be an incentive for the individual hunter to harvest more antlerless deer. Whether it’s a monetary gain or to win (earn) a free tag or something. Maybe shoot X number of antlerless and earn a lottery ticket in a drawing for a free bear or elk tag next year.
First off, I’m totally against limiting crossbow seasons. Keep it the way it is. If we are trying to increase hunting/hunters numbers, hunting with a crossbow is a great way to get new people into the sport. Deer sighting and weather are usually better during the current season. My proposal would be mandate 1 buck for bow/crossbow or gun/muzzleloader and have that buck be required to have a 4 point minimum on one side. This would encourage hunters to be more selective on which buck they choose to harvest, and maybe harvest more does. Hunters in this DMU for years have been shooting young bucks instead of harvesting antlerless deer. It’s a matter of changing the mindset of hunters. It’s not about just shooting a buck every year. It’s about controlling the buck/doe ratio and allowing bucks to mature. With so many does, bucks don’t have to seek during the rut, so buck sightings and harvest opportunities are lower. These changes would improve hunting in the DMU far more than eliminating crossbow hunting during the rut.

I’ve hunted for 26 years in oconto between the city of oconto and the county line with marinette. Both east and west of hwy 41. With the influx of tags being bought for any aged person in the house and all these doe permits your numbers are drastically off. I used to see ten different bucks a day. Countless does. And now like this year I only seen 2 deer all 9 days of gun. And 11 all of bow season. With the introduction of wolves on the county lands I have seen numerous wolf sightings while in the stand. Please please re set the traditional hunting age. You've got guys and gals stating their kids are shooting these bucks, and does and we all know that's not always true. We are over hunting does during the times they are pregnant with fawns. This declines our chances of the gene pools of large bucks succeeding. Lot of us out here dont own land sowed have to relying on rentals/lease lands and county or state forests. Your deer pops in those areas are so far down due to over hunting and predators.

A landowner that supports and spends money on wildlife and habitat has the same whitetail harvest quota as a citizen who harvests only (potentially on public land). Is this really fair? For example, if John owns 200 acres and manages this for wildlife spending $100k per year on trees, crops, and property improvements, he has the same whitetail deer harvest potential as Wesley who hunts public land and does nothing but take from the land. Has WI ever considered a method to earn harvest quotas? Both for landowners and non landowners who can contribute money or sweat equity to natural resources? I personally own 150+ acres and manage it essentially exclusively for wildlife. My efforts might double the carrying capacity of the property for whitetails. More specifically, I observe at least a dozen fawns that are born and raised on my property. My efforts and taxed property bring/support 12+ new deer per year. WI allows me to harvest one buck per weapon. Thanks.

Are hunting party is very angry about all of the rule changes. We have a major wolf problem by us. The couple deer we do see are running around scared for there life’s. We no longer have any bucks older than 1 an half years old. This is the worst are property has ever been. My dad has hunted it for over 40 years. We have lost a quarter of are hunting party because of the lack of deer. I am not going to lie. If this keeps up. I bet we will be down to 2 people ( used to be 12). We have 240 acres. Have managed it well for years. Always shot nice bucks and does. Not a lot of deer but it was fun. Now it is a joke out there. You guys want longer seasons for what. There nothing out there. Making the season longer and adding tags is not the answer. You really need to change your thinking. This might be my last year if you don’t try to fix the real problem!!!!!!!!!

In the past 3 years I have noted a steady increase. I saw more deer in 2017 than in 2016 I then again so I'm more deer in 2018 and 2017 and in 2019 I saw more deer while hunting in the gun deer season then I have seen for over 15 years in a row. There are so many deer and so many of them are dogs. We have too many deer in that zone in my opinion. We need to bring back the wearing of back tags. The lack of back tags on hunters in the field make it impossible for landowners to understand who is trespassing on their land. All we are doing is letting people violate with ease. Since we no longer need to go to any place to register our dear and we can do it over our phones you have no way of seeing where those trucks that are trespassing on land that you pay taxes on are going. They just disappear down the country road. We need to bring the wearing of back tags back.
The deer kill numbers were down in our area. Hunters from around the state and Upper Michigan that I talked to experience the same thing. I support bringing the deer number up quickly, no matter what that takes. Extending the gun deer season is something I FULLY SUPPORT. I'm an avid bow hunter and I prefer hunting during bow season much more than I do gun season. If people don't want to hunt beyond the typical gun season that is their choice. I've been advocating this for a long time. Most people own thousands of dollars worth of firearms and firearm equipment, only to be able to use them for 9 days out of the year. It seems ridiculous that we can't enjoy this this time a little bit more in Wisconsin. Thank you for taking time to listen to the people who take part in this sport and also support it financially.

I live in the southern portion of Oconto (Sobieski) and I hunt in central Oconto (around Suring/Breed), so I observe deer in both portions of this management unit. In my observation, there is a vast difference in the deer population between the south and north, with the southern end being over populated and northern end of the unit being much less populated. Most of the public land in this unit is located at the far north end, and the deer population seems to track closer to the numbers in the northern Oconto unit. I would propose that the division line between Northern and Southern Oconto is located in the wrong position. If we moved the dividing line south, perhaps to county road M, I believe the management goals in each unit would align closer to the actual deer population in each unit.

I've hunted for 35 years. We used to have more deer in the 80s. The deer didn't over eat the forest. Car crashes the same. I think we have enough extra hunting seasons. They dilute the tradition of the 9 day gun Season which lowers interest in hunting. The archers have too much advantage. Every other year bow hunters should have to hunt after the 9 day gun season. It is bad for the Deer to be under pressure for so many days with all the bow hunting seasons. Gun deer hunting used to be better before bow hunters took over. Hunting deer in 60 degree weather is not healthy for eating deer. Bow hunting starts too early. A few weeks of rut Hunting is enough for bow hunters. The deer should not see hunters in the woods September to Jan. Yes we have small game but that's not Deer hunting. Thank you Todd.

I am against the antlerless Holiday Hunt and antlerless hunts. I have seen a definite increase in road hunters and indiscriminate shooting. It can be scary just walking to the mailbox. I had to put-down two wounded does this past year that wandered on to my land after being shot by reckless antlerless hunters. Most of these unethical hunters are not hunting for meat They just want to shoot something for fun. My son was a good hunter, but he quit after seeing what happens during the antlerless seasons. The DNR has youth hunts to attract young hunters, but when young hunters see slob hunters road hunting and wounding deer for fun, the young hunter quits. My wife hates what goes on during the antlerless seasons too. Absolutely disgusting. No wonder why anti-hunters work so hard to end hunting.

Has there been any interest or talk about possibly changing license structure. Michigan has a combo-tag type license that i feel would be worth looking into. The combo license allows a person to still only harvest 2 bucks per year, however you may harvest both with a gun or bow or 1 with each. I believe this would be beneficial. There have been several years where i passed on harvesting animals because i wanted to continue to hunt. This type of structure would allow a person to harvest an animal and then still continue to hunt. They also require a certain number of "points" to use this tag. I believe the first deer has to have 3 points on one side and the second deer requires 4 points on one side. The normal license is still available if you dont want to purchase a combo tag.

while I understand that overall populations within oconto county central farmland afreas are high I also see that in the public forest lands within this region populations appear to be much lower than desireable. I believe the way the unit is viewed is apples to oranges. Deer herds tend to congrigate near farmland. Id really like to see public lands especially in the forests be managed differently. I remember the days of seeing many deer throughout the bow and gun season. Nowadays Im lucky to see 2-3 deer all season! I feel as if over hunting, wolf populations and now recently the straight line wind damage to the areas has completely destroyed the herd in the national and state forests in this area. Id love to see a few years of buck only to help being the population back.
I strongly believe that extending the firearm season is a bad idea. The vast majority of gun hunters only hunt opening day in the first place, so extending the season will NOT have the desired impact of increasing hunter interest. If anything, it will cause additional stress on the deer population, resulting in more nocturnal activity that will not only hinder hunters but also lead to more traffic related incidents. It may also widen the gap between gun and archery hunters, which seems more distinct every year, causing unwanted debates between hunters which will only reflect poorly on overall public perception. Times have changed, more hunters like the solitude and relative quiet they experience with archery as opposed to all the hoopla associated with gun season.

Deer are severely browsing tree seedlings I am trying to grow. Some areas they have completely destroyed all the young trees on several aspen clearcuts. I just purchased fencing to build some deer exclusion fencing to protect some areas of my property and try to get trees to re-forest them. While turkey hunting I am already seeing large numbers of deer this spring. I completely support the CDAC’s efforts, BUT they are not enough (not your fault). CDAC needs additional tools to offer additional opportunities to harvest antlerless deer. My wife and girls used to really enjoy the early T zone hunt. Weather was nicer and a more relaxed hunt. Some other tools are needed. I would even support an earn a buck system.

I’ve lived and hunted here all my life. 57 years. And I know the deer population is way to high, and a reduction in the numbers needs to be addressed. Our neighborhood, is nothing but buck hunters. If they harvest a doe, they think they are doing a great thing. I tell who I can, all the time, we need to harvest more doe. But many people are just to set in their ways, and think by doing this, they’ll kill all the deer, and there won’t be any left... Back when there was the earn a buck, SO many around us complained, but myself, and the hunters on our property knew, it was going to benefit the land, as well as the deer population as a whole. I’d be all for earn a buck, or a antler less season...

my opinion on the deer heard is, that your antler less harvest is way too high. if you talk to most of these hunters they are not even seeing deer. Myself and family included. if your goal is to wipe out the deer herd,its working. every year deer lose their habitat to more housing, sub divisions, new roads, industrial developments. Yes road kills are probably stable because they have to cross roads to get to their food and water source.now that roads divide their habitat on 3 sides. Most of the people i talked to are fed up with the false numbers on the actual deer herd in Wisconsin, and actually going elsewhere which is why Wyoming had to switch to a lottery a few years ago.

I would be 100% against any Deer Season framework now or in the future that would LIMIT the use of Crossbows for ANY part of the Deer Season. I would love to be able to use a compound bow BUT I Have had 4 shoulder surgeries and the last time I pulled back a compound bow I torn part of my shoulder again. It's not worth the risk for me anymore. I believe that the people who don't want the use of crossbows for part of the season are 100% selfish individuals and would never be allowed to hunt on my land anyway. I think that the state needs to promote more people getting into hunting and not deter people from getting into or staying hunting. Thanks

Opposed to all antler-less hunts with the exception of the youth hunt (although I'd like to see the age limit stay in the 10-12 years range. I agree with getting young potential hunters out there and gaining the knowledge and experience it takes to having a successful hunt.) Our camp, though, has seen a decrease in deer sightings every year for about the last 10 years. Area used to be great but with the addition of all the extra hunts as well as the antlerless permits that are given with each license and the option to purchase even more we do not see many does around therefore the bucks will not be around either during the rut of the season.

Probably my biggest suggestion because of the fact there’s so much extra room when you print out a license on the paper give a friendly reminder to everyone that just because they are getting three tags doesn’t mean it’s responsible for them to use them. DNR can only generalize regulations but that each one of us are responsible for knowing how many deer should come off the land. If you were only seen three deer every day you probably shouldn’t shoot all three of those if you want a future of hunting on your property. However on the other hand I hunt in a couple hotspots where 15 deer could be shot and not affect a thing hardly.
Deer distribution in this central zone does not show the actual low deer numbers in the western part of unit near the Menominee County. Many years ago this area, in Oconto County, was designated as another unit to reflect substantially low deer numbers. Deer per square in Menominee County is extremely lower than in Central Oconto County. Therefore, this area has very few deer from overharvesting with 3 antlerless permits per deer license. This very low deer density problem needs to be addressed by forming a management unit by itself to restrict overharvest due to the multiple permits to kill deer in the other part of the unit.

I mostly bow hunt the Machickanee. There is a lot of pressure from GB hunters and the deer are smart. Gun season pressure is high, but bow season opportunity is a high quality experience. The population is adequate and better balanced than most private land. Browse is not excessive most places and I have seen a lot of deer this spring in good body condition with little evidence of winterkill. I like the tag structure for public land in this DMU. I also like the extended seasons. They help spread pressure out over a longer time frame and provide for increased recreational opportunity. Keep up the good work.

I do not agree with your assessment of deer population. I live in the woods year round and drive the side roads in my local area watching for deer, I have hunted the same land my whole life and there just isn't the numbers that you claim. (no need for reduction) It is very hard to keep kids and grand kids interested in hunting when they don't see deer like when I was a kid getting started. I'm hooked but you are not hooking the next generation. Handing out more tags does not mean there are enough deer to fill them, but handing out these tags gives some people the need to fill them.

I agree totally with the proposed antlerless objective to be higher. We hunt private land and had enough tags available for the does we harvested which was nice and we just need more private land hunters to harvest more does. Unfortunately I don't feel the extended season really does that much more to increase the harvest as I think most people are just done hunting by then. Harvesting does is a lot of work, for us it's not fun, it's more like a job, but if you are managing your property it is a necessity and the best thing may be to tell the public bluntly.

Weather this gets read or not I would like to add a few comments about Oconto county. The county has two very different deer population zones in my opinion. If you where to watch a field south of Suring/Gillett you will see multiple deer. If you where to go north of Suring/Gillett the population has dropped tremendously in the past 20 years. It's not easy controlling the population in a county when the deer are plentiful on the south end and scarce on the north but what would nice to see is zones broken down a little more if all of these tags are given out.

I would ask the CDAC to please recommend eliminating the extended bow/crossbow hunt through January 31st. This extended season is creating a substantial amount of violating of bucks with people hunting over bait. If as a CDAC member you don't feel this is occurring you are out of touch with what is going on in the area. Yes violators will likely violate no matter what but this extended season is only helping these individuals. Please end all seasons in early January like they had been or at a minimum make the extended season doe only.

The CDAC wants to reduce the number of deer in the area I hunt yet I am lucky to see more than one deer per season. If there are as many deer as believed, even if I did not see any deer, I would expect to hear more gun shots than I do. I heard less than 5 shots opening day. When I first started hunting in 1978, I hunt within 2 miles of where I do know and I would hear 5 shots per hour and there was a lot less deer back then. I just can not believe there are the number of deer in my hunting area. I seen more predators than actual deer.

Move the muzzle loader hunt to a latter date in December. Most of the deer are spooked and if a hunter in not successful in the first 9 days of the gun hunt the days right after are usually not that much better except in the best unpressured ground. Make the muzzleloader hunt its own tag, which would increase funds, but use the earn a buck system in units where you want to decease deer numbers. Earn a buck was not well liked but I think it would work for muzzleloader giving hunters a second buck tag if they choose.
hello there, i know what i have to say will go on deaf ears. so let me say i have been hunting for the last 50 years. thru all the years ,you guys have been trying so hard to get rid of the deer population. having this hunt and another hunt. you guys need to go back to your regular gun season and bow season. then we will have more deer and maybe more hunters. right now the deer population sucks, because of all the different hunts you have. maybe you should make different hunts for ducks too!!!! thank you, mike

The holiday hunt can be a valuable tool to harvest does. You are missing a population of hunters that want the chance to shoot a buck with the bow during this time. Keep the Holiday Hunt, allow bow hunters to shoot a buck or a doe if they choose. I want to shoot my does early in the year and hunt mature bucks after that. Earn a buck would also force people to shoot does and possibly sell more licenses with the crossbow opportunities that are now available. More licenses = more money

Had a cool idea. EAB is banned and despised. Other states do a velvet hunt. What if we had a very limited number of velvet tags available thru a lottery for private land only and to get points for the lottery you would have to shoot a doe. Or maybe 2 does earn you a point. Points expire regularly so people have to keep shooting does. Season would be in late August for velvet bucks. Very restricted season, very limited number of tags. I'll let you experts figure out the rest of the details.

Harvesting deer is done by hunters who enjoying hunting and also gathering venison for food fare. Limiting baiting is one way to decrease harvesting those extra deer. Whitetail deer have been yarding up for centuries too survive with latest hunting limitation look in central farm near cedar plantations you can see browse lines throughout regions in Oconto county. Need to impress on hunters to do their part and make regulations that are conducive reaching your goal of harvesting possible.

AS LONG AS THE HUNTERS CONTINUE TO SIT ON THERE BUTS AND WAIT FOR A DEER TO MAKE A ERROR IN GETTING UP TO EARLY OR GOING TO SLEEP TO LATE YOU COULD EXTEND THE SEASION TO 365 DAYS IN MY OPIOION AND YOU STILL WOULD NOT LOWER THE DEER POPULATION. IT IS SAD TO SAY THE DEER HAVE BECOME SMARTER THAN THE HUNTER. WHEN YOU ARE HUNTING A NOCTERNAL FEEDER AND YOU ALLOW THEM TO SLEEP ALL DAY, AND YOU DO NOT WALK AROUND AND WAKE THEM UP AND MOVE THEM NOWONDER WE HAVE AN OVERPOPULATION.

I watch Deer everyday, I don’t believe there too many. I think the seasons are too long and too many. Should be one period for bow and one for gun, not all these youth hunts , special doe hunts, management hunts, etc. The deer are constantly harassed for too long of a period. Its no wonder during that time of year there are more deer car crashes. AS far as CWD, if you would get rid of the deer farms you would not have had this problem because 100 % of came from those farms.

After hunting this same area for 40 years, the last 10 years has been gradually getting worse. When we go out in the woods to hunt and you seen more wolf tracks than deer tracks, that tells you something. We have 4 camps that hunt in the same area,18 guys and a 3 year carry over on the buck pool. We are talking about not buying deer license's anymore, but we would like to get the young people involved. After sitting all day with no deer, they lose interest too.

With the amount of row crops and alfalfa grown in this central farmland as with the amount of county and private forests, it definitely gives adequate cover for the deer herd and this year I seen only one adult doe on day one of rifle season! Not another adult doe, only yearlings. This spring when they broke out of swamps and in the corn/bean residue I was amazed at the numbers of adult does and yearlings!! My hay fields will be over grazed again!! 😞

I would like the DNR to consider moving the northern Oconto County Farmland line south from highway 64 to county highway M. The portion of Oconto County is much more heavily forested and has more predators which have a larger effect of the deer population then you see in the southern have of the county. Also, the larger deer population exists south of the county M line. If you have any questions please feel to reach out.
I believe the estimated number of deer in this DMU is higher than the actual number. I think the DNR should encourage the harvest of does and allow bucks to reach a mature age class but it should be left to the land owner to decide the number of legal deer taken on their property. Some areas may have high deer numbers, some may have lower deer numbers but we should not come up with a blanket quota for the entire DMU that is as high as it is.

I am not sure where the people who are hunting, are seeing all the deer? Not in the area which I hunt! I saw the same two adult does with their fawns, all season. Kill them off and you have nothing remaining. We need less doe kill permits, one per buck tag is enough. Deer numbers a WAY down in this area. Less does harvested and LESS government intervention. If you want a problem, just get the government involved with the solution.

I consider the job being done to manage the whitetail in Wisconsin is very good and many things factor into the management plan. Consider the fact that many of the same people complaining about whitetail deer population in Wisconsin are the same people who complain about the new coach for the Green Bay packers and think he should be fired - even though he took the Packers to NFC championship game his 1st year - keep up the good work

It is my opinion that extending the nine-day gun deer hunt will not help you reach your goals. By the end of the nine days, most people are tired, and need to get back to work. I also know that the worst thing you could possibly do is re-implement earn a buck. The single greatest thing you could do to drive people out of the sport of deer hunting is implement earn-a-buck. That is not just my opinion, but every single hunter I know.

Keep crossbow and change the definition of archery to include both bow and crossbow. They are the same thing (technological advancements). Crossbow is the best way to get more youth involved in the sport. Not many people have the time to dedicate to master a compound but with a crossbow it’s more natural for gun hunters to enjoy. I have stopped gun hunting because I love archery so much. Keep crossbow and let our sport thrive.

I think what the CDAC does is jist like the sports teams of this state do in the drafts. I believe you say you will adress the specific needs of oconto county but instead you go out and choose the least needed things. We dont need to decrease deer populations in this county. I have not seen more then 5 deer in a sitting for 3 years now. Time to draft a position that this oconto team actualy needs. Increase, increase, increase!!!

You are proposing 3 antlerless tags, what percentage of hunters utilize all the antlerless tags now? Your antlerless quota is 7000 which is the same as last year. Only 3580 antlerless deer were registered. During gun hunting I saw a total of 3 deer. I did see a wolf during bow season. How many wolves are there in Oconto county? And is the same people who are counting the deer? Maybe we can switch counters.

If it wasn't for the overpopulation on private land there would definitely be less deer on public land. I have not heard of a positive cwd test result in oconto county that isn’t on a game farm, so relax the baiting rules unless you eradicate the deer on that deer farm. I think earn a buck is the only answer but now with registration the way it is how would that work, oh that's right everyone is going to be honest.

I would like to see either a 1 buck per year implemented, weapon of choice. Or a antler restriction implemented, 4 points on at least one side. I only hunt here for family reasons, I do all of my serious hunting out of state because of over harvesting in the area that I hunt. You are lucky to see a mature buck in the area, you might see a 2 year old but that's about it, due to the high amount of hunting pressure.

You need to let deer herd maintain at minimum it's levels now...it has started to get back where there's some deer in the woods again... years ago when my boys were young and I was introducing them to hunting and that was during those dumb earn a buck seasons it decimated the deer herd by me and they saw no deer and now don’t really like to hunt...they have started to gun hunt again cause they now see a few deer.
Some people don’t shoot does others that do don’t see deer numbers like they were years ago when you hunt in Oconto county in a farm field and only see two deer on 40 acre in 6 full days of hunting numbers are low not to mention when you give someone 6 doe tags some people can’t help themselves and make pigs of the hunting image make it a hunt again not 4 months of killing everything you see

Holiday hunts have gotten in the way from late season bow hunting which is my favorite time to go. That has limited my ability to hunt and harvest a buck. The registration of online needs to be changed back to at a registration station to bring back to the local economy and the tradition that deer hunters love. It’s time to stop changing everything and letting a tradition be a tradition

If there is an antlerless only deer hunt in Oconto county, I would not buy a tag for that year. Knowing that this is a way to control the herd, I feel it is not a productive way and takes too many deer out of the population too quickly. A few of these were held in my area and we are just starting to see a recovery of deer in our area where hunting is fun and exciting again.

I hunt about 50 hours with crossbow, and fifty hours with rifle. I hunt only in the upper part of the Town of Breed. I have only seen two deer in the last three years. I have three cameras out in the fall, and I am luck to get one picture of a buck. Opening morning 6:30 to 9:00 a.m., I heard twelve shots, and last year I heard eight. I hunt mostly public Oconto County forest.

I feel the Dnr gives me plenty of opportunities to harvest a deer without having to many special hunts. I agree totally with as many youth hunting opportunities as possible! I like to harvest one or most two deer per year so to hand me six tags just doesn’t seem right. Keep it simple one antlerless with your bow and one with your gun I feel is very generous and fair.

I believe extending the season overall is to broad of a population management. Management needs to be more localized to where larger herds are causing problems, while not hurting smaller population herds. I understand it would be difficult for a state angancy to be able to manage something like this. Maybe only give bonus tags to landowners or something like that.

I think the deer population is about the same as it has been for the last four years. I think the numbers are down because of lack of registration, and extremely wet year, and a late rut. But as far as the deer population I think it’s about the same as every year. People get tied up in the social media end of things, rather than focusing on being hunters.

I would like to see crossbow season restrictions. I do not feel it should run the same time frame as regular bow season. I think there should be a smaller time frame. It isn’t the same and shouldn’t be considered so. It takes the sportsmanship out of bow season. There is a place for it, but it should not be considered the same as a compound or recurve.

This last deer season I saw far fewer deer and I hunted all 9 days of the hunt. I saw two deer during the nine day hunt and the year before I saw 28 different deer. And again I hunted all nine days of the hunt. This spring i am seeing far fewer deer than i saw last spring so i am not in favor if the increased quota for the central farm zone. Thank you.

I feel there are higher concentrated black bear numbers where I hunt which could keep deer away and prey on fawns in the spring. There are also a large amount of coyotes that i believe push deer and kill fawns. I believe the wolves north of my area destroyed the deer herds on public land which hurts our revenues from non resident hunters (FIBs)

I like to use muzzleloader/ holiday hunt to see the health of the herd (wounded-sick) to take out , it is hard to get close enough with bow to take out possible cull animals. Usually will see more deer when less hunters are out and deer herd up and feeding patterns change to get better idea of inventory, also see more predators at this time.
My only concern for the extended archery season is the potential loss of excess does and the loss of those offspring. I'm unfamiliar with the growth rate of unborn fawns and the size they would be when these seasons are going on. The later these seasons are extended, the more that I feel we will be losing those future generations of deer.

I own property in southern Oconto County, about 3 - 40's from the Bay of GB. Deer numbers continue to plummet due to the high number of antlerless deer being harvested and the high water table. Less agriculture crops are being grown along the Bay. There is no need to be harvesting the high number of antlerless deer in lower Oconto County.

I am concerned with the number of Wolves i have seen on my cameras. I am concerned that these animals along with the increase number of permits given out and the DNR's Kill All the DEER mentality, there is going to be a lot fewer deer around in the coming years. I don't see an over population of deer at least in our area. Thanks

I feel there are too many antlerless permits being issued in Oconto Cty. Most Neighboring hunters seem to be responsible hunters. However, we did have one group next to use who were shooting at anything that moved. This is concerning to me from a safety and future buck standpoint. I think one antlerless permit per hunter is fair.

The number of deer by me is a lot less than a number of years ago. I used to see 20 or more deer the fields in the evening now I might see 2 or 3 deer. The woods by me have lot of vegetation and saplings years ago the ground was pretty much bare. I really think the amount of deer is pretty much where it needs to be.

I like the way Michigan does there buck tags. 2 tags to be used with any weapon and a point restriction on one of the tags. This may help increase the harvest #s also during gun season with a lot of hunters not wanting to shoot does. Also if you harvest a buck during archery you can still continue to hunt archery.

I live on the border of private and public land. Public lands are becoming void of deer while private lands have the deer but are impossible to find hunting opportunities. We need to stop over harvesting public lands and find ways to expand the private land options. Crop damage permits would be one way.

I realize this isn’t the proper quorum, but I’d like to see a governed wolf hunt in this area. I nearly saw as many wolves this year as I did deer. Plus the damage from the June storm destroyed a lot of deer habitat, that allowed some to escape the wolf predation. Thank for this post!!

Wolves are moving into this unit and they will surely decrease the population on there own I have seen more and more wolf kills, also when you give so many tags away people just shoot them and take the backstraps out as was seen in the dumpsters in the carcass collection areas. What a waste.

Saw few deer and only 4 different does and 2 had fawns. No baiting is hurting hunters. Those around me still bait which makes our families hunt difficult. Thinking of not renewing my lease next year due to deer numbers falling and people baiting around me. The U.P. of MI allows baiting.

When there is snow on the ground the deer don't move until after hunting hours are closed, even during the holiday hunt. Earlier in the season when there is no snow we often see them in the last 5 minutes. The baiting ban made me give up bow hunting and really hurt my gun harvest.

See several deer during bow season. Have noticed very few does compared to bucks. I have over 3 months of different cameras in our property and very little doe activity. Then gun season comes and people from down south come up and kill everything they see and then leave. Not right.

Why have we moved to a system requiring so much input from the uneducated (in terms of deer biology) public vs the dnr biologists making scientific based decisions? I feel these proposed policy changes are not what’s best for deer hunting whether the hunters agree or not.
See way less deer, poor management in my opinion. Don’t know where they get the deer population from, but it’s not on our land or anywhere near by. Seriously thinking about not hunting Wisconsin anymore and go to a state that wants to reasonably manage the deer population.

There are too many wolves in the Northern woods. The DNR has managed to decrease the deer population to such an extent that many hunters did not even see a deer in the last season. Too many antlerless tags and special hunting seasons has decimated the deer population.

Major issue I see in my area, are private lands that allow no hunting, and large numbers of deer congregate with no pressure. probably not much can be done about this issue but was or is there a tax break option for land owners to have an incentive to allow hunting?

When will baiting ban be looked at Cwd happened on game farm over three years ago I believe if people abide by regulations for baiting there is more saliva contact in a corn field than a 2 gallon bait pile that can be eaten by two or three deer.

I would support a tine minimum in Oconto county. I was very disappointed by the low number of Doe and immature bucks I was seeing in both northern and southern Oconto county. I do not believe we should continue to try and lower herd numbers.

I see deer in the Oconto county more in small area like on midway rd Lena. And valley line rd by county b in oconto falls there north by the county line On 141 by Oconto county and Marinette by bob white that is some of the hot spot.

1. The eradication of game farms from oconto county is imperative to the prevention of CWD. 2. Not enough information on predation specifically wolf impact on herds. I am curious to know those impacts and what the future will hold.

We have too many special hunts and youth hunts especially are being exploited by adults. Please keep firearm hunting out of the woods after the gun hunt. The deer go so nocturnal it’s a real problem for archery hunting. Thank you.

This extended gun season talk is making me not want to gun hunt at all. I’d rather leave my land undisturbed if deer are going to have 16 or 19 days of being shot at by rifle hunters. 9 days has always been enough and it still is.

The deer numbers are down despite what you believe. The amount of does being shot is too much. We need to thin out bucks. Properly manage and don’t allow out if state doe tags. They come to our area and kill everything and leave.

Bows are a more efficient weapon now than they were when archery seasons were first established. The archery season is too long. We should start the season on October 1st and end it on December 15th. We don’t need a holiday hunt.

I would like to see baiting come back for the youth hunters in a way that the bait would be scattered in an area for them to make a clean kill. This would keep our heritage going if the youth can get some early life success.

Deer gun season should be changed to be the same as Michigan. November 15 and for 2 weeks. Following thanksgiving around the calendar is old practice and really makes hitting the rut almost impossible, like 2019 season.

Wolves should not be protected. When there is damage by wolves to farm animals and/or pets, the property owner and those surrounding that farm for a 25 mile radius should be able to shoot wolves without penalty.

Antlered Rack has to be have at least 6 scoreable Or score a min of rack to help promote more 2 year old antlered deer, and possibly creating sanctuaries within public land where no hunting pressure is possible.

<td>6567</td>
<td>On public land from Mountain east to Coleman the deer population is pathetic. Not even worth hunting. I've hunted this area for 30 years. Never has there been such a low population.</td>
</tr>
<tr>
<td>6568</td>
<td>Very concerned about overabundance of deer on the landscape and the ability for forests to regenerate. Also have connections to farmers and the amount of crop damage is a concern.</td>
</tr>
<tr>
<td>6569</td>
<td>I believe that if land owners are upset about the deer damage then adopt a similar approach that Montana has as in BLM land that is available to hunting for resident hunting only</td>
</tr>
<tr>
<td>6570</td>
<td>I feel crossbow/archery seasons should be extended. If the goal is to reduce the deer population in this area, what is the difference what method is used to harvest the animal?</td>
</tr>
<tr>
<td>6571</td>
<td>Need to cancel the paperless tag and registration system. I feel alot of deer are being illegally harvested. Need to go back to having back tags and registration stations!</td>
</tr>
<tr>
<td>6572</td>
<td>July 2019 storm-downed trees made seeing deer difficult at best, with some areas impassable. This negatively affected gun hunting, and I’m sure bow/x-bow hunting as well.</td>
</tr>
<tr>
<td>6573</td>
<td>I feel we have an over abundance of wolves in area Seeing pictures of 7 wolves in a pack and neighbors telling us a pack was in their front yard.they need to be reduced</td>
</tr>
<tr>
<td>6574</td>
<td>My biggest concern is changing of the 9 day gun season. It’s family tradition for these times and if the dates would change myself and my family wouldn’t hunt!</td>
</tr>
<tr>
<td>6575</td>
<td>Way to many doe are being allowed to be taken. Not really concerned with doe kills by archers but want to see far fewer doe kill tags during gun hunting.</td>
</tr>
<tr>
<td>6576</td>
<td>Better information needs to be published regarding farmers that are using destruction permits and allowing hunters to hunt their property during season.</td>
</tr>
<tr>
<td>6577</td>
<td>Please don’t restrict crossbow regulation and season dates. You will see fewer license sales which will hurt the overall goal of decreasing deer numbers.</td>
</tr>
<tr>
<td>6578</td>
<td>As i hunt in a bow only zone the reduction of the season will not favor mine, or any otehr people in the same situations chance of harvesting a deer.</td>
</tr>
<tr>
<td>6579</td>
<td>If you want to get deer numbed down or even eliminate them , put a $10.00 bounty on them an you will achieve your special interest groups wishes.</td>
</tr>
<tr>
<td>6580</td>
<td>Last year I hunted 9 days including both archery and gun. I saw 3 deer total..... and 0 bucks. I say let the population increase by 20%.</td>
</tr>
<tr>
<td>6581</td>
<td>I want an earlier rifle season start. I want it to start same time frame as Michigan on the second Saturday of November. November 14, 2020</td>
</tr>
<tr>
<td>6582</td>
<td>I did not see an questions about extending the rifle season. If that is still in the works I would like to say that I am against that .</td>
</tr>
<tr>
<td>6583</td>
<td>We need an earlier opening day like Michigan!!! This has gone on long enough, please listen to us hunters so we can see more deer! (Rut)</td>
</tr>
<tr>
<td>6584</td>
<td>I believe way too many antlerless permits given with the license. Why not try a 6 point or bigger rule unless first time hunter.</td>
</tr>
<tr>
<td>6585</td>
<td>I would support a 2-week regular gun season in November and elimination of the antlerless-only and Holiday hunts in December.</td>

<td>I strongly oppose the 19 day gun hunt do to the over abundance of out of town hunters and the lack of safety and experience.</td>
</tr>
</tbody>
</table>
People like to walk their dogs on the land during the season. A big sign maybe would prevent people from doing so.

For the youth hunt it should be Antlerless only for the respect of the hunter that went out for years no buck

Crossbow season October only. To many quality bucks taken by crossbow during rut. Give it back to bow hunters.

I would like to see a longer gun season similar to Michigan. That allows the the gun hunter to hunt the rut.

If crossbow and archery season dates are changed from what they are, I will not be buying licenses this year

I've hunted for over 50 years in this unit.. I see about 1/4 the deer in this unit as I did 25 years ago...

Heard rumors of the deer season expanding!! I strongly oppose extending the deer hunting seasons. thanks

We had people who leased property next to us from Illinois and they shot every Doe they saw not good

I own 107 acres, mostly plantation pine. This past winter the deer damage increased dramatically.

Would strongly support antler point restrictions, would also support earn a buck used previously.

I'm seeing less 3 and 4 year old deer. I hunted 8 weekends and only seen 10 small bucks and does.

only allow harvesting a buck alternately every other year. i.e. gun 1st year, archery 2nd year.

With the mild winter we are seeing many deer this spring. We are seeing more than last year.

Lots of does around very few bucks. One buck tag a year would increase doe harvest numbers

The holiday hunt should still be open to the harvest of antlered deer by archery hunting.

The deer population in our area seems to be increasing, making for some upset farmers

I hope we keep the deer season the same length as before--longer will not help.

We are finally seeing some deer. And you want to take more does = less deer.

There is very little old bucks. Most harvested deer are 2 years and less

To many deer getting hit by vehicles crazy amount in ditches from winter

Need to see more deer. Only see small bucks very little does seen.

the public land should be managed differently from private land

Have an earn-a-buck season to help lower the high doe population.

holiday hunts discourage bow hunters - to much activity in woods

Stay the course on this DMU as existed in the past several years

I would like to see baiting back for at least the youth hunters.

Youth Hunt should be one and done! No extended archery season!!

Wolf population explosion. Cisible in sign and sightings.

Keep seasons the way they are. Less antlerless tags please.

Please do away with the extended hunt until January 31st.

Just does not seem like there are a lot of deer anymore

The season should open November 7 and run to November 30

I would like to see limited baiting brought back.

Too many coyotes populations in oconto county.

Start gun hunting on nov 15 no matter what.
I have no trust in the DNR whatsoever.
Thank you for asking hunters input.
Thanks for allowing opinion
Bring back bating
Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 81
   - I visit this unit for non-hunting purposes: 121
   - I hunt in this unit: 320
   - General interest in this unit: 63

   The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 301
   - Bow: 162
   - Crossbow: 133
   - Muzzleloader: 78

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 25.42
   - Maximum: 70

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 37
   - Mostly Private Land: 24
   - Public and Private Land About Equally: 63
   - Mostly Public Land: 56
   - Exclusively Public Land: 137
   - I did not hunt in this unit last year: 3

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 19
   - Not too crowded: 67
   - Neither crowded nor un-crowded: 54
   - Somewhat crowded: 61
   - Very crowded: 75
   - Not applicable: 4

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 99
   - Fewer: 104
   - Same: 97
   - More: 35
   - Many More: 6
   - Unsure: 5

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
Implement an ANTLERLESS HOLIDAY HUNT: Not applicable in this DMU
If a Holiday Hunt is held in a Farmland unit...
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: Not applicable in this DMU
If the Population Objective is not "Increase"...
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: Not applicable in this DMU
If a Zero Quota (buck only season) is adopted...
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?

11. How important were each of the following concerns in forming your opinion about the CDAC's recommendations for this unit? Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

Report Generated: Friday, May 01, 2020 Oconto, Northern Forest
I have hunted for over years in the Town of Riverview southwest of Lakewood in the general areas around Maiden and Little Maiden Lakes. While I don't recall seeing large numbers of deer running before me now as I did on a few occasions in the late 70's and early 80's, we have always had a healthy deer herd and consistently see and harvest deer year in and year out. While I can't prove it, I believe that hunting pressure in our area was greater in the 1970's through the late 1980's. I also maintain that the replacement with fawns and in some cases observed twins has kept up with predators and hunting so I don't agree that our herd is suffering or declining. We have trail cameras out year round on our property and are out year round particularly in the spring when we tap maple trees. We frequently see deer on and around our property almost every time we come up and this trend was consistent from 2019 up to the present time (April 2020). During the 2019 deer season, every member of our deer hunting party (about 10-12 people) saw deer (does and bucks) on more than one occasion. Our hypothesis has been and continues to be that lack of hunting pressure in our heavily glaciated area makes it easy for deer to bed down or simply limit movement during daytime hunting hours. If we or other hunters don't move, the deer don't move. Trail camera time stamps from both 2019 and 2019 showed multiple bucks and does materializing on and around our property at and after dusk and then being out of sight during daylight. Following the 2019 deer season, we continued to see deer tracks in the snow until they yarded up in January. By March, we frequently saw deer tracks and sighted deer during daylight and at dusk around our property and in the surrounding National Forest. During the recent maple sap season, a trail camera on my property consistently showed groups of between two and four deer and sometimes as many as five frequenting our property. Therefore, I have difficulty supporting the assertion that the deer are not out there. We also have browse damage that we see on our woodlot that further confirm the presence of deer and our consulting forester has made the same observation on more than one visit. I prefer to see that the 2020 Northern Oconto County private and public antlerless tags kept closer to 2019 levels. I also would like to see the DNR dispense with the private versus public tags. It simply adds more paperwork or red tape to deal with in a time of smaller staffs and smaller natural resource management budgets. One other reason why I would like to see harvest levels maintained is to limit deer density as I know CWD is only a scant 25 to 30 miles distant as it has been documented at the game farm in the Cecil area.
A fundamental outside activity of WI residents is whitetail deer hunting. The number of WI hunters is sadly waning annually due to increasing costs, lack or outdoor enthusiasm, family tradition breakdown, etc. My family and I enjoy both bow/crossbow and rifle seasons year in and year out. I am not in favor of restricting the crossbow season to anything less than regular bow season (Sep-Nov and post gun season is great). I have gone plenty of years without bagging a deer during archery season so I don't believe the deer herd is too low. The current/traditional coinciding bow/crossbow seasons allows for all 3 living generations to enjoy the hunting season and WI outdoors the way it was intended to be as an annual family event. Older hunters need to use crossbows and spend time with their children and grandchildren appreciating these outdoor traditions together. Once the family event is gone this sport will die! As is tradition, bow/crossbow seasons need to remain from September through the late November whitetail rut. If you restrict whitetail hunting during the rut you will cut hunters out of the most enjoyable and rewarding time of the season. The thrill is in the chase and observing the whitetail in its natural setting performing their natural breeding rituals. This is awesome to watch! Bagging a deer is just icing on the cake! Please don't deprive hunters of this special WI annual experience. For those lucky enough to own private land, these proposed changes would drop the value of their land in my opinion. I am not a proud land owner yet but, I intend to be in the future me and my family. Just please leave a good thing alone! Additionally for this unit...reintroduction of wolves into the North woods is was fine HOWEVER the lack of check on the growth explosion of wolves is rediculous! We all know including the WDNR staff knows that this is decimating the whitetail population herd of the North woods. Ridiculous. I currently hunt up North to spend quality time with 3 generations of my family with very little anticipation of actually bagging one. What has been allowed to happen to with the wolf pack and its adverse affect on its whitetail population is shameful and the only group I can blame is the WDNR for letting is happen. Shame on the few for making decision affecting the masses like this.

In this DMU I have noticed people using farmland zone tags for this unit. In addition there is a large amount of poaching and unlawful hunting in this DMU. Some people hunt this land at night driving up and down logging roads and shoot any deer they see. This has not been enforced by the DNR which needs to be changed! I personally call the game wardens on this matter and they say there is nothing we can do. I know of some groups of shooting 300+ deer last year alone before our gun season. There is no limit to how many they shoot. And if you are wondering where they are keeping them all they are selling them. This DMU is in the ceded territory for our Native American Tribes there should be more enforcement on this as I know of unsportsmanlike activities abroad all year long. We are running out of deer I started hunting seeing tons of deer and now I can walk miles without bumping one. Your deer number kills are down for a reason, not the decrease of hunters it is the low numbers of deer! We need to stop the hunt of does in this DMU and other areas in this state. I live for hunting and fishing in this area of Wisconsin I spend more time on the public land here than I do anywhere else. I'm not in it for the killing of animals. If we do not change something we will run out of deer and hunters and eventually the land I grew up on and spend all my time on will be sold off. These numbers that are produced for are deer populations are far from true. The people responsible I don't think have been in the area enough to realize that. Just think of this "If I shot your mom would you be here, if I shot your grandma would you be here, the answer is no. Bucks don't grow fawns change the way we hunt now or don't hunt at all." Only you can change that.
Deer baiting needs to be legalized. I find it completely ridiculous that you can plant any size food plot you desire which i purely am SOLELY planted to attract and hold deer for harvest, but you cannot lay a bait site. You can plant an apple tree, but cannot lay a bucket of apples to hunt over? Absurd. This uneducated nonsense needs to stop. Ot is VERY clear and obvious that there is an outright attack on those that choose to hunt over bait. Deer are incredibly social and communal animals that smell, touch and personally interact with each other on a day to day basis as part of their life. There's nothing you can do to prevent that. And attacking the population that chooses to hunt over bait is absolute nonsense. If your going to ban baiting, then you MUST ban food plots. They are solely planted to attract and hold deer. Period. I'm not asking to attack farming, which is the first thing everyone presumes. "Well then we must ban farming because the deer eat the corn, the beans, the hay, the wheat". No, farmers plant those crops to make a living and earn a paycheck. Nobody plants a food plot to harvest the crops from it. Purely to attract and hold deer. So i ask we lift the baiting ban, because it is VERY obvious there is an outright attack on those that choose to hunt over bait when you DO NOT address food plots being legal. Stop the nonsense and quit shaming and batting down those that choose a tactic effective for harvest.

I appreciate the efforts of this group on maintaining, and hopefully increasing the deer population in our area. That being said, I think that it goes without saying among sportsman (in the truest sense) that our numbers are not where they should be, or we would like them to be. With a combination of the increase in predation, too many hunting seasons, and some hard winters, our population in the northern forest is not good at all. After spending more time than most with boots on the ground, one should expect a reasonable return if the deer population is stable-our’s is not. What happened to harvesting your deer and being satisfied that it’s been a successful season. It seems of late that more and more tags are being issued, more and more seasons are being held, and yet, there is more disappointment than ever? If we limited the seasons and take, addressed some of the predation problems, and educated the next generation on the importance of quality over excess, we might just be able to recreate an experience in the woods that will keep people coming back, and in turn understanding the value of protecting our wild places and their inhabitants. We are losing that at an alarming rate, and without people caring about a quality experience in a public space, who will keep that space public and it’s residents safe? Thank you.

I have two comments one is general and one is specific. My general hunting area is near mountain. I have LOVED the considerable drop in antlerless tags. I like going in the woods and now seeing deer and it’s great for bringing my kids into the sport. I am currently very concerned with the population near their cabin just north of Mountain. In my opinion anywhere that the July storm hit took a HUGE toll on the population and it needs a rebound. Where there is no storm effect the population lets say a 5 mile square parcel 5 miles out of the damage the number seem to still be ok. I just want to state the point that, the massive storm of last year in that area took its toll. We hardly see a deer... really none in hard hit areas like right next to my parents cabin just north of highway 64 or bear for that matter. Its like a ghost town. But at the same token the numbers are ok where the acreage wasn’t completely wiped out. I know this isn’t the forum for this but i am against removing the crossbow season especially for youths. First off i will not like it, but it is GREATLY going to discourage my wife and younger children from hunting if there is just a limited amount of time they can hunt they would not hunt with a bow. Thank you for listening.
The hunting public in Northern Oconto County have been stating through this forum in an overwhelming way that they are not satisfied with the amount of deer that they have been seeing the past two years. It is stated that the DNR wants the feedback from the hunters and hunters have been doing just that. It is time for some members on the CDAC committee to listen to the people. Dropping the quota to 150 is just a bandage for last year's low harvest and won't address the problem of low deer numbers on public land. This zone needs a zero antlerless quota until the harvest metrics over a few years indicate that the herd is indeed increasing. The zero antlerless quota doesn't take opportunity away from kids, handicapped or vets, because those numbers don't count against a zero quota. A zero quota doesn't mean a true zero. During the preliminary meeting a member on the CDAC is on record stating "We are splitting hairs dropping the quota to 150 from 250". With a preliminary quota of 150 he is right, more needs to be done and a zero quota needs to happen. Northern Oconto County zone is more similar to Forest County and maybe it would be more appropriate that Forest County leadership takes over this area. DON'T SPLIT HAIRS, INCREASE THE POPULATION!!

I've been hunting in this unit since I was 12 years old. I harvested my first deer during the October youth hunt in 2007. Then I went sometimes five years without even seeing, let alone harvesting, another. The second deer I harvested was not until I was 24 in 2018, then I finally saw and shot my first buck in 2019. This is why you're losing hunters; it shouldn't take 13 seasons for a young person to even see a buck, let alone harvest one. Your approach to increasing the herd in Northern Oconto County has been much too lax and slow. I would STRONGLY advise that the DNR NOT limit youth antlerless harvests, especially during the October youth hunt and as their first deer. If a kid has to go several years sitting in their stand, in the cold and sometimes wet, and they don't get to see that it's worth it, you'll lose their interest in hunting forever. I believe that there's more to hunting, especially in beautiful Northern Wisconsin, than just harvesting something, but, really, that is the end goal. If I wanted to just spend some time in nature I'd buy just a state parks pass rather than private land, a rifle, all of my hunting gear, a deer license, and all of the other accouterments that go with it.

I own property -- 25 acres -- adjacent to the National Forest in the Town of Lakewood. For the last few years I have seen a healthy deer population. I am not just talking about Fall. I am up there frequently year round, and except for winter I see a good amount of deer. Further, I was just there for two + days and observed a healthy number of deer after what I might have thought to be a tough winter. I bow hunted most of of last November and observed plenty of deer. What I did see was that as the gun season approached the sightings were shut down. The deer were there, just not moving. Further, I have observed that hunter perseverance has declined. By Sunday noon many hunters are done for the season. I have to say that as an older hunter I am enjoying deer hunting much more as a bow hunter/crossbow hunter prior to gun season as there are fewer people in the woods, the deer are acting more naturally, and the weather can be (but not always) more pleasant. My impression is that deer management is becoming more focused on a particular weekend or week (gun) and driving decisions to enhance that hunt as opposed to the overall deer hunting experience available.

I've hunted Oconto County since my dad brought me out at 10 years old I'm 43 now. There were plenty of deer up there when I grew up. Hunting was fun up there every year. The last 5 years are a joke up there. You never see the deer like years ago. We used to go out shining when I was a kid an you would see 50 deer a night. Now your lucky to see 6-7. I don't agree with all the wolves doing damage on the deer herd and the wolves not being in check with a wolf season. It's a shame how all the predators get a free pass and continue to flourish while the deer herd which makes the tourism money goes down. I gave up hunting up there and now hunt western Wisconsin where the deer herds are more populated and have a better chance of shooting a mature buck and doe. I think back when I was a kid and think what happened and how did this happen. Poor management and too many predators. Thanks a lot you clowns. You guys ruin everything you guys touch.
As in the past the antlerless permits are wildly skewed in the wrong direction. The deer range is 74% public and 26% private yet the permits are given out in the reverse. The North American model of Conservation dictates that wildlife belongs to the people not to the landowners but that is clearly not the case in our deer management unit. Private tracts are generally small in size and deer freely move between both public and private lands, by making the permits available as in the plan and as in the past the CDAC is perpetuating the interests of the landowners over the general public. The whole public vs private is irrelevant and should really be dropped all together but that is beyond the CDAC authority. It's sad the direction deer management has gone since the "deer czar" from Texas was listened to by the government, let the DNR biologists set the parameters based on science.

I have hunted the north woods for over 55 years. The largest change in deer movement that has totally screwed up the playing field for all hunters is the elimination of deer feeding. 90% of all deer we see now are close to private land, and private homes or cottages. The deer have deep paths to these locations. So your feeding ban has failed terribly. If you go to the national forest to hunt you will be lucky to see one deer on a deer stand in a five day hunt. The deer sign is terrible, and I scout from early September, and continue through the hunting season. I have been unable to put my grandson on a deer in the past 4 years. That has really soured him on deer hunting. This is destroying a family tradition of feeding our family's, and hunting in an ethical way. Respecting the forest and the animals we hunt for food. (Please get rid of the sale of bagged corn to the public.)

The wind storm in July of 2019 caused considerable damage in the area of the Nicolet National forest that I hunt. The storm made huge areas of forest impossible to access. Not just for myself, but many hunters. Opening day of 2019 gun season was a mass of hunters congested in areas not as difficult to access. I believe as a result, there was not as much pressure as in years past when hunters were more spread out. Sunday of opening weekend almost no other hunters were seen. I have no idea what effect the July storm had on the deer because of the extensive damage to their habitat. If they moved away, or adjusted to massive numbers of downed trees. The damage that was not cleared away certainly affected the hunters ability to get into the forest to hunt. The numerous downed trees sadly provide unneeded fuel in the event of a forest fire.

I believe 150 public land antlerless tags is too little along with only 300 private tags. Last year less deer were registered because of bad weather, a late gun hunt, high water, etc. Look at the population trends. We were on a wave of increasing for the last few years and last year's harvest was down because of those other factors. Hunters are reporting more deer being seen. Last year less deer were harvested, so common sense tells you that the population is growing. It's hard enough to buy a doe tag for public or private for Northern Forest. At the very least you should offer 500 private antlerless tags and 250 public like last year and the population will still continue to grow. That was a very informative presentation by the biologist and I appreciate all the time he put into it!

We have a problem with the natives talking way too many deer the wolf's and other predators are a huge factor we should NOT give out any doe permits for up there and only able to shoot a buck that's a 4 points or bigger we have no deer left up there our group number have gone drastically down over the years, almost to the point where we should stop hunting for a few years to let the deer population come back also numbering the amount of tags the natives should get, they are pouching them and if they run off they will not look for them this has been a huge problem for the deer herds up where we hunt I know this will go any where but this is my input I've been hunting up there my whole life it's becoming sicking to not even see any deer whole 9 day deer hunt

I do not think there is enough research on how the last summers wind storm affected the hunt. I believe a lot of deer where able to hide in the blow downs and were safe from hunters. I think the wind damage also provided some additional thermal cover and browse for deer to help them through the winter. I have seen more deer this spring in Townsend, WI then I can ever remember seeing and I expect to see a lot of deer this fall. I hope that doe tags will be available so I can mitigate the amount of deer browse to my oaks and maples on my property. Finally, the acorn crop in my area last year was incredible. I think that helped the deer put on the weight they needed going into winter and also coming into early spring. I suspect a lot of does will be bearing twins.
I am against harvesting antler-less deer on public lands. The reason is a great number of landowners will harvest antler-less deer on public lands and only harvest bucks on their own property. The results is a over harvest on public lands to a point where I don’t waist my time of money hunting deer. The public lands in all of Oconto County are nothing but dead forest lands that once ran abundant with deer. My Son is 29 years old, he started deer hunting just as T-Zone, Earn a buck got started and now anything goes hunting. My son is so disappointed not seeing deer, he won’t bother to hunt deer. My dream to hunt deer with my son is gone. The DNR has failed me. I know it’s hard to judge the behaviors of others but to fail to correct the mistake is unforgivable.

I scout a lot during late winter early spring. 100+ miles boots on the ground predominately off of roads including logging roads. Increasing predators (wolves, glad they’re around but we need management) - ease of access and human disturbance is a real issue throughout most areas (Please consider closing some logging roads) - Logging is helping habitat but the deer are in high abundance in some areas and devoid in others even of similar habitat types. - there is less private land than public throughout this dmu... So why more private antlerless tags than public. (Political pressure from locals should not outweigh scientific data and research). - I believe this area could definitely use some more enforcement by game wardens. Year round!

I think surveys should go out to all hunters to accurately gauge what they are seeing for numbers in the woods. I’ve been hunting Oconto northern forest for 19 years during gun season and put in a great deal of time to try and get on deer and through all those years I have only shot one doe. I can count my fingers and toes and that would be more than the number of deer I have seen in all those years. Numbers are NOT accurate. Not sure if you just drive around houses and private land and put together your numbers that way? Have you ever spent a bunch of time in the Jones Springs area? And now with all this storm damage there, who knows if things will ever be the same but I can assure you that you need to take another look at numbers.

I live on 12 wooded acres adjacent to National Forest property. I have not seen very many deer around this Spring, and I didn’t see any during the 2019 deer gun season. I think that the hard winter we experienced took its toll on the 2010 deer population. Yesterday I had a female deer in my yard foraging for anything to eat. I could see her ribs. Also I see fewer deer this year than in past years. Either starvation or predators are taking many of our deer. I propose a minimal harvest until the DNR can figure out what is taking our once abundant deer supply. I would also like to propose a limit on out of state hunters, and much higher license fees for them.

To whom it may concern, I have been bow hunting and rifle hunting since I was 12 years old, I would say over the last 10 years deer hunting has become boring for our youth. This is very disappointing to me it’s just very hard to compete with today’s video games and computers, I think there should be no does shot in the northern counties until the population comes back and let only the youth shoot ago and hopes to get them hooked on deer hunting for life. Where we hunt in the northern counties my older son hunted for almost 6 years but was only able to shoot one doe so he gave up hunting because we just didn’t see much activity in the woods.

Sat 6 days last year gun and black powder seen 3 does. I paid 12.00 for a doe tag but could not pull the trigger with so little deer sign. Unit should be buck only for years to get the numbers up. Sad to see the Wolf kill of a deer on the property last year. Please tell me why we have wolves in the area. My parents bought the land for our family to enjoy. Hunting the land is a gift from them to my family to enjoy for generations to come. Hard to get kids excited about hunting when there lucky to see a deer let alone a buck. I will hunt no matter what happens. Love to be in the woods.

I spend a lot of time in the woods in WI and in the area in Northern Oconto county has some deer but the number of deer I see on a regular basis has been far less than I saw 15-20 years ago. Now with the no registration stations I feel that many more deer are just being harvested and not reported. Go back to the party tag - 4 tags to be allowed to shoot one doe. You will have more hunters hunting (no hunting tags for anyone that has not passed hunter safety class) because of the party tag and back to registration stations so that accurate counts can be maintained! Thank you.
A lot of violating and poaching is observed and heard about due to no in person registration. The lack of registration of deer and people who continue to hunt after harvesting a deer will continue to lower our numbers. We live in a ceded territory in the northern zone. A lot of night hunting is going on that needs to be addressed and talked about. This drastically reduces our numbers of the deer population. If we want to increase the deer population we need to put a haul on antlerless deer hunting and observe the hunting rules and enforcement needs to be increased.

Please get rid of the December Antlerless Hunt in the Northern Forest. Last year there were only 4 deer taken during this time. This season is not productive or well attended and it prevents the Snowmobile Trails from opening earlier, as we witnessed last year. Please do NOT put the entire County in one group for Doe Tags in the future, as keeping the northern forest separate is important as the deer population in the northern forest is alot different. I can't even imagine who would come up with the idea to put them together, as this makes no sense to me.

Over the years I have seen more and less deer in the area. I don't believe there are enough in the herd to justify any additional antlerless permits/hunts(other than youth hunters). If you want some does killed I would prefer to see either sex archery and or firearm tags or a limited number of hunters choice tags, one tag per person per season. I feel crop damage populations should be handled on that particular property. In my own personal opinion the public or private antlerless tags are probably not being used as such. Thank You for Your Time.

2019 was hands down, the worst year in my 38 years of gun hunting this area. My family has hunted this area since 1922 and those still alive all agree something needs to change for the hunters and the deer. It's been on a sharp decline since 2007 when it was overharvested with ridiculous amounts of antlerless permits. My wish is for my kids and grandkids being able to experience the same fun and excitement I was able to when the deer numbers were good, the wolves were dead, and a group of hunters coveted that single party permit!

I believe the storm and damage in July of this past year spread the deer out more. and deer did not return to their natural feeding grounds after the rut or even after the gun hunt? Are those deer alive or have been killed somewhere else? Im making my comments on me and brothers private lands in northern Oconto co.I think setting the doe harvest down til you get a better hold on what the population really is and err on the safe side as you are projecting to do, but divide the numbers evenly between private and public lands.

I feel the gun deer season needs to be extended by atheist a week. This week should be infront off the current season not after Thanksgiving. The biggest issue I have is when the bonus tags g I on-sale, my job doesn't allow me to stop working,, and purchase these tags. Honestly I stopped trying to get them simply because the u would sell out that fast. What if the bonus tags were sold for a certain time period during the season. That would work great if the season was more then 9 days.

Since I am elderly, my main concern this year is access to public hunting land. The Forest Service has blocked access to many areas using boulders and berms. I believe that UTV's and -or ATV's should be allowed for use to retrieve a downed deer, and to go to and from your stand. I have tried the "Disabled Hunter Program" and found that is very limited in scope! I could write a book on disabled hunting opportunities, since I've been struggling with being a disabled hunter for over 35 years!

IN the last year I have seen more antlerless deer than ever before. I was hoping to turn the to similar tags as last year with a longer hunt time to make up for this past two years that have been on the decline for hunters registering. We do not have the passion of hunting staying alive in the generations coming up and I for one am hoping to bring that back. By decreasing the harvest numbers its only going to make that more difficult to do. I hope that all things are considered.
I am a land owner in Oconto North-land region and was disappointed this year in the lack of deer sightings. Given the population, one would think that you would see more deer this past year. I agree that the later season and the Oconto County summer store damage may have contributed to see less deer than previous years. We are looking forward with the decrease kill from last year and a mild-winter that deer sightings will be up for next years hunting season.

Crossbows should only be allowed to be used during firearm season. Also if you don’t live in the area and support the area economy with taxes then you deer tags should be for archery only. To many people come from the cities and shoot spike bucks or yearling deer just because they wanna say they got a deer. Not knowing that they are a direct tribute to why the deer populations are down. Also QDM with 4 on one side should be implemented.

I hunt in the Michkanee area/Oconto county forest so I am not sure if that is public farmland or northern forest (I suspect the prior). However there are very few deer in that area and large number of hunters. I do support the young kids shooting does (but otherwise bucks only). There will likely be a portion of people that shoot does 'off' their kids’ tags. I wish funding for enforcement was better, but thank you for all you do.

Close the season for two years and watch the Deer population come back in record numbers. At this rate my kids won’t have anything to hunt people shoot small Deer all the time and it makes me sick. Also group hunting just to fill your tags is wrong what happened to waiting and watching and enjoying the wild instead we shoot anything thing that move now. Limit one Deer per hunter and let’s make the woods a better place for everyone.

Deer numbers are deceiving in this unit. One year to another is not enough to set quotas. Set them same as last year and see what happens. This constant tinkering is a big turn off (especially if I was a new hunter) Let quotas be for at least 2 or 3 years. Don’t remotely compare northern Oconto County to Southern Oconto County where there is way too many anterless deer. This area is different and should be managed that way.

Try to avoid tweaking numbers every single year. This constant up and down tweaking of numbers on an annual basis doesn’t do much. Try a 2 or 3 year average. Try not to be reactive to every email you get. Sometimes folks just have a bad season. I have hunted here since 1986. Sometimes we see a lot of deer, sometimes we don’t. This constant playing with numbers of anterless deer quotas (which is important to us) gets old.

I do not appreciate the fact that the Indians from the tribes of the area are able to drive all the back roads and National Forest roads at night and shoot deer from their vehicles with a spotlight. The deer population was definitely coming back. I was told by a local person from the area that the Indians killed 167 deer in the National Forest off Smyth, peek, and chickadee roads. I would like to know why that is allowed.

When turkey hunting this spring i have seen many more deer then i have in the last forty years in Oconto County Northern zone and this is before birthing is about to begin. No one has talked about the ability of the hunters to get into the woods for the 2019 hunt do to the massive straight winds that made it very difficult to get deep into the woods their for not many deer were taken last gun deer season in Oconto County.

Please stop baiting statewide! Please go back to in person deer and turkey registration. There is too much poaching going on in the northern woods. The system we have today maybe most cost effective for the state to operate, but our deer and turkey populations are being poached too quickly. People can not be trusted to to the right thing all the time. Current system promotes poaching! Thank you

Dnr, well with all the trees that are done where we hunt you could hardly get in the woods. Did see one deer except on private land seen more . But with these trees getting harvested this should make a healthy forest and good food supply for the deers . But must keep baiting out of hunting and turn in people that are feeding illegally. We do need deer numbers up to 20 to 25 per square mile.
I am not in favor of limiting or putting any additional restrictions on the use of crossbows for deer hunting. Let's all encourage the humane harvest of deer and not show prejudice of weapon choice. Logging is starting to take place on the National Forest which will improve deer numbers and habitat. I would like to see baiting brought back in limited amounts of one gallon per site.

excessive amount of bears in this unit. why does it take so long to get a bear tag with this many predators? Only in it for the money? keep people buying tags with out a chance of getting a tag? get rid of the bears. They are not afraid of people any more. they walk into your yard at noon looking for food. Kids are in danger. I have a cabin there. I fear for my grand kids in the yard.

I haven't hunted in over 8 years and would like to start again as I'm retired. I stopped hunting mainly because the baiting of deer. This stopped them from moving in their normal patterns. I saw less and less deer and therefore stopped hunting all together. I would like to see a total ban on baiting so we get deer to move in their normal patterns and stop or curtail the spread of CWD.

I am very concerned about the CWD risk in Northern Oconto County. People are not obeying the baiting rules. Also, a lot of people along the lakes and in back of their houses bait deer with corn. When you try to tell them that this is unhealthy to deer, they laugh and tell me they are just feeding squirrels. I think there should be more memos and warnings on feeding and baiting deer.

Due to the damage to the forest last year by the wind and tornadoes and the on going clean up, I feel is going to greatly affect the deer herd. Loss of habitat, food sources and the increase of predators on the fawn population is going to continue the decrease in the deer herd. I feel that doe tags should be reduced and a restriction on smaller bucks (antler size) be established.

I would prefer expansion from a county DMUs to a larger dmu that includes surrounding county forest areas. I expect this year's herd to be moderately better than last year, but that's just a hunch based on last years poor showing. I do not favor private landowner rights over public land hunters. The herd is a public resource, not a private herd, favor public over private.

I went from seeing 10-15 deer a day 15-20 yrs ago and then earn a buck took care of the herd along with the predators. People aren't going to be hunting along with our youth if you don't get the deer numbers up. I am very discouraged in our dnr in this matter. I urge you make more of an effort to restore our deer in the north before people quite hunting altogether!!!

People are hunting on Public land using there private deer tags.I see the hunters with there own land not shooting antlerless deer on there land, but driving deer on public land and shooting them.

The western third of Oconto county is public and very few deer for lots of years very experienced hunter with 42 years in the same general area been poor for long time predators for hunts earnabuck and the reservation all have had a large affect on the herd the public areas get slaughtered every year not much left this is a fact not a gripe true story!!

I believe the deer herd is considerably lower than ever before. I would like to see the youth hunting Be restricted to antlerless only. Also stop many of the other “special hunts”, the deer are being overharvested grossly in my opinion. To ad days to our fun season is funny, because more days in the woods can’t create deer that are not there

Three years ago there was a lot of logging in your area. At that time 2 Native American loggers were bragging they had shot over 50 deer. A friend of mine saw a Native American logger get out of his machine and shoot a deer while still standing on the running machinery. That season there were very few deer taken or even seen.
I’ve seen more deer this year then in the past 10 years. Less Bear sign and coyote. I am a disabled vet and was lucky to get a doe perm in the first 5 minutes before they were gone. I did not harvest. There is a lot of potching of deer in this area by private land owners. I've seen it happen from my deer stand more than once.

I hunt near Lakewood and the deer population among our group has been adequate. In my opinion hunters have been getting lazier and thus report seeing less deer. Also, I’ve been hunting with a cross bow in recent years and love it. There has been talk about restricting cross bow hunting. THIS IS A TERRIBLE IDEA.

I know that there are those that believe we should only harvest bucks. Over the last number of years I have not seen a buck to take a shot at, yet I have seen an increase in the number of antlerless deer. I know it only takes one buck to service a number of doe but it seems to me the ratio is out of line.

Myself and my two hunting partners were the only three hunters NOT baiting in the approximate 1 square mile we call "our" hunting area. Where the heck are the wardens? I have been enjoying Oconto Co, forests for 40 years and would like to thank all the CDAC members for their dedication and work.

I would prefer the gun deer season to start a week earlier than normal, and that the season last for a total of sixteen days. That would allow the gun hunter to see more deer during the rut, and would most likely allow for a better overall hunting experience because of seeing more deer. Thank you.

I have not seen any amount of change in the last 3 yrs in terms of deer population. I do not think there are enough deer for the large amounts of National Forest and open acreage to warrant any antler-less permits for the 2020 season. Perhaps 2021 or 2022 would show an improved deer population.

I have seen an increase in deer sightings throughout the year or years and I would like to continue to deer in the future, so I think we're on the right track by limiting the number of antlerless deer being harvested, also, I would like to see a permanent baiting ban for the future as well.

I would like to see the youth hunts enfed if you think the deer population is too low I see enough deer that I think there should be more antlerless tags for public In the 90's we had lots of deer and had hunter choice tags I would like to see an either or tag vs a bonus antlerless tag

I think you should have a minimum of acreage of at least 20 acres to obtain the antlerless land owner permit because people really can’t hunt on a acre of land but they are still getting the permit and they are still hunting in the national forest using this permit

I think you should allow the youth either sex. We have in the past and stayed within the numbers you wanted harvested. It is a great opportunity for their first deer and we need that to keep them interested in our sport. This could be the only unit they can hunt in.

I find it very frustrating that a 19 day gun deer season is being considered when there was a 25% decrease in harvest reports last year. So many rules are being change that allow hunters to do what ever they want and it's taking a toll on my local population.
There are a lot of doe/fawns in the Mountain area. I struggle to grow a garden. Neighbors say the same thing. I see does and fawns all the time but I haven’t seen any bucks. Maybe shooting a few more antlerless deer would allow some bucks to survive.

The July windstorm affected many areas hunters in my area hunt. Deer sighting’s were way down in these areas of public land. Is there an official count of deer mortality from the storm. Will the forest service be contracting for logging in these areas.

I remember ~15 years ago I could go out and at least see a few deer ever since CWD mess. I see none we killed off the deer heard and added the wolves, now I some times wonder why I buy a hunting license when I could just go sit in the woods for free.

On public land not enough deer on private land where only a couple of people can hunt to many deer if a farmer applies for crop damage it should be open for public hunting. You should look into let people hunt with air rifles .357 cal our higher.

I couldn’t hunt in this unit in 2019 because of a pre season injury, but for the last few years I have seen very few deer where I hunt on public land. More logging to create areas of younger growth more suitable as deer browse would help.

After the storm damage clean up is finished, there will be more open area and potentially easier access to some area. This is likely to increase hunter success rates in years to come and should be considered when setting tag numbers.

From our group’s (10 - 12 hunters) observations over the last 5-6 years, it does appear that the deer may be making a slight comeback. However, I believe that care should be taken to how quickly the antlerless harvest is increased.

The wolf population there is out of control. There are hardly any deer left. My family has been hunting there for the last 40 years and the last 4 years we can’t get any deer and cannot provide enough meat for our family!

you can’t have antler less season in northern oconto but you can SELL bonus tags shows what this management program is about money. Ten minutes after the online sale is open the tags are gone this is a poor system.

I have kept a daily log of my hunting since I was 12 and I hunt over a large area in the northern part of the county. The deer population dropped dramatically in the early 2000's and has really not recovered.

East of highway 55 should not have a doe permit. South to reservation and and north to highly 64. Extend this to highway 32. This area is hunted hard by hunters who are looking for a place to hunt deer.

The Northern Forest of Oconto county is a joke. Seeing a deer is as likely as seeing a unicorn, stop cross bow hunting and hand out wolf permits. It’s getting to the point to being depressing to hunt here

Of seven hunters this season, two of us saw only one doe... all gun season long. We used to limit out on bucks every year and for the last 10 years the available animals has dropped to nearly nothing.

I have heard comments about changing the length of the gun deer season. Why not make it the same as Michigan? Opening on the 15th of November each year and ending at the end of the month statewide.

If you talk to Ever and Dr. face Palm, please tell them to leave the citizens alone to make up our own decisions about when and how to reopen the state economy. We are all adults, leave us alone.

Please continue with the clean up following last summer’s storm and continue with the planned logging in the National Forest (Section 2107 and others nearby). Thanks for your consideration.
There are multiple packs of wolves in the area and each year are getting larger. I had 3 wolves walk under me in 2019, that is the first time I've ever seen a wolf in person in the area.

I believe the bear, wolf and coyote problems are unchecked. Turkeys also have exploded. You should not have to wait ten years to get a bear tag and turkeys should be under small game.

It is sad when the last five to six years of gun and bow hunting seasons I have not seen a deer for the days and hours of sitting in the woods. I will not hunt in Wisconsin anymore.

I would like to see restriction on harvesting Bucks to include requiring at least a 3-point antler on one side. In my opinion, too many young bucks are being harvested.

I believe the logging in this area was long overdue!! The deer should have a great food source with all the new growth. Continue with no baiting to help combat CWD.

Deer population is at all time low in my lifetime of hunting. Extended seasons are foolish, in my opinion because more time to hunt can’t produce deer that don’t exist.

Numbers in our area have been steady. With the new growth that will be generated from severe storm damage in July 2019 the population should flourish in the future.

Hopefully the logging that was done in this area last year will help improve the deer herd. There are too many Bears, bobcats and coyotes in this area.

My family (3 hunters 2 under 16) would like to see deer. We spend a lot of time hunting and don’t see many deer. Hard to keep young hunters interested.

The predator population in Oconto county is too high where I hunt. I have a hard time bringing my grandchildren to hunt because there are no deer to see.

There needs to be a more accurate system to address the deer populations/predator loss in individual DMU, I believe they are grossly inaccurate!

Crossbow hunting should be limited to elderly and those with a doctor verified medical condition that prevents the individual from drawing a bow.

Leave the 9 day gun season the same. Give the bow hunters the month of October to hunt, then open season for bow hunting after 9 day gun season.

Until we have control of the wolf population in this area these efforts to increase the deer population in this area are all a waste of time.

I walk every other day in the woods. Different locations - some private - mostly public. I have seen very low fawn survival rates.

There is definitely a wolf/coyote problem that is getting worse year after year. Have seen packs of both in 2 different areas.

We need to bring in sight baiting back unless your in an open area there’s no reason for a deer to stop (we need a safe shot).

People hunting public land buying bounts antlerless permit’s for private land because public land permit’s were sold out.

Storm damage has greatly reduced our hunting areas on National Forest. This can crowd undamaged areas with hunters.

Predators play a huge effect on deer population in this unit. The wolf population is what needs to be regulated.

I would like to see the antlerless authorization tag be valid for both public and private, not one or the other.

Wolf sightings have been up lately. Bear sightings have been up as well. Deer sightings are down.

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

737 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 361
   - I visit this unit for non-hunting purposes: 215
   - I hunt in this unit: 668
   - General interest in this unit: 131

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 635
   - Bow: 304
   - Crossbow: 266
   - Muzzleloader: 217

3. How many years have you hunted deer in this unit?
   - Minimum: 0
   - Average: 27.19
   - Maximum: 70

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 188
   - Mostly Private Land: 100
   - Public and Private Land About Equally: 116
   - Mostly Public Land: 98
   - Exclusively Public Land: 155
   - I did not hunt in this unit last year: 11

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 15
   - Not too crowded: 89
   - Neither crowded nor un-crowded: 81
   - Somewhat crowded: 120
   - Very crowded: 153
   - Not applicable: 11

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 186
   - Fewer: 191
   - Same: 224
   - More: 101
   - Many More: 25
   - Unsure: 10

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>

</table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...  
Implement an ANTLERLESS HOLIDAY HUNT: Not applicable in this DMU

If a Holiday Hunt is held in a Farmland unit...  
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: Not applicable in this DMU

If the Population Objective is not "Increase"...  
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 91 580 66

If a Zero Quota (buck only season) is adopted...  
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? 336 335 66

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?  

<table>
<thead>
<tr>
<th>Concern</th>
<th>Average Rating</th>

First of all I'd like to start out saying, I scout whitetails 8 months out of the year, I run a good amount of trail cams throughout the county and I hunt about 3 months out of the year very hard. Its hard to have success here if you are looking for a decent buck. But being out there all the time I am able to see what's going on. I hunt all public land, county, state and federal. Historically this area has been one of the worst areas in the state to harvest a mature buck sporting some decent head gear. This is due to lack of nutrition, severe winters, predation and just overall stress. I think we should be the first county in this state to set the bar and pass a 3 pt on one side antler restriction. Not to grow trophy bucks but to protect spikes and forks so they have a chance to go through the cycles of life and maybe they will have a chance to mature more. Seems like non resident hunters and hunters from southern WI come here and harvest the spikes and forks way to often. We do not have a quality herd because of this. People like seeing a nice buck, it brings business to the area, and when one is harvested the business continues onto the taxidermists, maybe the butcher shops. If muskie fisherman can get a 50" size limit why can't we get something to help deer in the whitetail capitol of the world? We should try it, what's it going to hurt? People will have more success and they will be happy. This should be an option and many of us would like to see this. Otherwise we would like to see one buck per hunter a year. We are losing hunters not because they aren't seeing deer, because they aren't seeing any decent bucks. I also would like to mention that my trail cameras do show the wolf population increasing every year. I also pay attention to the winter severity and this winter we are at a severe number already for stations in Oneida county. So there should be no antler less tags issued for public land after any severe winters. I believe it should be lowered for private land as well after severe winters but there are areas near cities and towns where the doe numbers could be maintained. The extended rifle season will hurt our fragile deer herd, and the continuation of crossbows for anyone all archery season is really having an impact on the buck population, I do not agree with either. We need to have a crossbow season and stay with the traditional rifle and muzzleloader season. If people are in the woods with rifles at the tail end of the rut it will be devastating to our buck population, they are like sitting ducks. One way we could make things a lot easier is change the way the seasons begin. This is a suggestion for the whole state. There are years we hear how the season started to late like 2019 so that lowers the harvest of bucks. There is a simple fix, make rifle season open on the same date every year like MI. This is my idea on season structure and I believe it would improve our state and simplify everything; Archery Season - Sep. 15th-Jan. 15th statewide continues Crossbow Season - Nov. 15th-Dec. 15th statewide continues Rifle Season - Nov. 20th-Nov. 30th statewide, weapon of choice Muzzleloader Season - Dec. 1st-Dec. 10th statewide No extended archery hunts, no holiday hunts, no youth hunts, no baiting statewide, no more CWD tags, bring back registration stations and let the counties control their herds as needed. Lets make this the greatest state to hunt whitetails because right now we are falling off the map, losing business and losing hunters.
It seems that increased deer numbers over the past few years don't accurately represent what many hunters see. My experience in talking with many hunters is that private land owners with large tracts of land with agriculture, food plots, etc have vastly increased deer herd size at the expense of smaller landowners or public land hunters. Because more wealthy land owners with large tracts of land can afford to put in large food sources, and because many residences continue to provide food sources for deer illegally and without penalty, there is no reason for a deer to be on public land or on a small private tract where there is no food. The lack of ability to bait deer has hampered people on public land/small land owners who are the majority of hunters from seeing deer. Large land owners with food plots provide a food source, and people feed deer in their back yards, but the hunters on small tracts/public land face stiff penalties if they do - so they don't see deer. It seems unjust that the penalty for feeding deer in your backyard is less than feeding them in the woods for hunting purposes - and that it is rarely if ever enforced. You can drive down any rural road or around any lake in northern Wisconsin and see into the back yards of people who have feeders blatantly sitting in their back yards full of corn. If the purpose of the ban is to stop the spread of CWD it should not matter where the feeding is happening - it is equally harmful to the deer herd and should be punished equally. If more people were scared of a substantial fine for feeding in their yards it would cut down greatly on the practice - thus deer would have to roam and browse to feed, thus putting them in front of hunters. The deer herd may be a healthy size, but it is not distributed well. When many antlerless/bonus tags are provided, the deer herd in these areas shrinks even further because the hunters don't have many deer to chose from and will harvest any deer they have a chance to harvest. The only people seeing a lot of deer are the large landowners and people with means/food plots.

In my humble opinion, the deer estimates for Oneida county are way off. There are not near the numbers of deer that are estimated, and I believe the goal for this county should be to increase the deer population. I base this on the number of deer I see during the season, the "deer sign" in the forest, and discussions with other hunters from different groups. Our group has been hunting the same public land for decades and our success rates have dwindled to the point of not even seeing deer. Half the people in our group do not hunt the north woods anymore because they are convinced there are no deer. I would like to see the bonus antlerless tags go away for at least one season, to include all weapons and all persons (youths). Then gradually bring the antlerless tags back slowly. Our group shoots one doe as our camp meat for the season, we are buck hunters. I would like to see the "party tag" used as a CDAC tool in future management as well. That was always a great program that defined a lot of group/family hunting traditions. If the idea in the overall management process is to get more hunters to the northwoods, there needs to be a better opportunity for a person to see and shoot a deer. With that in mind, having 2000 antlerless permits for private lands and 1000 antlerless permits for public lands is counterproductive. It will discourage people from coming up that do not own land. There is a disproportionate number of permits considering the land is split 53% private and 46% public. Thanks for letting the public speak.

This DMU has a large amount of illegal baiting ongoing. In the area of the Oneida/Langlage Cty line (W of Pelican Lk, Hwy Q, Hwy G) it is very prevalent by SOME landowners and others hunting public land - while I continue to follow the rules and not see any deer. I own land near this and seeing deer is a rare occurrence while neighbors are frequently tagging deer. It is something that needs further attention. Either police/enforce it better or remove the baiting ban. A lot of hunters have simply given up and the young would be hunters have no interest. For the health of the sport into the future (and the licensing revenue, and economic impact to areas in the northwoods) it needs to be addressed. Additionally, while I realize that a wolf hunt is currently a federal issue, MUCH more pressure needs to come from these advisory surveys, to the DNR, to DNR Administration and to legislators to continue to push legislation or file lawsuits to put this ban on wolf hunts to bed. I don't even feel comfortable walking through my forest with my hunting dog without carrying an AR-15 with 3 30 round clips to protect him. They also frequent very close to my cabin and I have been surrounded by them walking out of the woods at night in the dark after bow hunts. They have a place in the ecosystem but they also need to be kept in check just like it was 1000 years ago when humans killed the wolves to protect themselves as well as balance out the competition the wolves created for their foodsource.
The deer population in Oneida county, specifically the Willow Flowage region, has been and continues to be decimated by the wolf population. I own 80 acres surrounded by public land in this region and each year I find more deer killed by wolves than I see during bow season and gun season combined. It is easy to distinguish this with wolf tracks in the snow surrounding deer carcasses. Additionally, it is common to see more wolf tracks than deer tracks in this region just driving down logging roads as well as in the woods while hunting. We are close friends with our landowning neighbors as well as groups that annually gun hunt this region. Last year we did not hear of a single deer harvest within hundreds of acres with the total deer sightings less than 10. THIS SHOULD RAISE ALARM FOR THE DNR!!!!!! It is time that something needs is done about this issue. A decade ago, this region was absolutely filled with deer and now it is considered a good day if I see a deer. This region needs to be managed differently than the rest of the state due to the localized and the mostly permanent presence of wolves. The question of opening an antlerless season in this region is somewhat of a joke. With the amount of deer in the region, killing does would certainly not help the dismal population. Please do the right thing and understand that outside the townships and cities, the deer population is pathetic. PLEASE DO SOMETHING

1. Deer numbers need to first be addressed by killing from predators. Wolves kill “just because” and have witnessed, studied and heard the killings of deer in this unit that hunters no longer have choices to pass up a small buck due to predator killing. Fawns are far and few between and now a proposal of more antlerless deer kill? I can go all day without seeing a deer where we “use” to hunt, land that is still wild, but only for the strong that survive, “wolves”. Witnessing kills deer are an easy victim for wolves, wolves kill elk, moose, bear, which is a much more aggressive kill, whitetail do not have a chance. I am 57 years old and my hunting days are limited? My land is still - large predator tracks. I am sad to say if we do not fix the first problem that was introduced, our children will have no whitetail to hunt. Is there a bigger picture that is not being shared - such as elk/moose that are now being introduced? Moose and whitetail can not survive with each other. Announce the plan that the DNR has for our lands that I can make a better opinion. More tags means more money for the DNR. What plan does the DNR have for the children hunting Whitetail - when they will be no longer? I hope to have feedback on my opinion. I have been hunting the woods for many years. Redirection is needed for our future and I pray that you feel the same. We can make it right. :) Respectfully, Penny

The statistics showed that deer harvest during archery season greatly increased after crossbows became legal for every hunter to use. This points towards a much higher efficiency of crossbows over vertical bows. This should be taken into consideration within regulations and season because the number of opportunities vertical bow hunters have for antlerless tags or to encounter more bucks may be diminished while crossbows are legal to use for the same period of time and leading to more deer being harvested than normally would be in a vertical bow only season. I do not agree with the public/private mandatory choice for antlerless permits. In Oneida County in particular, private and public holdings border one another a lot. The deer using the private land in many cases are the same deer using adjacent public lands. For example, my family owns 30 acres of land and just across the road there are many acres of public land. If I choose a private land tag, I only have 30 acres to harvest a doe. But if I choose public, I may be hunting 50 yards from our property but not be able to harvest a doe on that property. It doesn't make much management sense in the Upper Midwest to separate public and private land antlerless harvest because the private holdings generally are small and have the same exact deer using that land as the public land next door.
I believe the Wolf kill mortality rate is much greater than is realized. If a hunter goes into the forests where wolves range, they will not likely find many deer in that area. Something has to be done about the wolf situation in regards to deer management. The higher deer numbers reside in highly populated communities where hunting is not available. They are hard to find in the forests. Although I do currently use a crossbow along with my compound, I fear that the use of crossbows may jeopardize the liberal archery season that we have had for a long time. I would support limiting or shortening the crossbow season but not the archery season. Crossbows are not a good promotion tool for getting young people involved in archery. They simply are two different weapons and have very little in common. I believe that the due to our harsher winters of late, it would be beneficial to allow the feeding of deer after the gun season. CWD doesn't seem to be a problem here in the Northern half of the state. Many of the deer in subdivisions and near populated areas are struggling to find food and over-browsing the woods and neighborhoods. Supplemental feeding would help make this population of deer healthier and make the people happier by watching them. It is also a cash industry for struggling farmers in Wisconsin. A win-win situation for all.

I live in the woods of an Ida County. I have seen so many dear here however the deer are all small. I feel that this is because so many Taurus feed them yet there is not enough for them to eat over the winter months. They are highly destructive 2 mi backyard plants and I routinely see carcasses are fresh deer hit on Highway 51. If we were able to harvest more deer in Oneida County I feel the road to become safer and we would have less deer starve in the winter. I also think that having less deer in Oneida County in the long run will cut down on predators that I see such as wolves. I have seen wolves in evidence of wolves with my own eyes and I do not like them around. I believe we should bring back the wearing of back pigs while deer hunting. As I see more and more people driving four-wheelers in blaze orange while carrying firearms I can no longer see their back pigs. I Wonder has all these people trample around our great state in the county which I live in if I were to ever even remotely want to figure out who they are I would have no means by which to do so. They're on four wheelers that do not display a plate or the plate is obscured by mud. If they had a backpack with a number, I could see that number and if necessary report trespassers and violators. Without having any back tags I am absolutely unable to do so.

In Oneida co there is a lot of public land. There should be more tags available for public land hunting. In recent years the number of hunters trailing to the area to hunt has gone done do to the fact there aren’t antlerless tags available for hunters. The number of predators (bear, wolf, coyotes, bobcats) is reducing the deer populations. There needs to be an effort to make more tags for predators available to limit the predation of the deer by these predators. The number of healthy deer has gone done over the years sense no baiting has been set in place. With hard winters and high numbers of predators around the number of fawns seen during summer months and fall hunting has gone done. The deer need nutrients to be able produce and support fawns, get them through winters, and allow the bucks to regain weight/health before winter. This unit isn’t in southern farm land where deer have the ability to go to farm fields to get nutritional food to stay healthy and recover after rut. Either increase bear permits and allow for wolf hunting in forested United or allow baiting or feeding so the deer stand a fighting chance to produce healthy fawn, healthy deer in spring summer, and allow the bucks after rut to get the nutrients they need to survive not only the hard winters but be healthy enough to survive predators.
I hunt primarily public land, being a reoccurring visitor to the county vs. a resident/landowner. I started crossbow hunting about 3 years ago with having semi-retired, along with hunting the 9 day gun/deer season annually for the last 35 yrs, the last 20 in Oneida county. I have seen exactly the same number of deer during the 9 day gun season each of the last 2 years - one each, on opening morning. I have hunted opening weekend, including the Monday. During bow season, I have hunted several long weekends (3-4 days) across October and November each of the last 3 years. While seeing a few more deer, I still feel the deer numbers are lower than what is being estimated by the CDAC/DNR. This is compared to what I saw, hunting the same areas, when I first started hunting in Oneida county. The first 2 years I hunted I saw 15 and 11 deer, respectively, across opening weekend (early 2000's). A second comment is the antlerless permits should be divided between private/public lands based on percentage of acreage, not whatever tool is used to determine the ratio now. My understanding is the ratio of private/public acreage in Oneida is ~ 55/45. With the 2020 proposed antlerless permits at 2000 private/1000 public for Oneida (which in total is too high), that is a 67/33 ratio. Doesn't make sense to me.

I own private land that is managed and have also hunted public for many years and I spend many hours in the woods on both. I believe lack of logging and predators has resulted in a decline of deer on public lands but conversely on my managed private land as well as private land around me the deer herd has increased and this spring I have seen over browsing and would estimate 75% of available browse is gone. I have done a lot of walking. This tells me there are too many deer in my area. Because of differences I see in private vs. public here's management becomes difficult. The biggest issue see is the impact of predators. I don't have a good feel for this. As a result of what I see I think you need to increase private antlerless tags and keep or reduce slightly the public tags. Please note I am concerned about reducing opportunities for non land owners on public. I try to do my part by allowing some people the opportunity to hunt on my land. We need to encourage hunting. As a side note it is ridiculous to consider reducing the crossbow season in an era where less people are hunting. I am fine with increasing the length of the rifle season but if people really want to see more deer with a rifle they should spend more time in the woods to scout and find them. The deer are there.

I hate to say after 45 years of hunting the northern woods of Wisconsin, our deer camp has decided to move to Indiana going forward. Since the late 90s we have seen a decline in the number of deer. We used to see 10 - 20 deer a day while sitting on stand from sun up to sun down. Now you are lucky if you see 1 or 2. This past year hunting the McNaughton Lake ski trail area three of us did not see a single deer in 4 days of hunting. We did see an abundance of wolf tracks. In going out to the supper clubs, we were hearing the same experience from many with comments of "likely will be our last year in this area". It is truly sad. I was born and raised in Southeast Wisconsin and besides the fall and watching the Packers - the one thing since I was 12 that I always looked forward to was going up north for deer camp. Our group which has gotten smaller over the years will be moving to a friends farm in Indiana. One comment I would make for your consideration, would be that out of state hunters that have limited time (3-4 days) to hunt that if possible to increase the number of doe tags for sale. It has been a really hard decision to move deer camp, but in the past 5 years we have only harvested 3 deer out of 4 of us.

I hunt in a section of county owned forest land that has seen a lot of logging. This has negatively impacted our deer numbers greatly. The clear cutting of our section of public hunting has devastated the habitat for deer in our area. We hunt right on the county line between Oneida and Lincoln Counties yet have no where near the deer population as those in Crescent Corners or near Hat Rapids. To treat everyone that hunts in the near CWD area the same is nuts. We do not have any farm land within miles of where we hunt. Have had to deal with logging and a very active ATV/UTV trail which has made seeing deer throughout the year a challenge. The idea that their is a one size fits all for the county hurts our hunting. Where we hunt, no antlerless tags should be issues. We need to be growing the herd in our area plain and simple. I've gone 2 years without seeing a single deer while hunting regularly for both bow and gun seasons. I'm not the only 1 in our hunting party of 5-7 who are in the same boat. Our hunting party used to be 12-15 guys, that is now down to a core of 5. There just are not enough deer in our area to entice guys to hunt our spot in the the southeast corner of Oneida County.
I would like to see a point based system for doe/small buck tags on private and public land. The fee for this $5.00 if pulled in a lottery system then the fee for the doe/small buck tag owed in 72 hours of drawing or goes to over the counter. At 5 points get a tag if not pulled for that county, once pulled points start over. Also would like to see point restrictions on bucks to encourage more selective deer management. With one buck on this first then can tag a smaller buck or doe for a total of 2 deer per hunter, a reverse of earn a buck system. This system would help the herd to regrow with a 19 day rifle/muzzle loader season if only gun hunting, combined season with bow/crossbow/rifle/muzzle loader be almost 3 months of time available. I would also like to see youth hunt ended after 1 deer harvested for youths up to 14, I know of too many hunters that use their kids to fill the freezer. This also takes a lot of good deer out of the gene pool for growing the population. After 1 deer or 14 years hunt with your mentor or parent on the normal season, the best way to learn the real hunt is about being in the outdoors enjoying nature not the harvest of a trophy.

My above answers are reflective of Hunter experience over my lifetime. Recently, seeing far fewer deer overall, and way free antlered bucks. Especially any over 2-3 years old. I have however noticed way more predators in the areas where I hunt. Not only canine, but felines also. I am picking these up on trail cams on runs throughout the property. I am an advocate of non bait hunting. But am frustrated knowing neighboring landowners are still using some type of bait or attractant to migrate deer towards their land. As the natural runs on the land I hunt, lead that way. I feel, not only for the reason of stopping CWD, but to reset the deer population that baiting/feeding has to be stopped. Every gas station, grocery store, and bait store, sells corn in bulk. Even though baiting is banned. You, DNR, need to do more towards stopping retailers from selling corn, in order to stop private baiting and feeding. And I don't know how you can do that, since retailers have the right to sell it? So, on the other side, let's try to get a better idea of handle on the predator population, to give deer a better chance of growth, and possibly living longer to grow more bucks?

When scouting in the area of Bass Lake and Shingle Mill Road each year there is less sign. There is also a lot less hunter activity. I think there are three reasons for this. Reason one is the deer herd there do to all the public land to the south in unit 42 and that area of 38 was over harvested. Too many antlerless tags we’re given out in prior years. In 2007 the woods opening day had people all over in them. There’s hardly anyone on opening day. Reason two you can’t compete with landowners that bait near by. I only know of on that’s been busted. I can give you 4 off hand for sure and there’s more I question. One buys 6000lb in the spring and 6000 in the fall of corn. I have also come across two on county land one that had a gut pile on it in 2018. Reason three and I know there’s nothing that can be done now but in my winter trips into the Bass Lake Road area I have found lots of wolf sign and the remains of deer. This spring they got one on Bass Lake Road just pass the landing. I personally believe the deer management units need to be changed.

Due to baiting bans, the deer populations have migrated to areas where agriculture is present. If you do not have any agriculture, or private food plots, you are not seeing the deer in any numbers to justify your time spent hunting. When you take away a small tract land owner’s ability to draw in deer, you are making it very hard, in some cases for landowners to see deer on their property for more than just a deer passing through to another area. If you are concerned that deer are more at risk from a landowners’ small bait pile than you are in an open field of corn or soybeans, you aren’t paying attention because the deer in these farm fields are always in close proximity to one another and still lick one another on a frequent basis. If this isn’t a problem for an area with baiting bans, then why deprive a landowner of small volumes of food that benefit many more types of animals than just deer. If there is agriculture in an area, then I fail to see the logic of baiting bans because the deer are congregating somewhere for food and you cannot stop that.
Over the years the deer population has plummeted. My cameras see bears and bobcats, wolves and now lately, Mountain Lions. We have seen the bears grow to heavier weights over the years. When does leave their fawns by the fence post to hide while they eat, the bears and bobcats have learned to check each post for a fawn. We see very few fawns yearly. I put my cameras out in April and leave them until gun season is over and last year was the worst year yet. We saw 4 deer for gun and were all to small to shoot. I saw 2 bucks for the whole bow season. Spikes. Our group puts out 9 cameras over 80 acres and we have not seen a mature buck in 3 years. My opinion is to have no doe tags for 2 years and only be allowed to shoot a buck over 6 points or higher for 2 years. Increase the bear and bobcat tags by 20 percent. Bring the wolf population down to or below what said when the wolf was re-introduced. These are my opinions and thoughts. I have been in the woods for 50 years. I am 58 years old. Thank you.

I believe that the goal of deer management is to provide a quality hunt, control the population and stop the spread of disease. This can be accomplished by thinning the herd. To do that you need hunters hunting and to do that they need they have a chance to harvest a deer. I feel that it is the wrong move to completely ban baiting. Hunters who bait are more successful and can balance work, family and hunting better. I the answer lay is somewhere in the middle. Allow small amounts of bait in and around CWD effected areas. I also feel that the fall youth hunt disrupts the rest of the season it should be ended. It could be added to the holiday hunt. I recommend extending the muzzle loader season from 2 weeks to the end of the year. Allow Bow and muzzle loader hunters to use small amounts of bait. Consider requiring Bow hunters to shoot a doe to earn a bow buck tag. However if they do shoot a buck before shooting a doe than they must shoot a doe before they can get a buck tag for the next season.

the western part of onieda co is total ruined/ dead/ there is no reason for that area to be so demolished from predators and doe tags, i hunt in old unit 31 which was awesome years ago, its a crying shame to whats happening in the north woods today, i have personally had so many bobcats feeding on a deer by my stand it ruined the season, 5 cats at one time on a deer carcass, not to mention a over population of bear and wolf. whats really sad is this state should be elite when it comes to game animals, but because of stupidity its the worst i have ever seen it in my lifetime. no woods wise common sense, the old conservation dept had real outdoorsmen working in it. now its educated dummies who dont know nothing except what some other dummy put in a book that they teach in schools, and bs politics, and wasteful spending of money. i personally could do a 10 times better job managing the wildlife than is being done now by applying good old fashion common sense.

We have over 15 trail cameras on our land and 13 hunters who hunt from Sept. Through end of season annually plus there often off season. We use to get hundreds if feet pictures. See alot deer shining. Now the past several years we get alot of pictures of wolves (some with collars), bears, a couple Bobcats...and deer a extremely slim. We know going into gun season that we are not going to see anything because we know there aren't many deer. We hunt 300 acres and board thousands of public land. There aren't deer. We walk the land, ride atvs and see wolves. We all have had to buy pistols for self protection and we dont allow our kids to roam the land like we were allowed to when we were kids in fear of the wolves. Peoe want to sell their hunting land up north but due to this issue other hunters are not interested in buying. I now rather spend my time and money the week of gun season hunting out of state and I know many hunters who feel the same.
Thank you for the presentations online from the CDAC representative. It was informative and interesting. I see vast swings in deer population as I travel through the county where some areas seem to have ample population while others do not. Some of these are within a few miles of one another. I am glad that we have broken the deer management areas up into smaller areas for unique management recommendations. I do still have concerns that averaging data collection may not represent any one area within the county and the ability to collect appropriate data quantity to make recommendations. I have personally seen changes an immediate deer population as predators have moved through areas local to my home and hunting areas. This change typically has a negative impact on hunting experiences and at times safety of family and pets. I would like to see more accurate information on predator kills by species in hopes to better manage those species as well.

The management area should be split along Highway 51. There is vast forest differences (lack of Oak) and the amount of public land, including timber management lands open to the public. The objective in this area should be to grow the herd. The deer populations tend to be in or around residential or developed areas and hang around the houses increasing the amount of ornamental damage and increasing the odds of car collisions. There are very few deer in remote areas. I have visited winter timber sales there were few if any deer in the sales in the western portion of the county. There is also a lack of Mature bucks on the landscape. I doubt you will be able to influence the deer herd without addressing the wolf predation and the population of these predators in these areas. These areas are vastly different and should be treated as such. Also the ability to objectively determine if the deer are taken on public verses private is questionable.

The deer herd since the slaughter of unlimited antlerless tags was given about 12 years or so ago, has not rebounded to warrant as many antlerless tags as you give out.. the past winters I have found aborted fetuses by deer from lack of food because of snow conditions... more deer hit because travel on roads was easier than in woods... if anything, they should of been included in your deer harvest numbers and that many less tags given... you need to go back to the season framework about 30 years ago, no special season for kids, let em learn like everyone else did, no special tags for them, shorten the bow season back up, no guns used to fill bow tags, muzzle loader season is a joke, twist barrels, sights, in line firing pins.. not what the season was intended for... all you people want is to make money.. so called cwd control is a joke and waste of money, it will never go away... ever!! Quit managing for money and manage for the sake of the deer...

Oneida is a no baiting county. I hunt public land adjacent to private property. Over the past 2 seasons 90% of the shooting I heard came from the area of private property. This past year the only sign I saw in the snow were tracks heading directly toward the private area. If the restriction of baiting isn't strictly enforced all of these questions about deer density and range are mute. Enforce the laws so everyone can have a more enjoyable hunt!!!!!!! After the season I contacted the Rhinelander DNR office and informed them of the situation and told them exactly where I was hunting. We’ll see next year what is done to enforce the rules. I’m sure it is also happening in other areas of the county. I don’t understand why the sale of corn and other forms of bait are readily available at many gas stations and spot shops in a no baiting county. It doesn’t make sense. Raise the fines and enforce the rules NOW!!!!!

The crossbow season should be shortened to be like gun or muzzle loader season. It’s a slap in the face to traditional bow hunters who spend hours practicing and honing their skills to get the deer in close. Compared to someone who takes a bow out of the box outfitted with a scope and can shoot 100 yards. That's not how bow hunting was suppose to be. The way it was for physically handicapped or disabled was great. After all it’s just like shooting a rifle, my dad had one after a knee replacement so I know. With the new compound bows with the let off they have there is no reason to let everyone use a cross bow, or shorten the season to 9 days like gun season. This is one of the biggest mistakes the DNR ever made. Hunting is suppose to be a sport about skill, there is none in cross bow hunting for a healthy person. To me and many old time hunters this was just a way to sell more licenses.

6774 The deer #'s (in the actual woods) are beyond below what they should be with the greater numbers being around towns & farming. It seems like people talking about how high deer populations are not people that hunt very far from those areas or drive through those areas more then wooded forest roads. My husband & I are consistently in the woods, spend many hours, and walk many many miles during ALL SEASONS and have seen a DRAMATIC DECLINE in deer numbers vs predators within our entire unit (mainly coyote & wolves....NOT BEARS - bear numbers seem to be down too - just throwing that out there) Anterless deer tags should be cut on public lands for all hunters. Give the deer a chance to re-coop. Leave the seasons alone. Stop talking about all the CWD nonsense. Get the coyotes in check. In a couple years all will be good again & y'all can start making money again & earn a little respect back.

6775 I disagree with the CWD tags for landowners near the Three Lakes Whitetails hunting preserve. While some landowners do not shoot any, sadly I know a few have abused the tags. There is no way to know where the deer were harvested from and I believe strongly at no fault of the DNR people are harvesting deer no where close to the CWD zone and registering them on the property listed for the tags. I also am sick of beating this CWD thing to death. I spend a lot of time in the woods hunting and trapping and to me the deer population has only increased in numbers, at least in Oneida County. I have never seen a “sick” deer that I thought was affected by CWD. I’m no biologist, just a avid outdoorsman. I have seen multiple wolf kills and even bobcat kills while out hunting and trapping but never a sick, skinny deer. Best of luck with figuring out the season and thank you to all DNR staff.

6776 Living in the woods i see many deer with lost limbs. due to lack of marksmanship with gun and bow..and Trailing the hurt animals..The doe population is climbing back to where it was. I enjoy the old ways Bonus doe permit, I feel if we allow a bow hunter to take Buck and a doe during Bow season... This would keep the deer herd up I wouldn’t mind paying 7.00 buck for a doe tag.. and then a drawing for that doe Tag.. But we have to keep in mind There are many deer tags handed out in different deer zones. where they hunt Bucks only.. Corn belt middle Wisconsin.. I trapped for many years.. lots of corn damage is cause by raccoons and they pull corn plants to the ground to eat ..where Deer nibble on the corncobs..I trapped lots a coons in corn fields.. Gang set 10 traps 10 coons.. They come running to see the Ruckus.. you guys have been doing a great job.. Thank you ....

6777 Deer are abundant in Oneida County, but are more concentrated around prime habitat than they were when baiting and feeding were common. Two of my favorite hunting spots have abundant cover and were reliable places for deer movement before baiting and feeding were banned. These areas don't even have rubs and scrapes in the fall now. Deer are more concentrated around agricultural areas that are off-limits to many hunters. Areas with productive oaks or plenty of young browse also still attract deer, but forests are managed differently than they were in the past and are aging. Baiting also made it easier to recruit new hunters and helped people who are limited in mobility - or limited in time, for that matter - to use a simple tool to help make up for the inability to scout thoroughly. Allow feeding/baiting, or at least manage forests for more young growth.

6778 I would support a reduced number antlerless harvest and NO BUCK harvest for one year, every 5 years to level out the buck:doe ratio and increase average buck maturity in the long run. I also support age restrictions on bucks to 3yr old bucks and older. I also support heavier predator control. More money should go to predator study than whitetail study. Whitetails population response will likely respond better to predator management (including the human predator) than whitetail numbers management. I do most of my hunting out of state on family owned private lands due to the shortage of opportunities for mature deer in my unit. Leased lands out of state is much better hunting than all the public access lands in WI. There's very little pride in ownership on public access lands. My opinion is that privatization and leases increase herd health.
It was my understanding when I purchased my gun deer license for 2019 that my choice to me in Oneida county was between hunting private OR public land. Since I hunt 90+ percent on my own private land, I chose private. Other people I hunt with did the same. However, when making deer drives, we do cross public land to complete the drive. If a deer had been shot on that public land, I can assure you, that deer would have been registered as being harvested on private land to avoid confusion and possible legal issues. If my assumption is not correct, then a better explanation process should be given to inform the Public. If my assumption is correct then there should be no choice given for public or private land. The license should just be an open hunting license for both public and private land. Thank You

As a land owner in Minocqua Township for 25 years I can truly say I have been over run by does in the past 2 years, particularly during the winter months. They have never been so plentiful in 25 years. DNR has cut back on harvesting antler-less deer over the past several years and it has greatly increased the antler-less deer heard. I now see groups of 6 to 9 or so in my yard every day eating and destroying all the pine. New upcoming pines never have a chance anymore. Of course there in no way to have flowers or a garden in the summer. The does are basically living in our yards during the winter and destroying everything. I truly believe your proposed quota in way to low. For years we never had a restricted season and things were fine. WE ARE GETTING TOTALLY OVER RUN -REDUCE THE HERD SIZE OF ANTLER-LESS DEAR!

I scout 40 acres or private and 300-400 acres of public every year. Although I do not solely blame predators for the drop in deer population, the past three years I have seen more coyote, bear and wolf scat then ever before. I think more research on predator populations would be helpful. I have also seen a slight increase in the visible herd the past 5-6 years and think that has a lot to do with lowering the antlerless tags available. I here from a lot of locals the frustration about it, but I personally saw a stronger herd shortly after the years of no antlerless tags. The downside is that is also when I saw the predators ramping up as well. My opinion is less antlerless tags, more predator research and educating hunters on how their actions hunting decisions effect the quality of the deer herd.

deer numbers in our area about 18 miles west of Rhinelander has a fair deer population, wolf depredation has increased significantly, we have cams year around and can say for sure this is true, worry greatly about our hunting dogs, neighbors horses and farm animals, the wolves are getting more used to human presence, have a picture from 3/16 of two wolves taking a healthy adult deer a day after we were working the land, a neighbor has horses and multiple year around cottages, this is no place to have a large number of wolves, actually seeing a occasional wolf in person when we walk, it bothers me that activists can have such a impact on this, while every biologist, game managers, property owners, I have talked to are for regulating the population, what can we do to correct this, thanks,

I believe that property owners in the county should be able to be on cdac. You shouldn't have to be a resident. I've owned a cabin and property in the county for 40 plus years. I have an associates degree in natural resources and wildlife management. And feel that i could contribute to the committee. I've probably killed over 40 deer in my life time hunting in Oneida County. My sons have killed almost as many deer hunting in the county as well. We know how to hunt. We went from having 21 hunters in our deer camp for gun hunting, we now only have 9. Part of the issue with loss of hunters has come from the new managed forest laws. I believe more land has been shut of 2 hunters because of it.I think there giving the land owners that put there property in the closed, to much of a break.
During the nine day gun hunt in Eastern Oneida county I saw no deer while in the forest. What the CDAC needs to realize and account for is Eastern Oneida’s deer population numbers are more in line with Forest county. Forest county’s deer harvest is much lower than Oneida as a whole. I find it troubling that to many antlerless permits are being made available. Since LEGAL baiting has ended in Oneida it is nearly impossible to see deer during the Archery/Crossbow season unless you invest in a food plot. Eastern Oneida used to have a good number of public land hunters 15-20 years ago. Public land hunters have moved to more productive areas as the Eastern Oneida county deer population has dwindled. CDAC needs to push for managing areas of the county based on population differences.

I have hunted in unit 31 just north of the Willow Flowage for 61 years. Starting around 2013-2014 we started experiencing a decrease in deer sightings and thus a decrease in deer harvested. In fact in 2015 & 2016 we did not even see a deer during the the first 4 days of the gun season & thats six hunters in the woods. We believe the decline was a combination of the wolf population in the area, two many doe's being shot in previous years & a few bad winters. A couple of seasons of no doe hunting I think helped as we started seeing a few more deer in 2018. However deer numbers in the area where we hunt are very low. I’m just glad I don't have to a young son or daugther starting out as it would be very hard to keep their interest in deer hunting when they see very few deer.

Please open up a season on wolves. Never had them before and they seem to be abundant. Definitely were scaring away the deer last year. I can't risk my dogs life every time I let her out because someone thinks a wolf is necessary. They are not. All they do is take away from hunters and families. They are invading new land and you know they are territorial. If I am going to come up to Oneida county and spend money, my pets have to be reasonably safe. Otherwise I will be forced to avoid Oneida county all together, I am sure I am not alone. It doesn't take much on social media to create a panic. If I have to deal with wolves like I did last year, I promise you, I will all over social media. Also yes, they are wolves and not coyotes, I have more than a few on camera.

My main concern is that being a disabled hunter it is almost impossible to find a place off road to drive in and hunt! Most of the logging rides have berms and or signs from the state of WI forbidding entry or use. I have hunted this area for sixty five years. We have driven back on traveled off road trails to setup stands and to organize drive for those that have what I don’t, legs that still work. The most disappointing part of hunting is that I cannot take my grandchildren’s back to places I can only talk about do to everything entrance being blocked, leaving me to have to shoot from the car. I appreciate that at least I can still hunt, but being disabled and not being able to drive off road on land open to the public gives me a 90 percent less chance to fill my tag.

I hunt primarily private lands in the more remote/rural areas of western Oneida County and have for 38 years. I live nearer to town. I hunt the equivalent of 10-20 full days a year, bow, gun and muzzleloader. I have watched a steady decline in deer sightings and apparent population on and around my lands for several years. At the same time, I have watched the herd be stable or increase near town and homes. It appears to me that the antler-less quotas and "maintain" determination are driven off observations from in town vs. the entire county. I do not believe the county as a whole merits antler-less quotas and "maintain" status. Perhaps the quotas need to be bifurcated within the county areas and isolated to those hot spots. The broad brush approach is not working.

I think the early youth hunt should not exist ( In my opinion that's what mentoring during the regular seasons is for ) and I would like to see an extended firearm season where gun and black powder could be used for a 2 week period at any time at the same time,during that period starting on the 15th of November ie. If you filled your gun deer tag early you could continue to hunt with a black powder tag right away until the firearm season ended. I would also like to see an either or, harvest for each deer hunting season were you can choose to harvest either 1 antlered deer or antlerless deer but then you would not be able to hunt with a weapon once you have harvested a deer. You could still make drives or be in the woods but no weapon. No bonus antlerless tags!
You should poll hunters on the amount of time they spend hunting and scouting for deer hunting. A lot of data gathered from people who spend an hour a day in the woods before going to the bar is skewing your numbers. I spend a lot of time in the woods and could kill 3-4 times as many deer than our group of 5 does every year. My only other comment is that the biggest problem for our deer herd is predators. I have seen more wolves in the last few years than I have seen in my entire life. I have seen 3-4 wolves every year the last 4 years. That is only during the gun season. I get a lot more on camera. The bear population is very strong as well and the DNR needs to consider making bear tags more easily available to help limit the deer they kill.

I generally agree with the cdac recommendation and providing some opportunity for antlerless harvest. However, my hunting experience through the archery and rifle seasons of 2019 showed a significant decline in deer numbers from the previous year. Deer numbers are not spread evenly, if farmers are having issues with deer, they should let people hunt on their land, or get damage permits. Wolf numbers are too high and have a great impact on deer numbers. The State needs to regain management of wolves and have an unlimited season for a couple years to get the numbers down to the target levels. If you want to grow more trees, cutting needs to be more aggressive to get enough sunlight to the ground. The CDAC recommendation is too high.

I still believe with the baiting ban, baiting is still heavily occurring, as well as food plots not distributing deer across the landscape. For years our property has seen good numbers all spring and summer and as bow hunting ramps up in October deer sightings go down all the way through gun season. This is based on cameras in the same location over years, left out all year and cards swapped out about every 2 months in summer, monthly during fall and left out all winter. Bears with cubs has been steady all years and 2 years having a sow with 5 cubs and 4 cubs. Cats and wolves are constant year to year, coyotes have increased in the last two years. We do not bow hunt, occasionally bear hunt, grouse and duck hunt as well as gun deer.

Replace 3” antler restrictions with 4pt antler restriction. (all the western states adopted this for a reason) IT WORKS! Stop all the unnecessary killing of all of the does in the down units. We own a restaurant and we hear from all of our customers, local and tourists. The consensus over the past 3 or 4 years has been the same, their just not seeing the deer. And we’ve seen a drastic decline at our restaurant from deer hunters over the years because their not coming up to hunt anymore because of the low numbers. FYI, I’ve taken my grandkids hunting with me for 3 years now and we have not seen one deer while sitting on the stand, both kids have told me that there not interested in going anymore, good job Wisconsin dnr!

1.) why drop only public land permits. Comparing to previous season permits. 2.) Oneida county is 56% private land 46% public land would expect permit ratio closer to 60/40 rather then the recommended 70/30. 3.) Quotes are put in place to manage herd, not to get more hunters in the woods or promote tourism. CDAC should look to other means if these are valid concerns. 4.) biologist sited early snow, harsh winter, and potentially lower fawn count seems like valid reasons to reduce quotas by 40-50%. Given these assertions seems a 20% drop in quotas is light. 5.) Have noticed the size of adult deer are getting smaller and smaller over the past 5 years. Lack of food? To many deer per sq mile? Should be investigated.

In 1970 we could count about 45-60 gunshots on opening morning, restaurants and steak houses were full of red wool - deer season was a statewide event. In 2018 we counted 7 shots before noon on opening day of gun season and last year only 4. The States attempt to please every single group and hunting method has cheapened the hunt and put hunters in the woods from September to January. The inordinate attention by the DNR to the (unwinnable) spread of CWD has scared away many hunters and using that as a tool to try to stamp out baiting/feeding has lost many more. The feeding ban also deprives a huge number of "other" wildlife fans from interacting with deer, turkeys and waterfowl. Not every citizen hunts.
Thank you to the committee for recommending some antlerless tags. Deer season is a lot more fun when I can get a doe for the freezer and then wait for a quality buck. I would like to see more private land tags. Our herd seems to have made it through the winter pretty well based on what I’m seeing plus the amount of car kills this spring. I live and hunt in Stella. We have way more than a healthy population in our township. With cwd a concern, I don’t think we should be stockpiling deer in areas with lots of private land- This does nothing to improve the population in the east and west ends of the county. Again, thank you for recommending some antlerless tags and for your time spent on the committee.

There are no numbers that will make everyone happy, and I do understand that. Where I’m coming from is last year was the first 9 day season I’ve ever had where I never saw a single deer. And this spring the sign isn’t there either. But on private land it’s a different story. I see deer by my residence on a regular basis. So I would recommend quotas of zero on public land and then staying with 2000 on private. There remains a growing disparity of deer distribution on public vs. private land. In terms of dollars spent I would argue to those who want more tags available thinking it will lead to more dollars spent the following...no one is going to come if they aren't seeing any deer. It's that simple.

Given what I have witnessed on public and private lands in this DMU in the past year, deer numbers have not increased enough to begin harvesting more antlerless deer. The presence and impact of wolves is steadily increasing and we've begun to lose interest in deer hunting because of the impact they have. In the 2019 9 day rifle season, our hunting group of 5 people saw a dozen deer in total and fresh wolf tracks and sign daily. Until the wolf population is controlled, there will not be enough deer to deem any antlerless tags necessary. In my 12 years of hunting deer in these areas, deer numbers have never been lower, and our group has not harvested more than 2 deer in a season for multiple years now.

the number of deer in the north woods is way to low, DNR allows to many hunts for does with out does you have no deer stop shooting all the does, all you are doing is making money off all the hunts foe no horns. wolfs and winter kill was very high this year take a walk out in the woods, don't just sit behind a desk and count deer, the insurance company's think we have to many deer because it cost them money to fix cars after a deer crash. Need more deer to feed the wolfs I would hate to see them all die off, O wait maybe that would be the answer to all this wasted money that is spent on the wolf population no deer and no wolfs we all win. we can stop hunting and you can stay in the office.

I listened to the meeting about two weeks ago through the teleconference. I was very satisfied with the way the meeting was conducted and the people on the committee. I thank them for their service to our county. For the CWD issues found between Tomahawk and Rhinelander I support all decisions the committee may make to eradicate the problem. I feel this problem was brought to our area via deer farms. I hope we are also managing them as well. I understand they usually have influence politically but we could ruin our state with CWD if we do not stand up against the CWD on the deer farms. Thank you again for your efforts and for the finely developed briefing.

It's pretty discouraging when you want to go hunting and you need to worry about your safety with the wolf's all around. Kind of unnerving walking out of the woods in the evening hearing the howling, or walking to your stand seeing fresh kills and wolf prints. Many hunters have given up that I know and talk to feeling its not worth it or they think the wolf's have taken all the deer. Bear population has exploded as well and that does not help the deer numbers either. While I say the deer numbers are the same in the survey from the last 2 years they are terrible. Many in our area did not see a buck all of gun season and only a handful of does and we were out everyday some days all day.
Bear and Timber wolf numbers continue to grow on my property based on trail cameras and the deer population dropped dramatically when the timber wolves arrived 10 years ago and can't seem to bounce back. I co own 440 acres and have many food plots as well as fresh cut poplar and still see very few deer. We would see many deer before the timber wolves arrived. We have 11 hunters on this property and have only harvested one buck in the last several years. My share of the property taxes is over $3500 and I haven't harvested a deer in many years. I hunt a little with my bow and also opening weekend of the 9 day. Can't take anymore hunting because of the frustration of not seeing deer.

There are very few hunters per acre in the National Forest (where I hunt) and there are growing populations in areas where timber harvesting is progressing. I harvested a buck and seen other deer (both sexes) while on my stand during the Archery and Gun Seasons. I contributed that to knowing my area and scouting year round. Other hunters I talk to were frustrated but they hunted only a couple days and didn't scout their areas. Too many hunters are blaming the deer populations but the reality is there are far fewer hunters in the Northern Forest region and the Deer have the advantage in an aging forest unless you set up a good hunting plan.

Hunting practices have changed over the years. More hunters are using blinds to hunt instead of the more traditional means of posting and driving. And more acreage is closed in smaller parcels by private landowners. Would it benefit the hunting population to know how the deer were harvested? From a ground blind, tree blind or other? I have noticed a significant reduction in the numbers of hunters from out of the area in the past two decades or so. Do we care about the metrics of how deer are hunted today? Consider a two week moratorium on any type of deer hunting prior to the opening of the traditional deer gun season. Thank you.

Been deer hunting in the north for 30 years but last year was my first in Oneida. I own 50 acres of old agricultural ground that is converting back to forest. We see a lot of deer on my property, I'm an avid deer hunter so I like having good numbers. It seems too high for my neighbors that are trying to raise crops and I know that they get damage permits...prefer to see increased permits so that I and everyone around could have an opportunity to harvest these deer during hunting season. We see a lot of damage to our oak seedlings deer numbers in my area are negatively impacting oak recruitment.

How about fewer tags sold for more money with longer season (gun deer). The 9 day season is really a 3-4 day season for most hunters with family obligations. Everyone and their brother is out opening weekend everywhere in the state on the same day. Why? It reduces the quality, safety, and opportunity for hunters. Perhaps a format similar to turkey season with different periods in different zones. It feels like one has to purchase a crossbow to have a reasonable opportunity for harvest in the north. Don’t get me wrong cross bows are cool but they are not archery they are short range rifles.

The deer population in Oneida county - Nicolet National Forest is terrible. The doe to buck ratio is extremely high. Too many deer tags are being given with all the different seasons offered. CUT BACK! If a hunter is lucky to see a buck it’s a spiker. Bucks are being killed too young therefor are not breeding. There needs to be 1 year of no deer hunting, OR change the 3inch antler law to a minimum 4 points. Give the buck that extra year to breed. You CANNOT compare Oneida county and surrounding counties to Western WI or Central WI. Obviously the populations are higher in these areas.

It seems like certain farmers bate deer year round, harvest deer year round, limiting the number further for surrounding public paper company firelanes. Also, it is hard to obtain access to landlocked acreage inside farmland, when the farm employees are the only ones reaping the benefits. There are also numerous permanent stands erected on public land that have never been taken down, beaver dams blown up with explosives by private citizens, solely to lessen hunters access to public hunting grounds bordering private acreage. Very little governance by DNR and local law.
I think we should do like Michigan 2 buck tags for the year, one has to be 4 points or more on one side and the other one can be what ever. You can shoot 2 with the bow, two with the gun, 2 with the muzzle loader, 2 with a x bow, or 1 with gun, muzzle loader, x bow, bow and any combination. Also I think we should have our out of state licenses the same as what that state would charge a Wisconsin resident. So if Kansas is going to charge $450.00 that is what someone from Kansas should have to pay. If Michigan is going to charge $175 they will have to pay $175.

Our deer numbers even after extensive habitat management are directly tethered to wolf numbers and when they camp directly on or adjacent to our property. You can tell when they’re on top of you not only with scat, howeling or game cam pics but the abrupt decrease in deer sightings. It’s a big problem and wolf numbers are way in excess of what the “experts” think they are. It’s totally unfair to those of us that are truly stewards of the land that we sacrificed to purchase and maintain. That’s the deer number factor in our area east of the Willow Flowage!

The area in which we hunt has decreased in numbers from 2018. Spring of 2019 we found at least 4 dead deer. Our neighbors found 3. Very few fawns. Most does had no fawns some had one. We had one set of twins and by bow season it was down to one. We have to be careful of doe harvest. I suspect fawn numbers will be down again this year due to weather and predators. If deer numbers do not look good again this fall we will probably not hunt our property this fall. Once again be careful on doe harvest numbers as the population is not increasing. Thanks.

I saw noticeably more deer last summer and fall, but they quickly went nocturnal in November. I hunted various seasons through December, and while my group didn’t shoot many deer, that wasn’t because of a lack of deer.

I’ve been out in the woods quite a bit this spring and I’ve seen a lot of deer, all looking pretty healthy. With good numbers and the growing threat of CWD in the county, it seems irresponsible to not offer a good number of antlerless tags. Keeping more deer on the landscape isn’t doing the population’s health any favors.

Our family hunts Oneida county every year a lot. We hunt bow, rifle and black powder. Deer sightings were down of the whole spectrum of the hunt. Very disappointing year, my young hunters could not even punch a doe tag this year. If we try and build the population back up and institute measures to control and reduce predation of whitetails, I feel we can nurture the herd back to a reasonable level. We eat deer as part of our regular diet and count on punching tags. Limiting doe tags or only giving to youth would be recommended.

I have hunted in this unit for 38 years. I have had daughters that have hunted in this unit for the past 6-8 years. The hunting has gotten progressively worse. I saw a total of 3 deer on our private land that we manage for deer hunting. All the deer are around homes that feed. We need to get these deer to distribute all over. The food plots that we are able to plant get eaten before the deer season and the deer go to the bait piles near homes. We need to be able to supplement feed at these time to keep these deer spread out.

I feel the agricultural damage permits are way out of line and are being taken advantage of, especially in my area. Also the enforcement of the baiting and feeding is lacking. Why no questions or concerns about baiting and feeding and impact on the spread of CWD and illegal harvest of deer. I have reported illegal baiting a number of times and the complaints have been totally ignored. I know the wardens are busy but one individual I have reported continues every year even though his has been cited in the past.

I hunt strictly on county land that the county has done a terrible job maintaining. There are no deer in our area. We are 10 miles south of Rhinelander off of Hwy 17 south. Corner of Lincoln and /Oneida. Since we cannot bait and there is not farm land close, we do not have any deer. We did back in the early 2000 but they are now gone. Since, I own property here with no hunting land, I have no choice but to hunt here. So, please do what you can to keep the antlerless count down so we may reproduce our herd.
Thank you CDAC for your work. I feel a quota similar to last year would be a bit more appropriate. I fear the late opening weekend is affecting our population estimates to a large degree. Based on the percentage of Public land in the county I think offering 1300 public land antlerless tags would be appropriate again. I have observed a solid number of deer this spring that seem to have made it through winter very well. Please continue to allow Public Land hunters a chance to harvest a doe for the freezer.

I think habitat has a lot to do with the amount of deer we are seeing in the woods. For instance the tree farming is killing the habitat. I believe in logging for better habitat. Better under growth for foraging. Plowing and planting pine trees in a row does nothing for habitat. Also spraying the planted pine trees or habitat with some sort of weed killer or shrub killer does not help foraging. I have seen the signs that prove it. Nothing grows but pine and grass. Doesn’t help the grouse either.

Two comments: The WI DNR should support the delisting of wolves as an endangered species in WI and subsequent hunting/harvesting of wolves in the Northern Forest zones as part of their deer management strategy. The DNR needs to expand access to more hunting land that supports deer. Woods (be National or State forest land) do not support deer as much as agricultural lands do. However access to areas adjacent to agricultural land is limited or nonexistent thus limiting to opportunity harvest a deer.

This format of deer population control would be fine in an enclosed fence or Game Farm. I believe all the wildlife species needs to be considered together as they all live together in the same forest. If the deer over browse the hazelnut the grouse suffer or the seedling poplar trees the beaver starve. Likewise if the bear and wolf populations aren’t managed, the fawn mortality rates rises. A balance of all wildlife needs to be considered versus micro-managing each species of wildlife separately.

I’m concerned with the lack of deer in the NW section of Oneida county. I’ve hunted there for the last 10 years, and last year was one of the worst for seeing deer sign and deer. There were so few gunshots during gun season that it was hard to believe the season was even open. Personally, I think the population estimates are high in comparison to previous years. I’m not in favor of having the antlerless quotas near the level of 2019. I think they should be at least 30% lower.

Heads need to be pulled from the backsides of those making decisions regarding the gun deer hunt. I sat for 8 out of 9 days if the 2019 gun deer season and did not see a single deer. Nothing. Saw plenty of wolf tracks, had wolves on camera, and also had bear on camera. Until those in charge start listening to those of us actually putting time out in the woods, this seems to be a lost cause. The almighty dollar is clearly speaking, and to be frank, it's bullcrap.

I have hunted on the 200 acres I own and sounding public for 16 years. I have trail cams out year round and I know that in my case we have continually seen less deer in the past couple of years, especially does. And have many more coyotes and wolves on the trail cams and a good amount of bears too. A few years back when it was antlered only the does were more prevalent. I don’t think it should be Antlered only but the number of bonus tags seems high from how I see it.

There needs to be a much bigger penalty for people baiting. I saw way to many people baiting on private land, which drew all deer into their property. Eliminating my chance of harvesting a deer this year on public land. I didn’t see a single deer, but many well used trails going into private property bait piles. Enforcement of no baiting and the penalty should increase quite a bit. It’s frustrating as a public land hunter that people aren’t following the rules.

I don’t know if this is the place for this or not, but I hunt a lot of public land up by Rhinelander/Lake Tomahawk. There isn’t as much pressure as there used to be and it’s hard to get the deer moving. The amount of antlerless tags provided does not help when we aren’t seeing as many deer as we have in the past. Also, I would not support an earlier gun season that would start to interfere with the bow season. Leave the seasons as they are. Thank you.
Where I hunt in Onieda county near pelican lk used to be a thriving deer hunting unit. 1st the wolves and Antlerless hunt fiasco killed population. Now we can't even get to the places we like to hunt because all the roads are gated. CLOSED I can't find a place to bow hunt cuz all clustered. I can't drop in my canoe at old launch spot. I can't even take my kids to our favorite berry picking. Spots. It's like someone stole my Christmas presents at age 8.

I think there should be a buck only season for a least 3 years. There is very little opportunity for shooting a deer in this zone especially with all the extra special hunts other than the regularly schedule season. There needs to be some growth without trimming down bambi every year . Let the deer grow and flourish so there will be hunting for many years to come. Stop the holiday hunts. Youth hunts. And also get rid of the wolves. That ought to do it.

Too many predators, I did not see a single deer last gun season. I sat all day both days of opening weekend and then hunted again Thursday, Friday, and Saturday. We have 10 hunters in our camp and only 4 of the 10 even saw deer. My Dad sits all day every day and he only saw 1 deer all season. We have family that hunts in 2 other camps (12 and 6 hunters) that saw fewer deer than we did. The population needs to go up away from agricultural areas.

In my opinion, the antlerless quota should be lower because our deer camp hunts over 400 acres of private land in Oneida Co and hardly anyone sees does or even deer at all. We have lots of wolves on our cameras and some hunters even see them running around the land, and we think this has an effect on the number of deer in our area. We almost never harvest deer at our cabin the hunting is terrible when it used to be very good a few years ago.

It is hard to come to any conclusion being last years hunt was effected by the heavy snowfall right away. I saw plenty of deer from opening day till Wednesday, both bucks and doe. After that it was zero deer movement. No tracks till later in the gun season but then only at night. This coming season could be completely different. But even last summer while mowing fairways at Pinewood Golf course I saw fewer doe/fawns and not one buck.

The wolf population is hurting the deer population where I hunt. I scout quite a bit and as soon as I find deer sign Instantly I find wolf sign. To blame rough winters on deer population is wrong Years ago we had rough winters also and lots more deer and deer sign. I will agree the winters are hurting the deer herd these winters because how much energy do the deer expell running away from wolves or just keeping an eye out for them.

When can people start to feed deer again? Anyone who observes deer knows that feeding them is not what causes CWD. Deer are herd animals. They lick one another. They mate. They give birth. They graze the same areas. They are always close to one another, touching one another. Don't blame people who enjoy deer in their yards for CWD. Look to game farms and people who exploit deer in order to make money off them.

Wolves are a concern of mine. Since wolves entered the area I hunt, in the early 2000’s. deer harvests have been terrible in that area. As far as the proposal to have an unlimited harvest in the two CWD areas - where I hunt is between Hwy 8 and Hwy G. These two areas have large expanses with no CWD positive detections. The proposal for a liberal harvest throughout these two zones is not necessary at this point.

I believe that the deer herd made it thru the winter in excellent shape and have been seeing a lot more deer throughout the county this winter and spring, both in areas of the large Heartwood parcels and especially in the Starks; township of Stella area. I would really like to see another 500 private land tags to address the situation. Also, please support getting a wolf season back in Wisconsin as soon as possible.

Figure out a season framework and leave it alone for at least 5 years. Seasons should be based on decisions of our DNR professional wildlife managers. Not politicians or the media. Too many changes or talk of changes every year is a waste of our tax dollars. Managers should spend more time on habitat improvements, Hunter access and the like. Please empower science based decisions and not political based.
Where I've hunted for the last 50+ years we've averaged about 30% of the hunters in our party getting a deer. Without the doe permits that number would be about 15%. There are usually about 8 hunters in our camp and I think we would all like to see less doe deer shot. I've gone more than one season without seeing a deer in the woods. To me a quality hunt would be seeing more deer and shooting less deer.

I would propose a two week gun hunt during the first two weeks of November. The reasons for that it is closer to the actual real rut and would it help help the the economy because you would have three weekends for people to hunt. No special hunts, only one weekend youth hunt in October. Bring back where you have to register your deer at gas stations, bars and restaurants to help small businesses.

I am seeing large numbers of predators. Bears, wolves, coyotes, and Cougars. While any one species is not going to wipe out the deer, the combined force of all of them is concerning. Please encourage deer hunters to consider hunting predators (legally of course) and support a wolf season. Also I would like to see an increase in bear tags. I fish all over Oneida Cty and see bears everywhere.

Each year the wildlife biologists say we need to kill more deer yet the people I interact with that hunt continually see and harvest less deer. I don't think natural depredation such as bear, wolves and coyotes is calculated in at a high enough number for killing deer. I have sat in on numerous cdac meetings and disagree with harvesting so many does. I think the number should be 500 not 920.

1. No deer hunting for a 2 week period prior to gun season.  
2. Only 1 buck harvest allowed for all types of deer seasons.  
3. Doe permits sold on a party permit system.  
4. Minimum age limit to purchase a rifle permit 10.  
5. Raise out of state fees comparable to what adjoining states charge non residents.

Don't see numbers of deer that I did when we bought the land in 1990. Went so far as having the woods selectively logged but was not satisfied with the forester or logger that I had and the amount of deer I see has been going down ever since. Been so bad the grand kids don't go anymore cause we rarely see any deer. I had 4 boys and they haven't gone now for about 6-8 years now.

Too many predators. Seems to be groups of deer in, around private land areas. Very few deer away from houses, in the deep woods. Lots of wolf tracks all over. We hunt from East side of Willow flowage, along hwy. Y .W. Dam Rd. North. Down to Burrows lake area. Have seen deer population gradually getting worse for years. Many wolf pics over the years. Something needs to change.

I live in the state forest and I am in the woods EVERY day - I see no difference in deer population this year, despite the snow. I think we would have been in trouble if we would have had a run of below zero temp days this past winter. All in all the herd looks healthy. I found zero mortality in the deer yards - the winter of 2018/2019 I found 16 dead deer in the winter yards.

The past few years I've been hunting & on vacation in Oneida county, I've seen less & less deer. The bear & wolf populations are both way too high & need to be regulated by hunting, especially the wolves. I know there's bear hunting, I've been applying for the points, but there needs to be wolf hunting to control the population which will also help the deer population grow.

As mostly an archery Hunter I feel that regular archery license(not crossbow) should be a buck or antlerless choice as in years past. I know for myself when this changed it was discouraging and I haven't hunted nearly as much. I would like to see regular archery hunting grow and be more attractive to new hunters and I believe the Buck or antlerless choice would be beneficial.

Private landowners are still baiting deer in high numbers that curtails the ability to harvest deer on public lands. Private landowners with hunting land should not be allowed to purchase antlerless tags for shooting a deer on public land. I would also like to see a rule for being able to set up timeframes each day for retrieving big game with the use of 4 wheelers or UTV's.
6847 Need to enforce no feeding in county. Seems way more deer near homes than out in remote parts of public land, hunt with group of 7 hunters, the 5 that stayed close to cabins went 4 for 5, the guys that hunted farther out did not see any deer but 4 for 7 good year, amazed you can drive through Saint Germain and see deer any time of day in yard eating and no enforcement !!

6848 The last several seasons I've seen so few deer especially on public lands. Last year, within our group of 5 hunters, we saw 1 deer over 3 days. We of course are also seeing fewer hunters. I'm sure all of the factors mentioned in the slide presentation come into effect, but it's hard to want to hunt up there with so few deer seen. Appreciate all your hard work. Thank you!

6849 I spent more time in the woods this fall, even during/after this deer season's snowstorms. With the fresh snow, there were fewer tracks observed than ever before. I even took it upon myself to try to scare deer up out of the the thickest areas, with none to be found. I truly believe the bow and crossbow seasons are having a large impact on numbers for the gun season.

6850 Too much emphasis is directed to the business side of wildlife management and profitability of this natural resource (IT). Unfortunately, IT needs to be managed by humans — so we need to consider what is best for IT, instead of ourselves, and everything would fall into place. There needs to be less deer, ban baiting, and close all the deer farms profiting from IT.

6851 I would support mandatory CWD sampling for gun season or at least opening weekend to increase our understanding of the prevalence of the disease in the Oneida County herd. Depending on the results of more robust testing, I would like to see a short-term period of aggressive harvest in the areas surrounding positive test considered in order to help slow the spread.

6852 Wolves are the biggest problem right now. If you haven’t figured that out by now you need to look for a new job. The deer population is pathetic. I’ve been hunting here for 56 years and it is getting worse and you never mention the wolf!!! As the reason. Totally disgusting. No excuse to not manage a predator that has ruined deer hunting in northern Wisconsin!!!!

6853 I live on Crescent Road. I see deer on my one acre parcel daily with no attractant or other wildlife feeders. If I walk south for two miles I can see up to 200 deer a night. Longview Forestry, LLC, the Bible camp, and all the owners near crescent corners have a surplus of deer. I would be in favor of a CWD sub unit for this section of Oneida and Lincoln counties.

6854 I'M VERY CONCERNED ABOUT SELF REGISTRATION. I KNOW THERE ARE SOME WHO HAVE HARVESTED A DEER AND ONCE THEY GET IT HOME, THEY GO BACK OUT AND CONTINUE TO HUNT ON THE SAME TAG. I FEEL STRONGLY THAT REGISTRATION OF DEER SHOULD GO BACK TO THE WAY IT WAS. I DON'T THINK ANYONE REALLY KNOWS EXACTLY HOW MANY DEER GO UNREGISTERED AND HOW MANY HUNTERS ARE DOING THIS.

6855 Hunted 6 days saw 3 does. I had a doe tag choose not to use it. 2020 they are select cutting where i hunt on public land. I'm not very confident in 2020 hunt. I'm against changing or adding to the 9 day gun season. I have hunted many years buck only in Oneida. I'm willing to do the same again to raise the population. Thank you for listening to my input.

6856 In the area south of the willow flowage the deer population is way down. I would like to see more deer but when there are more deer then there are more people. I'm 63 retired, hunted a lot bow, rifle, muzzleloader. Seen one buck with the bow and I got it. Only seen three other deer. But seen 5 wolves from tree stands. ID REALLY WOULD LIKE TO SHOOT A WOLF

6857 Our deer camp has not harvested a deer in the last 5 seasons (east of Hwy 45) deer sightings are near zero in those years. Something is wrong. We harvested at least one or two deer in most years prior to the last 5. We did purchase doe permits but failed to even get an opportunity for a doe. Not many deer around. Some wolf sign (scat) on the log roads.
Please drive around and look at all the deer that are on the landscape in Oneida County throughout the year. Just looking from your treestand during the opening weekend of gun season is ridiculous. There are many, many deer that are available for harvest. Now more than ever with folks out of work and the food supply chain disrupted. Let people hunt!

We are seeing many deer on our private property in Oneida. Public lands in Northern Forest zones may have sparse populations. But we are seeing pockets of crowded deer, we often cannot thin our crowded herds due to antler-less tag restrictions (if they sell out before we can buy). Private land owners should have a chance to harvest antler-less deer.

The Oneida County CDAC should look back at the last 4 or 5 winters. Winter Severity Index is high in at least 3 of the five years prior. The deer herd trend in the county is going down, yet the council approved issuing more doe permits. Makes no sense to me. Youth tags are still valid and that should be enough harvested for this current year.

On our property we witnessed deer being chased off by wolves last season. We depend on venison as a meat source, and not seeing any deer has become very upsetting. In my years of hunting here, I haven't been able to shoot a buck. The coyote population has grown drastically here as well. Offering incentives to hunt them may be of help.

I live in western Oneida county and snowmobile many miles around the western part of the county and ride atv and dirt bike in the summer and would like to know how you can even justify a deer hunting season for 2020! Unless deer have learned to fly a guy should see tracks. The only prevalent tracks seen regularly are predators.

Wolf populations and deer kills are way too high in the public hunting areas in the western part of Oneida County. Deer populations in these areas are extremely low. This forces more hunters to hunt remaining public lands creating over crowded public hunting lands. Something needs to be done to decrease the populations of wolves!

My opinion after living and hunting here for the last 45 years is we need to be buck only for a few years. We MUST control the predators/wolves.!!!! And need to start logging the National Forest. Most all of the deer in my area (Three Lakes) are in and around town, due to no food in the Nicolet and not many predators.

I think our last 3 winters have been rough on deer with snow depth. Wolves are a big problem on the herd. One of the biggest factors in my opinion is the registration. I think we need registration stations to keep people from harvesting multiple deer on one tag. I think people abuse the online/ mobile registration.

Would like to see a deer season(s) in which only bucks with 3 point a-side could be harvested. Would increase the chance of seeing bigger more mature bucks and maybe put Wisconsin back on the map as a destination to come and hunt large bucks. Most hunters seeking a quality deer hunt are going out of state to do so.

The population of deer dramatically change depending on where you are in Oneida county. Therefore, break Oneida county into different harvest zones. Allow feeding of deer once again in Oneida county. Make people broadcast the feed instead of putting it in a pile. I believe you would see increased harvest.

I am very disappointed in deer population where I hunt. In all my years have I ever seen fewer deer or deer sign in the woods. Mainly due to over population of wolves and poor management practices in past years. I believe the only way to increase licence sales is to increase deer numbers in the northern zone.

I have been hunting on public land in Oneida county for the past 7 years or so. There are never any doe tags available for the gun deer season. This is very frustrating. Every other county in Wisconsin is either or every year. Would be nice to have a better chance to obtain doe tags for public land hunting.
As a landowner and farmer in the Crescent Flats area where CWD has been detected, I highly encourage a relaxing of sport hunting in this area to dramatically reduce the deer population. The deer to extensive damage to my crops and we simply cannot kill enough deer each year to keep up with natural growth.

Too many deer. CWD not far away. Too many deer. Forests browsed heavily. Too many deer. Slipped and twisted my ankle so much deer manure in the woods. Too many deer. Worried that we’re going to be seeing CWD spread further, low deer body weights, too much pressure on woody vegetation. Too many deer.

I think in my opinion there should be antler restrictions on bucks/antlered deer in the northern half of the state. This would greatly decrease the amount of immature animals being harvested and therefore increase the number of animals being reproduced. Everything else in my opinion seems to be working.

This unit is primarily focused on non-hunting tourism. Some management of the deer herd by hunters is only necessary due to the lack of native predators. I would like to see numbers of native predators restored first and foremost, with hunting reserved for food-gathering by people who live in the unit.

Forest management directly effects wildlife and public use. Never have I seen such total destruction and mess left in public land logging operations that will not only render the land useless for recreational activity but also leave that land so exposed to the dangers of fire and erosion. Terrible

I would like to see small bucks grow up. They don’t stand a chance around here. Should have to be a 6 point or bigger. Also to many land owners in crescent flats and county hwy N that feel the need to have wildlife sanctuary’s, leave corn up all winter and not allow any hunting or hunt themselves.

For PUBLIC Land gun hunting, I would recommend a BUCK ANTLER RESTRICTION. Every other year, only bucks with 4 points on 1 side can be harvested. I used to see bigger bucks when I was younger, now it's all spikes & forks. Giving them a chance to live longer will enhance ALL hunters experiences.

I feel it is headed in the right direction. The last couple of years I have been seeing an increase in deer and an increase on adult bucks as well. I do support a longer firearm season just for the opportunity to see more rutting activity along with better deer movement. Keep up the good work!

currently my son, grandson and I are turkey hunting in Oneida Co. We consistently see 100 to 150 deer per day driving around scouting for turkeys for 2-3 hours. There wasn’t a shortage of deer last hunting season and there isn’t a shortage this year! Just a bad year last year..can't explain!

I like this survey format and hope it is used in the future, However, I think it needs to be later in the spring. Winter severity and its effects on the deer herd should play a large roll in what the quota should be. I don’t believe you get a true picture of that until later in the spring.

The requirement for public vs private antlerless tags is too restrictive for hunters who hunt both types of properties. I do not want to try & get 2 tags and deprive someone else, but I do not want to violate either. This is a poorly thought out and unfair rule that NEEDS TO BE CHANGED!

Our group has been hunting this land for 50 years and this past year was the worst. Our group of 6 hunters did not even see a track. We own 200 acres and have permission for another 360 acres. Something needs to change. All the kids have stopped coming up because they never see any deer.

People in Oneida County should be able to feed deer all year round. I don’t like the idea of does being shot. Use of a crossbow seems to be a more accurate way to kill a deer rather than wounding with a regular bow. The information in the video was interesting. Thank you Jeremy Holts.

Deer population is down in wolf inhabited areas..which is also most of the huntable lands..onieda county needs 2 deer MGMT units to properly balance deer herd..I along with others have suggested this to the council..they passed on to DNR ...only to be denied..time to wake up!!!
Business in this co. Are selling bait by the tons, I don't know how this is allowed knowing the ban on baiting. I think it's a good old boy thing. It's not right for the hunters who follow the rules. I believe it should be banned for all counties or not at all. Thank you.

I think the antlerless permits are about right, never go back to unlimited again, really feel a wolve hunt should be started back up, and coyote hunting should be marketed or somehow rewarded with perhaps an antlerless tag if a hunter harvested coyotes in the previous here.

I believe some kind of priority be given vertical bows versus crossbows be it vertical bow only days in early November, antlerless permits only for vertical bow, or otherwise. The vertical bow hunter needs some privilege much MW the muzzle loader to maintain that sport.

Wolves and coyotes are taking to much of the deer herd. I saw one doe on my 40 acres during the season and one buck one doe on cameras I have set up on my property. I have one deer that got killed on my property by an attack from a predator that I found on April 18th 2020.

Far too many deer and all the problems they bring. Reduce deer herd now. Daily bag limit of 1 from June 15-March 15. Possession limit of 3. I'm serious. Want the forests to be able to regenerate again. Tighten up deer farm regs or outlaw them so wild deer are healthy.

I believe some kind of priority be given vertical bows versus crossbows be it vertical bow only days in early November, antlerless permits only for vertical bow, or otherwise. The vertical bow hunter needs some privilege much MW the muzzle loader to maintain that sport.

There have been 5 wolf kills within the surrounding closest 40 acre parcels to my property over the last three months. That I am aware of. Not to mention countless others as you expand that area into other properties. It seems to be taking a toll on the local deer herd.

The wolf population has Escaladed and we have seen a number of wolves in the fall and gun season. We don't even bow hunt this land any longer for safety reasons. We found 4 wolf kills last weekend alone while out riding on our lanes. They are really depleting the herd.

It appears to me the the buck to doe ratio is out of wack. There appears to be far more does than bucks and in addition very few mature bucks. I would favor some kind of antler restriction to bring the ratio more in line and increase the number of mature bucks.

I hope to see more deer this gun season. My area has changed dramatically due to clear cutting and gravel pit mining. I seen more predators than deer this past rifle season. I will more than likely search for a new hunting area for the up coming season.

Do Not change or create a special season just for crossbow hunters. Leave the archery season as-is. A crossbow is just different type of bow. As with gun season, remember how many different types of guns are used for hunting.

please consider allowing baiting in restricted amount. after all deer will use several areas in their normal activities such as acorn trees, licking branches, scrapes and sparring all while following their instincts to interact with each other.

It is crazy to attempt to manage the entire county deer herd with one quota as the middle of the county has always been inherently more productive of deer than either the Willow or "Consolidated" blocks. There were good reasons for the old DMUs.

I have always thought that fawn harvest should be eliminated (or at least discouraged). A possible penalty for harvesting a fawn would be ineligibility for the following years antlerless harvest. I am not proposing a fine, only discouragement.
I rated Ag Damage as a non-issue as I don't feel that any Crop Damage payments should be made to those that are simply creating their own "havens". If your livelihood is truly being threatened, then allow hunters to help reduce the numbers.

We need to do more against predator kills. There needs to be more done for creating more food opportunity's on public forest land for the deer. Where I go hunting on public land in rhinelander by moans lake seems to be all pine planting.

Allow baiting. When hunting on small tracts of private land bait can be the only way to safely hunt to be sure your shot is in the proper direction. Also not all small tracts of private land have good natural deer movement and trails.

You’ll never stop CWD. The DNR dropped the ball when it was first discovered outside of Mt Horeb area. The wolves are killing the deer and it’s happening to much. I’ve found 3 dead deer less than 100 yards from my house from wolves. And I know it’s wolves because the kill is fresh and there is wolf tracks and I hear them at night there are lots of deer. hunters don't hunt anymore. they sit with heaters. tree damage is very bad on my land. landowners should get doe tags in the mail so they don't have to stand in line. thanks for doing what u do.

For the season of 2019 I saw 1 deer during gun season, only a few during bow. I live in the Lake Tomahawk area. This is really bad. You are not maintaining the herd. Wolfs are hear and they are making quite a differance.

I would like to see this year stay the same like last season. Letting crossbow season running side by side during the nine day gun. I would have the opportunity to get a antlerless tag to fill and get some venison. Thanks

Saw lots of does last rifle season and archery season in certain areas. I think the DNR is doing a good job with management. More frustrated with all the logging and lack of woods remaining in the Woodboro Lakes region.

I feel the DNR has spent millions of dollars on CWD testing and we still don’t have a confident answer about the spread of the disease and if it’s been here forever and the labs finally figured out how to test for it.

I appreciate the opportunity to be part of the process in maintaining the health of our deer heard. It is not the harvest it is all about the hunt and the health of our deer heard here in the north.

Would like to see turnip fields maintained like they once were on county land to help deer populations. Also, when you are more likely to see wolf sign then deer sign, I think we need to address the wolf population.

The antlered population has become terrible. Doe and doe fawn numbers are through the roof. I would definitely support an antlerless only or something similar to Missouri system of 4 point on one side or better.

Please do not cancel the 2020 deer season related to Covid 19. My family's deer harvest is very important in providing food for our family of 11! We hunt and fish year round to provide our family healthy food.

there are to many predators on the land in this area. we must get wolves delisted. leave crossbow season alone don't change anything . change back to a 9 day season no extra . will get people hunting again.

I don’t believe in the way you register deer now. It’s to easy for the violators to over harvest deer and throw harvest numbers way off. Bring back the registration stations so you can have actuate numbers.

There are plenty of deer, we can afford to harvest more deer than we did last year. Create a disease management zone in the areas of the county that have CWD and reduce deer densities within that zone.

For several years now, all I see are does! Everywhere in Oneida Co. Wondering what the DNR actually does that they have buck only in my area, yet I see very few bucks and probably a dozen+ does daily.

I believe that the bear, wolf and coyote populations are getting out of hand and have a tremendous effect on the deer populations. I have personally seen these predators chasing deer in the woods.
The deer herd in this area has been going down for a number of reasons and I just don't think killing that many Does is going to help anyone see more deer or have a chance at harvesting a nice buck.

I don't agree with the no baiting rules for CWD areas and we should be allowed to bait. In 2019 as soon as we got snow, all of the deer in our area disappeared. There were no tracks within a mile.

I think we should have zero antlerless tags on public lands in Oneida county. I walk a lot of public land each fall while grouse hunting. Oneida county public lands have very little deer sign.

Based off observations of the number of older bucks it would be an interesting to see a proposed antler restriction to allow bucks to maybe have a year to grow vs being shot at 1.5 years old.

Crossbow & archery should be treated s if the same- there should not be any differentiation or need for a special crossbow license. Bow & Crossbow should both be covered by the same license.

Way too many wolves in the area that I hunt in year before was good hunting and then the wolves moved in and took care of our dear hurt not happy with that at all. Need to have a wolf season.

My simple opinion is that does equal more deer to hunt. Close the doe season except to youth hunters, so they have a higher chance at success. Hopefully they turn into life long hunters.

I enjoy being out there in nature, if I shoot a deer that's a bonus, if I don't shoot a deer that's alright too. It's the getting out of the house and being in nature that matters to me.

Adamantly against the expansion of the 9-day rifle season earlier than the full week of Thanksgiving. Rifle hunting in the deer rut will destroy the age and sex structure of the herd.

The gun hunting season should be a week earlier. Late the rut is pretty much over and there is much more of a chance to have a significant snow which can make hunting more difficult.

Ross bows are WAY too liberal and accounted for disproportionate buck harvest. Give them one week AFTER the rut and let real bow hunters have October through early November.

The deer numbers in the Crescent area are far too high to the extreme. The antlerless quota could be doubled and there would still be too many deer for a functional ecology.

Why wouldn't the dnr just extend gun season and incorporate the muzzle loader week with a second week of gun deer. Instead of having gun season start a week earlier.

I think the feed ban should end. Every case of CWD here that I have read about has been from a game farm. No one in my group including myself hunts on game farms.

Please address the use of lead ammunition. If you need statistics on the affect of lead please contact REGI, Wild Instincts or Wildlife Hospital. It has to stop.

There are pockets of high deer population in the county near homes and cabins due to continued feeding. Deer population is much lower in heavily forested areas.

I have not really seen an increase in deer population for the past three years, but it has improved from 10 years ago. Thank you for allowing us to participate!

Predator control needs to be addressed in order to sustain this deer heard. The excessive amounts of bears and wolves are detrimental to hunting as we know it.

Too many predators (ie coyote, bear and wolves). Concentrate on regulating these populations and deer herd will bounce back. This is good for our economy.

I hunt the Big Woods with little agriculture. Predators are still a huge problem. I would like the DNR to aggressively pursue a return of a wolf season.
allow bow and crossbow hunters to bait with a small amount 1-2 cups per stand 2 stands per 40 acres. Not everyone is able to plant a $1000 food plot.

I believe southern Oneida county where I live and hunt may have far more does than northern Oneida county and this should be taken into consideration.

I can’t believe that you are considering issuing Bonus antlerless permits in Oneida County Oneida County needs to be a zero Antlerless Hunting county

Last year Me and my friend hunted in Oneida about 3 miles over the Lincoln border and we saw no deer and I hunted 8 days. Saw only slight deer sign.

I think predator management is a big issue; We need to be able to manage wolf populations. And bear also. They have an impact on deer populations.

I have seen less and less deer every year now, I truly believe that we should go to buck only and only allow kids the chance at antlerless

Too many predators and not enough deer. Wolves are out of control. It is a disaster. I may not even hunt this coming year. It’s that bad.

Wolf numbers are high in SouthWestern Lake Tomahawk, Cassian into the Woodboro area and are certainly affecting the deer population there.

I feel the numbers are low in the actual public lands, but we see most deer in the yards along the lakes or in town where people feed.

The amount of residents feeding deer is a large problem. Concentrating deer near residential areas limits opportunities for hunters.

I would really like to see the state go to allowing a hunter one buck & one doe per hunter per year, regardless of weapon choice.

Seriously STOP baiting and feeding! Don't just give it lip service. Deer corn and apples etc. should not be part of the economy!

We see plenty of deer. Bow season and gun season. I passed on several small bucks during both seasons. Lots of does and fawns.

Do away with public and private antlerless permits. And put back tags back in the rules. Along with in person registration.

Something needs to be done with the wolf and coyote population is to high. I’ve seen more of them than deer while hunting.

Might need to consider more in town hunts in the future. Have seen a lot of deer in and around houses and subdivisions.

I still feel that there should be added provisions for senior land owners like automatic and no cost antlerless permits.

Would like to see what the unit goals are based on and also the relationship between harvest numbers and hunter numbers.

Are you thinking about going back to baiting to help all hunters harvest a deer maybe with a half or a gallon of bait

I would support extending the gun deer season, I would oppose having a different season dates for crossbow and bow.

Why where there more deer taken, then the quota of permits(2000 quota= 2031 shot). If you only gave out 2000 permits
Way too many Wolves!! With lack of predator control & high fawn mortality, the population doesn't stand a chance.

Control the wolf population! IT IS TOO HIGH. Allow for fire lane usage during gun season for your aging hunters.

We have a strong wolf population in this county and need to take that into consideration when making decisions!

Hunters should be allowed only one buck per year no matter how it is taken. Gun, bow, crossbow, or muzzleloader.

Stop feeding and baiting in all units of the state. Crossbow season is too long and during the prime of the rut.

I would not be against having an antler size limit, like they must be at least a 6 or bigger for antlered deer.

We have a strong wolf population in this county and need to take that into consideration when making decisions!

Hunters should be allowed only one buck per year no matter how it is taken. Gun, bow, crossbow, or muzzleloader.

Need to get control of predators with hunting. Mostly wolf population is way over the goals set for the state

LEAVE THE SEASONS ALONE. THERE NOT THE PROBLEM AT ALL!!! TAKE CARE OF THE PREDATOR ISSUES ON HAD CURRENTLY.

we need to rebuild the herd in western Oneida and Price County, to many predators. To many special hunts.

Thanks for keeping an eye on the deer population. Didn’t see much last year. Only one deep in the trees

I definitely support having an antler and antlerless hunt both. I disagree with only antlerless hunts.

Recommendations need to be different for Oneida Co.west of highway 51 where there are a lot less deer.

Wolves are a concern in my area as I have several on camera being north of HWY 8 and East of HWY 51.

The deer population is not even close to what it use to be. Its hard to see many deer in this area.

You need to open up wolf trapping again, and soon before everything is dead in the north woods!!!

I do support our youth in the field hunting but I feel that there are way to many youth hunts!!

Predators are a huge problem where I hunt. Wolves, coyotes are more abundant than hunters.

Make non residents have to apply for tags and increase the cost of tags for non residents.

I am in favor of an antler restriction and lowering the predators numbers in the area.

Hunting party of 5 hunters saw 3 deer total. Wolf sign in our area (tracks and scat)

WE NEED TO HAVE Baiting back in northern Wisconsin/…NO Science about deer BAITING..

Quit shooting all the does ! I buy a doe tag, not to use it, but to save some deer !

I believe that baiting at a reasonable amount on private land should be acceptable.

There are no deer in Oneida county. Wolves tracks all over. Kill the wolves

I THINK IT'S TO EASY FOR HUNTERS OF ANY AREA TO KILL DEER AND NOT REGISTER THEM!!

There are a lot more does and fawns than bucks in my area where I live and hunt.

need to control wolves too many also need to reduce to number of special hunts

Please adopt antler point restrictions, pretty pretty please with sugar on top

Too many birds of deer in Minocqua 15 plus deer grouped together all the time

The deer population should be set to a growth model, not a maintain model.

I do not support making the season longer. It's not going to help anything.

Not happy with private land owners getting more tags than public lands.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 281
   - I visit this unit for non-hunting purposes: 63
   - I hunt in this unit: 375
   - General interest in this unit: 58

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 345
   - Bow: 218
   - Crossbow: 176
   - Muzzleloader: 160

3. How many years have you hunted deer in this unit?
   - Minimum: 0
   - Average: 24.94
   - Maximum: 63

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 256
   - Mostly Private Land: 62
   - Public and Private Land About Equally: 21
   - Mostly Public Land: 12
   - Exclusively Public Land: 22
   - I did not hunt in this unit last year: 2

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 23
   - Not too crowded: 41
   - Neither crowded nor un-crowded: 17
   - Somewhat crowded: 15
   - Very crowded: 9
   - Not applicable: 12

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 97
   - Fewer: 146
   - Same: 124
   - More: 30
   - Many More: 7
   - Unsure: 8

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

- **If a DMU is in a Farmland Zone...**
  - **Implement an ANTLERLESS HOLIDAY HUNT:**
    - Support: 143
    - Oppose: 241
    - Unsure: 28

- **If a Holiday Hunt is held in a Farmland unit...**
  - **EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021:**
    - Support: 242
    - Oppose: 150
    - Unsure: 19

- **If the Population Objective is not "Increase"...**
  - **Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons:**
    - Support: 57
    - Oppose: 336
    - Unsure: 19

- **If a Zero Quota (buck only season) is adopted...**
  - ...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?
    - Valid: Not applicable in this DMU
    - Not Valid: Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC's recommendations for this unit? **Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very**

</table>
I’ve been in the woods in this state more than anyone I know for the past 20 years in Outagamie county. I’ve see the number of quality deer dramatically decrease. I literally hunt on the edge of the city of Kaukauna. But I’ve also spent a decent amount of time up north. If Wisconsin is serious about improving the quality of the hunt, antler restrictions are the only way. Unless you plan on closing the deer season for at minimum 2 years which let’s be real if the money generated by the yearly hunting seasons was gone, well I wouldn’t have anyone to talk to about issues like this. Another major concern of mine is the disconnect between the DNR and trespassers. In the past 20 years I have caught at least 100 trespassers. Maybe it’s not a big deal until I mention that the snowmobile trail also goes across the land, for how long I don’t know unless there is someone who actually cares about private property. Perfect example, for the last 2 years every time I walked down the farm lane to hunt I saw 4 wheeler tracks. I finally caught the trespasser this last fall and watched him drive to his house. I went there with every intention of just telling him to stay out. When I got there I was confronted by an intoxicated individual who had 3 kids on his wheeler. His neighbor was a cop and delayed any action due to a conflict of interest. In reality he should have been charged with trespassing and operating an ATV under the influence as well as reckless endangerment to the children on the wheeler. Instead charges were reduced to loitering and prowling. The Wisconsin Department of Natural Resources needs to be more involved and serious about situations like this before all private lands are closed down for snowmobiling. Believe me I gain nothing from the trail. I would greatly appreciate a response as I feel I am the only one who takes things like this serious.

1-I believe there should NOT be days prior to gun season in which bow hunting is stopped. Bow hunters should not be punished because gun hunters want a chance at shooting a buck. Gun hunters can learn how to bow hunt if that’s the case. The best time to hunt the rut is the days leading up to gun hunting so you would be taking away the buck numbers. 2-I don’t think extending the gun season will increase numbers shot. Most years gun is after the rut anyways so bucks are worn out and hunkered down and spooked very quickly. Also, most people are done gun hunting after the first weekend anyway. 3-Crossbow proposal is flat out ridiculous. A crossbow is a bow, it should be included in the bow hunt with no restrictions. If you want to lose a lot of bow hunters then put this proposal through because in the recent years lots of people have started hunting because they can now hunt with a crossbow. I can tell you of my immediate bow hunting family you will lose 3 of the 4 of us. The objective is to promote future hunters to this industry and by making restrictions during peak times of the season based on the weapon choice is not fair. 4-Bow tags should be able to be used during the gun season universally. Guns are easier to kill a deer with so if someone wants to us a bow during a gun period why would they no longer be able too? They are making it harder on themselves so let them. I do not agree with the new proposals and believe they are discriminating against bow hunters. You also need to think about the future hunters as it is already hard to get new hunters and by making more rules and regulations on weapon choice and seasons, I believe you will be losing current bow hunters and not gaining new ones.
A fundamental outside activity of WI residents is whitetail deer hunting. The number of WI hunters is sadly waning annually due to increasing costs, lack of outdoor enthusiasm, family tradition breakdown, etc. My family and I enjoy both bow/crossbow and rifle seasons year in and year out. I am not in favor of restricting the crossbow season to anything less than regular bow season (Sep-Nov and post gun season is great). I have gone plenty of years without bagging a deer during archery season so I don't believe the deer herd is too low. The current/traditional coinciding bow/crossbow seasons allows for all 3 living generations to enjoy the hunting season and WI outdoors the way it was intended to be as an annual family event. Older hunters need to use crossbows and spend time with their children and grandchildren appreciating these outdoor traditions together. Once the family event is gone this sport will die! As is tradition, bow/crossbow seasons need to remain from September through the late November whitetail rut. If you restrict whitetail hunting during the rut you will cut hunters out of the most enjoyable and rewarding time of the season. The thrill is in the chase and observing the whitetail in it natural setting performing their natural breeding rituals. This is awesome to watch! Bagging a deer is just icing on the cake! Please don't deprive hunters of this special WI annual experience. For those lucky enough to own private land, these proposed changes would drop the value of their land in my opinion. I am not a proud land owner yet but, I intend to be in the future me and my family. Just please leave a good thing alone!

I am a land owner (300) acres. My wife and I have been unable to harvest a deer now for several years, BECAUSE THERE ARE NONE left. I am not going to buy a license anymore, nor am I going to encourage hunting in WI. I have hunted 4 continents and 10 countries, 12 states in the US and 10 provinces in Canada, and WI has the very worst trophy potential and overall numbers of anywhere. I am apologetic every time I tell someone about our deer resource. Thus, I have to travel to find good hunting, instead of being able to hunt my own land. It would be nice to have a chance at a buck that is more than 18 months old. But then that is not what you guys want for us. Every hunter wants to shoot a BIG one. Not a fawn or doe or a 6 pointer. I think the deer numbers are way down and we keep getting fed a lot of numbers that don’t resemble reality! I am going to try to get as many hunters as I can, to stop buying a license, then we will see how you manage the resource with no income. First thing to go will be employees. I remember the days when you could sit on stand and see 50 deer in a day, but I also remember the party deer arrangement, when there were not so many deer(same as we have now). Car deer collisions are not a result of too many deer, but of too many cars. So why don’t you limit the traffic flow instead of the deer population? That would help everyone, greenhouse gases, global warming, and of course better deer hunting for the people that pay for our all of our outdoor activities.

Our forest in Outagamie County are in trouble. We are fighting disease, invasives, and to MANY DEER ON THE LANDSCAPE. It is so hard to regenerate the forest. I am having to place fencing around trees to get them past the deer. Since 1972, I have lost in the forest the large elm, butternut, and starting to loose smooth bark hickory. Oak wilt and Anousum (pine) is in the area. Maples only generating from stump sprouts. Aspen struggle to regenerate from deer browse, emerald ash borer is in area. Trees that I have worked to get past the deer browse are being rubbed by adult bucks. I counted in January, 28 deer in one herd, the forest floor is tore up with them scratching for acorns. A week ago, counted 45 deer within 1 mile browsing in fields. MAINTAIN NO! REDUCE YES! Setting quotas on number of does or bucks do not work, CDAC data has proved that. CWD is coming! Reduce herd now! Get back to science, not numbers, EARN-A-BUCK worked. Until legislators let our wildlife specialists in the state determine on how to control the herd population based on facts and science, continue to give 2 or more doe tags for those who want to harvest more deer. Our forest are in trouble! The health of our deer is also at risk! REDUCE THE DEER POPULATION TODAY, NOT AFTER CWD HAS ENTERED THE COUNTY! We are so lucky to have a healthy deer herd. Reducing today, will help protect the herd tomorrow!
I hunt from opening bow til Jan 31st. Public, mfl, private...I hunt the holiday hunts and gun. But do I agree with the extra doe hunts not really. I would get rid of extra doe hunts. Please leave the 9 day gun alone. 20-21people I surveyed "gun hunters" said NO to the longer gun hunt. Please don't infringe on bow/cross bow times (it's hard enough as is) And please get rid of the private/public on extra $$$ for doe tags. Raise non resident tags less for resident tags to get your funding (wi is already cheap for non resident). I spent $72 on doe tags to hunt different counties, public, private to be legal....I lean toward more deer population over more deer harvest.. personally i feel more people will leave hunting if you make the drastic "gun season" the local and state hunting community are getting upset with all the big changes and even more upset with the new proposals. Would love to see the DNR work with hunters more then the DNR pushing there agendas upon the hunters. The resent questionnaire about the new proposals "clearly showed" with the wording to miss lead people. As a hunter of Wisconsin that process really disappointed me. I plan to hunt other states that reward hunters even if it cost me more money in the end. Better deer population management. Happy hunters = more money for local and state level economies.

The DNR wildlife biologist said that the deer herd is out of balance with the habitat and I agree. So why are we trying to maintain the current size of the herd? "Maintaining the herd" is irresponsible when it is out of balance with the habitat. I don’t care if you had previously set the “maintain” goal as a three year goal. The goal should be decrease. I think most hunters just want to shoot a buck and they don’t really care about the other 360 days of the year when the deer struggle to find enough to eat. So we suffer with smaller bucks and fewer fawns. Discussing how many tags to offer is silly when such a small percentage of the tags are actually purchased or filled. The committee offered 2000 tags and only 37% were purchased and 5.8% were filled. Please explain how changing the 2000 number affects the tags filled number and the size of the deer herd? You could make it 10,000 and the same number of deer would be taken. Very few hunters will ever say that there are too many deer regardless of how many there are. They base they opinion on what they see from their stand, not very scientific. Now is the time to begin managing the herd appropriately, before CWD causes more hunters to stay home.

Please continue the extended hunts for archery and crossbow - and Thank You. I’m a landowner and UW student/tutor. Time focusing on school is essential for some. I would also like to see an extended muzzleloader season into Jan. It doesn’t need to be as long as the string weapons extended season, but for the same concept - students wanting to focus on school while not worrying about missing out on the hunt. Would also like to see an active WDNR hunter safety program for adults - possibly highly technical. This program should get into various topics: 1) Safety/Marksmanhip - many types of legal weapons (and no ARs), 2) How to hunt w/o (too many) gadgets. Also includes what types of clothing, 3) Dressing/Skinning deer and turkeys - and meat processing/storage, 4) Forages to plant or promote for landowners interested in WI game health/mgmt. Another aspect I see is the promotion of apex and carrion consumers for forest ecology. This means, mostly predatory animals (wide range) engaged in: 1) cleanup after field dressing, 2) cleanup of dead deer, 3) cleanup of intentional human culled (and field processed) sick or severely injured deer (but not small healthy deer - that’s part of predator promotion).

Hello, I have hunted the Toad Creek marsh located north of Black Creek for 30 years. The last 3 three years of gun hunting have been the slowest of the 30. The 2018 season was the first time every that I did not see a single deer on Opening Day. I spent 60% of that day hunting in the stand and the rest of it walking around trying to kick deer up. My group harvested zero deer that gun season. The 2019 season was a little bit better, I saw only one deer, a buck that I harvested. The group managed to harvest 2 bucks for season. The consensus of the neighbors matches my opinions that there are not enough deer in the woods. Everyone can hear the number shots that ring out over the course of the nine day hunt, it’s very low. I feel that the late hunt, extra corn and flooded woods did not help matters during the 2019 season. But now, with the addition of multiple packs of coyotes and wolves( I have a wolf pack on trail cam feeding off a deer carcass) and bears in the area, I think that the 2020 season will be VERY slow. I do not agree with the number of extra antler-less permits that could be given out. Bucks only please.
I feel that some of the decisions were based on data that came off of a really bad year—actually two years—of bad weather. There were times we simply couldn't get to where we wanted to because it was flooded out with two feet of water, or raining too much to make it any kind of special hunt. I'm also thinking that the deer could have stayed on higher ground themselves. The deer are definitely there—cameras tell the tale, but the bucks really seemed to be nocturnal. We don't have a problem with shooting does or other antlerless deer. From what I see, there is a good abundance of them and maybe if this year is a bit more dry and better conditions, the counts at the end of the year will give a better picture into if enough antlerless tags are given with all regular tags. There are many other situations which can lower data as well. Personally, our hunting group has been cut in half due to some different circumstances, but there certainly isn't any way the CDACs can know this. I'm sure other hunting groups may have some of these reasons as well. It's just an offer showing other reasons why numbers may be down.

In recent years, I have talked to a lot of people who are strictly against shooting antlerless deer but yet they want to kill big bucks. What I have seen the last 7 or 8 years while hunting is incredibly high deer numbers but incredibly low buck numbers, with some days seeing over 50 deer, but only 3-7 of them are bucks and not necessarily mature bucks. As a deer camp, we try to only shoot mature bucks and in the last five years, between 10-15 people on a given year, we have killed maybe 2 mature bucks in that span. These numbers are nothing compared to the past. We used to have years where we would get at least 4 mature bucks and and even some years where almost everyone would harvest a mature buck. In my "uneducated" experience, I would say that the buck to doe ratio is incredibly messed up and the nutrition to grow big bucks is becoming much more sparse due to competition. Some of the best years we ever had on our land was during the “Earn-a-Buck” program and I would love to see something similar to that implemented again just to get people to shoot a few more antlerless deer each year.

I would like to see two bonus antlerless tags issued with each license. I believe that one effect of the Covid-19 Pandemic will be that more people will be interested in putting meat in their freezers rather than Horns on the wall. There are too many deer in this county, and this year's circumstances offer an excellent opportunity to put motivated hunters in a position to do something about the overpopulation. Forcing hunters to pay for additional antlerless tags hits the people who can least afford that, and who are probably the ones who would take an extra animal if afforded the opportunity. The committee's job is to manage a burgeoning population; not raise funds for the D.NR. (although I know it is grossly underfunded, thanks to our do-nothing legislators and Governors who have little interest in our Natural Resources). I would urge the Committee to issue two bonus tags with each license, as it did in 2019. The best defense against CWD is less deer on the landscape. Thank you for your dedication to our Natural Resources.

There was talk of limiting the crossbow season, of which I can only hunt with during the archery season. In my case it is a disability issue which I don't feel people like me should be penalized for. Also, In my area, deer is extremely scarce, (haven't shot a deer in 7 years!!!) so we WILL NOT harvest a doe if one is seen. The idea of issuing only one tag is okay, with the option to purchase additional tags.....for those with a large population of deer on their particular piece of land. There must be a better plan for this state in order to have really good prospects for trophy quality deer. Too many people have the attitude: "If it's brown, it's down", which is terrible thinking! at the end of last season, we have only been seeing fawn everywhere. Those does will not be bred; no fawns will be born; those does now will be shot; NO MORE DEER!!! We depend on game for our freezer, however, the past many years have found it bare. We are so disgusted with the hunting here that we travel out of state or even out of country.
It is my sincere position when it comes to deer hunting that we fully enjoy our time outdoors. Please keep in mind many of us own property at great cost to ourselves in order to enjoy the our hunting experience. “Less is always More” keeping our season structure simplified is much more desirable than the start and stop structure we have now. Bow hunting, is bow hunting, period! It is up to the individual what type of bow he wants to use. Be it long bow, recurve, compound, or crossbow, really it’s that simple, freedom of choice. Firearms? The same. Shotgun, rifle, muzzleloader, handgun. Freedom of choice. Issue a bonus tag with each license, let hunters be their own stewards, outdoorsmen do not want to mandated as to what they can harvest. Complex rules and mandates anger people, discourage license sales, and close off private land. Please keep in mind most men and women enjoy the outdoors because it’s freedom, the best way to discourage this activity is to have oppressive oversight.

I would like to see the doe numbers maintained and the buck numbers increased to allow for a more balanced, natural heard. I also want to see the hunting heritage in Wisconsin continue with our youth and I feel that the lack of mature bucks is not allowing the youth to enjoy the process of getting into hunting. This is caused by unrealistic expectations created by watching videos of mature whitetails being harvest in states with better buck age structure (Iowa, Kansas, etc.). I feel strongly that WI has the necessary ingredients to produce these deer, but we need to take out enough does and protect some of the younger age class bucks so that they can reach their potential. Doing a doe only season would really get this process going and I think that everyone would appreciate it after the fact when they are enjoying better hunting. In the meantime, everyone can keep the freezer full with doe harvests that are also helping the cause. Thank you!

It seems all recommendations were created with the false assumption that harvest numbers were low and also that people have lost interest in gun season because of the timing and/or number of tags. First there are plenty of deer harvested and not enough registered. Second people around the states that hunt private land hunt a lot of swamp property because large farms control the agricultural and let less and less people hunt these properties. Because of rules or bans to baiting, these swamp hunters have very little opportunity to draw anything maps from farmland. Excitement in the hunt has dwindled for both of these reasons. First people do not need to go to registration stations and show off their prize and they are also seeing far less deer because the deer reside on farmland. Farmers see the deer, hunters do not. Decisions are not made with the hunter in mind, they are made with business and insurance companies in mind.

I think a set crossbow season should be set. As a hunter who uses both crossbow and compound bow, there is a definite advantage over using a crossbow and it makes it sometimes too easy to take a deer. I would leave the regular bow season the way it is, but only allow crossbows for a specific amount of time within that season. However, still allow disabled hunters or those who are not able to use a regular bow to still use crossbows outside of the set crossbow season. I just have heard too many people who say it’s so easy to use a crossbow to kill a deer and often they liken it to gun hunting, which is very true. But gun season is only 10 days (plus a few days here and there for holiday/youth hunts), so why not treat it the same? I just think it might help to deter the glutton hunters who have 7 or 8 deer stacked up in a season that have no intention of ever eating it all, but did it because it was too easy.

Deer hunting in this area to say the least is a huge disappointment. I see fewer deer every year. My neighbor farmers have 15 crop damage tags each, and who knows how many other farmers have that in the area. I believe that food plots/baiting have a great deal to do with disrupting deer feeding patterns, therefore the deer are not moving naturally foraging for food. In short, if you don’t out bait or plant a bigger food plot than your neighbor, the deer are not on your property. Also baiting and food plots are creating a “hunter” who doesn’t even know how to “hunt” the “hunter” is reduced to a “shooter” I think the antlerless harvest is too high because of the crop damage tags as well as the antlerless and bonus tags. I have been considering not hunting deer in Wisconsin any longer. Too many hours in the woods with seeing fewer deer.
NO on the Holiday Hunt and extended season!! Neither one is necessary. The harvest totals from last year prove that it is not significant and not needed. You all talk about opportunity, but what about the opportunity that you take from people. A lot of people like to small game hunt at that time - when do they get to go? A lot of trapping is done at that time of year - when do the trappers get to go? What about the archers that want to hunt bucks during the Holiday hunt time period - they can't. What about the snowmobile trails and all the snowmobile clubs that need to go out at that time to mark & clear trails - they can't. The current season structure is just fine WITHOUT the Holiday Hunt and extended season. This CDAC council sure seems to be working from totally inside the box and ignoring the input from outside the box.

I would like to thank the Outagamie CDAC for having the extended archery/crossbow season last year. I've lived in Waupaca County for 20 years and last year was the first year I explored and hunted in Outagamie County public land during the extended season. Our Waupaca County CDAC did not provide the same opportunity, even though most counties in the Farmland Zones have too many deer and are trying to control the herd. I would encourage you to increase the number of antlerless free permits to 2 or even 3. Many people lost a lot of money to the Covid-19 virus business closures and will be depending on that venison to feed their families! Please consider increasing that number. If we are serious about controlling deer numbers to reduce deforestation and the spread of CWD, let's do it right! Thanks.

I pretty much support the deer management outlook. Since I am an avid bow hunter the extension of the gun deer season really hurts my opportunities to hunt deer. In my opinion the first weekend of the gun deer season is the largest population of hunters out there. Extending the season does not help on getting more people into the sport. Pushing the season any earlier would also hurt the bow hunting experience. The reason so much time is put into the hunt is to be able to hunt the rut. People who only hunt gun season should not get an advantage since bow hunters have been spending time in the woods, scouting, and sacrificing their time since the middle of September. Deer do not act the same after gun season and pushing this longer I believe hurts the health of the deer population.

I chose to support an antlerless hunt because the following year the DMU will become a high pull for trophy deer. Just 1 year could really jump start a trophy DMU. I am also highly against extending the hunting season beyond Jan1st in any unit across the state. There is already plenty of hunting opportunity to harvest a deer especially for bow/crossbow hunters. The deer become under stress this time of year, most bucks lost their antlers between mid December to mid January. (of course there are exceptions) Some hunters make mistakes and will harvest bucks that have lost their horns during this time. There is no need to allow these mistakes, these are the following years quality bucks and is not helping support the antlerless effort to manage the herd.

I hope that WI does not increase their out of state hunting license fees like many other states have already done. WI hunting is rich in tradition and I believe that the majority of out of state licenses are sold to people that use to reside in WI when they were younger. I look forward to hunting with my four brothers on my private farmland each year, they were born and raised in WI however they now live out of state. If their out of state license fees increase much more, they will likely not come back home to visit with the rest of our family for both the bow and gun hunting seasons. Out of state hunters contribute to the livelihood of many other businesses in the state, I believe this would diminish greatly if the license fees were to increase.

Please end the extended archery season! As a snowmobiler, a local club DID NOT OPEN trails although adequate snow and cold temps would have allows due to the archery season remaining open until Feb 1st! There is a tremendous amount of work put in by club volunteers to mark and maintain trails, and our local restaurants and gas stations benefit greatly from trails being open. To see that only 20 bucks and 60 does were harvest in 2020 in the "extend season" shows this is NOT an effective season. The season begins mid September and lasts 3 1/2 months WITHOUT the January hunt, and there is no reason a hunter cannot "fill the freezer" during this time.
Personally I think the deer season should be extended to 16 days. That would give the hunters that have to work more time to hunt, That would allow more hunters to harvest a deer. To prevent from over harvesting the herd you would need to cut back on bonus tags. That would help spread the harvest out over the hunting area. Because now some groups shot lots of deer in a small area and none are shot in other areas. Hopefully that would help more hunters see deer in the woods and make more people become interested in hunting again. When they don't see deer they quite hunting especially in northern counties. Thank you for your time.

I am concerned about those who hunt and don't care to shoot good enough to kill the deer on the spot. Bad hunters in Outagamie County are ruining it for the rest are my major concern. I don't know if this would work for Deer Management, but could we perhaps do a lottery for deer tags like bear? Or do a rotation? For example, Farm A, Farm B and Farm C are all right next to each other. Stats show that every year a resident on each farm purchases a deer tag. Could we possibly rotate and provide Farm A and Farm C with tags in 2020, and then Farm B gets a tag in 2021. I just think we need to do more if we want to maintain the deer population.

My land was part of the fawn tagging study and I owned this land for over twenty years. The numbers have dropped off dramatically and I hunt only edges and am very careful not to spook anything. I found five dead nub bucks this spring, not sure what the cause was but they weren’t from gun season- to fresh. My opinion is to go back to the old crossbow rules I shed hunt a ton of public and find bolts all over the place. Archery was supposed to be a challenge. It seems the easier the sport gets ethical shots are being forgotten. At least don’t allow scopes on crossbows how easy can people want hunting to get.

Any change of the traditional 9 day gun deer season would be devastating to the core base of hunters who look forward to that time every year. Imposing changes that effect the archery hunters because the gun hunters are upset “archers take all the big bucks” is a bogus claim. If that is their claim, I would rather encourage those gun “hunters” to head into the woods themselves and try archery hunting prior to the gun "hunt" for that big buck. Increase revenue for an additional archery tag sold and the hunter wins because who doesn't love chasing big bucks during the rut leading up to gun deer.

The informational video presented prior to the survey was well done. It was interesting to hear a wildlife biologist explain the various graphs and trends rather than just viewing the information myself. Although it hasn’t yet reached high levels in the county I hunt, I am concerned with CWD across the state. What is CDAC or the DNR doing to help prevent the spread of CWD? Is there any appetite to place more restrictions or regulations around captive cervid industry to protect the great bounty that is the people’s resource of the wild deer herd in Wisconsin?

Science should dictate all decisions keeping in mind that the white tail deer is just one animal in a healthy ecological environment. Threatened native plants need to be considered and some attention to Ruffed grouse habitat, I know I’m getting off subject a little bit but I wish equal attention would be utilized for invasive species control, the Hungarian Partridge and the yellow perch. Walleye seem to be the white tail of the bay at the expense of perch. Sorry for getting off subject but my point is let’s spend some time and money on other things too.

Believe current policy to issue bonus antlerless tags are influenced by the generation of revenue by the state and not the best interest of the deer herd. Also this being driven by insurance companies lobbying to reduce the deer herd. Also where I've previously hunted private land in Shawano county, land owners were issued so many crop damage tags that it decimated the herd to the point where seeing a deer during the bow season was rare. I don’t believe there was any governing body overseeing this area with the intent of maintaining a healthy herd.
The problem with the entire framework of your deer numbers is still the amount of farm tags given out to farmers that don’t have crop damage from deer! You can give out all the tags you want in this county and if private land owners don’t want to shoot does they won’t... you personally cripple my hunting of close to 350 acres and my good neighbors hunting land equaling close to another 500 around us by allowing a farmer with 15 acres of timber to shoot all the does all year round! By the time seasons start everyone else’s hunting is ruined...

Need to consider looking into a new price structure for non residents. We are literally throwing money out the window by leaving the price where it currently is. I firmly believe non-residents should be closer to North Dakota, Iowa, Kansas, or Nebraska. Doe tags, I believe we need to stop handing them out and start making people buy them. In addition, raise the price to $20 for residents. If the deer numbers get too high, open it back up. By then, we will have created enough non-resident attention, it will be a win-win.

I don’t like the antlerless holiday hunt Dec 24-Jan 1. That is one week I used to look forward to going after a buck, late season bowhunting. That is the only full week I get off to hunt and now I can’t harvest a buck. It also doesn’t make sense to me to hold this hunt and only give away 1 antlerless tag per license. If the purpose of this hunt is to keep the population in check, then you should be giving out more than 1 antlerless tag per license and let people harvest more antlerless throughout the seasons.

Here is my issue. I live 3 miles from where I hunt. A lot of days I see no deer while hunting. I see an average of 60 deer daily from 1/2 to 1 mile north of where I hunt to my house. These are all private lands most of which will not shoot antlerless deer yet they claim to follow QDMA guidelines. You figure out how to fix that and you will please a lot of hunters. There is way to much focus on shooting big bucks vs herd management. My daughter gave up deer hunting due to not seeing deer. That is sad!

Over the past 3 or 4 years the coyote population has exploded on my land (Dale, WI). Very few fawns are recorded on trail cameras or seen while hunting. Far less deer are seen while hunting and far less deer sign is seen while scouting. More coyotes are seen on cameras and while hunting than ever before. More deer carcasses are found over winter as well. In my opinion, antler less tags should be reduced from last year to offset the increased predator kill to help stabilize the deer population.

I’m an above average outdoor hunter. Our country has been very hard to harvest deer. Trying bow hunting for the 1st time to try to better my odds on harvesting a deer because I normally rely on 2 deer to get my family through the year. I hunt all the deer hunting with gun seasons including black powder. I hunt everyday and struggle just to see deer. Been hunting my whole life. Looking to go to better harvest county’s and make a couple hour dive VS waste the whole season staying close to home.

There are lots of deer very close to or in the city/town limits of Appleton and the surrounding towns in the metro area. These deer do a lot of damage to crops, landscaping and gardens, and the only things that reduce their numbers are disease, starvation, and automobile accidents. There needs to be a way to harvest some of these deer. I realize this would step on the toes of local governments, but bow hunting should be a safe way to harvest some of these deer and reduce the damage they do.

I also hunt in forest county. The deer numbers are absolutely terrible there. I found more wolf tracks than deer tracks. Who Ever is on the CDA for forest co obviously doesn’t go in the actual woods. If you really want to know how the animal populations are just ask any bear hunter that runs dogs. Those guys are in the woods more than anybody except loggers! Something needs to done for the Northern Forest County’s! I’m ready to sell my cabin & hunt in a different state it’s that atrocious!

I love deer hunting, particularly bow hunting, but there are too many deer being harvested in Outagamie County as the numbers are seemingly very low. Hunters like me would be much more happy to take less deer, but see many deer (especially higher quality deer). One doe tag per buck tag seems reasonable. This would give the average hunter the ability to harvest 4 total deer per year in Outagamie County. This provides ample opportunity while allowing the herd to thrive.
If a crossbow season is implemented for a shorter period of time than archery, I ask that instead of allowing only those above 60 and disabled to use a crossbow outside of that time frame I would include youth age 11 and under. My daughters love hunting but do not yet have the strength to pull back a legal bow. My hunts are way more enjoyable to mentor them versus going out on my own. The rut is a great time for them to be out there an experience that thrill.

With all the bonus antlerless tags and the crop damage tags and the longer seasons and having 1 year olds buying licenses are depleting the deer herd. It is to the point now where it seems like it is all money driven and not about the herd or the enjoyment of hunting. I loved hunting as a child and enjoyed it and hunted a lot until the earn a buck years when the deer were slaughtered. They are finally starting to come back DON'T do it again.

Lower the water levels at Mack and Herb Benke. Herb Benke and the adjoining public lands used to be teeming with deer. Now all of their bedding areas are underwater and they have moved onto the private lands. Water that we could walk through with waders is now ten feet deep. It’s been like this for 15 years now and hunting has been yucky too. Waterfowl rarely use the water in numbers greater than 3 birds at a time. It's a complete waste.

It is getting very bothersome that there is a feeling that there is a NEED to change deer hunting every year. I am at age where I simply get sick hearing it and am just ready to quit hunting as I can not keep up with the changes. If you expect a good hunt you have to work at it all year. The complainers go out the week or day before and expect to kill a buck. Stop listening to all the complainers who in the big picture are very few.

If you want to reduce the number of does why would you go from issuing 2 doe tags to only 1 I use my tags and might not buy another doe permit if I was not issued 2 when I bought my license. We pay enough for our license. If you want to get more money charge out of state residents more for their license or not give them any doe tags, but they would be allowed to buy them and charge them the same as we would pay in their state.

Please step up the anti-CWD measures in Outagamie County, region, and state. I believe swift action should be taken to prevent its spread to the County. I worry the public stigma of CWD-infected meat will have substantial impacts on the number of hunters in future years and continue the downward trend of reduced hunting rates. I have gun deer hunted all my life and even I have found myself weary of eating venison for fear of CWD.

I heard you want to shorten cross bow to a month. I DO NOT support screwing with the existing seasons or expanding the gun hunt. We have black powder for those who wish to continue with a gun. I would support only 8 points or larger for bucks. Get some size back in the bucks and charge more for out of state tags. Whatever the person's residence charges for their state, we charge the same in Wisconsin.

My only comment would just be the decline in the deer population. Three of my kids and I hunt together and we have not seen a deer in the last four years during opening weekend of the gun season. It's hard to keep them involved. So last year I think we each got 2 doe tags with our gun tag. I keep one and disregard the rest. This tag is reserved for my daughter who has yet to see a deer.

Deer hunting continues to be on the decline and disappointing as deer numbers have fallen. At this rate my opinion is that recruiting new hunters and fisherman to the sport will continue to fall off as our wildlife resources are depleted. Another more recent example of poor management is the decline in bag limits for fishing. In Wisconsin, we are not managing our resources effectively!!!

Introducing an antler restriction of 3 pts on one side. Youth and first time buyers are excluded from the restriction. Introducing muzzleloader only areas during the gun season, especially on public land similar to Missouri's set up. Allowing more crop to be planted on public land by local farmers if they leave a certain percentage standing, to allow for more food for public land wildlife.
With the number of large groups of deer (12 or more) I see in so many fields we need more antler less tags issued. I feel 2 per license would be better. Kill numbers were down last year and people saying they seen less deer i feel is because of the later season and very early colder snowy conditions. also with many farmers not getting crops planted deer movement was different.

Coyotes are taking more fawns then you realize. We are finding more dead fawns on our property each year and are starting to think how can we get rid of them? Coyotes are definitely hurting our deer population and thus our hunting experience. Our attitude becomes we have to shoot less does to maintain the local deer population. We also saw less quality bucks in 2019.

This was the first year, in 30 years of hunting, that I was unable to harvest a deer. There are several factors: 1) too much corn on neighboring properties 2) increased hunting pressure 3) urban sprawl - affecting how I can safely hunt my land Used to be getting a deer with the gun was a sure thing. May have to spend more time crossbow hunting.

It seemed that predation was undervalued in the data collection. This perception that the DNR is protecting predators is common among my hunting community. I am VERY concerned that bear, coyote and wolf populations are driving down deer numbers in this unit and in the Northern parts of the state based upon personal testimony of hunters.

The past few years have been the wettest I can remember in years. The river bottom lands make up alarge part of my hunting area. We have not been able to hunt it, and there has been no feed for deer because of high water forcing more deer to farm fields. This and high antlerless tags has caused a high decline in deer numbers.

My issue last season was the amount of rain we had. Most of the area I have to hunt was flooded to the point that deer were no longer using it. The lack of crops planted in my area didn’t help either. That being said, I feel that the amount of antlerless permits being handed out just for buying a license is a bit much.

Don’t like the use of Cross Bows during Bow season. should go back to the old way and have to be at least 60 to shoot one unless your disabled. I am 58 years old and will be shooting a bow until I cant pull a bow back anymore, that will be a while. People think you can shoot 60 or 70 yards with one.

Unit needs mandatory testing for CWD. With the mild winter and counties that are nearby testing positive it is only a matter of one quick jump to be in this county. Oppose any allowances for increasing season for bow or crossbow hunters unless gun hunters can do the same in January.

we need to create more ways to harvest deer inside the metro areas. Also create more opportunities for youth hunters. Utilize forest damage tags for landowners trying to regenerate their forests. I need more flexibility to control the herd to lesson the browse to new growth trees.

the trend in Deering hunting has shifted to archery (bow/crossbow) so why is there a push to make more gun seasons? We need less guns seasons and embrace the movement with more interest. Gun seasons just create problems and more landowners are closing there properties to it. I do.

DO NOT, extend the traditional 9-day gun season!!! Get rid of all the 'special' antlerless seasons! If people want to shoot a doe they have the opportunity during the regular seasons!!! Go back to the traditional season layout, before all the 'earn-a-buck' and 'T-Zone' crap!

Why are there so many turkeys that scare the deer away when we are hunting?? There should be bonus turkey tags Or (5) turkeys on every small game license! Please increase turkey tags Get rid of the spring draw ! Let people hunt them do deer hunting will get better!!

Do not extend the gun season into early season archery. Gun season should remain/start after the first week in November - I largely suspect that lower values were due to many environmental reasons, in addition to the late gun season start date around Thanksgiving.
I would like to maintain baiting of deer for the youth hunters but have the bait scattered in large areas to prevent the spread of CWD. This gives the youth an option to make a clean kill with extra time to shoot. We need to promote our heritage of hunting.

-One buck per hunter per year, choose what weapon you will use - keep bow season and gun season alone, add a special season for anyone using a crossbow that isn't a senior citizen or doesn't have a disability - No holiday hunts or antlerless only hunts

I would support a one buck per hunter per season. Shoot the buck during any season you want but you can only get one buck. This would solve a lot of the present issues like possibly more does shot and better quality bucks surviving the hunting season.

No holiday hunt or extended archery hunt. Having a month long season of gun hunting is a negative impact. The holiday hunt during the Christmas break is also taking away from late season bow hunting and taking away the chance of harvesting a buck.

Earn a buck destroyed the deer herd and made hunting no fun for many years. The deer herd has been back to solid numbers for the last 3-5 years. Thanks for all the work to make hunting fun again and support reasonable yet solid deer numbers.

Too many people shooting does off of small blocks of public and then deer won’t come back into and stay in private and then not enough of antlerless on private land being taken. If hunting private it, should be earn a buck for all private

You need to ban baiting. Baiting is the single worst thing to ever happen to deer hunting in WI ever. Baiting has changed the hunting dynamic and is the reason people do not see a satisfactory number of deer each season.

2019 was the worst year as far as number of deer seen while hunting in my 25 years of living on and hunting my property. The deer numbers are much lower than prior years. I believe coyotes could be a contributing factor.

The deer population is exploding in western Outagamie Co., Particularly the townships of Bovina, Liberty, Deer Creek, Maple Creek. Milder winters, lack of hunting pressure, and back yard deer feeding

January 31 may be a little too late as some bucks drop horns and it makes it more difficult to select does. Also need meat processors to support longer season but that’s not a big deal for most.

The number of deer on our property was drastically lower this past year, but I believe it had a lot to do with the lowland and the flooding that occurred. The deer simply moved to higher land.

I feel like the number of deer is always over estimated. My first year in this area 6 years ago I saw double digit deer. Last year was the first time since then that I’ve seen a deer at all.

I feel that our deer numbers are lower then usual and instead of having a holiday hunt for does. We should have a holiday hunt for bucks only to let the does repopulate the deer population.

Water is/has been to high near wolf/embarrass river areas. Deer haven't been moving very much in my observations. Can dams be opened more in the fall without flooding other areas?

It is my belief that your deer management units are too large. There may be an abundance of deer in one section of a dmu and a drastically different population in the others.

If we need to keep the deer population lower we should set point restrictions. This would keep sport hunters interested in hunting in Wisconsin and bring in more tourism.

High water in the woodlot through the Deer season 2019, greatly reduced the time to be able to hunt. The high water has also reduced the available browse in the woodlot.

Appreciate the time and consideration our CDAC representatives volunteer and put into making our privilege of deer hunting the best opportunity possible. Thank you!
| 7092 | Stop allowing crossbow hunters to use their "gun" for 6 months. Archery season should be separate from crossbow hunting. The archery season is much too long. |
| 7093 | STOP TRYING TO GET RID OF ALL THE DEER AND HURTING THE HERD!!!! DEER IS THE ONLY BIG GAME WE HAVE AND YOU GUYS ARE TAKING AWAY IT ALL AWAY AND MAKING IT WORSE!!!! |
| 7094 | Gun deer hunting should start the season 1 week earlier about the 15th of the month and run through the end of the month for a 15-16 day season |
| 7095 | Section 4 the questions are worded horribly. I could not imagine how they could be answered in any way to give input |
| 7096 | while I did see many deer were i live. My hunting land north of shiocton is completely useless because of high water |
| 7097 | Seem to see noticeably fewer deer in the last 8-10 years than in my first 8-10 years on the private land I hunt. |
| 7098 | While I see deer where I live. My hunting land north of shiocton is completely useless because of high water |
| 7100 | The state has to change the law on deer retrieval. Hunters MUST be allowed to get there Wounded animals. |
| 7099 | Forests have a real hard time regenerating. I also farm and the damage to corn and soybeans is terrible |
| 7101 | Make a antler restriction of 4 points on one side and minimum 15" spread to let young bucks mature |
| 7102 | I believe you are doing a great job with management numbers. Please keep the numbers the same. |
| 7103 | What is causing the influx of white deer and should we be harvesting them to stop the influx? |
| 7104 | Raise the out of state license fees by 200% We charge far too little for access to our game. |
| 7105 | would like to know what percent of hunters fill all antlerless tags given to them. |
| 7106 | Make a point restriction like 4 points on one side or 15" wide so bucks can mature |
| 7107 | The number of deer has really diminished over the years. It’s very disappointing. |
| 7108 | Bow hunted 12 times from Dec 1- Jan 31. Saw 1/3 of deer seen the previous year |
| 7109 | Implement a 4pt rule on one side or 15"width limit to let small bucks mature |
| 7110 | farmers need to get their corn off the field before The gun season !! |
| 7112 | not happy about the cross bows. should have a strict season on them |
| 7111 | There is no shortage of deer only shortage of quality deer hunters. |
| 7113 | I would like to see back tags be used again to identify people |
| 7114 | My hunting group and I strongly oppose the extended gun season |
| 7115 | should be allowed to harvest bucks also during a holiday hunt |
| 7116 | Recommend to keep crossbow season as 2019 season was |
| 7117 | need to stop the use of Cross bows during the RUT. |
| 7118 | Get rid of youth hunts, antlerless weekends, |
| 7119 | A longer gun deer season would be nice |
| 7120 | Have some common sense for once omg |
| 7121 | Deer numbers are too low. |
| 7122 | We have a lot of deer. |
Public Input on CDAC Preliminary Recommendations - Spring 2020

Ozaukee, Southern Farmland

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

112 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 80
   - I visit this unit for non-hunting purposes: 14
   - I hunt in this unit: 99
   - General interest in this unit: 18

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 75
   - Bow: 63
   - Crossbow: 49
   - Muzzleloader: 16

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 19.7
   - Maximum: 64

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 57
   - Mostly Private Land: 19
   - Public and Private Land About Equally: 12
   - Mostly Public Land: 3
   - Exclusively Public Land: 8
   - I did not hunt in this unit last year: 0

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 10
   - Not too crowded: 17
   - Neither crowded nor un-crowded: 5
   - Somewhat crowded: 5
   - Very crowded: 2
   - Not applicable: 3

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 14
   - Fewer: 29
   - Same: 52
   - More: 9
   - Many More: 5
   - Unsure: 3

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...

- Implement an ANTLERLESS HOLIDAY HUNT: Support: 61, Oppose: 42, Unsure: 9

If a Holiday Hunt is held in a Farmland unit...

- EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: Support: 88, Oppose: 16, Unsure: 8

If the Population Objective is not "Increase"...

If a Zero Quota (buck only season) is adopted...

- ...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? Support: VALID, Oppose: NOT VALID, Unsure: Not applicable in this DMU.

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?

</table>
I lived in the town of Port for the first 20 years of my life and I saw very few deer in that area, I would say that hunting the very limited public lands has been challenging in both not seeing many deer and non-hunter encounters (mixed between positive and negative encounters). For the past 12 years I have lived in the city, the amount of deer that I see is ridiculous, I used to have a garden I can't keep it because there are too many deer. It seems to me that the deer have congregated in areas that hunters are not allowed to hunt or are having to many non-hunter encounters. There seems to also be limited knowledge on where to hunt. I have hunted in the north woods for many many years and only since my purchase of a crossbow have I started to hunt in my home county. Quite a few people in the area are not keen to allowing people on their land to hunt or they want money to be able to, all of this ends up having negative impacts for aspiring hunters in this area. I would love to see better data on open hunting areas and the regulations in those areas be made more public to help the hunters.

Issue one doe and one buck tag per hunter per season or go back to hunters choice do not issue four tags per archery license and four per gun license and do not sell extra bonus tags. In my and many others opinion that just promotes a massacre which leads to fewer deer numbers and fewer hunters. When I first started hunting when I was 14 I am 34 now I would see between 15 to 20 deer a day now im lucky if I see that all season. There are not nearly has many deer has you think there are. I know people that stopped deer hunting in wisconsin because they do not see anything and I am highly considering joining them. They now hunt out of state where deer heards are better manged. I have hunted outside of wisconsin and could not believe the deer numbers I see then I come back here and nothing. I know my opinion probably will not matter on the issue but look at the numbers less license sold because of less deer in the state.

There is so much food for the deer in this unit that it could easily support 30 to 40 deer per square mile. I monitor the herd in my area and you people are so far off it is a joke. There are no more than 12 deer per square mile north of HY 33. North of 33 should not be in 77M. The only reason it is, the CDAC is loaded with farmers that want all the deer killed. Coons do far more crop damage than deer. THE ZONE SHOULD BE ARCHERY ONLY AND IF THAT CAN'T BE DONE, STOP ALLOWING RIFLES, YOU ARE GOING TO GET SOMEONE KILLED.

I have hunted in this area for over 50 years. The amount of deer I see in the last 20 years have been dwindling every year. My wife and I hunt a 40 acre parcel for gun season and this last fall was the worse we have ever seen. She had two does run by her on opening day I saw nothing opening day. Over the whole gun season we may have seen 8 deer between us that were actually other deer and we hunt every day. The way this state hands out doe permits is unreal. Instead of killing everything in site why not let people enjoy seeing a few more deer. We don't need to kill all deer like the insurance companies would like us to do, it is a resource not a commodity, use your heads.

Please for the safety of all gun hunters in every county. GET RID OF DEER DRIVES! Whether it's Ozaukee county or other counties in the state, I have never met a hunter that hasn't had gunshots to close or even had rounds hit near them when others are doing drives around them. I have had many bullets hit trees around me and even the tree I'm in. As a deputy in Ozaukee county, over the years we have taken numerous calls of rounds hitting houses and last year a guy shot in the leg with a .308. All reported after or during a deer drive in their area. At least prohibit them opening weekend.
Myself and a lot of others would like to see that “deer drives” or group hunting be stopped. All the people that do drives, the first thing they do is push out the public land. By doing that all the deer leave the area and gives all the people that like to sit an unfair advantage. A lot of people can only hunt public land and do not have access to private land. If all the deer are pushed off the public land there is no reason for the people that like to sit to even hunt. Knowing there not going to see a single deer. Detouring a lot of people from hunting.

The big problem with Ozaukee co, are these small farmettes that are nothing but deer refuges ... there is little public land to hunt and trying to find private land is a joke. There has to be a mechanism to have private land owners open up their land. The 2019 season was very disappointing, in 2 instances I had deer I had shot snatched by other hunters on public land. I’ve resorted to hunting on my 5 acres in my backyard... and managed to bag a decent doe. Hunting ethics have pretty much gone down the toilet and I’m about done dealing with it... good luck.

I would like to see as much done to keep cwd out of ozaukee county. In addition if there are any deer farms in or around the area we should push to close them. I see no net positive impact of these being in the area or in general. I also recently saw an opinion poll about stopping cross bow hunting on October 31. I support this, although I am a bias archery hunter who wants to see less competition on the land. Every sit I had in ozaukee I had another hunter within a few hundred yards or had a hunter walk past my stand.

I wish there was a DNR program that made it easier for hunters to connect with private land owners looking to reduce the number deer on their property. Only 3% of Ozaukee county is public land and much of that is not suitable for actual hunting. With so much private land and such high deer density, it could be a smart way for the DNR to help maximize the impact on the herd by the limited number of hunters hunting in this county.

I realize this ship has sailed, but I think crossbows should not be allowed for the harvest of antlered deer prior to the gun season/rut. DNR should only allow the use of crossbows for bucks after the traditional gun season. Video was very good, thanks for your efforts.

I believe it is critical in this county to encourage all methods of hunting deer. I hunt only with crossbow on my small acreage land due to safety and to keep low profile. Please continue to support crossbow hunting in all seasons at least in our area.

Its required for hunters to apply for and obtain a discharge permit prior to hunting in some cities in ozaukee county. I have no issue with this requirement, but the city does not ask if deer were harvested. Wondering if this should be recorded.

If Ozaukee County went with an antler less season I would hunt somewhere else. I did harvest 1 buck by bow and 3 antler less with a gun. Any information on private landowners willing to allow hunting would be greatly appreciated.

I live on the edge of Ozaukee and also hunt in Sheboygan and Washington counties. Having tags that are county specific is an inconvenience. I would prefer statewide tags or zone tags, not county tags.

My only comment is, If you would like more deer to be harvested, why was limiting the crossbow season ever even a consideration. Seems like that would only continue to lower harvest.

Quotas and long seasons should be more localized. The area of the County that I hunt seems to be way down on the number of deer compared to what I would see years ago.

I would strongly support an antler less Holiday hunt in Ozaukee County. I would strongly disagree with any “no buck” season. Thank you.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 67
   - I visit this unit for non-hunting purposes: 32
   - I hunt in this unit: 156
   - General interest in this unit: 20

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 146
   - Bow: 85
   - Crossbow: 69
   - Muzzleloader: 56

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 20.65
   - Maximum: 61

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 121
   - Mostly Private Land: 20
   - Public and Private Land About Equally: 7
   - Mostly Public Land: 4
   - Exclusively Public Land: 4
   - I did not hunt in this unit last year: 0

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 7
   - Not too crowded: 12
   - Neither crowded nor un-crowded: 5
   - Somewhat crowded: 3
   - Very crowded: 1
   - Not applicable: 7

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 17
   - Fewer: 59
   - Same: 65
   - More: 12
   - Many More: 8
   - Unsure: 3

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

Comments for Pepin, Central Farmland

Note: the comments presented in this report are the unfiltered opinions of individuals who responded to an online public input form. The viewpoints expressed do not represent the views of the state of Wisconsin, the Department of Natural Resources, or its employees.
I feel there are adequate deer numbers in Pepin County and the hunting is still decent, but it's nowhere near where it was years ago and could / should be. The quality of deer hunting in Pepin County (and the state in general) has gone downhill in recent years. Yes, some parts of the county offer better hunting than others. After talking with several other landowners and serious deer hunters, the consensus seems to be that deer sightings / encounters are down, yet we are constantly told about record deer numbers and high hunter satisfaction. Those claims just don't seem to be matching up with what we're seeing in the field. The last couple years have been tough hunting in Pepin County. The brutal never-ending winter of 2018-2019 certainly didn't help things when it came to the 2019 hunting season either. I'm not in favor of the Holiday Hunt - I live and hunt in what has traditionally been one of the better areas of Pepin County and just don't feel we have the deer population to justify it. When gun season rolls around, it seems like there are more deer, but realistically there are a lot more hunters in the woods chasing deer around. Deer go somewhere unpressured and away from the crowds and almost tend to herd up at times. You can't use 9 days worth of sightings to dictate an entire future season. We've already got 9 days of rifle, followed by 10 days of muzzleloader and 4 more of antlerless only. That's 23 days consecutively with a gun in hand. Do we really need another week of gun hunting? When is enough, enough? The harvest numbers haven't shown the Holiday Hunt to be overly successful- yes some deer get shot, but it doesn't put a big dent in the population. The people who are serious about shooting does are not going to wait until the last minute in late December to decide to do so. They are going to take care of business long before that. The Holiday Hunt also completely ruins late season hunting for the bowhunter who is seeking a buck. Bow season comes back in for a couple days following the gun/ muzzleloader/ antlerless hunts and then gets shut down for the Holiday Hunt and you're left with another couple days to chase a buck during late season, assuming there is no season extension such as proposed for 2020. I'm on the fence about a season extension. I’d support a season extension if the Holiday Hunt takes place, just for the chance to get a buck during the late season. As for the people that are worried about having a season extension and it conflicting with small game hunters, hikers, cross country skiers, snowmobilers etc... in the last Pepin County CDAC meeting it was stated that 95% of Pepin County is privately owned. The landowner is going to choose what happens on their land through out the year anyway, so to me, this is a non issue. Another viewpoint that was brought up in the Buffalo County CDAC meeting was that of construction / seasonal workers. There are a lot of hunters who work in the Twin Cities or other areas a good distance away because it offers better pay than what can be found in Pepin County. These people work long hours and just about every weekend through out the fall and might finally get a chance to hunt around gun season depending on their job and the weather. Don't these landowners and hunters deserve a chance to hunt? A season extension would give them a chance to spend some days in the field. All of this being said, do we really need to hunt from mid September until the end of January? I’d much rather eliminate the Holiday Hunt all together and end the season in early January. I’d personally love it if Earn a Buck was brought back, but am aware it would take action in Madison to do so. Enough antlerless deer would be shot to keep everyone happy and bucks would get a chance to get some age and size to them. The ridiculous Holiday Hunt could be eliminated and there wouldn't be a need for a season extension until the end of January. Regulations / season dates would be easier to understand as result too. If Earn a Buck were to come back, I feel that it should not be overused. Several consecutive years of Earn a Buck is a overkill, but I feel it's a valuable tool to have the option of using. Maybe use it every other year or every 3rd year as needed to get things back "to normal" if deer populations get out of check. Through out the latest Pepin County CDAC meeting there was mention of giving hunters more opportunities as a result of all these extra seasons. Wisconsin as a whole has the same mantra, in that more opportunities will bring more hunters. Deer need to be effectively managed and are a valuable renewable resource for this state but are not treated that way. It's all about license sales. Wisconsin just wants to sell as many licenses and shoot as many deer as they can. I’d argue that if the product (deer hunting) were better, the sales would be better and there'd be no need for all these extra hunting opportunities to try and entice more sales. I understand it's a cultural / traditional thing, and everyone can use their license as they choose, but the landowners and hunters of Pepin County (and Wisconsin as a whole) could certainly take some notes from places like Iowa that have a good deer herd, a logical season structure, and overall a very high quality hunt that has
Here are a few of my thoughts regarding deer management in Wisconsin. 1-First off, I'm not sure if the DNR, Dept of AG has a clear objective when it comes to managing the herd? Who has more sway when it comes to managing the resource, special interest (logging, farming etc) or the sportsmen/women who's license $ funds the department? Hunter recruitment continues to drop year after year as a result of fewer deer on the landscape and hunting regulations that are far to complex. 2-Seasons....Why is the DNR overthinking this? There is plenty of opportunity to harvest a/multiple deer in the 2 general (archery/firearms) seasons. There is absolutely no need for a special hunt/s every year to try and control a population of cervids that does not need to be managed to this extent. This whole management theory/plan is being overthought and is more of a danger to the herd than any disease or other outlying contributor to the health and population of the this resource. 3- Farming/reforestation-If farmers (god bless the american farmer) are struggling with crop loss due to overpopulation, let's look at all the factors and not just deer. Raccoon, Bear, and turkeys will destroy as much or more cropland than deer....Where is the management plan for these animals? Why is it always the whitetail that bears the burden and pays the tole? If the AG community thinks they have too many deer on their property and this is having a financial impact, HARVEST them as you see fit on THEIR land. The DNR should not use this as a blanket management tool for a whole county. 4-Private landowner contribution-I will keep this as close to the point as I can. I manage my 200 acres in Pepin County for Whitetail deer! I do not manage for timber/oldgrowth forest or agriculture. I have about $900K invested in this property and do not take suggested input from a government agency that has no monetary stake in the resource lightly. 5-Privitization of the herd- Here is the risk to the DNR. Every year landowner groups become more and more frustrated with over management of the deer herd. I'm not saying structure and management is a bad thing, but overthinking this is!!! So here is what is starting to happen whether you want to acknowledge it or not. If the DNR continues to overstep their management ideals, the landowners that own property strictly for the harvest of whitetail deer will unite and privatize their own management practices. It does not need to be this way....Manage public lands (we fund those to) work with the farmer, manage public land timber sales and reforestation projects...But do not expect support from the hunting public or improved license funding from younger generations if you continue to try and manage something that will manage itself if you would just let it (that's a hard concept for the department). 6- The resource (deer) belongs to the people of the great state of Wisconsin and I understand that the Deer Herd in Wisconsin is not privatley owned...But the private landowner that only owns lands and purchases licenses to harvest these animals should have as much say or more than the non-hunting public that appears to dictate the management framework. Just my thoughts.
I do not support holding a holiday hunt. The late season bowhunters lose opportunities. We've already got several weeks of gun hunting and the deer are stressed out and running for their lives while trying to find enough food to make it through the winter. In addition to the late season bowhunter getting the short end of the stick, the holiday hunt hasn't been overly successful in shooting a large number of antlerless deer. We have good hunting, and I think the amount of tags allocated is about right. The last few years have been tough hunting, but in the big picture, hunting here is still pretty good and a lot better than other areas of the state. If we go ahead with the holiday hunt, the season needs to be extended- this gives more opportunities for bowhunters who basically lose the entire month of December. On another note, I wish there was more outreach efforts from the Pepin County CDAC members. Their contact info is available via the DNR website, but I'd like to see them step up a little and seek out ideas / opinions from the general public versus just waiting to get a phone call or email from someone. The local news outlets don't do a great job of advertising the CDAC meetings and a lot of people don't know about the online comment option. There are several events held every year with the Durand Rod and Gun Club, Arkansaw Fur, Fish, and Game, Whitetails Unlimited and Pepin Sportsman's Club, among others. Perhaps some of the CDAC members could attend some of the events and have a basic questionnaire for people to fill out in order to get some feedback. Or even if the CDAC provided some sort of dropbox for people to put comments / ideas into at these events. This would get the CDAC some valuable info through out the year and from multiple locations within the county. Just an idea.

I’ve been hunting one of the best and least talked about public big tracts of land in western Wisconsin. It borders the Chippewa and is extremely hard to access without private boat landing access. It’s called 9 mile island If you didn’t know yet. My family, and many family friends, have hunted there for 30 plus years... from when it opened to recreational hunting in the mid 80s to now, we’ve been there. And since then to 2015, it was one of the best pieces of land we’ve all ever hunted. And even in 2015, guys that have 100’s of acres of private said they’d rather hunt there.. but since then, with ONX and public MFL maps, it’s been destroyed. No matter where you sat on that property, you seen a 120 plus inch buck, every damn sit, and 5-20 does. You never worried about seeing deer. But now, we go out there, and we sit the best spots on that island with the best sign best bedding, whatever you can possibly do to find the deer, and you’re lucky to see 10. And yes; that is better than most properties, but that ain’t right. We did our homework, we busted our ass, and yet, there’s people out there acting like coyotes, wolves, and extreme hunting pressure doesn’t play a factor. And that’s just sad. I once seen 5 coyotes on the trail of a fawn, 2 minutes after she walked through. They all did the same exact thing. It was like clock work. You guys need to make a change to public land hunting. You’ve already lost the guys who won’t buy tags anymore because public isn’t work it anymore. Improve what you still have.

I believe that the majority of areas where deer population is a concern (too high) is almost entirely on private land. But because as a whole the population is deemed too high, there is a demand to release more tags with each license sale. I believe that limiting tag amounts to public land tag holders versus private land tag holders would help keep deer populations at a desired number without reducing populations on public land to a point where hunters are seeing more hunters than deer in the field. As a public land hunter of almost 20 years its gotten to the point where we’re seeing private land dominate the hunting landscape leaving extremely crowded and massively over harvested public lands. As a young hunter, not seeing deer means far less interest which leads to far less future hunters in the future. As a public land bow and gun hunter I would never dream of filling the 6 tags I am provided for my license. I think this threatens the integrity of the hunt and why I picked up the hobby/lifestyle in the first place.
As an archery hunting family that has limited time to hunt especially with other children/family members that are only home on the holidays and they are archery hunters as well, it is not ideal to have an antlerless only holiday hunt. Would prefer to be able to archery hunt for a buck with family during this time. This is often the only time on holiday breaks that especially college age archery hunters have to hunt for a buck. The extended season is a trade off but I would rather not have to hunt in the cold of January when chances at a buck are greatly decreased, look at your 2019/2020 numbers of bucks shot in the extended season. Also when leasing land and not being able to allow archery hunters to shoot bucks during the holiday has not received a positive reception. In theory, I think for gun hunters, the holiday hunt is a welcomed season but as far as archery goes archers are being punished.

Too many antlerless tags are given out for every license bought. I have two sons that hunt with me. Last year I believe we could have tagged a total of 13+/- deer as a family. We collectively saw one deer (yearling) last season. I own approximately 100 acres near public land. My sons are getting turned off of deer hunting with the lack of action/opportunity. My sons were 15 and 13 at the time of deer hunting. It sucks to see them so excited prior to deer season only to have the excitement sucked out of them as minute by minute, hour by hour and day by day goes by with no action. They are bored out there, and frankly, so am I.

I HAVE NOTICE A DECLINE IN THE DEER POPULATION IN THIS UNIT OVER THE LAST FIVE YEARS. I THINK WE HAVE LOWERED IT ENOUGH THAT WE CAN START GIVING OUT LESS ANTLERLESS TAGS BEFORE WE PUSH THE DEER TOO FAR IN THE WRONG DIRECTION AND END UP BEING IN THE SAME SITUATION AS THE NORTHERN FOREST UNIT. THERE USE TO BE ALLOT OF DEER UP NORTH UNTIL THEY WERE OVER HUNTED AND NOW YOU HARDLY EVER SEE A DEER UP THERE. THEY ARE SLOWLY RECOVERING NOW AFTER YEARS OF BUCK ONLY. WE CAN ALWAYS GIVE MORE TAGS AWAY IF THE POPULATION SHOOTS BACK UP. BUT IT IS MUCH MORE DIFFICULT TO REBUILD A POPULATION AFTER AND OVER HARVESTING.

as a hunter who did take anterless deer the statement is the average hunter is only going to take what they want to eat reguardless of the number of tags a person can have! a better option is to get more hunters in the woods, lower licence fees both in & out of state my own son did not hunt because the out of state fees were too high. there is nothing wrong with the normal 9 day gun season, very few people hunt all 9 days, i only hunter 5 days of the season . extending the regular 9 day gun season would be a mess it stills goes back to how much do you want to eat!

I strongly feel that the deer numbers are not where they should be. I have noticed over the last 15 years that the numbers have drastically decreased. I don't think that decreasing the population is what the focus should be. At the very least, I think that the focus should be on maintaining the current population. Handing out more doe tags and shooting more does is not the answer. The holiday hunt can go away as well. Just about everybody who hunts the 9 day gun season already has their tags filled by the time the holiday hunt rolls around.

Although, I said tag allocations are too low, I understand they do not sell out and you are doing you best to try to increase doe harvest. It is an unenviable position and one that many game agencies in the midwest states deal with. None have been able to remedy the problem without employing Earn-a-Buck. Many of these tactics that actually work are controversial because of the way/culture surrounding deer hunting has changed within the last decade. Good luck and stay the course to lower deer numbers, I would support EAB.

I feel there are too many tags being sold compared to the number of deer in the county. I have seen a drastic decline in deer numbers over the past 10+ years. I used to see 10-15 deer a day. Now I don't see that many in a whole season and the size of the deer (buck and doe) is a lot smaller. The numbers are just not out there like they used to be. I haven't taken a deer in 4 years due to both the lack of numbers and the size of the animals. There are very few mature deer in the areas I hunt.
This is a smaller county and that being said, there is a lot of traffic on the public lands. All the deer are pushed out to private lands because of the hunters themselves pressuring too much. With that being said, public lands should decrease in bonus tags too. Private should increase more to help prevent crop damage. No major roads in this county and if there is, it’s mainly around private lands as well.

Deer population I observed appeared to be healthy with a even number of buck to doe sightings. I do support the use of crossbows for the entire archery season. I believe crossbows make for more accurate shots which probably does increase the harvest a bit. Also, lowering the amount of bad archery shots that just would deer that later die and aren’t found. Thank you for the opportunity to give my input.

With what I have noticed, there are a mass amounts or farms that didn’t get their corn down. This giving the deer a reason to stay in the corn. Very little reason to wander do to the abundance of food available. Late winter I did notice large groups of deer 20-30 deer in packs traveling through fields. It was a little latter in the season to see this but it did happen.

I believe we need to get a handle on the numbers of deer. I do take a two to four does a year but we can see up to 40-60 deer a day on stand. I mainly trophy hunt but manage to do my part for deer quality. When I bought the property 10 years ago we had bigger bucks around and I feel it was due to the earn a buck season(s) that were before me buying the property.

Earn a buck may have to be started again if too many does are out there and not enough antlerless are harvested. Antlerless only season would be very harmful to the herd as I don’t believe anyone would go hunting that year and you would end up with lesser deer harvested and low income for not selling licenses.

Not a good idea to extend archery season into late January. If a hunter hasn’t filled their tags by January, better luck next year. The deer don’t need to be pressured and hunted another month, especially during the hardest time of year for the deer to find food and survive.

The rut has gone away because their are to many doe’s and the bucks dont have to move to get to next one. A doe only season Will only bring the doe population down and create the big bucks every one wants to shoot because they have a another year to get bigger.

In 23 years of hunting the same property, the last 3 years we’ve seen far fewer deer while in the same period we’re seeing more coyotes while hunting. I’m not sure what can be done but they’re having a huge impact on deer sightings during the season.

I think we need to go back to earn a buck because trophy hunters are killing the sport of hunting and making the normal hunters stay home because they don’t like getting confronted by said trophy hunter for doing none hunting things around the area.

I think the youth hunt should be longer than 1 weekend & earlier. Without our youth involved in the Heritage of hunting it will eventually limit the interests in our youth & there fore hunting Gets too cold for young kids in most deer opening weeks.

I do not support extending the archery season due to the length of the hunting season. The whitetails are pressured enough from all the hunting starting in September. Give the deer a chance to rest and recover from the hunting season and winter.

I feel if you want to control the population you need to bring back Earn-A-Buck, as well as the registration at specified places because I thing you are not getting a real accurate number right now!

Increase the non-resident license fee substantially shorten the archery season, and cancel special hunts. If you were a landowner, you might understand? have a antlerless season only.

We need to have earn a buck to get the deer numbers back down because there is to many trophy hunters not shooting does which is causing the deer heard to get way to big.
Saw a few less does than average. Saw many fewer bucks than average. Party of 6 went 0 for 6 on bucks in 2019. Passed on some does, but saw fewer than 7 year average.

Extra hunts interfere with the normal hunting dates. When Bow hunting starts, that's the only hunt that should be going. No extra seasons mixed in.

Private landowners need to do a better job with the doe population. Also crossbow are a quality weapon for helping reducing the deer population.

There are too many seasons, reduce the number. Have the muzzle loading season before the rifle season.

I have seen less and less deer every year. The deer court is lower than the DNR is saying it is.

Move youth hunt later closer to rut....get rid of doe hunt that follows muzzle loader season.

I think to lower the antlerless population the earn a buck may have to be a tool to be used.

Pepin county should consider shifting from decrease population to maintain population.

Habitat being removed for farming. Poor to non-existent habitat management.

Only concern is the coyote population is getting out of hand.

Allow a bonus earn a buck after registering 2 antlerless.

Allow hunters a bonus buck after killing 2 antlerless.

Keep hunting the same. No need for change.

Not enough access to private lands.

Very few deer on public land.

Too many deer!
Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 233
   - I visit this unit for non-hunting purposes: 62
   - I hunt in this unit: 304
   - General interest in this unit: 69

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 266
   - Bow: 184
   - Crossbow: 115
   - Muzzleloader: 124

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 23.63
   - Maximum: 60

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 190
   - Mostly Private Land: 65
   - Public and Private Land About Equally: 26
   - Mostly Public Land: 4
   - Exclusively Public Land: 11
   - I did not hunt in this unit last year: 8

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 15
   - Not too crowded: 31
   - Neither crowded nor un-crowded: 19
   - Somewhat crowded: 16
   - Very crowded: 20
   - Not applicable: 5

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 34
   - Fewer: 89
   - Same: 163
   - More: 37
   - Many More: 10
   - Unsure: 6

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>

Public Input on CDAC Preliminary Recommendations - Spring 2020

Comments for Pierce, Central Farmland

Note: the comments presented in this report are the unfiltered opinions of individuals who responded to an online public input form. The viewpoints expressed do not represent the views of the state of Wisconsin, the Department of Natural Resources, or its employees.

7194 I would like to say it would be ridiculous to make an antlersless only hunt in ANY county in Wisconsin! People hunt to kill bucks, you take that away and you won’t have the kill numbers because the people won’t be buying the tags. I hunt Pierce county and every part of Pierce county is different with deer numbers. Along the rivers and hills are very high numbers, the small patches of woods and the flat lands, there are not enough deer. I get that we need to do something about the antlerless numbers in some areas, but a 19 day gun hunt or antlerless only is NOT the answer. If anything make it earn a buck again, but only in certain parts of this county/ Wisconsin. I also believe that holding a gun season a week earlier is a really bad idea as it’s messing with the breeding season! Look at Minnesota’s deer population. It’s terrible. They start the first weekend in November! No one is pushing down Minnesota’s door to go deer hunting. Wisconsin should take more lessons from Iowa. They have the right idea and have the numbers/ management practices to show for it. If anything, start the gun season later to put less stress on the heard. I had 6 tags last year and I could have used all of them. Why does anyone need 6 tags!? If even half the people shot 6 deer a year there wouldn’t be any left at 6 tags per person. Stop baiting everywhere in Wisconsin. That way it’s far for everyone across the board. Also Wisconsin needs to be charging at least $400 per buck tag for out of state hunters. $180 some dollars is not enough especially when the people in Wisconsin are always fighting for places to hunt. You will still get the hard core out of staters to buy tags to make up for the rest of the tags you’d be losing. Less competition. Stop messing with our deer seasons. Bow hunting should start the first weekend in September, bucks only to the third weekend September for bucks and does, that way we save all the fawns dying at an early age by not killing their mothers. Then stretch the bow/crossbow season all the way to the first weekend in January, but guns season starts the first weekend in December until the third weekend. 16 day gun hunt during the bow/crossbow season. That’s a win win if you ask me. Or just keep it the same. NEVER MOVE THE GUN SEASON UP in November, It will effect all of the breeding. Not a good idea! If all else fails keep it the way it is and stop trying to change everything for the very few who want it changed.

7195 I would just like to note why I no longer buy a gun permit in this area. SAFETY and sportsmanship is my biggest concern. I hunt mostly private land but it butts up to public land and as soon the sun rises I see approximately 6+ hunters all within 200 yards of each other on the public land. All other public lands I have checked during gun season are filled with hunters too. Once the morning hunt is over the flood gates open and large groups of hunters start driving the public land all day everyday and shoot anything that moves until the end of the season. I once watched an individual who was performing a drive take 5 shots at a deer that was in between him and I on the public land. He never even walked up the the area where the deer was standing to see if he hit it. The hunter turned around and kept performing the drive. One year I came across 2 dead does and a dead 6 pointer on the public land. Also, trespassing is a huge issue. I’d rather stay away from the unsafe acts and unsportsmanlike conduct some hunters perform in this county. I feel like the game warden needs some help establishing a presence on public lands during gun season.
I would like to propose that the # of hunters be monitored per square mile. In 2018 gun season, I heard over 36 shots fired from one property near where I live. The deer herd was wiped out in one evening by a local hunter and his family and friends. This is morally and ethically wrong.

I have taken 1-3 deer a season as only my primary means to eating red meat (personal choice). In all my many years of deer hunting I've been never more disgusted by that kind of blatant disregard for life in over 30 years of deer hunting. My background in hunting started in Marine Corp. I have an acute sense of hearing and identifying types of guns fired and the direction in which they came from. Simply put I would like to see the local DNR do a better job of monitoring the hunting area, specifically during the gun season. In fact, I have sneaky suspicion that some folks/adults are taking deer out of the designated gun season based upon the type of guns I can hear being fired, along with the follow up and frequency of shots there after, some of which are past the light hours of the early evening.

I live and hunt in a metro sub unit. and I must say your data and recommendations on harvest numbers couldn’t be any further from accurate. by giving out metro tags to everyone who buys a license your are relying on trusting the hunters to tag deer only harvested in metro units. when in reality many people are just using them as extra doe tags throughout the county. with the mindset of how are they gonna know where I shot it. also the amount of tags you give out is a joke for our metro unit. I try to herd manage the best I can on the 700 acres that I hunt. and I can physically show you that due to your outstanding and ridiculous amounts of tags you've given out over the last 3 years has totally destroyed our deer population. I highly doubt you will actually read this anyways as I could go on for pages and pages of how I believe with these new laws and guidelines you are implementing is killing the tradition of WI, deer season. but in the end its not worth it. DNR does whatever DNR wants to do. its all about the money anyways. not tradition or herd health.

I believe that the significant increase in archery harvest this year corresponds to the increase in use of crossbows. In addition, I expect that trend will continue and while it may be effective means of managing the doe population, it may also result in higher than desired levels of buck harvest. Accordingly, the efficiency/efficacy/range of crossbows (as compared with vertical bows) will need to be addressed, probably in terms of season parameters. Presumably, the most effective means of managing this is to shift the crossbow buck season away from the pre-rut and early rut (say, from Oct. 20 until gun season) given that during that roughly one month period, bucks are more easily hunted. Again, with the heightened efficiency of the crossbow, allowing crossbow hunting (for bucks) during this period may result in undesirably high levels of buck harvest. Obviously the previously used crossbow use exceptions (e.g. disabled/elderly archers) would still apply. Thanks.

I think to look at pierce county as a whole for deer numbers is very difficult. Certain areas are loaded with deer and others are not and if I personally were to use all the tags given to me each year there would be very few deer left in the area I hunt. I think back when we had Pierce County broke up into units 60a and 60b made a lot more sense and maybe should be thought about doing again. I know in the the Hager city area there is not enough deer to make sense of getting all the doe tags we receive each year and maybe some of those tags should be put in the hands of the hunters that hunt the more populated areas. I also think the holiday hunt is at a very bad time of year. Every year around that time I notice bucks starting to shed their antlers and if the point of the hunt is to get the doe population down what is that doing when shed bucks have the chance to be shot.

Keep the gun season at 9 days like it has been forever. It has been a family tradition as long as I can remember. Extending it to 19 days is not going to raise the deer harvest. The reason the deer harvest is down is because people are buying up anything they can, like the 10,20,40,80 acres and sitting and not moving the deer. No one is able to make deer drives any long like we use to do 20 years ago. A lot of the land now days is all private and no one lets you on there. Also there are less people eating and living off the venison. These big acre farms that are leasing land to the big buck hunters are doing just that, waiting for the big bucks and shooting them for the antlers and probably donating or leaving the meat for the varmites because all they care about is the horns! If you want the does killed why don’t make earn a buck mandatory!
7201 Just a comment on how many doe tags to hand out. Typically we get 2 with each license (gun and bow) hunting private land we are limited to the deer that are on the land. Once gun hunting starts they get pushed, when they get pushed to 40-100 acres that doesn't get hunted the chance of those deer coming back is small. So you could give use 20 tags we might be able to fill 2 the first day of hunting and then the deer sighting go to almost 0. The land around is either not hunted or hunted by people that stay in the stand from sun up to sundown. I also do not live in this unit so I am not able to take advantage short morning or evening sits for late season etc. I guess what I am saying is if there is a way to change the hunting pressure then you might reduce the number of deer. Not sure handing out unlimited tags will get that done.
7202 We are seeing abundant overharvest in certain areas. I refer to these as hot spots. Areas that have seen years of over harvest due to high antlerless tag quotas, irresponsible management practices, and irresponsible handling of crop damage tags. For example I do my diligence to manage my 20 acre parcel to keep antlerless numbers in check and provide enough habitat for a sustainable deer population. Then I go talk to my neighbor whom is enrolled in a crop damage program, and my local herd is being destroyed. 80 acres of ag and 30 acres of timber and they harvested 18 deer last season (8 with damage tags). Those 8 damage tag deer were most likely carrying fawns or recently dropped them. If these type of numbers keep pace year to year, I will no longer waste my time hunting in my home state. Thank you.
7203 A few concerns I have: * Since the opening of Nugget Lake to hunting during the Firearm season, the quality of hunting where I hunt has decreased dramatically. Please consider closing this area to hunting. * I see that increasing Non-Resident licenses in being considerate. Hopefully this will happen. Since money is always an issue with the DNR, this would be a great way to increase revenue. * With how many Antlerless tags are being issued with archery and firearm licenses I don't see the need to have the option of buying additional permits. There are hunters I now of in the area where I hunt that are shooting up to 10 deer, decreasing the quality of hunting. No way does one person need to shoot that many deer, but with being able to buy additional permits, they can do this. Not right!
7204 I am not confident in the DNR in estimating deer population numbers because of changing hunting practices such as quality deer management practices. (which I support) and I know for certain (from talking to other hunters and my own experiences) there are a good number of deer not being registered. Not intentionally but by getting focused on processing the deer and forgetting or not registering their deer on time or at all. All in all in my opinion the area where I hunt has been stable for many years. So when I hear of season dates and season structure being changed it makes no sense. These surveys are good because most hunters know what's going on in their areas more than DNR officials in Madison know by looking at skewed numbers!!
7205 Every year more and more tags are being handed out, more county / state parks are being opened up for hunting, seasons being extended, crossbows for everyone. The DNR is running the quality of deer into the ground! Wi DNR should take a hard look at why Iowa is so successful, night and day difference. I get opening county parks once every 5 years or so to thin the heard but opening them up 100% for every year is a joke. My property near Nugget lake is almost not even worth hunting anymore because of how many deer get killed every year out of there. I went from having great bucks each year to maybe a 6 pointer. Absolutely disgusted in the Wi Dnr and how they are running this states prestigious whitetails into the ground!
7206 Thank you for requesting this information. I am a MN bow hunter who truly enjoys archery hunting in your great state. I choose to pay for out of state licenses and to support local businesses when I am hunting because WI typically has a deer season that is "very bowhunter friendly". I oppose the expansion of firearms seasons or moving it earlier in November. I endorse treating crossbows as different than verticle bows and providing them with a special season. I oppose making Archery tag holders buy a firearms license to hunt with a bow during the firearms season. I am interested in your state retaining its already very functional harvest goals and laws [i.e. 2017-2018].
the unit 2 or 3 years ago was hit with EHD and/or blue tounge. Populations VISIBLY declined since then based on my direct observations of road kill; deer sightings along the road in pre-dawn drive to hunt site; and trail cam evidence in my hunting area. The population has not recovered from these low numbers. Plus, I note some hunters in my area seem to be taking advantage of the multiple harvest tags plus bonus. You definitely have "sub-locations" where some hunters like to shoot everything they are allotted. Difficult to control on an area-wide basis, I get it, but the disease plus liberal hunter take in my specific locality has had a negative impact for me on population.

I’m newly retired and love deer hunting of all methods. I think the DNR has done an outstanding job of not only managing the deer heard but also being open to public opinions. I’m very concerned about the new proposals because I believe hunters have gotten to a point where they are starting to accept different hunting weapons and methods and many that I know are considering changing as they age. I believe what these proposals will only accomplish is creating a hunter against hunter environment and put us back 10 years. Wisconsin has some of the best deer hunting opportunities in the country and I truly believe that if it’s not broke then don’t fix it. Keep up the good work. Thanks

Try and find ways to open more land to public hunting in the metro sub-zones. Avoid shutting down bow season during the extended antlerless gun hunt (After the 9 day season). I hunted this time last year, and I think it landed in the late rut. I saw 2 antlerless deer, and close to a dozen bucks. Which sucks when you cant shoot them. If I had my bow with me, I could have shot several bucks with it. I assume this was done to keep folks from shooting bucks with a gun, and popping a bow tag on it. From a harvest / population control standpoint dead is dead. From a statistics standpoint this would be an issue. Anyway that’s an issue for someone smarter than me.

Having this online method to comment is preferred to attending a public meeting for me. It allows a person to think through answers and also to complete the effort at a convenient time. (If the weather is good and there's daylight - I tend to be outside working / can not take the time to attend meetings.) The video was well done and a good way to review survey data / results and to consider that in combination with my own opinions and experience. I have never before taken the time to voice my opinions on Wisconsin's deer management or hunting regulations in a public, constructive manner. Thank you for this opportunity!

Been hunting since I was twelve. This past year I qualified for 10 tags for my unit, which in my opinion is far too many (they were free based on location). I don’t agree with the extension of the gun deer season. With how some parties hunt the numbers in areas will dwindle far too quick leading to more problems and more frustrated hunters. A one buck, one doe tag system is fine in my opinion with option of purchasing an extra tag if needed. I as well as others enjoy the archery season much more than gun season and extending the gun season may possibly conflict with archery season leaving hunters dissatisfied.

I would like to see a gun deer season longer than nine days. I know tradition has our season running from the Saturday before Thanksgiving to the Sunday after. My ability to hunt is impacted by the holiday in the middle. Extending the season to a week before (or more) like MN would be a benefit. I live in MN and own several properties in WI (in otherwords, I PAY TAXES TOO..) and pay large fees for an out of state license. Nine days is not enough. Tourism may benefit as others may come to WI to hunt if the season were expanded beyone the traditional nine days.

I have seen a trending decrease in number of deer per sitting over the last few years. I would say the buck to doe ratio is very healthy so the fact that hunters only harvest about 50% of the quota tells me that the quota should be targeting something closer to the actual numbers. Regarding the Holiday hunt, i was only opposed to it because I usually haven’t gotten a buck yet during late season and my vacation schedule aligns with the holiday hunt period. I want to be able to harvest a buck or doe during that time of focused hunting opportunity.
Public Input on CDAC Preliminary Recommendations - Spring 2020

7214 Special seasons for youth, disabled hunters should be doe only. Cross bow season for those without a disability/age 60 should be a shorter season. October 1st-20th then close till 9 day gun deers season. Having a party tag for a bear like they did back in the day would be great. Limit this to 100 bear quota for the first year. Improve moral and reduce the high bear population while deer hunting. Antler Point Restrictions would boost better shots. Knowing your target, bucks would get bigger and more meat/trophy hunts. 4 points on one side.

7215 I believe that with self registration, many deer are not reported. I find many carcuses laying it the ditches. The late season holiday hunts take numerous bucks that have shed their horns. Today as I was preparing fields for planting I had a turkey carcus with the breast removed and a pheasant laying in my woods along the road. I reported 3 deer shot and left lay last year to the dnr. They never returned my call. I'm not impressed! Also all the land they over paid for and they provide no access disgusts me.

7216 As a land owner in a great area, I am opposed to to many special hunts. Would certainly like to see more quality buck in the future as I feel there is not as many as in past years. I leave food plots, corn and beans for the wildlife. If crops are harvested at a normal time, deer damage to farmers is not a major problem like a few farmers say and we are in a high deer population. I think the extra doe tags are working fine, we have a nice long season and special hunts are not a good idea.

7217 I live in rural Wisconsin (54011) and am consistently inconvenienced by the out of state sportsmen and women. They drive fast past my house, park wherever they want, leave trash and don’t respect private land. Yes, there is public land nearby, but that doesn’t make my home your playground. I encourage charging more for out of state licenses. At the least, it would help our township respond to the damage caused to roads, patrolling and litter cleanup. Thanks for the opportunity for feedback.

7218 Let the gun hunt begin sooner. It gets too cold for hunters that still do hunt. I guess having 39-40 deer every night I different areas of the farm tells me to many out there. Also they are in our house area and garden. Disease will set in. In breeding also. Big dairy farmers are seeing 100 or more deer at night at their feed lots. Some told people you can hunt on their land but shoot a doe before a buck. I would like to see this for bow and gun season. This may help.

7219 We need to look into the out of state practices that Iowa and Illinois has put forth to enhance the genetics of the herd for the buck population and the price of the tags. We have a very large number of record animals in our state and should preserve it and also at the same time make it better for the future hunter. We should also capitalize on an increased out of state price on tags like Iowa and Illinois in order to increase funding for research and parks and recreation.

7220 Personally I think that the entire state of Wisconsin should adopt regulations similar to the state of Missouri as in a legal buck has to have four points or more on one side in order to be a legal shootable buck. But then make it so if you are 18 or younger any number of antlers is acceptable to be a legal buck. That would be to keep the interest of kids into our sport and assure that any opportunity they have to harvest a buck can be taken. Thank you for your time.

7221 The Deer Herd health is the most important point to me as a hunter and to be able maintain the harvest. I believe that no matter the increase or decrease in harvest numbers, that we have to look at the big picture of how the deer herd is maintaining. The number of hunters vary from year to year and the method of hunting deer will change going into the future. We have to just monitor the deer herd numbers and adjust if needed to maintain the deer herd's health.

7222 I am going to be a new hunter this year using a crossbow, I will not use a gun and I am unable to pull back using a bow, my only option is to use a crossbow due to an injury. It is my understanding that they might eliminate the bow and crossbow during the newly extended gun season. It seems to me if you want to recruit new hunters that putting restrictions on bow and crossbow for 19 days to accommodate gun hunters is a a poor way to obtain hunter recruitment.
I think we need to look into the Managed Forest Law. Many of the landowners are using this only for tax-breaks and not allowing access to the land. If this is the case, they should not be allowed to be in the MFL program as the primary use of the land is recreational. I would also like to see incentives to try and allow more access to private land through new programs or incentives. The biggest challenge in this unit is access to land to hunt.

If maintaining the deer herd is important, allow crossbows within the same season framework as vertical bows. If you want to recruit, retain or reactivate hunters, crossbows are an easy way to do that. In person registration stations should be an option again, leave the back tag regulations the way they are now, especially bowhunters. Provide more info on CWD and if people can eat venison safely, will also help the number of hunters each year.

The number of Buck tags should increase.... or have more tags for either sex!!!!!! If you have a longer bow season, there should also be a longer gun/muzzleloader season!!!!!! Have an early Gun/Muzzleloader would be nice too!!!!!! The number of Tags given per year should increase too!!!!!! Thanks;

I would like to see some easeyer way to make it less confusing on privet and public lands. im in an area where im stepping from one to the other needing not only county tags but privet and public tags. I hunt pierce and pepin county with public land or vpa boardering my property.I want to relax hunting not stessed that i have the right tags every time i move. hope you can simplify this a little. thanks for listening.

The anterless option is unacceptetable. I enjoy the chance of harvesting a quality buck. My children, the future, like the opportunity to harvest an anterless deer while i like to focus on more substance. Predators are causing numbers to go down and limiting the quality of the hunt. If we want to maintain the art and success of hunting, we need to encourage not hinder hunting with crossbows and choices. Thank you.

I am begging someone to please listen to the people. The area I hunt in this unit is becoming terrible. 5-10 years ago, I would see deer every day, usually a decent buck along with that. I am now lucky to see a deer a day. I have moved to Minnesota and believe the area here has benefited significantly with the 4 point restriction on one side. I ask that you please look into this.

As Crossbow harvest continues to rise it will have a negative impact on the Gun season. Watch this closely. We already are seeing a decline in Gun license Sales and as more deer are harvested by crossbow it will only cause more frustration among the Gun hunting community. Work with the Legislature to return to the old Crossbow regulation allowing use by Disabled and Seniors only.

I am happy with the way things are now regarding what was done in 2019. I'd like to see this continue for the near future. Where I hunt incompasses both the farmland and metro zones. I don't really hunt any other place. I always see about an equal ratio of bucks to does, mostly young bucks, but some large bucks occasionally. Thank you for the oppurtunity to add my opinions.

Peirce county needs less back tags permitted. I haven't seen a mature buck in several years where I hunt. Limit doe tags with all types of hunting too 2. Nobody needs 3 tags for each type of hunting(gun/archery). We try to manage the population in our area so that the deer are healthy but the numbers keep gettin lower and lower. Anterless limits need to be implemented.

The deer season is a very important time for our entire family. Large changes in seasons and or timeframe with how many and what sex of deer seem to be over reach with the amount of deer we did see last year near Elmwood WI. An antlerless only season seems a bit extreme for the amount of bucks and does we see equally in Elmwood WI.

Thank you for hearing our concerns and weighing it with your own findings. As a dedicated hunter, I would place knowing the animal and flora health is well before my desires to hunt and take an animal. I know many might feel the opposite opinion. I trust your biologist to help us all find the best course of action. Thanks again!
I would like future deer seasons to follow the current formula. I am not in favor of an extended gun hunting season. I also do not want a rest period between archery and gun season. I think lesser weapons should be able to be used for all deer tags. I think the current season framework is simple and easy to follow. Thanks.

As a 60 year old hunter who has went to a crossbow out of necessity I strongly oppose closing the peak Rut season to crossbow users. I only harvest deer when every shot is certain. I have the time to put in and enjoy every minute. See no reason to limit that on private land when I and my family are the only people hunting.

I would be more than ok with having just one antlerless tag and one antler tag issued with each license. If someone wants to buy additional antlerless tags to harvest more than one antlerless deer I would be fine with that as well. I personally do not see a need for myself to harvest more than one antlerless deer per season.

I have supported all hunting and fishing activities my entire life and would like to see the elderly hunters receive a discounted deer hunting license just like the discount on fishing licenses. I believe that more retired people would then have an opportunity (afford) to purchase a license and enjoy the sport. Thank you.

I hear some discussion of returning to Earn-a-buck regulations. I think those regulations when needed make sense for resident hunters; however, imposing that requirement on non-resident hunters may adversely affect the number of non-residents willing the visit for hunting and bringing their tourism dollars.

Public land is getting over crowded with hunters due to landowners leasing land. Mostly in the southern part of the county. Also, i dont think is necessary to give out that many doe tags. A person could literally shoot as many does as they want. Only half the doe tags available are getting bought?

Concerning the Holiday Hunt, I oppose that for mainly the stress on the heard at that time of year with winter and same reason for the extended season till end of January. Hard on bucks and fawns. I also use to take the week of Christmas off and hunt but won't hunt if can only harvest does.

Based on the deer numbers I saw last year (fall 2019) vs the year before (fall 2018), it definitely seemed like the population was down. I wondered if that was related to the high snowfall we received in Feb/March last year. Hoping it is better this year after a milder and shorter winter.

While I enjoy deer hunting the combination of limited access to hunting areas & the risk (albeit small) of CWD resulted in my spending the least amount of time I have spent deer hunting in the past 60 years. This is not meant as a complaint, it is only an observation on my experience.

The issue that we have is the farmers do not let anyone hunt the land. We even see the land owners that are in different programs not letting people hunt, and it’s killing the sport. Or the land owners are big on deer management so if you don't see a trophy you don't shoot.

I have seen deer numbers consistently go down. Everyone is hunting now so access to land is almost impossible. The deer numbers are normal on posted or leased land but are few on accessible land. I know people that quit hunting due to not seeing any on regular basis.

Regarding antlerless only deer season I object. Although most bucks I saw were 1-3 years old I did see or photograph more bucks than doe's. This has been the trend where I hunt for the last 2 seasons. For that reason I have not harvested any doe's from my property.

I started hunting with crossbow the past few years. However, due to my job I can only hunt periodically, mainly weekends. Eliminating the crossbow option after November 1 would greatly reduce my chances to hunt and may result in me not purchasing a license.

Raise non resident license fees. Instead of having a youth season or holiday hunt have a 3 day early muzzleloader season at the end of September or early October. Outlaw baiting during hunting season and allow supplemental feeding outside of hunting season.
I really like the present structure. Keep archery and crossbow at the same time. Keep gun and muzzleloader the same. Keep the Dec doe only and Holiday doe only as well. They provide a great opportunity for herd control in areas of high deer population.

I think that we need to look into options/improvements to access of private land. Much of the county is under private ownership and access is tough to come by. I think that MFL lands need to be reviewed and allow hunters access to this land as well.

In my opinion, organized drives to gun hunt deer are dangerous and should not be legal. Recently moved from Louisiana, where my dad retired as a game warden. Organized drives have been illegal there all my life. Seems strange and reckless to me.

From what I see the deer numbers in Pierce county on the higher end of the spectrum, but do not pose an immediate threat to themselves, forest and farmland. To prevent any more growth all available tags should be distributed to license holders.

My main concern is that we don't over react to the number of buck's killed in the 9 day gun deer season and try and extend or move up the 9 day gun hunt to coincide with the rut. We have it good in Wisconsin.....lets stay the course.

You will not control deer population when no one hardly hunt's anymore, they just sit in there shacks. Watch deer daily and nightly before gun hunt, then they head to posted land don’t see none. Right after gun season they are back.

Please do not extend the deer firearms season by taking away my bow hunting. Allowing firearms season to begin any earlier than the Saturday before Thanksgiving is a huge mistake for the State of Wisconsin.

Overall, the number of deer in this area has been consistent with what it has been in the last few years. I think the population is maintaining similar numbers and should not be changed at all.

Go back to the way it was! One doe tag per license, 20.00 per bonus tag, or buck only with antler restrictions! There are NOT AS MANY DEER IN PIERCE AS YOU THINK!! Bring back tags!

Totally against extending the nine day deer season. If that happens, I will close my land to deer hunting. Probably no big thing, since I only own 135 acres in Pierce Co.

Keep on asking for input from your public. They need to be involved since the DNR can’t be everywhere. One idea, raise nonresident license fees by 25%. Generate revenue.

There is not enough land that is open for hunting. Much land is privately owned and other land in land use permits is landlocked. Need more land for hunters to use.

We need to take a page out of Iowa’s book on out of state hunting. WAY too many out of state hunters, and why wouldn’t they come kill our deer, it’s cheap enough.

leave it alone there is no reason to mess with it. If people want to hunt they will. We need to stop bending over for certain people. Can't make everyone happy.

Am concerned about potential of deer being carriers of disease causing ticks if population gets too high. Support doe harvest to keep numbers in check.

There are too many tags given out per hunter. Bow Hunting seasons are too long-do not extend into January. Leave the gun deer season the way it is.

Provide additional testing sites for CWD during the hunting season to ensure the county remains free of the disease and combat any detection early.

I strongly oppose an antlerless only deer season. I also strongly oppose an extended gun deer season. I think the 9 day gun season is sufficient.
A couple years ago we saw hardly any deer. This past year we saw numerous deer. The deer herd is cyclical so just leave it alone.

Enforcement of road hunting needs to happen in the Salem Township. Especially the coulees east of the Rush and South of HWY 10.

Didn't see an option, but I know there was an idea to extend the rifle season by several days. I am OPPOSED to this option.

I will be new to crossbow hunting this year. Looking forward to a better chance of harvesting a deer. We use it for food.

Being a non resident hunter who will be hunting there many years to come, the non resident license price is about right on.

Could the laws be changed to allow antlerless permits to be used in their respective unit AND in an adjacent unit?

Extend the muzzleloader season and to create more DNR revenue purchase a separate license for muzzleloader

Suggest enabling use of an unused gun buck tag, after the gun buck season, for the continuing bow season.

Please consider no buck permits. We have too many does and fawns - there are very few bucks

I would like to see the buck population increase. Earn-a-buck would be a good way of doing this.

Need to bring back earn a buck. It’s the only way you are going to control the doe population.

If there is a doe only season, and I can not shot a buck for the whole year, i will not hunt.

If there is an antler-less hunting season only for 2020, I will not purchase a license.

Pierce county is one of the best managed counties in the state. Keep up the great work.

Continue to let the crossbow season go along with the bow season during November.

Less tags need to be giving. To many party hunting and killing young deer/fawns

need to reduce non resident hunters by increasing non resident license fees

Bring back paper registration? Locals need the business now more than ever.

Extra tags and extended season lead to increased chances of trespassing.

Increase cost of out of state licenses to mirror the state coming from

Feel free to ask questions. Thank you, Samuel Anderson

There are too many wolves and coyotes killing the fawns.

Keep all seasons the same as last year.

not much access to private lands

I strongly support earn a buck

Too many deer out there!

Like to see more deer

CDAC did a fine job

Public Input on CDAC Preliminary
Recommendations - Spring 2020

Polk, Central Farmland

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

618 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 342
   - I visit this unit for non-hunting purposes: 121
   - I hunt in this unit: 560
   - General interest in this unit: 121

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 522
   - Bow: 304
   - Crossbow: 195
   - Muzzleloader: 175

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 24.33
   - Maximum: 67

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 297
   - Mostly Private Land: 124
   - Public and Private Land About Equally: 63
   - Mostly Public Land: 22
   - Exclusively Public Land: 48
   - I did not hunt in this unit last year: 6

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 30
   - Not too crowded: 88
   - Neither crowded nor un-crowded: 49
   - Somewhat crowded: 51
   - Very crowded: 32
   - Not applicable: 7

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 122
   - Fewer: 169
   - Same: 222
   - More: 67
   - Many More: 18
   - Unsure: 20

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th></th>
<th>Much Too Low</th>
<th>Too Low</th>
<th>About Right</th>
<th>Too High</th>

<td></td>
</tr>
</tbody>
</table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone:

- Implement an ANTLERLESS HOLIDAY HUNT: Support 210, Oppose 344, Unsure 64

If a Holiday Hunt is held in a Farmland unit:

- EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: Support 284, Oppose 278, Unsure 55

If the Population Objective is not "Increase":

- Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: Support 65, Oppose 517, Unsure 36

If a Zero Quota (buck only season) is adopted:

- ...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? VALID NOT VALID Unsure Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit? Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

<table>

Dear CDAC Members

I would first like to give a bit of feedback from my own experience over the past 20 years of deer hunting. I have great love and respect for the species. I am a NR major from uw stevens Point as well. I hunt 4 different private properties between roughly Deer lake area and Cushing both bow and gun. I use roughly 20 cameras across these properties starting about 10 years ago. I am not sure on data and calculations methods you use, but would beg to object to the numbers calculations. I know each section of the county is different and can have different growth or decline patterns not in relation to near by areas. So just case study for gun season my number of hours has increased immensly since i have some nice heated stands and the number of deer i have counted each year has dropped considerably since the middle 2000s. Driving up river road there has been such a drop in number of deer I have seen at night. Also the number of deer on those properties bordering the public has plummited. There should be less pressure put on the public lands. I am happy for people killing deer just not to the point where it has whipped out a larger number of the herd. It has also dramatically dropped since the change from application for doe tags to free over the counter. I think the new system is better but it just needs to be managed better. Secondly on camera the number of bears we have had on camera has increased considerably and fawns has dropped significantly. Buck population has stayed mostly stable to a slight increase with a slow uptick in size. I am as big of a qdm proponent as there can be and haven't shot a buck in years. Even tho I know size has been slowly increasing. I have no one to blame but myself because i missed our big one last bow season. Needless to say there has to be more push for saving bucks until they are mature and maintaining a healthy doe population for recruitment. I think one thing that hurts fawn survival is the 2 free doe tags given out with the license. I think one tag is ideal. The number of hunter who aren't as experienced or good stewards of the land will shoot the mother and since they have the other tag shoot the fawn with her. It is the i need to fill my tag mentality, If they have it they will use it. I shoot several does each year off of a mix of the different properties i hunt to maintain a good population on each. I always try to take larger single does and usually can accomplish this. I hope people would just not shoot does with fawns and fawns but that is a little too much to ask for... But I think 1 doe tag free would help in this effort. I do not support the holiday hunt or extended bow season. I think to many bucks have lost antlers by then. I would be ok with a no buck gun season, but not bow season. Alot of the biggest bucks are killed during bow season and these people are hunting for the quality of the species. Where gun you get alot of people that will just kill anything to fill a tag. I don't think there is a way this will ever happen but I am a proponent of it for gun only. Also I had heard that there were ideas to change the gun season dates. This would be a tradgidy, keep tradition, we don't need a longer gun or earlier start. Also certain areas of the state have given out an exorbitant amount of crop kill tags. I have had friends herds get decimated in a year. There needs to be better regulation on this. Deer will travel miles to a field that is unharvested over winter. That farmer will be killing deer from many people who would like to harvest them durring season, not to mention bucks durring this. They should not be given an out because they were unable to get there crop off. Most normal years there is no excuse to not get your crop harvested. If they don't they should know the consequence is to have deer mitagate their yeild. In summation, there has been progress I guess towards your goals over the past decades of lowering deer population. I think your data in total kills shows to this trend. I think this is your goal for forest regeneration and less vehicle accidents. I was a forestry major and understand the need for regeneration, but to have these things steer your managment goals is a skew. I think it should be looked at for enjoyment of just the casual hunter who doesn't put the time in and just wants to see a couple deer. There has been gain in overall buck size and numbers which is good trend, but I think it can go farther. In all my favorite sport I tell every one is deer watching... My joy to watch them interact and just be them out in the wild is priceless. Thank you for your commitment and please do the best you can to ensure this is something that many of can do long into the future!
I would like to preface my comments by saying this is the first CDAC I've been able to attend and I thought it was very professional and well done. The multiple antlerless tag system is limiting and ruining hunting in Wisconsin. The more tags there are, the less of a need there is for more hunters. What is the biggest factor contributing to the loss of hunters... loss of hunting land. There are some group hunters that kill everything they see and then they're punished in the years to come with less deer. In a sense, some of the best hunting lands are the ones that people don't shoot many or any does. So the people that either do not trust the DNR or understand that they need to manage the wildlife on their lands are rewarded. I do not believe that it should be incumbent on the land owner to manage their lands for wildlife if we have a state run wildlife agency and wildlife is to be preserved for the commons. Another important point is that Polk county is much too large and diverse of an area to be managed in the exact same (two free doe tags) way throughout. There is a growing wolf population in the northern portion of the county***. As you can see this can create a lot of distrust in the DNR's management practices. I personally know people that have vowed never to shoot does after the past 4-8 years of low deer harvest(statewide, though we had -13 percent from 2018 to 2019, this is the first year since.... 1981 or 1982 that WI has harvested less than 200,000 deer during the rifle season... LOL). In short I feel like if you have to have two free antler-less tags, you need to produce some sort of "PR" video explaining how important your decision is(ie how the quota is even calculated...). Because frankly if the deer numbers are so high, people get all these tags, and there is only 10 percent success rate... People obviously do not trust the DNR and are not shooting does. Perhaps everyone in the deer advisory council should say if everyone of their hunting group shoot all the deer they had tags for. If they did not, they should explain why. If they saw deer and didn't shoot them, isn't that completely against the management objective of the very quota they're putting out? My only other recommendation would be that the in person game registration needs to come back. I say this because CWD is a serious thing and Wisconsin needs to be proactive and responsible in requiring mandatory testing throughout the state(even if tag prices need to increase, which they should anyways to support more wildlife biologist). This would also clear up what Jesse was talking about that he suspects a lot of people aren't registering deer(I was against online registration from the beginning for both the loss of accuracy in our deer harvest numbers and for the loss of tradition). I could go on and on with my grievances. In short, we keep recommending the same things; more and more tags, taking the tradition out of the hunt, allowing the destruction of the BOW season, and drastically changing the rules so frequently. Are we ever going to stop and ask if maybe what we're doing is at all correlated with the loss of hunters. I realize I say the DNR a lot in this and most of the decisions are made by the CDAC but ultimately the DNR is allowing your recommendations. Remember, the DNR needs hunters far more than hunters need the DNR! #BanCrossbows
I support 2 antlerless tags per license, the deer donation program, the Holiday hunt, revising the use of crossbows, and the addition of an antlerless handgun season. Antlerless tags: Please reference the Public Input on CDAC Preliminary Recommendations - Spring 2019 comment 2338. This is spot on for my situation. I am a cooperator for Snapshot Wisconsin and participate in DMAP. We get thousands of deer photos every year. We see scores of deer during gun season. Most are does. Some smaller bucks. We have LOTS of buckthorn and honeysuckle. The understory beneath these is barren. We have an active eradication program for buckthorn and honeysuckle in hopes to get more native plants established in the area. According to our DNR forester, native plant establishment will be difficult due to over-browsing from too many deer. Cutting the herd can only be done by reducing the number of does. I believe hunters are hesitant to shoot 2 does because they have no need for that much venison. The key here is to PROMOTE the deer donation program. I wonder how many hunters are not familiar with how the program works or where the processors are located. Hunters can harvest does and support the food shelves at the same time. The Holiday hunt: For me, this hunt is not so much about reducing the herd as it is to provide opportunity for our younger hunters. Statistics show that hunter numbers are declining. To encourage new hunters the Christmas holiday allows my grandkids an opportunity to get into the outdoors with Dad and Grandpa to experience the joy of wildlife viewing and to discover some skills and necessities involved in deer hunting and management. My grandkids live out-of-state and Christmas is the only time we all come together in Wisconsin as a family. Again, multiple antlerless harvest authorizations and the deer donation program helps to support this hunt for those that don’t need the venison for themselves. Crossbows and Handguns: The biometrics clearly point out that buck kills are elevating with the advent of crossbow hunting. Deer herd reduction programs must include harvesting of more does. I favor a season for crossbows where shooters would need to qualify to take a buck by first harvesting an antlerless deer. I would also favor a handgun antlerless only harvest season commensurate with the crossbow archery seasons. In my area, the need to reduce deer numbers is necessary to improve forest/wildlife management. Landowners who choose to manage their properties are handicapped when they cannot manage key components like deer browsing caused by excessive deer numbers. I believe that with the reduction of does, we will also start seeing larger bucks. Fewer does translates to more movement of bucks to locate the does. Traveling bucks are more likely to be seen by hunters. This enhancement will also help attract another set of new hunters on which our hunting heritage depends.
My family has hunted the "Polk County Barrens" in Sterling Township for decades. We now have third generation hunters in our cabin with a fourth generation on the way. During that time, we've seen the deer population and land cover change significantly. In general though, we've had a great experience, with considerable success. For a majority of that period, it was managed for what it is—a Woodland area (Unit 70). The recent switch to managing it as a Farmland Area is particularly disturbing. The Barrens area is simply not farmland and should not be managed as such. The practice of giving two anterless tags to every hunter as if the land is farmland is excessive in this area. Our hunting experience during the past two seasons has been poor. Our 10 person group did not harvest any deer during the 2019 season and only one small buck the previous year (2018). We have kept a camp log for all 47 years we've hunted in the Barrens and have averaged harvesting 6 deer per year. We also track the number of deer seen by our group. The numbers are way down. Some of our party did not even see a deer in 2019. These guys are not at camp to drink and play cards. They are patient, serious hunters.

I have listened to the video and attended CDAC meetings. I believe your population estimate for this area is much too high. My sense is that WDNR biologists are too reliant on past harvest data and don't walk in the woods. I have spent my life and career in the outdoors and see no evidence of over browsing on white pine or red oak. This observation is based on walking miles through prime cover while grouse and deer hunting. Also, the woods in the Barrens area has been heavily harvested over the past decade so there is at least 10 times the browse available compared to the 1980's and 1990's. One last request is more sentimental. You should bring back deer registration stations. You destroyed a charished tradition by going to online registration. The gathering of hunters at the store, gas station or pub where deer were registered was of great benefit to small businesses statewide. In my opinion, these benefits overshadow the ease of administration brought on by online registration. I also think it leads to an undercount of deer harvest because it is now too easy to simply not register a deer.

As I have hunted all over Polk county in one way or another. I am very concerned with the deer population variance through out the county. I hunt in the Clam Falls area and have seen a drastic decline in deer numbers over the last 20 years. In the area I hunt we have had no changes in land usage as it is farm fields and old growth forest. That being said the only thing that changes the population must be depredation and hunting. As the state is about protecting the predators and not the viable animals which bring in revenue, the only way we can get back to a decent population as we had in the past will be to STOP SHOOTING DOES. I believe we need to look closer into smaller areas for population density. Out in the Cushing area there are an abundance of deer as the land owners understand the DNR can not be relied on to do the right thing with the doe tags. I hunt prime farm land close to public land. 20 years ago I would see 40 - 100 deer per day (as my records show). Now I only see an average of 7-20 deer a year (2016-2019) during gun season. This is a very alarming number for a deer hunter with young hunters coming up. Children starting to hunt will not stay interested if there is no reasonable chance for success. If these children are not hooked on hunting there will be NO FUTURE for this sport. As the DNR does not seem to understand where there money comes from this is very concerning issue. As I explain my feeling of this issue to people, I use this analogy. If you consider the deer herd as we are farmers. Farmers do not butcher there heifers. They butcher there young bulls. The heifers are the future of there heard. Without females to make the new stock there will be none in the future to continue the cycle. If we look at the deer heard in our state as anything else we are doing it wrong. In conclusion. We have to stop shooting does and stop right now. If we do not there will be no hunters in the future to spend money buying tags to support the DNR's money needs. If these fees are not there the DNR will rely on more taxes to pay the bills.
I have concerns about the size of the deer herd in our area of NW Wisconsin (I believe it may be at an all time high), and the impact the current size of the herd is having on the landscape. It is clear to me that there are fewer deer hunters gun hunting in our area than in past years, and that over time, for at least the last 15 to 20 years, the number of deer hunters hunting during the gun deer season in our area has been declining. My family has a cabin on 320th north of Evergreen Ave and south of the old DNR fire lookout tower. I am concerned with the forestry management practices in our area, and with the size of the deer herd in our area. I would support the use of controlled burns to manage this "brush prairie" biome. I believe the size of the herd is too large, and that the deer are overbrowsing the landscape. I understand that it may not be safe or practical to apply controlled burning as a management technique in our area. But, I still think it should be considered and perhaps experimental and limited controlled burns may be feasible. I understand that there are most likely cost issues with applying controlled burning as a management technique. However, this biome, in my opinion, is becoming increasingly unhealthy, biologically speaking, because fire is no longer part of the natural ecology.

The format for the April CDAC meeting using the call in number worked well. It was convenient and fairly easy to follow along. I believe that it would be a great idea to further promote this style of participation in the future. Perhaps a method could be worked out to use both in person and call in participation. It should easily be possible using today's technology. I feel that the season recommendations for anterless quotas for private and public lands are way to high. I also feel that the season recommendations for bonus anterless quotas for private and public lands are way to high. As I listened to the discussions during the April meeting it seemed like there were more opinions expressed and decisions made based on these opinions. Only one CDAC board member mentioned that the decisions should be made based on the metrics that were presented, thank you Ken! The metrics show that the harvest numbers are down for the 3rd year in a row. Car kills are also down. Both of these metrics should indicate that the herd is declining. The CDAC board should not be making decisions based on opinions or second guessing the data, believe in the data and use the data to make your decisions. More tags and seasons are not the answer. Hunters are only going to harvest as the metrics show only so many deer. Except for a few, hunters will never fill every tag that they are issued based on your recommendations. More deer would help to lure the hunters back into the field. One metric that is missing, the number of hunters that are primarily hunting Polk county. We know the number of licenses sold state wide, which as the metrics show is in serious decline. It should be pretty easy to ask what is the primary unit hunted when purchasing a license and add a county specific metric for number of hunter. Please reconsider and reduce the overall quota, the number of free anterless tags issued with each license and the number of available bonus anterless tags that are available for purchase.
I own land in McKinley. I have owned the land for 9 years but have hunted the area for about 13 years. The Doe population needs to be protected up there! My wife and I sat all day (sun up to sun down) opening weekend of rifle hunting and did not see one single whitetail deer. I have never ever had a season like that. I typically do not shoot does because our numbers have been down in the area for a few years. I bow hunt all fall and usually see anywhere from 10-15 different bucks. Between my cousin and I, we have 80 acres. We have about 1 doe and fawn on each forty and that is it, each year. Every night of bow season the same doe and fawn walk by me headed out to the corn. And this year my neighbors shot both of them. I completely understand that the deer population varies based on the location (vegetation, comfort for bedding, water source, etc.) Our land has everything they need, but the does are just hard to come by. If we don't do something about it, the doe and buck numbers will BOTH suffer. I understand that the southern part of the county has a ton of deer and its normal to see 20+ out feeding in a field. Has it ever been considered to split Polk county into 2 zones at Hwy 8? Polk North and Polk South. With the wolves and cars, and everybody getting multiple FREE doe tags in our area, we are slaughtering the deer population north of hwy 8. I personally believe that it doesn't make sense to give free doe tags. Support the DNR with the money made by charging at least 5 bucks per doe tag; and double it for non-residents. The holiday hunt absolutely should not happen North of Hwy 8 in Polk county. We need our does. This winter wasn't too bad but last winter took a huge toll. Thank you for taking the time to read my opinion. I am far from the grumpy, negative guy who just wants it to be his way. I am a thirty year old who grew up in the area, purchased land, and hopes to have a healthy and well balanced deer population for many years to come.

I have hunted deer in northern Polk county near Clam Falls on my home farm since I was 12 years old. I am now 72 and haven't missed a season. In those years I have seen the highs and lows of deer hunting. I used to see many deer during the season, upwards of 75-80 deer during the 9 days. Now, over the last 5 seasons I have seen a total of 7 deer. Last season, I saw 3 and the season before I saw 0. It is hard to convince me that there are so many deer out there that you have to give away 2 antlerless tags with each license. I have not shot a doe in 25 years and will not shoot one on this or any other land where I hunt. I enjoy being in the woods hunting deer, but I don't need to shoot one, but I sure need to see some to keep my interest up. I never thought that I would say that I am getting bored with deer hunting, but when you are in the woods all day every day of the season and don't see anything on land you have hunted all your life and know it is good habitat maybe it is time to quit paying the DNR for the right to do that. That will probably happen if the next season is the same as the last 5 have been and I don't expect it to get any better with all of the antlerless tags. This is the biggest cause of the hunter decline. I have a grandson who is on his second year of deer hunting. How am I supposed to keep him interested when he doesn't see anything. I would like to see the north and west part of Polk county managed differently than the rest of the county because it is totally different habitat. Not nearly as open and not as much farm land. So please consider the hunter sitting in the woods not seeing anything year after year when you make your recommendations. Remember we are paying the bills.
I have been very happy spending my years hunting in the great state of Wisconsin. So much so, I plan on buying land and retiring in Wisconsin. I have heard there was a proposed change to the archery/crossbow season as well as the rifle season. Among the changes was creating a separate crossbow season, not allowing archery hunting during rifle and extending the rifle season. If these changes were set in place, it would seriously impact my decision to continue to hunt Wisconsin, as well as purchase land. The proposal truly seems to pander to a small group with no concern for the whole. A separate crossbow season is ludicrous. If that is a must, where does it end? A traditional archery season. A pistol season. A straight walled cartridge season. Why not a separate season for all variations? A crossbow is part of archery and should be kept that way. The changes to the rifle season (extending the dates and eliminating archery during). The majority of rifle hunters only hunt the first weekend and most animals harvested are during the first week. Extending it another 9 days would do little to the harvest. When adding the issue of archery hunting during rifle season, it becomes apparent this is pandering to a small group. The hunters who want to spend more time in the woods, took up archery. They did not complain and propose limiting another hunters time in the woods. The seasons have worked well for more time than I have been alive and should not be changed because some people are looking to fill tags easier.

I have been hunting in Polk County for the last 40 years on land that we own. The last 2 years and especially last year I experienced the worst hunting in 40 years. This past season I didn’t see a deer on the opening weekend. In years past I normally would see 10 to 20 deer per day. I hunt hard I spent most of the day in different locations of our property. I hunt the entire season with the exception of Thanksgiving Day. Our land is in northern Polk County. The Central Farmland classification is not appropriate for that portion north of HIGHWAY 8. This area is changing with many farms going out of business. I am going to be 69 years old soon and the late deer hunting season is quite often very cold and does limit time spent in the woods. I would propose an early firearm season perhaps a muzzle loader season. I am also a bow hunter and I would give up part of the long archery season to have a muzzle loader season when it is warmer say late October early November. We are attempting to bring up the next generation of hunters namely grandchildren. These young people are the future of hunting which is very important to Wisconsin’s economy. When they don’t see or get an opportunity in an entire season they become very disenchanted with deer hunting and this breaks my heart as I truly love the sport and I am concerned that deer hunting as a family tradition will be lost. Please listen to the hunters and not the lobbyists.

IF MOST OF YOUR INFORMATION IS COMING OFF OF DEER HARVEST REPORTS YOU NEED TO GET BACK TO DOING THE METAL TAGGING REGISTRATION. THERE ARE PROBLY 40% OF DEER BEING HARVESTED WITH OUT BEING REGISTERED. WITH THE METAL TAGGING WHEN THEY BRING THE DEER TO BE PROCESED THE PROCESER WONT PROCESS THE DEER WITH OUT THE TAG THERE FOR THEY WILL HAVE TO REGISTER THE DEER OR CUT IT UP THEM SELFS AND TO MANY PEOPLE ARE TO LAZY TO DO THAT NOW DAYS. WHEN I WAS YOUNGER IT HALF THE FUN TO GO TO THE BARS/REGISTRATION AREAS TO SEE WHAT OTHER HUNTERS GOT AND HEAR THERE STORIES. THAT WAS EXCITING FOR ME AND MADE ME WANT TO HUNT HARDER. THIS ONLINE/PHONE REGISTRATION HAS TAKEN THE FUN OUT OF THAT. THE WAY I GOT HOOKED ON DEER HUNTING WAS BACK IN THE LATE 90'S WHEN I TURNED 12 AND WAS ABLE TO SEE MULTIPAL DEER EVERY DAY I WAS OUT HUNTING BACK WHEN THE HERD WAS STRONG, IT WAS FUN. NOW THE YOUTH DOESN'T GET TO DO THAT WITH THE LOWER DEER NUMBERS. I HAVE MANY FREINDS WITH YOUNGER KIDS THAT HAVE NO INTRRESS IN GOING OUT HUNTING BECAUSE THEY ONLY SEE A DEER OR 2 FOR A HOLE WEEKEND OF HUNTING. THEY DONT GET TO HAVE THE FUN AND THE EXCITMENT THAT I GOT TO ENJOY IN THE GOOD YEARS. CROSS BOWS SHOULD GO BACK TO THE WAY IT USE TO BE ELDERLY / DR. NOTE. THESE CROSS BOWS ARE WOUNDING MORE DEER AND MAKING IT EASIER TO POACH DEER. IF YOU WANT TO HAVE A CROB BOW SEASON IT SHOULD BE FROM OCT. 1ST THOUGH OCT. 17TH OR AFTER MUZZLELOADER SEASON.
I feel that there is a considerable contrast between the northern 2/3 of Polk county and the lower 1/3. The overall population of deer (generally estimated) south of hwy 8 is not equal to the density of the deer in the northern 2/3 of the county. There are far fewer deer in that section of the county, and overall, the hunting experience is much poorer than in the north. I think it is enough of a disparity that there should be something done to account for this. * To be consistent, the state of Wisconsin should outlaw baiting in every county of the state. There really is no solid reason to continue to allow baiting for deer in the state. Just make the change. * Return tagging requirements in Wisconsin. There are too many deer that are not being registered, and the numbers are not telling the full story. Too easy for people to 1. Not have to tag their deer, and 2. Not phoning in their deer/registrations. I am ok with no back tags, but the removal of tagging and loose registration rules are not capturing the real numbers on the landscape. * I would be in favor of going to earn-a-buck framework in the future. It is the only tool available to help manage doe populations that has shown to be effective in Wisconsin. Plus, I believe it encourages a better buck age structure, which would be a side-benefit to hunters that I don’t think they are really aware of.

My family has land that we own and hunt on. We try to manage it a little bit to hopefully see a few more mature deer. Some neighbors will shoot anything they see regardless of size and age including fawns. Any extension of the doe season in this area of Polk County (North of Cushing) will result in too many does being killed. I have seen this for the last several years. We also have several large farms in the area and they complain about deer problems but will not let anyone hunt their land beside their family. If they do not like the amount of deer in the area they should start by opening up their land to more people. I have also noticed in the last few years more people road hunting and shooting in the evening during bow season. Most people who are sighting their rifles do not shoot once right at dusk during the rut. It would be nice to see a game warden around once in a while. It’s frustrating for those of us that follow the rules and then have to deal with people that trespass, road hunt, and poach with no respect for property owners. What we need in this area is the DNR to step up and enforce the existing rules and also to send a message that it’s important to be a responsible sportsman. Changing the season dates and how many deer a person can shoot in a year is not going to fix the problems that we have in this area.

During the call in meeting and in the presentation it was said that deer harvest numbers were down in 2019 due to multiple factors including corn still standing, cold weather during the hunting season and the 2019 season being that latest it can be compared to the 2018 season being the earliest it can be. It seems we hear different excuses every year for why the deer harvest is lower than the previous year. It never seems the reason is because of a reduced deer population. As a hunter and land owner I have seen both rapid drops in the deer population year over year in some years and slow drops in the population year over year in some years. I have yet to see an increase in deer population year over year since owning my land for 15 years while making improvements to attract deer to my property. I live in an area where many people own small pieces of property and most people hunt. Many people allow friends and family to hunt their small properties as well. These small tracts of land cannot sustain reasonable deer populations with that number of hunters receiving multiple antlerless permits each season. The people around me who own larger pieces of property also have large hunting parties and have the ability to keep the deer population in check without any form of extra tags or hunting season.
Deer numbers were about average on my 330 acres going into the season. After poachers killed at least 7 confirmed within a full section (wardens eventually caught and cited, with help from area landowners) plus the regular harvested seasonal deer the numbers went way down. The rifle season allows for much poaching and over harvest. Archery hunting limits the amount of deer taken but extends the season for sportsmen. I am for an extension of an archery season. Not for a gun extension or holiday hunt. I spent the second half of the rifle season chasing poachers and trespassers. The wardens are overwhelmed as are the Sheriffs during that time. Too many irresponsible people can wreck the wildlife projects I have built a lifetime to create. It’s just sickening looking at the cost I have paid only to have the suggestion to lengthen the season. And create more hunting periods. Youth hunt, holiday hunt, for doe only hunt. Polk county is a large and diverse county. To implement rules that govern my hunting are that apply county wide is a loss of common sense. Please limit the amount of deer to harvest. As well as the length of time “sportsmen” have to harvest. With every season comes poaching opportunities.

My comments are this. We have very localized large groups of deer. Make a more detailed map and give out extra tags for certain areas not the entire county. If you want more doe shot make restrictions so we can only shoot mature bucks. Do like other states do. With a 8pt or bigger restriction. Then guys would feel more comfortable shooting a few doe for meat. Most trophy hunters won't shoot there doe because if you have more buck fawns being born. You have a better chance of at least one making it into the 3 1/2 to 4 1/2 year old mature status. I personally sat over 50 afternoons in my stands on 3 different polk county properties and never even had a doe walk within 30 yds. However i can drive a mile down the road to a property where no one hunts and count 60 doe in the same field. Honestly if you gave me 1 doe tag an only 1 buck tag i would feel better about shooting a doe than i doe knowing everyone around me can shoot a buck and 2 doe with there bow and a buck and 2 doe with there gun.let people pay for bonus tags dont give so many away. That way guys will actually try to get there money worth. And as far as doing a doe only year a wouldn't even buy a tag and the herd would grow even bigger.

Although I do not live in Polk County I am part of group of guys who own a cabin on land we lease from the county. I have hunted deer inthe county for about 20 years and now primarily gun hunt on private land but still do some archery hunting for deer on public land. I am very aware of forest damage caused by deer browsing on both public and private land and see it more pronounced on private land where deer numbers seem to be larger but forest damage is still very evedent on public land. I recommend providing as much antlerless deer hunting opportunity as available in the DNR's deer season framework to maximize harvest by the hunting public. Currently antlerless permit levels have exceeded the desire of the public to purchase them thus allowing deer numbers to continue growing in Polk county. By providing an antlerless holiday hunt in the county and extending the archery/crossbow season to the end of January maximizes public hunting opportunity and the ability for them to harvest deer with the permits they possess . Hopefully harvest increases would be sufficient to have a positive effect on decreasing deer populations and improving overall forest habitat conditions.

We have owned land in this area for forty years. It’s very disappointing to see the lack of deer in our area and the trend continues year after year. I have been working on property management all spring and it’s shocking how few deer are in the area. We also used to shoot a number of big bucks in this area and that has become a thing of the past. Please start making some responsible decisions about the deer population. If the goal is to maintain it appears there is some work to do! As of now the population is decreasing and the antlerless tags just keep getting handed out. My perception is that the goal is actually to eradicate the deer. I had a first year deer hunter with me last year and after the slowest opening weekend we have ever had in Polk county I ended up seeking permission on land in Dunn county, so he could see some deer and have a chance at a successful hunt. Nine hunters in Polk county last year and we harvested ONE deer opening weekend! Again please start making some responsible decisions about the deer herd in this area. It’s very disappointing to see the results of all the antlerless deer getting harvested!
Please support bringing back earn-a-buck and a baiting ban. I understand each would require legislation, but your CDAC can voice support for each by contacting the NRB and elected officials. I hunt an area that was hit hard by the July 19, 2019 storm. Deer numbers seemed to be negatively impacted last year by the storm. However, many areas were inaccessible because few areas were logged and deer were thus more difficult to access. As loggers wrap up in the area and trees regenerate, the deer herd will increase tremendously. We should be in a maintain or decrease mode. I had one wolf on camera, but many different bears in 2019. I have not yet seen evidence around Pipe Lake of a serious deer population decline as a result of predators. However, predator populations have clearly increased in last 25 years that I have hunted. Very happy to see Holiday Hunt. It is a great opportunity to manage herd, especially for property owners who hunt a different part of the state during nine day firearm season. I hunt in Pierce County during the nine day season, but focus on antlerless deer removal with the later seasons in Polk.

I believe maintaining POLK county at this time is a smart way to go. I would just recommend only giving out one antlerless tag per license. Some hunters feel they have to kill an animal because the DNR gave them two tags rather than harvesting only what you need. It's a childish mentality, but unfortunately, very present in this rural area. I am sure other parts of the state also have this same thing happen. With COVID-19, my suggestion would be to leave the seasons as they were for 2019 and then, when folks are able to meet in groups again, THEN make changes for 2021. Thank you for offering this survey and allowing comment. I hope it helps you make decisions. I am just thinking that people are a little uneasy right now with the stay at home policy. If you start messing with their sacred deer seasons right now, they might freak out. As someone told me once when things were heating up...lay low. That's my advice. Lay low with your changes this year. Thank you. What do you call a deer with no eye? NO IDEAR!

When I was 13 yrs old I shot my first 20 yds from the cabin. Our cabin is on the barrons on the trade river. I remember cars lined up . seemed bumper to bumper. Every car that went by had deer tied on over trunks in the trunks over the front fenders. If you didn't see 30 deer you where sleeping in woods. There was so many deer on a tough winter that they ate the trees up as far as they could reach. The DNR wanted people to feed them. If you want deer on public land quit putting doe tags on public land. And that will bring more hunters. The only deer I seen in 2019 ran across the road 3/4 of mile ahead. We got 2 bucks in our camp and all are great hunters that got a lot of stay in the stand all day. 8 hunters. That is only my story. they can all tell you the same. You can feed deer when they are starving, but don't feed them when you are hunting. You can put a corn field in your back yard; and hunt over ' but you can't hunt over a little pile in thr woods. give me a break. 81yrs old

Biologist numbers indicate that populations continue to rise despite the maintain objective. I am concerned that there is an increasing imbalance in the herd sex ratios given the low doe harvest. Many Hunters only take Bucks and therefore are contributing to the imbalance. I would strongly recommend that the State and County consider earn a buck programs to help improve the balance. Last year I executed a QDMA camera survey on my 320 acre farm and calculated a 4.5:1 Doe to Buck Ratio. We need to take whatever steps necessary to increase the Doe Harvest. Good Hunter responsibility is much more than going out on Opening weekend of Gun Season and shooting the first thing with horns that walks by. Last year on my farm, we harvested 10 does and no bucks. I expect that trend to continue until we achieve a better balance. I encourage the CDAC and fellow Hunters in Polk County to act responsibly to ensure a healthy herd for generations to come.
I would like to see an earlier season for gun hunting. Why can’t we be like out west, you get a buck tag and once you shoot your buck your done, unless you have bonus antlerless tags. The dnr and insurance companies are always pushing for more deer to be killed. If the season was open earlier, more deer would be taken due to warmer weather for hunters to be out in and you would catch deer in the rut, this would improve kill numbers and if the season was longer, hunters would go more. Hunter numbers are down and this equates to less time in the woods for the season. But nothing will change and I don’t know why I am doing this. Always the thing you hear is “Tradition” and times do change except changing tradition and yet we change antlerless seasons and extend them and have changed we can now have uncased guns, and do not need to tag a deer unless you leave it unattended so therefore why can’t we change the season?

Hunting pressure last year during the 9-day season was considerably high in Polk County, in my opinion, especially on public land. I felt smothered by hunters who'd claimed their spot in the woods for the entire season, by putting up a stand and leaving it there. For this reason, 2019 was not an enjoyable hunt. I assume the unusually high number of hunters in Polk County has something to do with the number of antlerless permits that were available, combined with the lack of opportunity to hunt. Everyone hunted the nine-day season, it seems. Given that the antlerless quota is the same for 2020, I would like to see expanded opportunities to harvest antlerless deer, by adding the Holiday Hunt this season -- that may spread out the hunting pressure a bit, and provide more opportunity for still hunters to move through the woods without disturbing the hunt of stand hunters who may otherwise be sitting on every knoll. Thanks.

I would like to see restrictions for non residents for antlerless tags, because the land that I hunt on has public land on 3 sides. Residents and non residents go there just to shoot antlerless deer. After season I am lucky to see a deer. I know some are still there and new ones may move into the area, but with each new season I have been seeing less each year. There are a lot of excuses by the DNR for lack of deer sightings, I hunt as many days as I can with the bow including late season, I hunt every day of gun season, so I am out there all season long. I am not a fan of the crossbow, but since they will always be here they should be classified as a rifle and used during the rifle season, that’s what Colorado does, some of these cross bows advertise as meet your next rifle. I would like the DNR to manage for antler size, if this is not realistic for gun season then at least for bow hunting. Thank you.

I live in NE Polk county where the storms that occurred in the summer of 2019 had a huge impact on everything. I’m okay with regeneration but I’ve seen more wolves than I’m comfortable with. I’m not opposed to wolves. I’m concerned that after watching the video that you are not considering the substantial damage to our lands here and the predators that have increased. I’m a bow hunter and just love being in my woods. But for the first year in my hunting, I never saw a deer. I’m also not seeing as many in the fields and near me that I am used to this spring. In these crazy times, I think you may want to consider doing aerial counting. I am concerned about all wildlife and the balance of all. Thank you for making all the statistics available. But I also know statistics can be deceiving. I appreciate you letting me have a say in this. I want the best for all. Happy Earth Day.

Hi, Wisconsin's deer season is very confusing. It was my family's first time doing a youth and regular adult deer hunt. We saw ZERO deer. None. Lots of gunshots around us. My previous experience leads me to believe that deer are being baited to certain locations--most shots were just in the morning. We hunted all day each time we went and saw nothing. Second--too many seasons. I'm not sure the reasoning. But families have other priorities besides figuring out which weekend to hunt. Most people work during the day--so why even have the season open Monday through Friday? Why not have deer season each weekend from Mid-November through January? We probably won't return. I’d rather go to North Dakota where hunters are few, deer are plentiful, and the season is very well though out. My son’s first deer hunting experience was aweful. I just hope he wants to go again. Very frustrating.
Too many hunters sit in there mansion tree stands all rifle season. If more hunters got out and did drives on the properties they hunt it would get the deer moving so they could be shot. Where I hunt the deer population I see depends on what crop is in the fields on the property I hunt. Last year once rifle opened I had hardly any deer on my trail cams into this spring. The deer move to the thicker areas of land, which some are not hunted where others are hunted by a stand in the field. The neighbor sits in there stand and there are 20 does in the field, they don't shoot till horns come out, and they do not drive the woods. Honestly for rifle season I would recommend earn a buck. A lot of hunters hunt for horns. I do that during bow hunting, and I fill my freezer during rifle. Maybe letting hunters donate the deer for free to food shelves and the state picking up butcher cost?

A holiday hunt is one of the dumbest tools in a area where it doesn’t make a smidge of a impact. It creates problems with other recreational hobbies (snowmobile). It also is redundant to have from September opener, basically rifle hunting(crossbow) till the nine day gun season, then a 10 day muzzle loading, then a 4 day doe slaughter, and then Back to crossbow. If common sense was being used in this thought process, you would see that there is already 23 days of rifle. Now as far as I’m concerned the crossbow should no be included in the archery season. Sense it is then you have to consider that weapon (crossbow) as a rifle as well! So the deer after gun seasons are over turn nocturnal. They are pretty much up till the end of archery season. So let’s put the stupid holiday hunt in and pretty much cancels late season archery. Even if you add a few days on, it’s for not!!!

I feel like we offer to many seasons and the deer numbers are down in the area of the county that I hunt. 2019 season I seen 2 deer the entire 9 day season and I hunt all day every day no matter the weather. I archery hunt every weekend and sometimes after work from around Halloween until rifle season and seen far less deer then years past and did not harvest anything within that season. I literally shot the only 2 deer I seen during rifle season and hunt with several friends at our cabin and our group as a whole didn't see or harvest even half as many deer as we did in 2018. To many seasons are making for little to no pressure so if a deer leaves an area they do not return as nobody is out hunting like years past. Let's consider limiting the hunt season to a traditional 9 day only season and see what happens to the number of hunters compared to the harvest level.

Why do the CDACs always want so many deer killed. I've lived and hunted in polk county for 25+ yrs and the deer population has steadily decreased to such low numbers that I now have friends, family and youth that won't even buy a license to deer hunt because they sit for the entire season to maybe see one deer. There is no reason to kill off so many. I put in the time to increase habitat, food, and spend days on end during bow season and see less and less deer each year. Why do we need to give out so many tags? I strongly appose the holiday hunt because bow hunters who hunt late season can not harvest bucks... Pretty contractive, the CDACs want ALL deer killed but we are unable to harvest bucks (even wounded from gun season, as I've seen the last time we had a holiday hunt.) Please reconsider the holiday hunt, there is no reason for it in polk county.

First of all let me say that I haven't bow hunted for a few years mainly due to time constraints. I am all for bowhunting. However, when I started deer hunting bow hunting wasn't even a blip on the screen. Now we have crossbows which easily kill at 75 to 100 yards. Back in the day of stick bows 20 yards was about it. In my opinion the traditional nine day rifle season is the main season with 700,000 people partaking. My question is why has the rifle hunter been diminished to being satisfied with the left over bucks from the bow hunters. Why do the bow hunters get to hunt the rut every year? Isn't there something that can be done to give the rifle guy who never picked a bow up in his life a shot at a big buck? Maybe a drawing for a number of rifle permits to hunt the rut. I know it would be complicated but I'm sure there must be a solution.
The deer herd in this area appears to be at a good level and the deer appear healthy without crops nor forest areas being decimated. I am concerned of a new proposal to limit crossbow hunting to a subset of the bow season. The argument to limit to just October seems to have come without any logic or reason. The big difference between the two devices is accuracy - mostly wounding of deer and subsequent loss of them. The crossbow has likely reduced the number of wounded and lost deer to becoming recovered deer. The argument that hunters feel too many are killed during the bow season seems pretty silly, certainly not a sentiment passed around in this part of the state. Leave the bow and gun seasons as they were in 2019. Moving it a week earlier seems like a ploy to attract more folks, but I wonder if data really backs that up.

I feel the DNR should step in on many private land owners to recommend they allow hunters on their land. They could do a sign-in/ sign-out so if there is any damage to property then that hunter or that party would be responsible. The number of hunters would be determined by the number of acres. The deer are not stupid, after opener weekend they know where they can go to hide and its on private land. Many private land owners hunt yes, but many only hunt 1 or 2 days and their tags are filled. I know many that have 40+ acres and its only 1 or 2 people hunting 1 or 2 days. The deer know they can hide there the rest of the season. Also many private land owners do not hunt, but will not allow hunting; again, the deer know they can hide there. The public land is overrun with hunters and the deer hide on non-hunted private land. PLEASE HELP.

I think you need to limit the length of time you hunt with a crossbow. The buck harvest is increasing and I had no problem with elderly or handicapped people using a cross bow, but to have them hunt for months with that kind of weapon is crazy. Just like the technology improvements in muzzle loaders...they are now a high powered rifle, nothing rustic about them. There is no need for a special season, if that if the weapon of choice let them use it during the gun season. And as long as I'm on the subject....there is no reason whatsoever for a person to hunt with a weapon that holds more than five shells. When people are cranking off multiple shots at a running deer they are in no way sure of what is beyond their target. Make people be good responsible hunters. I am disappointed if I have to fire more than one shot.

I dont think hunter input matters. I have hunted this area for 50 years, and every year my friends and family see less and less deer. Many friends have quit hunting, even though we have cabins and own land. We are in the woods year around, we see whats going on. I walk my land, and hunt grouse also, and seldom do I even jump a deer. Years ago you go walk 100 yards in any woods and jump a deer, not any more in the last few years. First the baiting, and then issuing so many tags. It use to be driving the roads at night was an accident waiting to happen. Now your lucky if you see a deer, even during the rut. And also calling the area west of river road in sterling township farm land, what a joke! It seems like the plan is to wipe out the deer herd and clear cut every bit of public land.

You need to go back to the old way. Every year I see less and less deer. The deer are being hunted to hard, too many seasons. Get ride of the Holiday Hunt, youth hunt, and combine muzzle loader with rifle season. The deer are being decimated because of the predators and too many hunting seasons. If you want to get more people involved in hunting you need more deer. Creating more seasons to kill more deer will only reduce the number even more. I have sat out in the woods for the last 9 years all day every day of the 9 day gun season. The number of deer I have seen each year has only decreased. If this continues I will join the many people that have already stopped hunting. I wont sit out in the woods if I am not seeing deer. PRESERVE THE DEER NOT DETROY THE DEER!

Keep the 9 day gun deer season in November. Leave the Bow / Crossbow seasons the same as in the past unless there is a valid reason to extend it into January. The problem in Polk County last year was the devastating storm that went through the Turtle Lake, Almena, Poskin and Barron area which raised havoc with the deer population. Not that the storm killed them but their habitat was destroyed, restricted their movement and certainly created a highly restricted view in these wooded area for the hunters. It was impossible to see any deer because of the obstructions. But that's not the DNR's problem, it is the act of nature which we, as hunters, must accept and modify our approach to hunting deer. Thank you for asking for my opinions. An Old Time Deer Hunter.
I would like to see more deer around the southern end of Polk County. I have lived in the southern end of Polk County for 38 years, and I think the deer population is about the lowest I have experienced. I look for antlers and scout a lot, and I just don’t see the amount of deer sign I would expect to see. I feel southern Polk County has great agricultural and enough wood lots to carry a higher deer population than is in existence today. I travel to Iowa and other counties in WI to deer hunt and look for antlers, because, to be honest, the deer hunting in southern Polk county is hardly worth getting excited for... it’s not a surprise to me, hunter numbers are dropping off based on the low density of deer I experience in the southern end of Polk county...

I think only to be fare in accordance with other states because I do run into a number of out of state hunters, I feel Wisconsin should charge out of state hunter what their state charges us to hunt in their state if we choose to. For example, if Iowa charges $500 to hunt in their state then Wisconsin should charge $500 for Iowa residents to hunt in Wisconsin. This would also raise more money for Wisconsin DNR. Just something to consider. I do run into a large amount of Minnesota hunters hunting in Wisconsin during bow season and rifle season which is fine but causes me to find another place to hunt in my own state when trying to hunt public land. Do we have a separate hunt for out of state folks? Maybe they can only hunt the second weekend of rifle season?

Thanks for the opportunity regarding the deer hunt. I want to take an opportunity to say something about panfish limits. I agree with 25 limit on panfish in a person's possession. What I really have a problem with is when a boat pulls up near me, I fish from a private dock, and there are 5-6 people in the boat and they are catching and keeping everything they pull in. I feel that there should be a limit per boat as well, not necessarily per person in the boat. I am speaking specifically about Bone Lake in Polk County. This is so hard for me to watch. For the last three summers the same people come to the same spot, every day for a week, 5-6 in the boat, are pulling 150 panfish a day out of the lake. They say they need to fill the freezer for the year.

We put out trail cameras beginning every spring through the end of the year. They show the same deer consistently, as well as the numbers have been getting fewer each year. We used to hear numerous gun shots every opening weekend across the road on public land when we first bought out land last year not one shot was heard from there. Talking to a couple of hunters who do hunt it they said they see less deer, equals less hunter. Go back to applying for a doe tag and not giving them out like candy. To many hunters a loosing interest in hunting because of all the rule changes. These rule changes make it look like the state doesn't want a deer population. Too many special hunts, too many extra tags it shouldn't be about how much revenue can be generated.

I moved to Polk county from Minnesota, mainly to change my deer hunting for the better. Little did I know the Wisconsin dnr are pushing for extinction with the auto insurance companies padding their pockets. I've never witnessed such great potential in habitat in the area, yet deer barely exist. Last year I purchased a archery and gun license and you handed me six tags. You should be ashamed of yourselves! NO MORE DOE TAGS! One any deer license and if it were up to me we would be drawing for a buck tag. Look at all the states in the Midwest that are flourishing and copy their plan. It's that easy. If you want people to hunt here you need more quality and quantity. If no changes are made to improve the deer herd, I've bought my last Wisconsin tag.

Strongly oppose the holiday hunt. There's already enough hunting time, would even like to see only 1 free tag with each license. Many people I know spend a lot of time in the woods we're not seeing the numbers the DNR says there are. Maybe this is part of the reason hunter numbers are going down. The people in the field have a better idea of how many there are. I drive back and forth to work at the perfect times to hit deer, not seeing them then either. The drop in kill will probably happen here like the rest of the state. I wish the DNR had a reimbursement program for all of the hunting gear I've purchased and over $4000 a year in property taxes I pay for bad deer hunting. Considering just hunting other states and Canada!
1. Stop shooting the small bucks. Put a size limit on bucks to increase the age. We need older bucks to create trophy bucks. 2. Need more deer stop shooting the does. 3. Need less hunters with the Northern hunters displaced due to the wolves eating all the deer those hunters now moved down south. Need to split the hunters. 4. Eliminate the large group deer drives n public land. They are shooting all our deer and then go sit on their deer abundant private land. 5. Plant food trees and deer plots on public land to allow for better food sources and to keep them from the farmers fields. You need to take action or more people will stop hunting. If you make it a trophy hunt there will be more hunters to enjoy the sport.

As you can see I have been hunting for a long time. In the same area with same farming conditions. Deer population is so bad my family is loosing interest. We have gone from a family that was so excited to deer hunt to a family that is loosing interest rapidly. It’s because it’s no fun. What you don’t seem to understand is you can make the season year round but if there are no deer it makes no difference. Years ago we would see easily 20-30 deer per day. I have 2 grandsons (18 and 20 years old). They have collectively seen 5 deer in the last 3 years. ITS NOT FUN ANYMORE. Difference in my opinion. We see many bear, wolves, coyote all that where almost non existent 30 years ago. And you have to stop shooting does.

I think that we take less deer when we have a deer season that runs from mid Sept. to JAN. The good hunters have their deer and there is no one out hunting. I heard the least amount of shooting this year than any other year. If memory doesn’t fail me I heard 5 shots opening day. There were large 40 acre fields that where planted and left all winter. Many food plots by neighbors. The deer just didn’t move. Everyone was siting in their 10 ft. Comfortable stands. I’m guilty as charged also food, nice chair, heated. I’m 80 yrs old and need some of the comforts of home. I enjoy watching the deer, how dependent the fawns are on their mothers, how they tell me when a buck is coming etc.

The deer population is drastically declining. Not sure where you are getting your numbers but from what I see sitting in the woods on average of 30-40 sits, I see fewer deer than I did 3-4 years ago. I hunt 200 acres. So there should be deer everywhere. Also we need to bring back registration stations. Registering your harvest over the phone is leading to less deer actually being registered. So I feel like that throws the numbers way off. PLUS IT WILL STIMULATE THE ECONOMY!!!! If we keep killing all of these does, in 10 years there will be 1-2 deer per square mile, in order to get kids involved more into deer hunting, I feel like polk county needs to manage the heard better.

If we are going to ruin basically all of the December archery season by having a holiday hunt, it would be prudent to extend the archery season until January 31st. Adverse weather conditions are likely to keep many hunters home in January anyways. However, there are enough hunters who invest a large amount of time practicing, hunting, and scouting deer for the chance to harvest an animal with archery equipment, that is seems inappropriate to cut a large portion of their season out by allowing gun hunting for most of December with nothing in return. If we are taking the drastic step to add yet another antlerless season, why can’t we extend the archery season?

Remember that Polk counties objective is to MAINTAIN, not increase the herd. By looking at the numbers this quota will increase our deer herd. Very mild winter, will a 2019 kill slightly less that normal means our deer herd is growing. The holiday hunt is a must. Extending archery season also a good idea. Issuing more than 2 extra free doe tags? Not many hunters will shoot 2 does the way it is, so this is unlikely to affect the herd. A holiday hunt and extended archery season is the best option for people to fill tags. We can’t let a few user groups control late season hunting, especially when these activities are weather dependent and unpredictable.
I am opposed to having a holiday hunt season for Polk county. The holiday hunt season is during prime snowmobiling conditions. If the holiday hunt were to be put into place it will potentially shut down snowmobiling as well. Snowmobiles provide a large revenue to local restaurants and bars that have already been impacted by COVID-19. Implementing the holiday hunt would be selfish as there is already a designated hunting season, it would take away from snowmobiles that do not hunt, and it also takes away traffic from local bars and restaurants. Please take into the considering as many people would feel a negative impact from the state implementing this.

Concerning the public "Barrens" area, this portion of Polk county would best be served to hunters as either part of the northern region or separate the farmland region with NO BONUS TAGS for a period of two years. Public land is only 9%; so it's very crowded, and the deer population is fewer and fewer each season. Because we are in Polk county, the numbers are unfair to us, lots of deer, but not in our part of the county. It may be not feasible but we need to go back to the units to better get a hold of our deer population. Micro management is possible...if the money is there. HISTORY TELLS US WHERE WE HAVE BEEN, AND WHICH WAY OUR FUTURE SHOULD GO!

I would be in full support of antler restrictions, possibly a 4pt minimum on at least one side like some other states are doing. Wisconsin has the pedigree to be in the conversation as a whitetail mecca state with Iowa, Kansas, Illinois, Missouri but some things would need to change to get us to that point. Think of the revenue it would bring in if we were charging the same for out of state licenses like Iowa or Kansas? $500 per tag... Keep managing the antlerless deer with multiple tags and restrict the bucks. I'm a member and full supporter of QDMA so you understand why my opinion is this way on this matter. Keep up the good work. Thanks.

Excellent video re-cap for Polk County. Thank you! 1. Nobody likes to hunt when it's cold and miserable and the deer are herding up. Late season is a waste of time. 2. You need to reduce the zone around captive deer/elk chronic. Way too large. 3. Consider a tax break for private properties. Too much land is not available for hunting. 4. If you want to reduce antlerless population, extend 9 day hunt with first week antlerless only. Earn a Buck was a good idea. You need to get the numbers down without using car kill! 5. You need to allow answers of "don't agree with the proposition or statement". No opinion is not an answer option.

Why does CDAC want there to be no deer? I married into a hunting family 5 yrs ago and my husband got me interested in deer hunting, however my interest is rapidly deteriorating as I go to the woods and see no deer most of season. I saw a total of 9 deer during the entire 2019 bow and gun season combined. I keep a journal so I know what I saw when. 28 sits to see 9 deer and not have an opportunity to harvest 1. Please for the sake of the future of this county and deer hunting for our youngsters please reconsider the number of tags available or at a minimum the holiday hunt. There is no reason to make it worse for the up and comers.

So... 1) The deer population is increasing and is notably higher than the CDAC goal. 2) Deer are adversely impacting habitat, forestry, other wildlife, agriculture and society (deer-car collisions, etc.). 3) Current management goals and strategies are not reducing the deer herd. Conclusion: New deer management strategies should be implemented. Earn-a-buck is one. Finally, reduce the number of deer and you reduce the spread of CWD just like social distancing reduces the spread of Covid-19. Please ignore the whiners and implement some meaningful population control measures now to improve deer herd health and save hunting.

Wisconsin at least as I can remember has always had a fairly decent deer herd with fairly decent hunting opportunities and those are my greatest concerns. Deer hunting is part of Wisconsin’s heritage and I would think that most of its citizens would agree that we would like that heritage and tradition to continue to be such in this present as well as the future. Thank you for this opportunity to share my thoughts and opinions on this matter and I pray that you would continue to manage our natural resources in abundance so that we may experience that higher quality of life that comes from the outdoors.
Out of 6 hunters during gun season 2019, we harvested 1 8 point buck, saw one doe, and that was it for 3 days of hunting. The numbers are way too low due to over issuing doe permits and farmland permits & predator pressure (bear, wolves & coyotes). This area in Polk/Barron counties have been designated as "maintain" and "decrease". In Polk maintaining very few deer is mind-boggling - we should be allowing the herd to grow. In Barron how do you justify decreasing already low numbers? Give us a break and restrict antlerless permits for a season please. Thank you,

Please don't do the 4 day holiday hunt the annual doe hunt is enough. Or get rid of the annual don't want and just do the four-day Holiday Hunt at the end of the year but the problem with the end of the year Hunt is your shooting bucks without horns. I just think everybody can shoot their deer during a 9-day gun season the muzzleloader season and archery season. Guys don't hunt hard enough to get the deer like they used to. The public lands don't need more deer taken from them hunting was way better 16 years ago it was fun watching the numbers of deer come by it was great hunting.

I, along with everyone I know, am opposed to specifying public or private land. It's useless and adds confusion. People feel it is making a mess of hunting. We just want to hunt. Not worry about where we ate and what tags we have. We try to comply with laws. It gets harder every year. Many are considering quitting because of complexity. Lots of people killed deer illegally in Polk County without knowing it. They thought there was an open season when there was not. The confusion made criminals out of people who were trying to obey the law.

I live and hunt in northern Polk County, the deer density here is much different than that of the farmlands in the southern sector of the county. Having DMUs established on County lines versus geographic and structural features of the forest lands and farm zones made better sense. I also hunt just across the County line in Burnett County and have SnapShot surveillance cameras in both areas. The deer population is much higher in this segment of Burnett County yet, antlerless permits are not provided but come at an additional cost.

Polk county overall has many deer to be harvested. I support as much hunter opportunity as possible. I have concerns about the continued increase in deer populations according to the local metrics and the capacity of our hunting community to harvest enough deer. We are not engaging enough hunters these days. It is not wholly because of lack of deer or a general disgust with the DNR and how they approach deer management. Human interests have been changing and it's affecting hunting and our ability to manage deer populations.

I generally hunt during the week to avoid any other hunters. I'm retired and can do this so I'm not sure what the volume of hunters there are on the week ends wear I hunt I know there are other hunters in there. I will be 75 this season and would very much like to have the permission to leave my stand in over night, if this was legal would help me very much, it is getting a little difficult to carry my stand in and out every morning and evening. I think the DNR are doing a good job and I'm looking forword to next season.

Public lands are over harvested, wolves are a bigger threat than has been reported. Private land is pretty hard to control because you cant force private land owners to comply, and rightfully so. Hunting was better 15 years ago..leave archery and crossbow seasons alone, I take my 11 yr old out he cannot pull back or remain motionless enough to pull a bow back...please dont take crossbows away from youth...we are losing too many hunters already keep crossbows going it's not hurting anything especially with a strong herd...

Strongly recommend to have a minimum antler size limit installed to increase the number of mature bucks statewide. Every year the ratio of 1-2 yr old bucks shot v. 4-6 yr old deer is at least 10-1 in the areas I hunt. Young bucks shot consistently to 'get my buck' is heard over and over. I was living in Winona county MN when the DNR installed a 4 pts on at least one antler restriction. Since that time the number of mature bucks has increased significantly and the deer heard health / numbers has increased. Thank you,
Since the adoption of the crossbow season option for any hunter I have seen a tremendous rise in the number of hunters in the woods during the crossbow season. I have also seen more wounded deer that I speculate is from crossbow archers taking marginal shots and shooting deer at longer ranges. I think that the state should revert back to the way it used to be—only older and medically permitted individuals can use crossbows. Incidentally, I am 62 years old and still use the conventional bow I have used for decades.

I have a recommendation about antlerless tags. As of right now Antlerless permits are valid based on county. I hunt on the Polk/St.Croix County line on public and private land in both counties. Because both of these counties are in the "Central Farmland Zone" I am not sure why my antlerless tag is only good in the county I designate, it should be valid throughout the entire "Central Farmland Zone". With St.Croix county proposing an "Antlerless only" season, I think this could help manage the quota as well.

As a resident of clam Falls Township I am very concerned that the numbers of the deer population in the southern part of the County are vastly different from that of the northern half of the county. When the county was divided in half by State Highway 48 I believe that each Zone was more accurately Managed. My friends hunting in the Amery area say a great number more deer than those of us hunting up here. I believe we need to go back to managing Polk County with two separate management programs for North and South.

There are plenty of deer in the county so nice job setting a quota that will help manage a reasonable population if it is achieved. There needs to be more methods to harvest enough deer and i wish they would bring back Earn-A-Buck and the October hunt. Those would help. I am concerned there is no way to harvest enough deer with the existing season framework and I am concerned about forest regeneration and vehicle accidents. Also, with CWD knocking on the door the population needs to be reeled in.

Do not shorten the Cross Bow season. More folks are using them because that is what they want; why take it away? If there is concern about buck population/success, consider a one buck per hunter/any means per season. Who the heck needs to shoot more than one buck per season with all the does available? This would improve the quality of the buck heard too. Late hunts should only be considered IF snowmobiling is not interrupted. Hunters can adjust to the limited trail activity that would occur.

I believe that having a unit that goes across the state is not at all a correct estimate in addresses deer numbers. What happens in the Eau CLaire area or further East is in no way representative of our area here. I own 200 acres of land next to 1500 acres of state wildlife land. In the last few years our deer sightings have dropped to where last year five guys saw three deer in the first two days of season. Our deer population is decreasing markedly up here and we need to do something now.

You need to abolish all early season hunts and extend the rifle season if you feel the need to take more deer. How ever hunters like myself and many others will always oppose Wisconsin’s over hunting and early kill seasons. Never needed and early season 20 hrs ago- and the seasons always went great- I will teach my kids that the early season is not right to allow the meaningless slaughter of deer- it’s a wasteful practice that Wisconsin should be ashamed of- I have no issue with the youth hunt.

There are not enough deer in the county to support your harvest recommendations. If you want to save hunting make sure there are opportunities for new hunters. Kill every deer in the county is not helping. The counting of deer shouldn't come down to one guy making a drive in February where the deer historically winter. Those are not accurate numbers. If every deer in in a section it doesn't mean they are 2 miles away. Please stop with all the tags. Only you can make the hunting better.

Every year we see fewer deer. We feel that this is due to increased numbers of trespassors on our property who harvest deer and run away. Every year it gets a little worse with fewer deer being seen by us. How do we know this? We find the gut piles in front of our hunting stands. We can't be here 24/7 to watch for trespassors who ignore the no hunting and private property signs. We also feel that we aren't the only ones having trouble. These may also be harvests that go unreported.
DNR should offer at least two free antlers tags for non resident land owners. Or at least set our cost the same as residents. We support the local economy in many ways. Gas, food and materials to name a few. Also have wolfs starting to show up on our trail cams in recent years. How can I prevent bear hunters dogs from coming onto my land? I purchased an archery and gun tag with an additional antlerless tag. I log in at least 80 hours combined and harvested one fawn.

Hunt in this area for 60 years--last year was the worst I have experienced. Not being able to see any deer makes hunting something very hard for young hunters to enjoy. I am worried that at this pace we will not have any hunters. Too cold for older hunter and no deer does not look good for future of hunting. I do not think Polk County should be Central farming almost every section as some woods and the north has mostly wooded land. Not seeing any deer suggests to many permits!

No doe seasons leave Polk county a normal hunting season. Give everyone there 1 or 2 doe tags and they will be happy. Or leave the public land alone and set it up so the holiday hunt doesn’t involve the public land then a guy can still bow hunt if he or she want to target a buck. Most guys shoot there does ny then anyway. That's dosent mean an early doe hunt earther. Just leave it alone. Look at face book and the other wis hunting pages nobody's on board for any of this. Thanks

In the last couple years I’ve seen more wolf than deer while deer hunting. I used to see 10-20 deer on opening day and the last two years I’ve seen over 15 wolves and one deer. I have discussed this with neighbors and friends who also hunt the general area and almost everyone is experiencing similar hunting. I hope for my kids this problem is addressed because they don’t enjoy hunting without seeing any deer and it won’t take long for them to not want to do it anymore.

On private land in Polk county the deer population I believe is strong. However on public lands west of the river road from St. Croix falls to county road o in grantsburg, the deer population is very low. I believe this area should adapt a bucks only status just like Burnett county just to the north. I have hunted this area for 29 years and I see fewer deer every year. We need to allow the doe population to expand in this area with a bucks only season for multiple years.

Go back to physical tags and stop giving out all these doe tags like it’s doing nothing to the population. You work for us. You may think you know the population of the deer but you have no idea when you know there were 100s if not 100s of people that didn’t even register their deer because of your lazy way of registering deer. Do what we’re paying you for and listen. Buck only for as many years as you been handing out for for tags like nothing.

Do not allow the proposed 19 day gun season. This will NOT help hunting as a whole. It will overlap MN seasons and fewer non-residents will come. The weather has not been good for gun season, that’s a primary contributor as to decline in numbers...along with mis-management of deer herds, introduction of wolves, over populated bear numbers all playing significant roles in fewer deer and as such, unfavorable experiences in the woods.

I have heard of other things that have been talked about in the area. Extending the gun season? I am apposed to this. The gun season is long enough. Have a four point or higher rule for taking bucks in our area. Let our herd of bucks mature before harvesting them. I have also heard that some have wanted to decrease the bow season or cross bow access. I don't agree. I think you have things pretty much running well in Polk County.

Holiday hunt is just plain stupid. What little deer are slaughtered it isn’t worth it. Snowmobile trails will be open. The gun hunters will have 23 days already. 9 days of rifle, 10 days of muzzle loading and 4 days of doe slaughter. Let’s also remember that crossbow is from the middle of September to the end of bow season. In my opinion crossbows are just like a rifle. Should not be included in archery season. No holiday hunt

Holiday hunt didn't work in polk county last time and actually deterred people from late season bow hunting since there can be no harvest of bucks. This "tool" for management is terrible and should not be an option. And why so many tags? There is not that many deer north of hwy 8, possibly south of 8 where there is bigger agriculture fields there could be but not in northern polk county. Possibility to split the zone?
2 bonus tags oer payron license only. Then you will sell more doe tags or, hopefully, more patron licenses. All youth must have hunter safety. Should be age 12 to carry weapon and be accompanied by adult until age 16. CWD is not spread by baiting deer. The small amount of bait used doesn't bring in hoardes of deer. Phase out tiny little deer farms, such as south of Osceola where runoff goes into creek into the woods!!

I always liked to go out with my bow during the holidays after the hubbub of the gun season has died down. This is one of my favorite parts of the season. Still fairly warm and plenty of time off to hunt. But because I can only harvest an antlerless deer I have no interest in hunting. Ruins it for me. Other than that, I think you folks have done a good job managing the white tail herd. Keep up the good work.

Listening to the information provided was helpful to know how your stats are figured. One that peaked my interest is the 9% of public land or DNR controlled land in Polk. So my comment is if that's the only amount of land the DNR can control then you need to now the deer herds on those lands have been absolutely decimated over the past years so please don't give out many or any doe tags for those lands. Thank you...

The biggest problem with all the units I have hunting in wi is people getting a doe and buck tag for rifle season. This makes it so the hunter does feel they have to positively identify the deer before shooting. It creates a lot of wounded deer that are never recovered. There should be some thought about only giving buck tags and having to apply for doe tags for rifle and make a bow/crossbow tag an either sex tag.

Protect young bucks. The mortality on 1.5 year old bucks is atrocious. 4 points on one side tends to increase pressure on does and off of young bucks. I hunt Missouri and we harvest nice bucks every year with the 4 pt rule. We don't shoot young bucks in Polk co and we are usually not rewarded with decent older bucks because most get killed by another hunter. We have the perfect land to do something in Polk. And burnett

I am against baiting. It should be banned statewide in my opinion. I would welcome an extended gun season. Traditional archery and now crossbows are a wonderful option for hunters but I feel those constituents have too much influence on decision making as regards Wisconsin deer season. I understand historically traditional archery groups were very effective lobbyists and my hats off to them, but enough already.

I've been hunting on private land in Polk county for 32 years and I have seen the deer herd go from plentiful to scarce in the matter of 2 years. This drastic change occurred approximately 6 years ago. The herd numbers have stayed scarce ever since then, so I'm not in favor of any extra tags, holiday hunts, or extended seasons for 2020. Let's let the herd actually maintain and replenish itself a bit this year.

When I was a teenager(25-29 years ago) hunting in this unit I saw 20+ deer opening weekend. Now when I take my children hunting We are lucky to see 3 deer opening weekend. I understand there are many competing interests but this difference is just not right! I used to get one tag and was happy with that. Now I get three tags plus three to four for each kid. The quality of the hunt has gone down significantly!

I think there is potential for surveys like this to enhance reliability of deer populations. If possible I would suggest that this survey be a little more specific as to where within the county these sightings occurred. This then would create an idea of where to focus management needs to enhance or reduce deer populations. This may also reinforce understanding of neighboring county deer population trends.

Something has to change, I have never seen deer populations this large in southern polk county. Way to many deer going into spring fawning season which means even more deer in 2020. Need to extend all seasons and amount of tags. Let crossbows hunt from start of archery season until January 31. It seems like its the most attractive way to harvest deer and the only way to draw in new hunters or keep them.

Without a different season structure decreasing or even maintaining our growing deer herd is not possible. There are too many deer for healthy habitat in most areas. Give hunters as many opportunities as possible. You can not overshoot whitetail deer in this area. Private land hunters will only shoot what they want, regardless of the number of tags given, so don't be shy about available tags.
Please consider moving muzzle load gun early November before Rifle. One full week or if too high impact then Thursday through Sunday? More Game wardens in Barrons and River Road to keep things under control and safe. Discourage large groups drinking and driving deer to shooters in Barrons can be dangerous. I don’t dare take my kids in most public areas and that’s a shame.

The early gun seasons make the deer more nocturnal. I’m ok with youth and handicap early hunts. I love the traditional gun season and would not want it changed - tail end of the rut and 9 days is enough - many people don’t hunt after opening weekend. The doe/buck tag per license is enough - chance to harvest 4 animals - why have bonus tags - how many deer does one person need to take per year?

For the county I see they want to add the holiday hunt until Jan 1st. The amount of people that actually do these hunts are very slim. While doing a holiday hunt in other counties I rarely ever see anyone else participating. Also there are bucks that drop antlers during that time of the year resulting in bucks with potential to be mature and support a healthy herd being killed due to no antlers.

Quit harming/ the old hunters. Your stupid position on deer feeding when there has been no cwd in the county only a neighborhood deer farm. Keep adding more rules and you will accelerate the old hunters quitting. You survey question are bias gun hunter against bow hunter. I may not hunt this year--I have a handicapped permit but your complex rules. I am thinking about moving to Florida.

I think Polk county and there area around it should implement an antler point restriction/trophy manage rule such as south eastern MN has. I think the overall population is health but the number of mature bucks is very low. Conversely I think the doe population is quite high. I think WI would greatly benefit from an Antler Point Restriction in areas where the deer population is high as has MN.

Who decides nuisance tags? There seems to be abuse by some landowners using said tags for group hunting and in some locals a decimation of the herd to the detriment of their neighbors. The same people shoot deer and leave the carcasses in the field. Really sad that this is done to save popple trees in one case. Where can we see who and how many tags are out there?

It would be ideal if natural and native predators were allowed to thrive and help manage the deer population. Also, deer activity on the private land I hunted was extremely low after opening weekend. It’s hard for me to imagine that there’s nearly enough deer in this unit to justify the current quota numbers that are several times higher than the actual used tags.

I feel one of the biggest problems with Wisconsin gun deer season is when it occurs. The rut is typically over long before gun deer season starts. This causes 2 problems. First, the harvest levels are reduced, with the 2nd being less hunter satisfaction. I feel this is why so many hunters have moved to crossbow to allow for a more satisfying season.
I would like to see Polk divided into two units. Governor Knolls Forest is a lot different than the farm country to the east. The Dnr has got the deer population in governor Knolls forest pretty much wiped out. If your goal was to eliminate all deer from that area, you are doing a great job. If you had any other intentions you have failed miserably.

I strongly oppose an anterless only format for all 2020 deer seasons. One of the primary motivations and fun factors in deer hunting for most people is the opportunity to harvest a buck. If there is an anterless only format for all 2020 deer seasons, most, if not all, hunters I know will be incredibly displeased, and some would not even hunt.

I like the "two- antlerless- per -license" proposal for the simple reason that it may reduce the obvious violations of group-hunting regulations. (i.e. non-hunting family member buys a license with no intention of going afield.) Unfortunately, from the state's perspective that might reduce the number of licenses sold. A quandary indeed.

Let people use crossbows, don’t lengthen the seasons. We’re losing hunters at an alarming rate so don’t try to put gun hunters versus long bow versus crossbow. Why don’t people see deer? No one pushing them around. Private lands hold deer and with no one hunting them, there’s why we don’t see the same numbers as in the late 2000’s.

The party I hunted with last year did well. 7 in our group and everyone took home venison. Did notice that most of the antlerless in that section were button bucks. Of the 12 deer we harvested there was only 2 doe taken. 5 bucks were harvested. And most of them were young. Of the deer we harvested WE tested 3 none were positive for CWD.

I think it would be good to bring back the program of registration stations... It is a cultural thing. It also helps to drive the business to the small rural businesses. It would also make it easier to CWD test the population and give people reassurance that their meat is safe. I was sick this deer season and missed out on the hunt.

We wouldn’t have as many deer kills if people would learn how to drive and pay attention and if the county would keep the ditches clean. In our area neighbors don’t let people hunt like they used to in earlier years so you can move the deer and people from out of state buy up the land and post it not allowing for the deer to move about.

In our area - people from out-of-state have bought up the land and post it. Land that we used to hunt is no longer available. Car-deer related accidents occur because the ditches are not cleaned out by the county or townships so the deer aren’t seen until they pop out of the over grown ditches or run into your vehicle.

With that storm that went through our area last summer, it was tough seeing deer as they were so well hidden with all the trees down and little snow. It would be nice to see the ratio get a little closer than it is now. It is getting better in our area every year but still has a ways to go. Thanks for your time.

Management needs to improve...ie deer numbers are way down.. 45 years I have hunted this area...I saw 3 deer in 3 days of hunting in 2019...our camp has been shut out 2 years in a row. Never happened before. To many doe tags...back off, let the numbers increase...2 doe tags per a licence is a joke.

We must raise prices on out of state tags, including antlerless. There is no reason for giving out tags for next to nothing to absolutely destroy the deer population. Also bring back age limits, people buying tags for infants is ridiculous, its just allowing people to desimate the deer population.

Living north of Hwy 8 is a lot different than the southern part of the county. I believe the majority of the deer harvested are in the southern part of the county. Since living in the same place for the past 27 years I have seen a significant reduction in deer, to the point of not hunting here.

Main concerns are CWD and to a lesser degree I am concerned that gun season will be extended. CWD: All feeding of deer should be banned. Deer farms should be shut down and outlawed. Gun season should not be extended. It effectively shuts everyone else and all other activities out of the woods.
The northwest area of Polk county should not be considered farm land as I know many people see more BEAR than they do deer during the full 9 day gun season. This area is NOT farmland and there is too many doe tags being given out for public land when too many people come to this area to hunt.

The Holiday Hunt and extending archery would be a great move for the county. There needs to be more antlerless deer harvested. Also, you should be able to archery hunt for bucks during the antlerless only gun special hunts. Thanks for all that you do to manage the deer population.

More and easier methods for CWD testing in Polk county. Education on the topic. Carcass disposal sites to safely and ethically dispose of butchered carcasses. I'm tired of seeing them dumped in ditches and fields (they are not car-deer killed either). Education about CWD!!!

We had about the same amount of deer right til the rut ended, but our hunting season was as late as it could possible. The rut was long over during the gun season and the deer were not moving as well as the later season brought very cold weather so not as many hunters out.

Doe only deer season is ridiculous. I think antler point restrictions with added doe permits will help with the buck to doe ratio that has noticeably changed in the last couple of years. I wouldn't spend 800$ And drive 12 hours to family deer camp to shoot a 120# doe.

I hunted in the Deer Park, Little Falls area last year like I've done for 38 years and I saw one deer on public land. To have only a doe season would lower my chances to harvest a deer. I might only see 1 deer and if that is a buck then I might not get a deer at all.

The Polk County CDAC should end the distribution of antlerless tags specific to public or private lands and make them viable on all lands in Polk County. Tring to manage smaller parcels of public lands separately is a waste of time and limits hunters options.

I have been hunting in Polk county since I was 13 with my dad and uncle. I am happy you take our concerns seriously and appreciate the work that you do. I would recommend extending the bow hunting season and would not support an antlerless season. Thank you!

why would you allow 1 person to kill 6 deer in one season (gun-1 antler, 2 antlerless) (bow- 1 antler, 2 antlerless) when every year they’re seems to be lees deer. The new generation of hunters lose interest quickly when they don't see any deer out hunting!

I personally can not understand a doe only holiday hunt. I hunted countless bow hunting this year and hardly seen any deer. I am lucking I did get one. And also hunted 7 days of the gun season and never seen a deer. Every year we see less and less deer.

When are the kill numbers going to be revisited/revised to a more realistic level? The kill NUMBERS of antlerless are WAY TOO HIGH!!! Do something beneficial in producing BIGGER BUCKS...!!! That can't happen by killing off all the young deer and does!!!

There are not as many deer on public land in Polk County as you think. The quality of public land habitat has significantly eroded over the years and the logging keeps increasing. I feel sometimes that one day there will be nowhere to hunt anymore.

My only comment is STOP this rule of only using copper bullets . To many wounded deer will result from it . This is not California, this state is known for its lead mining . I've eaten deer shot with bullets for over 50 years !!

The only thing you might want to adjust is. Where you have an abundant deer in a CWD areas. Stop or limit the number of predators/coyotes taken in these areas. They will naturally thin down there herd. Just a thought. Good day.
my concern is have 90-120 der hunting. i am opposed to that long of adeer hunting season my opinionis the natural rut has been interrupted. i base this on the fawn sitings into late august into sept with fawns still having spots

I would like to change the deer license back to a BIG GAME license and let a few more people hunt bears , and try to reduce the population of bears. You could harvest an antlered buck, or a bear. Bow, Crossbow, or rifle.

I hunt the area off of county road E south of 48 and north of big round lake. the deer population in our area has gone down significantly to the point that we do not see or harvest hardly anything at all the last 5 years.

I am strongly opposed to my neighbor getting a outrageous number of nuisance tags every season to kill large numbers of deer in the name of wildlife Management, When he actually just likes to kill things.

Crossbow season should not be the same as vertical now season. Vertical bow hunters have a huge disadvantage in harvesting a deer compared to a crossbow that is much similar to using a rifle in the field.

We have a hard enough time keeping hunters involved. Making the refs more difficult to understand and pushing people to different units to shoot bucks will only contribute to a decline in hunters.

Polk county is not the same in north portion to south portion. It needs a split zone of north south. The north has much less deer and carrying capacity then the south which is actually farm land.

The crossbow season should be shortened as it has become too efficient of a weapon to use during the rut. End the crossbow season on October 31 and reopen it after the firearm season is complete.

I think it should be how it always has been. Extended gun seasons and all that will not bring in more people if anything it will hurt the people that actually buy both archery and gun licenses

With the large amounts of private land in Polk county that do not allow hunting except for a few family members,maintaining the deer population and crop damage will always be an uphill battle!!

I think we need to reduce our doe population to maintain a healthier herd overall. Proper management and a decrease of the existing heard will mean healthier deer an a better long term herd.

Currently, the greatest threat to the deer herd and our hunting traditions is the high deer population. They are eating themselves out of house and home. The Holiday Hunt is a good idea.

I live for bow hunting and my brother in-law cross bow hunts so please let us continue during the Rut, no gun hunting during that time. Also you could extend the season until end of January.

You should push the muzzleloader season back a week after the firearm season. That would give the deer a break from the hunting pressure. That would increase the muzzleloader success rate.

I think tour trying to change to many things at once. Also some wolf control throughout the state needs to happen before they kill every deer! How come we don’t hear anything about that?

I believe deer numbers in polk county are already too low,based on the #of deer I see while hunting. Especially on public land where the kill’em all mentality has been in place too long.

I’m in northern Polk county and I don’t think we have as many deer here as there are in the southern portions where there is more agriculture. Please take that into consideration.

This system works, look how close to the goals we are. In my opinion the goals are realistic as well. Give yourselves a pat on the back. Kevin Wallenfang is the best ever!

Deer observations last season were much lower than previous year. Suspect it related to timing is season as trail camera observations were at least as high as previous years

If the DNR is that considered about forest regrowth why aren't they doing more about Buck thorn and why did they cut down almost all of the public forest in southern Polk co
Concerned about some mention I have heard about eliminating bow hunting the week before gun season. I am in favor of continuing bow hunting right up until the gun season.

My family and I are all avid snowmobilers and oppose any late deer seasons, and we are all hunters. There is plenty of time from Sep. to Mid Dec. to harvest deer. Thanks

Please make CWD testing and management a priority! I am disappointed in how Wisconsin has addressed this issue. More needs to be done to slow the spread of this disease.

With public land around me that is heavily hunted and Wolfs in our area we see very few deer. Had to get my Grandchildren interested in hunting when seeing so few deer.

The county should consider a 4 point per side rule for antlered deer to lower the number of antlered deer harvest, gain more desire to hunt and see more antlered deer.

I live in the area where the tornadoes went through last summer so our hunting party saw a significant drop in the amount of deer we saw during rifle and bow seasons.

I would like townships and/or the county to establish buck management practices. Let the little young bucks grow a couple years so we can see bigger ones later on.

stop giving out doe tags, and go back to when it was a lottery draw like back in the 80's!! if things don't change, I will stop buying licenses to support the dnr.

Best analogy: Q: How many deer pull Santa's sleigh? A: 8? Q: Does that include Rudolf? A: I'm not sure!
Summary: I'm not sure either, but the DNR estimages 243.

Include a 4 point buck restriction on buck harvesting. This would allow bucks to mature and provide more bucks in general and allow more bucks to reach potential.

Last year we seen more wolves than deer. Even taking my son during the youth hunt we never seen a deer. We had a pack of wolves come by making us very nervous!

I do not like the Holiday hunt. I think with the variety of hunting options that we have today we should not have to hunt deer after the middle of December.

I live along side of us highway 63 in polk county, the traffic is so heavy many deer are killed so on my property where i hunt the deer count is way down.

Seeing less mature bucks. Makes me wonder if getting away from physically having to check in harvested deer is causing people to kill more than 1 buck.

If you are only selling a fraction of the tags that are allotted, then small adjustments to the # of tags allotted won't really impact on harvest totals

Significantly increase the fees for non resident licenses. The majority will still purchase and we certainly won't miss the ones that choose not to.

There is a lot of land been clear cut now and I rarely seen least number dead deer from car crashes in polk county not like 20yrs ago or even 10.

I liked the information on public hunting land percentage to private hunting land and then the comparison of deer killed on public vs private

We need this holiday hunt! There are deer everywhere and this provides a great late season opportunity to fill tags and hit the CDAC quota.

Leave the deer seasons alone we dont need no 18 day rifle season for 99 percent of the people hunt two days and whine they dont see any deer!
I don't think we have a real problem with CWD in Polk county. Taking away baiting is not the problem the deer farms are the big problem.

To many timber wolves, went from not even seeing a sign of them to lots of tracks and seeing them while hunting and seeing kills from them.

I'd like to see the county divided in two units, north and south with Hwy 8 the line. Totally different numbers in these two areas.

I think you guys are doing a great job and I REALLY hope we get the Holiday Hunt back.

Allow crossbows, which are really guns that fire arrows, to be used from October 1 to October 31 and then after the firearms season.

Don't see any big bucks in this unit, might want to put an antler restriction on bucks. Maybe 6 points or more. My opinion.

Instead of having all of these doe tags and you need money maybe you should consider raising the price of the licenses.

- Concerned about forest maturation on both public and private property.
- Also question deer population numbers.

My god... please stop permitting... the killing of female deer. Have you people lost your minds? For $ ????

We need a registration system to get accurate kill counts. Bow season is too long. Leave gun season 9 days.

Adopt an fork horn or better buck requirement to raise age class and encourage more does to be harvested.

Too many wolves. In the past two deer seasons I have seen a wolf each year. One was within 30 feet of me!

Stop the holiday hunt. You have a 9 day gun season to shoot does. We don’t need another season for it.

Would like to see more aggressive CWD testing along with increased enforcement on the use of baiting.

No antlerless season and keep the length of the season 9 days. We have too many deer seasons!

You can only control the 10% public lands so your recommendations don’t mean a whole lot.

Hunting on public land where I hunt has drastically gone down hill in the past few years.

Deer numbers are far too low in Polk County. Less tags need to be given and not more.

Ban all feeding, even though it wasn't allowed there was a lot of baiting going on.

I believe the 2020 deer season should stay the course with regards to past seasons.

I am 66 years old and crossbow hunt. I would like to see longer crossbow seasons.

I can only hunt a few days during the nine day so the holiday hunt is awesome.

Consider 4 point side for antlered deer and one antlerless deer tag per season.

Leave the season alone don’t need a 20 day season it’s just fine the way it is.

Allow baiting, yet another scan from the Dnr of Cwd found to prohibit baiting.

Just think there is too many tags giving out... and wolves need to be reduced.

Why fix it if it’s not broken, in Polk and St. Croix counties all is good.

Longer muzzleloader season Separate licenses for muzzleloader season

I support the holiday hunt. Maintain healthy and stable deer numbers.

Please discontinue all baiting for deer on public and private land.
Although the harvest numbers are low here, so are deer numbers.
Please keep the holiday hunt and 2 Farmland tags per license.
Extending the 2020 gun season by a week is my only thought.
Time to increase bear permits and establish a wolf a season.
Some farmland areas have too many antlerless deer on them.
Polk county should be split into 2 zones, a north and south.
Let's try antler restrictions or go back to earn a buck.
A lot of vehicle deer kills through out the county of Polk.
Do not change the 9 day season from the present. Thanks.
Large predators are a problem in Northern Polk County.
Have buck be 8 point or above and only 1-2 doe per tag.
Saw very few deer last year in northern Polk County.
Ban deer baiting state wide and also ban food plots.
If it went to antlerless only I wouldn't hunt.
Love the idea of an extended archery season.
Allow baiting in Polk County please.
There are way to many wolves.
Open season on timber wolves.
Earn a Buck should be used.
Too many bears.
Earn a Buck.
The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

544 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 320
   - I visit this unit for non-hunting purposes: 107
   - I hunt in this unit: 501
   - General interest in this unit: 103

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 475
   - Bow: 279
   - Crossbow: 191
   - Muzzleloader: 180

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 23.68
   - Maximum: 65

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 307
   - Mostly Private Land: 89
   - Public and Private Land About Equally: 36
   - Mostly Public Land: 14
   - Exclusively Public Land: 51
   - I did not hunt in this unit last year: 4

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 27
   - Not too crowded: 56
   - Neither crowded nor un-crowded: 43
   - Somewhat crowded: 35
   - Very crowded: 18
   - Not applicable: 11

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 84
   - Fewer: 177
   - Same: 210
   - More: 48
   - Many More: 13
   - Unsure: 12

Section 3: Feedback on the CDAC's 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th>Rating</th>
<th>7</th>
<th>30</th>
<th>215</th>
<th>185</th>
<th>97</th>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
Implement an ANTLERLESS HOLIDAY HUNT : Support 185  Oppose 302  Unsure 57

If a Holiday Hunt is held in a Farmland unit...
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: Support 250  Oppose 256  Unsure 38

If the Population Objective is not "Increase"...
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: Support 64  Oppose 437  Unsure 43

If a Zero Quota (buck only season) is adopted...
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? VALID NOT VALID Unsure Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?

Comments for  Portage, Central Farmland

Note: the comments presented in this report are the unfiltered opinions of individuals who responded to an online public input form. The viewpoints expressed do not represent the views of the state of Wisconsin, the Department of Natural Resources, or its employees.
First off I really do not think any of this will be read. I’ve written this after discussions with many other hunters. There should be a crossbow season. Keep the traditional archery season alone. Make crossbows have a two week season prior to the traditional firearm season. After rifle season open crossbow up again. I think this would be very beneficial to the deer herd but not the major issue. The traditional rifle season should be kept to nine days. This season had record lows because there was an abundance of crops available for deer to hide in. The rut was extremely early this year. In past years the rut was mid November. This last fall the rut was late October and early November. The rifle opener happened to fall very late. Most serious hunters predicted, prior to rifle season that the deer numbers were going to be down. There was one instance where I saw a small buck that was sleeping and I was able to walk past with spooking it because it was so exhausted. Keep traditional rifle the same and keep the following season for muzzle-loader hunters. This ensures tradition that many people follow. According to DNR numbers, the mid 1990’s had record years for deer killed, while this current decade has had record lows. Part of that reason is likely attributed to many years earlier having buck only season. Most old timers remember the days of buck only or party tag for does. Implementing a buck only season and eliminating holiday hunts may help the deer herd. Areas that commit to QDMA type practices typically have a better deer herd or deer population. I also realize that having buck only hunts is not always good for a population and that doe populations need to be managed as well. So one way to help the deer population would be by selling doe tags every other year or every two years. Another possibility could be antler restrictions on bucks. For example 3 or 4 point per side. This practice has been very successful in neighboring states. It also draws in out of state hunters. Have a 5 year trial on public land. If people like it keep it, if people dislike eliminate it. If people like the changes that are occurring make it statewide. Many areas in the state that practice QDMA ideas are already seeing the benefits of doing this. Another issue that countless people dislike is that there are not registration stations. People are not registering their deer anymore. Many are not even buying tags. How can the DNR get an accurate numbers if people are no longer registering their deer. Having registration stations at local gas stations, taverns or restaurants considerably helps the economy and camaraderie. People buy items at these local establishments. People also get together and share stories. These stories have a psychological impact. If people hear these stories about deer killed or see people with successful hunts, they are more likely to want to hunt. This idea has been studied by French psychologists Serge Moscovici and Marisa Zavalloni. They found that people can be influenced based off of their peers. Thus if people are able to see & hear about others in their community hunting they are more likely to hunt themselves. Another comparison that registration stations have is towards school and jobs. If an employee tells their boss they completed a job but there is no proof how does the boss know what is true? How can teachers see what students are learning if students don’t show teachers their completed work? Registration stations is the way the DNR gets proof. One minor thing that annoys and aggravates hunters is having tags by county. Have 4-5 zones instead. This could save confusion for many hunters. What does a hunter do if they shoot a deer in one county but the deer runs into another county where that hunter does not have a tag? I understand this a hypothetical question, but it happens. Most hunters acknowledge that different areas have different requirements for the amount of deer tags available or that can be sold. Wisconsin hunters also recognize that public land needs to be managed differently than private land. A solution that could be to continue the statewide archery and rifle buck tags, but make doe tags into 4 or 5 zones and not county. Also sell public and private doe tags because they need to be managed slightly different. A significant reason for this change is because there areas where people own land in two neighboring counties. Public land goes through multiple counties state wide. Create zones to sell tags so specific public parcels do not get split up. Doing this would also help prevent many private parcels from being split up. There may be several properties that are split into separate zones the number of private land hunters this may happen too will drastically drop. If you made it this far and read everything, thank you.
While I believe the existing deer population is healthy, I believe there are serious flaws in your population projection model. I hunt multiple locations throughout the county and state, and have run game cameras at multiple locations throughout the state. In all cases you seem to overestimate the deer population. This is consistent with your projected buck harvest numbers vs actual buck harvest numbers, likewise with the declining deer collisions. I was disappointed to hear the speaker try to justify this (with the intent of defending the population estimate) by saying this could be due to safer cars, or accidents not being reported or differences in how agencies treat and report collisions. I don’t mean to be inflammatory, but that’s extremely biased. You have a lot of indicators in front of you that suggest your baseline population estimate is too high. Additionally, I believe you are grossly underpredicting the influence predators have on population. In 38 years hunting Portage County, I’ve noticed a significant increase in predators. 10 yrs ago, I had never seen a bear, now frequently on camera and 5 interactions while bow hunting last year alone and sow with 3 cubs on camera 4x last year. I’ve had numerous wolf photo’s and one sighting in person. I live in wolf country in northern MN now and find it insulting when DNR folks keep trying to tell me they are coyote over the past 10 yrs. Most hunters are outdoorsman and know wildlife and their surroundings. Simmilarly, I've seen a lot of lion sign in northern WI and you keep telling us they are passing through. They are illusive and wouldn't leave that much sign if they were just passing through. Anyhow, your survey only provides for input on how we would like to proceed with increasing the deer harvest. I think the better question is how can we improve our data and closer improve our estimate, heard health and Hunter success/satisfaction. You already have declining Hunter numbers... if you ever conduct an antlerless only season, you will inevitably see a huge decrease in Hunter participation and part of that loss won’t likely come back... so rather than bringing that up as a management tool threat, you’d be more productive to not bring that up at all.

I bowhunt only, and on public land entirely, exclusively on The Mead Wildlife Area. Area private landowners get the "PUBLIC" land choice on their authorizations for for doe harvests. Why, because they prefer to save/stockpile the does on their private land, and rape the public lands for does. When I can bowhunt 9 different days and not even see a deer, it gets pretty disgusting. Doe harvest on public land should not be allowed, PERIOD? Did that statement get anyone's attention? Most likely not. Also, public land is overcrowded for the prime time period of mid Oct up until the gun season opener. I try to get away from the parking lots at least one mile, and sometimes further, and I still cannot find area(s) that that does not show signs of other hunters. Gun Season overcrowding is just UNREAL. Predator load? I rec'd this email from my local DNR employee (12.29.2019): "Mead is home to at least one wolf pack. As far as numbers go, we can only estimate the number of wolves on the property based on track surveys and personal observations. In years past, we have had reports of anywhere from 4 to 12 wolves in that area. Winter track surveys suggest that number is on the lower end. So while I can’t give you an actual number, my best guess would be 5-7 individuals on the east side of the property." Just add bears, bobcats, and coyotes to the Deer Consumer list, too. I had a trail cam out on east end of The Mead this past winter. I have 3 different wolves on my camera alone, and this is after the killing of what I heard was 2 wolves during gun season. My opinion is there are ALOT more wolves on The Mead than you people realize. FWIW I turned 65 years old last month (March 2020), so I have been a bowhunter somewhat longer than some of you people have been alive. Do I think ANYTHING will change in regards to the over harvest of does? No, but at least I got my opinion added to the discussion, hopefully. Where you people come up with these population estimates you put out, is beyond me. I suppose most of your members are farmers, that would just as soon see the whitetail deer eradicated from the landscape. Not a happy camper, and if this keeps up I won’t be buying a deer license in Wisconsin any longer!
I’ve been hunting in the Portage County farmland zone for approximately 6 years. I’ve seen some major changes in that time alone. I’ve seen an abundance of over-crowding on public land to which during the gun season I stay away from normal hunting spots that I visit frequently during bow season. Last year I didn’t make it out as much as I had hoped for the archery season but the few times I did I was not let down by the bucks I saw! I think the population is healthy and are very few issues in that regard. I’m also hunting in the lower part of Portage County. The issue I’m seeing more of is out of state hunters. I know they bring in good revenue but when these hunters are buying land and houses in Wisconsin and then hunting the public land it’s over-crowding a lot of areas. Some hunters I’ve known for quite a few years really depend on meat to fill the freezer and when they lose out on spots due to over-crowding due to out of staters it gets frustrating! I would propose a season or timeline of some sort for residents. For example in South Dakota during the pheasant season residents get to hunt the very first part of the season I believe it’s like the first week of the season. Then non residents are able to hunt after that. To me that would give residents a fighting chance to provide for there families and bring back the hunting heritage. I grew up that hunting was more than just going out and killing a deer or that big buck, but more of looking forward to hearing all the stories from years past about the big one that got away. In my opinion that’s gone. It’s now all about who can get the biggest buck and doing whatever it takes even if that means pushing a guy out of his spot to get it. Bow hunting has always been a pleasure in this unit. With each year though I see more people out with crossbows and I see numbers climbing. That’s a good thing don’t get me wrong people are getting out there but for the people who don’t want to use a crossbow, we are at a disadvantage. Maybe shortening up the crossbow season would help hunters that aren’t using crossbows get back out and help keep the deer numbers in a good spot. Thank you for your time!

Wisconsin could be the best trophy whitetail state to go to. Right now we are close to the bottom and a lot of hunters are thinking about quitting including me. I am a die-hard hunter and love to hunt but want to hunt for a trophy and that chance is little to none in WI. Please see the following factors: 1. Need to kill the wolves. We need to eliminate wolves- which are eating all the deer. Just taking a few wolves will not help. 2. Stop shooting all the small bucks. We need a size limit or drawing system to increase the size of bucks. They just need time and they are getting killed before the develop in to a trophy. 3. Stop the large gang deer drives on public land. They are raping our land and those who hunt public land are not seeing any deer because a group of 30 guys come through and shoot everything. 4. Stop shooting the does. We need the deer production. Especially if those guys keep shooting the small bucks. Years ago there was so many more deer more bucks would just be born. Now without the does the buck population can’t grow large enough to keep up. 5. Plant good deer plots and food trees on public land. Deer are leaving public land to go on the private and eat because they want the good food. If you have to choose between good clover or dry sticks what would you choose? Make those changes and everyone will be happy. It might take a year or two and the difference will be noticed. The wait will be worth it and the state will make so much money and hunting will grow instead of dying. If you don’t change you will continue to lose hunters including me.........
In my area there are less gun hunters in woods then ever. Bow hunting used to be a time if piece and quiet in the woods. Now I watch 6 of my neighbors go out and fill there tags before rifle season with cross bows. Less hunters in the woods in rifle season means less people to move deer around for others to see. I highly protest the cross bow season to all. Iv always like it for people that don't have the ability to pull back a bow or maybe for tax paying landowners but not my neighbors buddy from Illinois sitting on my property lines. I also believe that they should be aware that cross bows are not rifles I've found 5 dead deer in my hunting property, 2 with the bolts still in them. People are taking to long of shots at walking running deer because they don't understand archery concepts but given the privilege to be wound animals. I have hunted this property for 25 years and there's plenty of deer but no actual hunters left come rifle season. I also believe that Wisconsin residents should have the right to feed there families with venison before the non residents overpopulate and scare the deer away. I used to hunt with alot if people that have given up now because the opportunities are poor even with high deer numbers in my area. The cross bow season is ruining tradition in wisconsin. Every year beginners get the chance to learn the easy warm way they will never want to go out and sit in the cold to find deer. The DNR might as well force us to all go buy a cross bow now. In 10 years no one will choose to gun hunt.

If numbers are high, you need to kill doe and leave buck alone...otherwise no one except meat hunters will shoot a doe. Many young hunters are turning to big horns or nothing...not fans of the meat flavor. This over populates doe. If you do a doe only hunt for a few years it will make horn hunters happy long term with bigger number of bigger racks and meat hunters and population numbers happy by limiting overall mouths. Earn a buck is a slower alternative to doe only. Unless you get really creative: No buck hunting except Oct to Dec...that way doe are in the field and more vulnerable Sept and winter. Or due youth hunt in September...with current timing the leaves are all orange so in my opinion it's harder to be safe. I only bow hunt the rut and horn hunt both gun and bow due to time. I get meat from my gun hunt...lots of brown its down... they want to shoot but don't eat it or horn hunt. So if it's not a big rack I know I'll get my meat later ( I love the meat, but dont like wasting a life for nothing) example- 16 deer last yr with 15 hunters (youth, bow, gun) and over half don't like it so I was able to take my buck and another deer...I'm likely going to grab more from the groups stock pile of left over roasts. Nothing outside of antlerless only or earn a buck will make me shoot a doe and I'll never shoot a small rack unless injured...I'm sure there are a lot of hunters like me out there too. Just a suggestion

A 9 day gun season, 10 muzzleloader, 4 day antlerless only and a Holiday hunt is far too much gun season. The later hunts further pressure deer and decrease opportunities for an late season bow hunters. Even with an archery extension, success rates on even seeing deer is very low. If harvesting more does or creating more revenue is the ultimate goal. I feel removing the holiday hunt and replacing it with an unused gun buck tag is valid for late season archery. To increase the amount of doe harvest, you could require to harvest one doe prior to being qualified for that authorization. To increase revenue, you could require a fee to use your unused gun tag for late season archery. For example: before season, you have an option to purchase a authorization to use your unused gun buck tag for late season archery. For example: before season, you have an option to purchase a authorization to use your unused gun buck tag for late season archery for $10 (or whatever fee you feel necessary) Along with that you will receive a antlerless tag that you are require to fill prior to the end of gun season. (Could fill with archery or gun). Sales for this authorization would end prior to the start of gun season. (I believe you would sell more on anticipation rather than, buying one after you don’t harvest). I know myself and many other hunters would pay a fee and harvest a doe if had the opportunity to use my gun tag for late bow. And many of us would harvest a doe we would normally wouldn’t.
I hunt on the Emmons Creek Fishery Area and Pickerel Lake SNA when I hunt in Portage County. I have hunted deer in the same geographical area for 30 years. In Fall 2019 I spent 11 days in the field for purposes of gun hunting (two days prior for final scouting and I hunted all 9 days during the regular, nine day gun season) and over 45 days in the field for small game and bow hunting. I have NEVER seen fewer deer than this last season/fall and heard fewer shots during the nine day season. In the recent past (2014-2017) I have seen hunters harvesting 3-5 does per hunter in this area which is decimating the herd. I would be strongly in favor of having an application for a single "hunter's choice" tag (one deer, buck or doe) per season per hunter. Like the seasons used to be when I was a youth. I also hike on the Ice Age Trail and around the Emmons Creek Fishery Area during the off-season from hunting and found the same lack of sign and lack of visual sightings for deer throughout most of last year. At one point in February 2019 I hiked the perimeter of the Emmons Creek Fishery Area and quartered it when there was fresh snow. I encountered only 4 sets of deer tracks. Quite the stark contrast from even 10 years ago. Please strongly consider reducing the antlerless harvest. Go back to "hunter's choice".

In general, I think there is a great deal of thought put into the overall deer management process. However, I do think there are a couple things that should always be considered as part of the CDAC Recommendations and when putting things in place for deer management. 1) Consider dropping all the different "hunts", antlerless only, holiday antlerless hunts, etc. Just open archery/crossbow season mid September and let it run though January 31st of the following year. You get one buck tag and your antlerless tags based on population. 2) Open Gun deer season the Saturday closests to the 15th of November (I think this is a recommendation) and let it run through the Sunday following the 15th of December. But do not close Archery/crossbow and during the gun season you can use a Muzzleloader if you choose. This extends the season overall for gun. You are still only allowed 1 Gun buck tag and your antlerless tags based on population. Extending gun season and starting gun season closer to the rut timing will most likely achieve better success results overall. You can then control populations simple based on tag distributions.

My comments are based on talking to neighbors who are fellow land owners, hunters who have permission to hunt these same private lands, and just friends and coworkers who hunt other private properties all over the county. No one I've talked likes anything to do with extending the gun season a 2nd week, the antlerless holiday hunt, creating a separate xbow season excluding Nov, extending the archery/xbow seasons though Jan. Thanks to the mismanagement of the DNR's mandatory EAB practices of years past the majority of hunters I know have developed their own personal management of their local deer herds. It's not going matter much how many tags you hand out or how many antlerless seasons you have, hunters of private lands will manage appropriately for their area. Implementing a antlerless only season will only make some land owners sit out the season causing large parcels of land for deer to hide where the hunters that are participating wont be able harvest. I hope the DNR considers all the possible ramifications of any future antlerless only or EAB season.

Do the members on the CDAC committee really represent there role? Seems like their comments are directly related to their own experiences. I am able to hunt varies parts of the county on mostly private lands and take walks on the public lands as well. I am amazed at the lack or new tree growth / establishment. Seems DNR has the science to back deer browse issues but yet over the years the committee members vote to maintain. Based on the committees roles there should be at least one vote to reduce the deer populations based on browse. If you study the numbers over the last few years the concept of maintaining the deer populations is actually increasing the deer population. What is the starting base population compared to now? Cities and villages are contracting to lower the deer populations in their communities so again i would assume there should be 1 vote to lower the population based on this. Vehicle kills are quite evident on the landscape and farmers are alway talking about crop damage. Seems there should be even more votes to lower based on this.
One thing I would like to see is to address the logistical issues associated with the distributing of antler less tags. As of now, we have to indicate the county and whether or not we will harvest that antler less deer on private or public property. As someone who is frequently hunting in multiple counties and interchanging between public and private this has immensely complicated my ability to harvest an antler less deer during both the gun and bow season. There has been many many occasions that I held an antler less deer tag but because it wasn't the right county, or the right land preference I had to pass the deer. I believe developing a system that allows at least one antler less tag to transcend counties and also can be taken on public or private would elevate a lot of frustration. I can't imagine that I am the only one feeling this frustration. Thanks for your hard work and consideration to all involved in managing and preserving our natural resources for the future!

Previous 3 year recommendation was to maintain, population went up. Current 3 year recommendation is to maintain and again it is going up. What percentage has it gone up since 2014? Do you always just try to maintain for the current 3 year period or is it compared to its original base? If maintain is considered to stay within 20% of the current 3 year period then the committee will for the most part always meet its 20% goal, which has increased in each 3 year period, and then get another 3 years to let it go up another 20%. The percentage should be compared to the original base year to compare what they really wanted to maintain the numbers at. I would really like to know in one of your power point presentation slides what percent the population has gone up from the original goal in 2014 of maintain. If you really want to maintain and/or harvest more deer then earn a buck needs to be used every so often. Not popular but quite effective.

Opposed to issuing antlerless permits or extending the season. If we are going to maintain the deer population, the continued killing of antlerless deer must stop. This is evidenced by the reduced deer population and much reduced interest in hunting in the Northwoods area of Wisconsin. I own property in Oneida County and the interest in deer hunting during the gun season has dropped dramatically because (I believe) the much reduced deer population caused by harsh winters, predators (destructive wolves) and issuing too many licenses. I am a big proponent of the DNR but often believe there is too much emphasis placed on license sales. It is obvious the wolf population is out of control and they are destroying the deer population. I realize this is a Federal issue but it does need to be contained if the deer population is going to return to something more normal.

There is no need to have this many antlerless tags in our unit. I only saw 1 deer the last 2 seasons! I won't allow my kids to take that many does on our land in order to maintain an adequate population. When I first started hunting, I could see 10-12 deer in a day for opening weekend. Now, I'm lucky to see 1 for the entire season! It's difficult to engage new young hunters to hunt when they don't see any deer for a season! I would say 1 buck and 1 doe per hunter with no bonus tags. We need to get back too the way the population used to be. With fewer hunters in our land and surrounding lands, and no baiting, it's extremely difficult to see deer moving on our stands. Hunters will be happy to help manage the deer, but not if we don't see any. If things don't change shortly, I fear that we will continue to lose many hunters young and old.

Over hunting of trophy bucks has led to a weaker, smaller bodied and more shy whitetail herd. Deer yard up in protected areas by day and nocturnally over-browse young forest vegetation. The longer cross-bow season, not registering deer taken along with multiple buck tag opportunities is wrecking the sport. People always take the path of least resistance and when it comes to buck harvest in Portage county, many violate to save their tags. I've heard lot's of boasting about shooting more than 4 bucks in a single deer season. Taking of excessive antler-less is imperative to the health of the herd and responsible hunters will harvest mature does if they see them. It is clear that hunters in this county do not prioritize shooting does no matter how many days are made available to do it.
Thank you for the survey, I live and hunt Portage County. The white deer, that are not albino, because do not have red eyes are illegal to harvest. However, their population continues to grow. In 2020 prior to gas drop I am counting over 21 different white deer in driving around a 2 square mile stretch of land in the evenings. Also, there are a significant amount of them between point and rapids. Could you please consider an extra drawing for harvest of some of these deer? Also, if you would not consider harvest of these deer could you consider offering the college or Dnr the opportunity to do a census on the deer or genetic makeup so we can understand the long term impact on our deer herd without a harvest allowed? Thank you for the great work and seeking public opinions.

The number of actual bonus purchases compared to offered is a good indicator of Maybe a better option is to lower the cost of licences for residents which may have more people go back to hunting and harvesting. At the same time raise cost of non-residents which may incent them that if paying that much there may be greater tendenancy to shoot antlerless (besides rediculously low compared to WI residents purchasing in other states) The current zone structure is messed up - way too large to manage properly, plus requiring hunters to designate private or public, or purchase both, has a lot of people fed up and think it is hurting the numbers and harvest. Suggestion to simplify structure by making units smaller (similar to old structure) and eliminate the public/private thing.

I have seen two deer total on the Mead in three seasons. I feel like this willy nilly giving of tags is useless. My daughter won't even hunt with me anymore because she hasn't seen deer at all. Something has to be done and giving away more tags isn't it. The herd in our area is NOT as big as you say. The idea to give up wearing back tags is dumb. It gives poachers basically free reign to kill. No one can report anyone anymore if you see someone poaching without approaching them. Most won't approach a poacher because of possible dangers. Things NEED to go back the way they used to be 15 or 20 years ago. Get a buck tag, or apply for hunters choice. How about earn a DOE for a few years. Too much to say in this format and I doubt anything I say will make a difference.

I own a crossbow and bow. I've hunted with both. I would support a state wide archery only, no crossbow early season through at least the fall youth hunt. Then the remainder of the season would be crossbow or archery. I feel the crossbow hunting is putting too much pressure in the woods throughout the entire archery season and making the bow/crossbow levels of deer pressure similar to gun season. I hunt in an area with high deer density and high hunter density. I appreciate the ability to lethally and effectively harvest antlerless deer with the crossbow, but I think we've lost the solitude and peacefulness bow hunting used to provide. There needs to be some portion of the season still reserved for that slower paced, peaceful, more primal form of deer hunting.

I have been hunting many years and think that the harvest numbers are OK. However I have noticed that for the most part I am only getting deer with the crossbow. I do put in many hours but enjoy the other wildlife I see and the fall weather. As far as the gun deer harvest the deer are there but being there are so many hunting seasons that if I do not bag a deer opening weekend they are running at distances that would not make sense to shoot at. The deer have become more elusive and more nocturnal than even 10 years ago. Also if there is an issue with too many deer taken with crossbows change the age to say 50 plus years old or similar. I was not in favor of crossbow to all as I knew there would be backlash from bow hunters. Thank you.

I think there’s way to many tags available. Should be a buck and a doe tag for each license, gun, bow. When I started hunting a little over 20 years ago We received one buck tag for each license or apply for a either or tag and we were all just fine with that. Two deer in the freezer is plenty of meat for a small family. At that time we could sit and watch deer all day on private and public land. Actually be able to choose which deer we wanted to harvest. Now we can sit almost all season before we even see a deer and that might be the only one we see. I use to be as excited as a kid on Christmas morning for deer season. Now I don’t even want to buy a tag or maybe go to a different state and hunt. Very poor management around here.
Way less deer being seen in this unit and way more hunters being pushed into this unit due to the surrounding units low numbers as well! Especially after the dnr ruined a large piece of public in neighboring Adam's county by pasturing cattle on it and then ruined another in portage county only a few miles away. I dont know why the dnr needs to pasture cattle on public land... oh wait yes I do ... just another way to make money while ruining something for the hunters who you guys say you need our input on... I call baloney because everyone in our area that hunts these areas is extremely mad about the deer numbers and the dnr lands being used to pasture cattle. Thanks for ruining what land we did have by doing this!

I oppose the crossbow season, and think it is time for the DNR to reevaluate this approach to hunting. It was passed in 2014 with the caveat that it would be reviewed. Far too many deer are killed and wounded by crossbow hunters, and it is a clear license revenue grab by the DNR. Go back to the original age/handicap rules that were intended with this crossbow weapon. Please go back to back tags. Please do not extend the 9-day gun season. Keep your rules simple and consistent. Yearly change is getting ridiculous and confusing. With all the changes, crossbow rules, and indecisiveness from the DNR I am contemplating giving up hunting, and selling my land. Something I never would have thought I would consider.

Provide one free tag and the number of purchased tags will probably go up. if you buy a tag you more likely to harvest one which should increase harvests. with two free tags there is no incentive to shoot more deer, I'm not out anything if i don't shoot the second deer. just driving through the county after snow melt revealed how many car kills there were, its unbelievable there everywhere. we have done harvesting in our woods with little new growth, to much browse. bow season is long enough no need to extend it. over last several years deer population has seemed to go up considerably, maintain seems to have increased the population. earn a buck is better than an antlerless season.

Live on and own 60 acres in SE Portage County. We have hunted here since 1991. I have not noticed a great variance in the deer population over the years. Obviously this is based only on my observations and hunting success. Setting a quota/goal of 6000 antlerless deer permits is equal to the entire 2019 deer harvest in Portage. It seems unrealistic as last years quota of 5200 was just over half realized. How people hunt has also greatly influenced deer harvest. For the most part gone are the days of the deer drive. Where many antlerless deer were taken. Simply providing more permits I feel will not significantly increase the harvest of antlerless deer. Thanx

I have personally seen more wolf sign than ever before in this hunting unit. Your number of estimated wolves is too low in this area. They kill more deer than u think they do and need to be eliminated. It is a shame that you turn you head every time somebody brings up this issue. There is no benefit in having active population of wolves around. Without wolves you would be able to offer more licenses to hunters. A 9 deer gun season is more than long enough...in those 9 days deer are ran ragged especially on the public lands. Your greed for selling more licenses disgusts me...your detatchment from what is actually happening in the hunting woods is alarming.

Take a driving tour of the South-Eastern area of the county. There are hundreds of deer than you can see by a one-hour drive in the late afternoon, right now. It's extremely impressive how they are very visible until the start of the gun-deer season. Some of my highest deer counts in the field have been on the second weekend. I believe that they are very sensitive to the pressure and field reports are probably less than accurate. We have more deer down here than most people think. I love deer and deer hunting, but I believe we are beyond carrying capacity. A hasta plant will not make it in my front yard :). Thank you for addressing these issues!

I have had the opportunity to become a hunter as an educated natural resources student and learn about CWD, wolves, elk properly. This was my first year hunting, and the amount of deer I saw during the season as to offseason was extremely high. As I drove from Stevens Point to Green Bay this past winter/springtime I saw fields of deer...I saw fields with 50+ deer browsing. I would suggest and urge a spring hunt if possible around the turkey season. Both of these species are growing at a high rate, but perhaps providing an alternative season with better weather that the animals can not predict or are used to could increase the harvest rate.
I would like to see the inclusion of hunting pistols and single shot rifles during muzzleloader seasons. Modern muzzleloaders are as accurate as more modern firearm designs. Other than ease of reloading there is no disadvantage for muzzleloaders over pistols or single shot rifles. The added challenge of hunting with a pistol or a single shot rifle is something I enjoy during Wisconsin's gun deer season. Considering the use of crossbows during archery season is already allowed I can only wonder why other "primitive" firearms such as revolvers, single shot pistols and single shot rifles would not be permitted during muzzleloader seasons.

I think definitely charge more for out of state hunters. Grit ride of crossbows. Strop wasting money on CWD. Never will get rid of it. Buy CWD resistance deer. That way you are pleasing everyone. I agree on that in certain area numbers of deer could be shot but the high CWD areas have the biggest n best deer herd and shooting the biggest bucks in the state year after year. I have lots of friends and family that all quit hunting northern Wisconsin, wolves cleared out the deer. They don't hunt anymore. They would see 10 times the wolf's then deer. I know of 20 friends n family members that all quit hunting for that reason.

You have to take into consideration all the deer that are not being registered. If you make an incentive to register your deer, you will get better numbers. Wolves in the northern zones have significantly decreased the population and a majority of our MN and IL hunters hunt there. If you are worried about dollars, kill the wolves and get more deer where non-resident hunters hunt. Also, increase the non-resident tag amount. Lastly, farmland/private land is consistently being converted to subdivisions or smaller parcels, if you incentivize landowners with tax breaks or other financial gains, you would see more deer habitat.

I would like to see just one buck harvest tag issued to hunter per season. So if I harvest a buck during bow season my only option for gun season is to harvest a doe. Deer are hunted way too long in Wisconsin compared to other states almost 4 months adding holiday hunts is not needed. If you are looking for extra revenue increase non resident tags. I pay more for to hunt upload birds in South Dakota then a non resident pays to hunt deer here. Get rid of the Youth hunt it is not teaching our kids to hunt and it is not keeping them in the sport. Just look at license sales since the youth hunt started.

I am a private land owner in Portage County (own 40 acres of wooded land). I do not reside on the land but I do maintain it and am paying full taxes on the property. I strongly object to any type of bow hunting since I repeatedly find dead deer on our property which have been wounded by bow hunting and not found. I would like to find a way to prevent bow hunters from coming onto our property but "no hunting" signs are ineffective...bow hunters seem to increasingly ignore such signs. Do you have any suggestions on how I can keep bow hunters off of our property?

Unfortunately I feel that you are making decisions on false numbers of deer. I have heard numerous people in the area talk about shooting three four even five deer, both buck and doe’s but do not register them. I own 152 acres and had four people hunting it. My next-door neighbor owns 60 acres with two people hunting it. None of us saw a deer last year where deer have been plentiful in the past years. I don't feel that you will be able to manage the deer properly until you go back to taking the deer and taking them into a registration station.

My private land experience has indicated an uptick in the amount of coyote deer kills during the last 2 years. That is disturbing to me as I was not aware that coyotes could take down a mature healthy deer. I also know that my private land has black bear taking advantage of fawn births, but my deer cams do not indicate other than what appears to be normal bear - deer interaction. The deer numbers I have seen in conjunction with neighbor comments suggest the deer population on our land has remained stable during the last few years.

I have been hunting deer in Portage county for the past 26 years. The amount of deer I see in the woods has steadily declined since 2008. I have lived in Portage county for 52 years. Every day when I drive through Portage county I see less and less deer in ditches and fields. Bring the herd population back to what it was in 1994 -2008. I am considering quitting deer hunting because of seeing less deer. From 1994-2008 I would see 40-50 deer on opening weekend. Now I am lucky if I see 3 deer. This goes for the rest of my family too.
7510 I think crossbow season should stay the way it is. back tags are stupid waste of money, keep registration format the way it is. I think bucks should not be allowed to be harvested during the youth hunt. If crossbows are not allowed during the rut then ALL methods of hunting should not be allowed, including bows of all types it should be easier to have a harvested deer tested maybe a free test kit included with a license purchase, to check for CWD. All deer farms/pens should be banned in Wisconsin immediately until CWD is under control.

7511 Why no report or numbers of wolf/bear kills. Wolf and bears numbers are out of control. As a kid I never had to worry about these animals in central Wis. My grandchildren can’t roam the woods like I did. Not funny when you run into these animals. Find remains of their kills way to often. Don’t like finding this. Does the dnr actually listen to hunters or just people who have no idea of reality. Been on dnr surveys. Not what I saw in their reports. Very opinion slighted. Too bad this is how most hunters view the dnr.

7512 What really irritates me is those individuals who over harvest deer using the various extra tags available to fill their garages with carcuses. Many other hunters go the season without seeing or being able to harvest a single deer. Place a limit on individuals purchasing extra tags. Cut backs of wardens ability to travel\enforce by previous administration has also caused much damage. Hunters shouldn’t have to go to other states to harvest deer. Predation by wolves and coyotes have also taken a toll.

7513 I think, at some point in the future, going to a 4-point on 1-side restriction would really help stimulate the number of mature bucks in Wisconsin (especially central Wisconsin). It seems to me that private land owners/hunters need to do a better job of taking anterless (mostly doe) deer. Upping the amount of public land anterless tags is just going to create more hunting pressure on public lands while limiting the amount of quality deer sightings on those public lands. Thanks for what you do!

1698 In a 5-10 mile radius from my home I am able to see upwards of 30 deer on a given field/visual sighting from one point. I am surrounded by an overabundance of deer of different populations. And am sickened by the lack of undergrowth around my home, on the private and public land I hunt within minutes of my home. The browsing on the undergrowth is too much. My observation and that of a forester that surveyed the private land I hunt. UWSP Natural Resources Management graduate.

1699 I believe the presentation for Portage county was focused too much on the overall number (which is obviously important) of the herd in this county. I think in the future we should start considering the quality of the deer in our county and impose an antler restriction to give more people a higher probability of shooting a quality deer. This proposal may not go over well but I think at least talking about it will generate ideas as to how to improve the quality deer.

1700 No antlerless season - bring back earn a buck. don’t give out two free tags. that’s to many free tags. what is my incentive to buy the bonus tags. two deer are enough to eat. lot of car kills on landscape. this alone shows population is steadily increasing, not maintaining. based on this alone there should not be a unanimous vote to maintain. there should be one if not several other lower votes based on what the cdac representatives are suppose to be representing.

1701 I believe that with the current Covid-19 situation that there will be more hunters wanting to participate this fall. My rationale for this is that a lot of people that stayed at home have used up a lot of there food reserves in their freezers to avoid going out to get groceries and that more people will want to restock their freezers with venison. Therefore this would allow more people the opportunity to hunt that otherwise would not participate in the past.

1702 Need to open gun deer season earlier every year and lengthen the gun deer season. The current length of our regular gun deer season is too short, especially when compared to the cost of the license. Also, look at other states. Another reason why we are losing more hunters each year. It usually opens after the rut and the bow hunters have taken many, many of the bucks. Only does are left for gun hunters. Another reason for fewer hunters.
A hunter should be no younger than 14 to harvest a deer, 5 year old children do not harvest the deer, their parents shoot the deer for them. Crossbows need to go back to elderly and handicapped hunters, once again 5 year old children do not harvest their deer, the parents shoot them with crossbows. I think too many antlerless deer tags are being given out in this unit. Please only give one antlerless deer tag to each hunter not two.

Deer count is way down from what I’m seeing in my woods. Shooting more does will never help I saw 11 deer this whole 9 day season. Terrible by my standards. I understand maybe the deer had different patterns weather etc. I enjoy deer hunting especially with my dad on our 80 acres but the deer hunting really isn’t that good and hasn’t been in recent years. We don’t shoot does or small bucks. It’s really not rewarding or exciting to us.

Deer drives on public land create unsafe situations. I have set up several times and had to leave the woods when a drive sets up to comb the woods. The timing of the gun season did not line up well with the rut and the crossbow hunters had the advantage. Local land owners plant deer food plots and draw deer from miles around and we see fewer deer on public land. Crop damage permits also take a lot of deer before the season starts.

The deer population numbers in Portage County west of the Wisconsin river are extremely low. I hunted all 9 days of the gun season and saw a total of 4 deer. If the DNR wants to retain hunter numbers and improve recruitment especially with youth, the deer population must be increased. There is no way I will be able to introduce my young grandson to deer hunting if opportunity to see deer continue to erode.

ANTLER Restrictions like PA did. More draw to the state for better herd/ bucks. Higher number of mature bucks Stop all these extra holiday/ youth, early hunts... they've truly destroyed the anticipation/mystique of opening day and the tradition that WI used to be known for. The deer population is stressed non stop because of this which has resulted in less success rates and in turn less interest. Thanks

I’m concerned about CWD and disease within our herd. I support more aggressive deer harvest. My fear is that nature will control the herd, not hunters. With CWD closing in around portage county, I feel it is important that we stay aggressive and promote more opportunity across the board. Hunters need to stop bickering about what weapon kills a deer. Hunt, have fun, and enjoy yourself. Thank you

Limit the use of crossbow during bow season. You may as well open up gun hunting during the entire bow season. Crossbow doesn’t take anywhere near the amount of skill and ruins bow season for many bow hunters. I personally had trophy deer taken out from underneath me by a person with a crossbow that didn’t put the time and effort in that I did trying to harvest a trophy. Crossbows suck!

Need to realize there are pockets of deer. Don’t rely on you seeing 20 deer on private land in one area. Many of us didn’t see a deer in the month of November, even though I hunted with a crossbow, which to many is “unfair”. Hard to shoot them if you don’t see them. I’ve shot plenty of deer in the past so skill is not a factor. Quit giving away so many for tags for free!

I think there should be only one buck tag an one doetag per license To many deer are taken with gun bow youth hunts an car kills know extra time should be added on to this But thats just what i think

Stop all the extra tags for the youth hunts. Let the kids hunt when it is regular season like it was always before. There is no reason the youth go out and shoot all the large deer (bucks) and chase all the deer around before the season starts. And lets be fair the parents end up shooting these massive bucks half these kids shoot anyway. Its not right.
1. I think Wisconsin should charge the same for out of state license as the state the hunter lives in.  
2. To make Wisconsin more attractive to other hunters to want to come and hunt, we should raise the buck tag to at least 3 points on one side of rack. This would cause more bucks to make it through the season and bigger bucks through out the state.

Please get ride if the private, public and county to choose your antler less permit. I hunt three county’s private and public hard to decide where to pick where u want to use your tag. Go back to 4 or 5 sections reduce tags where deer herd is low. Please change this. Wolves are not helping our herd but that is a whole different story.

Having a reasonable chance of harvesting a nice buck or a large doe in the last 3 years in my opinion is due to the pouching happening at night. I hear alot of shots at night seeing as I have to smoke outside, and people shinning at 1,2,3 in the AM. Suddenly the big bucks that people have been watching for months are gone.

I have lived in this area since 1985. this past summer in my farm fields I saw zero to very few fawns. I think the coyote an wolf have cut down the fawn numbers drastically. Also you need to allow some shooting of the white deer. Their numbers are increasing every year. The only bucks I saw during the gun season were white.

Since the start of electronically registering deer instead of paper tagging the amount of poaching and reckless shooting of deer has sky rocketed. People are tagging only the biggest deer and leaving the others or cutting them up before they go back out. That is why harvest numbers are down but more deer are getting shot.

I believe hunters need to ban together. It doesn't matter what kind of weapon you use (compound or cross bow, muzzleloader or rifle etc.....) as long as you love to hunt. When I was younger I couldn't sleep the night before opening day of gun deer season, because it was tradition. Seems now days we get away from that.

I hunt only on my private property (150 acres). Family and two close friends are invited. Good repour with neighbors. We do not use deer management with trying to save the big bucks. You can't eat horns! Checking the gut shows the animals eating like cattle. The winter of 2019/20 was good with no known deer kill.

I would strongly support antler point restrictions for the buck harvest. Three legal points on the main beam of one antler (not counting brow tines) should be a minimum. I believe this would both improve the overall health of the herd and hunter safety (by increasing focus/caution when identifying a target).

Due to the over harvest of deer in Portage County there are very few deer on private and public ground during the normal Deer Hunting Season. Due to the lack of game I may not be hunting in Wisconsin for the next few years and you loose an out of state hunting license and local businesses lose my business.

We wish that shining deer would be stopped completely. Very Invasive to our private property. Feel that the deer can be easily poached by the use of crossbow by unlawful people. Also, hard to get a license number of a shiner after hours as asked for by law officers when they shine our house and buildings.

I live on my property and use trail cameras. The deer population in my area of southeast Portage county is down significantly from the early 2000’s. Id suggest it resembles the car deer collision metric. I am not suggesting this is true in all of Portage county but it is true in my neck of the woods.

We need to limit the crossbow season. This is similar to hunting with a gun or muzzleloader, so this season should be only a week or two also. With the improved bow technologies, I think we should reduce the length of the season, or limit each person to one deer for either the bow or gun seasons.

I have NOT harvested a deer in this county since 2008. I have not seen the the same numbers of deer that I did in 1995. Creeks drying up when irrigation wheels are activated. Deer tracks are fewer, bear tracks and wolf tracks are present at times. We’ve always had coyotes so I know the difference.

The amount of small bucks harvested needs to be addresses. I would support a point restriction ! The amount of private land tags used to harvest antlerless deer on public land also needs to be addressed. The lack of Game Wardens is also enabling poaching to increase. Especially illegal baiting.
Portage County farmers reap the benefits of the crop damage program. As far as I know, the hunter pays for the program and gets nothing in return, unless they are the hunter! Be fair to all involved. If they get a bunch of tags, please force them to allow outsider hunting on their land!!!

The amount of deer being killed by auto is much much higher than your graphs have shown I hunt in the area along highway 66 well searching for sheds this spring I personally found three dead carcasses bones in this reoccurs year after year and it's only a 20-acre stretch...

Ever since baiting was eliminated, people have given up on deer hunting. No one is going to spend the money and time to hunt if they are going to see few or no deer. CWD is never going to be eliminated and I see deer in groups browsing on the same plants and areas anyway

Why change things all you are doing is making the hunters mad. The harvest is controlled by the hunters and the weather. Two things that the DNR can't control. By changing the season all you are going to do is drive hunters away. That mean DNR is only worried about money

No separate crossbow season. Keep the 9 day gun deer season no need for longer one same amount of deer would be killed just have weekend warriors out hunting with potentially endangering other hunters. Have the 5 day break before the gun deer season of no hunting

the present season length is fine, I see less and less deer each year, but I think that is because of a lack of hunters in some areas, I also do not like the on-line registration process I think there are 20% more deer taken than are registered in some areas?

The DNR and people as a whole should fight for a wolf hunting season to cut down the predator-prey kill rate and increase the deer population. Also the antlerless tags should be limited so more deer have the opportunity to breed and increase the population.

I have property in the eastern part of Portage county. Numbers of deer have drastically reduced the last several years. We are in a woods of several hundred acres and are lucky to see a couple of deer opening weekend. We are 1/2 mile from Waupaca county.

The deer predators seen in this area has increased tremendously. During turkey hunting, there were coyotes and wolves spotted. All within the hunting fields available to open hunting. The open hunting lands are becoming less and less in this area.

Instead of “antlerless only” seasons, bring back earn-a-buck where needed. But let people earn it the previous year. i.e. If I shoot two does this 2020, and my DMU goes to earn a buck for 2021, I’m all set for opening day 2021.

I’m fine with the authorizations. However, I strongly oppose the Holiday Hunt. There are too many seasons and they are too long already. Let’s let some other outdoor users have their time as well. No Holiday Hunt! Thanks.

I’m become concerned with the wolf population growing in Portage county. The estimated number of wolves in Portage is grossly underestimated. Without some sort of control I fear the numbers will continue to increase.

I would strongly support an extended archery season in Portage County. This may help with declining harvest numbers in archery. Additionally, it would also enable hunters to reach the larger proposed quota for 2020.

The deer count is a lot lower than you think in my area! No longer seasons!!! The deer just move at night when there is a lot of human activity in the woods. I’m tired of sitting all day to see one or 0 deer!

Why is there even any consideration being given in increasing antlerless tags and having a Holiday hunt, when so many hunters did not harvest or see many deer last year? It makes absolutely no sense.

The wolves and private land permits are devastating the herd in Portage County. May stop all hunting and fishing due to low public land availability of deer while land owners devastate the herd.
My property is next to public land. I would like to see public land be logged a little bit more for cover and food. I did not hear a lot of gunshots during the time I hunted Portage county.

I think they should leave rifle 9 days, get rid of antlerless only hunts, and only let elderly and disable use a cross bow, i believe the deer are pressured way to much! Have a great day

I don't support an anterless only season, but would consider a framework for earn a buck, or even a framework that would require more mature bucks be taken (age/antler size considerations).

I would eliminate free tags. If some one wanted a doe they wouldn't have a problem paying 12dollars. Dnr gets money needed. People shoot deer they don't want or need with a free tag

The whole state of Wisconsin should have a points or antler system like other states have. So there will be bigger bucks and the young ones have a chance to possibly reach maturity.

I feel the deer numbers are stable in my area, have to put more time in to fill tags the last 3 or 4 years then in the past.... over all I feel a good job is being done .

If a Holiday Hunt is conducted only residents or land owners of that DMU/County should be able to hunt and deer registration should be in required in person, not on line.

4 points on one side is how we can get buck growth and future revenue from people wanting to hunt for trophy whitetails. Its simple and alot of other states do it.

2019 Gun deer hunt was the first that I had seen Coyote, I attribute the Coyote population to the fact that no Deer were seen in our 120 acre wooded private land.

require having a permit in the field. I feel that people harvest deer and do not report it so the harvest numbers are low but the actual harvest is about the same

NOT ENOUGH PERMITS TO PUBLIC LAND HUNTERS. SAW FEWER DEER THAN EVER BUT IN TALKING TO PRIVATE LAND OWNERS THEY KILLER MORE THAN EVER. TIME TO STOP HUNT, PERIOD.

Worst browse damage noticed in our 30 yrs here occurred last winter. Between deer damage and invasives the next generation will not know the beauty of what was.

Access to hunting land is a major problem. if private land recieves government money for crop damage they should also allow public access to their land.

I don't think gun season should be extended which would cause bow hunting to be shortened numbers seem to be rising for bow hunters keep them happy

Do not want to see an earn-a-buck gun season in 2020 DNR Should make bow hunting a doe only hunt in 2020 if they need to lower the deer population

Please leave the bow season alone.. if you bye an archery tag it should not matter whether it's a bow or crossbow.. stop micromanaging hunters!

I do NOT support deer hunting in Hartman Creek State Park. Hunters pose a risk to the majority of the park's users (hikers, campers, bikers).

There is a problem with your deer numbers. There is a lot fewer deer then you think and handing out doe tags like candy is killing the sport.

Only other comment i have is to leave the season dates/framework alone...leave archery/crossbow season as is and leave 9 day gun hunt as is.

I would like to see the muzzle loader season not start for a week after the 9 day gun season. Give the woods a chance to settle back down.

*Portage, Central Farmland*
Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 204
   - I visit this unit for non-hunting purposes: 170
   - I hunt in this unit: 581
   - General interest in this unit: 91

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 550
   - Bow: 286
   - Crossbow: 240
   - Muzzleloader: 206

3. How many years have you hunted deer in this unit?
   - Minimum: 0
   - Average: 24.78
   - Maximum: 69

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 268
   - Mostly Private Land: 81
   - Public and Private Land About Equally: 94
   - Mostly Public Land: 62
   - Exclusively Public Land: 67
   - I did not hunt in this unit last year: 9

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 12
   - Not too crowded: 40
   - Neither crowded nor un-crowded: 54
   - Somewhat crowded: 87
   - Very crowded: 103
   - Not applicable: 8

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 135
   - Fewer: 186
   - Same: 182
   - More: 73
   - Many More: 35
   - Unsure: 9

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

- **If a DMU is in a Farmland Zone...**
  - Implement an ANTLERLESS HOLIDAY HUNT: Not applicable in this DMU

- **If a Holiday Hunt is held in a Farmland unit...**
  - EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: Not applicable in this DMU

- **If the Population Objective is not "Increase"...**
  - Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 56 517 47

- **If a Zero Quota (buck only season) is adopted...**
  - ...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? 297 259 64

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?

Deer hunting in Price county is a joke compared to what it once was and what it could be. Years ago, it was a top destination for quality deer hunting. Years of mismanagement and over predation have caught up. Unfortunately, the CDAC and the DNR continue to pat themselves on the back. Take a drive through some of the vast public forests during the 9 day deer season and you can witness the lack of hunter presence in areas that formerly flourished with hunters. Opening day you may see a few vehicles parked on the side of the road but after that there is next to nobody. They don't hunt the same lands anymore because the deer hunting is terrible. I've been lucky enough to hunt many parts of the state and several other states and I can honestly say of all the areas I hunted in the last 10 years I consider Price county the worst. I truly hope for the next generations things improve because we are losing numbers as hunters and a tradition. I'm proud to call Price county my home and have many great deer hunting memories here. We used to be a big buck mecca and now we have very few mature bucks. We have an over abundance of wolves and bears now. I saw as many wolves as deer on public land last fall. Bears continue to be a nuisance to most rural residences and are undoubtedly having an effect on fawn survival. Take a drive on a summer evening and notice how many does have only one fawn or none. Something is killing them. The hunting format changes in the last 10 years are also part of the reason for poor hunting. When the hunting was good, we didn't have early youth seasons, we didn't have holiday hunts, and we didn't have continued pressure on the deer for 4 months! Native Americans were not allowed to legally shoot deer with the aid of spotlight. Looking at the crossbow harvest is very disappointing. It is unfair to vertical bow hunters to have to share a season with crossbows. By allowing crossbows during the rut, a large portion of young bucks are taken from the herd. I am not anti-crossbow (I have one) but I think they need to be regulated to a shorter season. The fact that the DNR would even consider extending and/or moving the gun deer season earlier is a total disgrace to the hunters of Wisconsin. You've wrecked enough tradition and quality already, it's time to start going back to the way things were. Sadly, this letter doesn't mean much and I'd be surprised if it gets read to the finish. Politicians (I consider CDAC members politicians also) have their own agendas and will do as they please or what the special interest groups that fund them tell them to do. Sincerely, a concerned hunter. The DNR and CDAC should be ashamed of their lack of results.
Deer kill numbers have had a down trend for more than 1 year, this is a fact! Deer numbers are still very spotty. Yes, areas like west of Ogemav have more deer. But, overall price county is STILL NOT there as far as numbers. Winter severity was 53, this is a JOKE! The area around Prentice was over 18 inches since Thanksgiving week. Get out of the office and look at facts! This a CDAC, that stands for County Deer Advisory Committee not Ogemav, not farm land deer committee. If you are going to continue to play that argument, then you have to give equal credit to the Forestry. How many deer are there? You cannot have it both ways. I believe there are about 10 deer per square mile in most areas. Half of Price county was managed to 15 per square mile prior to the new units, the rest of the county was managed to over 20. LOOK AT WHAT THE KILL WAS THEN VERSUS NOW! You guys talk about driving around and seeing deer on fields when the snow melts early, wow...where do you think the deer will be? Do you then think when they disperse there are that many in every square mile? No there are not. Every year there is an excuse for the low deer kill, like, too warm, too cold, too much snow, late start to season, rut ended early, too rainy, it’s always something. But, never, gee, maybe there are not as many deer as we keep saying. The crossbows are slamming deer at a record pace, this is a fact. As for tourism, it will NEVER come back if the herd is not close to what it once was. No, we dont need 35 deer per square mile, however we need more than are there now. Last year, I argued to ALL OF YOU, that the 2019 deer kill would be low. You all looked at me like I had 3 heads. I stated, if I am wrong, then I am wrong, but, if the deer kill ends up being low again I was going to remind all of you about that moment in last years meeting this year. DID YOU ALL FORGET? I had over 2 dozen deer cameras spread out from our family private land, to the federal and in 3 different county land blocks and can prove what I am writing to, can you ? I am still stating that at best there are 10 to 12 deer per square mile. And, I believe it is closer to 8 to 10. You guys cannot back up the fact there are so many deer yet. We have a huntable herd, not a maintain herd. Meaning, with winter kill, crossbow and predation, this herd is still very vulnerable. Again, you all will do what you do. I look forward to next years meetings where we all argue where we go from here! Be prepared with facts to back up your decisions. As, I will as well. Oh, spending 4 to 6 months a year in the actual woods would help as well.

When it was discussed around something happening around Nov 12th for deer activity. I have noticed the past few years the deer have been conditioned to know when the gun season is starting. The increase in people at cabins, people in the woods the week before doing last minute scouting. They know and reflects their movement. I am lucky enough to have a good chunk of private land that I am able to monitor what is there and such and did see a decrease in deer activity. They were there but they bed down lay low until after thanksgiving. Another topic that is brought up about season structure in 2020. My wife I have just introduced to hunting. She fully enjoys being out through the first couple weeks of November before it gets too cold. She isn’t a fan of firearms kick, noise, etc. she loves going out sitting with the crossbow. I feel with this season structure change with that you will lose a hunter. I was fortunate enough to be able to mentor her. Best program ever. She tried it out, no success. Saw deer but she completed the hunter safety program because of the time she spent. I think the state is losing the younger generation to hunting and outdoors. This crossbow season going through the rut with normal archery is the best thing to happen to introduce new hunters. It’s nice out. They don’t freeze. It’s a good environment for us to teach the next generation to hunt and outdoors. This crossbow season going through the rut with normal archery is the best thing to happen to introduce new hunters. It’s nice out. They don’t freeze. It’s a good environment for us to teach the next generation to hunt. The animal is close and you have quicker more humane kills on the animal. Isn’t that what hunting in Wisconsin is all about. Getting together with friends and family. Spending time outdoors and if you are lucky enough to get a chance to harvest and animal, use the quickest and most humane resources we have to do so? I hope this is considered. Also with the extended gun season, the deer in northern Wisconsin are stressed and hunted year round by the large population of predators and then September to January from humans. They need a break also. The 15 day proposed gun season is going to cause more people trying to sneak on private land and you won’t see the increase of deer kill either. Like I said before, the seer know when gun season is. Keep it traditional. We have done it how long this way with no issues. It comes down to trying to get more licenses sold. If you keep the crossbow and rifle seasons the same there will be no issue. In fact my nephew is going to start hunting next year under the mentoring program. It’s working and the crossbows are the best tools to help get women and youth in the outdoors doing so.
Thank you for giving me the opportunity to comment. I appreciate your time given to this important deer management council. I believe the CDAC is on the right pathway of maintaining the herd numbers. I would like to see more deer on public land if possible. Unfortunately I was not successful at harvesting anything, let alone seeing any deer during my sits on public land. On opening day a hunting group did a deer drive pushing all deer out of public land on to their private land. I would like to propose banning deer drives on public land for the first opening weekend. So the DNR also has another set of proposed rules pitting gun hunters against bow hunters. Mainly not allowing the bow hunter to hunt during gun season. I'm not a bow hunter, but I really don't mind anyone bowhunting during gun season. As for the possible adding days to the gun season. I would much rather the gun season be a whole lot earlier. Say last week of October thru first week of November. My private land and surrounding area was hit hard by that group of high school kids poaching and didn't have as many deer around this last deer season, which pushed me to hunt public land to try and let my property rebound from the slaughter. I hunted public and didn't see a single deer or a lot of deer sign. That leads me to believe it's been over hunted, which is the case for many years on public land all around the state. How can we manage public land better to allow for more population growth? I see there is a concern with over browsing in forests, which I didn't see that as an issue with how many seeds are put out by mature trees and new shoots sprouting up all over after a select cut/clear cut. I would like to propose something similar to Michigan gun hunt. Have an antler point requirement. 3 on one side, or 4 on one side. Let the young bucks live another day. I also recommend doing away with the youth hunt, that’s what the regular gun seasons are for. This program has been abused one to many times it seems. I seen a possibility of banning bait statewide. This would impact a lot of locals selling bait to hunters. Not sure that would be the best option for small town USA where a lot of places depend on these sales. Will ATV's be allowed to drive on public lands ever again? I see the roads are being gated off. Thank you.

The wolves are an issue weather you want to admit it or not! I am in the woods a fair amount and can honestly tell you, the wolf population needs to be address. Also what we have done as a state is increase every predator that we possibly can have. More bear (hard on the fawns) more Bobcat (hard on the Fawns) Fischer, some mountain lions-don't try to say they are not hear they are! Coyotes and so on. But most of all the WOLVES!!! They are not good and I also hunt in the UP of Michigan and they are not good there and deer herds have taken it on the chin there also. Plus we are loosing hunters and it is only going to get worse, our camp is full opening day (19) a few hunt all opening weekend and then most of the young hunters (Under 30) go home. I want to thank you for what you try to do, but no matter what anyone wants to tell me as a hunter of almost 50 years there are less hunters and less deer, small game ect and it is do to the predators that have been allowed to get out of control! Most people up here feel the same way if they are from here and have been here for a while. I believe it is only going to get worse until we can stop the killers that live in the woods 24/7/365 days a year. Good luck if you are like the DNR people I talk to in the UP you want a season to keep Wolves under control but we have Judges stopping it. I wish you luck a few more down years and even less people will hunt. By the way the hunters are seeing deer by the roads and homes not in the middle of the woods, that is because the wolves have them chased out to other areas. I hunt public land and hardly ever see anyone back off the roads more than a few hundred feet. I am sorry to rant I have never done it before, but what I am seeing in the woods makes me sad and sick. Wolves are BAD, my 2019 hunt was the worse ever and are group of 19 hunters say the fewest deer and most Wolf sign in our history. Thank You for your time. Good luck and please help us before its to late!! P.S. You are going to see more deer hunting and less gun hunters- More time to do it when they feel like it rather than a chance to be in a group for a set week.
Wisconsin could be the best trophy buck state in the union. We could have great hunting for all who want to shoot a trophy on public or private. These are the keys: 1. Kill the wolves. There is more of a predation problem than you know. Wolves move up to 50 miles a day to feed on their primary food source which is deer. They also kill deer just for fun. Wolves were exterminated years ago by our forefathers who knew why they needed to be eliminated. Wolves are killing our hunting especially in the North. Most of the hunters moved down south in WI to find deer and won’t even hunt their own land. The family tradition of deer hunting in the north has been lost. 2. Stop shooting the does on public land. Start to put deer plots in on public land to draw the deer off private land. Burn and manage the forests for good new growth. Plant food trees and crops on public land. 3. Stop shooting small bucks- put in a size limit or make buck tag drawings. Let em go so they can grow. The North used to be the trophy buck place to go in the world. Now it is a laugh. The deer are gone and everyone wants to sell their land because the wolves are eating everything. There used to be a lot of hunters because their were trophy deer. Now it is like a ghost town. 4. I used to sit in the woods in the 70’s and 80’s and see 50 plus deer a day with trophies a good potential. Now if I sit all day I might see three deer. Two fawns and maybe a doe if I’m lucky. I baited and the bait rotted- no deer to eat it. You will loose me too soon if you don’t make the changes suggested. If you do make the changes you won’t believe the large bucks you will see and all the hunters will apply for a tag and come back. Wisconsin will again be the state to trophy hunt. If not you will continue to ruin it and I and others will stop hunting.... 5. Use wolf tags to take the place of deer hunting until the deer come back. They will come back if the wolves are eliminated. If not deer hunting is finished, especially in the North. Please listen and make those changes..... Thank you

We have watched the decline of the deer herd in Price county over the past 10 years with predator increase and bad winters. Finally the last two years there has been a small increase but with adding antlerless hunting and not knowing next winters weather we could drop back down to seeing very low numbers again. I understand your wanting to keep a controlled herd number but why cut it so close that if we have bad weather in winter we see no deer at all? How can you go from no antlerless tags too 3000 in one to two years? You are always either one extreme or another. You also speak of the deer herd numbers coming back after a drop but you never speak of quality of the deer. Why not focus on quality instead of quantity for Wisconsin? We have so many hunters leaving Wisconsin to other states who manage there herds for quality when Wisconsin could be one of the best. Almost all our deer shot are under two years of age a managed herd with antler restrictions would help greatly within a couple years. Its hard enough getting new hunters or keeping past hunters interested but we have had in our area in the past 5 years 45 plus hunters covering thousands of acres only kill one spike horn all gun season. That would be fine if everyone was at least seeing deer but that isn’t the case, most see nothing. Please help our future deer herds, stop anterless hunts for now and allow the herd to grow and mature. Then If we need small adjustments we can have anterless hunts at intervals not to overkill in case of bad weather or increase of predator kills. Allow the Bucks to reach potential and make Wisconsin a big buck great hunting state again.
I agree with the proposed recommendations. In 2019 I observed the most deer in a very long time in the spring, during the summer and in the fall in many places in the county. I felt that the fawns were a bit down though. In August I observed a group of bucks in velvet head-butting and pushing around during the month. Several days before the gun opener the deer were not moving around at all. But on the opening weekend of gun season, when it was very pleasant weather, the deer were moving. I saw does and fawns on Saturday. A lot of people were saying that the deer were not rutting anymore and the opener was too late. On Sunday mid-morning I observed a doe feeding in an overgrown field. After several minutes a spike buck was following her. I kept watching and a few minutes later came a large-bodied forkhorn also following her, which I harvested. During the gun season the last 3-4 years it seems there are not many large bucks. I think the long crossbow season before the gun season is a factor. I read in the Wisconsin Outdoor News that the bucks dropped their antlers really early this year. On March 15th I observed a spike and a forkhorn with both antlers. The next day I saw that the spike had dropped both antlers and the forkhorn had dropped one. On April 2nd the spike still had his one antler and he was head-butting another deer. I don't believe that the winter conditions had much of an impact on the deer herd as there are now, in the middle of April, a lot of deer appearing and the fawns will add to that.

I think the idea of shooting does in this area should be heavily frowned on due to the extreme predation in this area, at least the areas I hunt (Price, Rusk, Sawyer County). There are way to many wolves, bear, and cats that are killing deer. An adult doe has 1, maybe 2 fawns in this area. A wolf can have up to 8 pups in one litter. More recently now the Eagles are preying on the fawns-I've seen it first hand. There are days when I hunt the state forest that I will sit all day long, and not see a single deer. If I see 5, that's a good day. It makes it difficult to get my kid interested in this sport. I have many encounters with wolves, and they also frequent my trail cameras. While shed hunting this spring, I found 7 deer skulls/bones. I do not know why they died, but being that the winter was relatively mild, I can only assume predators. I also own private land, and I feel that the herd in this area is much better, but it's because myself and my neighbors are not killing all the does. I feel it wouldn't take much to deplete this heard as well, and then it would really be tough to get my kid to go. Hunting in the Northwoods is much different than in Southern WI. I feel that the talk about extending the rifle season is a bad idea for our area as well. There are MANY people that hunt our area that are from out of town. Making a 2 week rifle season would only mean more dead deer, fewer sightings, and less interest yet. Thank you for considering my input.

We continue to set harvest numbers based on deer harvest numbers from the previous year. I dont think members are actually putting boots on the ground nor is the biologist. This animal management should be looked at the same as a farm does in there herd. I am in the woods alot yes winter logging (this last winter 3 dead on the job in Feb so another month went by due weather moved off job), I enjoy nature I spring shed hunt, Turkey hunt, bear hunt. So on time off I am in the forest. Our biologist doesnt understand wildlife, sorry but it is fact. Bear was shot by a cabin in Sept in a brush pile field dressing there was grass plug in rectum he had no clue why. Yes our biologist!! So why would it be different for whitetail it is!! Does abort and eat the fetus not absorb! A farm would cull out cows to maintain there herd. So why would it be done to the deer herd? Not sure how the number for severity was attained also, as above mentioned I am in the forest, there was 18 of snow gun deer season it never went below that depth until the end of March. We didn't have many days below zero this also added to the stress factor. Example Derek weighs let's say 250 pounds, myself 150. Who will tird faster walking the distance from one end of Phillip's to the other end, not done now put 50 pounds one and walk back to the other end. Time limit 45 minutes added. Now you get it!!! This is how our deer herd should be looked at, not only deer all wildlife!!
HI there, I believe that there is absolutely no reason there should not be antlerless tags available. I think that the number for public is about right but the number for private is excessive. My main concern is baiting. I believe that especially in the northwoods, baiting needs to be open. When hunting public land which is thousands of dense acres, baiting in all honesty is what gives you any chance at harvesting an animal. CWD as primarily (and 0 in Price Count) been a "wild issue" in the northwoods and has instead originated at deer farms which should be help responsible. I have also seen the elimination of baiting destroy small businesses in other areas and counties such as Oneida and Vilas. I also find it somewhat funny that you cant put bait down but can have a food plot to attract deer. Also, I am concerned that the votes within DNR meetings is not separated between public land and private land. I know MANY people in Price county that would be against baiting. Thank is easy for them to say considering they have 100 acres each to hunt with multiple food plots to attract deer. And many of the food plots are not that large at all. So you are telling me that corn sprinkled over a small area is any different than a 10 by 10 foot area of standing corn? I disagree. Thank you for your time and I hope we can keep hunting in the northwoods fun, successful, and beneficial for all including public and private land owners.

I understand the justifications the county biologist provided for the drop in deer harvest in the 2019 season and I understand people are anecdotally seeing more deer in the fields as they drive around, but the people I hunt with are still not seeing many deer. Perhaps the primary reason for the excessive drop in harvest is that the deer population in Price county is simply not as high as the DNR says it is. I've been hunting in Price County for 40 years but did not hunt in 2019 because the hunting has been so poor in my area. I may try it again in 2020, but I can't get excited about having a positive experience especially after such poor harvest numbers in 2019. I have studied the metrics (car accidents, hunter success rates, etc...) from the surrounding counties and it is difficult to see any distinctly clear pattern (e.g. car-deer accidents are all over the place). This inconsistent data is borne out by the population goals of the counties surrounding Price County. The counties to the north and south of Price County are trying to increase their populations, while the counties to the east and west are trying to maintain. I would like to see the CDAC vote to increase the deer population in Price County.

The mentored hunt giving youth hunters a tag to harvest a doe gave my son an excitement for the sport and was greatly appreciated. I strongly oppose the proposed change of the crossbow season. Crossbow is a much more accurate and humane way to hunt especially for youth as opposed to bow. It would also be disappointing considering the amount of money invested for a nice accurate crossbow after the law was changed in favor of crossbows. I would be in favor to the proposed 16 day gun deer season, however I am opposed to the extension of the gun season through muzzle loader season. This would greatly take away from the special tradition of the muzzleloader hunt. I am in favor of eliminating the antlerless season and especially the holiday hunt in the lower units. I do not hunt these seasons as I would prefer to hunt with the opportunity of harvesting a buck. On these same lines I strongly oppose an earn a buck system. When this was previously instituted, it was the most sitting in my stand opening day and not being able to shoot a trophy should one walk by was the worst hunting experience I've ever had. Thank you for your consideration on my thoughts.

Predators -- The impact of predators is not adequately taken into account with deer numbers. Wolves are endangered species, bear population is too high and fur prices at all time low make the deer harvest for hunters very limited. Studies have shown that wolves harvested more deer than hunters in 2019. Baiting -- The area of Northern Forest is unlike the rest of the state. Baiting is a hunting option needed to maintain the hunting experience. Current baiting regulations must be enforced. Food plots are baiting. Do not treat this issue as identical for the entire state. Forest is much different than agricultural. CWD -- The impact of CWD is from high concentrations of deer, especially in high fence deer farms. In the wild in the Northern Forest area, there is not the heavy concentrations of deer. Not the same situation as Southern WI. Deer management -- Please consider selling deer licenses per region. We need to track revenue and deer numbers per deer management unit. This is a practice done in the western big game states for years. Preference point quotas is a sound management tool. If animals not in sufficient numbers, don't over harvest.
I am still trying to find out why the public/private permit designation exists and has not been done away with. I know the CDAC has no control over that but if enough of us and the CDAC support going back to doe permits there is a better chance. With a little over 40% of the unit open to the public, per presentation, I would think that would be used to split the number of permits for public and private land. Instead the proposal is for 75% going to private land and that does not include the number of crop damage permits they get. Now this year the verbal recommendation is if we increase the number of permits they all go to private land owners. Yes I do own land in Price County but there is a lot more public land for me to wander around on. I have been told, do not have proof, that the first thing the people that have access to private land do is buy up public land permits because there are so few they go fast and can always get the private permit the next time. If you increase the public land permits to at least 1/3 of the permits this would help more people getting one and not have to “Buck only” hunt.

The population in the Northeast part of the county(national Forest) is the lowest I’ve seen in the 25 years of hunting. Not sure where your numbers are coming from. Where were the deer during the bow season? I come from Waupaca county where there are many deer but limited places to hunt. Hunting up in price years ago was damn good. Many deer sightings and a good chance to shoot a nice buck. Not anymore. It's very sad that the DNR doesn't see this, so called professionals. Talk to people that only hunt this area and your ideas on your numbers will change. No does should be shot until the wolf population gets under control would be a start. They are taking way to many deer. I see the tracks and the outcome from them. It's getting so poor up here hunting wise you might lose another group of hunters. Me and my family. To get youth to want to hunt you need them to see deer period! Not all these special hunts. I want to see deer too. We need to make this county, at least the national Forest, fun to hunt again.

I do not know how it can be estimated that that there are 28 deer per square mile in price county, that's ridiculous. When you do a deer drive covering just under a square mile and do not see a deer or any tracks or droppings from within the last week there aren't any deer there. The national Forest should not allow doe tags. There is a huge difference from private to public land in the county that they should be managed if they were separate units. I could understand allowing every other year doe tags. I hear excuses why the deer kill was down, the snow, the storms, late start to the season. Never admitting the deer count is down. Our group of 16 harvested 7 bucks, we do not shoot does. We had a great year compared to others. Counting the 7 we harvested we saw a total of 23 deer. 2 other bucks that we missed and 14 does and fawns. This is being in the woods the first 8 days. I wish numbers weren't blown up just to make hunters who spend less time in the woods feel as though there are more deer in the woods than there actually are.

My husband and I have hit 3 deer in 2 months costing us $1500. One in particular hit my drivers door and if it would have been only a few inches higher it would have gone thru my window! Luckily it did not (this time) and I am able to tell you about it. I'm scared that one of these times we won't be so lucky with just some damage to our vehicles. Not only the money factor but the time spent getting repairs done is an issue. I'm tired of them grazing on my plants, again that has cost me hundreds of dollars and shear frustration. One morning on my way to work last week I saw (10) ten deer in 3 different groups along the side and on the road in which I had to slow down for. County Highway W is treacherous and filled with deer. When it's hunting season we don't see any bucks but I did have 8 does in my back yard on opening morning!! We never see any bucks, the bow hunters always get them. Please take this into consideration and or take a couple of rides out on Hwy W towards Sawyer County. You'll see for yourself.
There are too many bears killing fawns...please restore spring & fall hunts. There are too many wolves killing fawns and adults...please reduce their numbers substantially. They've decimated our area. There are too many coyotes killing fawns and adults...they shouldn't have been protected just to protect wolves...please reduce their numbers. There are too many bobcats killing fawns and adults...and ruffed grouse...please reduce their numbers. There are too many "weekend hunters" shooting too many fawns, half of which are "button bucks"...better to watch and take larger does with no fawns...also a lot more meat. Not sure I like the cross-bow rule for everyone.....how many are wounded and die from bad shots when raining, or no snow for tracking? Bad or too long shots and bad hunting tactics by too many uneducated or unethical hunters that wound and kill too many deer that are not tracked and found. How many wound 2 to 4 deer that get away to die for every 1 deer they actually get? way too many!

The use of baiting should still be allowed in Price County. Deer numbers from the time I started hunting to now are substantially lower. On average I would see 5-15 different deer every sit, now myself and the others I hunt with are lucky to see 1-3 deer per sit, and they are usually the same ones. I know the DNR cannot control the wolf issue, but we have had a pack move onto our hunting land for the last 9 years, and our herd has taken a big hit. We have a gun season hunting crew of 12-14 guys, and since the wolves moved in, we have averaged 2-3 bucks a year, compared to 10-12 bucks and 4 does before wolves. Morale is getting incredibly low in deer camp nowadays, and talks of selling the square mile of land we own are always happening. "The good old days" of deer camp are fading away as we put in numerous hours of hunting, but hardly anyone gets to take home any meat. Until the wolves can be managed by the state, the northern zone is in a world of hurt for deer hunting.

The northern forest has grown up and there is less room for deer and other wildlife. What I mean is that it has changed a lot since I was first hunting. I just don't see the DNR changing. I really don't see a need to kill any antlerless deer in Price county. I don't think the farmer are complaining and you can deal with those issues one at a time. He is a story for you. About 15 years ago we had a hunting season with no snow until the last Saturday of the season. Our gang of 6 of us had not seem much at all for deer sign and even less deer. So on Sunday Morning of the last day we had some snow and I told my brother that we instead of hunting we should drive around and look for fresh tracks to see where the deer are. W travels through the federal forest east of Park Falls and drove for eleven miles and say only 7 fresh deer tracks. Should have seem hundreds as in the past. And Yet the DNR was still selling antlerless tags in this area for 12 bucks. Stupid.

My 160 acres borders a lot of public land with large hunt groups that put out a lot of very large corn piles under the balsams and use ATV/UTV on Price County, WI State, & Federal land. We are successful at harvesting deer on our land and the public land that adjoins our land every year. I work with the Federal and State wildlife managers to establish habitat and food plots for all wildlife not just deer. Every year I notice a substantial drop in daylight buck and antlerless deer movement once these groups start baiting heavily which is usually 2-3 weeks before fun season. In 2019 we did notice very little deer movement during the gun season. I was lucky to harvest a mature buck on the last day of fun season right after the heavy snowstorm subsided. The large hunting groups were gone then as well since they headed south on Wednesday before Thanksgiving. Did the corn piles dry up by Sunday and get the deer moving in daylight again?

I only bowhunt, no crossbow, no gun. The last couple of years. more people are crossbow hunting during the rut and they are not gun hunting. For what ever reason when you should see more buck movement in the prerut and rut you dont. In 2019 I hunted for 3 week during the rut. I seen 1 buck every 7 days and none of them where mature. I do not bait. Guys that never bowhunted before are now crossbow hunting. I found 4 dead deer on my property after the rut. I don't know if guys are poaching them or if the new crossbow hunters don't know how to hunt. The game wardens are not enforcing the baiting laws as they have in the past, and all the slobs know it. Illegal baiting is almost as bad as it was 20 years ago. Need to ban baiting and get the cross bow hunters out of our bow season. Bow hunting should not be easy, it should be a challenge. The DNR has ruined the quality of our Bow season. Crossbow hunting is a poachers dream.
Basically all my answers are about the size and shape of Price county. It is a very long county north to south. More farming to the south. Below Hwy 70 and more so below Hwy 8. I hunt and spend considerable time north of Hwy 70 and for several miles south of Hwy 70. I think it is much different then below. We no longer have the old zones. But it should be controlled differently. Deer population much less to the north and should have less doe permits. Never have liked the new way of controlling deer county wide. Large population of wolf’s below 70 Sailor lake area. Hardly any deer. I hunt mostly between Pike lake and SpringStead. Deer have been coming back in the area. But many don’t want does shot. Last year friends said might as well get doe tags, somebody is going to shot them. Many of the people (locals ) I know got doe tags. Saw some and still didn’t shoot one. Including myself. Just didn’t feel right.

The last several years have been extremely disappointing in deer hunting. Price county used to be one of the best counties in the state to harvest deer and large bucks in a matter of fact. With the increase of antler-less deer kills and predators it has taken a major toll on the deer population. We have a total of 14 trail cameras on our land and through out the last 5 years we can tell the deer population has decreased by a lot. One of the largest factors that we have since is in the wolf population. The wolf population has increased immensely and we are our neighbors have proof of it. We have seen several wolves kill fawns in the spring and summer, and thats just the ones we have witnessed. Our neighbors have seen the same thing. The biggest thing i think that would help the deer population in price county is to remove all wolves and the decrease the amount of antler-less deer permits.

The deer herd in price county as far as I can see is not any where near where it was ten years ago. The deer population is less than half what it was. The wolf population is triple or more. And we can’t even hunt them. We need to be able to hunt the wolves and have buck only season for about four years. This is what was discussed and decided upon about six years ago and the buck only season lasted two years and then the DNR started handing out doe tags. We want the deer population back to where it was. Also the logging that is taking place in the National forest is a good thing, but the loggers need to be held responsible for putting the tree tops in wind rows instead of just leaving them lay on the ground. Let’s make the public lands accessible for everyone. Even the handicapped!!!!! Thanks for your time and hopefully we can make these suggestions work. The forest is for all of us.

The deer population has dwindled from great to hardly any at all. We used to see and harvest a large number of deer. In recent years we have seen few and gotten even less. We only hunt bucks. From the 80’s and 90’s we had about a 90% harvest rate now it is less than 5%. I have gone from seeing 30 deer in a season to seeing 5 or 6. The predators are, in my opinion, the primary reason. The number of wolf, bobcat, coyote, and bear kills are increasing significantly. The amount of sign in the woods has changed dramatically - the deer sign is way down and the predator sign is way up. Something has to be done to decrease the predator population and increase the deer, that is why I am in favor of decreased harvest quotas for at least a few years. We need to build up the deer herd. Between the weather and the predators the deer are suffering in a significantly negative environment.

I guess for Price County I hope they limit the amount of anterless tags just because of the extreme winters in that area that take a toll in the deer herd and the amount of predators that take a hit on the herd. Last year in particular we saw very few deer during the gun season, but a large part of that was the season was so late in the year. I know this is an issue that is out of the DNR’s hands, but I really wish they would push for a wolf season in Wisconsin. Wolves are fascinating animals and have their place in the ecosystem, but I feel at this point they shouldn't be classified as an endangered animal and should be managed, even if very conservatively. There are many wolves in Price County and data suggests they make almost more of an impact on the deer herd than hunters considering price county is one of the lowest in the state for annual deer harvests by hunters.
I live in north-eastern Price co we don’t have crop damage to deal with but I understand that the southern part of the county does our county is geographically unique in that we can go from a rural farm setting to vast forest wilderness in a matter of a few miles unfortunately I have the opinion that you have managed this county as a whole based upon what goes on in the southern portion please consider managing our county from the south border of the national forest to the north county line as a unit of its own our deer herd depends on it predation over harvest on public land which is what the majority of this land mass consists of night hunting from tribal members and three hard winters in a row are some of the things are deer deal with that deer in the southern part of the county might not be subjected to as severely just my humble opinion

I feel that the numbers the DNR are working with are very inaccurate. Besides large tracts of agriculture land in Price county, the deer population is at a record lows in Price county. I bow hunt, gun hunt and muzzleload hunt Price county. I have seen the good bad and now ugly. My 15 trail camera’s don’t lie. My countless hours in the woods from July-Jan don’t lie. The only reason the Kill hasn't gotten to embarrassing levels is because of the efficiency of the modern hunter. Please stop comparing harvest trends of todays hunters to that of the 80-90’s hunters. Crossbows, trail cams, HD scopes, food plots, have saved the overall harvest for this state. Until we can manage the wolf population we will never get our northern herd back. Until that day, we need to at least try and help the population the best we can.

The northern forest deer herd goals should be set at or below 50% of biological carrying capacity (overwinter deer density at or below 15 deer per square mile). This will require harvesting a quarter of the population every hunting season with at least half of the harvest consisting of does. This would allow for maximum sustained yield while maintaining a stable, sustainable population. As a hunter, gardener, commuter AND someone concerned about the long term conservation of Wisconsin’s northern forest, I support harvesting MORE and BIGGER deer rather than SEEING an over abundance of “wood rats” (which is currently the case under the existing management regime). In the near term, the proposed CDAC anterless quota needs to be adjusted upward to at least insure ZERO population growth on both public AND private land.

I am 70 years of age and have been a Price county land owner for nearly 40 years. I shot a decent number of deer throughout the years. Since 2009, just seeing a deer, either buck or doe, is a rarity. I have a crew of 4 seasoned hunters/people who have shot deer) as my party. I will hunt the entire season, over 100 hours in the stands, and seldom see a deer at all. I know you said predation is taken in consideration, but we see wolf tracks nearly each day. The deer have become nocturnal for some reason. Could it be from wolf pressure? My hunters aren’t as willing to buy licenses any more, let alone hunt. I have 5 grandsons that might hunt someday. There had better be something to see or their interest won’t last. Looking at trees all day long won’t cut it in the future for myself and the younger population.

Personally, I’ve been hunting up north with my dad since 2008. The first two years were unreal as we saw many deer and it was a fun sit. Then the $3 unlimited doe tags came along. Steady the deer population decreased. Then the introduction of wolves came along. That put the deer population 6 feet under the ground. Due to the non-action of the management the deer population has stayed the same. I actually laughed out loud when I saw that in 2017 the goal was to MAINTAIN the deer population..... THERE WAS 0 SO MAINTAINING 0 MEANS IT STAYS AT 0! There are still no deer! Myself along with my peers and neighbors that I’ve talked to would like to see a buck only for a while. We would also like to see an increased number of predator tags. The deer need a lot of work in the northern part of the state, please help us out!
Stop with the antlerless seasons, T zones the stupid youth hunt (do you realize the numbers of folks that are abusing this, i mean seriously) or what ever other BS you guys scheme up for additional funds. There are not any deer in the woods. I dont know where you guys are finding your numbers from but there are no deer in the woods. I spent the 7 straight days hunting gun season and saw 4 deer in Skinner Creek area in Price County. And everyone I know up there and I grew up there so i know tons of folks, nobody is seeing the deer you guys are. I also spend countless hours in the woods in the fall. There are no deer, no trails, no rubs nothing. Go back to the basics or bow/gun, hunting at 12 like we all had to do and leave it be...you can very easily over manage things you know?.

I agree with the 1200 quota, but why are you recommending more tags than last year if you want to kill 300 less deer? Wouldn’t it make sense if you wanted less deer killed you would give out less tags? The winter severity index is interesting. By the end of gun season I had 2 feet of snow by my house in central Price County. In the video it stated we had 12"-16" by the end of gun season? Not sure who does the measuring, but my ruler must be different from theirs? I took a ruler at the end of February and still had over 20" of snow. If my math is correct that would be around 90 days with more than 18" of snow. So wouldn’t that mean the winter severity index should be over 90? I will have to go the the hardware store to buy an updated ruler.

I’ve been hunting price county for over 20 years and living here on and off over the last decade... The drastic decrease in deer after the early 2000's slaughter turned alot of folks I know who used to come here annually for the gun deer season off (including folks who own land here) I’m finally living here again and would like to say I whole heatedly want to see Price county economy thrive from the influx of tourism generated by the gun hunt. That said I also want to see a sustainable deer herd. I think the antlerless harvest needs to be kept within tags used during a traditional archery season and gun season. Throwing all the additional doe only seasons in there has only driven away hunters who hunt public lands and kept landowners out of the woods.

For the DMU’s in the Northern Forest, serious consideration should be given to having a deer harvest duration over 3 weekends(starting 1 weekend sooner) instead of over the standard 2 weekends. Under the current season timeline several factors deter hunters from deer hunting the Northern Forests. The weather generally limits hunting 1/3 to 1/2 of the available days, and the rut is typically completed, lending to many inactive antlered deer, and therefore less deer sightings. I believe a 16 day period provides hunters greater flexibility for time and travel to the Northern Forests, and greater potential to see and/or harvest deer. I also believe this would provide a much needed boost to license purchases. Thanks,

My recommendations for an increased number of antlerless doe tags being issued is based on my observation of too many deer in close proximity to humans. I am sure the DNR population numbers are accurate but with more and more deer being fed and drawn towards human populations it may be that the DNR should consider a smaller herd in general. I would like to stress the increase in vehicle accidents from unnaturally tame deer, the damage to people's yards, and the possibility of disease from unnatural gatherings of deer to feed from humans rather than foraging in the wild. If the DNR wants to keep a high population of deer then they may have to regulate the people who are taming & feeding the deer.

2019 herd level reminded me of the old days. I consistently saw at least 4 deer on every sit in the morning or evening. (Bow, October and early November). This was one of the largest acorn crops I've seen in years. The Wednesday before gun opener the deer disappeared. Our cameras showed they had gone nocturnal. Probably from gun hunters scouting and setting up stands. Your harvest numbers look correct. The possible drop in harvest is consistent nationally as there are less hunters. During my bow hunt this was one of the least amount of hunters I've seen in years. Gun was even less pressure in the National forest. Hence lower numbers harvested. You're doing a great job!
There are plenty of deer in the area of mostly private land where I hunt. The problem is with the low number of alter less permits the people who are meat hunters continue to shoot most of the little bucks just to make sure they get their meat. This has been going on for at least 5 years. The number of mature buck I get on camera has steadily declined. I let little bucks go only to have other people hunting nearby shoot them. My suggestion is to put a size limit of 4 points on one side for about 3 or 4 years to allow bucks to grow to maturity. I believe people are not hunting as much because of the lack of worth while bucks and therefore the drop in harvest numbers.

I've always seen a lot of deer of both sex during bow and gun season during legal hunting times last year for some reason I didn't and I never even seen a buck last year with is something I've never encountered before though I did see some on the trail cameras traveling at night of all the time I spent in the woods for bow and gun last year I would say that the amount of deer I saw all of last year was about the same amount I would see in one day during 2018. When we go around the last week of October and that first week of November I could go out in the afternoon and see 25 to 30 deer a day for some reason last year I would see 5 or less and I don't know why that was.

Its time to seriously address the impacts of deer on the future of our forests. Northwoods economies are dependent upon healthy forests (recreation, tourism, logging, etc). Deer browsing is having a profound impact on tree regeneration and other essential processes of a healthy forest. We simply cannot allow the this further degradation of the forests. In the face of so many threats to forests (pest, pathogens, changing climate, etc) the most important thing we can do is ensure a diversity of species. What is the limiting factor for tree species diversity? deer. What can we do about this? We need more antler-less permits on private and PUBLIC lands.

I own 100 acres in park falls wi. I have owned this land for 10 years however this land has been in my family for over 100 years. Gone are the years of seeing deer and hunters having success. Now we find carcasses around the fields and the "friendly" wolf stalks us around our own woods. If the dnr is not going to make this a priority the landowners will take herd control into our own hands. Between the harsh winters of the past few years and the t zone hunts of a few years ago the wolves just add to the problem. People are not traveling up north to hunt anymore. Local business are suffering and people are fed up. Thank you for reading my rant.

I hunt 2-3 weeks during bow and gun season. Wolves are very abundant, as evidenced by direct sightings and sign. I have had multiple direct close range encounters with them over the last 10-15 years. While it's understood that wolf management (ie, authorizing a hunting/trapping season) is out of the state's hands at the present time, I encourage the DNR to do all it can to promote being able to manage the wolf population at the state level. Bears are also very abundant. I encourage the DNR to increase the number of bear permits for the northern forest - plenty of them out there, and they may be contributing to high fawn depredation.

I’m very concerned about how Price County manages county land with respect to timber sales. It appears to me that a disproportionate amount of the forest consists of pioneer species of trees and plants. Specifically, the areas that were impacted by the storm on July 4, 1977 are now being clear cut. Looks like we are in for another 40 years of popple trees instead of mixed hardwoods. Seems to me that the county gives little or no consideration to the quality of their forest land. Likewise, the DNR needs to recognize what is going on with the forest land and take that into consideration when trying to determine harvest quotas on public land.

I feel the northern part of price county should have different quotas than the southern half. The number of deer in the north is significantly less than the south. In the heavily forested zone it is difficult to even see a deer for several days during both bow and gun season. The experience of our camp over the last 40 years is that the deer are barely able to sustain their population the last several years. Based on our deer sighting experience if we have another bad winter the deer population will be unable to sustain itself!! Question. What are we doing to decrease deer predation from other than hunting predation? Thank you.
Public Input on CDAC Preliminary Recommendations - Spring 2020

7608 My family has hunted this area for many years. When the wolves came the bottom fell out. During this period it seems that the use of ATVs was abolished on public land. My friends stopped hunting public land. My son and I do not have the privilege of private land. I am at an age where it’s hard to get around. Also an important point for me is being able to leave tree stands up longer. But being able to get back into my hunting area is still cut off. There are many hunters in my age group that are kept out of their areas due to the ATV situation. We need some help if you need to manage our herd.

7609 I have been bow hunting and rifle hunting in this county for the past 20 years. When I first started hunting in this area I did observe more deer than I have in the past 10 years. With the introduction of the grey wolves deer observations decreased dramatically. The last two years I observed more wolves than deer. The black bear population also has exploded and I have seen more bears than deer in the past five hunting seasons. Bears also kill more fawns than either coyotes and bobcats. Until a plan is put into place to control the predators the deer herd in the this northern forest zone will continue to decline.

7610 I just want to mention how ridiculous an antlerless only hunt is. It takes away a week or weekend of archery hunting. A few yrs ago price cnwy was buck only and the wknd I went up to archery hunt I couldn’t because it was an anterless hunt. Explain how that makes sense that a buck only Cnty couldn’t hunt because of an anterless hunt but couldn’t shoot an anterless deer. One last thought which I’m sure you get sick of but wolves, coyotes, bears are taking a bigger toll on t population then you guys let on. Why doesn’t anyone admit there are way more wolves then you guys have any idea there is? The people aren’t dumb.

7611 I think it should be a point system where you can’t shoot unless it meets those guidelines, so that would mean no fawns let new generics come in and try before they get shoot it’s a waste people get trigger happy and the saying if it brown it’s down applies to them. It might help the population with more genetics out there of these deer.... and also raise the out of state licences it's horrible we are the lowest state but yet we have the worst population I would even raise it to were if you reside in a different county but hunt in a different county you have to pay more and out of state raise it even higher.

7612 Just my thought on the issue of deer baiting. A person that has land & the money to put in food plots has a big advantage over the person that has neither but just wants to get out & try & get some venison. A set amount of bait scattered far & wide in a area would at least give a little better advantage to the public land hunter. My father told me years ago that hunting would someday be a rich man’s sport & when you look at the hunting shows on TV that is sure the case. I think that hunter numbers are just going to decline & the ones that have the means will carry on. Just my two cents.

7613 Until someone realizes that this county represents two totally separate ecosystems, (north vs. south) with two totally separate populations of deer, it is very unlikely that either area will ever have the correct population. You numbers show it. (private land success vs. public land success) There are too many deer in the southern part of the county (private/farm land) There are not enough deer in the northern part (public/forest land). There has to be a way to separate the two different areas???

7614 Not sure why but for the 2019 season of which I hunt approximately 6 weeks of, I saw more deer then in previous years but almost no bucks, only a few spikes that were to small to harvest. I believe the area I hunt can sustain a larger herd but the buck to doe ratio has changed to fewer bucks then previous years. The cameras also support this observation. It may be that a few more doe need to harvested. As a note I am not a trophy hunter but would take one if it presents but my preference is for table fare. A young six or four point is fine. It is the hunt, not the horn.
I chose maintain population but was on the fence about choosing increase as the biologist video mentioned part of the reason for deer harvest being lower last year was partially due to a late winter storm and just last week we had another significant winter storm late in the season. I feel while there is room for some antlerless harvest overdoing it will have a negative impact. After last season there has been a great debate on declining buck harvest but as antlerless tags increase many fawn bucks are shot not allowing them to reach legal buck status the next year.

We saw 2 sets of tracks in NE Price Cty, 1 more set than we saw in 2018. There are very few deer in N Price county......I've hunted 46 consecutive years here, this equals our previous low years......I have never seen a DNR biologist, nor have my other 2 friends, in the forest......ya I know, its a big woods......and we are in the woods. Grouse hunting 4-5 days a week !! I know the DNR guys didn't take these jobs to become millionaires, but they have no clue about how many deer are really there. Thanks for the opportunity to give input.

In my area of Price Co. (east central) the population seems to be staying even or going down. We had very few if any deer on the logging jobs in our area, we see very few deer on the farm fields last summer and now this spring. I have a snapshot camera from the dnr and don't get many pictures of deer. Last spring I had a camera on a clover field and had way more pictures of bear and turkeys than deer. I think the predator population is way out of control, in the evening you can here four or more packs of coyotes. Thank You.

The low number of tags is a determent to the deer and the farmers. Please drive around and look at all the deer that are on the landscape in Price County throughout the year. It is normal to see 20-30 deer in fields at dusk. The herds during winter are 5 times that. Just looking from your treestand during the opening weekend of gun season is ridiculous. There are many, many deer that are available for harvest. Now more than ever with folks out of work and the food supply chain disrupted. Let people harvest deer! Strange that this group wants to lower the anterless kill even though the deep population is way more than 3 years ago. I think crossbow hunting has truly hurt the buck kill in the regular gun season. Seem the DNR whines about lower kill but honestly all they truly care about is the almighty dollar and the loss in people hunting, which hurt's the money they squander. But I know your group doesn't care about that.

Since I have moved back to Wisconsin in 1996 I haved seen a steady decline in the number of deer where I hunt in southern Price county. If the trend continues I, along with the 12 others in the group, will hunt in another state. Four have already left and are currently leasing land in Tennessee and Kentucky. I wish we would implement a point restriction in parts of the state to improve the quality which would increase the quantity of bucks. Use Price County south of Hwy 8, or all of Price county as a test site.

Very, very, very few deer; whether Antlerless or not. Although I'm familiar with some of the factors affecting deer populations; e.g. winter severity, predators, harvesting too many does, habitat, myself and my Deer Camp hunters aren't very good -I'm just not educated and knowledgeable enough. What I do know is that I've hunted in Price County for over 25 years and there seems to be fewer and fewer deer for the most part. We do see a few on our Trail Cams; but not a lot. We hunt on 200 Acres of Private land.

I believe the whole state should be 4 point on one side and no less, stop multiple doe permits. Everyone gets one. Go back to register stations. Control this wolf population. More bear permits, go to a 6 year wait and eliminate hunt with dogs. Get a firm grip on guys taking multiple deer with their wife's tag. You should only get one buck. Choose your time of year. Either bow or gun. ONE BUCK. Get the insurance company of your back. I will pay more for a tag if that helps the fight. CWD is BS.

I counted 19 Deer in my Yard this Winter, and of those 19 Deer, 7 were Fawns. I saw One, 4pt Buck during the 9 Day Deer Gun Season on Opening Day, which I didn't shoot. After the weekend, the Deer movements were drastically reduced. Snow wasn't a factor. Neither properties on either side of me Hunted during the 9-Day Gun Season, so pressure wasn't a factor. Including both Bow and Gun Seasons, I only saw 2 Bucks. One, the 4 Pointer (Bow and Gun) and a 7 Pointer during Bow Season only.
Can we bring back the days of Hunters Choice Please? In all my years of hunting, in particular public/paper lands; the Hunters Choice actually (to me) provided the most amount of deer sightings during this program. The management particularly in the "Northwoods" has been less than ideal in most of our opinions and something needs to change as it has been at minimum 10 years since our camp of responsible hunters has harvested a deer. That kindly, is a disgrace given what it once was.

The Price County CDAC preliminary recommendations are much too low considering the information available and my deer sightings from the spring of 2019 to present. Agricultural areas of the county are over crowded with deer. They are causing significant damage to crops and forest land regeneration. The opportunity must be made more available for these deer to be harvested. Private land quota should be increased drastically while the public land quota should be increase mildly.

I understand the DNR cannot manage wolves at this time. But as soon as the courts restore this right that has to be the top priority. Deer hunting in Price County is a mere shadow of what it once (20 years ago) was. I have not harvested a buck in almost 10 years, and it's not for the lack of trying! I see alot of bears and wolves but no deer. I'm mentoring my grandchildren and it's tough when they sit all weekend and see no deer. They lose interest in hunting quickly.

The earn a buck program was an absolute distruction of the Price/Ashland/Sawyer county deer population. Hunters were traveling from the southern farmland area to shoot a doe and then "earning" a buck tag to hunt with down south. This devastated our herd which already was low in numbers due to hunting, hard winters, and the increasing wolf population. Please do NOT bring it back. We should limit the distribution of anterless tags to youth hunters and southern farmland zones.

I understand that the annual overall harvest decreased in 2019, however, I don’t believe this is due to a decrease in Deer population. I saw more deer or at least an equal amount of deer as I have ever year while bow hunting. Weather definitely played a factor in the annual gun hunt that caused hunters to stay out of the woods and deer to stay semi dormant in the late season. I personally believe last years quotas are a good basis to set for this years hunting season.

I've been hunting for 40+ years in Wisconsin and enjoy my time in the woods especially seeing deer and other wildlife. I think there are to many politics & monetary influences that shape decisions for guidelines and rules about wild life in general. The reason most private land owners don't have open land is they are managing wildlife for the DNR, that doesn't work either. Keep the rules simple keep the bag limits fair and the wildlife and outdoorsmen will do just fine.

The number of hunters appears to be dropping during deer gun. WI needs to get back up to its reputation as a great deer hunting state. I have seen it dwindling since 2008 with a definite setback. Maybe this means greater investment into Natural Resources instead of streamlining budgets so tight that the standards for natural resources are watered down. Just not a lot of interest from the hunting crowd anymore. (WI needs to learn you cant cut your way to prosperity).

There is a lot of gated off county land, that was not previously gated off. Older hunters cannot get to their hunting areas, they do not hunt then. Hard to get younger hunters to stay interested if you hike a mile or more, to see nothing, or just have someone privileged enough to have a key, drive by you with a truck full of corn. And if you do hike all the way to your usual hunting areas, what do you do if you do shoot a deer? It's no wonder we are losing hunters.

I think it is a joke that there is so much talk of reducing crossbow season's because something like 6000 more bucks are getting shot. I hunt in portage, price and Waupaca county owning acreage in 2 of the county's spending thousands of dollars per year on hunting and land improvement. The NRB is so out of touch if they think limit d crossbow will bring back bow hunting plus everyone I gun hunt with uses a crossbow to hunt that is the future and it won't change.
The buck to doe ratio in my area of Price County is about 20 does for every buck, and that is from my observations. I believe to help this out a three point on one side limit would help this out. In my area as much as we try any buck seen is taken even when doe tags are possessed. I do not believe more does need to be harvested, but I do believe these younger bucks need to get older which would help in the buck to doe ratio, and the quality of the hunt.

The number of deer on our family owned land and the national forest is down significantly since the wolf packs became prevalent in and around Park Falls Wi. I am not anti wolf but strongly believe the pack has grown too large. I started noticing the decline when the pack passed 300 wolves. With a pack size of 800 in the upper third of the state, the ecosystem has changes along with the ability to leave your pets or young livestock unattended.

I believe there are two many seasons and they run too long. The advances in technology have severely impacted the mature buck populations with the early, late, and rut hunting. Between the cameras, crossbows, compound bows, etc. very few deer make it to full maturity. The excessive harvest of young bucks has taken a heavy toll on buck numbers in general with mature bucks nearly extinct. I find the management of the deer heard very disappointing.

Very disappointed on predator control. The last 6-8 years have been very bad. Most of or group hunt out of state now and are thinking of selling our land. We’ve shot one doe in the last five years and it was a youth hunter. We’re lucky to see a fawn with a doe going into winter with all the predation. When there’s no deer to see are kids get discouraged and they don’t want to hunt. How do you recruit new hunters let alone keep us interested?

No permits for public land should be given. If I had to hunt the Federal Forest, I would quit. There is nothing out there to shoot. My kids have quit hunting here, even though we have a large private property with excellent habitat for deer. The deer are not here. Predators are killing them off. New hunters, young and old need to see deer when hunting, or its over with. Hunting numbers will keep declining without more deer on the land.

This is Wisconsin's Northern forest let's get the population up. I have young hunters who want to see deer. We want to give them experience. Keep myself and my boys wanting to come to the North woods. How many deer can the forests handle, it's much more then we have currently have. If most southern part of price county is throwing the rest of the county off fix that. If predation is the issue let's figure that. Thank you for listening.

I would love to see antler point restrictions put on for counties here in the Northern Forest zones. A 3-5 year trial period would great to see if buck populations grow. All while giving each resident an antlerless tag for "meat hunters". You can drive around fields in the fall in northern Price county and count over 200 deer a night but only one or two would be a buck. Bucks in our area are not reaching maturity like they should.

Since 2008, the deer herd in southern Price on PUBLIC land has eroded where lack of hunters is paramount. No deer equates to no hunters. Need to build the herd and they will come. Get rid of your outdated SAK formula and listen to the hunters for ONCE. The majority of hunter feedback via these surveys has concluded this for many years, and you just don't want to grasp on to this reality. Reduce the antlerless tags on PUBLIC!

Outlaw baiting and feeding wildlife State wide, if you want to feed wildlife, plant a tree or shrub that is edible or fertilize or water mast trees. Extend the "gun" deer season to include all shoulder fired weapons i.e. muzzle loaders and crossbows. Archery season for archers only. Eliminate all captive cervid facilities State wide. Re-instate wolf season. Include bear permit and/or wolf permit with every gun deer license.

1. Deer hunting has become too "competitive" for new and seasoned hunters.  
2. Complexity of hunting regulations and license prices are spoiling the sport.  
3. Lifetime hunters such as myself are not seeing or harvesting deer because of predators who are better at it.  
4. Deer have become 100% nocturnal by evolution, and that does not coincide with hunting "hours". Just a few thoughts.
I really believe we need to start a sound wolf management protocol, they're extremely detrimental on the northern Wisconsin whitetail population. I also feel baiting should be banned. I'm in favor of a total ban. Hunting over a bait pile is not hunting. Deer would be better off being deer, instead of cattle, for many reasons. Look forward to seeing what the overall outcome will be. Thanks for listening.

I have been hunting in Price county since I was 14 years old. Since that first year hunting I have seen the deer population decrease. In my general area the locals have determined there are at least 3 wolf packs in this territory. The wolf population has been increasing and the deer population decreasing. I think we need to keep the wolf population in check so the deer population can grow again.

In 14 years of hunting this area, not only have I seen MY numbers go down, but also those of fellow hunters, decrease in business for local taverns, restaurant, stores, etc. The winters can be hard enough on the deer, without adding all the extra seasons, doe tags, and increase in predators. At this rate the tradition of hunting in Wisconsin will become extinct altogether within a generation.

I hadn't hunted in price county for 6 years. I track bucks and have for 33 years. I check literally 100's of miles of forest Roads daily on fresh snow. In my opinion in the last 20 years the whitetail numbers have dropped 80-90%. The deer are closely grouped to avoid predation. The bear track, a visual sightings are 30-40% higher. The wolves tend to move the groups of deer continually.

The deer population overall appears stable or up a bit. As usual some areas NEVER have large numbers, some area are extremely high. If we do a bit of scouting, we'll find there are opportunities for everyone. Last year was hampered by lack of accessibility due to inclement weather and a post-rut start. Go with the current plan and quota. If hunters can't find deer, it's their own fault.

We just started seeing deer again after four years of you giving 10 doe permits to a neighbor every year !!!!! And now we have a newer neighbor ( same place) that has dogs trained to chase deer and who does not turn on his electric fence to keep his cattle on his property and we end up having to chase his cattle off of our property continually every time we were up last year.

I am afraid you have missed the boat on the number of wolves and predator kills in Price Co. I have recently purchased land in this area and in the last 2 weeks have found 2 fresh wolf kills. The Wolf population is a lot higher than you project. How else can you explain the decline in hunting success in the north woods over the last 10 years. This needs to be addressed.

I don't live in or near the unit, but my family has been hunting successfully and unsuccessfully in the unit for the past 20 years. We use to see very many deer about 5 years ago and has steadily dropped of how many we have seen/harvested. I firmly believe that this unit has a wolf issue, that is negatively impacting the deer herd significantly. Thank you for your time.

the decline in the deer herd in Northern Wisconsin coincides with the increase in the wolf population. If you want to increase the amount of deer, reduce the number of wolves. there have been years when I have seen more predator tracks than deer track. I have gone 2 years in a row and never saw a deer. lately im lucky to see 3 or 4 deer in a season last year I saw 2.

You are considering Price County in the respect of having farm land which is far and few between areas that people of the north actually hunt. The farm land areas can sub stain the hunting of does, the Northwoods this should not be in the cards. Local deer around cabins are what your seeing harvested. Questioning how many are registered is a whole different story.

Rather than an antlerless only season why can we not just combine a antler point restriction and do the doe permits? Price cty has the opportunity to be a "trophy" location for hunters if only we would try a point restriction for 2 years hunters would see more quality bucks if they could gain a year or two to there life and the rest would come naturally after that.
I recommend the CDAC review all data available in making decisions, I'm an avid sportsman and like having a successful hunt but know that deer numbers can impact a healthy forest regrowth that we all are dependent on for economic reasons. There are very few hemlock/cedar seedlings that grow to be adult trees...deer are impacting our forests at current population.

I feel the continued tolerance to baiting has disrupted the daylight activities of the deer population, i.e., has made them much more nocturnal, and hence has greatly decreased opportunities to harvest deer during legal hunting hours, and has substantially increased the risk of CWD in the wild deer herd (which will be a certainty at some time in the future).

Buck harvest of yearling bucks is way too high each year due to baiting. This needs to be eliminated from all seasons. If people had a chance at a decent buck they wouldn't complain about the herd numbers being too low. They think more deer equals a higher chance at a bigger buck but in reality most of them never make it through to see their 2nd birthday.

I believe that when a hunting tag is bought it should be the choice of the hunter as to what they harvest. Buck or doe one deer only. Also from what I'm seeing is that there are hunters out their that don't or won't even register a kill just so they can keep hunting. They skin and butcher their own and no one has a clue as to how many deer are being shot.

My wife and I have personally had 3 deer vehicle accidents in the last 4 years and many near misses. Our trees, plants, flowers are continually under assault and mowed down. So far we have not been injured but only by luck and God's grace. Something needs to be done to drastically reduce this hazard to our safety and our financial burden.

Need to get a wolf season back they are killing of the deer badly. And on top of that shooting does up there is foolish right now when the number of deer is so low. You need to get the numbers back up and that will only happen once you get the wild population under control. And on top of that they are also affecting the Bear population.

The wolves have decimated the deer heard. I put on a ton of miles during deer season and when i see wolf tracks more and more and less deer tracks there is a problem. Our group of 15 guys have gotten 1 or no deer during season the last 10 years. If the wolf pop is not put in check the people will start managing them on their own.

There seems to be an overabundance of anterless dear in this area. By anterless I mean does, not buck fawns as I do not consider them anterless since there is a potential for a buck fawn to become an antlered deer. The buck population is very low, lower than its been since my youth. We need to address this overabundance of does.

Currently have 16 deer on 80 acres of crop ground as of 4/27/2020. With the current COVID situation resulting in claims of impending food shortages from national and international sources (UN) the luxury of hunting outweighing the public need for locally sourced food supply can only be deemed as depraved indifference.

I believe our deer numbers are still too low I believe predators including beer wolf and bobcat while minimal mountain lion are putting a big hurt on our deer numbers , I don’t believe there should be any public land doe tags . While the extensive hunting pressure and long seasons also account for low deer activity.

I have read price county deer outlook and winter severity also bad weather during gun season and amount of crops left in south west part of county.I agree with them.we had a mild winter,herd should slightly be up i feel no need for any changes .hopefully the weather is fair and the coronavirus has no effect.

Please don't have any special seasons or youth hunts etc!! There is plenty of normal season to have an opportunity to harvest a deer for all ages!! The early youth hunts etc just change deer behavior and movement so that when normal season comes around the deer are all spooked and make it harder to harvest.
The wolf population in Price County is out of control. I see more wolf tracks than deer tracks. The last two years I have seen zero deer while gun hunting. In that same amount of time my hunting group has only taken two small bucks. Something needs to be done to address this problem. PLEEEEEEASE!

In all reality it's time for "earn a deer" in Price County. By this I mean quite simply when you kill a wolf and present the carcass you would then become eligible for a deer tag. No this is not a joke, it's high time the DNR has a reality check on wolf numbers in the northern 1/3 of the state.

Before the buck only seasons I've seen mainly doe on property. After the buck only seasons I've seen a good improvement of both, but feel the population could be improved. I would like to see buck only come back to the area for a couple seasons and see if that will improve the population.

The buck to doe ratio is completely upside down. There are many more antlerless deer than buck (maybe 50 doe to 1 buck). Something should done to correct or reverse this issue. Not sure is something could be done, but maybe not shooting spikes bucks or limiting small deer could help???

Keep the youth interested in hunting. Do not stop the youth hunt. I like my dogs - stop releasing wolves because old school farmers won't shoot does. They do not get crop damage anymore then. End all the negativity about crossbows. One buck per year. Season and weapon of choice.

Wolf tracts on every deer trail on our property........5 Grand children, two sons and myself have seen 2 deer over the last 3 years. 4 of these hunters are buying out of state Licenses. We need to reduce the number of Predators in Price County or lose these young hunters.

We hunted public land last gun season and all I saw was orange everyday, no deer! No bucks and very few does in the forest around the land we hunt. The numbers go up around an agricultural area or around any housing where people are feeding in their yards. No deer in the woods.

I spend a great amount of time in the woods of southern Price County,3 winters ago I found around 30 dead deer some were coyote and bobcat kills but close to half of them were starved.I found a lot fewer these last 2 years.still hard to find a deer while hunting,bow and rifle

I have owned land and hunted Price County for several years. always enjoyable but I do think our buck to doe ratio is way off. We see way more does than bucks on our property year in and year out. I do believe our population is stable and/ or up a bit. I hope this helps

Did not see a deer last year and found deer carcasses tore apart from wolves I don’t think keeping the antlerless tags the same or close to the same is right I buy license and would like to see some deer to at least give me a chance to maybe harvest one or the right to

I would like to see a 5 day break from all hunting with the exception of waterfowl for the 5 days leading up to the opener of the gun deer season in November if possible. This will help with overall hunter success and increased participation in the gun deer hunt.

I spend 4 weeks bowhunting and bird hunting every year on public land in SW Price Cty. Mainly the Skinner creek area and the Cheq forest ne of Phillips. In my opinion there should not be any antlerless permits given out on public land for at least a couple of years.

As a landowner and hunter in Price County I am pleased that we have not detected CWD in the deer herd to date. I am however concerned that baiting may be a contributing factor to the spread of CWD. I would like to see the baiting of deer banned in Price County.

I would like to see the muzzle loader season come before the regular rifle season, especially in the northern forest of Wisconsin. Also many fawns are being taken by predators and deer in general are being poached, or so I've heard through the grape vine.
Between the wolves and the winter we have seen a significant decrease in deer populations over the last 3 years. There should not be any antlerless tags handed out at all. There should be wolf tags handed out instead of an antlerless tag to the hunters.

Numbers that you see reported I feel are likely skewed without having the need to tag deer as was required in the past. Without tagging violating potential is much greater, and typically violators are taking more than one deer when they violate.

Being a non-resident hunter the cost of license, housing even on private land is very high pressure on hunting is high in many places would be nice to see a drop in out of state licenses! It's rough to spend $180.00 on an non-resident license!

I own 130 Acres and on my private land I see way too many bear. I would like to see a change on Applications for private land owners with more than a set number of acres. Instead of 7 years for a tag would be nice to drop it to 4 or 5 years.

I drive to cabin often through the National Forest. this past winter I see very few deer tracks so I now the numbers are way down there. I would like to see the number of deer return to our northern part of state for my sons future in hunting.

Baiting needs to end, it is getting ridiculous. I've heard reports of guys buying hundreds of pounds of corn and a couple of reports of guys that where buying thousands of pounds of corn last year. It is time to stop ignoring the problem.

Ban baiting and feeding. Baiting deer is not hunting. I don't see deer during gun season because I don't bait and those all around me do. The deer just hang out close to a bait pile and move late. Baiting disrupts everybody's hunting.

I would like to see the number of antlerless permits split 50/50 between private and public. There is a lot of public land hunters that lose out on the opportunity to harvest a deer due to limited number of public land antlerless permits.

In my opinion the deer population in the big blocks of public that I hunt is a joke. To even suggest a doe harvest in these areas tells me that the cdac/wdnr has no idea how low the actual deer population in these big blocks really is.

Too many private land deer in some areas, I live in the NE part of the county and some people are feeding 30-40 deer on their property. There are virtually no young hardwoods or white pine, red pines or hemlocks coming up in the woods.

Need to concentrate more on regulating the predator populations (ie coyotes, wolves, bear). Deer and deer hunting is HUGE for income in our areas. The predators are not what draw in the tourists and these are hurting our income.

CWD still remains a threat to Price County. We should not let our guard down. With the economic hardship presented by the Covid19 pandemic, I am concerned that there may be a significant increase in poaching violations in 2020.

I would like to see the deer population increase some in the unit. I would support 1 buck harvest permit per hunter for a year or 2 years. This would be able to be filled during archery, rifle, or muzzleloader season.

The deer herd must be healthy for the economy of northern Wisconsin flourish. Please stop making license sales based on DNR budgeting decisions. Crossbows should have the same season as all other archery seasons.
My reasoning of the low kill last year was the late season and the major snow storms. During muzzleloader season the deer were moving again. In fact shot a dandy buck chasing a doe I presume during the second rut.

The antlerless tags should be split more evenly between public and private lands, it should also be a requirement to prove you own private land. Too many private "tags" get filled off public lands.

Too many predators and baiting have changed the experience. Not many deer on public land and, those that are, are not moving during daylight. Get rid of the baiting. It does nothing good for the herd.

I think the deer numbers could improve on public forest lands if the mature forests are harvested on a more regular basis. The state does a good job of this but the national forest could do better.

I hunt on private property. I'm seeing way more does than bucks. However, with that being said, wish it was bucks and doe. Would also like to see all these special hunts gone along with multiple tags.

The proposed quota of 1200 is not sufficient. The quota needs to at least match last year's level, if not surpass it. There should be zero population growth on both public AND private land.

I would never support antlerless deer harvest after the earn a buck last time it wiped the herd out where I hunt and because of that 2 of my 3 adult children will not hunt deer any more.

Always think that bucks should be required to have at least 3 points on one side to be legal. This I believe could bring up the buck/doe ratio and possible more activity during the rut.

Most deer I've seen are in farm areas. Really not seeing much for big buck though. Not sure if it has to do with the number of predators and them getting run down during breeding season?

Wolf population has greatly affected the quantity of deer. It has also had a major impact on the daily activity of the deer on the property that we have been hunting since 1994.

We don't have enough mature bucks, immature bucks are doing a lot of the breeding. There are too many seasons. Online registration is a joke, and it isn't my job to enforce it.

I believe land owners should have the preference for all permits. Land owners should also have to own at least a 40-acre parcel. This parcel must be one continuous unit.

The registration system is poor & I believe some hunters are either not registering deer or falsifying information. Dropping kill numbers may be partially from this !!!!

Reduce the number of doe tags from last year. Make an antler rule where it needs to have at least 4 points on one side. Too many 1 1/2 year old bucks being killed.

Stop all baiting forever. End bear season. Make bear season a part of deer season as it was in the past, with no limit on bear kills during deer season.

Had 5 hunters in camp for 2019. Total number of deer seen was 8 does and fawns. No bucks. Some of the hunters may not hunt in 2020 due to lack of deer.

The deer numbers on public land are incredibly low. I drive thru the National Forest to get to my cabin and see no deer tracks for miles in the snow.

Total deer population in the northwoods is way too low, no where near where it was 15 to 20 years ago. It's basically not where going out in the woods.

Please continue the bonus antlerless tag system, have seen many more deer since 2016 and have seen more antlerless deer than antlered deer.

I have seen many more deer recently then I have in the past. However I will say many more have been younger deer than I have in the past.

**Price, Northern Forest**
The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

87 forms were submitted for this unit.

**Section 1: Information about who provided the input.**

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 69
   - I visit this unit for non-hunting purposes: 10
   - I hunt in this unit: 74
   - General interest in this unit: 15

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 57
   - Bow: 46
   - Crossbow: 31
   - Muzzleloader: 16

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 16.52
   - Maximum: 51

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 46
   - Mostly Private Land: 7
   - Public and Private Land About Equally: 9
   - Mostly Public Land: 5
   - Exclusively Public Land: 7
   - I did not hunt in this unit last year: 0

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 6
   - Not too crowded: 12
   - Neither crowded nor un-crowded: 2
   - Somewhat crowded: 3
   - Very crowded: 3
   - Not applicable: 2

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 19
   - Fewer: 19
   - Same: 34
   - More: 7
   - Many More: 4
   - Unsure: 4

**Section 2: Perceptions about the number of deer in the unit.**

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

Report Generated: Friday, May 01, 2020

Racine, Southern Farmland
I know the DNR wonders why hunting participation is going down in Wisconsin. I can give you an example of why that is. Growing up I was an avid hunter. My dad got me interested in hunting at an early age. We hunted deer, pheasant, waterfall, squirrel and rabbit. Now I live in Racine county and hunt on public land. I also hunt with a friend of mine who owns hunting land in Marquette county. My wife’s aunt owns land in Taylor county and encourages family to use her land for deer hunting. Another friend owns land in Barron county (I sold my land there a couple years ago) where we always got together to hunt. I have 3 grandchildren that would love to get into hunting even though their parents don’t hunt. Why in the hell do I have to buy an extra doe permit for each area that I have an opportunity to hunt, plus buy the same for my grandkids when they would like to tag along with me? I would like to try other public hunting areas in Walworth or Washington counties but don’t want the added expense of buying extra doe permits. I would love to include my grandkids in an activity that I thoroughly enjoyed, but I won’t do that with the way costs keep going up. First there are application fees, then buy the license, then pay for more permits or tags. I also noticed on your questionnaire that landowners always get preference (more permits available). I haven’t gotten one of my first two periods for Turkey season in several years. People in the past warned that the DNR was turning hunting into a rich man’s sport. Looks like your goal was accomplished.

I'm very lucky to own private land in the metro sub-unit and I saw deer every day I sat 20+ days and was able to harvest a nice mature buck. That said I'm seeing the same deer time and time again. Seeing deer might be a good metric in Marinette or Dunn county with huge expanses of land, in Racine I'm seeing the same family group or does and the same 5-6 bucks cruising. I believe we need to drastically increase our deer population and we need to eliminate all antlerless harvest for the next 2-3 years. You’re seeing the hunters take matters into their own hands, as you said they are choosing not to harvest antlerless deer. I myself and others I know willingly purchased metro sub unit antlerless tags and tossed them in the trash with no intention of using them. I bought them to prevent others from buying and using them, so did others. While I don't mind contributing $20-30, it would be nicer if our goal is to increase the heard to actually have it reflected in the tags being issued. More does = more deer. We have the habitat, but since our herd was so small to begin with it's taken much longer to recover after the disastrous earn-a-buck fiasco. Also lets stop catering to gun deer hunters if they want to kill deer outside of rifle season let them pick up a bow and stop the terrible early, december, and holiday antlerless hunts.

Thank you for considering limiting the doe harvest in this unit. I have been hunting prime habitat on prime private land in an area that has more than the average amount of deer for this unit and have been frustrated with the ups and downs of the deer population. We are currently in a very low cycle of deer numbers. I also have heard rumors of deer culling in the county parks in Milwaukee county metro during the offseason. I am highly opposed to this. Many of the deer from northern Racine county migrate to the north into these county parks during the winter so what might be perceived as a populated density of deer is only during these winter months. If many antlerless deer are killed during this time in those locations it may be having a disastrous effect rather than a helpful one. It seems like every time the population gets about right the following year there is a huge drop and nearly no fawn production. I would like to see a deer population quite a bit higher every year with a consistent presence rather than an ebb and flow cycle. Thanks
I think we should get away from splitting up all the counties into separate zones. It makes it too challenging to hunt multiple counties for antlerless deer due to the fact you have to pick one county. Does are far more abundant than bucks and when it comes time to fill the freezer I would like the ability to harvest what I want where I want. I believe we should go back to a 1 buck/1 doe tag per license that is good in anywhere in the state. If there are higher quotas in counties sell a set amount of additional antlerless tags for those counties or if the population is too low in a county don’t allow the harvest of does there. To sum it up no more doe tags that are county and public or private specific.

The goal is to increase the herd. Leave the does go for a year and then you will achieve the goal. I know so many that feel when you provide the free tag they can harvest an antlerless because they feel there are to many, hence why they were given the tag. Most of these people do not fill the tag for only one reason. They fail to see a deer. To me this is the reason why we need to lay off the does. Many people hunting in Racine never see a deer. Eliminate the free tags then and sell some tags so that the hunters have some skin in the game.

We live in a forested area with numerous deer. I am a crossbow hunter and have given up gun hunting in Racine Co. as it is too dangerous. We now fear for our lives during the gun season as we have neighbors that continue to shoot towards our home. With high powered rifles is only a matter of time before someone gets killed or injured because of reckless hunters. Please consider eliminating the gun season in Eastern Racine Co. A crossbow with a scope is very deadly and adequate for our region.

Racine county CDAC members thank you for donating your time. There has been a lot of talk about lack of citizen input at CDAC meetings. Public input is mostly driven by dissatisfaction. I believe the CDAC’s including Racine County are doing a good job no news is good news. With that said I would like to see no additional antlerless permits with everyone getting one with every license some people overharvest an area. The west end of the county is still light on deer.

Very Simple stop the Doe harvest... there is not enough deer to have a doe harvest.. can't understand why people don't understand that.. stop all deer hunting by December 20... and if you allowing doe to be killed during the Holiday 3 day antler harvest you are killing doe that have been bred.. might as well open gun season during the rut... stop non antlers for 2 year's build the herd up.... all your doing now is killing more deer and your not letting the doe reproduce...

I primarily hunt Racine county farmland. As well as public and private land in Iowa county. The Wi. Deer herd has declined over the last 20 years. Our seasons are too long. Hunting until the end of January dont give the Deer any rest. Abolish the Holiday Hunt. Stop harvesting DOES. Keep the traditional 9 day hunt. Stop Dec Antlerless. Archery and Crossbow hunt Sept 14- Nov 16. 1 DOE. Muzzleloader Oct 1- Dec 24. Buck only

I am 79 years old and love to bow hunt. I cannot hunt with a vertical bow anymore, so I took up a crossbow last year and harvested a nice, mature doe. I understand that DNR is considering having a crossbow season in Oct. only. This eliminates hunting during the rut. I would like to see the crossbow season be the same timeframe as the bow season. Thank you.

As a landowner in Racine County I am disappointed every year with the recommendation that we do not have a holiday hunt. The CDAC needs to clearly address the reason they don’t support this hunt. If it is pressure from the snowmobile clubs I will no longer host snowmobile trails going through my farm.

Considering the information presented around crossbow numbers. Please consider a restricted crossbow season. Similar to gun or muzzleloader season. A 14 day crossbow season would be preferred. The advantage over vertical bows is much closer to gun hunting than archery hunting.

I would support no holiday antlerless only hunt and extending archery through the end of January. Don't need people home for the holidays running around with guns in the woods.
Biggest reason for not seeing many deer last year where I hunt is that they went nocturnal VERY early. Caught many many on trail cams after hours.

Had my best year ever hunting racine county last year. Keep up the good work.

Predators were high this year. Had way to many close encounters!!!!!!

I would like to see baiting and feeding of deer allowed

No does
**Richland, Southern Farmland**

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

514 forms were submitted for this unit.

### Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 143
   - I visit this unit for non-hunting purposes: 122
   - I hunt in this unit: 494
   - General interest in this unit: 89

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 466
   - Bow: 296
   - Crossbow: 186
   - Muzzleloader: 127

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 19.37
   - Maximum: 60

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 398
   - Mostly Private Land: 57
   - Public and Private Land About Equally: 20
   - Mostly Public Land: 6
   - Exclusively Public Land: 9
   - I did not hunt in this unit last year: 4

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 14
   - Not too crowded: 25
   - Neither crowded nor un-crowded: 23
   - Somewhat crowded: 11
   - Very crowded: 11
   - Not applicable: 8

### Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 68
   - Fewer: 129
   - Same: 237
   - More: 54
   - Many More: 15
   - Unsure: 11

### Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

Report Generated: Friday, May 01, 2020
I think there is a generalized "cult following" (for lack of a better term) when it comes to us as hunters. We are all talking about the same things all the time when the idea of conservation and deer management are brought up. If we have a bad year seeing deer that means the population has to be down. If all we are seeing is 15 doe per sit we assume that we need all the bonus tags we can get because the populations have to be exploding! I also believe that when it comes to the antlerless seasons, holiday hunts and bonus tags you could have 100 of each and you will still get the same stats and results on the population numbers we continue to see across the state. I believe that is because of the "I DON'T SHOOT DOE'S" mentality that I see and hear all the time in the hunting community. Some of us don't because of a bad experience with a doe and a young fawn. Others simply believe that large doe numbers is a sign of a healthy heard. Still others believe it is more of a trust issue than it is about any moral standard. The WDNR (In my opinion) does not have the trust of the Wisconsin hunting public. I believe the hunting public feels as though the wool has been pulled over their eyes for so many years that they have decided to take matters into their own hands. That is why you could "award" a county 20,000 bonus tags and only see 200 doe taken on them. The hunting public simply will not do what is asked by people who haven't stood on their level or fought for the things that they feel are important too. (That list of things is longer than I time to sit and type) What if I want to shoot my doe at home? What if I want to shoot a doe at home and one in another unit with a friend or group of friends? I think we would be further ahead by allowing the hunting public's views and opinions be implemented more often than organizing a state agenda and having us vote on topics that are nothing more that a "lesser of two evils" crap shoot between topics that we cant relate to and would rather not comment on. It puts the DNR in power and makes the average hunter say. "It doesn't really matter what I say. The DNR is going to do what they want to anyway." Which seems dramatic and somewhat childish but that is where I feel we are as hunters. We follow the general guidelines but until someone starts listening and adapting processes to fit the needs and wants of the hunting community you will continue to see those numbers the way they are.

200,000,000 doe tags issued 10 does harvested. That's my opinion on just a couple of the matters brought up today. I can tell you that even as the time passes as I write this the thought comes into my mind of how much of a waste of time this has been. Will anyone even read this...? If they do how hard will they be laughing at it...? and finally. I know even if they do read it they would have to have some serious pull and then politics would have to be completely removed from the decision to restructure the way things are. So I end by saying: "What a waste of time. I'll just hunt like I always do. I'll follow the guidelines and laws but I certainly won't shoot a doe if I don't want to. If "they" implement a doe only season in my county I'll just hunt in another county. If "they" implement a doe only season statewide I'll just hunt another state or not at all." Hopefully you see where I am coming from. Thank you for the opportunity to share my opinions even if they are meaningless and juvenile/inferior to the "greater minds" that make the clock tick.
First of all I'd like to start out saying, I scout whitetails 8 months out of the year, I run a good amount of trail cams throughout the county and I hunt about 3 months out of the year very hard. But being out there all the time I am able to see what's going on. I hunt mostly public because I have better success. I think we should be the first county in this state to set the bar and pass a 3 pt on one side antler restriction. Not to grow trophy bucks but to protect spikes and forks so they have a chance to go through the cycles of life and maybe they will have a chance to mature more. We do not have the quality of bucks like we did in the past. People like seeing a nice buck, it brings business to the area, and when one is harvested the business continues onto the taxidermists, maybe the butcher shops. If muskie fisherman can get a 50” size limit why can't we get something to help deer in the whitetail capitol of the world? We should try it, what's it going to hurt? People will have more success and they will be happy. This should be an option and many of us would like to see this. Otherwise we would like to see one buck per hunter a year. We are losing hunters not because they aren't seeing deer, because they aren't seeing any decent bucks. The extended rifle season will hurt our buck population, and the continuation of crossbows for anyone all archery season is really having an impact on the buck population, I do not agree with either. We need to have a crossbow season and stay with the traditional rifle and muzzleloader season. One way we could make things a lot easier is change the way the seasons begin. This is a suggestion for the whole state. There are years we hear how the season started to late like 2019 so that lowers the harvest of bucks. There is a simple fix, make rifle season open on the same date every year like MI. This is my idea on season structure and I believe it would improve our state and simplify everything; Archery Season - Sep. 15th-Jan. 15th statewide continues Crossbow Season - Nov. 15th-Dec. 15th statewide continues Rifle Season - Nov. 20th-Nov. 30th statewide, weapon of choice Muzzleloader Season - Dec. 1st-Dec. 10th statewide No extended archery hunts, no holiday hunts, no youth hunts, no baiting statewide, no CWD tags, let the counties control their herds as needed. Let's make this the greatest state to hunt whitetails because right now we are falling off the map, losing business and losing hunters.

I personally think we need to go backwards and stop Archery season the Sunday before Gun season to give the deer a break and only have the 9 day gun hunt. Forget all these other season’s. If you want to limit the deer herd which is crazy where I live and hunt because we remain stable and it’s because we have been successful year after year and actually hunt it. Go back to earn a buck and make people get out in the 9 day season like we always did. It was once like a holiday week and people looked forward to it. Too many changes year after year have pushed hunters away and because of all the choices, people hunt different. With less hunters our, the deer do not move as much. Think about it before pushing even more hunters away. If you go to antlerless only, I am done. I have taken many bucks and does and like to have the option of either or both. I am glad that we have not had any confirmed CWD where I hunt and we always have ours tested. It is all around us but so far not here. We manage our herd well by hunting but not over hunting. If I see 5-7 deer in a day, it is a good hunt. I remember when I could see 20-30 deer a day. Please stop ruining the tradition that I had for my kids and grandkids. Management is important but no matter what you do, landowners have the ultimate control and the problems will always remain in certain areas because hunting is not allowed or only one person is allowed to hunt it. There are parts of our zone that are overloaded with deer and you need to figure out how to control it. I do not like being punished because of those areas when we are lucky to see deer every year. I know many hunters that feel the same as me. I have been lucky every year to provide for my family but I hunt hard and spend many hours in the woods. The true problems are localized due to little hunting pressure and no matter what you do, it will not change. Another problem we have at my place is the 60 plus ag tags that a neighbor receives and kills all these deer including bucks that get left to lay and you do nothing about it. Good luck and we do appreciate your efforts but you need to make good decisions and don’t look at our zones as a whole if you want deer hunting to continue. I’m glad that I do not have to make these decisions as I understand they are difficult. Make me proud to live and hunt in this great state of Wisconsin again.
4 doe tags with a license is ridiculous. I Hunt private and public. I try not to shoot any doe on public because of the amount of pressure and i have some opportunities others dont. If you look at the amount of actual acreage in the county vs. The amount of acreage of just public. Its not even close if you used that ratio to differentiate the amount of tags public vs private there would be no tags. The public gets the most pressure on top of that. The private that i can hunt has 4 other hunters on it so 5 total. We each get 4 doe tags and one buck tag for bow and gun. 10 deer tags per person 50 total deer in one group on not much acreage. I feel we have a pretty standard situation. I really dont understand the 50 tags? Are we expecting one group on a small private tract to accomplish that? There isn't 50 deer to shoot. You may have some large tracts of private land with accessory deer #s but 95% of the hunters can't help with that. But it seems to fall onto them to shoot more and more deer. The situation doesn't have an easy fix but maybe some encouragement or kick back for doe only youth hunts on large tracts for youth, veterans, disabled, etc...we need to stop pretending the average hunter or recreational property owner can fo his part on private when 40 to 80 acres is a typical piece. 300 or even more acres with 5 hunters is different than a 40 with 5 hunters. Public lands should almost always be set to maintain or increase the herd. So much more pressure and more deer get shot per acre.

I listened to the CDAC meeting on the telephone. It was mentioned by one individual that it was quite frustrating to be a member and not be able to have input to the tools that they are given. How can we think we are helping when we are restricted to only what is given. How can this be changed so that our input is at least given some thought. I know that is what the Conservation Congress does but look at how long that can take and too much other stuff is tossed into that. I don't think there was enough emphasis on slowing down the impact of CWD. If there was there would be more being done outside the deer seasons. The DNR could be taking some deer out of the large groups in the late winter or spring. As you drive down the back roads in the evening there are groups of deer as large as 75 to 100 deer. What would be wrong with having some of these deer taken for testing and the meat given to food pantries. It would be a great way to lower the numbers in those areas also. Use a form of market hunters that could be regulated and also would do some good. I'm a land owner and would gladly let them take a couple deer for this purpose. I'm also opposed to having the muzzle loader season messed with. We don't need rifle hunters charging around disrupting the deer movement. If they think they need a longer season open it back up again after that week.

If the overall objective is to reduce the deer populations, and with taking into account the information provided in the video program. It would seem a "earn a buck" program would be the most efficient way to decrease deer populations. An "earn a buck" program could have other variables in place like, needing to harvest two or more deer to earn a buck tag, maybe reducing the cost of a deer hunting license if it is "anterless" only. Or, implementing a "earn a buck" program with a option to buy a premium (higher priced) "buck" tag if someone wanted that option. The idea of having multiple tags carries with some factors that seem to make it not very sufficient. A lot of hunters I know don't process their own or have the means too, or maybe don't consume enough for it to be a viable option. If multiple tags is the solution moving forward - maybe promote ways one can have an animal processed or donated to a food bank, etc. Going to a "anterless only" season.. in my opinion will deter a lot of hunters and seems like it would have an adverse effect on the deer populations along with the revenue that is raised from deer hunting. Honestly, this really seems like a step backwards in achieving the goal on reducing deer numbers.
Crossbow seasons should not be changed. If it is the short range and long range goal to cut back on the deer herd, it does not make sense to limit the crossbow season and number of deer harvested to meet said goal. Rifle seasons should not be allowed or overlap into any Archery Season as the methods of hunting deer vary so greatly. As a Bow hunter Crossbow Hunter you obviously need to be more stealthy. Having someone blazing a rifle during the bow season is in direct conflict with how a bow hunter harvests his deer. It would seem that some people that are in a position to talk trash regarding the use of a Cross Bow neither understand the aspects of using the Cross bow or have personnel skin in the game to hamper the use of said Crossbow. These people sell conventional Compound Bows and view themselves as traditionalist in nature. Being almost 70 years of age, I started hunting deer since being of the age of 14. I use a rifle Compound bow and cross bow. I enjoy using all three methods of harvesting deer. I do not impose my ideology onto other folks as to how or what method or device is used to harvest the deer. I feel that cross bow hunters are being targeted.

I've been hunting within 100 miles of my current home for almost 45 years with a bow and rifle. I'm not longing for the good ol' days when I say that I truly believe that we need to get back to the traditional 9 day rifle season and work within that framework. That would have a positive impact on landowner and public perception of deer hunting. I have talked with many landowners that are tiring of the "never-ending" rifle season. I'm also one of them. It would also get more people in the late season woods for small game, trapping and bow deer. Remove the youth hunt, the antlerless only hunt and the holiday hunt and I believe the enthusiasm for the rifle season will improve along with the motivation of hunters during the nine days. I do think that there is still a place for the black powder hunt with a 5 day season beginning the Wednesday following the rifle season close. I am very concerned about the impact of CWD as well, but I feel there are additional options outside of the nine day season that could be used, especially with the help of interested landowners, but those options have to be developed with the involvement of those landowners.

A couple of comments: 1. Increase the price of out of state licenses. The cost of Wisconsin licenses have been way under priced. Our neighboring states make it nearly impossible to get drawn or afford an out of state license. 2. Do not extend the "traditional" nine day hunting season. That tradition is what still brings several families together over the gun hunting season. It is also very beneficial to have the gun season coincide with Thanksgiving. I personally, along with several in my party, be very disappointed if this tradition was tampered with. I think it would have the opposite effect on the licenses sold. I personally would never purchase another Patron's License. I have hunted my whole life, and every time the Department tampers with seasons and regulations they lose more hunters. Please do not change/tamper with the 9 day gun hunting tradition. It is the one thing that keeps several hunters around. 3. Crossbows should be only allowed to hunters over the age of 60 and/or those that have a debilitating condition. (Again, every time the Department tampers with traditions) 4. DO NOT change the 9 gun season.

Bonus antlerless harvest authorization sales in Richland DMU is abysmal. While it's nice to make a high number of authorizations available to reduce the deer population, it's moot if sales do not increase. With roughly 25% of bonus authorizations being sold the problem isn't opportunity for harvest authorizations. It would be interesting to see metrics on the number authorizations used per license sold for both firearm and archery. If authorizations issued with license sales are not being utilized, offering more authorizations isn't going to solve the population problem. Which then suggests focus is on the incorrect side of the coin. Focus should be how to increase utilization of license issued authorizations, which likely means landowners. On my land I saw a ton of deer again in 2019. Being MFL land and almost exclusive closed canopy timber, it's hard to pattern deer to get shot opportunities. Therefore, I'm considering pulling land out of MFL to create opportunities for habitat improvements. What I'm learning as a relatively new landowner is the objectives of MFL contradict the objectives of good wildlife habitat.
Thank you for the opportunity to comment. I've been hunting public land almost exclusively in Richland County and many other SW Wisconsin Counties for multiple years now. I continue to be impressed with the quality of deer that I'm able to find throughout the county. With that being said, CWD is a very real concern to me. Not only from a consumption stand point but also for my passion for this amazing resource that we're tasked with managing and responsible for protecting. I ask you to please take this disease seriously if not for yourselves but for future generations. I also want to thank you for once again offering the holiday hunt and the extended archery/crossbow season. I'm very appreciative of this season as its a great time to hunt with friends and family. This additional opportunity also allows those weren't previously successful and those who want to harvest more deer the opportunity to do so. With that being said, I fully support and thank you for recommending the holiday hunt and the extended archery season.

I understand the complexity of all this, but to make decisions that equally affect land masses the size of counties is borderline insane. Anyone who spends a reasonable amount of time hunting in this state knows that the distribution of land ownership creates “hot spots”, for lack of a more scientific term. Within the borders of a county, there will certainly be areas where there are land owners who possess hundreds, if not thousands of acres, and either hunt with very few people or even none. Then there are the areas where several square miles consist of nothing but different owners of 40 acre parcels, each with multiple hunters on them. With all due respect to rocket scientists and brain surgeons, even without being one of them, one would know there would be extremely large disparities in deer numbers between the two. To legislate situations where these scenarios are treated equally is not well thought out. Just like life in general, we don’t need equality, we need fairness.

I would like to see it be available to harvest 1 Doe and 1 Buck or 1 Deer either species Statewide. The rest of the antlerless authorizations can stay how they are chosen and distributed now. I hunt to eat venison not horns, although I Hunt and have family ties in this zone I do not live in this zone, thus it is sometimes hard to make it back to hunt in the late season bonus hunts. I also mentor youth hunters both during the youth hunts, regular season and bonus seasons where possible. If this were to be put in effect this would give more opportunities for these and other hunters to harvest a bonus season antlerless deer by giving them the opportunity to hunt someplace other then their chosen county and land type for the traditional 9 day season. I truly believe that if the objective is to either maintain or decrease the population in most counties this would give more hunters the opportunity to harvest a deer over the course of the entire hunting season.

Designate an Earn a Buck bonus to help combat the spread of CWD. Each hunter is issued 1 buck tag along with an antlerless tag and the standard bonus antlerless tags for the farmland unit. Hunters would then have the option to earn a second buck tag (but a maximum of one extra buck tag per hunter). Since bucks are the primary spreaders of CWD, harvesting more bucks could help reduce or control the spread, and this bonus could increase the doe harvest. Archery/Crossbow EAB tags would only be valid for Archery/Crossbow. To verify that does are actually harvested for the EAB authorization, hunters would be required to submit a picture of the doe with the tag validated and attached to the carcass. This would only be required for the bonus EAB tag. All other doe tags would be registered the regular way. EAB tags would only be valid for the year the doe is harvested in. This could also encourage more antlerless harvest per year.

all the info you provide, there is NOTHING mentioned on CWD improvement. Pretty sad, since it's been here 20 yrs. Go back to earn-a-buck, back tags, and in-person registration. We don't need 15 deer hunts per year. We should move the gun season to start earlier in Nov., not run later. Everybody would like to catch a part of the rut,...not just the bow hunters. You want hunters to have their deer tested for cwd, and give 4 antlerless tags per license, BUT YOU CAN'T COME UP WITH A TEST RESULT IN ONE DAY, rather than 10-14 DAYS????? Who in their right mind is going to pay to process all that, or process themselves, freeze it, and then find out 2 wks. later it tested positive??? I kill it now, I want to know now so I can enjoy eating it. DNR needs to wake up now before it's too late.There's pregnancy tests that give instant results..Too much poaching going on. Shutdown all deer farms and ALL baiting.
First off, I am glad that they have kept the statewide Buck Tag, however, it would be nice if one of the bonus antlerless tags that they issue in some areas would also be considered statewide or at least allow you to hunt in an adjoining county. I understand they issue the extras, because they want to reduce in a certain area. However, I live in one county and have land in the adjoining county. I have friends that I hunt with that have land in the county I live in, and it would be nice to be able to hunt antlerless deer together. Our properties are within 10 miles of each other, but because we have to specify the county we cannot hunt together. If we missed something in the way this was set up, please make it more clear in the hunting rules. We would love to be able to give our kids and ourselves more opportunities to harvest deer and hunt together like we did in the earlier years.

The more rules that are changed from year to year will end up in a reduction of hunters. Reducing your hunter numbers will reduce your harvest totals. Why is there this nonsense about changing seasons and weapon type. The system wasn't broke in the past and yet decisions were made to change them. CWD prevention has proven to be a disaster. Too much change to fast is why we are with a broken system. How long has CWD existed in Western States? Are there still elk and deer in those states? Nature will take care of itself and will balance out. If the original hunting structures would still be in place you would have more excitement and participation in the hunt. Now there is no urgency to go out for the 9 day gun deer season. The attitude is: There's plenty of time I'll go out later. Later doesn't happen like a deadline. Fact! More is not always better!

Hunter retention is key therefore I feel like an antlerless only is danger. I would still harvest antlerless, but perhaps some/many may not. Having 4 antlerless tags to each gun and bow seems like a lot, but if that gets people to take animals following the 3 yr goal than OK. Do the people that purchase bonus tags from this county or outside? Would decreasing free tags translate to more bonus tags purchased for DNR revenue? or reduce amount of deer taken, the primary goal? I would like antlered deer to be taken during the extra seasons with bow/crossbow. I like to hunt those seasons, but if I have already taken antlerless during the year I would like to opportunity to take a buck. Again is primary objective reduction of county herd number? Especially because most of the deer taken during this time are by people with limited time to hunt other weekends of the fall.

Here’s my opinion. Again, just my opinion. How many licenses were sold in 2019? Ok, now ask, how many of those harvested deer in 2019? There’s a problem with deer population in RC, and this guy on the video, doesn’t know anything about how to attract deer hunters to Wisconsin. At all! Grant county included! Oh, and now you opened the city limits of Richland Center? I pay taxes and buy licenses from the DNR? I own property in green county too. Both areas have declining deer population. You guys can’t understand what it’s like to raise mature deer just to see them disappear because public hunters don’t know boundaries! So in my opinion, 9 day gun season only, and bow season dates remain till Christmas. That’s it! Get the population up, and omg, you got more hunters. I haven’t seen deer in my area all gun season. Our heard population sucks. Look at your own numbers!

2019 was my first year hunting deer in Wisconsin. I was invited to hunt deer on a farm with crop damage tags and shot 5 doe. I was back for the firearm opener and shot a scruffy, one antlered buck and three doe opening day. I am a meat hunter and left some with the farmer, gave some to needy friends, and brought the rest home to MN. The thing that made it really attractive to me was the farmer’s request to help thin down his deer herd and the fact that the first time buying a Non-Resident tag it was half price. I would be willing to shoot only doe if that would make it possible some way to pay half price for a non-resident license. I’m not a wealthy man, antlers don’t mean a whole lot and that kind of reduced license cost would make it very attractive for me to hunt in WI in 2020. Last year we made three trips to hunt, eight hours drive each way.

Report Generated: Friday, May 01, 2020
No mention was made what so ever about the effect of Epizootic Hemorrhagic Disease. Dozens of dead deer were found in our area last year. EHD seems to be completely ignored by the DNR, the CDACs and the media. However it was/is real and troubling. Instead of extending seasons later in the year, how about allowing land owners some flexibility in harvesting antlerless deer with firearms earlier in the Fall? I know the all mighty bow hunting lobby would get in a snit. Farmers hold many crop damage permits and seem to be able to kill deer without causing huge disruptions. My wife and I would like to hunt our property in October with rifles in nice weather. We don't care to use arrows to kill deer, preferring instead the swift certainty of a rifle. Tell us you want 4 does harvested in Oct. and let us do it however we see fit and we will work with you.

I experienced a very frustrating archery/gun season in 2019 due to crops still standing in the fields. I realize this is out of your power to control. However, it got me thinking about a better season structure for WI in general. Extend rifle season through the traditional muzzleloader season, providing three full weekends of rifle hunting. Additionally, the late bow season should include muzzleloader hunting if you haven't filled your gun buck tag, and/or antlerless tags. I think the late season should extend till the end of January. One big issue is access to private land that is never hunted (sanctuaries). Find some way to provide an incentive that is too good to pass up, so these landowners will start hunting these properties. In counties that are predominantly private, these properties make it impossible to reach herd goals.

As someone who has hunted deer in this area for all my life I feel we have lost some of the enthusiasm for this sport. As an older person it is my opinion that we may be better served with a 9 day gun hunt rather than the many seasons we now have for gun hunting. I strongly believe the tradition was much stronger under this format and wonder if we would see more participation and better harvest results if we returned to this format. I am an avid hunter and want this tradition to carry over to the next generations but it is concerning to see the decline in hunter numbers. I do feel there is a real incentive for all of us to do what is right to protect deer hunting into the future. I do understand we have a major concern with the CWD issue and how to manage this to protect our deer herd going forward.

The deer herd and hunting Richland County have long been underrated with terrific opportunity for a hunter to take to the woods and have a reasonable chance of success. While this still remains the case, the current "decrease" trajectory and over-harvesting of does does not bode well for the future. This war on does needs to end and the recommendation needs to be to maintain or even increase the population when the chance arises. Additionally, while some private land may need additional does harvested, public land deer populations are already taking the biggest hit. With continued aggressive doe harvests, the public land opportunities will continue to decrease along with the quality of the hunting opportunity. Scale back the number of does that we are harvesting before its too late!

4 adult deer harvested in 2019 season 3 of 4 positive for CWD. Population in the area needs to come down, is all private land. Some land owners still of mind set to let the does go mentality and selectively harvest Males. I shot a buck aged by DNR to be 3.5 Years Old weighed 154 lbs. granted harvested at the end of rut(NOV 27) and had lost weight. but believe over population had something to do with lighter body weight. Was also the only deer to test negative for CWD, all Does over 2.5 Years old tested positive. I had a lot of work in the harvest of the meat because of the possibility the test would be positive and just threw it away. May hunt Northern WI for consumable venison and just kill deer in Richland county to reduce population but have considered not hunting at all.
We have too many deer and too few hunters. Grow the hunting tradition by bringing back in-person registration stations. Make hunters accountable with in-person registration, requiring backtags to be worn in the field, and make the minimum hunting age 12 (and require hunter safety). We have too many deer - 68 per square mile in Richland County! Add hunting seasons to reduce the herd: we should have an October antlerless hunt, a December antlerless hunt, and an either-sex holiday hunt. Leave the 9-day gun hunt alone. Don't enact an unnecessary cooling-off period. And don't listen to whiny, greedy, entitled cog-bow hunters when they complain about cross-bows. We need more hunting seasons and more flexibility with hunting tools.

I feel over all that the amount of deer that I see during hunting season is ok. I don't see an over abundance of deer but see enough to keep me happy. One thing I have noticed pertaining to gun deer season is the hunting pressure is down quite a bit compared to 15 to 20 yrs ago, which is why even on Opening Day you may not see that many deer, and I've heard hunters complain that they aren't seeing hardly any deer, it's not from lack of deer but rather the deer aren't being pressured like how they were 15 to 20 yrs ago, so they assume the deer numbers aren't their, when in fact they aren't seeing deer because they are not moving because there is a lack of hunters in the woods to make the deer move.

Regarding increase in price for out of state hunters, I do not believe this is a wise decision. As a resident and of WI until my wife's job took us to Minnesota, I find it very frustrating that I cannot afford to hunt multiple seasons on my own property due to rising license costs. Additionally, a rise in resident costs will result in an increase of non-licensed hunters (poachers). After the in-person registration requirement was removed, I believe many hunters are not registering their deer if they are self-butchering. There is an indicated reduction in deer harvest but part of much of that may be due to inaccurate reporting due to the lack of requirement to register in person.

I am extremely against the proposed lengthening of the 9 day gun season or making it earlier in the season. I am even more extremely against not allowing bow/crossbow hunting a week before the traditional 9 day gun season. I feel we have made some progress in this state segmenting deer management units and getting feedback from hunters localized to each unit they hunt. Just because of one poor gun season which was a bit later last year, had a lot of crops not harvested in most areas, poor weather for hunting conditions etc.. We Should NOT jump to an extreme measure of not allowing bow hunting a week before gun season or making any changes to the gun season format for that matter.

I think that we need to stop having antlerless deer hunting seasons and have earn a buck for the normal gun deer season and bow season. The DNR needs to stop regulating hunters putting out minerals to help deer, CWD will be spread by the deer licking the same branches and drinking from the same watering holes. Also the best way to sell more licenses for deer hunting would be to allow hunters to purchase both bow and gun licenses at the same time and could use there gun buck tag for bow hunting and then not have a gun buck tag if used during bow season. Wisconsin should really offer a life time hunting licenses like many other states already do.

If the concern is to lower the size of the deer herd, it only makes sense to add an "earn a buck" back into the equation. The former rule of being able to take a buck first and then, by harvesting a doe, earn another chance to get another bigger buck seemed reasonable. My hunting companions and I and many other hunters I know work to harvest a "record book size buck". The only way to take that bigger buck now, is to let smaller bucks walk by and thereby missing an opportunity to lower the herd. The way it is now we have to let every buck go by waiting for "the big one", and in many years that means not harvesting any deer. Let's get back to the former rule.

Implement the traditional and simplistic season structure. Nearly every weekend in December is a gun season which doesn't allow time for late-season bow hunting. We find sheds every year starting around New Year's. It'd be irresponsible to extend bow season into January or later. Let the deer recovery and remove all pressures of seasons. The constant season changes are tiresome. Provide full recommendations of how the season should lay out and let people vote on that for Richland County. Quit asking round-about questions and get to the point of the season structures with full plan options for hunters, land owners and farmer to decide on.
Public Input on CDAC Preliminary Recommendations - Spring 2020

Do not look to Earn-a-Buck (EAB) to reduce deer populations. By increasing the number and age structure of bucks in the population, EAB is a negative when trying to help control the spread of CWD. A Bonus Buck Authorization (either one per person per year or one per license per year) is a better tool to help control the spread of CWD. Another method to reduce the deer herd and help control the spread of CWD would be to have a draw for buck harvest permits with antlerless hunting for those who did not draw a buck harvest permit. Those who did not receive a buck harvest permit would be given a preference point for next year's draw.

If increasing antlerless harvest is top priority, I'd suggest a modified Earn a Buck system as follows: Allow the first deer a hunter kills to be an antlered buck. If the first deer taken is an antlered buck, the second deer must be anterless, which would then allow the taking of another antlered buck, however, if the antlerless deer taken is a buck fawn, no antlered buck tag would be rewarded, requiring another antlerless deer to be taken. This would really help promote the proper identifying of your target while hunting and would allow hunters to take a buck when the first opportunity presents itself.

Year after year of 4 to 6 doe tags has taken it's toll. Taking the kids out gun hunting and we don't even see doe, it's getting frustrating, everybody shooting doe then not registering them is why the numbers are out of whack. Driving to our land we see tons of deer in sauk county why don't they get 6 doe tags per license? Between me bow and gun hunting and my 2 kids we could have have taken 17 doe. Why? People in town complain the deer esting there plants? That will never stop unless someone hunts them. Enough with all the extra hunts and extra tags or there will be 3 less license purchased.

I would love to see crossbow hunting have either it's own season like muzzleloader after the rut because using a crossbow during archery season is about the same as letting people muzzleloader hunt during archery season. Not right and should be changed. But most importantly our farm has had many conversations about wanting an earn-a-buck type structure but limited the buck tags to one for archery and one for gun. Does do need to be decreased but you are going backwards letting each doe kill represent another buck tag. Earn a buck with one buck limit per season (bow and gun).

So watching the clip talking about the deer decreased harvest is going down. Would you think that, after changing the rules in 2018 to do online harvesting, many people would comply to it and actually do it. I would say probably many people are taking advantage of it and shooting more antlered deer with a single tag/ or just not registering their deer online. I support having an online deer harvest registered but I think many people are taking advantage of shooting more deer using 1 tag instead of all their tags. Thats just my saying in how the numbers are decreasing.

1 buck per year per person not per liscense. I would like 1 harvest tag buck or doe statewide. would allow me to hunt with my son in another area of the state and not restrict my chances of harvest. Leave doe tags as they currently are. if you are extending gun season go earlier start. tell bow and crossbow hunters to quit bitching about their 5 month hunting seasons or restrict their seasons. come up with a faster test for cwd. Do not pay for positive tests, replacing tag for following year a good idea on positive tests. I am a meat hunter, rifle season only.

Certain areas have many deer with no one able to access, other area's have very few do to all the tags issued. People living in town complain about deer eating plants, shrubs, and trees have no clue. These deer are living in town never hunted so they complain and want more deer shot in the county. Makes no sense. Let people bow hunt near the outskirt of town might solve the problem. Me and my 2 kids had 13 tags this past season and saw 4 deer in 7 days of hunting. We pay high taxes in Richland county and hope something will be done.

I am in favor of earn a buck. I like the idea of a bonus buck, but would almost like to see two does for the next buck tag... I think you may really see some does hit the ground then... but it takes hunters with the drive to hunt and hunt hard and unfortunately it seems that all the proposed knee jerk reaction proposals (longer gun season) seem to cater to the specific hunters who hunt only a handful of days a year and want the easy way given to them. Hunters who make hunting a priority will have success in Richland county.
Overall, I would like to have a quality hunt. This means seeing deer on the land I hunt which would definitely help bolster the economy in the area as well as getting younger people interested in the sport. I didn’t see that many deer this past year which deflated my ambition to go out. I do realize that the deer numbers fluctuate in different regions in the area I hunt. I am noticing a lot more predators and wonder if the populations are at risk in the future. I think the way the system is set up now for this unit is fine.

I used to see deer in the fields adjacent to my land on a regular basis, this is no longer the case. I have seen & found dead deer with blue tongue/ midges disease as well as others that may have been affected by CWD, so what about all the blood borne pathogens that are being caused by ticks & how will the deer herd be treated or vaccinated to prevent the spread of these diseases, I had anaplasmosis, it was horrible & took a long time to get over & yet I still continue to suffer from the side effects of this disease???

A increase in non resident youth licenses is not unreasonable. If WI provides and continues with lower license cost then its neighboring states they will continue to draw more hunters into the state. My family has owned property and paid taxes in WI for over 45yrs, yet we don't benefit from resident licenses. I do believe in extra doe tags with the licenses, but I am willing to harvest and donate my animal or animals to food banks. Including locations or # to where to donate would be more helpful. Thank you!!

The dnr has to realize that in certain areas the deer population is way to high but it’s all private land with very few hunters. They want large deer herds and who can blame them I would. So please stop crying about the size of the deer herd because the majority of the area is not over populated. I’ve hunted since the early 80’s and the deer population now is a fraction of what it was them all we here is 2 million deer. What a joke. It’s time you listen to sportsman because that’s where the money comes from

Yes, I would really like to see where one who owns or rents the land, that they can harvest a deer when they have a need for one to put in the freezer regardless of "gun season.' The reason being is I don't hunt on Shabbat (Saturday) and by the 1st day of the week (Sunday) the deer are all spooked and gone. I only hunt for the meat not for the sport or the antlers. There are also poor people who could use some deer meat as well. So it would be nice for private landowners to harvest a deer when it is needed.

There are hot spots for Richland county as in alot of deer. But northern part is not so much I hunted all 9 days last year and I can count on both hands the number of deer we saw between 8 hunters.. there is a big decrees in deer and I think the 9 day gun hunt is good for time wise but I think bow needs to be shortened Sept. To Jan seriously why so long if your going to have 4 months for them open a small window so people that just gun hunt can get in the rut to.. we would love to have the hot action to..

If there is a "doe only" hunt I will hunt another deer Unit. We harvest 1 or 2 does for each of our party of 4. Without the ability to hunt bucks we would hunt a different unit. Where we hunt last year there was a deer kill from blue tongue(?) Numbers were down in our area. I think giving a second buck tag after shooting a doe would work better than 4 doe tags. You should always get a buck tag, no earn a buck for first buck tag, then earn another for harvesting another doe.

The deer population estimates year over year always seem too high. As hunters in the woods, at least in my area of Richland County, we are not seeing the a deer increase. We see about the same to less deer. That is for over 1200 acres. Also, folks are not going to shoot 5 deer a year (with the 4 antlerless tags). That is why the your chart on the providing 2 antlerless tags vs 4 antlerless tags shows the harvest is the same. Your population modeling seems suspect in my opinion

I am a gun hunter. I don't have the time or resources to spend hours, weeks, or months bow hunting. If you really want to manage the deer herd, allow me to hunt with a gun in October when the weather is more favorable, and not just antlerless deer. It is hard to hunt in cold weather. I appreciate the history of the November hunt, but the deer herd keeps growing and the hunt is going to have to be adjusted if we really want to
The presenter could of had more energy during the presentation, describing the graphs better to dumb down - some people may have hard reading graph, and informing them what the Y/X axis is will help them process the data. I would consider sharing the screen so that the biologist can use his mouse and point to where he is speaking to. Keeps the viewer engaged a bit more. More pictures of bucks in the area. Youh numbers down, presentation for youth.

The deer population has dropped so bad in the past 5 years is pathetic. 10 years ago i used to see on a average of 15 deer a day. now if i see 3 out of the 9 day gun season I'm doing good. that goes to say that the population has dropped so bad with the over harvesting of these animals so pathetic. that goes also for the crossbow season also. I THINK NO EXTENDED HUNTS, NO HOLIDAY HUNTS, NO BONUS TAGS. 1 BUCK 1DOE PER GUN AND ARCHERY THAT'S IT.

Good presentation. I didn't see any deer opening weekend (one coyote,) but my brother, whose land I was hunting on for the first time, gave me one of the two antlerless he shot. He also got a buck with his crossbow. Later during the Holiday Hunt I shot an adult doe. I plan on hunting with him again this year. We didn't get our deer tested. We plan to test for CWD this year as we are in the NW corner of the county and the prevalence is growing.

If the kill numbers are down its because of lack of hunter participation. Allow all kids under 21 hunt for youth prices. Keep all liscence prices the same. Raising these will definitely keep people from buying them. Especially out of state residents. Make the doe’s an unlimited harvest. One buck tag per gun liscence. One buck tag per bow tag. Make gun season longer. A little earlier than normal and a little later than normal.

If you want to kill more does, quit handing out 4 tags with each license. If you give me... a landowner....8 tags (bow/gun)....I'm sure as hell not going to shoot a doe. Why? Because most are to concerned that their neighbors will actually fill 4 doe tags/license. You will kill more does by just giving each license a doe tag. Don't believe me.....increase it to 10 doe tags/license...and lets see if doe harvest goes up or down.

I do think the muzzleloader season should be moved from right after gun season. To have a muzzleloader season right after gun season makes no sense . I would like to see the season moved to later in the year say Christmas and or an earlier season say weekend hunt in late September or early October. Also non resident license should be raised by a considerable margin. Thank you for considering the above items.

I fully believe that the 9 day rifle season should be extended this year. I hear people talking about crossbow hunters having taken more deer because they can shoot farther and more accurately which is incorrect because most people I know are usually only shooting the same distance and no further than 40 yards so crossbow hunting should not be eliminated. I seen a lot more deer in 2019 than I have in 5 years.

Please consider using the best tool we ever had for decreasing the overpopulation of deer by bring back EARN A BUCK. That tool was the only one that worked and landowners would use it because they would like to have the chance to hold out for a trophy buck after they harvest a buck. When we had EARN A BUCK, I ate tag soup every time but it got me and others to shoot a doe. We need this and it worked.

No need to pay farmers for crop damage. If they want deer killed they should be begging hunters to come and harvest deer. Have the farmers sign up with dnr and dnr regulate/allow so many hunters per farm. Do it from September-December! Great situation for hunters that are having problems with public hunting areas being crowded. This should help fill the 4 tags per hunter for southern farmland areas.

I support an anterless only hunt, for all seasons, including 2020 and future years when needed. I would like to see a reduction in the total number of deer along with an increase in the number of adult bucks. Currently, with all the seasons and hunter preference of harvesting a yearling buck versus an antlerless deer leads to very few bucks making it to the age range of 3 1/2 to 5 1/2.
In an effort to keep CWD prevalence rate as low as possible, I would encourage the CDAC to continue with the 4 antlerless tags per license. If the CDAC is ever given the authority to manage buck harvest, I would recommend the re-implementation of the "Bonus Buck" system. NOT "Earn a Buck". The "Bonus Buck" was an effective management practice to increase doe harvest. Thanks for your consideration.

I am an out of state resident that owns land and hunts that land in this unit. Discounted tags for out of state land owners, and additionally discounted tags allowing the landowner to distribute for the property, would allow myself and additional family & friends more opportunity to hunt and harvest deer. I believe this approach would encourage more hunting and encourage more doe to be harvested.

I support NO CHANGES to the current 9 day gun, archery, crossbow, or muzzle loader seasons. Keep all dates the same as they have been. It is tradition for Thanksgiving to always be during gun season. Bow/crossbow hunters and harvests do not affect gun season. 2019 gun season had low kill numbers. 2020 will be high. It's happened before like it always does with a late gun season. Thank you.

I think earn a buck was the best program for increasing the amount of does being shot. With online registration we don't have that opportunity as readily available but we do have CWD monitoring stations. This would allow for the re starting an earn a buck program while increasing the amount of does being tested. It would also increase business to businesses that have CWD testing sites.

I feel if you can harvest 2 doe by any means then you get an extra buck bow tag. I hunt primarily bow and I harvest does with gun and bow for balance, but I lease my land and drive 3 hours. If I shoot a big buck early it takes away the excitement to get back out in woods and see an even bigger buck. Reward the hunter who takes Does (2-3) and give him the extra buck Bow tag. Thanks

I continue to have my deer test positive for CWD and it is getting costly to process a couple of deer and then find out I can’t eat it. I have even tried to shoot smaller/younger deer in hopes they would be negative. A longer season with more free tags would allow those of us that can only take a day or two during the season to hunt a chance to get out more and help reduce numbers.

If the deer season goes to antlerless framework none of the 4 non-resident hunters in our group will come and only one or two out of 8 in-state hunters will come. The only reason we shoot does is to reduce our deer population and for meat. We are very strict with what we shoot. If you shoot a buck you have to shoot a doe. Plain and simple, we sit in stands to see horns!

I'm a land owner, legacy hunter now living out of state. I have seen opinions to raise out of state license fees for fishing and hunting to raise revenues. This is in my opinion a very bad idea. I can say with some certainty that coupled with the lack of state action concerning CWD raising fees would all but end my deer hunting on my family's farm. David Duren

We see as many bucks as does on the east side of RC. We have taken our does over the years and the population is close to a 2:1 ratio. It makes for an exciting hunt with good competition and an abundance of Rut sign. I think antlerless only would be detrimental to the herd in our location. When hunters were more concentrated with fewer seasons we saw more deer.

I think they should do a doe only hunt or at least do where you have to shoot 2 does before you get a buck tag. We have a over population of deer. And mostly for. We count at least 30 deer in out hay field on a nightly basis. And we shot 5 does last deer season. You can go for a drive for a mile or two and count almost a hundred deer. Something has to be done.

I use a crossbow and if the restrictions are for them to be only used in October I personally will not purchase a bow license this year and every year it is enforced. I know many other crossbow users who are in agreement of not purchasing a license if these rules are finalized. I would agree to a Holiday hunt if bucks were allowed to be harvested as well.
Many years ago the northern WI. counties like Florence had an abundant deer population. Rules were changed to basically kill as many deer as you wanted...doe only, extended seasons etc. Now hunters in that area are lucky to see one deer in a season or more likely none at all. Just don't want to see that happen in Richland County or surrounding areas...

I think deer licenses for out of state should be lowered in price. It’s a pretty exorbitant fee and you are limiting the amount of people that can join their families and friends in the yearly hunt. Please consider at least lowering it for those that hunt private land only. A tiered system of cost would be better with private land being the cheapest.

We try to kill as many deer as possible during the gun seasons, but many times just run out of time/opportunities. A longer gun season might help. Our efforts don't seem to limit deer numbers and CWD keeps increasing. It is very, very disappointing to kill and process an apparently healthy deer only to find out that it is positive for CWD.

We need to bring back earn a buck, our doe population is way to high. Most of the hunters don't use their antler less tags due to the warm weather during the early season and by the time the weather cools we are concentrating on harvesting are bucks, and put the doe harvest on hold as not to interfere with are buck hunting.

We need to bring back Earn‐A‐Buck. The legislature needs to authorize the DNR to use this management tool in areas where the herd needs to be decreased. Simply having an antlerless only year will just reduce the number of hunters. Also I would like to see a return of the holiday hunt be either sex as it was originally.

We have a mountain lion cave on neighbors property and there have been pictures taken with trail cameras of one male one female and two cubs last fall and I do feel I have seen a lot fewer deer because of this reason and it is hard for me to let the bucks become big and manage my herd with the lions doing it for me.

Deer distribution is not equal throughout the county. Decisions regards management are being driven by people who believe they can control CWD. I am not of the belief that killing all the deer will save the deer. Carrying capacity does not seem to be much of a factor in the choices this CDAC has been making.

I think the management unit should be working much more aggressively than proposed to reduce the deer population by any means necessary. The CWD problem won’t be addressed if we can't manage deer density and frankly there are too many deer as is, which is detrimental to other land uses like growing trees.

I don’t expect to get a chance at a deer every year. That would make for boring non sporting hunting. But over the last years I have noticed a severe decline in the amount of deer in the area. I experienced my first year ever not even seeing a deer anywhere at all and I put in much more time this year.

The biggest concern is people are more interested in the big bucks than just the venison, I will shoot a buck or doe because you can’t eat the horns. I don’t see many deer during the hunt and see most of them when hunting season is over. I have been lucky enough to get a deer almost every year.

My sons and I have hunted our woods for 5 Years. North East Richland County. 2018 the 3 of us on 70 acres saw a total of 7 deer during the gun season. 2019 We saw 4 Deer Hunting almost every day 75 % of every day. In discussions with our neighbors very similar results. Extreme disappointment.

It is totally wrong to issue so many antlerless /crop damage tags to the point that neighbors can shoot down an entire herd on opening morning. I also disagree on the same being able to hunt all seasons with bows/crossbows and the assistance of a drone! We need more restrictions on most of this!

I really think when you got rid of back tags and went to calling in harvest, you lost accurate numbers. I strongly feel 20-30% of deer harvested are not called in and registered. Plus, hurt local businesses by lack of registering at bars, gas stations.... poor change in my opinion.

Before times 26 deer would go by in an hour now maybe see 10 in 2 days total maybe never see a deer opening day maybe get a shot on sunday. Not a lot of shooting in area anymore like in past years, don't see as many hunters in area anymore, not sure because of registration change.
I would support an earn a buck approach to shoot a second buck after the harvest of the first buck. This could apply to archery or gun. I feel this is the only way to increase the doe harvest. Where I hunt very few does are shot as most hunters are trophy buck hunters.

You people in the DNR just don't get it if you want to lower the antlerless deer in this unit, you need make every Hunter that wants to shoot a buck shoot at least two antlerless deer, that's the only incentive that will work, look back at your past history of kill!

The archery season should stay the same and crossbow hunting should be allowed during the archery season. The gun hunt should not be extended. The doe only hunts should be taken out completely. The muzzleloader season should be pushed back another week or two.

Regulations should go back to the way they were pre CWD. Also add an option to be able to purchase an additional buck tag for residents of the state. Raise non resident hunting fees. Possibly go back to earn a buck if you have a way to regulate it good.

If you want more doe shot in Richland County make all the out of state folks and people that lease hunting land shoot a doe before they can shoot a buck. The nonresidents should have been banned owning land in Wisconsin then we would have never had this problem.

The deer season in Wisconsin is steeped in tradition and brings an enormous amount of revenue into the state with very little overhead. Stop treating the whitetail as a pest and realize what a gift it is to the citizens of Wisconsin.

I operate a slaughter plant that process deer. If deer seasonIs extended beyond the typical Thanksgiving week I have to quit processing deer. Keep the 9 day season only. Make everyone hunt that week to move deer in the woods.

I would like to re-enact onsite registration and bring back the use of backtags as a form of hunter identification...no holiday hunt anywhere within the unit, a nine (9) day gun season for rifle, shotgun, pistol, or muzzleloader.

One observation I would note is we have found the mortality rate this winter was much higher in years past. We do 100 percent testing and have found that CWD has spread through all age classes of deer not only bucks but also does.

Do not shorten or eliminate the crossbow season keep it the same with traditional archery. Bring back the Back Tags. Mandatory registration stations no more online registration for whitetail. Reopen a season on Wolves.

We took 3 bucks and 5 does off our land this year. With a total of 8 hunters. I have found 2 carcasses so far this spring. Which seems more than normal. Sometimes I see none. We also have a bobcat living on our land now.

I know I'm in the minority but I do feel if you want to lower the population I would put back the earn a buck. Also give hunters more opportunities to donate deer to food pantries. If by going doe only I would not hunt.

We had a lone grey wolf observed on our land in Henrietta township Sunday morning of opening gun season. When we told our neighbors they mentioned they lost a calf to a kill in the spring. We don’t want wolves on our land.

In a seven mile drive I have counted over 300 deer and that is just what I could see from the road. It is nothing to see 50+ in a single field at any given time. This is being reported from north of Richland center.

Most landowners will set there own quota for the number of deer killed on there land. On my 350 acres with 5 hunters all bow hunt and gun hunt so we could kill 40 does and 10 bucks. I would allow each hunter 3 deer.

Too much crop damage because trophy hunters want large numbers of does on their small private acres while the farmer owned land winds up feeding them. I believe in bonus buck tags if antlerless is harvested first.
Although I am not opposed to selling or supplying extra or doe bonus tags I think that issuing four per license in the Richland area was excessive. Maybe a maximum of two per license would be better.

I heard rumors of shortening the crossbow season. I hope that is just a rumor as crossbow hunting is getting more popular it could help hunters/dnr to reach the desired deer harvest quotas. Thank you

I think Earn A Buck (with verification) would be great for 2021- would ensure a whole lot more antlerless deer are shot in this unit to help address the growing deer population and CWD transmission

It seemed to be less deer 2019 rifle hunt than in the past. I feel that the nine day season being a week later then it was in 2018 had a big effect on seeing deer as it was better in years past.

We farm in Richland County Buena Vista township. We have found seven dead deer on our farm land since January 1st. This doesn't include woodland. I believe cwd is. Taking its toll. Thank you

We need to eliminate CWD, For the future of hunting! We don't need large predators like the wolf back! This will open up a hold can of worms that we don't need! Please stop spread of the WOLF!

We keep trying to shoot all the deer off. I have a grape vineyard that gets ag tags every year and dear hunts. I see fewer dear every year. So why would I want to shoot more. I don't see more.

Over recent years- the area where my family farm is located in eastern Richland County and western Sauk County (Willow township) We have seen a lot more poaching. Any statistics about this

I feel we should extend seasons. Either on the back end, or earlier start. Once gun season happens, most deer go nocturnal, in my area. That makes any hunting after much more difficult.

I would prefer the crossbow and bow seasons remain open from September to closing in January. Limiting crossbows in November I heard as a proposal I am completely against.

I would like to see more on the effects of CWD on deer. I would like to hear more information if you eat a positive dear do they have any concerns of human consumption?

Please keep pushing for a change in the law to bring back earn-a-buck. It was the most effective management tool we had and the hunting was still very enjoyable.

I am completely against any lengthening of gun deer season at all no matter when in the hunting season! Deer population has plummeted in this area over past year,

I appreciate the biologist taking the time to make the video. I have a better understanding of the deer management taking place in Richland County. Thank you!!

1984 Richland county...Avg deer herd 200+ animals 2020 Richland county.... Avg deer herd... 2 or more animals. When did Conservation, turn into annihilation?

Make the gun deer season mirror the Michigan season. Start November 15 and run until the end of the month. You would consistently reach the harvest quotas.

Lower out of state non resident license price to attract new hunters into the area along with Increase revenue they would bring in to local businesses.

We need to harvest more antlerless deer if we want to control the population. We should use science and not politics as our guide

recommendations for the entire unit do not take into account differing herd population densities in different areas of the unit.

Why can't we bring back Buck/Doe Holiday hunt? The kids loved hunting during Christmas break to get a chance to shoot a buck.
7871 I would like to see holiday hunt include using your buck tag some people don’t get the chance to go out for the nine day hunt

7872 I think the CDAC should consider going back to a straight 9 day gun hunt and get more hunters in the woods at the same time.

7873 I would like to get the muzzleloader season moved ahead of the 9 day season to encourage more people to use muzzleloaders.

7874 You could give out all the free antler less tags you want, but until you use earn a buck nothing will change.

7875 I would like to see bow and cross bow season start earlier. Give the kids in schools an opportunity to hunt.

7876 I don’t want a separate season for bow and crossbow. Keep them the same. Please and Thank you !!!

7877 Allow harvest of antlered deer during the holiday hunt. That will increase hunter participation.

7878 We have a number of cod deer taken the last several years. Need to get a handle on that problem

7879 Crossbow should only be for people with disabilities or of a older hunter (60+ years of age).

7880 Please dont change any seasons. The lengths of seasons and time is tradition and works fine.

7881 Most does I observed had 1 or less fawns, very rarely 2. I think coyotes get way too many.

7883 Keep the crossbow hunting season the same as the regular bow hunting season.

7882 We have a lot of deer in our area. Numbers more than ever nw Richland county

7884 Leave the bow season and crossbow seasons alone! It’s working just fine!

7885 9 day hunt only for firearms Bow season ends first Sunday in January

7886 Leave all the seasons in Richland County alone! Everything is fine!

7887 I would like deer season to have the same framework as last year.

7888 I would like to see a buck harvest included in the holiday hunt.

7889 if we could bait a little, we would probably shoot more deer

7890 Reconsider the public vs private tag system. Too confusing.

7891 the land I lease is getting ate up from deer theres to many

7892 Shoot buck during holiday hunt, go back to earn a buck

7893 Licenses should be for both private and public land.

7894 Do not close the crossbow hunting season early.

7895 The overall hunting season should be extended.

7896 I would like to see earn a buck for holiday hunt

7897 Thanks for helping with our deer management

7898 Keep CWD testing sites available.

7899 Bring back unlimited EAB

7900 Deer population is high

7901 bring back earn a buck

7902 Decrease Antlerless
The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

249 forms were submitted for this unit.

**Section 1: Information about who provided the input.**

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 193
   - I visit this unit for non-hunting purposes: 29
   - I hunt in this unit: 220
   - General interest in this unit: 44

   The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 206
   - Bow: 135
   - Crossbow: 87
   - Muzzleloader: 71

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 20.32
   - Maximum: 62

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 119
   - Mostly Private Land: 45
   - Public and Private Land About Equally: 26
   - Mostly Public Land: 12
   - Exclusively Public Land: 18
   - I did not hunt in this unit last year: 0

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 19
   - Not too crowded: 36
   - Neither crowded nor un-crowded: 18
   - Somewhat crowded: 15
   - Very crowded: 9
   - Not applicable: 4

**Section 2: Perceptions about the number of deer in the unit.**

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 39
   - Fewer: 77
   - Same: 88
   - More: 26
   - Many More: 12
   - Unsure: 7

**Section 3: Feedback on the CDAC’s 2020 preliminary recommendations**

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th>The Antlerless Quota is...</th>
<th>Much Too Low</th>
<th>Too Low</th>
<th>About Right</th>
<th>Too High</th>
<th>Much Too High</th>
<th>Unsure</th>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
- Implement an ANTLERLESS HOLIDAY HUNT: 96 Support, 131 Oppose, 22 Unsure

If a Holiday Hunt is held in a Farmland unit...
- EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: 150 Support, 84 Oppose, 15 Unsure

If the Population Objective is not "Increase"...
- Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 33 Support, 196 Oppose, 20 Unsure

If a Zero Quota (buck only season) is adopted...
- ...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? VALID, NOT VALID, Unsure

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?  
Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

<table>

</table>
I being a avid bow and gun hunter and completely dissatisfied with this county’s deer numbers and seasons. Running trail cameras on 5 different properties in different areas of the county I can tell you deer numbers are down. The farce put on that this counties deer need multiple doe hunts and extended opportunities is laughable. I am on vacation last week of October and all of November. I did not draw an Iowa tag, and didn’t hunt Illinois 2019 season. In 2016 I also hunted exclusively in Rock county. Numbers are down by 1/3 from 16 referencing my trail cam pics and numbers seen on stand. 2017 and 2018 I hunted Iowa and Illinois so didn’t have 5 weeks of hunting in Rock county. My numbers seen in stand, trail cam pics, and communication with avid hunters such as myself don’t lie. The format you gather deer densities is flawed quite obviously. Perhaps listening to the majority of people whom buy licenses and spend countless hours in stand is needed. Good god several parties whom hunt public only never saw a deer or didn’t harvest anything. If the DNR is really concerned with recruiting youth into the sport look here. I can tell you of numerous parents whom took youth out the last few seasons. Most never saw a deer and few harvested. Quite simply increasing deer numbers is the only way youth recruitment changes. I call for 1 buck 1 antlerless deer per person. Regardless the weapons used that’s it. 1 buck 1 antlerless and you hang it up for the year. Low numbers of deer equal low hunter satisfaction. That means youth lose interest fast. With the amount of things for them to do in today’s times that’s where we need to start.

The deer population is down in my area. Has been for a while. I hunt every day of the gun season. In my stand until 11am. Back in by 1:30. Two years ago I saw 5 deer the entire season. This year (2019) I saw one deer all season. A small fork horn. I let him walk. It’s been 10 years since I have shot a deer. My wife hasn’t got one in 15 years. She is thinking about not going hunting this year. Like she said She can sit in a warm house because she isn’t going to see anything. My opinion is that way to many doe permits are handed out. Both bow and gun seasons. Hunters are shooting fawns because they are lucky to see a deer. I have seen the bad and the good deer hunts over the years. If you don’t get the deer population back up where you are seeing deer more people my age are going to stop going. The DNR is so worried about getting the youth out deer hunting but are forgetting about the middle age and older hunters. I am not saying I need to harvest a deer but it sure would be nice to see some. Sitting in my deer stand for 70 hours and only seeing one deer is not going to keep me buying a license to much longer. We don’t need longer seasons, or more doe hunts. I brought and live on my property since 1993. Didn’t see a lot of deer at 1st then you started seeing more. Now during the year you don’t see many. I watch all the time. Would love to start seeing deer run on my property. Stop with all the doe hunts and get back to the way it use to be otherwise you are going to lose your older hunters. Thanks for your time.
I will say that the last few years it seems that I've seen fewer and fewer deer in Rock County. I have three property's that I hunt that are private property's totaling 178 acres that I generally see decent deer movement, however the 2019 season I seemed to struggle to see a deer. From November 4th through the muzzleloader season I seen 5 deer. 1 buck by himself 1 doe by herself the other 3 were a doe and her fawns. And that was on private land. Seen zero deer on public land after October 30th. I understand that there are some people that probably see an abundance of deer where they hunt but I can't say the same. I think canceling the holiday hunt and maybe moving the muzzleloader season to the last 10 days of the season could be something worth looking into. It's not easy to fill a tag with a muzzleloader when it immediately follows rifle season. Deer are pretty much nocturnal for a while and by the time they start moving in daylight muzzleloader is pretty much over. I think that by moving it to where the normal holiday hunt would be the deer are mostly back to their normal late season feeding patterns, increasing your odds. I also think giving hunters a 25 day (roughly) break from hunting gives them time to rest up and get excited again knowing they could have one last chance to fill that tag, buck or doe with a muzzleloader. Thank you.

Positive feedback. I've hunted here a long time. At one time, I can remember a deer sighting was a rarity, and it was ideal to head "north" to hunt or have a chance at killing a deer. CWD, and the hysteria to harvest and kill all the deer was horrible. When private land owners realized that idea was not an agreeable idea in terms of being able to hunt deer, or see deer, they took matters into their own hands, and decided to heck with that! Since the majority of hunters in Rock County decided they were not going to play into the hysteria, the deer population has bounced back, and honestly, (here's the positive feedback), Rock County, and most of Southern Wisconsin for that matter, is the place to be. I will never have a deer tested, and I harvest 2 to 3 every year. I hunt private land, and that is the equation that makes this county a success. We have learned to manage the herd the way we see fit, because we realize that hunters are the true difference between a quality herd versus one failing. The north is failing, because of over harvest from man, predators, and severe winters. The south is the new North!

Bottom line for me having 72 acres of wooded property with exclusive permission to hunt I can say. There are drastically fewer deer in Rock County than DNR number or tags allocated shows. I am getting tired of the constant doe only seasons. The deer patterns are so drastically changed and turned nocturnal. After gun season we have hade up to 4 different guns seasons. Ruining the quality of the late archery season. The deer left which is few are not moving during a day pattern anymore. It's pretty sad the way deer traditions have been destroyed. No wonder youth are not interested like I was as a child. With the lack of deer these years of unlimited antlerless tags caused. Kids don't want to sit all season and see no deer. Sad to say we have no control over any of it. DNR manages as they see fit regardless the license holders thoughts. No other service provider dictates how the customer experience is like the DNR of Wisconsin does.

To Whom it may concern, The only reason I entered choices on this survey was to get a chance to tell you how much damage the massive amount of deer cause to our farm in Rock Twshp of Rock County. EVERY SINGLE DAY we must check the fence holding in my brothers' cattle because Deer run through it every night and sometimes during the day. I have constructed a fence 40' infield of the actual border fence in order to drive to check it daily. This compacts the soil limiting plant growth of corn & soybeans, not to mention the loss damage to fencing materials & time involved. The biggest problem is that Deer stay in Woods bordering 3 sides of our farm which are in the City Limits. During Deer Season they do NOT come onto our land until after hunting hours. Over the years I have gotten to HATE Deer!
I've hunted this unit for 14+ years and truly believe there should be a year with fewer tags given out to help boost the population. There should NOT be a doe only gun hunt as that is just messing up the deer and making them move more at night instead of during shooting time. Give the deer population (does) a year off and for the next few years we will have more. We went from earn a buck, to getting 4 free tags per day with earn a buck, then earn a buck, then selecting what county and public and private land. To be honest it totally feels like the WI DNR just wants to make money. I’d prefer a system like IL where you can shoot 2 deer (either a buck and a doe/ 2 does/ or 2 bucks). That is a system I could support. Every hunter gets 2 tags a year with no bonus tags. You can shoot what you’d like but after you get 2 deer you’re done. Several people I know would prefer that as well.

Be careful while trying to balance the numbers in your reports cause how factual are they I have heard lots of hunters say for example hey did you register that deer ya I will get to it later season ends hey did you ever get that deer registered? no no big deal wonder how many deer never got registered / not just deer all required game I am sure you are aware. garbage in garbage out. Like I have said I have people making reports I have people reading reports But I truly need someone to implement the reports also when taking deer in for processing no one ever asked me for my lic no info taken just phone # should there be a least a tag/reg/ conf # given to the processor? keeping everyone honest or at least help your reports

Hunters kill deer, and we are very efficient at it. We can kill the necessary deer by giving us more authorizations when necessary to maintain healthy populations and healthy wildlife areas in the shorter more structured hunting seasons of the past. Longer seasons, additional hunts, and added tools for those who don't medically need them is simply allowing us to smother the resources we love to death. Yes from what I have seen in recent years we have more deer, are they back to pre-CWD numbers from what I see, no. Are going back to those number healthy, maybe not but things were working just fine then. Antlerless authorizations and earn-a-buck when NECESSARY are much better tools for controlling populations than extended seasons.

Get rid of all the extra youth and holiday hunts. All good hunters watch the deer go nocturnal and it ruins the regular season hunts. Each county should be managing the hunts as far as baiting, how many deer and what deer can be shot. The zones are too large of areas. Give one anerless and one buck tag that’s it. do not punish the bow hunters whom spend way more time and money on hunting just to satisfy the gun hunters whom don't take hunting nearly as seriously. Bow hunters on average are more educated and dedicated to the sport. Just because gun hunters go put a stand up the day before and spook all the deer out, come in their stand loud, late and hungover, they think it’s the bow hunters fault they don’t see deer!!

Hello, I own private property in Rock county. The issue I see is when issuing doe tags to private land people who own less than 5 acres can shoot as many deer as long as they buy tags. I think if we make minimum for acrage and only allow landowners of that property to buy tags. If you have a trouble maker neighbor he can shoot anything and everything. People in southern Wisconsin pay higher taxes and also have higher populations of people having longer seasons can also be dangerous with rifles. People who have smaller properties cant practice safe hunting if they are always shooting towards roads or other landowners property lines. My opinion on what I’ve seen with my neighbors on smaller pieces. Thanks for your time.

Quit making all these extra seasons! Hunters will shoot more deer if they only have a certain time frame to do so. So , if have a more seasons after the nine day gun season to shoot a doe most will wait or not even hunt as hard if there are extra seasons. Then antlerless season come around and you don’t have time or the weather isn’t great and you just don’t go. There is finally enough deer around so you can take your kids out and see some! If you guys do antlerless only hunt one year, I will quit hunting in Wisconsin forever. You thought the DNR wasn’t liked by landowners like myself now after that CWD slaughter that happened, try a antlerless only hunt. Man oh Man outdoorsman will hate you!
Rock County is over populated with deer! Estimated population is 8900 animals. This equates to more than 56 deer per square mile of habitat. That is 3-4 times more than a healthy habitat can support. Rock County's habitat is not healthy. Try to find a oak seedling anywhere. I have had numerous conversations from property owners, Janesville area, about deer eating their ornamentals. I recommend harvests authorizations should be increased, there should be a Holiday and extended archery season. Metro tags should be doubled and at least one bonus authorization included with a license. City and County governments also need to get there acts together to at least try to address this issue.

Recommend stopping all types of feeding and baiting of deer. If people have bird feeders and deer come to them, they need to change the way they feed deer to stop deer coming. Need to stop all mineral and salt blocks. Stop the sales of all deer feed, salt blocks, etc. Realize this will take education and many will not like. Need to educate land owners that do not let people hunt as see 25+ deer in small areas at multiple locations. I spend much time afield and in woods hunting birds and see many deer. Hunting is called hunting because it should be some work, people like the easy button, it really should not be a person riding 4 wheeler out, sit in a stand 30m and shoot a deer.

I should not have to decide between private and public land when buying my tags. This is one of the dumbest ideas I have ever seen. We should be limited to one buck OR one doe only. Regardless if it's on private or public. When a hunter buys a licence and gets three tags with the option to buy more, that will need to a few hardcore hunters killing 3+ deer a year with most being doe. That doesn't help the population for the rest of us. Next, please end the holiday hunt. There is no need for it. How can you say that you want to increase the success rate for gun deer season and then have a doe only holiday hunt that hurts the population for years to come?

I believe the current tag structure is okay, however, do support dropping the metro harvest authorization so only 2 (or even 1 for that matter) antler-less tags and no extra metro tag. Deer have become noticeably clustered throughout the county (I've seen many herds of 50 or more deer that originated form a single woodline) browsing fields. And it seems every year more fence-rows are being removed or wooded plots developed. An addition of habitat through an increase in state purchase of habitat areas to be managed and cultivated for favorable deer habitat would be something I would support (and probably volunteer for).

I think an extended gun season is a horrible idea, archery season where you can wear camouflage and and harvest a buck are already way to short. I would like to get rid of the holiday hunt as well. Also extending the archery season even longer sounds like a waste of time as well. Due to the short days and often frigid temps it can already be challenging to draw your bow safely and effectively. It seemed like the bubble responses weren't registering so, I oppose the holiday hunt, oppose extending the archery season, oppose extending the regular traditional gun season and oppose a antlerless only season framework.

I have four children, two have been hunting with me and the two youngest will begin hunting deer this year. I would like them to be able to hunt and get a shot at a deer. That is my main goal, more opportunities for them to be able to hunt and take a nice deer. Don’t change the youth hunt and tags. It’s so nice taking my kids hunting on a weekend when it’s only kids hunting deer. Also the statewide either or tag is perfect for kids. I started hunting in the days of "earn a buck." I have probably never seen as many bucks as I did when I could not take a shot. I love that my kids will never have that problem.

The largest issue we have ever had regarding the deer herd in Rock County and the State is CWD and we continue to have a poor, disjointed response that seems to be based more on politics and self serving public opinion (most people like to see a lot of deer). Having a high deer population may appeal to some hunters, but it is not in the best interest of the deer herd today and longer term. We need to do more do address CWD and the least we can do is harvest more deer and reduce the population. Earn a buck was unpopular, but frankly that is the best tool we have ever had and it should be reinstated.

Earn a buck was unpopular, but frankly that is the best tool we have ever had and it should be reinstated.

I have always enjoyed deer hunting in Rock County. It has been tougher harvesting deer on public land. In the past when Rock County was part of the 76a management unit your deer tag was good for private or public. Most of the hunting I do is on public but occasionally get the opportunity to hunt private but I don’t always know that ahead of time. If I get that opportunity during the gun season my harvest tag is not good for private and I have to decline. Has anyone else expressed this? Could we go back to a tag that is good for both? Just something I wanted to put out there. Thank you.

My feeling is that bow hunters put in time all year round to track deer movements to know where to set up a spot. And now gun hunters want more time to hunt. It blows my mind that its considered. After opening weekend must gun hunters done. And after the 9 day hunt go get a muskelaoder to extend your hunt I did. Don't need to extend archery season after the new year. Where are all these deer numbers coming from. More wardens pre county. I would pay more for license if that happens.

I have hunted deer on the same 200 acre farm between Janesville and Evansville for 20 plus years. The number of deer harvested from this farm is increasing each year. Yet The deer population continues to grow, through my observations. The buck to doe ratio is way off from where it was only 10 years ago. Way too many antlerless deer, compared to bucks. And the quality of the existing bucks is way, way down. In my opinion, this unit needs to revisit the earn a buck program.

I am appalled at the fact I have a better chance at winning the lottery than I do at having a chance at harvesting a deer to help my family on public land. If your not a land owner or related your SOL. Harvesting deer in our area has to be tied to farmland access and be done in a positive way for all. Maybe use a lottery system for that? If I don't see some movement in this direction I'll stop hunting. What's the point? I might as well play the lotto. Thanks for listening.

Hello......i would very much like to see the Archery/Crossbow Regulations stay the same. Wisconsin is becoming a dominantly more Archery/crossbow hunting population that i like......i would very much like to see the current Regulations stay the same. If the deer harvests are lower than last years its because hunters are being more choosy on the game they harvest and private land owners have purchased land and dont allow as many hunters as they were in years past.

someone needs to address the deer population on n rock river rd and edgewood shores rd and dalby rds we rent 54 acres of farm land on those rds and in 2019 we had a 30 bu reduction in our bean yields compared to our other bean fields u can go to those fields just before dark and count 50 deer in those fields of that 54 acres there was only about 45 acres with anything left to harvest something needs to be done to lower that population in that area dramatically.
Private lands leased for public needs to be looked at in a way that has more habitat majority of the leased for public are wide open fields with no real hunting experiences. those lands that have no habitat shouldn't be leased and use the money to better the habitat on existing public lands. also farmers that are eliminating tree lines and fence rows should have to pay a fee for the removal of habitat or grow habitat in a different location.

1 buck per hunter per year regardless of weapon choice to help bucks achieve max antler potential. Control population and management goals strictly through doe and fawn harvest creating a state that people want to hunt for "trophy" deer. Enough with killing every 1.5 year old buck every season. Reputation and revenue would skyrocket allowing managers to create and keep season framework beneficial for hunters and healthy herd. Thank you

My personal observations have shown me that the large herds are on private property and that this never use to be the norm in rock county. We have large tracks of public that should hold deer but don’t anymore. The only obvious reasons one can come up with is either baiting or fool plots are holding them there. There should be investigations preformed on these property's that hold large numbers of deer.

If we are truly looking to manage deer why not run the firearms season for three weekends four days each Thursday through Sunday starting the third week in November and then close it completely after this? This would enable more hunters to be in the field for more hours due to having days off work On weekends and the deer would be less pressured and therefore easier to hunt.

Don’t change anything bow,crossbow,gun,seasons,quotas,tagging,etc everything is working fine---issue a car kill tag or tags that can be called in from home for those that do not have a cell phone or can’t get cell service where kill location is, within the same cwd transportation restriction guidelines this has happened many many time to me and you just have to leave them

I was hoping that bow and crossbow hunts could be hunted together because I would like to change back and forth with each weapon every once in a while. If you sell them separately but are able to hunt together you will sell alot of tags. Also, it gives me a chance to hunt with my young nephews who don’t have the ability to pull back a compound bow yet.

I hunt on public land and private land in Rock, Dane, Green, and Jefferson county’s. Having to buy different doe tags for each county and public or private is absolutely ridiculous. All it is, is a money grab by the DNR. You need to at least give hunters 1 or 2 tags that are open to a bigger area than just 1 county public or private.

You are destroying deer hunting culture and allowing way to many antlerless and antlered deer to be killed. Why can’t hunter satisfaction matter the dnr. We lay your wages with license fees. Yet you ignore us and still issue way way to many tags. I’m half tempted to quit hunting all together.

Leave the crossbow season alone! Archery seasons should not favor longbow and compound bows over crossbows. Hunters have invested a lot of money in Crossbows and equipment to have part of the season taken away. The best part of the RUT is not just for longbow and compound bow hunters.

Way to many seasons,and to many does being killed, deer population way to low,can’t give a deer license away,people don’t want to come here and hunt from other states do to over hunting and low deer numbers.face it people do not want to hunt,after hunting and not seeing deer.

I believe the 9 day traditional season is just that..Tradition!! Leave it alone!! If there is to be a holiday hunt make it either sex to entice more hunters. Crossbows have helped with deer harvest and recoveries..keep them an option. Do not try and reinvent the wheel!!

I hunt in rock county see less and less deer every year. Seems like the heard is trying to be wiped out. I would suggest getting rid of doe only and holiday hunts and just have buck and doe tag or archery and gun seasons. No extra tags or seasons
The antlerless seasons are a waste I bet I haven't seen 3 hunters in all the years the DNR has had them. I do love the late season bowhunting. Some of the best hunting of the season if you can stand the cold. No holiday and no doe only seasons.

The holiday Hunt is confusing and if we only harvest a few deer I would not recommend it. Why? Well I don’t bow hunt at that time cause I can’t shoot a buck. I regularly hunt late season and that’s a time lots of people are off of work.

I'd absolutely love to see the regulations go back to how it was 20 years ago. No antlerless only seasons, one bonus tag per weapon statewide, 9 day gun season followed by a week of muzzleloader. Then go back to late season archery.

I have seen less deer in the past two years, than I have in the 28 years I have been hunting. I have not seen a deer to harvest with rifle in the past two gun seasons. I have been very disappointed in the population numbers.

I have seen a significant decrease in the amount of bucks in the last 6 years. Not only in person sightings for me are down. Also less bucks being caught on trail camera. This is a concern to me.

Having an earlier season. No deer moving in 2019 season. Rifle season started too late, well past the rut. I know there was still a lot of fields unharvested which kept the deer out of the woods.

The deer population is obviously higher in my area as compared to recent years. I would prefer an October gun hunt rather than the holiday hunt or the late season archery/xbow extension.

I knock it off with the doe only extra hunts. Limit crossbow season since they are the ones killing all the deer and not gun hunting anymore. Crossbows is not archery and is cheating!

Don’t Know how I keep seeing less and less deer every year but the biologist say more deer need to be harvested and season needs to be longer ...shut the season down early December.

I have noticed more deer along creeks and rivers in metro areas. Specifically in Beloit. What if there was metro sub units for these areas with archery and crossbow only.

Would like to be able to harvest more antlered deer. I.e* normal 1-buck/1-doe permit per each license purchased & then earn a buck tag after each doe harvested.

People 65 and older should be able to use there crossbow to fill there gun buck tag. It is legal now to fill your antlerless gun tags with a bow or crossbow.

I do not like the holiday hunt. I believe the season framework without the dreaded holiday hunt is much better. Like earn a buck this should be scrapped.

Less deer then the last 25 years. You are ruining hunting with these doe hunts. STOP ALL THE DIE HUNTS. Quit ruining deer hunting we are sick of it.

I’m in favor of one buck and one antlerless tag for both archery and firearm. Also to only have the regular nine day gun hunt and no more than that.

1- no holiday hunt 2- early youth season before bow opener 3- muzzleloader season for 2 weeks at the end of December with no other weapons.

I am in support of mass eradication to make sure CWD is controlled. If we don’t take action I fear the future of the animal.

Crossbows need a season similar to muzzleloaders. No extended archery season. The holiday hunt HAS to be eliminated!
Extend the gun hunt by one week, opening the season one week sooner, with same number of authorization.

Please do away with the separate tags for public and private. Gather that info at time of registration.

Urban deer management needs a comprehensive, thorough evaluation for the WI Deer population health.

I’d like to see farmers get kill tags that they Can either use or choose who gets to use them.

The 9 day gun season was traditional..people now are losing interest with seasons for 2 months.

No reason private land owners should not be able to put out reasonable amount of bait.

Close all deer Hunting December 15th. We don't need 4.5 month of deer gHunting.

I believe there should be more bonus tags available for private land.

Rock County metro unit does not include enough Public Access land.

Dont extend the gun hunt and get rid of all of the doe only hunts.

Shorten the season to the original 9day hunt and nothing else.

You should issue refunds to all conservation patrons.

extend gun season 1 week and open 1 week earlier.

Strongly against extending the gun deer season.

don't change crossbow hunting.

Gun season is long enough.

Shorten deer Seasons

Saw no deer
Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 120
   - I visit this unit for non-hunting purposes: 157
   - I hunt in this unit: 469
   - General interest in this unit: 87

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 451
   - Bow: 236
   - Crossbow: 192
   - Muzzleloader: 141

3. How many years have you hunted deer in this unit?
   - Minimum: 0
   - Average: 23.65
   - Maximum: 72

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 230
   - Mostly Private Land: 88
   - Public and Private Land About Equally: 67
   - Mostly Public Land: 38
   - Exclusively Public Land: 42
   - I did not hunt in this unit last year: 4

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 11
   - Not too crowded: 48
   - Neither crowded nor un-crowded: 52
   - Somewhat crowded: 67
   - Very crowded: 47
   - Not applicable: 10

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 109
   - Fewer: 148
   - Same: 159
   - More: 55
   - Many More: 12
   - Unsure: 9

Section 3: Feedback on the CDAC's 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th>The Antlerless Quota is...</th>

After listening to the CDAC call it is very apparent that none of the members hunt in the Blue Hills. The comments about abundant deer sightings when driving around in the early spring before deer have spread out is a poor way to interpret the deer population. Drive Meadow Dam road, Deer Lake Road, Fire Lane Road and Dejung Road after a snowfall in the fall and count the tracks you see. 2019 was the first year in quite a few years with an acorn crop of any significance. 2019 was also the year of the coyote and wolf. I saw more coyotes in to woods in 2019 than in all my previous years combined. I also saw more wolf tracks than in any years past. Talking to other groups gun season and all they talked about were the # of coyotes or wolves seen and the lack of deer. The comments from the CDAC members about we can't make private land owners shoot does, but dont decrease the private land success rate is contradictory. They do shoot does they just do it on public land where there are fewer deer. When the group's making drives can't move deer on public land that has very little to do with a late season or snow storms. When there is snow on the ground most of the season and you cant find deer that is a pretty good indicator they are not there. The deer camps have all but moved off the public land. The campgrounds at Audie and Perch Lake campgrounds that used to be packed now sit half full at best on opening weekend. Did the camps leave early this year? Absolutely but they do every year now. They head back home to shoot deer.

Hunting in the Blue Hills has deteriorated to the point that you see very few people that don't own land or cabins in the area. I will say that is a perk of the poor hunting though. We have the woods to ourselves every year after Monday of gun season, even the years without snow storms. We hunted the highly pressured public land of Clark county late season and saw many more deer than in Rusk. Didn't have to work near as hard either. If you would like to continue to lose public land hunters and their associated $s keep increasing the tags and lowering the success rate while maintaining or increasing the private land herd where the deer collisions happen and the crop damage $s get spent, because well private landers wont shoot the does anyway right?? Doesn't sound like common sense to me. I happen to be fortunate enough to own private land and will only shoot does there, I must be the minority. The public land needs all the does it can get. I would guess my words are in vain but I will leave with one last observation/question from a group that spends most of the summer 4 wheeling and most fall weekends hunting. Where are the fawns in the Blue Hills? The does you do see summer and fall were lone. Trail camera pics had very few fawn photos. I am not looking to see 15-20 deer a day like the good ol days but even in the days of all the free or $2 doe tags it was easier to find a deer than now. I think your models are missing something. Maybe it's the ability for fawns to avoid the bear, coyotes and wolves?? Maybe 17 and 18 winters wiped out more deer because of no acorns?? Get out of your Ag land hunting areas and come to the Blue Hills hunting for a fall. See if you would want to go back the next year or leave like the rest. If things don't improve I will be the next to leave and it will be a sad day. I grew up hunting the Hills and have a pile of great memories. Unfortunately the # of people that want to hunt up there with me is dwindling and the good deer memories are in the past.
I am a long time hunter of Rusk County and also am a land specialist Real Estate Agent that walks and sells hundreds of acres all over the county. I have seen collectively 7 deer in the last 3 gun seasons and my daughters no longer hunt because we never see any deer. Please understand it is not our ability to hunt as we plant food plots and hunt mostly on private land. I have harvested multiple mature bucks the last couple of years just not in Rusk County. The deer numbers are low and the predation is high, in 2018 we had 8 does old enough to have fawns on the land we hunt. Of those does only one had fawns going into the month of July. In 2019 we had 3 Does old enough to have fawns and going into July there were 2 fawns. The season of 2019 with 10 trail cameras running we had 2 adult does on with fawns and 3 different 1.5 year old bucks through the gun season. Please keep in mind we have harvested 2 adult does by kids over the last 3 seasons and no deer shot during the archery season. There are not as many deer as one thinks in the county. As stated I walk a ton of ground all over the county and the deer numbers affect more than just the hunting season. The low numbers affect the price per acre that Rusk county land brings on a good market. My company sells land all over Wisconsin, Illinois and Iowa and Rusk county out of all the counties in three states we sell brings the lease amount per acre and this is partially due to low deer numbers. If Rusk County had better deer numbers and an older class buck structure, I know for a fact that the land sale price per acre would go up. People are willing to pay more money for land that has good deer numbers. More deer means more hunters and more money and is better for the Rusk County economy. Please consider a zero doe harvest for a year in the county and an increased bear harvest during the fall and spring seasons for a couple of years. If I could ask for the pie in the sky wish for the County I would say no does for the first year and minimal in the second and a 4 point one side antler restriction from here on out on Bucks. It would take three years and the deer numbers would be strong and the buck age class would be where it should and hunters would be happy and more hunters would take to the field once again and the land values in the county would go up substantially thus improving the Rusk County Economy.

The two areas that concern me most about Wisconsin deer hunting are how late in the year rifle season seems to be getting and also the amount of wolves that are invading the northern Wisconsin region and moving south each year. I'm sure it's all a monetary issue for the government, which is why they want to increase the quota. To them if you increase the quota, you increase hunting license sales. Basically, increase the quota of licenses and permits available, increase revenue. I don't feel that increasing the deer harvest quota is addressing the actual problem, the actual problem is that the deer population, at least in the area that I hunt is going down. The past 3 years I've seen more wolves, coyotes and bear than I have deer during rifle season. Maybe open a season on wolves while also increasing the bear kill quota will help bring back the deer population and hunters will come back to the woods to hunt deer. Last season we stopped at the deer hide drop off just down the road from our hunting land on Sunday evening of opening rifle weekend. There wasn't one hide in the drop box on opening weekend. The amount of hides dropped off has decreased substantially over the years. When we talk to all of our neighbors after deer season, none of our neighbors even saw a deer during opening weekend in 2019. Our neighbors across the street didn't even come up for rifle season this year. I also have a friend that deer hunts up in the Winter, WI area. He bow-hunts every day during the last week of October thru the first week of November. 15 years ago there were deer all over the place, now only wolves. How long is the WI DNR going to wait before addressing this issue? My guess is when the deer population is all but deceased and nobody wants to hunt anymore. Either that or when there become enough accidents involving cars and wolves that the insurance carriers start complaining. Please, let's address the real issue, not just cover it up.
At current proposed antler-less quotes is in my opinion reckless. I own land in Southeastern Rusk and the number of fawns we had last year was the lowest I have seen since I purchased my land 15 years ago. Deer sightings last summer and fall were terrible. My kids even expressed their dissatisfaction on the season, not because they did not get a deer, but because they sat all season and saw very few. If this keeps up, there interest in hunting may also go which would break my heart. In fact the only thing they expressed about the season was the number of bears they saw. My cameras are showing the same thing, bears & a lot of them along with a fair number of bobcats & now what appears to be wolves moving in. If you want to open the spicket to kill all these does but I am sitting with 9 points & still did not receive a bear permit. You value obviously the predator population more then the deer. Please stop the insane number of antler-less tags being issued. As well please start controlling the number of tags one person can get. Unfortunately there are alot of slob hunters who only care about killing everything in site. I have one neighbor who is like that & it just ticks me off. His comment, well the DNR would not issue all the tags if there were not alot of deer. So lets let him buy 10 tags & his wife 10 tags & his kids the same. These are the same people that throw illegal amounts of corn down & then shoot everything that comes over them. I hope you see the issue with this. People need to be babysitted. There are alot of them that have no common sense. Please stop this madness. The deer deserve that much.

I hunt in Northern Rusk County. Our camp did see a few deer bowhunting during the rut. That got our optimism up, but once again the 9-day gun season was very tough. I hunted dawn to dusk opening day without leaving my tree stand and never saw a single deer. I also hunted Sunday, Wednesday, Thursday and Friday (we left camp early due to a snow storm) -- and never saw one deer while hunting in Rusk County. I'd estimate our camp of seven hunters saw about 10 deer during the gun hunt. This continues a trend that goes back more than 10 years. We tried placing game cameras this spring, and through three months (one camera for two months and another camera for one month), we had two deer on camera. I walked a straight line across four 40s and never cut a single deer track last month in snow that was at least a few weeks old. I realize that other portions of the county have plenty of deer, but it would make sense to manage northern portions of the county with Sawyer County, rather than with Rusk County. I live and also hunt in Barron County. The difference is night and day as far as deer population. I don't mind hunting without seeing deer -- I shot plenty of deer in my life. However, I fear for the younger generations of hunters. I'm afraid introducing them to hunting in Northern Rusk County, where seeing 3 deer in a season is a success, will lead to both fewer hunters overall and many fewer hunters in this great part of the state. Thank you for working on the Rusk County CDAC. Your time and commitment to deer management is very much appreciated.

You need to go into the woods vs. observing deer in the farm fields along roads. Since the late 1980s I would go from seeing teens and twenties of deer on any given 3-4 hour stint in my stand to now not seeing any deer over multiple days with 8-10 hours in the stand each day. The Rusk County deer population is significantly down in deeper wooded areas. We should not be in a maintain situation, we should be in a grow the herd situation. We have a camp that adjoins a lot of the public land in the NE corner of the county and have been hunting this area since the 1930s. Last year our camp of 8 people were able to harvest two deer. Some people didn't see any deer at all season. The previous two years we were unable to harvest any deer. This was the first time in the history of the camp that we were unsuccessful harvesting deer. No shots were even fired. There are not the deer in the woods that you see out around the farm fields. The population has declined significantly over the years and it is difficult to keep a teenager interested in hunting when they see no deer. It seems like Rusk County has been all over the map with bonus tags, earn-a-buck, etc. In my opinion, the deer herd in this area is not in alignment with what the DNR thinks it is. My opinion is widely held between several neighboring camps in our area who all have been hunting these same woods for 70+ years. Please reduce the number of antlerless tags and bonus tags until the herd is brought up so that you can actually see deer while hunting.
I would like state to go to a 3 point on a beam restriction, NOT including the brow tine. We need to get an opportunity to see a mature buck, not just a 1 and a half to 2 and a half year old buck. This would make the the breeding gene pool better. Also the wolf population reporting is a farce by the state!! The number always stays around 750. This fake number you give is an insult to anyone with a brain! We have zero harvested in a hunting season and very few hit by cars. This means they die of old age and they never have any young pups. You also expect us to believe they won’t breed in a tough condition. What a crock when a female comes into heat, I have yet to see any male not breed her! Why don’t you just put out a more accurate and believable number for the wolf population. By doing simple breeding averages. 750/2 = 375 females. I’ll even give you a brake and multiply first year by 250 x 4 = 1000 and if mortality is 50% is 500 lived to breed the next year. Thats 250 more females plus the year before 250 is now 500 breeding females or 2000 new pups that need to be feed and a lot of deer to feed them. Now you have 1000 breeding females or 4000 new cubs of which 2000 live and now 1000 new females and the previous 1000 is now 2000 breeding females. Do the math and you can see that nobody believes your numbers at all. If I were to guess there are between 3500 to 5000+ wolves around our state. Release some around Dane county and a few high priced pets disappear and I’ll bet you will be forced to tell the truth!!!

I believe the CDAC does a pretty good job at controlling and maintaining the deer herd, but one thing I would like to point out is the mortality of deer not registered, ie wounded deer. I am an avid archery hunter, and in my experiences 80% of all people I talk to (friends and family) are wounding deer and not recovering them with bows, but especially crossbows. If the DNR is allowing anybody to hunt with crossbows, then they might just as well allow everybody to use rifles all fall seasons. At least that way there’ll be a lot less mortally wounded (mature) deer that aren’t recovered. Don’t get me wrong, i’m Not disaying crossbows, i’m disaying unethical people using them ( my own family members included ). One question that should be asked during the registration process is,(did you or anyone you know wound a deer and not recover it). I think you’ll be amazed. And them are the mature deer, because let’s face it people are not filling tags because they didn’t see deer, they’re not filling tags because they don’t see any mature deer. I don’t want to be that guy who complaines about crossbows because it gives people an advantage over me ( I could buy one anytime) but I honestly know people are using them for the advantage of shooting deer out to 100 yds. And that’s what they’re trying to do, not to mention out the truck Window as well. Anyway there’s ALOT of dead deer out there that are not accounted for and I believe that is a huge reason why.

Stop all deer hunting during the rut. Completely unsportsmanlike to kill a buck when rutting and not aware of danger. Deer seasons can be before and after the rut. Stop all bear hounding. It is a cruel and unsportsmanlike practice of pursuing a terrified animal with packs of hounds into a corner or up a tree and walking up and shooting it. Sicko! A disgrace to the State of Wisconsin. Bear can be hunted similar to deer as is done in other states. Where there is bear hounding there is practically zero deer. The hounds chase deer 50% of the time and devour more fawns than all other predators combined. I’ve been watching this 30+ years. In the northern part of the state bear hounders, combined with bow hunters, leave very few deer in the public forests. Most private land owners don’t want them on their property. My family deer hunting has been ruined cuz my relatives and friends from out of state don’t want to pay the higher license fee and hardly see a deer and seldom even a track. I know it’s affected many others. With the current program there is less and less interest in hunting. Can’t blame them. My wife and daughters are afraid to go berry picking because of hounds ranging through the woods. If major changes are not made as suggested the decline in deer hunting will only become worse.
I believe the proposed antlerless harvest quota of 4000 is much too high for Rusk county. Hunters in the county last year did not meet the objective quota, and based on anecdotal evidence as well as personal observations, I strongly believe the deer population for this area is currently overestimated. Most hunters in the area I have talked to saw fewer deer in 2019 compared to previous years, both while hunting and while just out and about. The fact that hunters could not kill the intended number of antlerless deer further leads me to believe that there were fewer deer than estimated. If 4000 antlerless tags are issued, not only do I feel like hunters would fail to meet the quota, but if they did the impact on the deer herd in the area would be devastating. It concerns me because there are many other causes of deer mortality such as predation and winter weather, which cannot be accurately predicted. This winter was mild, but there is not telling what the future holds. If the quota is to be increased, I think it should be no more than 2500-3000 antlerless deer. Personally, however I would support maintaining the current quota for the time being as there is little evidence suggesting deer numbers are rising in the area.

It seems like wolf activity, including not just predation but also very importantly for hunters like us in the far northern tiers of townships, is being given very little consideration in the discussion. Having hunted in wolf country of both northern Minnesota and NW Wisconsin since the early 80's, I feel somewhat qualified in stating that the wolves need tighter management. I don't hate wolves but their numbers where we own land (and do our deer hunting) are excessive and the wolves themselves have become way too comfortable—hunting during mid-day, allowing themselves to be seen by people on regular basis, i.e., showing too much acclimation to people and willingness to be too close, thereby often creating vacuum-like deer presence for us during the gun season. More and more hunters are switching to cross-bow hunting (or taking it up) to give themselves a better chance to see deer before the gun season finally arrives and the deer have already been put into near panic state of hunkering down during shooting hours and becoming totally nocturnal. The combination of greatly increased wolf and archery+crossbow pressure has greatly diminished the joy of gun season.

The last three years hunting public land I have seen fewer deer than years prior to that. The deer were shot off with excessive antlerless permits in past years. I hope that this year's proposals are not setting this situation up again. I used to see a good amount of mature bucks while hunting, especially with bow. The last three years have been very sparse in any sightings of deer period. Not only are the mature buck numbers down, but all deer numbers continue to be low in public land areas that traditionally held some pretty good deer numbers. I have hunted the Blue Hills area for over 50 years now and find the last 3 years some of the worst for deer sightings. Not only are deer sightings down, but overall deer sign in the woods. Last year it was like pulling teeth to find active rut sign. We need more deer in the Blue Hills. Increased forest management projects are good to see. That may help improve habitat quality and therefore increased deer numbers. It needs some time yet before opening up the tag numbers.

I hunt in the Rusk County Forest area near Gordon Road. When my hunting group first built our cabin deer were available for all of us. We would normally shoot 1 or 2 bucks that were nice enough to be mounted. That was from 2000 o 2012 or so. Since then our group is lucky to even shoot a buck now and usually it's small. In 2018 out of 13 people one 12 year old girl shot a doe and that is all we got!!! There are two many people shooting anything that moves because of all the Public Land does permits being handed out and the heard hasn’t recovered from the days the T-zone. It was only several years ago when a hunter could shoot 4 does if he wanted. Come on! I recommend NO DOE PERMITS on Public Property for 5 years to give the herd time to recover. We have too many predictors like bear, coyote, wolf, bobcat and on it goes. We have too many seasons and all deer have become nocturnal due to hunting pressure...Please back off on the number of seasons to pressure dear and make baiting illegal.
I'm retired and bowhunting is what I do. In 2019 I had just short of 300 hours on stand, yes I hunt a lot. I hunt on both private and open forest crop land, hunting in 25 different stand locations most of which are moved around not only on an annual basis but as changes in deer movement happens during the season. I'm sure there are Ag locations in the county that have to many deer. Such is not the case in the area I have hunted in for the last 30+ years. According to my hunt log it was the fourth lowest year for deer sightings in that time period. Only two fawns were seen during all those hours. I'm sure there is more than one reason for my own experience, all I can do is comment on said experiences. On a different note I support removing the crossbow (except for the elderly and physically impaired) from the rut. I also support keeping the rifle season out of the rut. Eliminate baiting as well. Again just my two cents worth. Thank You!

I have been hunting and visiting are land cents I could walk and ever year the seeing of deer and the number of deer taking in the jump river area is going down. It’s to the point we’re I was thinking of sealing the land. No deer to many wolfs not worth driving and putting all the money n the land for nothing I hope you stop taking money from insurance companies and actually care about the deer. Should have 2-3 dose per buck not 2 buck per doe. In the last 5 years of hunting I’ve only seen 5 does. Are camp hose years with out shooting or sometimes even seeing anything. It used to be great. Could walk to your stand with out seeing 5 deer. My first year I saw over 20 deer just in the first 2 hrs of opening day with 6 of them being bucks I wish it was still like that. For my kids hard to get in to hunting when all you see is trees

The deer population was down in the 2019 season I seen fewer deer then I did in 2017 & 2018. I have seen fewer deer this year I and my wife drive around the area in the spring and look for deer we have not seen the deer this spring that we have in the pass their were less deer in 2018 to see then there was in 2017 and their were fewer in 2019 then 2018 & less this spring then in 2019. Bow season is way to long there is no reason to open that season before Oct. With a cross– bow it is like hunting with a rifle. When you have the youth hunts the deer become nocturnal. Some of kids shoot the biggest buck of there life so they feel they should get one every year, when they don't they quite hunting, the youth hunt took away from the traditional excitement of the nine day hunt with the family. I feel the DNR wants to regulate families.

If possible to better help the deer population and quality of deer, I think most of northern Wisconsin counties especially Rusk county should move to a 4 point rule system as of most of counties in Missouri have implied to their state. I hunted down there seen more and better quality bucks as well as antlerless deer. I also believe highly in selling less and increasing the prices on non-resident tags. We should be giving more opportunities towards our residents to fill their freezers before nonresidents to do so. All states around Wisconsin have way higher prices on their out of state tags which would help us with more opportunities putting more money in the DNR to help the conservation of other wildlife as in trout, other fish species, elk populations, and also our Whitetail populations.

We own land and hunt about a mile north of Hawkins. We have 4 bow hunters and 4 gun hunters. We have multiple food plots and have managed the forest to benefit wildlife. We also deploy about 8 trail cameras from spring through December to survey the deer herd. In 2019 we saw a slight increase in the herd and several does with twins. (Hadn’t seen that in years) Our land and neighbors can handle the increase. We see no sign of browse damage in forest and the food plots grow well and still have to be mowed. We did not shoot any anterless and 1 buck during bow. That’s with each of us logging about 10-12 full bow hunt days and 3 gun days. No deer were seen in gun season. I think several neighboring deer camps have closed because they haven’t shot anything in years.
Last year was a really good year, ideal weather, ideal temperatures for opening gun weekend... Several years prior to this I had seen no deer year after year on opening weekend (5 years consecutive) - this past year I saw 2 deer. The person that I hunt with didn't see any deer. I think there are some other factors out there that are affecting the overall deer population. In the Northwoods, the opening weekend hunt seems to be dying off. The diners aren't open in the morning anymore and driving past the public land trucks and cars are very minimal. If your going to double down on some of these number quotas you need to at least look at why people aren't going out anymore. Locals believe that the wolf population is playing a big role in the low deer numbers.

Being a landowner in rusk county I've taken the last 16 years bettering my property for all wildlife whitetail included in the last several years I've watched as the total deer numbers have continued to drop on both public and private rusk county lands . I was never a hunter who counted my hunting success by a harvest but its sure nice to see a few deer when you log in some long days in the stand . I'm more worried about my kids having the same opportunity and seeing enough deer and maybe getting a shot at one when they start hunting . Deer should also have to be tagged and registered like before . From the sounds of gun fire I hear during primetime during the rut while I'm now hunting I'm pretty sure the locals are keeping your herd thinned down enough.

We need to get rid of this “call in registration” for deer harvesting and go back to the “back tags”. This call in registration, I feel, is severely messing up the actual deer harvest numbers. There are some individuals out there that exploit this I am sure. Processing places do not ask for your hunter ID number when you drop a deer off. So why would an individual even purchase a tag? Also, by not having to register your deer at a verified registration place... Gas station or bar for instance. You effectively kill the local economy by not getting hunters out of their camps to come in for food, drinks and or groceries, while they register their deer. I have personally noticed the drop in business around the area due to this “call in” registration.

This is an astronomical leap in doe harvest authorizations that should NOT happen in this county especially on public lands. Yes the deer heard has grown in Rusk county after the few years of buck only but it has not fully recovered to the point where that many doe tags are needed. It is still difficult for the average gun hunter to merely see a deer during gun season on public lands. I think a couple more years of lower doe authorizations would give the heard enough time to bounce back and bring more hunters back to this county. Between the predators, harder winters, and over killing of does the county will suffer! We are already seeing less and less hunters due to poor hunting opportunity. This is too much to soon on Rusk county public land!

To whom this may concern, The 2019 deer season was a successful one for me, not just because I harvested two bucks (crossbow and gun) but because I saw deer around half of the days I was hunting. Seeing deer is important and for the past dozen years before these last two seasons, I was seeing less than ten deer all season! I do NOT support an antlerless season for the general population of hunters, but would like to see an antlerless season for our youth hunters. Keeping the amount of antlerless tags to a conservative number for another season or two will improve the population of deer who are starting to show slight increases in population. Thank you for your time in reading this and the opportunity to give my input.

The cold long winter of 2018/2019 had a large negative impact on the deer herd. Not to mention 2 new packs of wolves moving into the blue hills region around Weyerhaeuser. Last season in 4 full days of hunting sun up to sun down my 3 sons and I saw only 2 does without fawns!!!! Its very hard to get youth involved in hunting when they aren't seeing any game!!!!! When I first started hunting over 30 years ago in the same area we hunt now it was common to see 20 deer on a single day and we never thought of harvesting a doe until after Thanksgiving. The few years we had buck only we started seeing more deer but now it has regressed severely again. Please help to bring the great whitetail deer back to the northwoods.
Our family hunts a 200 acre plot in Strickland. We had one of the best deer seasons in recent history. Everyone had the opportunity to see and observe deer. We harvested 4 bucks, all of which were 8pts or better. The deer appeared to be comfortable as they were moving naturally and not as if they were in a constant panic from predators. I don’t think almost doubling the allowed antlerless kill is a good idea. Our land is near some large farms, and in years past when large amounts of antlerless tags were issued (intensive harvest), the land owners would wipe out the heard. Causing the following couple of years to be very tough hunting for us who’s land is made of mostly trees and swamp.

You guys are absolutely going to ruin hunting in Rusk County on PUBLIC LANDS!!! I’ve been hunting the same public lands for 43 years, the number of deer are down dramatically! I witness every year the same few groups of locals (that own their own land) come out to public land with 30-40 guys and drive everything and KILL every deer they can. They are armed with doe tags, tags they won’t us on their private land. They do not care who is parked off the road and in hunting as they will come right through your set-up! THERE SHOULD BE ZERO ANTERLESS TAGS FOR PUBLIC LAND!!! This is a money making grab by the DNR! Last year I bought as many as I could and then BURNED THEM!!!!!

I see more and more predators every year. This year and prior I’ve seen wolves, black bears everywhere, even mountain lion on camera. I think we are in a dilemma with too many tags and too many predators. I had a total of 3 tags this year and I hunted the 9 day season on 180 acres in different areas of private land. I’ve hunted this space for 15 years. I saw multiple predator tracks and few in far between for deer. In my eyes the numbers are scarce and far/few between now. I remember when I first started hunting. You would see at least a handful of deer ever season and ever sit in the stand. All in all we need to open more hunting of predators, and less tags of whitetail deer.

I understand there is talk of reducing crossbow season to just October. Hunting numbers are down 6 percent. If this happens my family will not hunt in Wisconsin. I know many other people that pay thousands of dollars in out of state hunting licenses that intend on doing the same. We have made significant investments in hunting with crossbows. Reducing the crossbow season will not only affect deer license sales, but all license sales. I understand there are association lobbying hard to reduce crossbow season due to their own personal interests. The financial ramifications of these actions will be much farther reaching than what you believe they will be.

Overall I think the deer hunting experience in Rusk county has been very positive for our family on our private land. However, I do feel more antlerless deer need to be harvested to balance the buck to doe ratio and reduce social stress for the deer. I feel the deer population has increased the last 5 years on our family property. Three of us hunt on 160 acres and we mainly harvest 3-5 does ever year and average one mature buck between the three of us every year. Even with three of us harvesting more does than bucks every year, I personally feel that we still have more antlerless deer living around our property year over year...

I have hunted for 50 years. In the last 15 years the quality of hunting has been severely affected. Stop killing the does. Between two legged and four legged predators there are so many fewer deer the young people cannot hunt what’s not there. The value of my hunting tag has gone way down. Seems like we do what’s best for revenue and not necessarily for healthy deer population if you want to sell tags and get young people involved provide sufficient deer to hunt. Why buy a tag if all I want to do is watch birds and squirrels? Seriously we can do better than this. Hard to believe really that public hunting has gotten so bad.

I think the herd should be allowed to increase slightly for a few years. In the forest areas the herd has declined as total deer killed last few years. Plus I think we don’t have a very good grip on deer density. We need a better method than current. Also should go back to back tags and registration stations. Rusk county has a large population of predators especially bears coyotes and wolves. So that said we need to increase deer numbers. During the gun season i have hunted same property for last 6 years.I hunt about 7 out of the nine day season. My deer seen went like this 18, 24, 15, 13, 7, and just 3 last year.

<td><strong>8010</strong> Gentleman and Women, I hunt north of county O off the end of Norwegian Rd and west southwest of the Christie Mountain on private land adjoining Norwegian Rd. The deer population has not recovered since the slaughter of the doe population 15 years ago. Obviously the habitat changes over the years may have some input, but the hunting pressure during gun season is very low. Seeing any good size doe is rare. Buck population is low also. Maybe it is the farm land drawing the deer away for better food. I would like to see this area really researched closer for better herd management. Thankyou</td>
</tr>
<tr>
<td><strong>8011</strong> GO BACK TO TAGGING DEER AND REGISTERING THEM IN PERSON! Every hunter I know could care less about number of tags or seasons we want our old way of hunting back. We all miss getting a back tag then driving up to the gas station or tavern to show off or look at each others luck. The stories that are told the dollars spent at local businesses. Instead the last few year we all hide our deer and register them secretly so no one knows or talks to each other. The love of the sport is dwindling fast with the loss of the stories and sharing. PLEASE bring back back-tags and registering in person!</td>
</tr>
<tr>
<td><strong>8012</strong> I welcome the increase in antlerless harvest, it seems the buck to do ratio is getting low after I believe many have targeted young bucks for harvest significantly lowering the buck to doe ratio and the number of mature bucks on the landscape. Buck movement may be lower due to a low buck to doe ratio and a sub-optimal level of competition. Camera data and observed conditions in the field suggest the number of mature bucks is currently low relative to 4-5 yrs ago and lower still from the 2011-2013 timeframe which I believe benefitted from earn a buck in years prior.</td>
</tr>
<tr>
<td><strong>8013</strong> I am a nonresident landowner. I was born and raised in Wisconsin. Please reevaluate the metrics that are used to determine herd size and harvest. The number of deer, north of Highway 8, is shockingly low. The predator numbers are high: black bear, coyotes, timber wolves. I strongly urge one to two years of bucks-only to rebuild the herd. I love my home state of Wisconsin and the rich tradition and history of deer hunting. However, it is unlikely that I will be coming home to hunt this year. I can not justify killing a deer in an already decimated herd.</td>
</tr>
<tr>
<td><strong>8014</strong> It’s interesting to see the effects of of the management methods. Extra doe permits definitely brings more people to public lands, and usually shows in lower deer numbers the following year. The bucks only years lowered the amount of people on the public land in that year, and showed in more bucks and deer the following year. Allowed deer feeding seemed to show a higher kill all over. Private land appears a little harder to control with increased permits as the private landowners seem to decide on their own how many deer to take even if more permits are available.</td>
</tr>
<tr>
<td><strong>8015</strong> The data presented by the DNR does not add up. The project 2020 deer herd amounts are similar to 2017, 2018, 2019 but yet the CDAC and DNR want to increase the quota number by double that of 2019. Rusk Co. has not come close to meeting the quota numbers in the last three years but yet the CDAC and DNR want to dramatically increase the quota. Either the deer are not there or we are poor hunters in Rusk Co. You can sell all the bonus tags you want but if you are not reaching the desired quota then you are just generating additional revenue for the DNR.</td>
</tr>
<tr>
<td><strong>8016</strong> I feel our deer population has reduced greatly since the introduction of the wolf. I know the wolf population is a huge detriment to the deer population. These animals will destroy a deer population rapidly. I wish their instinct was to completely devour their kill, but they kill, just to kill by instinct. I wish we could go back the days that I could enjoy my game hunting and not have to compete with the wolf. About 3 of the 12 in our hunting crew are considering not to participate in the 2020 deer hunt due to the deer population being down.</td>
</tr>
</tbody>
</table>
I believe the new unit system (going to county instead of dmu) hurt our area. My county was split in half by the previous dmu. The southern half is predominantly farm land and holds an over abundance of deer while the northern half is mainly public forest land which is limited severely in deer population. Our deer population had a fantastic winter and we are seeing large herds out and about now that the snow is gone. Our rut the last few years has been almost non existent with the buck to doe ratio so out of wack.

The deer harvest by residents in the Northern Forest district is reduced due to out of town and out of state hunters. The out of town and out of state hunters are first in and first out with their quota while the remaining deer population is in hiding for the rest of the limited season. Hunters (southern counties plus Illinois & Minnesota) that are not from this area leaving their trash being are harvesting the natural resources and leaving minimal for the local hunters. Thank you for this opportunity.

Way to many wolves and blackbears in Rusk county. Deer populations are way down from 5 to 10 years ago. I hunt on 300 acres of private land. 40 of those acres is crop field. When corn is in the fields it's not uncommon to have up to 10 different bears on camera. The fawns get massacred by those adult blackbeard. Also, we are constantly finding wolf kills of adult deer. Too many predators in the area to up the limit of antlerless tags. Start giving out more bear tags to hunters and get rid of the wolves!!!

Over the years I feel that we are seeing less and less deer. I think we disturb the heard by baiting, and the sport turned into hunt off of bait piles. I am not seeing as many deer harvest on the roads on cars as I use to when driving home. Talking with others around the state they say very similar and concerning things. I think if we concentrate on keeping deer numbers up and not worrying about the number of tags sold you will continue to have a steady rate of hunters bring in money to the sport.

Own 40 acres and hunt there in south Rusk County. Seeing plenty of deer. In fact a very high number of young up to 2yr old deer. Not seeing big bucks until rut. Even then very few big bucks. Last years late rifle season saw hardly any bucks at all. There were plenty of young deer last fall. We avoid taking spike or fork horn young deer. Maybe increase emphasis on increasing bigger bucks. Thank you for doing a good job monitoring and maintaining the deer population in Rusk county.

I have notice the last few years the doe that I regularly see on my land are having fewer twins than years in the past. I've also seen more fawn kill by predators per trail camera. 5 years ago I had 1 bobcat on trail cams regularly. This increased yearly to 4 Bobcats last year (I trapped the biggest Tom last Nov. So down to 3 again) I'd like to see less cross bow. We have trophy bucks in this state. I fear cross bow during the rut will hurt our states big buck reputation

Rusk/Sawyer county line– First time in 22 years I’ve encountered wolves...in all, I saw 5 (4 in a pack and one loner) I’m only up in this area for five days a year but my father stated in 44 years of hunting in blue hills country, he’s only seen 1 in that time span. I went on the wolf sighting page, and it didn’t look like there was a documented sighting in this area... Take it for what it is, but there are wolves in this area! Thanks for all you do.

I thank you for the opportunity to participate in this program. I hunt with cross bow on private land and move to public land during gun season. As I am getting up my years it is however hard for me to retrieve a deer from public land. I can use my atv on private land. It would be nice to be able to see public land (State) trails and roads open for the gun season even if it was only for the retrieve of a Deer with a motorized vehicle. Again, thank you

I hunt is Rusk county and I saw 1 doe all season. I didn't have a tag to shoot the doe because Rusk county didn't have any to hand out at the time I purchased or wasn’t authorized in selling doe tags. 2018 season I didn't see on deer (zero). 2017 I shot a nice 11 pointer and didn't see another deer the rest of gun season. 2019 deer season I was 1 coyote and several fresh tracks. thank you for working hard on keeping Wisconsin's deer herds safe.
There is much variability of deer population within Rusk County and should be taken into account, both by location relative to farmland (SW) and pressure from predators such as wolves (N, NE). As a land owner, if desire is to maintain herd by taking more antlerless deer please consider giving antlerless tags for free with purchase of buck tags for landowners instead of charging. Also, where herd control is warranted, consider earn-a-buck program.

I have hunted rusk county my entire life. I have watched a steady decline of the deer population and a steady rise in the predator population for many years. Last year,(2019) I saw 4 deer the entire 9 day season. I. The same area, I also saw 63 coyotes and a number of timber wolves. Something needs to be done about the predator population. In my opinion, the rusk county unit should not be hunted for about 5 years. Maybe we can see some deer then.

Important to think about carrying capacity with Elk in the same area as they browse 2-3 times as much. It must affect this. I have many trail cams and see many bear, wolves, bobcat (all cool) but a factor greater than mentioned I believe. The ratio is different the last 3 years with as many bucks as does (few each) in our area on the Rusk-Sawyer line, not sure why. Just some comments on what our camp sees. Hope this helps with your work.

I am more concerned about the oversale of tags, and the EXTREME amount of wolves and coyotes that are on our trail cameras and our trail. There needs to be an open wolf season in all of wisconsin, the wolves are the massacring the deer population and it’s ruining the hunting season, especially for the youth. This is a MASSIVE problem especially in northern wisconsin. Please Fix this, otherwise license sales will plummet.

The number of deer this year was much lower in our area than in the past. Predators such as bear, wolf and coyote as increasing. As well we are seeing higher sign rate of Cats species. We didn’t see near the number during the bow or gun hunts. We have too many seasons, with cross bows now legal the bow season is way too long. By gun season the deer pattern has turned nocturnal if there is no active rut.

I own 80 acres that is surrounded by other private property. On most days driving to and from work I can count over 100 deer in the crop fields within 1 mile of my property. I don’t feel it is right that if I don’t rush to the store the day antlerless tags go on sale they are sold out. Private landowners should be given preference for antlerless tags the same they are with turkey tags.

I have been hunting this area for over 11 years and it is prime deer habitat and every year the number of deer we see goes down and yet you continue to give out more doe permits. Go into the woods and walk around a little and you can see the deer sign is not there and listen to the hunters for once. I sat in the woods for 3 days for the entire day never leaving my stand and I saw 1 deer.

The lower success rate for deer on public land, should not be a reason to administer more antlerless tags for public land. The number of antlerless tags to be issued for public lands is much to high. I would encourage CDAC members to spend some more time in the Large blocks of state and county owned land within Rusk county and reconsider the amount of tags available for public land.

We have been seeing a large increase in Wolves in our area over the past several years with hearing them daily, seeing tracks on my trails always and people in our group seeing them. In last 4 years we barely see any deer during gun season and only see a few during the rut when they have to move. We need wolves thinned and doe left alone so we can get numbers back up.

Quality bucks (8 point or more) have greatly decreased over the years. Many of the bucks harvested are under that and are not given a chance to mature. I personally would like to see a more than 4 point rule go into effect to increase the quality of the bucks harvested in not just rusk county, but statewide. I would apply this to both the gun/bow season. Thank you.
Our Bear population is way to high, need to allow more bear to be harvest. We also have a problem with wolfs, I seen 5 wolfs and in our hunting party from bow and rifle hunting we seen seven different wolfs running deer. We also have a mountain lion on our trail camera with several coyotes, I can say that is one of the main reason our deer population is down.

During the 2019 9 day gun deer season I hunted 5 days. During that time I only saw 6 deer. I was able to harvest 1 buck. I didn’t see one fawn all season or any of the previous scouting trips. I hunted in the Blue Hills county forest on public land only. I have hunted this same area during gun season since I was 12 years old with only missing one season.

Deer seasons start in September and end in January. If you can’t harvest a deer in that amount of time your not hunting. There is a difference between hunting and killing. Hunting means you have to go and make a little effort to harvest a animal. Walk more then 50 feet of the beaten path. People have become very very lazy when it comes to this.

There are very few deer on public land in rusk county. See fewer every year, bow hunt for 2?weeks during first two weeks of nov seen fourteen deer more little bucks than does and fawns. Should be bucks only for five years but thats not your objective is it your objective is sell more tags make more money so go ahead and screw it up more

My feelings are that if u buy a large game permit be it bow, gun, or both on private land the land owners family should be allowed to take one deer buck or antlerless deer at or in any season. It should be allowed with any weapon they want. I want to keep my hunting family interested in hunting. My land rights to hunt one deer.

We have 120 acres and saw 5 deer between 5 of us hunting. We have food plots and seen nothing. It sucks for my kids when they spend over 40 hours in a stand and not see any. I understand now why the younger ones are quitting. My 2 kids probably won’t go again. I go to take my 80 year old dad, when he quits so will I.

As a farmer in Rusk County, the deer population is simply too high. Checking fields in the evening, it is not uncommon to see 10-15 deer in each field. Crop damage, to both forage and grain crops, is out of control. Also, the amount of antlerless deer is high, while harvesting a mature buck has become more difficult.

Deer population is crashing. Too many wolves and no control on those, winters have been hard and we have good property with oaks and food plots and there aren’t enough deer to even eat the food we have. Do not give any doe tags and figure out a way to mange wolves or people will stop hunting up north very soon.

Bear numbers are extremely high in thornapple township in Rusk County. I personally saw 9 bears during the gun deer season last year and we saw few fawns in our area. There needs to be increased bear tags issued in hot spots since the extremely high bear numbers take out a large number of fawns in these areas.

I have been hunting and scouting the same area for 26 years and I have seen the deer herd decline dramatically. The wolf population has a drastic toll on the herd from what I have seen, also the doe harvest tags are overabundant. In general the population is hurting in Rusk County from what I have been seeing.

What is the DNR’S plan to reduce and address the exploding wolf population in Rusk County and Wisconsin overall? Over the years our deer population on our 440 acres has greatly reduced while predator populations of coyotes and Wolves has increased. Something needs to be done to manage the wolf population!!

We have so many does that our 400 acres is way over-browsed. Doe to buck ratios are way out of whack against healthy ratios, according to our extensive camera studies throughout the property. Please open up more doe tags, especially on private property where we know our deer and our numbers well.

I would like to see Wisconsin significantly raise its out of state license prices or have a Wisconsin residents only hunt first. We have premiere deer hunting in this state but it seems like we are you eager to sell it out to everyone rather than reward the residents who make it happen.
I have been hunting Rusk county for 55 years and believe me when I tell you the amount of mature bucks have been reduced, and the Doe population the same. My son and I would compare the number of racked bucks we saw after an evening bow hunt. I feel for the next generation of hunters.

The purpose of the quota of 7500 antlerless tags is to high for our area. I have gone out on several occasions scouting for deer, I see a lot less deer than I did last year when I was out scouting for deer, my scouting is in a 15 mile radius. There is less deer this year than last year.

I have not seen the numbers I used to see 20 years ago where the deer were herded up. I remember seeing the numbers much higher in the woods of Rusk County years ago. I don’t see the point of such a high quota of antlerless deer. I’m not seeing the numbers to support that.

We as a camp of 8 hunters have consistently seen lower numbers of both sex deer over the last number of years in the northern 1/4 of Rusk and southern Sawyer county. There is not a need to over harvest the deep woods deer. The few we do see are the same over and over.

I think the deer are healthy and the population is good. I hunt by the Flambeau forest. The elk are beautiful and seem to be doing good. We see lots of wildlife. I think the amount of harvests and available tags are right at this time. Thanks for the survey!!!

Please keep the harvest tags the same. I feel the deer numbers are starting to come back in this area. There were many years of not seeing many deer at all while hunting, while in the past few years I have seen more. Thank you for all of your efforts.

There seems to be plenty of deer in some areas. Family buys about $1500 in out of state license and hunting opportunities and being able to have times available to multi generations to hunt is critical ---gun,cross bow and muzzleloader.

I feel the bow and cross bow rules are right were they need to be should never change them. I feel the gun season should go back to old days 5 day season either buck or doe. This allows families to be together during thanksgiving holiday!!

I am very concerned about the # of deer we see. For the last 6-8 years we haven’t seen any #s of deer. I hunted 8 days last year and saw 5 different deer. Both of my boys each saw 2 deer all season. I really hope they keep hunting.

The number of deer I saw last year was down but it was a strange season. I’d like to see the deer population up just slightly. If 4,000 antlerless tags would result in a straight maintain I would want to see 3500-3750 offered.

Stop all baiting!! Bucks only with 4 points or more. If that happens we might see a recovery in about four years. We need to issue more bear tags also. I had to wait eight years for a kill tag. Who makes these decisions?. Thank you.

I don’t see a need to keep raising the number of Doe permits for public land. We hunt the Christie Mt. area and don’t see 10 other hunters on 100s of public acres. No matter the number of permits, there’s a lack of hunters.

There appear to be far more predators here than the DNR recognizes. These predators decimate the deer population. Primarily in the spring. Coyote, bear, bobcat, and wolves kill fawns at a staggering rate.

I believe that an increased antlerless harvest would be good for the unit but I am not in favor of making it antlerless only. I also feel that the permit system favors landowners over hunters on public land.

We see very few deer in the area we hunt. We have 5 camps in our area. The last several years several camps are lucky if they shoot 2 bucks a season. We had people that saw one or none deer last season.

I would like to see the antlerless quota around 3500 in Rusk County. I believe the 7000 plus quota would be way to high, and would knock the future numbers of potential harvestable bucks way down.

<tr>
<td>833</td>
<td>There are heavy numbers of predators in this hunting management unit. I firmly believe the number of predators exceeds what is yearly documented. We see large numbers of wolfs and bears. Thank you</td>
</tr>
<tr>
<td>834</td>
<td>Get rid of the wolves and other predators. Way too many! Too many bears. Not enough bear tags. Still waiting for eight years and haven’t received a kill permit for bear, that’s ridiculous!</td>
</tr>
<tr>
<td>835</td>
<td>During the crossbow season I hunted about 40 hrs and approximately 60 hrs during the rifle season. Deer sightings over the last 4-5 hrs have been dismal for others in our group as well.</td>
</tr>
<tr>
<td>836</td>
<td>Need more doe tags for private land owners in 2020. I am a landowner and could not get a doe tag for my property in 2019. Many many many does and not enough tags to harvest.</td>
</tr>
<tr>
<td>8020</td>
<td>I think the amount you expect out of state hunters to pay to help with predators is absolutely insane. You cannot gain popularity in the outdoors while overcharging people!</td>
</tr>
<tr>
<td>837</td>
<td>Please consider removing the separation of &quot;private land/ public land&quot; from antlerless tags. A tag should be good for a deer in public or private land in a given zone. Thx!</td>
</tr>
<tr>
<td>838</td>
<td>I would like to add the nonresident licenses cost are to low in Wisconsin. I also hunt out of state and pay way more than they pay to hunt here in Wisconsin. Thank you....</td>
</tr>
<tr>
<td>8021</td>
<td>The deer population and deer management in Rusk County is good. The county needs more law enforcement activity with respect to controlling the illegal harvesting of deer.</td>
</tr>
<tr>
<td>8022</td>
<td>To many wolves had a 16 year old kid get stranded in stand by 6 of them had to have help starting them off so he could get out saw a couple other while hunting as well</td>
</tr>
<tr>
<td>8023</td>
<td>I have been hunting in this county for 39 years, since I was a young boy. Despit statistics shown, I have seen less deer of both sexes over the last few years.</td>
</tr>
<tr>
<td>8024</td>
<td>I am most concerned about the predators especially the wolves. These need to be controlled to have a sustainable deer population. Way too many wolves out here</td>
</tr>
<tr>
<td>8025</td>
<td>To many out of state hunters that are buying up the land to hunt and dumping corn all the time. No more deer drives anymore. The deer aren't pressured to move.</td>
</tr>
<tr>
<td>8026</td>
<td>I would like to see all deer seasons to remain as they are, there are ups and downs in all things we do and we appreciate the good seasons after the poor ones.</td>
</tr>
<tr>
<td>8027</td>
<td>Soms and grandkids spend 1500 buying out of state lascenses to hunt with crossbow and gun. see no reason to punish crossbow hunters with a shorter season.</td>
</tr>
<tr>
<td>8028</td>
<td>I think all junior licences should be antlerless only, always. Junior licenses can always hunt anterless deer and only anterless deer no matter the quota.</td>
</tr>
<tr>
<td>8029</td>
<td>I would agree with the approach of bucks only with reduced number of bonus tags for public land and an increased number of bonus tags for private land</td>
</tr>
<tr>
<td>8030</td>
<td>Deer numbers are still too low, I hear of the importance of introducing youth to our great hunting traditions, tough when kids don’t see deer.</td>
</tr>
<tr>
<td>8031</td>
<td>Been many years since a good harvest for my hunting group in Rusk county. Sometimes we rarely see deer anymore. Hope we can find a balance!</td>
</tr>
<tr>
<td>8032</td>
<td>Too many black bear in county taking the majority of new born fawns the past 10+ years. Fawns need to survive for the numbers to increase.</td>
</tr>
<tr>
<td>8033</td>
<td>Please leave crossbow season alone it's what got me back into hunting if its changed I may just stop hunting with crossbow and with gun.</td>
</tr>
</tbody>
</table>
keep doe tags low, 6 person deer camp. saw 4 deer from sat thru wednesday total. we refused to shoot a doe because numbers were down.

Deer numbers look good on my land, S of Hwy 8 E of Tony. Doesn't appear to be much winter kill. Number of tags looks good to me.

Keep tags down, rebuild the deer population. No t-zones or extra seasons. Ok with youth hunt only (beyond normal hunting seasons)

We are losing to many hunters each year. One of the biggest reasons is not seeing deer. We should not be over harvesting deer.

Seeing fewer deer every year to increase hunters increase the herd. Many hunters I talk to are concerned by lack of sightings

Limit bow hunters to 1 buck. The kill to many in their season. They can get a second tag after gun season is concluded

Haven't seen any deer now in two seasons and very few tracks. Lots of wolf and coyote tracks. Confirmation bias, yes.

the deer season should be 1 buck and 1 doe tag for both gun and bow. No other tags should be available to buy.

Numbers are still not reflecting herd accurately. Everyone I talk with says they are not seeing deer.

Do not change the rules in regards to which weapon can be used. Allow all types the way it is.

You'll sell more licenses and attract and retain more hunters if more deer are seen.

Rusk county landowner should be granted an antlerless tag with purchase of license.

STOP BAITING period, end of story!!!! Just stop it!!! No really STOP BAITING!!!!

DO NOT CHANGE THE DEER SEASON !!! LEAVE THE TRADITIONAL 9DAY HUNT AS IS !!!!

Numbers are hard to believe still not seeing deer like I have in the past

Going from 2100 to 4000 quota seems like a radical change for one year.

Deer being shot illegally with crossbows. To long of a crossbow season.

Believe we had a mild winter when you factor in the snow and weather.

DMAP Program is an excellent resource. Please continue this program.

I am very interested in maintaining a thriving, healthy deer herd.

Very few deer in this Rusk Co unit other than on a couple farms.

Deer numbers are drastically down from at least 5 years ago.

Cross bow hunting has certainly effected the gun hunt.

Would like to see more Clear Cuts made in the Blue Hills

Predator numbers are too high. Poaching is too high.

I’m concerned about poaching in Rusk County.

All of us hunters want meat in the freezer

I haven’t seen deer since they did T-zone

There are not enough deer in this unit.

I believe a 1 buck rule would be good
Keep cross bow hunting as it is now.
Do away with October youth hunting
Leave the season dates alone!
The DNR is doing a fine job...
go back to having BACK TAGS
Nice work over the years!
Less wolves will help
Get rid of the wolfs!
Wolfs kill too many
ban baiting!
Public Input on CDAC Preliminary Recommendations - Spring 2020

Sauk, Southern Farmland

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

668 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 368
   - I visit this unit for non-hunting purposes: 140
   - I hunt in this unit: 618
   - General interest in this unit: 125

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 586
   - Bow: 337
   - Crossbow: 228
   - Muzzleloader: 179

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 24.52
   - Maximum: 70

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 398
   - Mostly Private Land: 93
   - Public and Private Land About Equally: 44
   - Mostly Public Land: 25
   - Exclusively Public Land: 44
   - I did not hunt in this unit last year: 14

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 26
   - Not too crowded: 63
   - Neither crowded nor un-crowded: 48
   - Somewhat crowded: 37
   - Very crowded: 24
   - Not applicable: 8

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 117
   - Fewer: 197
   - Same: 259
   - More: 67
   - Many More: 13
   - Unsure: 15

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
Implement an ANTLERLESS HOLIDAY HUNT : Support 323  Oppose 297  Unsure 48

If a Holiday Hunt is held in a Farmland unit...
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: Support 399  Oppose 211  Unsure 56

If the Population Objective is not "Increase"...
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: Support 63  Oppose 550  Unsure 55

If a Zero Quota (buck only season) is adopted...
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? VALID NOT VALID Unsure Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit? Scale: 1 = Not-at-all;  2 = Slightly;  3 = Moderately;  4 = Very

Main thing I want to say is that CWD is here to stay. Study it if you want to but the amount of money wasted and still being wasted on it is ridiculous. I don't think the projected numbers are anywhere close to what you think they are. I've been hunting for 28 years and know many, many, many other hunters that hunt all over, and the results are all the same—we've never seen a sick deer in our lives. How can that be if it is so prevalent? Also, the deer harvest numbers are down for various reasons. Less hunters for one, because everyone is scared away due to the CWD scare you portray. Also look at the hunting conditions...opening day last year had frozen leaves on the ground. It was absolutely noisy getting into the stand last year. Last time I checked deer had ears and a nose, and you're not going to tell me that human presence did not go undetected in the woods last year more than others. This adding 10 days to the gun season—one word—DUH. What is this really going to do? Most people are done hunting after thanksgiving anyway whether they harvested a deer or not. Do any of you spend time in the woods at all to know this fact? Also, the crossbow proposal is just pitting hunter against hunter and that is completely unacceptable. Back to CWD. Back when cwd first started in 2002, so called wildlife biologists here were talking the sky is falling for the deer herd...that it's going to be wiped out in 5 to 10 years. They've had it out west for decades and the herd is still there and flourishing. Cwd has been here for 18 plus years now and I see plenty of deer year after year. And not just deer—healthy deer. You aren't going to stop the spread by killing deer, because deer still interact 24/7. They smell each other's poopitydoo, they rub on the same rubs, they lick and smell the same licking branches and mock scrape areas and rub their pre-orbital glands on the same places. How you going to stop all this?—go out there and put a mask on them and put signs up for them? There are still people out there that feed the deer, put out mineral licks, they drink out of the same puddles in the woods. These regulations are nothing but overreactions to CWD. Study the disease, but leave the damn deer herd alone with your managements. It's nature...it's going to survive. Humans in government agencies have this overwhelming urge to think they need to play God all the time. It's not the CWD that is ruining the best resource Wisconsin has available, it's your policies. Wisconsin is an example of failed CWD policies and an example of how CWD does not gravely affect the deer herd like you said it will. Go back to the traditional ways of hunting when I was a kid, but add a twist. Buy a tag—gives you the right to shoot a buck or doe. If you want more deer, buy more tags. Plain and simple. This buy a tag and you get 3,548 extra doe tags is ridiculous. It encourages overkilling of deer which we all know you want for some insane reason, but who the hell needs to shoot more deer than they need. I'm just like most other hunters...I am glad to shoot someone a deer, but I come first. And when my freezer is full, I quickly go from I love deer hunting to I'm sick of deer hunting. One more point that proves your CWD logic is flawed. Let's say we kill every deer in the woods that has CWD. Hooray, no more CWD.....no but wait.....that "white" deer has CWD. Can't shoot him. Well son of a potato...looks like CWD is going to spread again. It's still here to stay. Wake up
First of all I'd like to start out saying, I scout whitetails 8 months out of the year, I run a good amount of trail cams throughout the county and I hunt about 3 months out of the year very hard. But being out there all the time I am able to see what's going on. I hunt mostly public because I have better success. I think we should be the first county in this state to set the bar and pass a 3 pt on one side antler restriction. Not to grow trophy bucks but to protect spikes and forks so they have a chance to go through the cycles of life and maybe they will have a chance to mature more. We do not have the quality of bucks like we did in the past. People like seeing a nice buck, it brings business to the area, and when one is harvested the business continues onto the taxidermists, maybe the butcher shops. If muskie fisherman can get a 50" size limit why can't we get something to help deer in the whitetail capitol of the world? We should try it, what's it going to hurt? People will have more success and they will be happy. This should be an option and many of us would like to see this. Otherwise we would like to see one buck per hunter a year. We are losing hunters not because they aren't seeing deer, because they aren't seeing any decent bucks. The extended rifle season will hurt our buck population, and the continuation of crossbows for anyone all archery season is really having an impact on the buck population, I do not agree with either. We need to have a crossbow season and stay with the traditional rifle and muzzleloader season. If people are in the woods with rifles at the tail end of the rut it will be devastating to our buck population, they are like sitting ducks. One way we could make things a lot easier is change the way the seasons begin. This is a suggestion for the whole state. There are years we hear how the season started to late like 2019 so that lowers the harvest of bucks. There is a simple fix, make rifle season open on the same date every year like MI. This is my idea on season structure and I believe it would improve our state and simplify everything; Archery Season - Sep. 15th-Jan. 15th statewide continues Crossbow Season - Nov. 15th-Dec. 15th statewide continues Rifle Season - Nov. 20th-Nov. 30th statewide, weapon of choice Muzzleloader Season - Dec. 1st-Dec. 10th statewide No extended archery hunts, no holiday hunts, no youth hunts, no baiting statewide, no CWD tags, let the counties control their herds as needed. Let's make this the greatest state to hunt whitetails because right now we are falling off the map, losing business and losing hunters.

The white deer issue continues to be a problem in many parts of Sauk County. Each year I'm told by the board that I should go talk to a legislator or write to someone. Wouldn't they value this opinion more from someone on the CDAC committee or on the Conservation Congress board? I don't see that opinion going very far just coming from a citizen and not someone who has the credibility/background/pull like you folks have. Couple main points to consider: 1.) We want to control deer numbers and DECREASE the population yet it's okay for the white herd to continue to grow? Each year at these meetings it keeps being stated to decrease the deer herd and give out more free doe tags, but protecting white deer does not allow that to happen. 2.) CWD was found in 25% of the deer tested in Sauk County in 2019... that is an astounding and scary number. 2 mature bucks have tested positive on my farm the last 2 years. The number only continues to climb and increase. Yet it's okay for the white herd to continue to grow and not kill off those deer that may have CWD? There are currently 10-12 white deer on our farm, many of them being mature does. 3. White deer are genetically inferior and do not provide benefits to the herd yet it's okay for the white herd to continue to grow and pass on these poor genetics. All of these decisions are supposed to be science based in order to help better the population. They aren't supposed to be made in order to please a group of people who enjoy looking at white deer. Like I stated last year, I realize some of these CDAC members have direct ties to those people and they don't want it to affect their personal life and how people judge/view them; however, isn't the point of this CDAC is to help the deer herd in the best way possible for Sauk County? Just brushing this issue off each year does not help the deer herd in the slightest. I believe it's time for someone to take a stance on this because allowing them to be protected totally contradicts everything we are currently trying to do in this county. I realize white deer are protected by law, but EAB is also currently restricted by law but now it's a question again this year if people would be in support of it coming back. The white deer issue could be handled in the same way. I appreciate you taking the time to read over this and I hope it will be read by the committee. If it is too personally attacking, please just take the main points and relay them to the committee. This NEEDS to be looked at from a scientific perspective, not an emotional attachment perspective. Thank you!
Hi. In all honesty I was happy with how the season structure looked last year. As an avid bow hunter I am not a fan of the doe only hunts. Especially the October one. But I understand their purpose. On the property I own and hunt I am trying to raise my deer numbers. The neighbors have been enlisted in a crop damage program for many years now and we are seeing significantly less does. I am trying to maintain a healthy buck to doe ratio so the last few years I haven’t allowed anyone to shoot does on my property. I also plant a lot of food plots and trees that benefit the deer and other wildlife in the area. There weren’t any questions regarding limiting crossbow hunting and having bow season end a week before gun season. I’m not sure if those are no longer on the agenda but those two proposals are what I didn’t like, and why I am giving my feedback. I personally don’t use a crossbow and at first I thought of it as “cheating”. But as I thought about it more it is a good way to get more people into the woods to experience the joy of bow hunting. And for a lot of hunters that don’t put in the hours of practice in the off season, it is a good way to make a good ethical shot on a deer. I think the decision to open that option up to everyone was a good idea. As far as closing bow season a week before the gun season, I don’t like it at all. I use my vacation time to hunt all of November. And that proposed week can have some awesome rut action. I can’t speak for public hunters but it hasn’t effected my gun seasons at all. Bow hunting is all about sneaking in and out without pressuring the deer to much. So I have the same deer in my fields all of bow season and gun season. What effects my gun season the most is neighbors. Wether they are out hunting or cutting fire wood. I hope my feedback helps, I am sure you guys get a lot of input. But thank you for listening and I’m looking forward to the 2020 deer season!

1st, I was on the Sauk County call, thank you for setting that up. I really struggle with the 3 antlerless tags with each tag. I do not think that increases the number of does shot at all. In fact I believe it creates the opposite affect. All my neighbors think that everyone is going to shoot 3 does each so no one shoots does because they think the deer population will be wiped out like what happened when we had earn-a-buck. So no one shoots does at all because they are afraid everyone is going to fill all their tags. If you have one doe tag with each tag you purchase I believe most would shoot one doe and then people that wanted more does could buy more tags. It is also a benefit to the DNR because purchasing the extra tags is added revenue. I heard many jokes about all the tags that were handled out. One group close to me had 10 hunters with 80 doe tags. They shot 2 doe because they were afraid all the other neighbors were going to fill their tags. I know you want to send a message to legislatures and that is why you want to keep handing out so many tags but this idea is completely backfiring! I am completely against all the extra doe seasons and holiday hunt because it keeps me out of my land to cut wood, etc. because I don’t want to anger all my neighbors that do hunt. Additionally, as a snowmobiler and one that puts all the signs in, all the extra deer seasons affect us severely. Everyone forgets that trails need to be put in during early December and with all these deer hunts many landowners do not allow us in to mark and clear trails during the deer seasons whether they hunt or not because they don’t want the deer pushed to the neighbors that are hunting. We as snowmobile clubs end up doing a ton more work because ground is frozen and it is hard to get the trails. Again this does not take into account if we do get early snow we would miss out on open trails.
