The comments presented in this report are the unfiltered opinions of individuals who responded to an online public input form. The viewpoints expressed do not represent the views of the state of Wisconsin, the Department of Natural Resources, or its employees.
Public Input on CDAC Preliminary Recommendations - Spring 2020

Overall Summary

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

35559 forms were submitted.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management unit? (Check all that apply)
   - I live in this unit: 16468
   - I visit this unit for non-hunting purposes: 7935
   - I hunt in this unit: 32893
   - General interest in this unit: 6215

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In the DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 30674
   - Bow: 18080
   - Crossbow: 13299
   - Muzzleloader: 10871

3. How many years have you hunted deer in the unit?
   - Minimum: 0
   - Average: 23.6
   - Maximum: 99

4. Which statement best describes where you deer hunted in the unit last season?
   - Exclusively Private Land: 17595
   - Mostly Private Land: 5124
   - Public and Private Land About Equally: 3719
   - Mostly Public Land: 2180
   - Exclusively Public Land: 3955
   - I did not hunt in this unit last year: 320

5. How crowded with other hunters did you feel while hunting on public land in the deer management unit?
   - Not at all crowded: 1356
   - Not too crowded: 3843
   - Neither crowded nor un-crowded: 2911
   - Somewhat crowded: 2999
   - Very crowded: 3246
   - Not applicable: 623

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in the DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 6797
   - Fewer: 10610
   - Same: 12432
   - More: 3762
   - Many More: 1275
   - Unsure: 683

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in the unit?

<table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...

- Implement an ANTLERLESS HOLIDAY HUNT: 9259 Support, 11719 Oppose, 2121 Unsure

If a Holiday Hunt is held in a Farmland unit...

- EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: 12404 Support, 8713 Oppose, 1946 Unsure

If the Population Objective is not "Increase"...

- Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 3247 Support, 24890 Oppose, 1827 Unsure

If a Zero Quota (buck only season) is adopted...

- Should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? 6148 VALID, 4933 NOT VALID, 1379 Unsure

11. How important were each of the following concerns in forming your opinion about the CDAC's recommendations for the unit?

<table>
<thead>
<tr>

Overall Summary: Friday, May 01, 2020
The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

15916 forms were submitted.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management unit? (Check all that apply)
   - I live in this unit: 8507
   - I visit this unit for non-hunting purposes: 2915
   - I hunt in this unit: 14663
   - General interest in this unit: 2695

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In the DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 13684
   - Bow: 8507
   - Crossbow: 6213
   - Muzzleloader: 5422

3. How many years have you hunted deer in the unit?
   - Minimum: 0
   - Average: 23.47
   - Maximum: 71

4. Which statement best describes where you deer hunted in the unit last season?
   - Exclusively Private Land: 9684
     - Mostly Private Land: 2437
   - Public and Private Land About Equally: 1181
     - Mostly Public Land: 467
   - Exclusively Public Land: 777
     - I did not hunt in this unit last year: 117

5. How crowded with other hunters did you feel while hunting on public land in the deer management unit?
   - Not at all crowded: 636
     - Not too crowded: 1556
     - Neither crowded nor un-crowded: 967
     - Somewhat crowded: 788
     - Very crowded: 596
     - Not applicable: 319

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in the DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 2783
     - Fewer: 4857

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
Implement an ANTLERLESS HOLIDAY HUNT:
Support | Oppose | Unsure
---------|--------|--------
0 | 0 | 0

If a Holiday Hunt is held in a Farmland unit...
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021:
Support | Oppose | Unsure
---------|--------|--------
0 | 0 | 0

If the Population Objective is not "Increase"...
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons:
Support | Oppose | Unsure
---------|--------|--------
653 | 5553 | 484

If a Zero Quota (buck only season) is adopted...
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?
Support | Oppose | Unsure
---------|--------|--------
VALID | NOT VALID | Unsure
5086 | 4155 | 1091

11. How important were each of the following concerns in forming your opinion about the CDAC's recommendations for the unit?

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

7183 forms were submitted.

**Section 1: Information about who provided the input.**

1. Why have you chosen to provide feedback about this Deer Management unit? (Check all that apply)
   - I live in this unit: 3929
   - I visit this unit for non-hunting purposes: 1375
   - I hunt in this unit: 6598
   - General interest in this unit: 1283

   The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In the DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 6007
   - Bow: 3914
   - Crossbow: 2472
   - Muzzleloader: 2007

3. How many years have you hunted deer in the unit?
   - Minimum: 0
   - Average: 21.03
   - Maximum: 85

4. Which statement best describes where you deer hunted in the unit last season?
   - Exclusively Private Land: 4267
   - Mostly Private Land: 1030
   - Public and Private Land About Equally: 476
   - Mostly Public Land: 236
   - Exclusively Public Land: 525
   - I did not hunt in this unit last year: 64

5. How crowded with other hunters did you feel while hunting on public land in the deer management unit?
   - Not at all crowded: 370
   - Not too crowded: 769
   - Neither crowded nor un-crowded: 416
   - Somewhat crowded: 346
   - Very crowded: 227
   - Not applicable: 139

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in the DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 1064
   - Fewer: 2051
   - Same: 2865
   - More: 727
   - Many More: 287
   - Unsure: 189

**Section 2: Perceptions about the number of deer in the unit.**

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in the unit?

1 Your format focuses is made on an assumption that both private and public land share the same deer density -- and that's a patently false premise. Private land, by definition, is used by owner(s). The public land is open to more people- the "public". I have been hunting in Wisconsin as a non resident since 1980. The deer herd size has dropped precipitously since the early 90's. So today's "public land" hunter drags thru the season seeing fewer and fewer deer each year-- because they flee the public land as soon as bow hunting start and head to and then stay in the sanctuaries of private land. Add to this misery the "early hunts" that you sponsor-- again it just further drives the few deer left back to private sanctuaries. Giving me three tags to sit in a virtual "desert" does not help me and it certainly doesn't help you. The season just ended was for me the straw that broke the camels back-- THIS WAS THE THIRD YEAR IN A ROW THAT I HUNTED ON PUBLIC LAND AND DID NOT SEE A SINGLE DEER DURING HUNTING HOURS. States out west have used a program where private owners issue an access slip to hunters for a fee. If the permitted hunter then bags an animal, the permit slip is included in the registration process. At the conclusion of the season the private owner recovers a fee from the state -- which is in addition to his access fee. If you do not find a way to open up private land you might as well make property owners the only licensed hunters.

2 More CWD cases in the county. That's the most important stat in the entire presentation. We must "drastically reduce" the herd to "save it." CWD is only going to grow and infect a larger portion of the herd each year unless we make the tough call and take action now. This means declare war on CWD and cull the herd until we hit pre 1980 levels. The health of the herd is not all that we have at risk - since we don't fully understand CWD, to hope the herd just copes with it on it's own is a time bomb. What is at stake when CWD could jump to another species? That species could even be humans. Who at the WI DNR is going to show the intestinal fortitude to stand up for the course of action that is in the long term best interest of not only the WI deer herd but all WI humans? I don't like this idea any more than anyone else and but we must think big picture, we must see the potential of what could happen here and think of the future. What's at risk, is worth what we must do. We must rally and get ahead of what potentially could be very dangerous situation by reducing the deer herd size via very aggressive hunting laws to address the risk of CWD. If you're not for declaring a war on CWD by cutting down the herd size, then at least fund more research of it.

3 Gun Deer harvest in this unit is directly/positive correlated to the corn harvest. When the corn harvest is at a lower %, so is hunter success rate, and vise-versa. I was provided data from the NASS and WI DNR to do my statistical analysis. I have concluded that there is a fairly notable direct/positive relationship (Correlation Coefficient of 0.46) between the Corn Harvest % by the first weekend of the 9-day Gun Deer season AND hunter success rate during the 9-day gun season. Any lack in harvest this year was due to that. All things being cyclical, I'm sure when we have a good stretch of less fall precipitation and higher corn harvest %, we will see an increase in deer harvested during gun season. From a deer population standpoint, our land has increased throughout the last 10 years. Along with the quality of mature bucks. This is attributed to QDM practices by my neighbors and myself. Not only being selective, but managing land. I'd say the more incentives you can provide for land management, the better.
I hunted predominantly on private land in Adams County. I hunted every day of the season for a minimum of 4 hours although my usual was an average of 6.5 hours. I saw a total of 2 deer while in the field and actually hunting. I stand hunted, slow walked some areas and participated in small drives of 1/2 to 1 mile in length. Consulting my records I have noted that over the last 5 years the number of deer seen has decreased drastically. Going back to 2014/2015 and previous years it was common to see 7 deer a day. I will grant that it is possible that I was seeing some of the same deer every day but not all were the same deer. I will also grant that the amount of water currently on the ground in many areas over the last 3 years has to have had an effect on the deer movement. However the areas I hunt have some nice oak knolls and other natural foods. We have also put in a number of smaller food plots to attract and hold whitetail into the area. That has not yet born fruit. Thank you for the opportunity to comment.

I would like to see an extended Nov gun season. As an aging hunter it is no longer feasible for me and many others that are getting too old to bow hunt. Most of us would like to see or have a chance for a trophy buck, how ever by the time gun season opens the rut is pretty much done and so are the chances of the big one. I would say that of 100 hunters I know that last season only 45 of them bought a deer license. They have quit hunting for the reasons I stated above. I don’t see many younger hunters replacing us old guys far as gun hunting. It seems the younger hunters do go in for bow hunting. The deer herd is up, the kill is down and license sales where down 2019. I think it will continue unless there is more gun hunters that can have a hope of getting in on a good hunt during the rut. Thank you for allowing me to voice my opinion.

Hello, I am a private land owner/private land hunter. We are seeing very large increases in deer numbers in southern Adams county. Surrounding large tract private landowners are “managing” for deer hunting, but do not harvest near enough antlerless deer. Our family has limited time to hunt, and/or some parcels too small to harvest enough antlerless deer to keep herd in check. See the future herd growth as only an increasing problem. I would like to see return of earn a buck tagging. I realize this is unpopular, but forest health, and herd health, will suffer in near and long term. I also feel that hunters just will not kill extra does, or an additional deer if they kill a buck, no matter if additional tags are given away. Thank you for allowing my input.

We need to encourage more people to harvest antlerless deer other than simply offering more tags. Perhaps sponsoring/supporting/funding more programs like Field to Fork...especially during the December antlerless season...could inspire more private property owners to support more antlerless harvest. Although I hate EAB, there needs to be more/different tools available to CDAC to encourage more antlerless harvest while still allowing folks to pursue mature bucks. Perhaps a hybrid EAB whereby your previous year antlerless harvest qualifies you to harvest a buck. This may help encourage more folks to participate in the December hunt while still not “ruining” the early season and rut.

I would like to see the bow an crossbow season stay the same. I’m a felon from owi’s And I understand that what I did was of my doing and losing my right to carry a firearm. So when crossbow became legal for deer hunting I pick back up into a sport that I love to do. Felt like I had a new life of hunting whitetails once again. And if changing the crossbow season to only October and then after the gun season. I think that would push me away once again not being able to hunt the best part of the rut. I don’t think with the technology in bows today that it really doesn’t matter I think it just the hunters preference in weapon choice just my thought. Thanks for you time.

Stop using CDW as a ploy to rid our state of deer. Have a state deer hunt every other year or no killings of does. We want more deer after you killed them all years a go they are just now starting to rebound there used to be hundreds of deer now maybe I see one or two. The dnr doesn’t know how to manage because it’s a sick government program that’s all about $$$$$ you have wrecked wildlife populations I hunt but don’t take doe. Government of every firm has molested the citizenry and have trampled in constitutional rights including DNR
Too many doe tags are issued to hunters in the area. Also should go back to using actual tags and registration stations because paper tags and registering online makes it too easy for someone to poach deer and never register them and/or shoot more than they are allowed in a season. Crossbows make it too easy to harvest deer during archery. There is no challenge to hunting with a crossbow compared to a regular compound bow. Restrictions should be set back to limiting those who are able to use a crossbow during archery season.

Considering any sort of holiday hunt or bonus tags for this unit is laughable. I’ve seen more wolves than deer over the past 5 years and it’s been over a decade since my family has seen a healthy number of deer where we hunt. Between predators, harsh winters and farmer tags, there is absolutely no reason to give out more tags or extend any sort of hunting seasons for deer. Hunting sales are down for a reason, I really hope the dnr will figure it out and do the right thing and bring the deer population back up.

We hope the gun deer season remains in the traditional 9 day period coinciding with thanksgiving. The idea brought up about moving it to earlier and extending it to 19 days contradicts the idea of providing better opportunity to harvest deer for 2 reasons: most people have extra time off the week of thanksgiving, and spreading out the hunting pressure will mean less deer movement. Also dedicated muzzleloader hunting would be eliminated which would be disappointing.

1. DO NOT want to see the gun deer season changed from the traditional 9 day during Thanksgiving dates. 2. Raise out of state tag prices. 3. DO NOT change the crossbow season and think you should simply make vertical bow and crossbow all Archery. Crossbow has doesn't have that much advantage over vertical bows. 4. NEVER bring back Earn a Buck, worst idea ever and increases poaching levels. 5. CWD has been around forever, stop wasting our dollars on this junk.

I have hunted this area for 65 years. The quality (deer seen and bucks shot) has progressively decreased. It seems as if hunting pressure has increased. The long bow and crossbow seasons have subjected the deer to constant pressure for about 4 months. The deer bow and crossbow seasons should be shortened! The distribution of deer among the farms is remarkably variable while the overall population maybe at a desirable level to the DNR.

I see possible major changes in crossbow hunting. I personally love the experience of using the crossbow and support the current seasons. There's a reason why there are more deer take with crossbow. Its the preferred method and is getting more people out. Please keep it as is and do not cave into pressure by bow hunters. Again, we want max participation and using a crossbow seems to be a popular method these days.

Keep the gun season as is. Don’t punish the crossbow hunters by shortening their season. Take a look at the wolf numbers in our area. Have more wolves on game camera than deer. Have not seen one deer opening weekend of gun hunting in 3 years. Now we go hunting out of state for whitetail. Why should I hunt on our land and get nothing. Now I have to carry a pistol because of the wolves on our land.

I tried to go through the video twice, but it would not move forward, so I wasn't able to get through the whole presentation. During Gun-Deer, I saw the most deer of my group of three of us of ~4 for the entire season. Another member saw a number of good bucks during early bow season, though. Hunting pressure has decreased.

I understand that it is not currently an option, but I think anyone who is given the opportunity should support the return of Earn-a-Buck. I believe that EAB is the only realistic tool that can be used to control populations. Antlerless seasons will never garner enough support to be successfully utilized.

<td><strong>20</strong> I wish there was just one November deer hunt season like years ago, and shorter bow season. There are too many seasons, too many long seasons, and it just makes the regular November season less enjoyable. Plus I think it leads to seeing less deer although they are out there hunkered down.</td>
</tr>
<tr>
<td><strong>21</strong> The archery season should be extended regardless of a holiday hunt. The few hearty individuals who head out in January will not take too many deer. If you feel that doe need to be taken to maintain the population level, why wouldn't you allow this?</td>
</tr>
<tr>
<td><strong>22</strong> I keep track of deer population in the town of Dell prairie in south Adam's county by observation and talking to neighbors. Deer populations are staying average in this area. I suggest to keep a maintain of the deer quotas for this unit.</td>
</tr>
<tr>
<td><strong>23</strong> The over abundance of the top predator wolf and coyote in my past years of hunting and observing, reviewing trail cameras for months at a time has multiplied and has had a drastic toll on the number of the deer herd population.</td>
</tr>
<tr>
<td><strong>24</strong> I am in favor of a longer archery/crossbow season however I oppose a 19 day gun hunt. I also oppose shortening the crossbow season I dont believe its fair to limit the crossbow season and end it just before the November rut.</td>
</tr>
<tr>
<td><strong>25</strong> Open it back up to a normal unit. There are plenty of deer in Adams county. If we wouldn't hand out a 1000 free tags to everyone for ever county when they buy there tags we wouldn't have any problems</td>
</tr>
<tr>
<td><strong>26</strong> Public deer herds are at ridiculous low levels-- and hunting pressure is at an all time high. The &quot;special hunts&quot; ps deer from &quot;public&quot; to &quot;private&quot; lands where they remain til the season is over.</td>
</tr>
<tr>
<td><strong>27</strong> All I want to see is a state wide gun deer season for the entire month of November. I had to pick a unit to continue survey. Most years I cant get vacation to go in WI so I hunt out of state.</td>
</tr>
<tr>
<td><strong>28</strong> Never quite sure where you get your numbers as I always ask plenty of people about how many deer they saw and at least 3/4 of them saw very few deer ( I hunted 6 days and saw 3 deer ).</td>
</tr>
<tr>
<td><strong>29</strong> I would like to see the youth hunt extended in such case if a parent has shared custody of a child or children it may make it hard for them to get afield with only 2 days to do so</td>
</tr>
<tr>
<td><strong>30</strong> Do not make a longer deer gun season End the holiday hunts Do not punish the crossbow hunting sector group Take a good look at wolf population. End handing out extra doe tags</td>
</tr>
<tr>
<td><strong>31</strong> I hunt in the management zone formally known as 54C. The deer sightings and sign on the private property I hunt is very poor. I am in favor of no antlerless tags being issued.</td>
</tr>
<tr>
<td><strong>32</strong> Very concerned about the increase of wolf predation in Central Farmland Zone. Starting to see wolf pictures on trail cams and tracks. Concerned for my safety while bowhunting.</td>
</tr>
<tr>
<td><strong>33</strong> We feel going to one buck tag and one bonus doe tag is what we need to maintain/ rebuild in our area. We havent seen any damage to crops or yards within our community</td>
</tr>
<tr>
<td><strong>34</strong> Leave the darn seasons alone for archery hunting. we got the lengthy season because regular archery is harder than crossgun( yes crossbow-gun) and firearms. Thanks</td>
</tr>
<tr>
<td><strong>35</strong> I would like to see a “point minimum” for a season or two...in other words, no 6 point or under for example helping to “let them grow”.</td>
</tr>
<tr>
<td><strong>36</strong> Leave the length and time of gun season the way it is! Get rid of the holiday hunt! Get the quota straight for once!</td>
</tr>
<tr>
<td><strong>37</strong> Charge Illinois hunters the same as we pay 400!!! We are destroying our deer head To many does shot last 10 years.</td>
</tr>
<tr>
<td><strong>38</strong> I would like to see deer numbers go up in this unit instead of staying low and the same as the last 9 years.</td>
</tr>
</tbody>
</table>
| **39** let's get the population back to where we can get our children to see some deer.

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

604 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 156
   - I visit this unit for non-hunting purposes: 150
   - I hunt in this unit: 571
   - General interest in this unit: 115

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 530
   - Bow: 334
   - Crossbow: 261
   - Muzzleloader: 183

3. How many years have you hunted deer in this unit?
   - Minimum: 0
   - Average: 20.95
   - Maximum: 65

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 298
   - Mostly Private Land: 104
   - Public and Private Land About Equally: 57
   - Mostly Public Land: 38
   - Exclusively Public Land: 67
   - I did not hunt in this unit last year: 7

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 56
   - Not too crowded: 83
   - Neither crowded nor un-crowded: 45
   - Somewhat crowded: 36
   - Very crowded: 37
   - Not applicable: 9

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 161
   - Fewer: 201
   - Same: 178
   - More: 41
   - Many More: 11
   - Unsure: 12

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...  
Implement an ANTLERLESS HOLIDAY HUNT :  
Support|Oppose|Unsure
---|---|---
Not applicable in this DMU

If a Holiday Hunt is held in a Farmland unit...  
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021:  
Not applicable in this DMU

If the Population Objective is not "Increase"...  
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons:  
Support|Oppose|Unsure
---|---|---
VALID | NOT VALID | Unsure
58 | 507 | 39

If a Zero Quota (buck only season) is adopted...  
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?  
Support|Oppose|Unsure
---|---|---
VALID | NOT VALID | Unsure
291 | 238 | 75

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?

Comments for Adams, Central Forest

Note: the comments presented in this report are the unfiltered opinions of individuals who responded to an online public input form. The viewpoints expressed do not represent the views of the state of Wisconsin, the Department of Natural Resources, or its employees.
I would like to start off by saying I have lived in Adams County my entire life and would consider myself an avid outdoorsman with roughly 20 years of hunting experience. I just wanted to express my concern and disappointment with how we have managed our deer herd in this county, and quite frankly in this entire state. Numbers and graphs publicly displayed by the DNR would indicate that people are seeing as many or even more deer than in years past, which I thought was so strange. In the forest land zone in which I hunt I have yet to talk to a single person who was satisfied with the amount of deer, rather lack thereof, last deer season. The farmland zone wasn’t much better even though people claim there are way more deer south of highway 82 than all of north of highway 82 combined (not true at all). I have personally talked to government employees in this county who have tried to make excuses for why there were significantly fewer deer seen in this zone than in years past, and believe me, I’ve heard many off the wall theories. It’s obvious to me that certain people in power do not want to admit that our deer herd overall is declining. I ask people, why is it a bad thing to have more deer in our area? Some folks claim we will have more vehicle collisions if the herd grows, but there is no evidence of that happening in the past to support that claim even remotely, (at least in this county). The other concern I hear from people is the CWD effect as I call it. It is the one ace in the hole subject that our DNR has used as a tool since 2002 to essentially eradicate localized deer herds. I'm not even going to get into this subject, but I believe it is an overblown media frenzy. Just wait until bluetongue disease creeps up and takes hold in this area for a few years. CWD will be a laughable subject. Even voting online for the spring hearings showed me that it is so blatantly obvious that the DNR is massively biased favoring a significantly smaller deer population in this county and probably wouldn't even consider trying to increase the herd, even just for a year to see what happens. I also am a little skeptical on how many deer are being killed in our county over the course of a year. I know the DNR calculates deer mortality rates based on human and natural factors, but I've always wondered if they calculate for deer that have been shot and never recovered. I'm very confident that number would be high and very relevant. I also noticed that data would indicate that antlerless deer are having fewer fawns, especially in the forest zone. I observed this trend in virtually all areas I hunted and or scouted last year. It seemed strange to me considering we've had relatively "easy" winters the past few years, but nonetheless was concerning. I'm still not sure why our state decided to implement private vs public land tags either. I don't understand the significance of that decision, and I believe you should be allowed to hunt any area you have a tag for regardless of whether or not it is private or public. What is the difference? The other subject I wanted to talk about was the price of licensing for non-resident hunters, and fishermen for that matter. Anyone who cares about deer hunting, or nature, or the outdoors in general, knows that Wisconsin has very cheap licensing for non-residents as compared to other states. I can't tell you how many times I have heard the DNR say we can't do a certain project because the funding isn't there. That is such bologna! Other avid sportsmen that I have talked to in other states nearby believe what we do in Wisconsin as managers of our land, and especially our deer hunting is absurd, and I unfortunately have to agree with them. Please increase the price for non-residents to hunt and fish in our state. I realize that this takes upper tier legislature from the state, but it is something we should have done 25 years ago. I hunt and fish in many other states and provinces and understand that paying a little more money as a non-resident to experience different opportunities is well worth it. The final and probably most important thing that I need to say is our use of CDAC's. Many people realize deer populations are very spotty and spatially congregated, which is why we now have CDAC's I would assume, to combat and "better" manage for smaller areas. I listened in on the last board meeting and was disappointed in the system as a whole. Granted it is difficult to communicate over the phone between a handful of people, and I understand that. The problem is that these people on our CDAC boards have no business making the decisions that they are making. I personally know almost every member on the Adams county CDAC board and they are all good people! Don't get me wrong on that fact, that being said, there is no way a single person on that board knows enough about wildlife ecology or population dynamics to make an educated decision as far as quotas. I know the DNR helps them out and everybody is doing the best they can, but I don't foresee this system working in the long run. I believe we need an overhaul in this entire state when it comes to deer hunting and how we manage it. If I had a good answer I would gladly explain how we could make it better. The reality is that it is much more complicated than any of us even realize, and I know everyone involved is trying
their best. This letter wasn't meant to offend any affiliation or singular person and I apologize if I have. In the end I am just a passionate outdoorsman who wants to see sustainable deer populations for future generations. I believe we are walking a slippery slope as managers and just want to see the right decisions being made in our county and state. Thank you for your time.

Adams county: One thing that is never talked about, is average parcel ownership size, and hunters per parcel. If a square mile has 640 acres, but the average parcel is 20 acres, or 40 acres, and each 20 has 3 hunters, and each 40 has 6 hunters, and each hunter buys a bonus tag. That could allow 96 does, to be shot per square mile. This has gone on for years!!!!!! Adams county has lots of small parcel ownership. How can you have a deer psm goal of 36 deer, but allow 96 does to be shot per sq mile each year??? This is a sever problem. I used to see 32 deer on opening weekend, now I see 4..maybe!!! This is horrible, for the enthusiasm of our youth, and out ability for hunters to maintain enthusiasm in the sport.

2nd point. Population kill data. Every year, we see and hear the reports, we are only down 10% in kill. However that doesn't talk about comparison to a 10 year peak. During the 10 year peak we killed 400,000+ at our peak. Last year we killed less than 160,000 during rifle season. That means deer sightings were 60% less....we only see 40% of the amount of deer. Deer kills were 60% less........ we were 40% less successful. What if deer license purchases became 50% less?????? What would that income loss be?? It is time for us to consider parcel size, and reduce the kill substantially, in order for our hunter interest, and hunter youth interest, to maintain or increase. We have to allow populations to increase, in order to maintain hunter enthusiasm. Where public land had 30 cars parked there all week, we now have 1 or 2. Why...if you look at population count, and a kill count, since 1980, we are no where near out peak. Why keep hunting???

It would be nice to see the use of crossbows strictly for someone who has a disability permit or youth hunter getting into the sport. As I strictly hunt public land it would be nice for hunters to have more access to private land where most of the deer are seen as it seems. I think not having the additional waterless hunts and extra tags would give a year or two for the population to come back. I know someone on private land would disagree as on private land deer are abundant. The deer on public land are few to begin with and one you spook them they run right for the private land. Opening morning of gun deer we put our stands basically trying to cut the deer off before they run to the private. I just wish it was easier to see deer on public. Now having kids of my own a 6 and 9 year old who show interest in the sport I worry they will lose interest after not seeing deer. It's not unlikely to go 4-5 days without seeing a deer. That's with walking, sitting trying every tactic available. I dont like hunting in big parties for the safety factor so pushing deer is not an option. I know there are private land open to the public and may have to explore more options on that for my kids so any information would be helpful. I miss the days of registering deer and back tags too. My first time giving feedback so I hope I don't sound like I'm ranting or complaining. Giving my opinion and that is all. Thank you.

I think the crossbow season should stay the same as it has. I like the ability to hunt through the bow season and through the gun season with the same weapon. I doubt I'll hunt if this changes because the cross bow season will be shortened and I most likely would miss the prime rut. I'm opposed to an extended gun season if it negatively impacts the crossbow season. It seems there is a school of thought that continued manipulation of the different deer hunting seasons will generate more revenue in selling multiple licenses. For me personally I may not hunt if I feel this manipulation is going to negatively impact crossbow hunting. I hunt private land that is in an area that is archery only because of the deplorable condition the public hunting land has become with disrespectful out of town hunters that follow locals to find deer and shoot anything that moves. I quit going out to public lands for some time now because they shoot their AR-15s and scare everything away as soon as it gets light out. I used to like the gun hunt and then it became way too dangerous. Generating revenue has taken priority over quality hunting for Wisconsin residents in my opinion. I would like to see 0 out of state licenses for a number of years. Especially now that folks are hurting due to Covid-19. Keep those out of town guys out of it and let local folks harvest food for their families. That's my 2 cents.
Started hunting deer at the age of 13 in and on public land in Adams county in 1973. Have seen a lot of changes over the years and generally have felt my opinion didn't amount to the value of the paper a license is printed on today. For the past couple decades, because of desire and hard work I own and hunt on private land. And because of my job I get all over the county on a daily basis. I see racoon, possum, skunk, badger, beaver, mink, fox, coyote, bobcat, cougar, bear, Fisher, wolves and most predominantly whitetail. In the 70s the deer population was way different than today, although in my opinion is climbing to that level again today due to plenty of browse and food and mainly, to the decline in overall hunter participation. My opinion on the hunter participation is due to mismanagement of the CWD and the baiting ban over the course of all these years. Not being able to legally bait is slowly taking the heart out of the sport. Sure many still bait but everytime a violator gets caught it effects many and the fear of getting caught is more real and more hunters drop out of the sport. Today, I recognize that the deer population is about to explode. In all the years in my memory I have never seen the amount of white tail in the area as there is since last season. Please consider what the sportsman care about and what we are in fact seeing. Thanks.

Personally I feel you keep making to many changes to the hunting regulations all the time. The public land vs private land is a joke. 1-Public lands are for the tax payers to enjoy outdoor activities to limit one ability to enjoy those land is just wrong. 2-To sell more tags for private land then public is unfair the wild animals are everyone's not just the guy who has land in the area. 3- sometime hunting spots are a bust ie wind direction, other people in the area, closed due to logging or flooding what ever it might be. It is unfair to say well you spent all that money for a trip. your spot is a bust and now you cant move because your tag is not only good for a type of deer it now has a type of land in a zone. Really now you want to limit the type of bow i use on top of it? You had a boost in hunters because of xbows now your going to tic them off by limiting their season. And most of us guys using xbows use them in the late season when its to cold and you are wearing so many layers to keep warm. Trying to use a bow results in bad shots injured game. Who is the winner it that situation? Are are deer numbers not high? Are new hunter numbers not low? Are less deer being harvested? I have so many pics of half starved deer in Roam WI it is truly sad. So you think more rules will help this?

I have hunted this area since I was twelve years old and have seen some ups and downs in population of deer but I feel a combination of predators such as wolves and coyotes and poaching have taken a huge tole on the total population. The pine plantations have grown significantly as well reducing cover and food sources and significant acreage has been put up for sale to the public reducing the area for public hunting. I have seen more private land hunting and a significant reduction in public land and public land hunters. I think personally most hunters just don't know where to hunt anymore and have given hunting up because like myself I can't afford $3000 or more per acre for recreational land. I was hoping this area would get purchased by the State or Federal funds but instead Governor Walker talked about selling what we have and putting MFL back into the hands of the owners to post against open hunting. My father used to say that some day hunting would only be for the wealthy and I think it has come to that point but the predators and poaching have devastated the small areas of public hunting land still available. Another thing that concerns me is the registration of deer on a honor system. I think a lot of deer are being shot in some areas and registered in another or not registered at all.
I hunted over 40 days last year in Adams County and the same or more in 2016, 2017 and 2018. I have continued to see larger and larger numbers of Antlerless Deer in the Central Forest unit, particularly within a few miles of Adams Friendship. Our property is roughly 2 miles from Castle Rock Lake and just north of Hwy J. Based on personal observation our numbers are too high, particularly antlerless deer numbers. Our ratio is skewed heavily toward antlerless as well. We've seen increased browse on all understory and many areas now look almost park like. Our hunting party and neighbors make up 320 acres and were able to take 9 antlerless this past year and roughly the same amount the previous two years. Yet the population continues to grow. In late bow season it was not uncommon to observe 15-25 does in an afternoon sit. The major concern is we have had confirmed cases of CWD only a few miles North of our property. We test all deer harvested in order to monitor the spread but the one tool that we have to delay the spread is population control. More needs to be done to lower the population and lessen the chances of CWD spreading to our area. Options such as no-cost landowner antlerless tags and more antlerless gun season opportunities should be considered.

Knock off ALL the special does seasons. The past 4 years, shots on opening day of gun deer are under 30 all day. Yet you still give out a ton of doe tags. Sundays shots are under 10. No shooting means no deer. But you still give out bonus doe tags. Our cabin borders public land and private land. We have hunters in the woods, sitting, moving so its NOT because of lack of hunters. I do take offense to the DNRs solution to why the harvest numbers are low. It rained, it snowed, to warm, to cold, the hunters didnt spend enough time in the woods, the hunters were in the bars instead os the woods,( great for the public to hear ), how about just admitting, the deer population is down. Since your earn a buck it hasnt been the same. Talking to alot of hunters, WE DONT SEE DEER is what i hear. Look at your license sales going down. In the business world, thats not good. A couple suggestions, again, STOP all the special doe only seasons, you need the does to repopulate, stop extra doe tags with your license. No good if i see a few deer during bow, gun and blackpowder season. You want to build up bucks, 6 point minimum. And final thought, KEEP THE 9 DAY SEASON. Its been there for YEARS. When your sales plummet, go back to basics. All i ask is listen to the hunters, we ARE in the woods.

The current proposals for the neww 2020 season are insane and will do nothing to further hunting in the state of wisconsin. The youth now a days arent interested in killing and cleaning animals to eat . The number of broken families fueled by tge xbox baby sitters and lazy dads has taken away from the youths desire or ability to enjoy hunting. By adding season length and taking away a weapon only hurts the deer . Thse who want to hunt will make tg he time. Those selfish politicialy creed motivated individuals looking for more rules in an already complicated need a lawyer to interpret the rules book time we have already should be ashamed. Give the deer a chance to live and breed. The more pressure the more nocturnal the more problems we create as human beings. Im 60 years old have enjoyed all my hunting years. Some very good all successful because i was able to hunt them all. Leave it alone or better yet take a step back. Give the deer a week off between first bow and gun. Lets get back to the old tradions. Plaid orange and red coats

Have hunted this unit for many years. Deer sightings, let alone shooting opportunities, are way down from previous years. First noted this trend about 5 to 7 years ago and has gotten worse since. Was not uncommon years ago to see 8 to 14 deer per sit in archery tree stand. Now can go for days with zero sightings. Have harvested a deer every year in archery season up to 2 years ago. None harvested in last 2 years and total sightings way down. Contributing factor may be legalizing crossbow hunting during entire conventional archery season. Properties of crossbow are much more in line with a rifle than vertical bow. Like a rifle, crossbow can be shot from a rest, can utilize a scope, is a shoulder held weapon, requires no movement to fire except moving a trigger finger and is ready to fire with no additional movement as is required to draw a vertical bow before firing. Efficient range of crossbow much longer than vertical bow. Crossbow should be limited to disabled or youth and crossbow season should not run entire archery season.
I am a property owner and have hunted this area for 40 years. In the past 10 years the number of predators has increased quite a bit. We have seen two different litters of wolf pups since they started breeding in our area. Our neighbor told us that the wolves den on his property. I believe him because when we saw the first litter, about 4 years ago, the pups looked to be about 4 mo. old. I have numerous photo/video of the family on our clear-cut ridge day and night for about a two week period in July...about 6 pups in that litter. Last year we caught on camera three different fawns being hauled back to the neighboring property before the pups were old enough to hunt. They also killed a Sandhill Crane. Later we only observed one fawn on our property during hunting season. We don’t feel we can shoot any does as the population is being thinned out by the wolves. We also see Bobcat, Bear and Fisher. I don’t know if they affect the deer population as much as wolf, but I think if they had opportunity and were hungry they would.

The habit and area included in Central Forest is way to big and varied, specifically concerned about Adams county being split with part in Central Forest and part in Central Farmland. I own land and hunt very near Heartland Farm headquarters - that area has an abundance of farm land and yet it is considered Central "Forest". Kind of ironic that there is such a high number of Ag tags issued, which by definition Ag is farming so why is this Forest?? Makes absolutely no sense that no "extra" tags are included in purchase of license in Adams - Central Forest yet if I go a mile north or east it is designated as "farmland" and one gets 1-2 extra tags w/ licence purchase (yet one can still purchase extra tags suggesting it may be more about generating revenue than managing herd). I am pretty sure that the deer don’t stay on one side of the arbitrary boundary so really begs the credibility of zone designations. If serious about management of the herd, go back to smaller units like we had before.

One of the large public lands open to hunting is now being used to pasture cattle and that is a terrible way to promote hunting in the area! Our family and hunting group has hunted this property for over 30 years including years before the dnr purchased this land and have always saw and harvested deer from it. During the 2019 season not one single deer was spotted or harvested during the 9 day rifle season due to cattle being pastured and to the dnr digging 2 ponds and destroying numerous trees on this otherwise grass land. Every little patch of trees on this property were ripped out and buried around the ponds that were dug! It's sad that this land is being destroyed and that a large chunk of public land is now useless! All of the deer that used to use it are now pushed to private land! Sad dnr very sad! I am referring to the public grass land on the corner or county hwy D and county hwy W near the Adam’s waushara county line.

As many people agree, its past due to stop participating in the Ag. Damage program. Year after year its the same few individuals that participate relying on payments to survive instead of practicing good farming practices like most others do. Now that there is no requirement to physically register deer harvested like used to exist, I personally know of one farmer who registers deer electronically through others, that are not harvested so that he can stay in the program year after year. This coupled with the fact that he leaves his crops stand throughout the winter should indicate that he really is not concerned about alleged damage. Majority of corn was finally harvested on April 1, this Spring with a majority balance of soybeans a week later! Does this sound like someone who is concerned about crop loss to wildlife? When complaints are registered, they seem to fall on deaf ears. Time for local CDAC to get involved here!

I feel the deer hunting use to be a lot better in the Quincy Bluff area. But now the four wheelers are carting people back 3 or 4 people on a four-wheeler and then walking in from there quarter to a half mile... I feel if they can walk in that far after they drive their four-wheelers back they do not need to drive in there.. I walk in a mile and a half to watch a four-wheeler driving through the woods when it is just starting to get light out it is ridiculous! I have talked to DNR wordans and they say to get the number of the 4-wheeler and get it to them!! I do not go in the woods to hunt to walk around and look for four wheelers so I can turn them in... I feel that we need to start raising the out-of-state licenses I just applied for Kansas this year myself and it was over $500 to go over there I think we need to start doing that same thing for our state! Public land is getting over run by out-of-state people!
I purchased my land in 1996. Back then there were hunters choice permits and not all that applied received them. I would see many more deer both hunting and recreating. Deer numbers have never been as high as say southern farmland in my area (old 53) but these days it's not uncommon to not see a deer for days while hunting. My neighbors across the street own 70 acres and last rifle season did not see a deer! Quite common on my block. We were fortunate to harvest two antlerless but that was the best hunting I have seen in 5 years. By the way the only deer seen during rifle. I believe my area of Adams never rebounded from the bonus tag days of the early 2000's. I voted that your numbers are probably right as far as quota for 2020 but would love to go back to hunters choice to put deer back in the woods. Even back in the 90's where I say hunting was much better it still really wasn't that good.

Hi, thank you for making such an effort to gather public opinion. I spend two or three weekends a month from April through December in Adams county North of Hyw 21 to HYW D. I have talked with quite a few land owners in this area. All have noticed some of the lowest number of deer seen in the last 30 years. My memory of this area, formerly listed as management zone 53, is it used to have very few antlerless permits. Recently flooding, from increased precipitation and influenced by more beaver and land development, along with terrible winters and more predation makes me wonder why so many permits are being issued. Also, it seems like a gun season lasts from November until January. I'm not sure if this impacts the deer population much, but it is exhausting being a land owner with guns blaring every day for months. When you add early duck season and coyote season in it get long.

Based on deer herd quantity/quality and the number of deer seen throughout the year vs during hunting season, overall the herd sizes have significantly decreased in the last few years. The predator sightings have significantly increased with more wolf sighting occurrences. The number of unregistered deer is also a large concern. Based on this information, its our recommendation that the DNR seriously considers opening up a wolf season, go back to earn-a-buck along with making a set limited quantity of bonus antlerless tags available. As well as going back to requiring back tags and having registration stations. We feel this would help prevent the number of unregistered deer for more accurate numbers, would help keep the predator numbers in check and would help with a more accurate deer herd for the 'maintain' numbers/quantity for future.

The increase of WOLF'S in the area. Also the deer survey from the public if I drive down a road and see 5 deer in a field and report them and 6 more cars do the same thing then there's 30 deer reported in this field instead of 5. The past 4 years the deer I've seen has decreased alot in 2005 when I started hunting here I would see 10 plus deer a day when 2012 season started the decline started in 2017 I believe I harvested 2 deer the only deer I saw 2018 I saw a total of 3 deer 2019 I saw a total of 5 deer the anterless hunt needs to END keep the regular seasons with buck and doe harvest. I hunt the Adams central forest zone I absolutely love to deer hunt but the past 2 years and this coming season my motivation to bow/gun hunt has declined so bad from the lack of deer I'm not sure I even want to hunt this year.

We're losing a lot of good public land to hunt. Heavy pine or marsh lands not very huntable. Why so many antlerless tags for private land over public. And now you want to give archery more time. Isn't 4 months enough. Put doe only on the archers and give gun hunters a better chance at bucks. I think archery should be shortened not extended. Why so much time especially when the get the rut season. 2 years of gun hunting all week and I've seen 6 deer total. I don't know where these metrics on deer are coming from. Try hunting on public land. Take care of us public land hunters and not the private. We're losing a lot of land by sales or clear cutting. Give public hunting a break. If you want doe numbers down than have archery harvest doe first to receive buck tag and watch the doe quota grow. Garantuee it.
A significant increase in wolf sightings on our property began in Jan. 2019. I am retired and have time/passion for observing nature and hunting. I have reported a few wolf sightings with pictures and rec’d confirmation. I continue to record "game camera" images of wolves about once per month since the fall of 2019. Cameras were placed on a fresh wolf kill (deer) resulting in 400+ pics of wolves. Multiple Wolves continued to visit the bone pile into May 2019. We noticed a reduction in fawns last year and by hunting season we saw zero fawns. I use as many as 10 game cameras taking thousands of pictures per year. I purchased and did not use my doe tags this past year. No doe's will be shot this year. Mature Does and Bucks are still common but I fear this could change due to predation.

Although deer number are "ok", we still don't have the numbers of deer to keep people interested, especially younger kids. If we want to get the young people interested in hunting again, we need to have enough deer so that they at least see some deer. It used to be a regular opening weekend I would see 20 or more deer......the the last 2 years I saw 2 deer total one year, and zero deer last year. These were all day sits, and I hunted at least 5 days each year. I walk through my woods and hardly see any deer browse whatsoever, so the land can definitely hold more deer. Although I do believe in the youth hunts, and really don't want to take that away, we need to stop all the other special hunts we have. We certainly don't need an antlerless hunt after the gun hunt. Thanks!!

deer numbers have not rebounded liked i thought they would even though the antlerless tags have been lower. for young hunters who do not have access to private land and must hunt the public central forest land soon learn that deer hunting based on the number of deer seen, is boring, we need to bring deer numbers back or even close to numbers in the mid 90's. the higher the numbers get in the private will eventually will filter out to the public land and this is where you will capture the next generation of hunters. the media filled youth of today with grand dreams like they see on the outdoor channel are soon shattered by the reality of minimal of deer sightings. even though reality isn't what they see on on tv lets give them something to keep them in the sport

For all units we need to go back to the hunters choice program where it still only allows one deer per license for crossbow and gun. If hunters want a choice, they spend $5 on an application and a lottery picks who gets one. Go back to either sex for now bow season per license. Stop separating public and private. Re-establish the 10 year old minimum for the mentor ship program. Thwart the federal government and start a wolf season. Keep the traditional 9 day gun deer season. Keep the youth hunt weekend. End the early gun season and end the holiday gun hunt. Run the bow and crossbow season from October 1st to January 31st.

I own 80 acres and have for years. I do not understand why I'm required to pay to reduce the herd or get it back in check. I pay my taxes not reduced per MFL. I look to waushara, (3 miles away) and there in farmland, Marquette as well. These areas as well as a lot of the others bordering central forest all receive additional permits with there license. ? Deer are tourist and go to those areas instead of central forest? Landowners should be given antlerless tags and not required to buy. They should be transferable but specific to that land. If I plant trees the deer eat them. I have to now fence in order to protect them or anything I plant. How would you like to own 80 acres of green plastic fencing? The system needs an overhaul.

I believe the number of deer is good in the area of Richfield that I have hunted for 40 years based on my group's hunting observations and trail cam activity. The last few years have been bad hunting mainly because of the amount of water in the area and the impact that the wolves have in terms of modifying deer behavior...not to mention the depredation effect itself. I think the disparity of hunting experiences (from seeing lots of deer consistently to seeing no deer for a whole season) expressed by the CDAC members and even within the members of the Richfield QDM cooperative of which I am a part is mainly driven by habitat differences. Those with good, diverse habitat seem to have a much better hunting experience.
I would like to see a holiday hunt for both zones in Adams county. The early seasons such as the youth hunt do cause the deer to adopt a more nocturnal pattern decreasing opportunities during later hunts, a holiday hunt would give hunters additional time to harvest a deer, some of us hunt for the meat and are not too concerned with targeting bucks, if we do get one it is nice but we are not focused on this goal. With the present economic uncertainty due to the COVID 19 issue many of us would welcome the extra chance to feed our families. In addition, our weather is usually not too conducive to hunting during the holiday hunt so I feel it would have minimal impact on the over all kill rate for the county.

Myself and my son hunted on private land for 5 of the 9 days and did not see a deer...my brother was hunting for 2 day without seeing a deer...this is hunting all day...open to close..if u want people to continue hunting we need to see deer...a young hunter would be very frustrated..my nephew has stopped hunting because of the lack of seeing deer..I am just telling u like it is...even the neighbors who live there see very few deer..Big flats area is where I hunt..thanks for allowing me to have imput..i went to a meeting years ago and was not impressed...the questioner was not just about deer hunting..i dont fish or anything else so i did not answer those questions but I'm sure some people would...

the deer numbers that I saw during both bow and gun seasons in 2018 were discouraging so I had high hopes for 2019! 2019 comes and that proved to be worst then 2018. 2 does and 1 spiker observed during my 10 day bow hunt during the “rut” and 0 observed during the gun season. Also not buying the late start of the gun season as a reason for not seeing deer. The numbers just aren’t there! I’m at the point in my life where I appreciate just seeing deer! I know what I’ve said does not matter but sooner then later you have to start listening to the average hunter! My nephew has already given up because of not seeing deer. Has no interest in getting his two daughters involved which is a shame!

This old timer has been hunting deer in this great state for over 50 plus years this thing with shooting all these does is crazy with the inceccssin wolfs bear and coyotes slot more deer are being taken down by these animals and along with all the road kills the numbers a way down I say stop shoot I g does for a couple of years let those does in the end alot more happy hunters we do not need all these special hunts no youth hunts no doe only hunts no holiday hunts go back to the way we hunted back when a hunter would see 20 plus deer a day and harvest a nice buck yo take home thank you

I own 30 acres that i live on and hunt on when we first bought the property 4 years ago we saw deer daily. It has gotten to be less and less we see deer. I saw 2 the other day out the window and was surprised that is a rare site anymore. The coyote and wolf population has grown to be a problem we here them 4 or 5 nights a week and see whats left of the carcasses they devour. I enjoy deer hunting and have chosen not to take a deer last year in hopes next year i would have a chance to shoot a 3 year old deer most of what i saw was very young deer. 4 years ago i had on several older bucks last year not one. I do not think the population needs to be decreased.

Coyotes and wolves have completely decimated the deer herd. When we started hunting here decades ago, i would see 70+ deer on opening day of the rifle season and typically harvest 1-2 antlered deer in a season. For the past 3-4 seasons, we are lucky to see a single deer over the opening weekend. When we walk the property, we find wolf sign more frequently than any deer sign. My father is so disgusted that he will not hunt anymore since the chance of actually seeing a deer is highly diminished. Really disappointed. Find a way to get the wolf population under control. Predators are wiping out the deer herd and not sure that it will ever fully recover.

I believe that there should be a buck only hunting season or a party doe tag for this unit. I have gone several years without even seeing a deer. Losing interest in the investment of time and energy to hunt. It’s very difficult to encourage young hunters to hunt when year after year they see nothing. It’s discouraging and difficult to convince them that there are better days ahead when I myself am not seeing them in sight. I believe youth doe tags should be honored but no doe tags available to hunters over 18. If you want to keep hunters and hunters spending millions on equipment lodging and food then there needs to be deer to bring them out.
I would like to see a September 1 opening day for archery to have a greater chance for hunters to get a velvet buck. Also allowing crossbow and compound and not favoring one over the other is the best way to promote more hunters and help the economy is important to me and hunting because my daughter isn't strong enough to use a bow and it's harder today to get kids excited about hunting and crossbows add a different appeal to young people. I also think all doe tags should cost money why not generate extra income to help the DNR in its duty to ensure the best experience for all of us to enjoy our great resources in WI.

During the course of the past 20 years, I've observed a steady decline in deer numbers. I have some acreage and a trailer back in a woods and we used to see deer almost daily and would harvest at least one deer in our group. Now I'm lucky if I see four or five from about mid April until the end of November. I believe part of the problem is also due to the loss of woods around there to fields for crops. I haven't seen a deer during the deer season in probably seven or eight years. It won't be long before I stop throwing my money away on deer hunting, and I've been deer hunting every year for almost fifty years.

I hunt on the southern border of the Colburn Marsh. Every year the deer population gets less and less. However we see wolves on our trail cameras and when we are sitting on stands. It appears from what we see, the deer population is decreasing and the wolf population is increasing. Before the wolves hunting was great. Now it pretty much stinks. I can go 2 or 3 days without seeing a deer. There is a serious wolf problem in that area. We need to have a wolf season. I think if something is not done about the wolves, people will take care of it themselves. It would be nice to see deer like we use to.

Hello in 2017 while crossbow hunting I seen fair amount buck to doe racial while gun hunting private and public was very low numbers in 2018 crossbow only seen 0 bucks and a few does while gun hunting I seen 1 buck only and I harvested 2019 I seen a couple does first couple weeks of crossbow after that the wolves were killing deer 300 yds from where I hunt never see a deer the rest of crossbow none during gun season none during black powder none during doe only season deer hunting by the colburn swamp is very poor and thinking about giving up deer hunting and many my friends thinking the same.

Factors like poaching, shooting and killing without tagging, need to be at a plus or minus of at least 10% and your mapping zones do not mean people actually use them. I think you need to account for the cheating that goes on and the impact of predators as not really mentioned. I have purposefully not harvested antlerless deer due to lack of numbers for at least 3 years I do not agree with the dnr quotas and extra tag sales. Also our public land and huntable land is shrinking due to woodland clearing for irrigation fields and public land being sold to private has really shrunk around Adams Co.

I don't believe deer drives should be permitted on public land. It's no fun putting in the effort to find a good buck bed and plan a setup just to have a bunch of people come stomping through the brush and yelling. Deer drives ruined my hunt several times last year and they ran all the deer over on private land. I'm considering not even gun hunting this year. Is ridiculous paying for a license just to have my hunt and the land ruined by deer drives. Nobody does it on private land cause they know it ruins the rest of the season. Why it's allowed on public land is aggravating.

Please address the fact that the Central Forest of Adams County has an abundant population of wolves. On my property located just SE of Adams-Friendship I observed 2 wolf predations this last Winter. Nearly every square yard of my 80 acres had wolf tracks on it. I firmly believe that the estimated number of wolves in this unit and others is way lower than actual populations. I'm not against wolves in Wisconsin, I just believe that the DNR needs to address their presence as a huge factor in population growth, especially in Central Forest of Adams County.
I think elimination of deer carcass tags and relying on phone/online registration contributes heavily to unreported deer harvests. Too easy for unscrupulous hunters to harvest a deer and continue to hunt and harvest additional deer. Since deer harvest numbers are heavily used by DNR to establish deer hunting regs and season structure, using current system of self registration is too unreliable. I feel DNR is operating on faulty harvest numbers and has no way to factor into those numbers unreported harvested deer. At best it’s a guessing game.

I have a major concern with the increased wolf population. One of our young bow hunters witnessed two wolves take down a doe and tear her apart. The local police have acknowledged there is a growing wolf population and several DNR people have acknowledged the area now has a new, growing pack. Between the growing wolf population and Adams county water problems that they and the DNR will not address, our hunting area on private land has decreased significantly. We are losing both the value of our land, along with the hunting area.

The wolf population in this area has taken its toll on the deer numbers in this unit. The state should have a wolf season to reduce the numbers so the deer population can increase again. Wolves are killing so many deer and fawns here, that you barely see any deer. When Wisconsin had the party tag system, only one doe tag was awarded to a party of 4 hunters. I used to see over 20 deer in one day of the opening day of gun season. Now your lucky if you see 3 and you don’t hear many shots either, so others in our area aren’t seeing deer either.

Certainly feel the deer herd is down with both quantity and quality the last number of years during hunting season, predator sightings have increased with more wolf as well. As well as the large number of unregistered deer is a huge concern. Should go back to earn a buck as well a set amount of antlerless tags. As well as going back to having back tags and registering them at a station would make counts way more honest and accurate. We all love our forests and would like to keep a more accurate herd management out there.

During the last few years of hunting I have seen my hunting land plummet in the amount of deer I see throughout the year. I use trail cameras and last year in a 2 week period I seen 1 doe, 2 fawns, and 2 bucks. I think the hunting lands are being destroyed with tourism and it is ruining the hunting for hunters in this area. I know many hunters are facing the same problem and many will not be participating in the 2020 gun deer season. All because we think the changing of seeing a deer worth shooting is slim to none.

While I understand deer do agricultural damage, I do not feel farmers should be able to fill "ag damage permits" year round. From January through July/August, close the season. There is no reason to continue shooting deer after archery season closes. There are no crops even on the fields until May, and at this point, there is no good reason to shoot pregnant does or does with fawns that are only days/week old. This just gives anti-hunters more ammunition and gives true outdoorsmen a bad image.

My son (12 yr old hunting for the 1st time) and I saw so many hunters on Public Land - and only 3 deer. Your numbers back this up, with only ~250 antlerless deer taken. As I have noted, I've been hunting in Adams Cty (forest land) for over 30 years and ever since the mid-2000's (~2005ish), the deer population has unfortunately plummeted. I would like to see quotas continue to drop until populations are able to come back up. Also, I am STRONGLY AGAINST changing the 10-day gun-deer season.

Last year was our worst year of seeing deer since we started hunting in this area 30 years ago. No one saw any deer and one of our group is from out of state and will not come back. There are deer in the area from the sign, but there is so much pressure in the area that the deer stay in safe areas and do not come out in the daylight. Last year was a strange year and we heard many hunters were unsuccessful. I hung a camera for one week and saw over 40 deer. all were after 8pm and before 5am.

Chronic Wasting Disease is a significant concern to the stability, health, and long term viability of the local deer population. As this disease continues to expand across the state and this deer management unit, it is clear that science - not politics, needs to be the driving factor influencing deer management decisions. Public education about the severity of this disease is greatly lacking and is fracturing the WDNR's professional influence with the hunting community on this issue.
Chronic Wasting Disease is a significant concern to the stability, health, and long term viability of the local deer population. As this disease continues to expand across the state and this deer management unit, it is clear that science - not politics, needs to be the driving factor influencing deer management decisions. Public education about the severity of this disease is greatly lacking and is fracturing the WDNR's professional influence with the hunting community on this issue.

I strongly object to extending rifle season and restricting crossbow season. I personally hunted at least 3 days a week during the early season before rifle opener. If these new regulations are enacted I will not buy a rifle license for Wisconsin and my not crossbow hunt, that is still up in the air. Ir you teach people to be patient and not shoot the first 50 pound fawn they see the quality of their hunt will go up. We need to change the ethics of the hunter, not the hunt.

I have 40 acres and found remains and carcasses of 3 deer this Spring. Rabbit and turkey sightings are lower than normal as well. Coyote and bobcat trail cam sightings are up, but not drastically. Ag plantings in 2019 were not as diverse as previous years. Many farmers all had corn this past year and the corn crop was below normal. Also, two wet spots on our land were virtually dry most of the year. I’m guessing most of these factors weighed in for a poor presence of deer.

I own 80 acres in Northern Adams County. In the past 10 years I have seen the deer population on my property steadily go down. Deer sightings all year long have steadily decreased. I have talked to my neighbors and they have also seen the same thing. During the 2019 gun season my grandson and I sat all day for the first 3 days and never saw a deer. I’m not too sure I can get him to go deer hunting this year. In my opinion your numbers are way off in the Central Forest of Adams.

There should be some way for private land owners to be prioritized on getting bonus tags for their land area. The bonus tags seem to be sold out every year in my area, even when getting licenses months in advance. This has been the case for many years now, and it gets very frustrating, for those of us helping with deer and forest crop management, to always be turned down for a bonus tag for our own land area. This never seemed to be a problem when I first started hunting.

I own 100 acres in this DMU. I feel deer numbers are adequate and both buck and does are healthy and stable. Why is it that I buy a Conservation Patrons license and yet I must still buy a “bogus” I mean “bonus” antlerless permit to harvest a doe? Is there anything that can be done to change this situation? I feel it’s very unfair requiring hunters to purchase extra tags in this unit. Thank you for your time and efforts to make Wisconsin deer hunting enjoyable.

The primary problem with deer management in this unit is the Wolf overpopulation we have hundreds of pictures of wolves on our property in 2019 alone if the predation problem is continued to be ignored all of the rest of the survey that you give is immaterial. Every time I go to my property to do work I find in another carcass of a deer ripped apart by wolves on my property wolves are killing more dear than hunters by far please stop ignoring the real problem.

I feel that more antlerless tags should be available for public. The parcel of land south of hwy 86 is not enough for the tags issued. There is plenty of land in central forest to harvest doe. From the sightings I have seen. Being that I can cross the street to Marquette cty and harvest a doe. It makes more sense to spread out the hunters. I believe it would evenly distribute harvest numbers. This is condensing Hunter traffic and is not good for game hunting.

The unit boundaries need to be modified. To include southern portions with mainly private land into the Central Forest is not representative of the deer and hunting population. I can go three miles south and get free antlerless tags and see as many antlerless deer in that three miles than in the Farmland Zone. The Farmland Zone northern boundary needs to extend past State Road 82, possibly to County Road E or at least some point between County Road A and E.
I own 270 acres and as I increase the number of food plots on my land I would think that I would increase the number of does on my land. It’s work in progress but I’m just not happy with the amount of does in my area. It’s hard to take kids hunting when they just don’t see a reasonable amount of deer to keep them interested. Who wants to hunt bow season and only see a hand full of deer. I do have wolves and I realize they harvest a lot of deer.

Deer hunting rule Enforcement is missing in our area. So many are baiting as well as taking more than what’s tagged. You only have to be an ear in a bar to know that. Or watch when the Illinois hunters come up and stock up on hundreds of pounds of corn. Places are even allowed to have a wagonload of DEER APPLES outside the front of their store. They were even labeled that way. This is wrong on every level.

The numbers in this unit have steadily declined over the past five years as predation goes unchecked because of politics. This unit used to be excellent hunting now I’m hunting alone on thousands of acres because everybody has moved on to areas with deer or given up hunting all together, we need to save this sport it’s dying a slow death and it will have long reaching effects on our economy and wildlife as a whole Thank you for your time

Stop the wolves! Had one come through my property about 9am opening morning and the deer sightings were VERY scarce after that. Made it seem like the 3 (wife, Son, and myself) of us hunting my property were basically wasting our time. Hunted Sat-Tues then back Fri-Sun spent many hours out in nature but not seeing deer made it very disappointing. If it continues I don’t think we will waste our time (or money) sitting in the cold for nothing.

The deer population has not recovered from the heavy harvests in the previous years. It is unfortunate to hunt in both private and public areas and not see the amount of deer available to harvest. This leads to less people supporting the community economically. The state needs to continue maintaining a healthy herd in all zones. CWD will infect the weak population and the strong will produce a healthy herd in the future.

I personally am not seeing the projected deer herd that you are seeing. I think the trends in the central forestland are going down because there are not as many deer out there vs what we are projecting. I believe to stay in a "maintain" objective we need to have similar permits and harvest numbers as last year. I would argue that we may need even less of a harvest considering the numbers are trending downward.

The 2019 season was truly disappointing during the gun season. Weather was certainly a factor but there still seems to be much fewer deer around than several years ago. The past winter was mild so I would hope deer numbers increase as hunter numbers have each year across the state. Realistically, more opportunities for hunters to see and harvest deer impacts hunger numbers fat more than people realize.

I would like to see less antlerless harvest tags given out. I spend a lot of time hunting and scouting public land properties all over Adams county central forest. Many days I walk 7-8 miles through the woods. Because of the amount of deer I jump while walking and the amount of deer I see while on stand, I do not believe we need to lower our deer herd. I believe we still need to see our deer herd grow.

Hunters in areas with to many deer should start harvesting them, and areas that need to increase the herd should resist. This problem can’t be solved by only C.D.A.C. We as Hunters, Farmers, Land owners, ect need to take responsibility for the future of deer numbers in our areas. No need to point blame, lets get this done so that our kids and this tradition can continue for years to come. Thanks

Just cancel deer hunting in areas for a year if need be to get the numbers up, I am sick of wasting my money every year trying to hunt on public land with no deer. No wonder deer hunting is becoming less popular, when you have no chance to even see a deer in the woods it makes it pretty unappealing. I will be joining the non hunting people at home soon if the deer population gets any smaller.
5 guys saw 2 deer in 178 hours of hunting on a privately owned 160 acres in this unit during the gun deer season. Same 5 guys hunted private and public sat 48 times on private in the pm and saw 5 deer in total sat 31 times in am on private saw 4 deer total sat 12 times on public on pm and saw 0 deer. Need to increase deer population maintaining the deer population at 5 deer is not working.

I will try to be nice do not listen to the member from the north part of the county tells me he is seeing less deer but tells the committee to reduce the deer population anyhow he also brags about telling the people he hunts with to shoot at every deer they see especially if there running he doesn't care if they wound them. Not the kind of guy you want representing the hunters.

It would be good to issue antlerless permits in the Central Forest with tag purchase like farmland. There are ample antlerless deer as well in that unit. Very concerned about the wolf population in Adams county. We are seeing more and also more frequently. We are located north of cty O and east of Hwy 73. Near Leola. Wolves are killing a lot of deer in that area.

Please keep Wisconsin the way it is! We don’t need to change things around. We have it very good compared to other states. We definitely do not need and extra amount of dats tacked on. And being a bow and gun hunter I especially don’t like a 5 day rest period directly in the prime of the rut considering I put A LOT of time and effort in finding that monster buck.

I am part of the Richfield QDM group..the real numbers are no one sees any deer if you want blown up political BS listen to what they say. The loudest members do not speak for the majority we need to kill less does and issue fewer tags deer sightings are way down unless you are one of a couple in this group who see 100 more deer than anyone else (I wonder why)

Bought 40 acre oak and pine woods three years ago put it into managed forest nice mix of mature and young growth. Young growth of trees are doing great because it has not been browsed. Saw 7 deer now and gun hunting in 2017, 2 in 2018 and 0 2019. I have food plots and water holes I don’t over hunt the property. Still no deer. We need 0 doe tags in this unit.

The wolves need to go my property has so much wolf sign it’s ridiculous and speaking of witch last day of gun season I watch two wolves kill a perfectly healthy deer and it’s wrong they need to be managed before us as hunters just take matters into are own hands and the elk gig all there doing there by bringing elk here is feeding the wolves.

Moved here last year, have never seen 1 buck anywhere, either out hunting, near our home, on the road. There are does everywhere, yearling’s, mature does, and in-between. Their like fricking rabbits. Live near east side of Petenwell lake. Hoping to get a doe permit or two for Adams this year. Just what I observe everyday around here. Thanks.

Public land acres decrease every year making available land more pressured by hunters driving deer to private. Allowing ATV access permits in state lands (Quincy) is being abused by transporting multiple hunters miles in for deer drives or just to lazy to walk and ruined what once was good hunting for us that walked the miles to get there.

I feel like it would be easier to propose an antler size restriction (past the ears/point limit) or something like that, than an antler less only season. I hunt for food, and having the extra tag helps. I also try and manage my small property as best I can. I border on public land where nothing is let go. Thank you for all the hard work.

I ride ATV in Adams County and hunt both Bow and gun, saying this I spent a lot of time in the woods and I am constantly looking for Deer and Deer signs while in the woods. I do not agree with the total number of deer you are stating there are. There has been way to many bonus permits available for the amount i see in the woods.
First I want to say great job to all in this turbulent time! We need to continue to put a great deal of energy into youth hunting to bring in the next generation. Maybe a family style permit that would keep the cost down for young hunters and promote the family deer hunt. Good luck and thank you for a great job!

Please get the deer numbers back up so we have a chance to get a deer. Also go back to the days where you sent in for 1 doe permit per person and if you didn't get one you had to shoot a buck. Or if you were lucky enough to get a doe permit you had a choice. If you want people/kids to hunt they need to see deer!!

The agricultural damage done by deer is huge. I see 12 to 15 deer grazing on my alfalfa and rye fields currently in the spring of 2020. My family has harvested 3 to 5 does on my property for the last 4 years, but the number of deer increases. The deer population needs to be lowered instead of maintained.

The dnr has allowed the dessimation of the deer population. In adams county you are lucky to see a deer ever. I do not know where you think the deer are at. Many landowners i know never saw a deer last season. My sons are choosing not to hunt deer this year. Thank you so much for destroying this sport.

I believe the only reason for trying to kill off the deer population is to make the insurance companies happy. Deer crop damage is not that bad as everyone thinks and besides the farmers get plenty of welfare to make up the difference. We need to go back to the original deer season and party tag system.

Please do not extend the deer hunting seasons . Adams county seems to have lost a huge number of deer . I believe If hunting stays the way it has been the last few years and the adams county above ground standing water stays as it has been My party of 7 gun hunters will hunt else where. Regards.

We saw a LOT less deer in our area in 2019. Of course, the number of antlerless permits being issued is ridiculously high, and has a very detrimental effect on the herd. I own a farm here, and deer browsing has never been a concern for us. The area could support a Much higher population.

A committee member told me to watch this presentation and comment: why when the biologist indicates the population went down and you are in maintain population goal, do you increase the amount of quota and tags shouldn't the quota go down. I know increase the deer population in this unit

I have family that hunts a Dane County metro area and their season is longer would help them to harvest more deer. I would like to see not just Adams Forest unit but the adjoining counties also extend their hunting season for antlerless and bucks. Started sooner run it longer.

I hunt public land which is several thousand acres less than when I started hunting in this unit but you issue more tags ????? I did not know how to answer the question about how many deer I saw because I haven't seen one in 4 years. Is that a ( saw way fewer deer) answer ???

i am a landowner i have trees i have flowers and shrubs the deer do a very large amount of damage especially to the trees you should give as in free an antlerless permit to every landowner that has 40 or more acres if they dont want to use it they could give it away

The predators are a big issue in the Forest Area of Adams County. I have seen a great increase number of wolves in the Rome area of Adams Co. and the deer numbers have declined. I'm a land owner and it's frustrating to see deer numbers decrease and predators number increase!

There are not enough deer being taken out I can remember years back for knows one buck per hunter now its 1 doe 1 but depending on the county your and you can get to doe in 1 but we are way overwhelmed with dear we need more dough permits we need the analyst tag brought back

Are you one of the CDAC members that ignore the citizens input every year lower the quota and increase the deer population. I want to see deer again. Please follow the input of the hunters you represent, cdac is not for your personal belief or deer management ideas
On Opening Saturday morning a group of about 10 hunters did a very loud deer drive and scared every deer out of the area, this should be illegal at least on the first weekend. Also we should be allowed to put up and keep up deer stands for the entire season.

Why is Adams County one of the only in the state to be split into two different units? Treat it as one whether that is farmland or forest. A decision should be made. I hunt on both sides of highway 82 yet need to have different antlerless licenses.

No holiday hunts leave season at 9 days eliminate all special seasons and reduce anterless tags to 0. 4 people hunted 6 days 3 deer seen and we hunt we don't go to the bars and sleep in. Shame on DNR for destroying a county that had good deer hunting.

Bought 120 acres built food plots cut the mature trees following a forest plan have water on land NO DEER anymore. Deer sighting have gone down every year now my two kids no longer want to hunt. Thank You !!! Why don't you issue a few more doe tags!!

The deer predators seen in this area has increased tremendously. During turkey hunting, there were coyotes and wolves spotted. All within the hunting areas available to open hunting. The open hunting lands are becoming less and less in this area.

Every spring I capture coyotes carrying fawns back to their dens on trail cams. Wolf sign has become more and more abundant on my property in recent years. When can we expect accurate data on how these two predators are affecting our deer herd?

To many farmers in this unit with crop damage tags. Deer numbers are down in areas of this unit because of years and years of over harvesting with these tags. Deer become totally nocturnal because they are getting shot at all Fall by farmers.

People are loosing interest in hunting because not seeing any deer. NEW HUNTERS WANT TO SEE DEER if not they will stay home and play games all day rather then sit in the woods, just ask them and listen to them. With CW coming it will get worse.

I didnt see many deer in the colburn during gun season or bow season. I also never saw another hunter. I believe the low deer sightings during gun season were largely due to the lack of hunters. Not sure why I didnt see much during bow season.

I make this same comment every year. How does a deer know if it is on private or public land? The proposed numbers make no sense to me. The deer population in my area of Adams County is not as high as I believe that management describes.

I would like to see the seasons stay the same as it does not favor any hunters weapon choice. I believe that the population in this area is about the correct numbers. Also being disabled that everything works well for me with brothers help.

I would like to see Wisconsin go back to Hunter Choice License until Deer numbers increase. I think Deer Management is failin, Deer Numbers has become more about revenue, &Insurance Companies than Deer Numbers,and harvesting opportunites.

Don’t punish the good hunter so the bad hunter gets a better chance of harvesting a buck do the work like I do don’t be lazy . I’d like to see gun go back to just 9 day hunt and unit choice no more doe or youth hunts go back to tradition.

I just feel that some people are shooting way too many does when they can buy so many bonus tags. I can understand shooting a couple of deer but more than that seems greedy and I feel it has too much impact on the following years hunt.
Over the past few years, the deer seem to have dwindled and not many are being seen by all Hunters, bow, crossbow, and rifle. I think this is a concern especially for the young people that are just starting to be able to hunt.

The deer are disappearing and even with daily hunting, scouting and planting of food plots the deer are gone from over harvesting and the number of Predators... How about issuing extra Bonus tags for bringing in a Coyote!

CWD is here and we need to do everything we can to combat its spread. The deer density in our unit is too high. The CDAC needs to provide the Department with every available tool to decrease the deer density and fight CWD.

During the 2019 gun deer season I was able to hunt 7 out of the 9 days. I hunted all day during those 7 days. I saw a total of 2 deer the entire gun season, and that was on opening day only. One mature doe with a fawn.

I think what should also be considered, is the fact that they have been doing a lot of clear cutting near where I hunt public land. An exact place is hwy c and 16th ave in Monroe county and the boarder petenwell

Why do we even have anterless tags. I drive Co.C all of the time. Used to not be able to drive more than 50 MPH after dark. I have counted over 100 deer between Co G and Co Z now you are lucky if you see anything.

If it were up to me I would have quality deer management where the only buck that could be taken would be larger bucks. In that way the quality of the bucks will improve and we will have a much better deer herd.

Getting to the point where I can’t answer way fewer deer because I only saw 1 deer last year. I don’t even get any pictures anymore. I also am snowmobiler please do not allow a holiday hunt south of highway 82

If Central Forest zone for Adams county is buck only, but you can still hunt does with bonus tags, why not include doe tags with the license that can be used in that zone? Instead of having to buy bonus tags.

Lower the amount of deer to be killed the harvest rate sucks. Why do you issue so many tags when no one buys them. There is not enough public land left to kill 1500 does vote to increase the deer population

Deer populations are way to high. The deer are removing many age classes of our forest resources to a point they will not recover and the habitat is removed off the landscape in every township in Adams Co.

Hello, I both archery and gun hunt in Adams county. Last year was honestly the worst year I've ever had in seeing deer. Neighboring property owners also expressed the same results. Thank you.

What is being done about the out of control wolf populations? I have no issues with there being wolves, however, they need to be managed like everything else, not just left to increase indefinitely.

I would like for the DNR to explain why they developed a central forest region when many land owners are deforesting the land. I don’t see the benefit. This would be a good topic in an DNR post.

Suggest limiting crossbow licences issued during peak rutting periods or shorten the hunting season for them. The accuracy and distance for crossbows is becoming more equivalent to a firearm.

To many wolves along with to many tags you can't even sell them all but you guys just issue more quit trying to make money for the DNR and represent your fellow Hunter reduce tags.

Cdac members must be the only people seeing deer. Time for a change get rid of committee, and get a new one. There are no deer to many tags harvest success stinks. No holiday hunt

My Son stopped hunting due to not seeing any deer. Hard to grow the sport of Hunting when this happens. You just don’t see deer much anymore. And I might give it up also

The antlerless harvest should be increased. It was a mild winter and there are more deer then I have seen since in a decade or more. There are deer everywhere. Harvest them.

The dnr is running the numbers of deer down to low. They also need to bring back backtags and registration stations. They are destroying the safety and traditions of hunting

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

21 forms were submitted for this unit.

**Section 1: Information about who provided the input.**

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 4
   - I visit this unit for non-hunting purposes: 7
   - I hunt in this unit: 19
   - General interest in this unit: 3

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 19
   - Bow: 9
   - Crossbow: 3
   - Muzzleloader: 3

3. How many years have you hunted deer in this unit?
   - Minimum: 3
   - Average: 30.53
   - Maximum: 60

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 1
   - Mostly Private Land: 3
   - Public and Private Land About Equally: 12
   - Mostly Public Land: 2
   - Exclusively Public Land: 1
   - I did not hunt in this unit last year: 0

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 0
   - Not too crowded: 2
   - Neither crowded nor un-crowded: 4
   - Somewhat crowded: 5
   - Very crowded: 7
   - Not applicable: 0

**Section 2: Perceptions about the number of deer in the unit.**

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 7
   - Fewer: 7
   - Same: 3
   - More: 3
   - Many More: 1
   - Unsure: 0

**Section 3: Feedback on the CDAC’s 2020 preliminary recommendations**

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>

I have hunted the Island since the early 1990's, and have seen the population get extremely high, as it did in the last 90s and early 2000s, and fall to a level that no one in our camp can recall in 2019, going back to the 1960s. Its not just one thing pointing to low deer numbers. Increase in predators numbers, primarily bear and coyote, has been taking a serious toll on the island, and based on your numbers, are killing more deer than hunters are. Leaving a deer shot with a bow overnight is not optional, because by morning coyotes or bear will have eaten it. Loss of quality habitat is another major concern. It has been over 25 years since a storm of consequence has blown down enough old growth to regenerate the Forrest. Very little if any logging has occurred over the past 25 years. Beaver populations have exploded, especially in and near the State Park and on MIWP land is causing loss of deer habitat and destruction to both public and private lands. What if anything is being done about the predators on the island and why aren't their effect on the deer herd taken in to consideration in this presentation? If its up to hunters can we go back to deer/bear combo licenses. Why are there no active Forrest Management Plans on Madeline Island Wilderness Preserve owned property or on private land that is in the Managed Forrest Crop program? New growth forrest are essential to a healthy deer herd and ecosystem. The numbers from 2015 to 2019 show a steady decline and these are the lowest deer kills in 30 years. Instead of assuming there is something flawed in the numbers, take everything in to consideration, spend some time in the woods, and you will soon realize it doesn't take a wildlife biology degree to figure out there are far less than 500 deer on Madeline Island.

I believe we have too many out of state hunters hunting on Madeline Island, our out of state license is too cheap. I came across on Sunday afternoon last season, and 6 trucks, each having 2 people min came off of the boat and all Minnesota plates. I have nothing against out of state hunters but they are there the majority of late bow season and opening weekend of gun season. Their comment was that for the cost of license and ease of accessing land its better than Minnesota. The added pressure throughout the season by these additional hunters force the majority of the deer into private property where we cannot harvest them. Many of these private landowners are not on Island (seasonal) and there for we cannot get permission to hunt. Predators are also a huge problem, bear and coyotes are hurting the herd. You can take a trip around any block and have a great chance of seeing a coyote if you look hard enough. Looking at the numbers you showed, I can all but guarantee more deer were harvested than what was registered. Our deer statewide have too much pressure on them and we do nothing to help these majestic animals out. We add more predators, add more seasons and allow too many hunters-- talk about stress. I never saw a buck in the woods last season throughout archery or gun season for the first time ever. I am not about the kill, but do enjoy seeing animals and I went several days not seeing a deer. I am hopeful we can some day go back to the week break between bow and gun season state wide, and have better plan of predator control on the Island. Also, bring back the back-tag and a better registration process. The phone call is a bit of a skewed process. Thank you.

Thanks for the video presentation. It was a very good explanation of a unique hunting unit and herd dynamic. Your understanding of the unit, it’s deer population and hunting culture has provided me great confidence in the continued management of the island deer hunting. I’d like the opportunity to view this information every year as I am not able to travel to the meeting in person. Thanks again!

Thank you for recognizing Madeline Island as a unique biosystem separate from the mainland. This is a unique outdoor opportunity and I appreciate that is is being cared for in a thoughtful manner.

I have no hard numbers for this comment. However I have noticed a increase a big increase in the bear population and I would say that I have seen more wolves during the deer season as well.
If there will continue to be a limit set of antlerless bonus tags available for purchase, it would be nice to limit the number per licensed hunter.
The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

312 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 106
   - I visit this unit for non-hunting purposes: 97
   - I hunt in this unit: 286
   - General interest in this unit: 62

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 276
   - Bow: 135
   - Crossbow: 117
   - Muzzleloader: 88

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 26.81
   - Maximum: 65

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 95
   - Mostly Private Land: 48
   - Public and Private Land About Equally: 47
   - Mostly Public Land: 39
   - Exclusively Public Land: 52
   - I did not hunt in this unit last year: 5

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 2
   - Not too crowded: 19
   - Neither crowded nor un-crowded: 39
   - Somewhat crowded: 31
   - Very crowded: 88
   - Not applicable: 7

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 88
   - Fewer: 91
   - Same: 85
   - More: 31
   - Many More: 11
   - Unsure: 6

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th>The Antlerless Quota is...</th>
<th>Much Too Low</th>
<th>Too Low</th>
<th>About Right</th>
<th>Too High</th>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone…
Implement an ANTLERLESS HOLIDAY HUNT:
Not applicable in this DMU

If a Holiday Hunt is held in a Farmland unit…
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021:
Not applicable in this DMU

If the Population Objective is not "Increase"…
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons:
Not applicable in this DMU

If a Zero Quota (buck only season) is adopted…
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?
VALID 135  NOT VALID 152  Unsure 25

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?  

<table>
<thead>
<tr>
<th>Concern</th>
<th>Average Rating</th>

Report Generated:  Friday, May 01, 2020  Ashland, Northern Forest
I have hunted in Ashland County for over two decades on my land and adjacent public land. I am a PhD level scientist and I find the data presented very interesting. The situation on our property may be different than the remainder of the county. In the 2000-2010 decade we averaged sighting 8-15 deer per day per hunter although given the winter grouping of deer many of the same deer were likely being seen by the various hunters. From 2000-2005 that number plummeted and from 2006 to 2018 we have not seen a single deer on our property during the 9 day gun season. For several of those years when there was fresh snow we didn’t even cut one deer track. Last year one hunter saw one deer (doe). I bought the property specifically to have land to share hunting with my kids and nieces and nephews. During the first decade we cultivated several hunters. None of the second decade kids continued since - hard to keep their interest with not even seeing a single deer — none seen by our seasoned previously successful hunters either. We have discovered based on tracks and wolf sightings, a wolf den adjacent to our property on public land. We have literally seen more wolves than deer on our hunts in the last decade. Other than more flooding than usual there hasn’t been other significant changes to our forest that I am aware of. For whatever reason the property doesn’t at all serve the purpose I bought it for - “deer camp” for the next generation. The only reason I keep it and keep “hunting” is as a tribute to my late father-in-law who recently passed away and shared this family dream with me. Please make decisions that bring some deer back to the Glidden area although it is almost too late for our next generation. Thank you!

I've been hunting in southern Ashland County (Butternut area) since 1994. In 1998 I purchased property. At our peak we had 12 guys in camp in the late 1990's / early 2000's. We've had some good years and some and some poor years, the last 6 or 7 have been terrible and we are down to two guys, myself and my son. The rest no longer make the trip up because its just not worth the time and money to have a poor hunt year after year. From 1994 - 2012 I ether killed or had the opportunity to shoot a buck every year. I usually hold out for a nicer racked buck. The only two years in 25 years of hunting the entire 9 day gun season I did not see a single buck were 2015 & 2019, since 2012 I've only shot one buck in the 9 day season and general deer sightings are way down. The only reason I continue to hunt in Ashland County is because of tradition. I would like to sell the property to buy land further south where hunting is better but there is not much interest and the price is low because there are not many nice bucks and the deer hunting is poor. In the area of my property there is not even close to enough bucks to satisfy the hunting pressure. Before season I might have 4 or 5 spikes / forks and an occasional small 8 on camera and usually by mid week most of them have been shot by the neighbors. I also do not have a large doe population, usually 3 or 4 and the last few years very few fawns. After the poor season last year and the reports on the bad winter and a lower population I cant find any rational to support having a doe harvest on private property.
To the WI DNR- STOP!!!! With the doe tags PERIOD!!!! There are no deer to shoot!!!! Put an antler restriction on spikes and forks for at least two season and see where we end up. Keep this simple guys. Majority of hunters want more deer. The equation is very simple: breeding takes place in the fall i.e. the rut. If We shoot does that are possibly bread you just knocked out two to three deer possibly. You don’t say you want to “increase” a herd and the propose doe tags. You guys make no sense. More deer equals no doe tags given out anywhere!!! Public, private, youth hunt, disability hunt, veterans hunt. None means none!!! For years now I/we have been asking for this. Surveys, CDAC meetings, more surveys, Emails ect. You guys just don’t friggen listen to us. You put this stuff out to make us feel better (surveys) and then do what Wellenfang and Naas want while they go count there pathetic elk herd by Clam Lake. Can you sense the frustration Yet!?!? Start listening to us! This land supported a healthy deer population back in the 90’s and 2000’s but then “CWD” was introduced to sell more tags. Then your wolves reproduced like rabbits and yet they are still “protected” what is going on!!!!!!?????? Stop doing what you want and making this complicated with biology, numbers, statistics, and most of all Masters and Bachelor degrees!!!! Listen to the hunter for a change because everything you guys are doing ISN'T WORKING!!!!

The Cdac voted to increase the deer population in Ashland co. This is not rocket science look at the results so far. 1. The last two deer seasons the harvest has been down .2, The wdnr admitted we have had some sever winters.We know sever winters mean deer lose. 3, A deer study by QAM showed that 57% of the deer population in Ashland Co. have been taken by Predators. 4, After years of the wdnr talking about all the deer in the marenco Valley NO ag tags were given out. I find it interesting that last year when the wdnr appealed to the NRB for doe tags Ag damage was one of the reasons for tags but yet NO Ag tags were given out. 5, I remember a few years ago a guy bring to the Cdac over 25 surveys from businesses in Ashland Co.. ALL in the survey said the lack of tourism was due to a lack of deer and Quality Bucks. We now want 500 tags all on private land . So what does that do for the out of the area hunter who can't hunt private land . 6, Even the Ashland Co. forester voted for no tags. That has to show there's not a browse problem. Anyone that spends any time in the Ashland Co. forest can see all the cutting and habitat that has been created and still a lack of deer sign (rubs) and deer in the winter cuttings.. Stop having doe tags start building the deer numbers up. This is not rocket science. The facts are there.

Based upon my observations, I believe the Antlerless harvest for 2020, for Ashland County, should be less than 2019. As a result of the multiple major snow events in late November, Deer in the deep woods areas of the County, were forced to resort to their woody browse - starvation diet, much earlier than usual, and expend a lot of energy in doing so, because of the snow depth. This is of course was compounded by the predator load in the deep woods areas. (Timber Wolves, etal.). In the agricultural areas of Ashland County, (mainly portions of Ashland, Marengo, White River, Gingles Townships), the Deer numbers seem quite high, the predator load is much lower, and some Antlerless Harvest, is probably warranted. In the heavily wooded Townships, Deer numbers do not seem to have improved much at all, from where they were in 2013-2014. The one size fits all management for an entire county is very unfortunate. When Ashland County was comprised of multiple units, (Unit 6, Unit 28, etc.), antlerless harvests, could be much more target specific, based upon cover types / habitat types. Higher antlerless harvest quotas in Units w/ a lot of agriculture, and lower antlerless quotas in deep woods areas Units, etc. Alas, that horse has long since left the barn....
Prior to 2019 it appeared the deer herd may be rebounding from the low points it was at, but this was not the case. I am generally up there from mid-spring to early December and it was apparent the deer herd was way down before the hunting seasons started. I have approximately 175 acres located within the Chequamegon-Nicolet National Forest and saw fewer fawns in the spring and fewer signs of deer throughout spring, summer and fall. The deer population is down. One suggestion I would make is not to base the deer population on Ashland County as a whole. The farming areas of Ashland County do have more deer then the forest areas, that is obvious just by taking a ride in the car and seeing where the deer are during the non-hunting times. I am trying to get my grandchildren interested in deer hunting, but with literally no deer being available to them it is hard to keep their interest. We need to grow this herd back to what it was in the late 90's; let the antlerless deer go for a while, that is the only way it is going to come back. I would not be opposed to limiting the season in this area for a few years if it helps to bring the deer population back up.

Last year I saw many more deer personally and on trail cams. I believe the late season date and the bad weather held down the hunter success ratio. The ratio unduely influenced the discussion of overall deer numbers. I believe private land numbers are higher than the numbers in biologist and county committee discussions settled on (I listened in on the committee discussion). I feel the antlerless permits are low if anything, and want to support local businesses by having the numbers of permits 500-750. As an aside, I do not support youth hunts. Youth are best taught to hunt in camp with their dads, grandpas, moms, uncles, etc. during the regular season. If people are too selfish or lazy to take their kid during the regular season, they shouldn't get a break by expanding their time in the woods in the name of supporting their kid. Sorry, I am a traditional guy aged 65. I learned by hunting with my dad when I was 10 in the cold and snow. I wouldn't have wanted it any other way. Certainly not sitting in the warm woods trying to beat others to the stand and then sitting at home twiddling my thumbs in my pajamas when the real hunting (fun) happened.

I have hunted on public land in Ashland county for over 25 years and the number of deer sighted has dropped considerably. I believe we do need to be able to regulate predator populations to assist with herd growth. I am a supporter of wolves in Wisconsin, however I also believe they need to be controlled, and numbers managed appropriately. In addition we need to review the bear hunting policies, including increasing hunting quotas as they can be devastating to the deer population as well. In addition I can support a reduction in antlerless permits if that will help increase the deer population. However, it is completely inappropriate to allow those permits to be on private land only! I am not advocating a split according to the percentage of public vs private land, but would suggest that of the proposed 200 antlerless permits for 2020 it should between 50-75% private and 50-25% public. It makes no sense to have Bayfield county allowing 2670 public land permits vs 3000 private land permits and Ashland county allowing zero public and 750 private.

Hunted in DMU for 22 years (4 years observing - 18 years shooting). Over that time, the I have seen a drastic decrease in the deer population. I believe this was mainly attributed to 3 factors; 1. Mismanagement of Herd - Earn-A-Buck & Excessive Antlerless Tags, 2. Hunters taking advantage of Anterless Tags, and 3. The uncontrolled spread of Wolves. #1. Is being asked by the CDAC in this proposal. In order to right the wrong of years past, the heard needs time to grow. I believe eliminating antlerless tags will helps combat this problem as there are other factors besides hunters reducing the numbers in this DMU. #2. Non-Issue if tags are not issued. Hunting community just need to understand and support this decision. #3. Needs to be the States #1 priority. I understand this is a Federal issue, but the states numbers are strong enough to support a controlled cull as successfully completed during our one slotted season. Correcting this issue will also help other species, such as elk, increase in population.
I feel there needs to antler restrictions put on Buck harvest. Everyone enjoys seeing an antlered animal, even the old person driving down the road will pull over to see a beautiful antlered animal in the wild. Killing immature bucks can take away from mature buck development. There are many states that have antler restrictions related to harvest. Recent studies have shown Wisconsin to have fallen based on the quality of the deer harvested throughout the entire state. I believe that the state can balance quality and quantity. Please consider antler restrictions throughout the state. Wisconsin for many years was known for its quality whitetail hunting, now quite frankly has fallen and is being surpassed by other states. This is simply sad and is a direct relationship to poor deer management. Predation is a key factor, this includes human and animal predation. Please figure it out so we can get QUALITY and quantity deer hunting back in WI.

Please log more!! That’s all we really need to have better hunting. There is no food - imo- other than the yellow gold piles that began the destruction of Northwoods deer hunting traditions. I’m glad I don’t have any kids to introduce the the Northwoods hunting traditions, because they’d think I was crazy after their first year of hunting 8 days and seeing 3 deer. I don’t think we need the high numbers of the 2000’s, but what we have now is tough hunting...to say the least. Why is it that the county and private forests in our area have 5x the deer as the CNF in spite of having just as many wolves? They sustainably harvest them. Period! When I started hunting the CNF, there was logging every winter. Big cuts, little cuts....all different locations peppered around 20 square miles we call “home”. The logging going on these days is a literal joke!! Not even close to the same scale! But we had deer!

Have hunted and/or trapped in Ashland county for 30 years and have seen deer populations fluctuate from record highs to where they are now today on the public land which will always happen, however I feel that better habitat would definitely help deer numbers on the public land and would increase their populations with more logging, creating new growth and would help other species too. Also predator populations have become, what I feel, to high as I have see multiple bear, bobcats and wolves the past few falls along with a coyote population that has returned after not seeing much sign of them for a number of years. I think predator control of some form needs to be accomplished to raise deer numbers and since the DNR can really only control bear and bobcats at the moment I feel more tags could be issued to lower there numbers without putting their populations at any risk.

The deer numbers in my opinion have flat lined for a few years maybe a very slight increase. I like that we have had very few doe tags and virtually none on public land. I think we’re on the right track with few doe tags but I think we need several more years of this. A recommendation I’d like to make and see implemented is one buck tag fill with weapon of your choice. If the concern is selling tags then raise the price of the deer license to cover the difference. The buck population has grown some but the mature buck population is terrible. Too long of seasons,crossbow hunting which is extremely devastating on our deer herds and technology has made us to good at hunting. It’s past time to address these issues. My other question is why can’t we change certain issues and try them as a trial for 2-3 years then review the changes.

I was unable to hunt the last two seasons, but the year before, there was finally some sign of deer making a comeback, in the wake of the decimation of the first decade of the 2000s. It sure would be nice to get back to the glory days of the 1980s, when a still-hunter could get a Choice tag (and, therefore a reasonable chance at getting a deer) every other year or so, without the over-harvesting which followed. I’m willing to defer semi-regular antlerless opportunities, or anything close to it, if it means building up the herd to at least move in that direction. I don’t want to have to feel like I need to hide in a tree over a pile of food to get a deer, but the low numbers and buck tags have meant a long drought, and I’m not getting any younger.
Wolves are not endangered in Wisconsin. They need to be removed from the federally protective list so Wisconsin can open up a yearly wolf hunt. My camp saw more wolves than deer this last gun season. I don't even waste my time to scout for bow season anymore because there are few deer in Ashland County. Also, I would like to see an Antler Point Regulation...minimum of 3 on one side. The harvest is already low, why not enforce it now and in 2-3 years we can see an increase of bucks and larger ones! It's been 18 years since I shot a buck with my rifle because I was waiting for something bigger. People should not be shooting spikes and forks, let them go so they can grow. If someone is in dire need of venison, they should get a doe tag.

I believe fawn recruitment is very low with many mature does with one fawn or none. I have monitored our area with trail cameras for at least a decade or more and believe 2019 buck sightings on camera were significantly lower than both 2017 and 2018. My cameras are up from August till the end of November. While over all Deer numbers look to have risen since buck only it is only a marginal rise. Predication and winters are preventing a more positive rebound. Lack of deer sightings by many have in my opinion increased the road traffic and road hunting in our area greatly. The amount of vehicle traffic in the national forest was the highest i have ever seen and you know vehicles traveling at very low speeds during season are not sight seeing.

I have not seen a buck in the forest while hunting for the past 5 years. I use to have 10 guys at my Clam Lake Cabin for 5-9 days of hunting, I now have 1 1/2, without much interest. The 5 years (I believe) of having an antlerless hunt several years ago depleted the herd. An average of 330 deer per year were registered in Clam Lake, half of those were your bucks. The DNR's mgt was deplorable. Baiting must stop, PERIOD!!! Deer are now completely nocturnal. When I put out trail cams the deer I get are all at nightly. 1:30am is peak. I never took a deer under 8 points. Today, I do not need to kill one but I would like to see a couple if I am in the woods 10 hours per day. Yes, we still hunt hard.

There was much better hunting 30 years ago with no wolves and a lower bear population. Even then there was not a high population of deer. Why any does are allowed to be shot is beyond me. In 5 days of hunting I typically saw 4 to 8 deer 30 years ago. If you saw a buck there was a good chance it was a nice one. About 8 years ago with the high wolf and bear population we did not see or shoot any deer. In the last two years it seems there is a slight come back in deer but still not back to the old population. Once again let's severely limit any shooting of does and let the population come back. I suggest an increase in bear permits and getting back to hunting wolves to control that population to the published desired limit of 800.

I grew up in Wisconsin and left when I joined the military. I spent 26 years in the Air Force and continued deer hunting in Ashland County most of those years. I own land in Ashland County and it is always a highlight of the year to be with family and friends for opening day. I have utilized a forester to develop plans to improve the deer habitat over the years. I am a non-resident and hope deer licenses for non-residents do not get overly expensive like they have done in many other states. Hotels, gas stations, grocery stores, restaurants, and sporting good stores all benefit from out-of-State hunters. Please don't raise the price of out-of-State deer licenses as it may make the entire trip up north unaffordable.

It would seem many people on this CDAC are just concerned with hunting horns, not management of whitetail deer. The few reasonable folks on the CDAC are overshadowed by the outspoken buck hunters...the average hunter just wants to hunt deer during decent weather (not such a late season hunt) with a fair chance at shooting ANY deer. It doesn't need to have a certain number of points or a certain sized G-2 to satisfy....Yes weather was tough on our deer herd this winter, but lots of feeding has pulled a large number of our deer through. plenty of deer out in the field right now. I think the numbers are screwed up because there are no tags needed and call in registration is a joke and not being done by many.
This is just a replay of the past few years and nothing changes. The numbers are too low in the southern forest areas, too high in the farm areas, yet nothing is done about it. Winter is longer in the forested areas too. Yet that's ignored. (Case in point 2 years ago with the late snow and emergency phone meeting you had to change the final meetings results) People that own acreage will hunt for that reason alone. Those that don't own land won't come up and hunt due to the lack of deer in public hunting areas, and no doe opportunities as well. This will not change until the deer numbers are up, and people see decent sized bucks again. We are not going in that direction at all.

Number of deer sightings was getting better from 2016-2018. Deep snow and predators hurt going into 2019 and took a step back in number of deer seen. Back in early 2000s too many antlerless deer permits were given out for too many years. That in combination with more predators in wolves, cats etc... made the 2010s very slow, boring and uninspired. My son has rarely seen a deer and has been hunting for seven years now. Loves the woods but loves seeing deer in the woods even more, losing hunters up there. The people up there that blame it on wolves are full of it, they are only part of the decline, their is an imbalance from our management based on all factors.

I think all the deer hunting rules you have had over the years should stay the same!!! The only thing in Ashland county I would like to see is less antlerless deer shot... from the time i started hunting to now the deer population doesn't even seem comparable. Over the past few years when you started to limit the antlerless deer shot it seems to be bringing the population back up slowly but it seems to be heading in the right direction now atleast. I say no does. The population down south seems to be a lot higher than up here. Possibly only a junior doe hunt. All in all I think the population in deer in northern Wisconsin is way low compared to 15+ yrs ago.

The number of deer harvest numbers have dropped dramatically over the last 15-20 years. I understand there are many factors for this happening however this has effected the number of hunters, that come north to hunt and effects the small businesses in the area when no one wants to come north to hunt anymore because they don’t see deer. This also has a effect on trying to get youth hunters involved with deer hunting. When taking youth hunting I feel it is important for them to understand they may not always have a successful hunt but they need to see a deer once in awhile to stay interested. As of now many a are seeing few deer if any at all.

deer are abundant in my area. people need food security. venison is a healthy protein source, and adequate harvest lowers our risk of seeing CWD here. forest health, understory, and habitat for other species is degraded by deer overpopulation and heavy browse on my property. the predator i am most concerned about is my fellow man. i deal with more trespass problems and unauthorized ATVs than i do coyotes, much less wolves. humanity teeters on the precipice of climate catastrophe and societal collapse not to mention pandemic and weak dull “leadership” and i have little hope we won’t drive off the cliff together chasing the big bucks.

It’s time to eliminate baiting and sitting in heated shacks and call yourself a "hunter." It’s time for the new generation of so-called hunters to learn how to do something besides sit over a bait pile. They should rename it shooting season. The biggest buck by far near me was shot by a 70+ year old grandpa out of his house because he couldn't help himself because that is the "way I was brought up." The poor deer don't have a chance anymore to get to 4 to 5 years old. Shut the entire season down every other year for bucks to give them a chance from the "hunters." On the off years the can hunt coyotes!!!

my family and I hunt west of Butternut in the national forest for 45 plus years and since 2010 we have seen less deer annually. We hunt all 9 days in gun season and several days with bow. We believe the causes are too many wolves and too many antlerless tags earlier in the decade that the herd has not recovered from! We also feel we need to go to a 1 buck per year tag or antler restrictions to protect younger bucks and also keep antlerless tags at 0 for several years until the herd recovers! We also need to keep the pressure on our politicians to delist wolves and renew a hunting and trapping season again!
There are areas in the county where doe numbers are fairly substantial. The early heavy wet snow actually provided some poor browse for the deer with the tops of spruce trees breaking off. I found at least two predator kills in my woods which was once again hammered of browse. None of us can be sure how the snow depth and poor nutrition source will affect the fawn production so that has me more concerned for the longer term. Still, I think enough permits need to be available for private landowners as the majority of them know what taking too many means and what taking not enough means.

Less rules brings simplicity, which makes people much more interested in participation. I understand why parents tell me they are not interested in our outdoor activities anymore because there are just too many rules to keep up on. Also we have an abundance of predators in Ashland county, especially bobcats and wolves. In my 50 years of outdoors I have never observed so many predators with my own eyes. I hope the snaring rules can relax some also. The trappers I have talked to in the western states have very little issues with snaring and have much less restrictions than we do.

After 46 years of hunting in Ashland county, I have seen a lot. I will make this very clear the hunting and (hunting tradition) was much better before all these special hunts (antlerless and holiday and youth hunts) and last but not least before all the wolfs came back. We need to go back to tradition including helping the local establishments by requiring to stop in and tag your deer. And the youth hunters should not be toating guns in October, you go out on opening 9 day season and freeze your rear end like we all did growing up. Thanks for this opportunity.

No antlerless harvest should be allow in the Ashland Forest Zone! No youth, disabled, or military antlerless authorization at all. If deer herd populations are a priority then everyone should be held to promoting more deer. Private landowners should not have any antlerless if there property borders national forest except for farmland crop damage. Private property in the middle of the forest with no farming on it allows the private individuals to harvest but the hunter hunting the public forest next to private cannot harvest antlerless.

The 2019 season was terrible compared to 2018 season when we actually saw a few deer for the first time in a long time. Our winters and predators take way more deer then we plan. I understand in some parts of Ashland county the snow isn’t that bad and it is agriculture which supports a better herd then we have in southern Ashland county where the wolves, coyotes, bobcats and bears are way over populated. The youth hunt should be canceled as it sends the deer k in Nti a nocturnal pattern. If it wasn’t for baiting we would never see a deer!

I believe that as a Wisconsin resident, we should qualify for bonus antlerless tags. We are quite picky when it comes to harvesting an antlerless deer, and only do so when necessary for the meat. I’ve heard that they’re is a proposal to extend the rifle season and eliminate muzzleloader season all together. I don’t think this is a sound move. Those of us with muzzleloaders enjoy the additional work that goes into a harvest made while using one. There are many long standing traditions that would be ruined if too many changes are made.

I think a moderate antlerless tag availability for this unit is important. The bucks only status which was present over a number of years greatly affected the number and quality of bucks seen in the area of Ashland county that I hunt. Many of the hunters in this area are meat hunters which led to the buck population and quality of antlered deer to drop dramatically. I think a moderate number of antlerless tags will allow for a sustainable deer population while allowing the buck population and quality a chance to improve.

I spent more time hunting in Bayfield county only because of the fact that they offered more doe tags. We need to go back to the way units used to be structured. I would drive past dozens and dozens of deer in Ashland county just to get to Bayfield county. There aren’t a ton of deer deep within the forest but that’s the way its supposed to be. Hunters who complain about the lack of deer anywhere in Wisconsin are either poor hunters/outdoorsmen or lazy. The DNR wildlife biologists and foresters need to be listened to more.
Last year was the first time in numerous years that I was able to purchase an antlerless license. Ever since you took away the antlerless tag that came with the archery license all we see are does. I don’t hunt for antlers. I hunt for meat. I’ve had to go quite a few years without harvesting a deer. The amount of does I see while in my stand I don’t think there is a shortage of them at all. I think you should give the antlerless tag with the archery license like it used to be.

Instead of worrying about changing the seasons and worrying about out of state hunters. Worry about the deer herd. Put a 3 point per side restriction. For everyone. If you open up antlerless to the youth the adults will be shooting them anyway. And I think the done needs to really get out and look. Northern Wisconsin right now has very poor hunting. Put some real restrictions out there. If you say no does then all the little bucks get killed. Put a restriction on the antler point.

I am not at all sure of the reason/logic of issuing doe tags to only private property however this came about I completely disagree with it. Ashland county has vast expanses of public land which many people hunt on in this state where they purchase license and pay taxes yet when it comes to this issue it appears that no consideration is given to that. This situation is just plain wrong! It may be done that way in Texas but last time I looked my license said Wisconsin on it.

I hunt predominantly in the south/south western area of Ashland County. Public and private. Our deer numbers can barely maintain from one year to the next! I would estimate 80% of our fawns are taken by predators. Our age structure of bucks is terrible! An old buck in this area is a 3 year old! If you can even find one! More bucks are being harvested by crossbows than regular bows, this is another negative on a herd already struggling with numbers!

Having spent many years in this DMU I feel that the higher antler-less deer population heading into the brutal winters there the better with hope that percentages carry through. Yes, there will be loss due to predators and over population in the deer yards, but that is nature at it’s work and is blind to whether it has horns or not. One buck can support the herd many times a year; one doe can only support once per year.

I would like to know the size of buck shot. This is partly due to many years of only small bucks being seen/shot and therefore unable to grow for trophy hunting. I believe this has an impact on the hunters outlook for each year. I have wanted to see a minimum point standard for bucks for at least one year to allow our buck population to mature. From family and friends they concur. Please consider and thanks for your time.

As a hunter, the years only get worse and worse, trying to see a good set of antlers is like seeing Bigfoot nowadays. Not saying hunting should be that easy but, I don’t think you should be able to shoot does and a buck should at least have 4 points on a side. That way it gives these deer to grow longer then 2 years. No one wants to shoot a spike or a fork unless they need the meat. We just want the numbers back up again.

I dont think the numbers represented for population are very accurate. Since I've owned my property I have seen a decline in numbers significantly. I have not bagged a deer every year, sometimes many consecutive years. I have cameras up and every year, less and less. I dont think wi. Dnr are doing a good job at all. Many friends of mine are going to hunt elsewhere. Another state. I thinking I may as well. I may sell.

I think in the winter deer yards where the loggers are working the wolves move in and take a lot of the deer. When the snow is deep in the snow belt regions it has a large effect on the number of deer that make it. They seem to take most of the bigger bucks and fawns. I do understand that other predators take their share but, since the wolves were reintroduced there definitely are fewer deer. Thank You

I travel 4 hours 1 way to my cabin in Ashland County. Last fall I crossbow hunted 4 weekends and gun hunted most of the 9 day season. During those times in the tree stand I saw a grand total of 0 deer... Our gun hunting crew of 16 saw less than 20 deer combined. I’m not sure where all the deer have gone. Is it severe winter or predators that have caused the numbers to drop so significantly?
Please stop killing the does. The antlerless hunts need to be put on hold for a year or 2. I go up there every year and barely see a deer track during gun season. I've never been so disappointed in my life and are considering quitting hunting up there because of the lack of deer. I hope that things will get better because I would like to have my relatives enjoy heading north to see deer.

The hunting is so screwed up around here I will never buy another hunting license in Wisconsin and yes I am a landowner you people got things so screwed up not even funny and now you want us to help you figure it out all I got to say to you is look what you have done in the past in the stupid stuff you done lately I will never hunt another deer in the state of Wisconsin as long as I live.

I saw more wolves and wolf tracks during 2019 then I have ever seen hunting in the past 29 years. Our group has also been finding a significant amount of wolf kill deer carcasses. It seems to have been increasing over the past 5 to 10 years. There has also been less clear-cut logging in the acreage that I hunt so I feel there is less easily accessible food/cover for the deer as well.

Back in the late 90's early 2000's we would see maybe 6-10 deer on opening weekend every year we never observed anymore than those numbers, but since about 2005 those numbers have declined to 0 deer from 2008 till 2016. From 2017 till last year the population has been coming back but 2-5 deer seen per 3 to 4 day hunt so keeping the doe quotas low and predation to a minimum is crucial.

I see plenty of does where I hunt private but we do not shoot them. Trying to get the heard stabilized as predators are a problem here. I ALSO FEEL NON-RESIDENTS SHOULD BE CHARGE THE SAME THAT THEIR STATE CHARGES US FOR HUNTING THE SAME GAME TO BE TAKEN. $350 for us to hunt deer there then $350 for them to hunt deer here. Sturgeon spearing should not be allowed by non-residents.

The CDAC group is a joke. Comprised of all big track property owners who don't care about public land because they never have to hunt it. Of course they are going to opt for antlerless only for private and non for public. And even some of the people on the council don't even hunt! This state needs to go to either or tags. One for now, one for gun, no no bonus tags.

Why doesn't Wisconsin move to allowing each hunter to harvest 1 buck/year, with whatever weapon they choose. Also please do not change season dates for hunting. If that happens you will have 1 big year when rifle hunters harvest a lot of bucks during the rut and pay the price for the next 10 years. The only reason seasons would change is political motivation.

The Ashland antlerless proposed quota of 200 deer is reasonable using the provided data. The winter was quite severe in 2019 with snow depths of 10 inches or more during the gun deer season. To accomplish a population increase I would be in support of a buck only season, although for hunter education a youth antlerless hunt would be great to hold still.

I am concerned about the spread of CWD, I would like to see a statewide ban on baiting/feeding of deer. I would like to see an earlier start to the Deer gun season, up here the weather plays a major factor on the time spent in the field. too cold or too much snow. I would like to see an opening like the neighboring states of 15th of November.

Deer numbers are very low in Ashland County. Did not see a deer during gun season. There should not be any antlerless hunts for a few years inn Ashland County. The herd is at very low levels. I own 200 acres in Ashland County and see very few deer all year and have very good habitat for deer. The past 5 years have been very poor for hunting.

You can't possibly determine deer population where I hunt, the camp 13 area totally wooded. I've seen a increase in the deer population over the last 4 years. I think that the antlerless permits should be split giving people that don't have private land hunt a chance. I have not been able to harvest a doe for years because of no permits.
I've hunted in northern Wisconsin my entire life. Started hunting at the age of 12 with my grandfather and my father in the early 70s. Times were tough what did your question was there. And look forward to caring it on with my children. But after the last few years and lack of deer management I've hunted my last time in Wisconsin.

I think just as important as managing the deer population there needs to be a balance in the predator population. There should be a limited hunting/trapping season for large predators such as wolves, which I believe are overabundant. I think the bear population is in balance, but is bordering on over harvesting of this animal.

I want opportunity to harvest deer where I pay to hunt. I have gone too many years without harvesting deer and don't like the future opportunities the DNR is providing to us hunters. I only have a short time left to hunt and would like to enjoy the experience better than dealing with all your perceived necessary restrictions.

I know this is a legal subject but the predator issue i.e. inability to appropriately manage the wolf population in the Northern Wisconsin is a significant problem. Reintroduction metrics have been met and its time to provide the opportunity for hunters to manage the population like we do with other game animals.

I haven't seen or heard a single deer in 5 years of hunting at my cabin out of the 8 years I've been hunting. Really wish I could shoot my first ever deer with horns instead of a doe just for meat cuz that's the only thing I saw the first 3 years I hunted. I had no choice and took a shot because I needed the meat.

We need to greatly decrease the wolf population in northern Wisconsin. They are killing way too many deer. This winter alone, I personally witnessed a wolf taking down a deer on 3 separate occasions. Prior to this winder, in my 20+ years of traveling up north, I have not seen a single wolf. We need to fix this.

Our camp is moving into our 5th family generation. All but one under age 54 gave up on hunting because there are no deer in the woods and the one only hunt 1.5 days. The deer are gone mostly to wolves, the few that remain hang around corn feeders. It is truly a pathetic situation.

I am not that happy that in Ashland county will only give doe tags for only private land and only for juniors. If you are going to give them does the you should at least hand out some doe tag to public land to. Me has a hunt I don't hunt on private land and I am hunting for meat to put in my freeze.

In the Clam Lake area, snow reached 18" around the first week of December and stayed above that until around the 13th of March. Positive note was the number of days below zero wasn't bad. If the goal is increase the herd, why are you allowing antlerless tags. Sounds like a DNR money maker scheme.

if there is a problem w/ too many deer in the Ag section of Ashland cty, maybe you should split the county. i'm in the national forest and the deer and fawn numbers are way down. there are several issues. wolves are the worst, then bears, then coyotes then the last few harsh winters really hurt.

I am glad to see that deer managers believe the numbers should increase in these northern counties. I would like to see more years of "no doe" seasons, except for first-time young hunters. I would also like to see more attention paid to reducing the predator numbers. Thank you for trying.

I hunt the Chequawagon. Habitat is still a major concern. Even with a bit of an increase in logging in the forest, the overall maturity of the forest is a concern. While forest age structure balance is important more logging would benefit many species not the least of which is deer.

I am a firm believer that mans over harvest of antlerless deer and the un management of predators has drastically diminished the deer population in the forest. I am completely against the extended rifle season in northern Wisconsin and believe it would only hurt the population

My only opinion/comment would be we need to do what we can to help bring the deer population numbers up. (especially antlered numbers seem way down). Here in northern Ashland county the long hard winters and large wolf population have the deer numbers way lower then normal.
If there are to be antlerless permits for practice land, there must be an equal number for public land. NO landowner hunts only on private property. They all hunt a mix. They hunt in the public woods but I can't hunt on their land, and they shoot does in the public forest.

Large increase in number of predators present. Poor forest management for deer species. More logging is needed. Increasing amount of potential poaching on public land (private land antlerless tags filled on public land). Too much detrimental recreational vehicle traffic.

This unit still struggles to maintain deer numbers. Been here 25 yrs. way to many predators. Tough weather, long winters. Need to work at increasing numbers again for few years at least. Saw very few bucks last year, all were young bucks, mostly 1.5 year olds.

The formula for the deer population is flawed for Ashland county. The northern half is much larger than the southern portion. Anterless tags should not be allowed in the south. The county needs to be divided into more units to address each areas deer population.

Public land in Ashland is about 45% and private land about 55%. But for the last two years and now proposed year private get 100% of antlerless tags. It only seems fair that at least 15 - 20% of the tags should be available in the public area.

I personally feel that the southern part of Ashland county has less deer then the northern agricultural part of the county. Should consider going back to the old party permit tag. When four hunters could harvest only one antlerless deer.

I think the deer number still need to be increased in the county and even the junior license holders should not be authorized to harvest antlerless deer. They should be taught responsible game management right from the start. Thank you.

In the Area I hunt there is still a large population of Older Adult Doe who restrict the young deer from obtaining their share of nourishment. Incresing the number of antlerless permits should still be a tool for growing a better herd.

permits look about right for me. I think their should be some thoughts on bucks three or more points on one side for couple years. In last four years 80% of the bucks shot in area were forkes or less. Need more breading deer.

Saw more predators than deer during rifle season 2019. Buck quantity and quality has declined in the past 3 years. Ban deer baiting and feeding statewide and actually enforce it. Wolf harvest. Antler restrictions.

Zero antlerless tags means ZERO, no matter who you are. What a great opportunity to teach our young hunters about conservation and wildlife management by not allowing them to harvest does and explaining to them why.

The amount of wolves in our area is underestimated. We have had wolves for years but they were never as visible as they have been the last two years. This past season I saw more wolves than I did deer.

In 2019 my group of 4 hunters saw more wolves than deer. Some days a pack of 6 and 0 deer!!! The DNR must in my opinion, take management of wolves away from the USFW and get our herd back!!!!!!!!!

I have 40 a acre and can't get landowner tag but have too many does I need to cull some but tags are gone so fast, I need to take 3 or 4 of it but can't get a tag for one. Add for tags back.

Make hunting attractive for hunters. If you keep up your pace of your perceived control, hunters will be giving their desire to hunt, as your rules are getting to hard to follow.

Having just purchased land on Ashland County, I am very concerned about the wolf population, and when the D.N.R. is planning on controlling them more efficiently!

WOLFS and coyotes are a real problem seen 5-7 daily. Should open wolf season and cut there numbers down. Several different spots always predators around.
I think anterless numbers would be ok for youths only. I would like to see one or two years where adults have to harvest a buck with 8 points minimum.

It’s time to increase the antlerless harvest. Why should we continue to increase the deer herd for the predators (wolves, bears, bobcats and others).

TOO MANY PREDATORS!!! Deer numbers continue to decline on both private and public lands. I’m a logger and avid outdoorsman, I see it first hand.

There are way to many wolves and bears compared to the deer population. The elk cause way more damage to my land then deer have ever caused.

I would be okay with the Junior anterless quota of 200 allowing only one anterless permit per junior resident of that DMU per calender year.

I believe that there are to many does in the area and/or not enough bucks. I don't know what could be the reason for this but am concerned.

Still very little deer sign in the forest. Not enough logging to improve habitat. Would support youth hunt only having lotto for anterless.

I think it’d be great to take antlerless out of the equation for a few more years. Also put a point restriction on to 4 per side

I spent my vacation time hunting and saw one antlerless deer the whole time, saw lots of wolves though. Very discouraging

Severe winter conditions that started in November lasting into spring, no wolf control, poaching and the use of crossbows.

It’s not right that all the antlerless tags are private land only, considering the large amount of public hunting land.

I hunt the entire gun season all day, every day. I saw no deer in 2019. I hunt near Spillerberg Lake and Morse.

Deer numbers are low do to people hunting at night and way to many predators between wolves and coyotes.

We see so many wolves. Open the season back up and give out more tags. We see more wolves than deer.

Deer are just starting to recover don’t need any doe permits, keep crossbow season same as before.

The Lack of Deer numbers overall for this DMU are VERY evident on both Private and Public land.

Take doe permits off keep the crossbow season same as before increase nonresident license fees

Need to reduce amount of predators, wolf #s are too high they need to be reduced.

I witnessed a lot of Wolves, I feel that is one reason for not see many deer.

Please follow the guidance of DNR professionals and Ashland County Forester.

Harsh winters and wolves have take out the deer population in the county.

Like some other States, we need to impose a minimum antler size on bucks.

Open wolf season! Too many wolves! We need to manage both populations.

the deer herd is significantly affected by wolves in the area I hunt.

I hunt the public land please give out some doe tags for public land

We need a wolf hunt. There was much more sign of wolves then deer.

State should open up wolf trapping and give out more bobcat tags

Please do what you can to support a wolf season in this unit!

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

487 forms were submitted for this unit.

**Section 1: Information about who provided the input.**

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 274
   - I visit this unit for non-hunting purposes: 92
   - I hunt in this unit: 443
   - General interest in this unit: 81

   The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 417
   - Bow: 223
   - Crossbow: 170
   - Muzzleloader: 142

3. How many years have you hunted deer in this unit?
   - Minimum: 0
   - Average: 24.37
   - Maximum: 60

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 244
   - Mostly Private Land: 94
   - Public and Private Land About Equally: 51
   - Mostly Public Land: 21
   - Exclusively Public Land: 30
   - I did not hunt in this unit last year: 3

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 23
   - Not too crowded: 67
   - Neither crowded nor un-crowded: 32
   - Somewhat crowded: 48
   - Very crowded: 22
   - Not applicable: 4

**Section 2: Perceptions about the number of deer in the unit.**

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 111
   - Fewer: 144
   - Same: 163
   - More: 53
   - Many More: 7
   - Unsure: 9

**Section 3: Feedback on the CDAC’s 2020 preliminary recommendations**

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

Because the number of antlerless permits set is always less than the number sold, increasing the number of permits set is meaningless in the current hunting environment. Some other incentive must be used to entice hunters to purchase and use at least the antlerless permits set. Many tactics have been tried to accomplish this with limited success. The one tactic that has been successful in other states is to have an additional early rifle season the week before the traditional 9-day rifle season. This option is not available in Wisconsin due to a recent state law changed initiated by Senator Tom Tiffany and sheparded by him through both houses to successful passage. This law had no scientific basis for enactment and was opposed by both the DNR and hunters. The motives of Senator Tiffany in proposing this law is unclear, but scientific data supporting such a law is totally lacking. The law must be rescinded to allow the DNR the option of setting an extra earlier season—the best option to increase the deer harvest as seen in other states. An earlier week is generally warmer with less chance of heavy snowfall. Deer hunters are anxious to pursue their sport and would most likely avail themselves of this early chance to get into the woods and hunt. The rut is in full swing so deer movement would most likely be very high, and both the antlered and antlerless harvest would likely be enough to reduce the deer overpopulation in CDAC where herd reduction is a stated goal. Logic and common sense dictate that this law prohibiting an early season be overturned. Furthermore, uninformed, single-issue legislative meddling by senators and representatives of this type in natural resource must be discouraged in the future. Leave natural resource management to professionals with degrees in their specialty. Legislators have proven time and again that the laws they propose are almost always for selfish reasons to placate some wealthy influential constituent (who happens to be a significant donor to the legislator’s campaign). This is the worst reason imaginable to enact a natural resource law.

I have hunted deer in Barron county for 30 years now. When it comes to public land I can honestly say that I have not seen the number of deer that I have before. I hope that you lower the number of tags for public land. I have also hunted private land for that amount of time to. I can honestly say that I have not seen the number that you used to see when I first started hunting. I am sure you want to lower the number of deer on some of the private land. It’s up to us the hunter to manage the deer heard also. We can not leave it all up to you. I wish that we had a 4point restrictions like they do in Missouri. We could have some quality deer like they do. I hope the DNR raises the prices for out of state license across the board. Especially the price for bonus tags for out of state hunters. When I go to Minnesota it costs me 90 dollars for extra for tag. Here is my cell phone number. 1-715-931-7703 my name is Gary Anderson. I live in the poskin area. If you would like to ask me anything else. Or talk about things pertaining to the season feel free to call me. I will say that it's sad to see us loosing hunters the way we have the last few years. The biggest frustration for alot of people Is the lack of seeing deer. So they always say why should I stay hunting if I don’t see anything. Thank you and have a wonderful day.
Online aids

379 This isn't directly related to deer harvest goals but does have an indirect relation. The river systems in many areas flow through private land (both sides of the river). We've encountered many seasons where people have floated the river in a canoe or jon boat and then shoot at deer as they are exiting the river or even standing on private land. I've called wardens before because I've witnessed floaters shooting at deer that were running up river banks and then they never followed up on the shot to see if they even wounded the deer. We've recovered deer that were shot by river hunters that actually came into our property and died right next to us and no one ever got out of their boat to check for blood. We have found dead carcasses on our property with bullet wounds that we couldn't salvage as well. I would like to see a regulation prohibiting shooting deer while they are traversing a water system that has private land on each side of the water system which in effect would eliminate people from floating through private land and shooting deer that they can not or do not follow up on (not to mention the ethical dilemma of trespassing).

380 I bowhunted barron co last year As I have in the past and was amazed at the lack of deer last season. I hunted the new auburn public grounds and only saw 1 fawn in several trips. Hunted yellow river by cumberland several times, saw 3 does in one trip and nothing else the rest of the season in 5 different spots, saw a few bears, which I think killed off the deer. Hunted a small parcel just east of rice lake and saw 2 does and got chased out by a group of howling coyotes(or wolves). This is the general consensus of everybody I know that bowhunts around barron co- no deer, let alone shooter quality bucks. I would shoot anything more than 4 pts, but have not even seen anything that big in years. I'm pretty sick of finding tree stands, blinds, tripods, cameras and other misc hunting gear left out on public grounds, I see that as littering and don’t understand why the dnr allows it, most unmarked, but even marked ruins the experience. I found multiple blinds that were left out, probably shredded by wildlife and the owners decided to just leave them instead of cleaning up their mess. Pretty soon I'm going to just start taking them.

381 Over all deer numbers this spring are on a par or slightly higher than last spring. I am a bit surprised by the large numbers of doe, fawn (last years) groups out in the evenings, this probably reflects our very mild winter. I continue to wish for a state wide ban on baiting of deer. CWD is beginning to show up just to our south, so a baiting ban will likely continue here at least. East of highway 53 where deer numbers are overall lower still has some pretty nice pockets of deer this spring so I don’t expect splitting the county into partial northern forest will accomplish any real results that mother nature can’t take care of. We started shooting does on opening weekend three years ago, and more does in general as younger hunters joined our group, surprisingly we kill as many nice bucks as ever and see similar numbers of deer during gun season. At our camp we could afford lower deer numbers as browse damage is a problem, almost impossible to grow any oak without deer exclusion fences. I thank the council for the time and effort they’re putting in and I think the deer metrics are are great tool.

382 I think your plan is messed up for barron county. I believe the county should be devided into 2 sections perhaps HWY 8 being a dividing point. I see many (lots and lots) in south barron county I understand there is more private and posted land in that area and I don't think it gets as much pressure as the north part does with there being more count land available. but I don’t think its right for the north part of the county to have a poor deer herd because the south land owners just collect crop damage and don’t allow the herd to be hunted. I own 40 acres bordered by county forest and in the past few at least I have noticed the amount of deer dropping I have trail cams in the woods and there just isn't as many deer as I should be seeing. Last fall hunting season I seen very few hunters and my trail cams showed very few deer. This has been getting worse and worse every year yet hunters are allowed to go out there and shoot 2/3/4 deer and go home. So far this spring I have 1 doe and 2 smaller deer It looks like another bad year!!!! Maybe I'll just quit like it seems others have.
I hunt in both Barron and Dunn counties and I feel that it is absolutely absurd that Barron county is put into the same category as Dunn county. The deer population in these 2 counties, at least the land that I hunt, isn't even close. If I had to choose to hunt one of the counties solely off of number of deer I see per hunt I would choose Dunn county hands down without even having to think about it. When I decide that it's time for me to harvest a doe I go to Dunn county because it's way higher odds I'm going to see deer, might not get an opportunity to harvest but I'm going to see deer. I've had numerous hunts in Barron County over the last 5 years where I sat for minimum 4 hours per hunt and didn't see a deer. I haven't harvested a female deer in Barron county in over 10 years because I don't see the number of deer in Barron County as I did 10 years ago and currently as I do in Dunn county. I remember growing up when I first started hunting, Barron County was almost as good for hunting as Dunn county but still wasn't quite as good. Again, now it's not even close.

Thank you for all the effort put into keeping the hunting #s in perspective. I believe that issuing 2-3 tags on public land would be beneficial to reach a more targeted goal. Also extending into a Holiday hunt, and extending the archery/crossbow season would be beneficial. I also wonder if promoting a positive response between the Private and Public hunters would be welcomed. We're all in this together. Couldn’t help but notice that an area of public land last year got totally boxed out by private hunters. My small family of 3 hunters cannot afford land so we hunt public land. We do however understand the importance of support of community and maintenance of the deer herd. So when we pick an area to hunt, we also provide to a local charity, eat at local restaurants, buy hunting ammo and supplies, and stay at local hotel/motels for the season. We are safe, courteous, and well seasoned hunters that care for the animals and people. Thanks again

As long as people are allowed to congregate deer on private lands through baiting and feeding we will always... * run a high risk of disease exposure and spread. * have an over abundance of deer on private lands as opposed to public lands. * foster a hunting experience that will vary greatly between public land hunters vs private lands. * create artificial over browsing in localized areas. * cause an increase in car deer collisions in areas where artificial food sources are placed. * continue to see a drop in hunter recruitment caused by taking the challenge out of hunting. * continue to see a decrease in lands/wildlife open to hunting as people feel an “ownership” to the animals they feed. * continue to see a decrease in the natural fear deer should have which causes an increase in negative deer/people interactions. GET RID OF BAITING SND FEEDING AND DEER FARMING AND MOST IF YOUR PROBLEMS WILL TAKE CARE OF THEMSELVES.

I know deer population can vary across a county and it is difficult to decide upon regulations that can encompass an entire county but I can say the area I hunt does not see anywhere close to the number of deer that I used to see. I hunt in the former zone 23 which is east of hwy 53 but south of hwy 8. In this area it has become a greater struggle to see deer with regular occurrence while hunting. I do bow hunt and gun hunt and in general I have become accustomed to only seeing deer every other time I’m in the woods. It wasn't that long ago that I used to see a lot more deer. When I see year after year the committee recommending decreasing the population and more tags being handed out I know I won't see the deer rebound in my particular area. I have not been shooting any does in the last few years as I did not want to take another deer out that could produce more for the area.

I am wondering if the DNR/CDAC know what the true carrying capacity is for the available deer habitat in Barron County. I have hunted both the eastern portion of the county and the western portion. I have seen a definite difference in the number of deer from east to west. I stopped hunting in the east part of the county due to fewer deer sightings. It makes me think that the public forest land in the eastern part of Barron County is being managed for timber harvest instead of wildlife habitat. In the western part of the county where I hunt now, I have seen deer almost every time out even though the numbers I see are fewer in recent years. The amount of agricultural land in this area is higher and seems to support more deer. The CDAC needs to reevaluate the number of antlerless tags to recommend. A 10% reduction in the numbers, especially on private lands seems more reasonable.
We should be able to take a deer by any way we choose. By selecting the correct license to take one. When I hear complaints about people not seeing deer it is time to change spots. Period that all it takes. I’ve done that several years and deer change things up also to avoid people. We should not punish a hunter by people blaming each other like for example crossbow people take more deer and that’s why were not seeing deer. I know people who missed deer by every way of taking a deer. Let’s not take choice away! How to take them. People get stuck in their ways by sitting in the same spot year after year. It’s easier to take a deer with a rifle than any means with a crossbow and compound following close by. Keep season and quotas the same and tell people to move around!

I believe the season should change. Add a one week season at the beginning of November while deer are in peak rut. Hunters will see many more deer than they do during regular season, especially regular seasons that start late. Seeing more deer will likely result in shooting more deer to help get population to desired levels. And seeing more deer in general motivates hunters who are "on the fence" about deer hunting because they may see so few deer late in the month which is caused by lack of deer daytime movement post-rut. Besides the season at the beginning of the month I suggest having another one week or 9 day hunt at the end of the month. Antlerless deer quotas and tags allowed can vary each year as the desired deer numbers are obtained or not.

As a new resident of Barron County I was taken aback by the large herds of deer that I have seen in the Prairie Farm Area. One night on 3 and 1/2 ave we saw over 70 in 2 massive groups. We also experienced a large amount deer loss in the garden, I will fence this year, but we were unable to harvest an ear of sweet corn off of over 400 linear feet of sweet corn and we found the deer even ate tomatoes and tomato plants loosing about 200 plants, we were not able to harvest green beans as well from our 300 linear foot planting... there was heavy brouse to our apples and other fruit trees and bushes. If there is an additional season I would plan to hunt on it due to my commitment to hunt with the family group during traditional gun season in Polk county.

Have earn a buck as an option, not does only, new hunters exempt from earn a buck due to fact they had no chance to harvest an antlerless deer the year prior. Majority of people will only harvest a few deer per hunter due to expense of processing or work of processing my family has a five deer limit on processing at home, hunter numbers vary from two to three. Last year was two bucks and two antlerless one hunter in military and only hunted four days due to limited leave. Have antlerless tags good for multiple counties private land in farmland zones, I hunt in three counties and so do many folks, also friends who visit to hunt a weekend don’t select that county for antlerless hunting because they only hunt that county a few days.

Since the elimination of buck check in and metal tag system, year after year the average buck age and antler size has diminished on the 1,000 acres of private land I hunt. I believe with such a loose system for checking deer, specifically bucks, more bucks are being taken in my area and less does. While friends use to come in from out of state/town to hunt "trophy" bucks, they are now choosing other options in other states. These were the guys that would bring business to the locals and have to kill a doe to hunt a buck and helped me manage the deer population. Without a tag system for bucks, I believe hunters are abusing the laws and killing all bucks and not doing their part in managing does and the overall deer population.

While Barron Co has some public lands the majority is private and ag lands which typically are adjacent to the the public lands. I see a disproportionate amount of antlerless on these public lands w/ very limited ability to harvest while in plain sight of private land where they have much more opportunity at the same deer. As is, private land owners are getting nearly 4-1 doe tags. These same antlerless are as much on public but go to the private ag for browse and food source. Would be great if public hunters would be better able to help control the population by increasing public antlerless tags as well. It is very uncommon in Barron for private land owners to open their land for doe harvesting in my experience here.
2019 was one of the worst years I have hunted, didn't see a lot of deer and they were acting different, we do have wolves and coyotes in our area, was that the reason? Also, too many bears, one day, did not see any deer, but did see one bear!! I hunted more days than I ever have, with no success, took grandkids out 2 different days, no deer, so they were not interested in going out any more, I really believe deer are getting smarter but it is not a lot of fun to sit most of the day and not see a deer. I strongly disagree on the no baiting law, it does bring in a few deer and that is what I wanted my grandkids, to see deer and get interested, but it's hard to keep them interested when you see nothing!

Thanks for sharing the data gathered about Barron County. I wish deer hunters in WI understood how much of an impact deer can have on an ecosystem when populations get too high. Micromanaging the deer herd for the sole purpose of seeing a lot of deer and potentially harvesting more is not good science. I wish Joe Public would see how such strategies ultimately decrease habitat for not only deer, but other wildlife as well. Everything is connected and most hunters need to quit whining about how the herd is managed. Trust in the people that have the schooling, experience, and expertise to manage our natural resources on a sustainable basis. Bar stool biologists need not apply.

I own forested property surrounded on 3 sides by cropland. I have also been on 10+ parcels looking to buy land in the DMU. Deer browse decimates the native plant community over the winter, pushing selection for invasive and non desirable plant species. Buckthorn, prickly ash and elderberry have dominated the understory of several of those parcels, some even had very little herbaceous growth under those. Having no predators in the area allows the deer to sit in the woods and destroy the forests in our DMU. Until we have large predators in the area I fully support all increased hunting efforts. I plan to harvest my limit. It's good for tourism and good for our local forests.

I am a 60 year old female that grew up with a father that was a avid outdoors men. Not only is maintaining the deer herd important, but I believe growing to learn what the woods and what is in it and how it survives makes a good hunter. We have been told we have too many deer, but we sure see less than we used to. With hunting of course comes all the family traditions that go along with it. We as a family have been doing our traditions for over 40 years. Times have definitely changed, maybe some new changes for our hunting needs to be tried. It's not as though they would have to be permanent:) Thanks so much for giving us the opportunity to share these things with you!!

Good Morning I totally support the early season Youth Hunting program, however, I do not support it becoming a way of life. We cannot have all of these seasons. Please give some consideration to making the Youth Hunt a "1 and done" experience. That being, once you kill a deer as a youth hunter in the early season, you now become a 9 day hunter like the rest of us. This season has become a source for illegal hunting. That season changes the archery deer patterns and does not give the youth hunter a realistic view of how Wisconsin hunts deer. Seems to me, if the DNR is as eager to kill anterless deer, why not make the youth hunt an antlerless only season?

I see a lot fewer deer than I did 5 years ago but there is a lot of private land that doesn’t get hunted. The public land gets pounded opening weekend pushing deer into surrounding private land. The hunting success on the public land near me is low for the number of hunters, could be due to several factors but even after season the numbers are lower. I think the mild winter should help with fawn survival. I don’t think the predation is a huge factor yet but probably is going to be within another year or so due to good wintering conditions and lack of hunting. I appreciate the online survey option being offered this year.

One thing you should look at is putting up and leaving tree stands on county land during the season. I am going to be 65 years old this season. It is to hard to back pack a portable tree stand in and out every time I want to hunt. It is no different than leaving an ice shack out on the ice all season. I know several hunters who have stopped deer hunting because you the DNR make it to hard on the aging hunters. So please let us put up a portable ladder stand and leave it through the deer season on public land. So we can walk in quietly and get in the stand without spooking all the deer in the area. Thank you.
If the population is so high Wisconsin really needs to allow Barron county and others facing to extend the gun season to a 2 calendar week season instead of a 9 day season. It's a fact that gun harvest rates are significantly more impactful to population control than now harvest rates. Additionally, it has been unfair that for decades now hunters have enjoyed the luxury of hunting through the rut while gun hunters have to wait until the very end of the season to get their turn. If you want to bring balance to the deer population and equity to the hunt for sportsman extend the gun season. Plain and simple.

I saw two deer, 3 bear, and 4 coyotes on opening day. My brother and a friend both shot deer and before they could recover them the coyotes got to them. There is no real effort to control predators. This bothers me but the most disturbing thins is the Kaz movement to exclude some hunters from hunting his deer during prime rut period. There should not be so many limiting issues coming up to each year. If the goal is to decrease the deer population lets do just that but with balance. This fight between hunters must stop. I feel it's time for science to rule and not politics or special interests.

I my opinion, the land that is hunted in barron co. Is very much private. You can give out all the antlerless tags you want it's not going to affect the population on private land. The land owners need to shoot the deer and most that I've talked to just don't care if they shoot any, they don't need the meat. Its not like it was 25 even 15 years ago, people don't hunt like they used to. Less driving deer, now people just sit and hunt their own land. That equals less deer movement and less deer shot. Giving more tags won't help. Anterless only seasons only makes hunters mad. Good luck.

The poaching in our area have become an ever-growing problem. Night hunting, trespassing, road hunting are all up. We had plenty of deer in summer. Perhaps 4 or 6. By hunting season, there was one small doe left, which of course we didn't shoot. Perhaps some of our county has a high population. But not around Arland and Prairie Farm townships. I'm going to take license plate numbers this year. We've been reluctant to turn people in, but it's gone far enough. My husband was almost shot by road hunters north of our 40 acre woods where we hunt.

I hunt public land in the Northeast corner of the county and the wolves have basically wiped out the deer herd vs 20 years ago. I have two kids that I am trying to introduce into hunting and it becomes very discouraging for them not to see anything. Likely they will stop hunting altogether if this does not change. I don’t expect there to be deer all over the place but it is frustrating when I know this same land used to have so many more deer. There are dramatically fewer hunters in this area so I know they have not contributed to lower numbers.

I have owned land in Barron county for 3 years. The deer population is higher than other parts of the state and we selected land in the county specifically so we would have a better chance at harvest deer on our property. We have been fortunate to harvest several deer each of the two hunting seasons we have owned the property and would oppose efforts to substantially reduce the size of the herd. While some reduction seems to make sense esp. given the desire to limit disease, we hope to continue to have successful harvests for years to come.

There is a huge difference in the amount of deer on the east half of the county compared to the west half of the county. The west half has a much larger number of deer than the east half. The deer harvest number is not accurately reported due to call in/online registration. This type of registration does not work in a state with 600,00 hunters!!! No one at the DNR is listening to landowners but the biologist’s have any easier job now...good for them.

DO NOT extend the bow season. To extend and yes I know you are not going to do it this year. However it is something that is on the table. That would be a JOKE can there be a POORER way to control deer numbers than using a bow. Look at how much time they have to hunt now. EX: they start their season in September and go to the end of December four months minus a couple of days for the t-zone and rifle season, wait I forgot they can hunt those season can’t they. So again it is 4 months to shoot deer and they want more please.
I feel that East of Rice Lake should be included in unit 18. West remain in unit 22. Unit 22 is too large. Also it was unclear last year if one could use their rifle doe or buck tags for the muzzeloader season. Also is there a way to find private land owners willing to post or accept applicants to hunt their land? Seems to be a major task and time consuming challenge finding a potential land owner to ask permission to harvest from there land. Also, I have been seeing more Black Bear than ever in units 18 and 22.

I would recommend an every other year earn a buck season, hopefully this would keep a check on the antlerless deer population while possibly bringing back a better buck population. I am seeing far more does than bucks and I’m retired and spend most of bow season and all of rifle season in the woods, more bucks means keeping the younger hunter in the woods, they have the mentality that they have to shoot a buck in order to get praise from their friends, it’s not important to get meat for the table.

Too many Private Land Owners are not allowing hunting on their property, or at best, hunting the land themselves and harvesting 1-2 deer, resulting in a large number of unharvested deer being able to stay in a "safe zone" for the entire rest of the season. Public Land Owners should have to open their land use to hunting beyond their OWN hunting use, to help reduce the number of unharvested deer. Either that, or if it is farmland, they should lose their right and ability to claim deer damage.

If there was an increase statewide to license sales for resident and non resident each county could to help aid in CWD registrations a program to have your deer tested provides a credit back to the license purchase or option to donate that credit to ongoing CWD research for Wisconsin. Additional option to donate testing credit to conservation programs for land to be enrolled into easement access for public grounds not used or as accessible, wetland enrollment, pollinator, etc.

CWD is a hoax to try to eradicate the deer population the reason the harvest numbers are down is because the DNR has made it way to East for the poachers to continue doing what they do no back tags makes it hard to turn violations in to the authorities the DNR are more interested in giving out fines for people feeding wildlife then controlling violating hunting use to be a family get together now its a joke nobody wants to hunt because of the lack of control of the violators

try to increase herd alittle back to some years past. unless habitat is solely agriculture deer density is quite a bit less. No holiday or extending into january hunts. If need to harvest some antlerless have a 4 day hunt in October which includes the youth hunt during same time, don't need a seperate time for a youth hunt that way. With increasing predators especially bears killing more fawns we need to increase densities to provide better hunting and seeing more deer.

I would like to see a buck management program that would increase the age of bucks harvested. Example - only bucks with 3 or more points on one antler may be harvested. I understand this would initially reduce buck harvest numbers for the first year of the program, but by year two the kill should return to similar numbers as there would be more mature bucks to shoot. MN and many other states are trying this with great success. Thank you for taking suggestions!!

I think owners of 35 acres or more should get one , maybe two antlerless tags,free of charge. With today's computer systems you can keep track if the people that recieved them are using them or just have them to keep other people from being able to get one and the animals numbers not reduced. PETA MEMBERS (example) In other words the people that are feeding them. So if they dont show a kill in two years , they shouldn't get free ones anymore.

I am an advocate for quality deer management (QDM). This philosophy highlights the importance of harvesting antlerless deer and not harvesting young/immature bucks to improve the chances of harvesting a mature buck and to increase the buck:doe ratio. I would love to see a change in harvest policies such that a buck must have at least 4 points on one side to be harvested while at the same time also promoting the harvest of antlerless deer. Thank you!
I liked the number of licenses that were issued for the 2019 season. I hold onto my buck tag for an older deer so some years it is not used. On the land I hunt the population may be getting a little high and causing more damage to crops than many would like. I’m more worried about diseases in the herd because my family eats venison year round. I would purchase extra antlerless tags to keep the numbers down if that was the goal continues to be.

Such a small part of the county is land that the DNR can actually control and the overall deer numbers are extremely low on public land so I don’t understand why they want to decrease it anymore. If the deer numbers are high on private land maybe you should find a reasonable way to get those numbers down without completely destroying the public land. I also feel you should charge a fee for doe tags. The holiday hunt is a bad idea for the county!

Please lift baiting restrictions. It makes no sense. CWD is passed through deer poop and then into plants. Deer poop in the spot where bait is placed makes zero sense in try to control the spread. I can take you up on our 40 acres in the spring I could show trails upon trails that the deer use that have have solid deer poop on them. I have read many articles that show baiting does nothing in spreading the disease.

In the future would be nice to tie in wolf population and predation numbers. While we haven’t seen wolf on camera yet at our place in Cumberland we are starting to hear others talk about it seeing them. It is something that will need to be watched as it could be an outside influence on deer population that is not being considered. At least not in these numbers that we have seen in this presentation. Thanks for sharing!

Hunters need to stop shooting all the yearling deer. The hunting parties on surrounding properties seem to shoot anything that is deer-shaped, regardless of size. We’ll never see trophy deer as long as they keep shooting all the little ones. It’s hardly even fun anymore when you see guys dragging 90-100 pound white tails out of the woods. If they want to shoot small animals, they should focus on the growing coyote population.

Where I hunt, which is about 10 miles northeast of Chetek, the deer herd is abysmal. The population has been steadily dropping for years. At dusk when I used to see many deer in the fields I only see a few if I am lucky. During rut in my journal I used to see 30 to 40 deer in the week starting on Halloween. I now see 4 or 5. I have moved around some in that area on private and public land but the results are still the same.

Quit trying to change and/or extend the hunting seasons. Keep the bow hunting season as is, and keep the traditional 9 day gun season starting the Saturday before Thanksgiving and ending the Sunday after. WHY do you think these seasons need to be changed? Its been that way for many years, for many reasons and it has worked well. I believe in the youth hunts, but the Doe only season should not ever happen again.

2 friends and I have purchased land in Barron county, we have worked out tails off to make our 66 acres a deer haven. We have been hunting archery (vertical) the immediate area, public and private for many years. In our specific area, we definitely have a very large doe to buck ratio. We plan to do our part to hopefully lessen the Doe population. I am very impressed at the view of the Wisconsin DNR.

All in all, I feel that the DNR has us taking out WAY too many antlerless deer. The population of deer is so much lower than what it used to be. I do not feel that the DNR is doing a good job of managing the deer population. In fact, I think humans need to back way off of trying to manage the population of any animal. It isn’t our job. I do enjoy hunting, but we have taken the deer almost out. Not good. Shame!

I think with kids of all ages being able to shoot a deer while hunting with a guardian we no longer need the youth hunt. In our area it just seems like the youth hunt is just opportunity for the parent to shoot a nice buck out of season. Make this a doe only season if you think we need it. This hunt interrupts our bow season. I have 10 grand children (ages 4-16) and we don’t need the youth hunt any more.
I strongly support the antlerless harvest recommendations. There are so many deer out there! I have cannot grow trees in my woods without tree shelters. They are ravaging my flowers and shrubs. I have concerns over vehicle accidents. I predict even if they shoot the quota there will not be a big change in the deer population. Also, with CWD knocking on our door, population management makes sense.

From what I have read in the charter the CDAC is to gather public opinion. I would hope this survey and the other Surveys that are filled out will be taken into consideration. We seem to see in years past, it seems that the whatever the wildlife manager and forester carry way more weight in the decisions then the public. I hope in the future we the public have some say in what happens to our herd.

DNR has suggested an earlier deer gun season before. But turned down by hunters. Michigan starts on Nov. 15th, regardless of the day it falls on. This year we were post rut. Cold and deep snow up north. Deer not moving. Deer very nocturnal. Earlier hunt would be more enjoyable. Hunters would stay in the field longer and harvest more deer, rather than killing them on the highway with our vehicles.

We need to consider alternatives to increase hunter numbers, for example reduce the non-resident license cost to 2 times that of residents. This would increase the kill AND boost the economy. A non resident with a couple of 18 year old kids faces a massive bill to hunt in WI, when he does not start the kids hunting here they will not consider WI later in life. KILL MORE DEER!

Hello, I hunt in the south west corner of the county. We have seen a lower number of deer in our neighborhood. I have spoke to my neighbors and we have all came to the conclusion we need to stop taking anterless deer to increase the herd. We have been able over the years to fill our tags but last year and from what we see in the area we are not going to fill the tags.

While hunters in Barron county understand the need to not bait due to CWD, this change over the last season has had a dramatic effect on the hunters I know. Many hunters in the area reported seeing little to no activity during active hunting hours. If the goal is to decrease the deer population in Barron county, baiting needs to be allowed, if even in minor amounts.

Deer populations in Barron Co. have declined a significant number since 2014-2015 in the area I hunt. Predators (coyote, bears, and wolves) can confirm seeing all three in the area with documentation have drastically reduced the herd. Wolf coyote and bear populations need to be regulated/ hunted more to reduce the amount of damage they have done to the herd.

The Southeastern part of the county near New Auburn, Chetek, have very few deer. West of Sand Creek area the numbers increase significantly. Two free doe tags is simply unsustainable in the Southeastern part of the county! 5 hunters on 150 acres saw three deer all season. A doe and two fawns. We had 10 free does tags and we never pulled the trigger!

The county needs to be split. The eastern half has very few deer vs the western half. We have been telling the board this for years. They do not hear what the people are requesting. This is why participation and hunting is disappearing not only in Barron county but throughout the state. Hunters want to see deer while hunting.

Plenty of deer around. Browse lines very evident. Would like to see more hunting opportunities available to those who choose to partake - Holiday hunt, extended bow season, etc. Not saying I would participate, but see no reason to limit the opportunities to those who would - especially since the harvest goals are not being met.

Barron County is not all crop land. The NE portion is mostly woodland and has a smaller deer population. Treating the entire county the same way is not an effective way to control deer population. There are already metro units in other counties, why not separate some of the units where the entire county doesn't fit the mold?

Don't like extra hunting seasons. They take away the the traditional "hunting season". Which in itself has been like a holiday in WI and we are loosing it. You travel around later in the week during season there is very little pressure. So the people would have time to make a harvest if they wanted to without adding seasons.
The way of hunting has changed dramatically in the past few years. Being that Barron County is mostly private land and most landowners don’t give permission to hunt. The deer aren’t getting pushed around so people don’t see as many deer during the hunting seasons. Mainly during the rifle season.

I feel that the landowners with 25 plus acres of land of which 20% is planted with agricultural crops, should be allowed a land owner permit to harvest a bonus deer on their property. The 50 acre thing doesn’t work for me because I only have 40 acres. That said 50% of that land is crop land.

I hope we will continue to be able to bait for deer if possible. This should increase the percentage of success for hunters, and hopefully continue to avoid overpopulation. However, I support using the best evidence for decreasing CWD spread, if or when that evidence becomes available.

Take into consideration the wolf, bear, and coyote predation. I’ve found several in the spring last year. Lots of winter kill in winter 2017/18. This year I’ve not found as many, but have not got out as much. Something to consider on the amount of antlerless tags that are available...

Please maintain crossbow use through the duration of the archery season. I personally have used it as a very effective method of introducing my sons to hunting, no recoil, longer season, close shots. It would be a major step back, in my opinion, to reduce crossbow hunting.

I don’t think that the state should raise the cost of a nonresident license. Many family members who live out of state, now have begun to rent land for hunting rights in their home state, when they use to hunt in Wisconsin and contribute $ to the Barron County economy.

Get rid of deer farms and all others which create risk to wild life population, ie CWD. Seems like this group has a lot of say in how it is managed. It is not right that public has to pay of arrogance of a few that insist on raising these animals for profit.

I oppose restricting crossbow hunting. It has allowed my daughters to bow hunt. If restrictions are considered I do not think they should apply to youth who may not be able to use a vertical bow, or to older people who may struggle with a vertical bow.

Not sure if anyone else in Barron county has the same thoughts but this year I have seen an increase in the wolf population on my trail cameras on my private property. Maybe it has to do with myself not seeing as many deer as I normally do?

Hope we can bring the herd back to what it once was. We enjoyed way better years ago. I can remember going out shining deer with my dad and we would see tons of deer on the fields. Now you would go and shine deer it isn’t anything like that.

Our 90 acres of recreational hunting land is hunted using management practices of harvesting mature bucks & doe. I don’t believe additional doe only seasons are required in our area of Barron County at this time. Thank you

I am doing the survey for the hell of it. Nobody pays attention to what we say anyway. The only thing that gets the attention down in Madison is if we stop buying licenses. One more year of seeing no deer and that will be what I will do.

In Barron county for the past 2 of the 7..we saw very little deer. The only buck we saw was incredibly small. I would like to see better management of deer by not given more tags to kill does based on the volume we were seeing.

There needs to be more bear tags gave out to hunters. As a farmer I see more a lot more damage from bears then I do deer. In the square section that I live in last fall there were 5 bear killed. All in deferent fields and woods.

There needs to be more bear tags gave out to hunters. As a farmer I see more a lot more damage from bears then I do deer. In the square section that I live in last fall there were 5 bear killed. All in deferent fields and woods.
Hi, I believe that the 2019 harvest kill decrease would have to do some with the online registry, I myself find it easy to forget to register deer. I believe that there are a lot of deer that may not be getting registered!

I believe that less out of state licenses should be sold. People that live in the state that hunt public land have a hard time sitting in a spot without groups of out of state hunters doing drives right through the same area.

The deer herd declined steadily over the years and no one seems to care. The extra tags are bought and filled by people just giving deer away. I don't think the DNR is really in touch with the hunters or deer herd numbers.

Increase out of state license amount, unless the hunter owns land or property in Wisconsin. Decrease the total amount of tags given out. Take wolves of the endangered list. Make a bounty for coyotes and wolves.

Would like to see bow hunting open from mid-Sept until the end of the year or early January, with no closures for youth/gun. I hunt private land with bow only and could care less about extending the gun season.

Shorten bow season. Move gun deer season to earlier week or create blocks of days that can be chosen like turkey hunting. Traditional thanksgiving week needs to be changed. To many distractions with holidays.

The deer herd in most of Barron county is over abundant. Herd numbers should be lowered to maintain a healthy population. I would like to have a stable healthy deer herd for my kids and grandchildren to hunt.

There has been a significant increase in predators of deer...which seems to cause a problem of deer moving on to another nearby area without a predator than the number of deer eaten by the predator.

I am an out of state landowner, I pay my taxes and such just as much as a person that is a resident landowner, when will us non resident landowners get some sort of break on the price of our tags?

I do not agree with extending the traditional gun season by 9 days. I also do not agree with eliminating bow season the week before gun season. This is typically some of the best hunting!!!

For Conservation Patron Combination Licenses allow two antler tags and four antlerless tags for the 2020 crossbow/bow season providing for a better chance in the decrease population hoped for.

We need to split the county. We the public have the only thing that will make people listen to us and that is stop buying licenses. Money is the only thing that will get Madison attention.

Wide spread storm damage had a significant affect on hunter access last fall and likely changed the patterns of deer as well. I would expect this will result in a higher harvest this fall.

I propose being able to purchase a buck tag and doe tag for muzzleloader hunt, instead of how it is now that if get one during gun hunt I cant go muzzleloader. And would increase revenue.

The deer numbers are higher and kill numbers are lower because majority of people dont register deer anymore. Bring back registration stations that could double as cwd testing locations.

Too many hunters and too few deer. Probable cause is multifactorial: too many deer harvested, too many hunters, deer population has not revived since decimation a few years ago.

I’m afraid that CWD isn’t being taken seriously enough. More needs to be done to ensure that we have deer to hunt for future generations. Start by banning high fence deer farms.

Shouldn’t we try to keep numbers up. If you take kids hunting and they do not see any deer day after day. We are not going get them into hunting. Not a hard decision to make.

We as hunters have more than enough time to shoot a deer if we what so making longer seasons and giving out more tags will not change our views. Thanks.

Number of permits issued isn’t the issue. lack of hunters. i could be issued 20 permits but it doesn't do any good if I can only use 1 or 2 permits for my venison needs.
I think Non resident licenses should be cheaper for family members that live out of state. When my Grandchildren get older they will not be able to afford to hunt.

Can we split the county? I am filling this out again this year. I hope next year more thought will go into what the public wants!!! Not what Madison wants!!!

Same every year. The deer Are not plentiful. Why do you Think people Are not Hunting. Split County as asked before.

Thank you for the opportunity to be involved. Continue doing the great job you have always done and vote for our environment and those that enhance it.

I am not going to hunt this year I haven’t seen much the last 5 years and it is time to save my money. The herd just isn’t as large as you say it is.

I would like to see the public and private anterless tags changed to JUST plane anterless tags and not specifically have to be used for either or.

We need to increase deer herd. When I hunt public land you don’t see anything. I asked the other hunters and they say the same thing.

I hunt in both Barron and Polk county I would like an anterless tag that could be used in either county. I own land in both counties.

CWD research and mitigation should remain the highest priorities for whitetail management in Wisconsin and throughout the country.

Believe current licensing and deer seasons are good. Don't recommend changes to Archery, Crossbow, Rifle or Muzzle Loader seasons.

Way too many tags given out. I feel every two years or so no tags for antlered deer. Way too many SMALL bucks being killed.

I am opposed to the extended "holiday" hunting season. Concerned with what it would do to the deer population in our area.

I agree to keep 2020 deer hunting quota the same as 2019. A separate doe season is not needed in this unit.

stop killing all the deer the DNR is wrecking hunting and its foundation that it was built on. no youth hunts

I was out hunting everyday of the season and I didn’t see a single deer, many other hunters had this problem

Monetary offense for any deer feeding. Keep deer numbers at or lower than current to have a healthy herd.

We are seeing less deer on the east side of the county. We still are hoping you can split the county.

This is sad. I am ready to stop hunting if this is the way you are going to manage the deer herd.

More seasons=good. Limited Draw for antlered tags and allow more pressure on antlerless. My 02.

We have more than hunting reducing our herd. We need to go with bucks only for 3 years.

Please simplify the licences, why cant we have buck tag, doe tag, and bonus license

Limit native American poaching Have a wolf season Have more intensive Turkey hunts

Way too many crop damage tags are issued. Let the hunters have a chance at the deer!

There aren’t the deer numbers on the western side of the county you think there are

if we want lower deer numbers because of very mild winter extend seasons.

The wolves have wiped out the deer population on the public ground

Please reduce the amount of anterless tags are being issued.

Bayfield, Northern Forest

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

789 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 270
   - I visit this unit for non-hunting purposes: 254
   - I hunt in this unit: 737
   - General interest in this unit: 163

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 698
   - Bow: 347
   - Crossbow: 259
   - Muzzleloader: 226

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 27.05
   - Maximum: 70

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 159
   - Mostly Private Land: 105
   - Public and Private Land About Equally: 150
   - Mostly Public Land: 99
   - Exclusively Public Land: 217
   - I did not hunt in this unit last year: 7

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 17
   - Not too crowded: 108
   - Neither crowded nor un-crowded: 106
   - Somewhat crowded: 133
   - Very crowded: 198
   - Not applicable: 9

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 195
   - Fewer: 251
   - Same: 228
   - More: 83
   - Many More: 21
   - Unsure: 11

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>

</tbody>
</table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...

- Implement an ANTLERLESS HOLIDAY HUNT: Not applicable in this DMU

If a Holiday Hunt is held in a Farmland unit...

- EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: Not applicable in this DMU

If the Population Objective is not "Increase"...

- Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 62 677 50

If a Zero Quota (buck only season) is adopted...

- ...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? 417 297 75

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit? Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

Comments for Bayfield, Northern Forest

Note: the comments presented in this report are the unfiltered opinions of individuals who responded to an online public input form. The viewpoints expressed do not represent the views of the state of Wisconsin, the Department of Natural Resources, or its employees.
Addional comments Regarding the 2020 Bayfield CDAC Antlerless Quota

Thank you for the opportunity to further outline my opinion regarding the preliminary antlerless quota for the 2020 deer season in Bayfield County. Below I have outlined my observations and opinions of deer hunting and deer management in Bayfield County as someone who has deer hunted near Drummond for more than 50 years. I reviewed the recently posted 2020 Bayfield Deer Metric Report, viewed DNR Wildlife Specialist Todd Nass’ on-line presentation, and was one of the 27 “public” individuals who participated in the 8 April telephone conference. I am led to ask some questions about the future goals of deer management in the County. While the CDAC is focused on the 2020 recommendations I believe they must also be looking well into the future if deer hunting in the County, especially the quintessential Northwood’s Deer Camp experience, is expected to continue. The numbers in the metrics report and from Mr. Nass’ presentation in my opinion do not support the further reduction of the herd in Bayfield County, especially considering my observations in the national forest found in the southern part of the County.

Most of my deer hunting in Bayfield County since 1969 has been done in the few sections of land between Drummond and Lake Owen, although our group has occasionally hunted other parts of the national forest around Drummond just to see if the “grass was greener”. It wasn’t and we always seem to come back to our traditional area where we have had success, that was until the last 10 – 12 years. This area has continuously been hunted by individuals from my southern Wisconsin community since the early 1900’s, making me the fourth or fifth generation to enjoy the sport and fellowship of a Bayfield County deer camp. We are hoping to convince another generation to continue the tradition, but it is becoming increasingly difficult to persuade them to join us. One of the major reasons is the lower quality of the hunt as documented by reduced siting’s and harvest since the mass “kill-off” of the early 2000’s. It is my hope that the committee understands that by my calculation the majority of deer hunters in Bayfield County are not residents of the county and many, like me, drive hundreds of miles to hunt. We expect a high quality hunt and the reduction of the Bayfield County herd is preventing that from happening. I don’t believe our voice is being heard by a committee comprised solely of County residents. That is not your fault, but rather it seems to be a rule regarding the structure of the CDAC’s that don’t allow folks like me who only rifle hunt in Bayfield County to belong to Bayfield CDAC. Let me outline some of my thoughts from what I read in the 2020 Bayfield County Deer Metrics Report and watching Mr. Nass’ presentation:

- The 2019 total harvest for Bayfield County declined to 62% of the 2017 harvest. The buck harvest declined similarly. Mr. Nass did a good job of outlining the double whammy from the historic impact of the late seasons on harvest numbers and the snowstorm impacts. However, the first four days of the season had exceptional conditions with relatively mild weather, calm winds, and fresh snow. The majority of deer are typically killed opening weekend and those numbers were lower compared to previous years from reports I recall, which dampens some of the logic for the loss of the last half of the season.
- The report’s data show that while 55% of the deer range is considered public, it only provided 42% of the kill. If it is assumed hunters are somewhat evenly distributed across public and private land the success rate is significantly lower on public land. Yes, it is more challenging to hunt public land as heated blinds, natural field edges and travel lanes, crop fields, and long-term baited areas are uncommon in the public forest. But could it be that simply deer numbers are lower on public land because of over-harvest and predator pressure, especially in the national forest?
- The reported data show that the period from the late 1980’s to about 2008 Bayfield County had a much higher harvest, and therefore a proportionally larger herd. Was this increase from the low harvest numbers of the 1970’s due to more abundant food from younger browse, milder winters, less predator pressure, or inadequate antlerless harvest? Regardless the herd increased and the total harvest averaged in the range of 8,000 – 10,000 animals (6 – 7 per sq. mile), with the buck kill averaging around 4,000 (3 per sq. mile) over this 20 year period. Then came the early part of the new century when a decision was made to reduce the herd by the generous issuance of antlerless tags and special seasons. Following that slaughter a seemingly new norm has been established that appears to manage for a herd size that supports a harvest of bucks in the range of 2,000 – 2,500 animals (1.5 – 1.8 per sq. mile). Hunters have been forced to see their potential to see deer and harvest a buck decreased by nearly 50% in the past decade based on buck kill decrease over that time. Is this the “new normal” that hunters are expected to accept? If so, it is not something most support.
- The success rate for bonus tags on public land in 2019 as shown in the report for Bayfield County
was 21%, or about a third lower than previous years when it’s typically been 30%. It leads me to wonder if those that purchase them are bad shots, were hunters waiting until the end of the season to harvest a doe and got snowed out, are not filling them earlier with a bow to ensure meat in the freezer, or are there simply substantially fewer deer on public land than what DNR managers estimate. - The reported data show the Post Hunt Herd Abundance numbers for Bayfield County dropped by over 25% since 2017. Was this due to increased hunter harvest, predators, or the severe winter of 2018 – 2019 when heavy snow went late into the spring? Mr. Nass modified the 2019 number upward in his presentation to the CDAC, but still it shows that the “reduce the herd” strategy is working, to its extreme I might add. The goal to “slightly” reduce the herd has been accomplished. The adjacent counties of Ashland and Douglas are each showing a similar reduction in their Post Hunt Deer Population estimates. The herd in those counties decreased 22 and 24% since 2017, respectively. Interestingly both Ashland and Douglas County have an increase the herd strategy, which doesn’t seem to be working. It makes one wonder if non-hunting factors such as predator kill, winter severity, and perhaps unknown disease are more significant in terms of the number of deer on the landscape. - If in fact deer are so abundant in the county there should be numerous Ag. and nuisance complaints. These numbers have been insignificant for several years and apparently where a complaint is made a shooting permit is issued to address the problem. - The concern that there are high deer numbers and are causing too many car-deer collisions is noted in the report. Mr. Nass’ report showed the Bayfield County Sheriff’s numbers were about twice as high as the DOT numbers. I’ve hit four deer in my nearly 50 years of driving, one on Highway 63 just south of Drummond. Admittedly it’s not a good experience. However, when one compares the relative Post Hunt Abundance numbers for 2014 and 2015, which were about 18,000, it seems to have little relationship to car-deer collisions as in succeeding years car-kill numbers were similar and deer numbers were higher. The number of post hunt animals was nearly double in 2017 and 2018, showing over 33,000 animals. I believe relatively inexpensive gas, good roads, and an increasing desire for an outdoor experience equals more miles driven and increases the opportunity for a car-deer accident. - I am surprised by the hunter deer observation numbers. Depending on the survey type hunters recently report seeing between 0.43 and 0.74 deer per hour. Of course these could be the same animal wandering about the forest in its normal habitat, as there doesn’t seem to be the hunter numbers anymore to move animals. We hunt roughly 10 hours each day opening weekend. I’d wet my pants with excitement if I was seeing 4 – 7 deer per day and I guarantee I would not feel compelled to write these annual missives to the Bayfield CDAC. My buddy sat on my Dad’s stand Saturday through Monday this past season, for about 28 hours total and saw zero deer. There was a reason that was my Dad’s stand, as he seemed to harvest an animal every year and it was his for opening weekend. Where are all these deer hiding in the national forest? Based on my review of the data presented in the 2020 Bayfield County Deer Metrics Report, Mr. Nass’ presentation, my observations of deer numbers throughout the year near Drummond, and the CDAC 8 April meeting discussion I offer some thoughts and suggestions regarding the antlerless harvest quota and overall deer management for Bayfield County, which I respectively submit to the CDAC for their consideration: - It is now appropriate to change the Bayfield County deer management strategy from “reduce” the herd to “maintain” or even “build” the herd strategy based on the current post hunt population estimate. The herd has been more than “slightly” reduced as originally intended in 2017. This would be immediately accomplished by reducing or eliminating the 2020 antlerless quota. I believe Mr. Nass clearly implied deer numbers have been reduced more than intended and states in the discussion portion of the 8 April minutes that further reduction “will likely be unpopular by the public”. Long-term hunting quality will continue to suffer and the future reputation of Bayfield County as a quality hunting destination will suffer, resulting in significant social and economic consequences. - If it is determined that an antlerless quota is needed it should focus on where the deer are located, i.e. the farmland that is of course mainly private land and the county forest according to the local forester. Quotas should be lower in the national forest, which has declining deer habitat. Bayfield County Forestry Department reports show that 28% of the land in the county is in the national forest, whereas 18% is in the county forest. Unfortunately such flexibility for managing public forest land does not exist in the CDAC program. There is clear frustration among the Bayfield CDAC members that they do not have the flexibility to manage their county as they see fit by making geographic or habitat-type
adjustments. -The committee should recognize that something beyond hunter harvest is substantially affecting deer numbers as shown by the 2019 post hunt numbers. The observation that deer numbers are declining in Ashland and Douglas Counties shows that even under a build the herd strategy deer numbers decreased in 2019. Mr. Nass discussed the 2019 – 2020 winter severity (WSI = 102), which is very severe and actually started before it first calculation date of 1 December. While he stated the deer he saw looked healthy this early spring, I question the reasoning to abandon the very severe WSI value interpretation and select an ambitious quota for 2020. -An interesting comparison can be made between Douglas, Bayfield, and Ashland Counties, which each have 50 – 55% public land (mostly in public forest), active privately-owned agricultural areas, and similar landscape and weather. The Bayfield CDAC continues to recommend a 60:40 private:public split for antlerless tags. The 2020 proposed quota of 1500 antlerless will result in 2250 and 2000 tags for the private and public land, respectively when corrected for hunter success rate. What are the adjacent counties recommending on their land? In 2019 Ashland County offered zero tags for public land and Douglas County allowed 31% (250) of their tags on public land. The proposal for 2020 in Ashland County is a quota of 200 on private land and 0 on public land. Douglas County will not have an antlerless quota if their preliminary recommendation is accepted. -The comparison of quotas between the adjacent counties begs the question of why the recommendations are so different. Bayfield County adopted the reduce the herd strategy in 2017, being the only county to do so north of Highway 8. Both Ashland and Douglas Counties selected a build the herd strategy. It seems that much of the reason by the Bayfield CDAC for selecting the higher quotas has to establish a smaller herd size on public land because of forestry management considerations. This is mostly due, in my opinion, to the zealous recommendations from the county forester, which actually represents a bit over one-third of the public land. Looking back at the CDAC minutes from August and October, 2017 when the strategy of build the herd was changed to reduce the herd the forestry representative made both the preliminary and final motions to reduce the herd, which were then approved by the CDAC. The forester also made the motion to set the 2000 quota for 2019. At the recent 8 April meeting he made the motion to have a quota for the 2020 season and in the discussion prior to the vote lobbied for an even higher quota than what was eventually accepted. He wanted to reduce the herd by 4% rather than the accepted 2%. It is very apparent to me that his influence on the decisions of the CDAC favors a significant herd reduction that will only further result in the decline of hunting quality in the county. His input, in my opinion, overwhelms that of some of the other members who don’t wish to speak against the forestry industry that is undeniably important in the County. I appreciate the economic significance of the forestry industry in Bayfield County, as clearly the county forest is a “working forest” and is managed to provide economic return to citizens. However, based on my long-term observations there has been little timber management in the national forest, especially that which would support deer management. Over-browsing can be detrimental to forest growth, however the one-size high quota for public land does not fit equally on the both the county and national forest. The forestry representatives in Ashland and Douglas County CDAC’s do not take a similarly aggressive approach and seem to appreciate that there is a balance between browse damage and deer hunting quality and opportunity. -A huge component of deer hunting that the Bayfield CDAC is overlooking is the consideration of the social and economic factors that are impacting hunter participation and local economies. There was very little discussion of the economic impact provided by hunters during the 8 April meeting. I have observed a significant decrease in hunter post-hunt activity in Drummond over the past several years, especially since in-person registration was discontinued. The minutes show the tourism representative had “No concerns” when he had the opportunity to provide it during general discussion. The current CDAC must be forward thinking with respect to how their decisions will impact the future of deer hunting in the County. There appeared to be no consideration of what the deer season and hunting will look like in ten years. There will be impacts because of the depressingly low hunter success, loss of the social comradery that comes from a successful hunt, and the loss of tens of thousands of dollars that will not be spent at bars, restaurants, gas stations, and other businesses. -I applaud DMAP member Tom Erickson for speaking up about the negative impacts of extensive baiting, which in my opinion allows deer to become nocturnal and have a smaller range. It is important to have such comments in the public record, even if not popular with some. County CDAC’s should have the ability to write and pass resolutions for DNR,
Conservation Congress, and public consideration. As an example the ability to divide the county to address deer distribution concerns would allow for local authority to better manage the herd. These would likely require a special approval or variance from the Natural Resources Board. Why not develop resolutions on issues like baiting and sub-dividing county management for the NRB as advisory suggestions, so that group can gain a bit of the pulse in the County. If we can vote on how many bluegills one can keep on a specific lake in Vilas County, as was recently shown in the DNR Spring Hearing Survey, why not have a question about deer baiting in Bayfield Co.

The high antlerless quota for the past two years has frustrated most of the hunters I talk to around Drummond, both locals and non-residents such as myself. Recall that the survey that was taken after the 2019 preliminary recommendations were published asked the general question “How would you rate the antlerless quota recommended by the CDAC in this unit”. Of the 275 respondents 57% said it was too high or much too high. Only 15% said it was too low or much too low. Considering this opinion I am wondering why the Bayfield CDAC ignored the majority of their constituents and supported a reduce the herd strategy if only 15% of the respondents wish to continue to reduce the herd. The 2020 preliminary recommendation continues to ignore the majority of public input.

Finally I think about what deer hunting has meant to me over these past decades from the time I first attended deer camp as a wide-eyed high school sophomore, put in same small cabin with men who fought in WWI. I have grandchildren entering hunting age. I would love to be able to pry them away from their mothers (my daughters) to experience quality deer hunting in Bayfield County. Kids these days have so many distractions and if we are to encourage the next generation of hunters in Bayfield County we must improve the quality of the hunting experience. Recognize that if myself and the other 60 – 70 year olds in our deer camp, and the several other camps in our Drummond neighborhood, are not replaced you won’t have hunters to help control the herd, spend their money at local businesses, or for that matter buy licenses. The Wisconsin deer hunting experience will disappear, at least as I’ve enjoyed for over 50 years.
Thank you for this opportunity to discuss the following topics:  Thanks for listening. BAN BAITING STATEWIDE CROSS BOWS TRADITIONAL ARCHERY (Do Not invalidate archery tags during gun season) GUN DEER SEASON BONUS TAGS, STOP SELLING THEM PREDATOR POPULATION; Spring Bear Hunt and over counter tags for a short time MAKING MONEY VIA LICENSE SALES Bayfield County and the National Forest area is a diamond for the State of Wisconsin and it's people. What has happened over the past decade is very disappointing with regards to the mismanagement of the deer herd. Not only the deer herd but the general fish and wildlife management overall has been atrocious. Last year was the worst year for deer hunting that I have seen in decades. It was not because of the snow fall or the late time period of the hunt. It had mostly to do with the CDAC's decrease the population goals over the past decade. I don't understand why you want to kill all the deer where there are few deer to begin with. There are not that many deer in Bayfield County. I will say that near farmlands, south of Ino, or Mason/Benoit country, there are numbers of deer because of the farmlands. But there is not an abundant acreage of public land in those areas. North of US Hwy 2 that is mostly national forest. There are very few if any farms. It's mostly vast areas of big woods. There are not many deer in those areas! That is where all the public land is, and that is where all the people from down south go to drop their bait piles and claim their spot. Now if private landowners want the population lowered on their property then so be it. But what happened last year was all about money in my opinion. That's what it had to be. The DNR banned baiting in 52 counties and then sold 9000 bonus tags for Bayfield County! What the heck! I have never seen so many hunters in the woods in my LIFE! You can't do that! Every person from down south where baiting was banned traveled to the National Forest lands and dropped a pile of corn. Shot everything that walked. Bambies..lots of them. buck fawns/doe fawns..it didn't matter. If it was brown it was down. The numbers of trucks on the fire lanes was insane. I have never seen anything like it. What is tremendously sad is what our state has done for the deer hunting tradition as a whole. We have generations of hunters who believe they cannot kill a deer without a bait pile on the ground. That is so sad. It is pathetic. Please BAN BAITING STATEWIDE! BAN BAITING STATEWIDE!! If we worry about CDW then BAN BAITING before it comes. It was unfair to ban baiting in 52 counties and sell 9000 bonus tags up north. That was very unfair to us that have hunted in that country our whole lives. I have never seen it like that. Trucks and hunters were everywhere. The sad part about the baiting is that people come to the area, drop a pile of corn, and then claim that whole area as "their stand." They will claim 300 acres. Citing that they "have a stand in there." It creates bad blood, on public land. People in general are very good about it, but there are those who will literally get in a pissing match with you, trying to claim public land as their spot. It's ridiculous. I know that money drives everything. It's sad. People talk about hearing the public, and wanting to do the right thing for the deer herd. Their actions say exactly the opposite. If we take money out of this equation, then the decisions on the deer herd would be obvious. Stop baiting. Stop selling thousands of bonus tags. The questionnaire that was put out in April raised some valid points, but some of the ideas that were asked don't make sense to me. For instance; why would we want to invalidate an archery tag during the gun season? What if someone wants to bow hunt the rut? Say on lands that are private and not open to rifle hunting (metro zone for example). Now they cannot hunt the rut! That is dumb. Also, for those people who want to hunt with a crossbow during the gun season. Why is that so bad? I don't understand that at all. Now if you want to make money I have a few suggestions to help make money and help the deer herd population in Bayfield County. I don't know who does the estimates on the Bears and wolf population but the vast majority of the public will tell you there are way too many bears and wolves. Open a spring bear hunt. Let people buy tags over the counter for 2 seasons and then go back to the draw system. Charge more for the over the counter tags. People will come from all over to kill a bear in the spring or fall if they can plan the hunt knowing they are guaranteed a tag. Bear hunting in the spring would be a burst of economic growth for the locals. Tourism would start coming. Take an example from our neighbors in Canada. Guided spring bear hunts run anywhere from 1000 to 2500 on average! People fill those resorts up trying for spring bear. People would skip Canada (hassle at the border, travel etc,) and they would come to northern Wisconsin. It would hurt nothing to pause the draw system for a couple of years, charge more and offer spring and fall tags over the counter. Bears kill a lot of fawns and take a lot more deer than most people think. The wolf. Well we
Public Input on CDAC Preliminary Recommendations - Spring 2020

know is a difficult topic that involves de listing etc. But we need to keep fighting for that. There are way too many wolves. I see their tracks. Lots of tracks every deer season. I hear them. I see the kill sights. We all know how they kill deer/elk/whatever they can. Coyotes also. The coyote population is very high as well. I don't know if there is some way to make them worth something on the fur market. Maybe offer a bounty on them for a year. Just to get the population in check. That would help. Crossbow hunting: I think it should be limited to those with injuries (note from a doctor), or people over 60 YOA. These young guys run out an buy a crossbow, don't practice, and then wound deer left and right. It's crazy! They have never hunted before, or very limited hunting experience and they get a crossbow and now they can go shoot at a live animal. If you can't change that law, at least increase the price of a crossbow license. Charge residents 100 dollars for a crossbow license. They won't bat an eye at that. Hell they probably spent 2K or more on the weapon. They for sure will spend 100 dollars to go and wound a big buck. Also, charge more for out of state hunters. We are WAY BEHIND in that respect as compared to other states. What are we waiting for? The non resident hunters will still come to Wisconsin because they have dreams of bagging a northern Wisconsin giant buck. This is another way to make money. I appreciate that we have been logging the national forest in Bayfield County, cleaning up the wind storm damage from a few years ago. I have friends that hunt south, between Clam Lake and Loretta. There is very little logging taking place in that section of the National Forest. Logging produces so much needed food to support the deer population and the elk herd. Start a logging program that benefits the deer herd. Rotate the logging operations so we have different aged slashings in different areas of the forest. Logging makes money. Finally. Get rid of the cormorants on the Chequamagin Bay! They are nothing but fish eating "black death." Not even native to this country. Canada allows hunters to shoot them. They know that their fisheries cannot support those birds. The Bay used to be a mecca for jumbo perch. Much like Devils Lake ND. Now there are hardly any perch left in the bay. There are tens of thousands of those birds chasing fish in rafts. It's unbelievable. The break wall is nothing but cormorant nests. tourism for Ashland, Washburn and Bayfield would flourish. People would come from all over in the winter to ice fish jumbo perch. If we had any. Thank you for listening.
Northern forest land cannot be managed the same as the more southern forests/timbers in reference to deer populations because the winter weather and lack of agricultural feed / browse for the animals is not nearly as plentiful. You want to stop the CWD in the state STOP baiting! Same principle as COVID-19 social distancing. I grew up on the farm and every year we vaccinated our animals because ANY time you have animals/people confined or gathering you increase your chances of infection and disease. This is not rocket science! Stop pandering to the video hunting world and do what is right for the deer population so that we can preserve it for generations to come. Southern MN where I used to hunt is a complete disaster now over CWD. You don’t need or want it in the northern forest. I have hunted Bayfield county since I was 12 and I am 54, I have never seen too many deer in the woods. We had a good population back in 2005 to 2010 but we have slaughtered it. I was in favor of the 21 days season, because bow hunters get too long and rifle hunter season too short. With today’s job and work force harder for people to get out in the woods than it was 30 years ago. Longer season would give rifle hunters a few weekends to get to the woods and an opportunity as some rutting bucks. Bow hunting has changed with cross bows and compounds and so the season should change. They are as accurate as a rifle but they are the only ones hunting the rut and now with baiting have the best chances as mature whitetails. Extended season would allow for opportunity to reduce numbers and allow more young people who are in the work a day world to get to the woods. If you look at Northern MN and Michigan UP both provide this opportunity because the hunting is more difficult and the numbers are always lower on the population. I have a cabin in Northern woods and with the amount of money I pay for all to hunt there it is ridiculous but we do it because we love to be in the woods. Don’t have to kill everything to hunt but it is nice to see some deer once in a while. Last few years in clover township have been horrible and with the bad winter weather this year numbers will be down. Stop killing the does and fawns. We have more wolves and bears than down south and they take their toll on the population as well. When we see more of them during deer season than deer then there is a problem. It would be nice if the state offered one resident license to those of us paying resident taxes on our lands. Small pay back for all we spend up there in recreational money and taxes. I would make it a minimum requirement of 40 acres and the owner’s name would have to be on it. Iowa does this but they charge like a 2.00 fee and call it free. Silly people. Free cost nothing. But it is a benefit. There are too many seasons already. We don’t need more seasons for Juniors to hunt. They should be hunting with dad and mom during the regular season. That is how you learn. As a former law officer I witnessed too many times that the Junior season is just another opportunity for adults to hunt early and put a kid tag on their deer. Make the season long enough to accommodate all ages and be done with it. Lastly, I am a bow hunter and a conservationist. I have planted thousands of trees on my property and I can see that the population is so low now that the browse is near minimal. I fight the deer population to grow my trees but I still support increasing the population because it is the right thing to do for the deer, hunting, predator animals and sight seeing. I bow hunt with a recurve and I believe that the season is entirely too long and there should NOT be a season after gun season. Let the cross bow / recurve and compound people have their September to November season and be done. Then gun season and muzzleloader if necessary. Do away with the baiting 100% before we destroy our whitetails. We should learn something from down south! And hunting is not hunting anymore. NOBODY walks, just sit over a pile of corn and shoot out the window of their tree house. That is NOT hunting. That is no different than feeding the cattle on the farm and shooting one for food when it comes to the bunk for corn and hay! Come on we are better than this!!!! And we cannot adjust the deer population because of traffic accidents. People have to live in the animal world up in the northern forest. If you don’t like it they need to go to the city. The majority of sight seeing people love to see the deer and animals and we should not be killing them off but finding ways to make the herd stronger and greater and utilize that as a way to bring in future hunters, sight seeing folks for both the deer and the predators. I could have shot a small spike buck last year but I passed him up. NOT because I am too proud to shoot a spike but because it was the ONLY buck anybody in my 8 person hunting party that saw a buck in 8 days of hunting. We used to see at least 2-3 a year. For the amount of money spent to build a cabin and outfit all for the hunt and pay the licenses it would be nice to at least see some deer each day. Used to hear some shooting from time to time. I think we heard maybe 24 shots all season. I quit hunting in northern MN because the wolves and winters killed the deer population so badly and
they mismanaged it terribly. I invested in Wisconsin near where my grand father and my mother were born and raised. Let us not destroy it here too!!!!!!! I will say that I appreciate the fact that the state of Wisconsin has NOT jacked up the price of licenses yet. Please continue to be hunter friendly this way. MN is now raising their prices and Iowa has been just plain stupid about it. Turning it into a money hunt not a deer hunt. Lets keep the tradition of deer season going by keeping our licenses low, consider one regular license for non-residents per a 40 acre track and maintaining some sense of a deer population for the hunt, the predators and sight seeing folks to enjoy. I hope you listen! God bless!!!
I have not been a supporter of the decision to reduce the deer herd over the past 3 years. In my opinion, the deer herd is being decimated in the area we hunt in around Drummond by management practices that put the food that the deer eat naturally in the forest as more important or having a greater value than the deer themselves. I understand the concept and importance of habitat, but I also know that at there used to be clear cuts and selective harvests in the area that we hunt that profoundly helped boost the deer seen during the season. I understood at the time that this practice was intended to mimic the natural clearing of the forest that used to take place through naturally. The big clear cuts mimicking the naturally occurring fires and the smaller clear cuts and selective cuts approximating the natural blow downs. While very beneficial to the wildlife, at the same time, these management practices were effective in supporting the local lumber and pulp businesses. The wood also generated much needed revenue for the park system and the increase in wildlife brought in hunting and bird watching enthusiasts that supported the local businesses. There have not been any clear cuts or selective hunts in the area we hunt near Drummond in many years. The little that has been done did not benefit from a controlled burn to clear out the slash and more accurately mimic natural processes. The voices of those who spend time in the woods and see first hand the impact of management practices and predators on the deer herd are valid observations, and do not deserve to be declared “false” by those who are chartered to manage resources. This is not educational, it only serves to repress and frustrate those who, right or wrong in their statement, sincerely want to contribute. They end up asking themselves why is it that all the studies are designed by people who seem to only be able to present information that supports the agenda to reduce the herd, and those same parties appear to be actively repressing those with a contrary belief. The impression I get is that the outdoors observations of the interested public only seem to be of value if these public observation and opinions can be used to support the reduce the herd agenda. The presentation I just listened to left me with the impression that the only time the information offered by the interested public is sited as a source is when the observation supports the desired conclusion. I do not understand why Bayfield county persists in reducing the deer herd, while at the same time, the counties around Bayfield county do not feel the need to decrease the deer herd. Why is the data used to decide to increase or maintain the deer in those counties never offered as a basis of comparison to the decision to reduce the herd in Bayfield county? It is not objective or even good science to ignore bodies of data like what the surrounding counties may have used to support their decision, and only consider and present the data that can be used to support the "reduce the herd" conclusion you want to promote. I have a friend who has repeatedly submitted his research on the subject of the deer heard in the area where we hunt in Bayfield County. He is a research scientist and his research is based on facts just as valid as those in the presentation. He asks questions that I would think would naturally be considered as worthy of consideration in any objective research effort, but there was no evidence of such consideration again this year. It is also frustrating, and a little suspicious, that here is never any data what so ever presented that might support any agenda except "reduce the herd". I know from my own experience that those who conduct research are supposed to have an obligation to report all the outcomes of the research. However, it seems the research conducted for Bayfield County only ever supports the "reduce the herd" agenda, while the adjoining counties seem to have access to data that does not allow them to come to the same conclusion. Finally, if you want to see oak regeneration, you should take a walk with my friend, the research scientist who keeps submitting his observations of the national forest near Drummond. There are so many oak saplings on most of the oak ridges and valleys where we hunt that they look like a thicket. The whole area shows little to no evidence of browsing activity. Also, I would like to see some research that considers the impact of continuous baiting on deer habits. I am not talking about attractants; I am talking about long-term piles of deer food. Another study that should be considered to determine the impact of the many acres of deer food crops that are planted on private land are having on the habits of the deer herd. The impression is that bait piles and food plots have encouraged the deer to bed down all day and feed at night. If true, that would have a big impact on hunters seeing animals in the woods and having the opportunity to harvest one.
I have been hunting public land in Bayfield for 3 seasons since moving to the area, and have had success every season. I’ve seen a very reasonable number of deer for the amount of time I put in hunting (I hunt full days, sunrise to sunset, on weekends and weekdays when I use vacation time to hunt, and I do not bait). That being said, I did notice a significant decline in deer activity at the end of October 2019 due to the severe change in weather, when temperatures dropped into the 20's with windchills even lower. The weather pattern shift appeared to really shut down the deer movement, and I expect hunters that hunted only short periods of time would misinterpret the lack of visible deer movement for an overall lack of deer, which would be very incorrect. I’m not sure why, but I did see a significant increase in the number of other hunters on public land last fall, particularly earlier in the archery season compared to previous years. Perhaps it was due to the sheer number of antlerless tags issued giving out of area hunters the impression there were significant deer available for harvest, who knows. The end result was a diminished hunting experience due to harassment by other hunters in the form of passive aggressive notes on my vehicle's windshield, and other hunters setting up much closer than would be considered courteous. I very much support the proposed antlerless quota number for Bayfield county, as it should hopefully accomplish the goal of reducing the deer population by a reasonable amount, and a slight reduction in the number of available bonus tags will hopefully reduce the number of out of region hunters that sometimes bring poor attitudes into the field. I hope the CDAC will not be swayed from the very reasonable proposed quota by a vocal minority that is against management of the antlerless population in Bayfield county. Each spring for the past 3 years I have shed hunted and turkey scouted the areas of Bayfield county that I deer hunt in the fall. Each spring I find several winterkilled fawns, but I have yet to find a winter killed adult. Clearly there is mortality that could be captured and utilized by hunters in the fall. Additionally, the lack of fresh or even old shed antlers supports my fall and winter observations of a hard skew in the buck-doe ratio in the county, likely due to many consecutive years of buck only harvest in the past. Because of the skewed buck to doe ratio, it is doubly important to have antlerless tags available to give hunters interested in meat a chance to take a deer, instead of waiting for that much harder to find buck. I harvested an antlerless deer in Bayfield county last fall, and hunted all the way through until January end of archery season. I saw dozens of does throughout the seasons, but only a half dozen bucks. The deer population where I hunt (which is a forested area of public land) is significant enough that there is damaging browse occurring on the understory hardwoods regeneration, which has been nipped and browsed to the point that the saplings have become stunted and shrubby in form, with short stubby limbs that snag on hunting packs and hang on deer stands being hiked in daily. In March, while shed hunting a timber sale that was active this past winter, I observed and photographed more than 50 deer in a single part of the timber sale. The local deer population, despite a lack of agriculture, made it through winter in very good shape. One of the deer I observed in that many dozen-sized gathering of deer was a very small fawn, yet it clearly survived until I saw it in late March. I sincerely hope the CDAC will fully support the proposed antlerless quota, as well as continuing to support CWD prevention measures in Bayfield County. I very much appreciate the continued efforts of CDAC and local community members to prevent the spread and establishment of CWD in Bayfield County, as I hunt for meat and want to feel safe and secure in my attempts to harvest wild protein.
I timber hunt walking into the wind the Raspberry, Sand, Flag, and Cranberry river areas. I have no opinion on the harvesting of wolves one way or the other and will not run my dogs on one even though my wife wants to shoot a legal one someday and full mount it and place it in her law office as I have seen them and their tracks since 1971.

Last year was the first time in 5-6 years I cut a human track on Monday from the weekend. It takes me 10 hours now being dropped off in the predawn hours now to hunt the canyons 4-5 miles as the crow flies to a road I hope does not move during the day. Last year I climbed into a dead fall I have found and prior to shooting time had a doe come by with two wolves followed by three more wolves seconds behind in the Cranberry. Had two on the other side of the Sand rim on Saturday most likely trailing the doe and fawn that had come by. Saw one more stair down 4 does and a tiny buck on Tuesday during the blizzard. Our cabin on the historic Cranberry had 4 does and 7 fawns in the alfalfa field I planted in front of it from mid summer right up to the blizzard before T day. I have 30 game cameras on our land still running today and the 6 that were on public that were removed Tuesday prior to T day. I have only seen one fawn this year in the food plot with the four does as darkness falls on the land. Cameras confirm a disappearance of 6 fawns. I found several parts of bone while shed hunting the flag river wildlife area in the last few weeks spending 30 hours shed hunting the southern slopes. Yes there are deer in downtown Cornie, but the number hit bottom a few years ago and have not rebounded and the wolves look nice and fat on the cameras again this spring. You can walk miles in and around recent past cuts and where once the deer were thriving they are no more. Hunting pressure from the Barrens to Port is 10% of what it was in the 70s but walking and stalking I should cut tracks and jump deer near recent slashing and they are just not there. You will find them near the orchards or where they yard up as we flew 6 missions this winter into and over the deer yards we know of this winter looking for numbers and they are no longer like they were. If I sat in one place like most do, this could be understood as the woods ages, but when you walk and stalk and the tracks are not as they were perhaps an air survey buy the CDAC members with open minds in the pressing need. Our family has been hunting in the county since just after the great depression and dad started in 1941. He cherished the land and the deer and loved Ruel, Poncho, and Bremell as men and a friends but would be very sad hunting today if alive. you will always have your hot spots, but the numbers are down still at near historic lows throughout the timber slashing like the great die off in the 70s where teams were flying hay to no end to try and save those herds from the days of yesteryear. Food is so plentiful near the recent cuts yet the herd fails to regain the greatness of days gone by. My children no longer care to hunt, and grandchildren find no excitement in the big NINE day season at all. My wife has got three bucks in three years out of her handicapped stand but that is all she has seen in three years, three bucks running the ridge from a husband who can still cut county almost as good as Boone. she will be done in a few years, and me, so long as I can walk the wind in my face will continue. If any of you are firefighters or EMTs, one of these days during deer season if I fall hopefully you will find my carcass on a ridge no doubt as where else to fall than the wild of Wisconsin's Final Frontier.
Disappointed, but not surprised sums it up for me. CDC has been a great thing for the majority of the state's hunters and individual DMU's, however, the Bayfield Co. CDAC committee and wildlife expert(s) have been out of touch with the reality of the deer hunting experience and deer population in Bayfield Co. I was one of 27 very interested hunters who listened to the telephone conferenced CDAC meeting for Bayfield Co. earlier this month. The 2020 goal setting meeting was an opportunity for some trust to be gained after the 2017 decision to reduce the herd, but it was squandered. The biologist pointed out that with a herd estimate of aprox. 28,000 this year (down about 15% from last year) the herd was now at goal-maybe even slightly under goal. Throw in extreme wolf predation and a severe winter over 100 WSI and more than likely an even lower population for 2020. So the CDAC goal was met! Good thing, right? Well, not exactly. The committee was then told that 1,500 antlerless permits would translate to a further 2% reduction in the herd. The committee jumped all over that. So meeting a goal means nothing? I thought the purpose of setting a goal was to get to the goal? Not only was the 2017 decision to reduce the herd a very poor decision, they throw salt on the wound each year since with their approach to further decimate the herd and turn a tradition of quality hunting into distant memory. The committee didn't even want to lower the public land antlerless quota where the deer herd is extremely low. I'm not proposing deer numbers like the 1990's and early 2000's, but the herd is and has been much smaller than we have been told since the severe back to back winters in 2013 and 2014. Some observations: *I was amazed at how few questions the members asked about the metrics. Many of their questions were procedural. *Why does the wife of the biologist get a vote? She was a tie breaker (5:4) for both votes concerning quotas. *Those foresters on the committee sure are after blood. So Bayfield Co. is the only county in the northwoods with some sign of deer browse? I see no problem with browse in the public areas I hunt and I have great photos to show red oak and white pine regenerating in amazing numbers in old clearcuts. *It would have been nice to get more information and anecdotal observations from the DNR LEO, but he seemed disinterested. *I also heard erroneously from a committee member that the reason that we stop seeing deer a week before gun season is the deer are all bloated up from all the corn dumped in the woods?! That did not come from the biologist. That's a relief because more than a few of us hunters in the area thought it was because there just aren't a lot of deer around and went more nocturnal due to baiting disturbing the woods and deer patterns/behaviors! *A WSI over 100 is severe and it was not a winter north of HWY 2 with 18” plus a few inches! It was 30-40 inches from Thanksgiving on and a much greater impact than central and southern portions of the county. Yet deer were reported to be in great shape. This past winter makes three severe winters in the past seven years in much of the county. *How little predation was considered, but I guess that is not a surprise given that the herd must be trimmed further per committee. The ONLY positive out of the ordeal, brought up by a committee member, was that perhaps some counties could in the future be divided into smaller, more similar deer habitat to aid management. I would love to see north of HWY 2 all the way to the lake be it's own unit.
I have to say that I feel this is one of the most mismanaged units in the state. I do agree that parts of Bayfield County may have a larger deer population like in the agricultural areas, but in the northern most parts of the county along the lake shore the numbers are terrible. 2019 was the first year I did not bow hunt in northern Bayfield county since 1995, and the first year in 37 years that I did not bow hunt in the state of Wisconsin. I chose to go to Iowa so I could see deer again. I bought a tag in Bayfield in case I finished up early in Iowa but ended up spending the month in Iowa and had the best hunt I had had in many years. I gun hunted and saw one buck and no does. I don't say this to put that in your face, because I feel sick that I have to abandon an area I love to enjoy hunting again. This year will be the same, but I won't even buy a tag in Wisconsin because I am going to Missouri because I truly love to hunt and see deer. I have a beautiful cabin up in Bayfield which takes 5 hours to get to from home, that I always planned on moving into when I retired and now I don't even hunt there. I spend 5 weeks of my hard earned vacation every year, and have for years just so I can walk in these beautiful woods, but now I know that is a waste of my time, money, and vacation. My son and I keep 15 cameras in the woods spread over about 10 miles looking for deer, but to no avail. The few fawns you see in the spring on camera are gone by late summer thanks to the predators. If anyone would have told me 10, 15, or even 20 years ago that hunting in northern Bayfield County would be what it is today, I would have called them a liar. Nobody in my hunting group from 1995 to 2012 ever used bait, but we could not see deer so we started to bait in 2012. Now as deer numbers dwindle we can't even see deer over bait. Very pathetic, I never thought I would become a baiter, but when the buck sign disappeared we had to do something, especially when your trying to get your 14 year old son to be interested in hunting and see deer. Bayfield County is a large county, with both agricultural and forested land. There is no reason that the county can't be split into 2 management units and until that happens the northern forest hunters will suffer. I really hope your committee gets there act together, otherwise you are going to continue to lose good, ethical, law abiding hunters such as us. I have worked with the DNR over the years on things I have come across being that I am always moving and for the amount of time I spend up in Bayfield in the fall and its just hard to believe that they do not push to make a change. We don't need to see a lot of deer every day but some would be nice. The whole story is just kind of sad, but we can only hope that it will turn around some day. If it doesn't shortly, I will sell because owning a deer camp where no one wants to come and hunt anymore and believe me there are many other camps which are feeling the same way. I sure hope you reconsider your actions before your stuck with only the criminals up there, like the ones who broke into my cabin last year, which is the first time in my 25 years as well. Thanks for your time.
First of all its ridiculous that we have a 3 year plan to decrease the deer herd in Bayfield county. At best it should have been to maintain, if not grow. If there are more deer in the farmland areas of the county, then the dang county should be split up into 3 sections. Where I live in Bayfield county has been low on deer population for years. I'd love to see numbers like back in 2008, but I'd be happy with 2012, but I just don't see deer like I used to. And GUESS WHAT I'm a better, harder hunter than I used to be. And I have more trail cameras out than I used to have, I pick up less deer and see less deer, bucks especially. SIDE NOTE: Why heck is Todd Noss lying about the gun season snow fall? We didn't get the season ending snow fall until the saturday evening, essentially only cutting the season short by 1 day. We got a foot of snow before thanksgiving but that clearly is not season ending. A foot of snow only ends a lazy persons season, I was out there. What a huge lie in that video!!

NOTES: IF there has to be does tags, should be no more than 500 quota and sell only 2000 total tags. I understand to have more and better bucks we need to shoot does, but we need baby deer to be born and survive to have more deer, period. -preditors play a big role in our deer herd now and its getting out of control. I have so few fawns make it to 3 months old, i have 400 acres aross a couple miles areas so I know what the heck I'm talking about. If we are not going to control preditors like with do deer, then we need to shoot less does. I don't mind some wolves but there are TOO MANY. Same for coyotes and bears -I've done logging, i've done bedding, I've done food plots and water sources on my property, and guess what, it really hasn't changed anything because the deer herd just isn't big enough. What is the point of owning land and improving it if you can never reach your goals. People say move around, find/follow the deer, HELLO, I have, my properties spread that far. -Especially after a winter like this there should be no doe tags, if they didn't die from starvation(which they might not have so much), they were pretty easy prey for most of the winter for wolves and coyotes. I think the deer that survived are in ok shape but know wolves and coyotes were running on top of snow by end of december. I like to see older class bucks, but I love the meat. My sisters and friends like to have meat so we'll shoot a young buck too, but why can't we have both readily available. Why do I always get looked down upon because I want to shoot a nice buck. I don't feel like this CDAC ever listens or cares about the hunters concerns. Year after year, the majority of attendees and comments call for less or no doe tags, and year after year I hear calls for doe tags by 2/3 of the council and nothing ever changes, not even compromises. Its almost a joke. I'm way tired of the forestry, there are plenty of trees out there, I can show you where to find them. Same for agriculture, if farmers have problems let people on your land to shoot deer, problem solved.
Hello, I have spent over 60 days hunting both private and public lands this past fall, and around the same amount of days each year over the past 10 years. These are my opinions and observations based on that time in the woods. I think that Bayfield county can not be managed as a single unit. The agricultural areas of the unit like mason and ino hold tremendous amounts of deer when compared to the public lands to the north known as the “barrens”. In my experience bow hunting and rifle hunting both agricultural and forested public land I have found the differences in deer population between these two types of areas to be staggering. How can these vastly different areas be managed under the same rulings and result in quality deer herds? There are very few deer in the northern national forest, I have had game cameras in multiple locations spanning a 20 mile radius in the barrens (northwest of big rock campground) and documented just 10 different does from early August 2019 through January 2020. My cameras in the southern part of the county have had 80-100 different does on them in that same time frame. I just think that this county is to different ecologically to be managed the same throughout its entirety. Many other states manage big game by region, mountain range, or type of land with great success. Why are we not doing that? I also believe that if antlerless tags are given out going forward, that they only be for private land. This way the deer population can be controlled where it needs to be controlled, on the private agricultural lands of the county, not the public forests. If you give antlerless tags for both public and private lands, public land hunters are going to shoot antlerless deer from the already decimated herd in the northern forests of the county. I believe this because public land population densities are low and hunters are less likely to see a deer, let alone a buck. Because of this, the few does and young bucks that are still on these areas of public land are going to get killed at a higher rate, resulting in smaller herds and less mature deer. As far as deer browsing red oaks and causing damage to the forest, I just have not seen it. There are not enough deer in the areas I have seen with have red oaks to have any effect on the future of the forests. I also think that there should be a single buck tag for each hunter. Not a bow buck tag, a gun buck tag, and whatever doe tag that may or may not be available that year. Just one tag will force hunters to choose one buck instead of two, which will enable some of the younger bucks to get older so we can have bigger deer in the future. This states (northern portion) problem with hunter recruitment is both lack of deer that are accessible to the public and lack of quality deer on that same public land. I don't think giving hunters 2 buck tags and countless doe tags each year is going to fix that issue, instead it's going to make it worse.
My name is Mark Winkel. I live in Door County but have hunted Bayfield County for the past 40 years. I solo tent camp and deer hunt on public land. I am providing my name and County of residence because I do not wish to be accused of hiding behind a veil of anonymity. As a young man I looked forward to the WI Deer Gun season with an anticipation that rivaled Christmas. Camps would reopen, Motels and bars would fill, and extended families would reunite. One could just feel the excitement in the air. Over the years we did have some lean seasons due to tough winters but nothing was ever as bad as it is now. I travel long distances along the backroads or through previously productive public lands and scarcely cut a deer track. I no longer go hunting with the expectation of even seeing a deer. Perhaps that is why my children quit hunting years ago, and my grandsons are likely to never follow in my foot steps. It was with a sense of sadness I listened to the recent Bayfield County CDAC meeting. WDNR Biologist Todd Naas provided what appeared to be an optimistic overwinter deer population estimate that was down only slightly from last year. Little deference was given to the winter severity index which measured over 100 in most areas, placing it in the severe category. Mr. Naas acknowledged some potential winter loss, but reported the deer he was seeing looked "really good". I can only wonder if the deer that Mr. Naas reports seeing are cabin deer like those of the Barnes and Delta areas which have sought refuge there from an out of control wolf population and are fed during the winter by the property owners. It was with disbelief I noted that Biologist Naas's own wife still sits on the Bayfield County CDAC as the Vice Chairman. Never in my 32 years as a (retired) Law Enforcement Officer did I ever see the wife of a Plaintiff serve on a jury. I guess the appearance of a fair and impartial hearing are not important in Bayfield County, or are just ignored out of fear of being labeled as politically incorrect. I was stunned at the speed by which motions by the stakeholder representing Forestry were made to reduce the already depressed deer population and were quickly passed by Vice Chairman Sandra Naas along with representatives of Agriculture and Transportation. The only group that didn't seem to have a stake in this meeting was the hunter who is relegated to pubic land. I love hunting Bayfield County. When I’m up north deep in the forest, I don’t feel that I left home, but instead I am home. I have always taken pride in the fact that I am a hunter and not a killer. I harvest and utilize only the surplus the land has to offer. I can no longer in good conscience pull a trigger or loose an arrow one of the few remaining wild deer that still roam there.
Bayfield County is unique in the difference between ag land and dense forest. Our county NEEDS to separate the two the best they can and make these decisions based on that. While I am glad we have an input the survey is skewed as each answer I gave doesn't necessarily fit each part of our county. Public vs private is a good start but physical boundaries should be drawn on maps do the best you can it will not please all. I hunt both private ag land and public dense forest. It is night and day difference on populations of deer and understandably food sources as well. However, I see a population in the ag lands that is quite heavy and a poor doe to buck ratio. I support antler less tags in these areas. In the big woods the population of deer is sparse and not to the levels it was when I hunted as a kid which got me hooked on the sport! When you look at other states they have areas where units are quite small based on the habitat and populations of that area as they can be quite different from one to the next. Bayfield county would be fairly easy to divide up that way. I do see a predator problem in our county as well and I fully think that our county officials need to voice your citizens concerns to legislation and help that cause. I'll leave it at that. Our county used to produce several trophy bucks each year and consistently. I know several avid hunters who have expressed my same concern and who have, like me, started to travel outside of our county to have a better chance at chasing trophy whitetail. This was not the case years ago our county was a magnate. I know there are several factors that are part of this based on winters, food, stress, pressure, etc but I would like to see our county have a goal of making this part of their plan. I would support a point restriction for antlered deer for ADULT hunters. I think youth should have the chance to harvest any buck so kids can get hooked on the sport and keep our group of outdoorsman strong for generations to come. Currently, I see several disappointed youth hunters because the chance to see deer in the forest outside of ag land can be very low especially for young non experienced hunters to get into the sport. Please do something different than we have been doing. I've seen our county's deer hunting go to hell and not only is there hunter frustration but our local economy has taken a hit due to it. I hunt here out of convenience and my love for the outdoors but travel out of our county several times a year to have a better hunting experience! Thank you and I look forward to how everyone's input is taken and I strongly hope that it is considered in your decisions.

Another part of the deer management puzzle that I believe needs to be addressed, is the impact of the Archery/crossbow season on the antlerless as well as the buck harvest. I hunted deer with a bow in the 60's & 70's with a recurve bow and Aluminum an cedar arrows. The deer harvest was accomplished from 25yds or less with success contingent on many hours spent in a tree or deer stand, freezing and trying to stay flexible for the "one opportunity". The technology of the 90's and 2000's has brought extremely fast, hard hitting compound bows that can be held at full draw with 30-50% of draw weight for several minutes, and rifle accurate and fast cross bows that come complete with telescopic and red dot sights that extend killing shots reliably past 50-75 yds. at a moments notice. The season for these arms reliably includes both the "Batchler Bucks" period of deer movement, as well as reliably the height of the deer rut. Also running these seasons right up until the day before the firearm season, results (by personal observation) in the high-tech harvest of 2 antlerless legal deer just before the firearm season, and additional harvest via firearm several days later, by the same hunter. There is a very good chance that these antlerless deer harvested, were in the early stage of having just been bred. You do the math. These facts are not lost on the large number of firearms hunters who see 30-40% of the deer activity that they observed just 20 years ago on both public and private lands. If your individual history goes back more that 20-30 years, your opinion of loss of observed deer activity increases. I conclude this dissertation with the observation that a number of hunters I know have become frustrated with this "reduction" of deer herd that continues with the 2020 quota recommendations and the resultant less observation of deer in the field. So frustrated that some have just "hung it up". We all know that the ramifications of loss of hunter activity is far reaching to the herd, the economics of the state as well as meaningful conservation practices. Most hunters I know do not focus just on the harvest, although that is meaningful, but the excitement of the wildlife observations. By viewing minutes of the boards meetings, it is glaringly obvious that many recommendations are voted on with some members having no comment. I would encourage every member of the council boards to express a comment with a vote, people are watching, and care.
I listened in on the CDAC meeting. I have several takeaways. First, even though I disagree with some of the comments and conclusions I appreciate the work the CDAC puts in and I thank them for sharing the knowledge and information they have. Second, there is a huge disconnect between what the experts say and what is observed in the field—at least in some parts of the field! For example, I doubt any of them have spent as many Falls hunting deer in Bayfield County as I have. I know this for sure. Deer sign is WAY down in our area, way down. There use to be rubs, scrapes, trails in good numbers in our area. Last year I did not see a single deer, a single rub, maybe 1-2 scrapes and no well used trails. I know what the experts say, the deer are there, they were bedded because of the late season, etc. I call BS on that one. I walked all over the area on fresh snow early in the season between the two forks of the Flag and hardly cut a track. And I walked thick crap as well as the new cuttings. When I was a kid I saw 10-20 deer a day up there, I have not seen 10 deer in the last 5 years of gun season and I know that land like the back of my hand. Third, I recognize there could be a few explanations for this. The woods are clearly full of humans all year round now, never was true 40 years ago. Bow hunters, atv'ers, pulpers, hikers now fill the woods nearly 12 months a year. Bear and wolves are much more common, etc. Lots of commotion. Moreover, hunters are way lazier and if they can't get somewhere in their atv they don't go. Few wander the woods like the old DeMars gang, Skrit gang or the Isaksson's gang did years ago. Consequently far less deer movement. However, I cannot discount what the experts say about over browsing in certain areas, ag damage, etc. Like I do, they believe what their eyes tell them. But I think the problem is that Bayfield is too big for a one size fits all deer structure. Southern Bayfield County is much different than northern. I strongly suggest that we divide the county in north and south and manage each differently. I think this strategy would be a smart move politically, economically and socially. I recommend you consider it.

I think the quotas are alright for doe there is enough to get out and shoot one in a day or two for the most part. I heard more wolves this year than past years. But there has been more Turkey sightings as well. A couple topics I disagree on that I've heard are a "grace period week before gun season", "not allowed to hunt gun season with a bow", "Exteded gun season" I feel like the regulations and season dates are perfectly fine just the way they are. Having a grace period just takes away the rut for a bowhunter, I mean really?? I can guarantee this will deter the attracting of non residents and tourist hunters and a decrease in sales will be seen once again as well as ultimately push more deer because the gun season will be extended. The bucks need that time after the rut to recover. More bucks were killed than does in 2019 so that would equal even more bucks being harvested. This will harm the deer population for years to come. The laws that are established now are perfect for a bowhunter and caters well to gun hunters. As far as crossbows go they are basically a rifle anyway(I work at an archery pro shop also). That's where the gun hunter vs bowhunter debate comes in. Crossbow laws in MN are perfect and are regulated correctly. In WI it's basically a free for all. And when you introduce a bunch of crossbow hunters that are taking deer like a rifle will then there is tension between the groups, now its bowhunter vs crossbow vs gun hunter. Regulating no crossbow use in october I can agree with but it should be regulated to be more strict. Not allowing to let bowhunters hunt during rifle is ridiculous. I hunt in WI because of this reason! It's awesome that I am allowed to hunt all season with my bow and a huge attraction to me as a hunter when looking for states to go to. In conclusion, extending the gun season while moving it closer to the rut and having a grace period taking away the rut from bowhunters while prohibiting bowhunters from hunting during gun season will hurt the deer population for years to come. The laws, regulations and season dates should be kept the way they are forever they are perfect as is and attract more hunters to to state of WI.
I don’t believe you truly understand how the affect of poor deer hunting pours over toward the economy of Bayfield County. My father has hunted there since he was a teenager. He is now retired and no longer buys a deer license but chooses to stay at the cabin while his sons go out and report no deer sightings. In my 20 years I have watched a thriving small town turn into a ghost town. There is no reason to visit and a good deer hunting opportunity carries over to other seasons. Lakes that had many people ice fishing become desolate. I took a few buddies ice fishing last year and had the lake to ourselves all day. Stopped at the bar for food and saw five locals in there during the prime snowmobile season. Deer hunting is a large revenue generator and the DNR has succeeded in destroying that with the introduction of wolves and their very incorrect population numbers. We used to have to drive around to find spots to make deer drives and now go anywhere because there are no hunters. They have left the area and probably never to return because the future of hunting is so poor. I myself have a son and choose to take him hunting in another state as to keep him interested in hunting. If he were to sit in a stand for five days as I have and see three deer only because you kicked them up on the way to stand, I am sure he would give up a passion I love and never carry that over to his children. I don’t expect my opinion to go very far. I only pray there are many with the same opinion and someone finally gets how you are choking out the economy up in the Northern zones and hurting many people. Poor decisions seem to be the norm and I for one am about to hang my blaze orange hat on the cabin wall and save myself the out of state fees for something else that makes more sense. Maybe we should start to have all hunters refuse to buy a license for a couple years and teach you how poor decisions lead to a major lack of revenue to keep your programs afloat. Sounds painful? Ask some of the business owners in Bayfield how they feel!

I have hunted Bayfield County for 50 years, bow/crossbow, gun and muzzleloader, north to south, public and private land. (I’ve hunted many other counties and states as well.) I don’t know where you’re getting your information, deer numbers are down. PERIOD. Opening 4 days of 2019 gun season, 2 days public land, 2 days private, dawn to dusk all 4 days, NEVER leaving stand during daylight hours, saw 3 deer total (one day), doe and 2 fawns. (All on the private land, think about that, ONLY 3 deer in 20+ hours of sitting during the first part of the season on private land surrounded by 1000's of acres of other private land, lower pressure, the deer herd should be thriving, it’s not! AND that was WITH BAIT down, if we go to without bait it’ll get worse.) Muzzleloader season, saw 1 deer in 3 days of hunting. Too many predators, some harsh winters, TOO MANY antlerless permits. The driving idea of over browsing of the forests is ridiculous. In reviewing the comments last year, 90+% of respondents want LOWER antlerless permits and yet the CDAC in Bayfield County continues to IGNORE the overwhelming public sentiment. Bayfield County CDAC doesn't work. It's just a DNR/Forestry Dept. shill and membership is skewed to DNR & State employees. Public input is generally disregarded. Frustrated hunters are quitting. Recruitment of new hunters is poor. Hard to get excited when you sit for hours/days and see nothing. We’ve taken to putting our "young guys" on our best spots hoping they’ll have some success and stay engaged, it’s not working. 21 hunters in camp last year, 3 deer. WHY are the Bayfield County CDAC antlerless recommendations SO MUCH different than surrounding counties in NW WI?? Do you think the deer are sneaking in "over the Bayfield Co. border" in the back of semi trucks when no one is looking?? CDAC is doing hunters a disservice and bending entirely to the wants of a few forestry and DNR with their own agendas.
I appreciate the opportunity to provide my input towards establishing deer season quotas. I’m a meat hunter, exclusively gun hunted for the past 34 years in the western UP in the heart of the snowbelt. In Bayfield county I only bow/crossbow hunt early as well as late season. Winter kill is isn’t anywhere close in Bayfield county as it is in the western UP, but predation is significantly more over in Bayfield county as there is an extremely healthy whitetail population. I feel Bayfield county is a premier whitetail hunting area, but I also have a hunch the population is much too high, therefore winter yards are being overbrowsed and disease could spread rapidly if some of the herd is initially affected. I for one never filled my buck or doe tag in 2019. I do enjoy some sport to my hunts regardless if my main pursuit is providing table fare for our family. The reason I did not harvest either a buck or doe was quite honestly was it was not sporting enough... I could have logged probably 2-3 kills every hour that I hunted based on the opportunities presented. I don’t consider hunting fun nor challenging if literal herds of deer converge upon my hunting area every time I go out, this I set my own personal goals for bucks and does alike and those opportunities never presented themselves. Again, I feel there was way too many deer in 2019. The past couple weeks this spring I’ve driven around western bayfield county from the north end to the south. Again, I’m seeing large herds of deer browsing in ag areas, been dodging deer on US2 as well as county roads and just feel there are more deer than last year. The winter yards simply cannot sustain this amount of deer year after year and overbrowsing will be a serious issue. Thank You!

I recommend the proposed 16 day gun season. Essentially, we already have it with black powder, but muzzle loaders are slow to fire, slow to reload, and cost needless suffering and lost deer. I, personally, lost the biggest buck I ever shot at, on the 2nd day of black powder, due to a hang-fire. I tracked for 3 days, and lost the trail after snow. This would not be the case with a standard rifle with no hang-fire and fast follow up shots, and extended season. I assume it died, but I did not "register" it, as we’re not required to. Maybe there should be a separate registry for un-recovered (lost) deer, not costing a hunter his tag, and allowing them to continue hunting, if they choose. That could help determine "harvest" numbers more accurately. Secondly, I think it’s wrong to place bait in a single pile. It forces deer, potentially sick ones, to all stick their faces in the same spot. Have we learned nothing from "social distancing"? I’m all for baiting, but spread it out. Additionally, could the DNR afford to provide feed, or feed vouchers, to volunteer residents who wish to feed through the winter? This was a bad year, and I feel like deer could starve when hunters abruptly stop baiting, after the season. Personally, I fed over the winter, but could only afford so much on deer mix. It would be nice if county residents could volunteer to be supplied with vouchers for feed. Maybe I’m dreaming, but it would be nice. Third, I'm opposed to the early youth season, and any proposal to start gun season earlier. The youth season messes up the herd, and the earlier season takes bucks out before they have a chance to breed. Later would be better than earlier, from a breeding/genetics/QDM standpoint.
I've been hunting in Bayfield county for 44 years with somewhat good success. Probably up until about 10-15 years ago with trapping on the decline, limited bear permits (bears have proven to be fawn eating machines), the increased coyote & bobcat numbers due to decreased trapping and hunting. These animals are very effective predators on fawns. Plus coyotes are effective hunters on adult deer if conditions are right. Let's now talk about the wolf who's population numbers I believe are highly under estimated. Running trail cameras for many years would occasionally produce a picture of a wolf. In recent years, a trail camera picture of a wolf or wolves has become common place. But yet the numbers project there is not a huge increase in their population. I have read several articles that have been published that pretty much state that the wolf population in the northern counties has been harvesting more deer than bow and gun hunters combined. Not to mention that wolves seem to be extremely efficient at hunting down and killing the stinky post-rut mature bucks. Our area is not extremely over hunted by man. But for many years now me, my wife and our family have been practicing QDM. Letting many lesser bucks walk to see another day hopefully to grow into mature animals years later. Unfortunately, we haven't been seeing mature animals years down the road. All we are really doing is feeding the growing predatory problem. In conclusion, I would not want to be a white tail deer in northern Wisconsin these days because realistically them seeing a second or third or greater birthday highly unlikely. They have all the cards stacked against them.

Do not understand why the DNR keeps making excuses for a low kill, how about the fact that there are less deer. We hunt in an area with at least 30 deer camps, we all leave Wednesday, so that eliminates the snow storm theory. The local buck board that has over 100 hunters on it saw a kill of "1". Our records show over the last 48 years our second best opener is the late opener because the rut is over and the bucks are now hitting the acorns and feeding in the clear cuts, that eliminates the late opener theory. We don't bait but the camps that do by us didn't see anymore deer then us. Out of all those camps numbering over 100 hunters I was the only bow hunter to kill a buck. I hunted until Friday night gun and saw 0 deer. As far as the predators go, bears feed mostly on fawns, we are seeing does with there fawns during hunting season, so its not the bears. There is no recrutement of yearlings the following year. The DNR keeps making excuses which turns the public off, why don't u guys come out to some deer camps and find out what is really going on in the woods. We hunt the Barrens south of Herbster. I live in Illinois but hunt up north, obviously i am leaving some of the best hunting in north America to hunt Bayfield, i don't need to get a deer i am there for the hunt but i would like to see a deer. I truly feel u guys are doing a great job and are putting forth a wonderful effort to maintain a great deer hunting experience, just don't make excuses to why the kill is down it then makes it look to the hunter that u don't really care. Just say u don't know why the kill is down, i can except that answer. Thanks.

We need to allow more antlerless tags. Period. There are some squeaky wheels and they always get the grease. These lazy hunters that view predators as competitors for deer hunting - toughen up - get out there and hunt - afraid of a little bit of competition? Predators probably help move the deer for deer hunters - though they probably also make the deer a bit more cautious as well. Deer can handle heavy mortality rates. and antlers grow bigger when there is less competition and probably more likely to see a buck when there are more just as many males as there are females. We need to give our forests a break from deer browse as well. Also, this ridiculous draconian idea of not allowing junior hunters to harvest antlerless deer if the CDAC says zero is just stupid. We need more hunters not fewer. I am sure there are some people that game that system, but it isn't worth shutting down our only opportunities for young hunters to participate. I honestly don't care that much if the adult with the youth hunter is the one that pulls the trigger - I am just glad we are encouraging the youth to participate. Also, one of the biggest things turning people away from hunting are hunters complaining that there are no deer. There are plenty of deer - people just like to complain. And this stupid crap - people trying to remove the DNR biologist for doing the best job they can - just because we had one rough season that was mainly influenced by the weather - they try to remove a long standing local biologist - just plain stupid.
I am unsure why the management goal for this unit is to lower the population of deer within this unit? The existing population within this unit is much much lower than the historical level of deer that was supported within this unit from the 1990's. With the diverse habitat mixture of farmland and oak forests it seems that this unit could support more deer per square mile than the population goal is set for. I have hunted this unit and spend considerable time groundtruthing it over the last 30 years and have noticed the steady decline of whitetail deer population in areas that traditionally had higher densities. These areas provide adequate food, cover, water and protection from environmental factors. Higher numbers of predators such as bear, coyotes, wolves, and humans have definitely impacted the populations in these areas, but also it also appears we are mismanaging populations based on other factors and not just sound biological science. Letting specific groups, such as insurance companies, forestry groups, special interest and other outside entities that stand to gain from lowering the deer numbers, direct our management goals should not be allowed. Let biological science dictate the numbers of deer that units are managed for and allow us to continue to pursue them in ethical manners and teach our younger generation the same. If the present deer population trends continue in the northern units, there will not be any future for continuing or passing down this Wisconsin tradition within our families.

It's been pretty obvious in this county since I started hunting here in the 70's that half the hunters say there are plenty of deer and the other half say there are none. Our camps deer sightings and kill have fallen at a steady pace since earn a buck. We hunt in the Barrens south of Herbs. We had 40" of snow and the deer were yarded before gun season even ended. How can the DNR treat northern Bayfield county the same as Southern Bayfield? Its complete different habitat. "This county needs to be cut in half". U guys want to give out doe tags? 30 camps in our area that meet at our cabin did not kill a deer this year! One buck on the local buck board! We all share trail camera pics among the camps, there are 200 cameras out there and we get a handful of pictures! Don't mind the tough hunting that's why we drive 500 miles the last 45 years, but it would be nice to see a deer now and then. The DNR needs to stop making excuses why we aren't seeing deer. I love the one about that hunters are using bait and the deer are feeding on acorns. I don't bait never did, i was in the acorns!!!! I saw 0 deer gun season and bow. 5 hunters saw one deer in ten days of bow hunting, the buck from our camp was the only kill out of all the local camps for the bow season. Split the county and stop the doe tags for a year or two up north. I know u can't stockpile deer in the north but how about letting the herd up there have a chance to rebound.

Hello, I've been hunting Bayfield County, particularly in the Cable and Drummond townships, since about 2001. I have since acquired land near Cable Lake, and after sitting through the archery and gun season last year, here are my thoughts: I personally think we should be focusing on heard growth, not decrease. If anything, we need to be decreasing the amount of predators in the area. My opening morning (Gun Season) consisted of nothing but coyotes howling in a close proximity to our area, and not a deer to be seen. Less than a mile away, nothing but wolf tracks (approximate location -between Big Brook Rd and West Cable Lake Rd, Cable WI). I had cameras up for the whole year, and while there were a decent amount of deer, there's far less bucks year after year. I sat opening day through Tuesday(left just before the big storm hit), dark-to-dark, and saw the same doe and fawn each morning, and that was it. So I have a good number of hours in the stand to base my decisions and input on. In my opinion, you should release a single combination tag for each license (1 for archery, and one for gun). Your choice, buck or doe, but then your done for the selected weapon license. Basically bring back the old-school "Hunter's Choice" tag, and see what it does. This way, everyone still gets to hunt, but the herd has an opportunity to grow at the same time. Thank you for your consideration.
I have been deer hunting in the Chequamegon National Forest - Lake Owen area since 2003. Since we had the earn a buck season (I don't recall the year?) the number of deer seen by our group has significantly decreased. Our group ranges from 8 to 14 per year depending on other influences. The last 3 years we have seen less than 10 deer for the entire group total. 3 years ago we didn't harvest any deer for the group. 2018 we harvested 3 for 11 people. Last year we harvested 2 for the group of 8. We have also noticed the last few years the amount of hunters from outside the area decrease which impact the local economy to restaurants, bars, gas station, grocery stores. Lakewoods Resort and Garmish's used to be completely booked and last year they had less than 20 groups total between both resorts. This is a direct correlation to the reduction in the herd due to mismanagement. The questionnaire I'm assuming is generic for all units as there is little to no concern for agricultural damage in Bayfield county. I would support Antlered Only season for a few years to get the numbers back up. I'm also concerned with the number of Wolves that are in the area. To enlist increased Antlerless quotas, or any quota for that matter in this area would severely and negatively impact the herd. I greatly appreciate the opportunity to be heard and hope my concerns will be considered.

All I can say is the deer hunting(for mature bucks) is going way down hill. There are no where near the number of big deer around. Why? I would say predators is the biggest reason. On almost all my trail cameras I see a bunch of wolves, coyotes, bears, and even bobcats! Most of my cameras are on trails or by deer sign. The reason being, those predators are after the deer. Now that is normal but not when the numbers are this high. I have more predators on cameras then 6 point bucks and bigger. That is absolutely terrible!!! No other state has them numbers or ever will. Why?? Because they sell predator tags Every Year!! I know this because I have worked in about 25 states and I always ask around to the locals. Plus I read about other states all the time. If you don't believe me just go look at the buck boards in the bars or ask a taxidermist. I was at Ino after deer season to check out the buck board and meet the owner of a bar in Herbster. He said a 138 lb buck won his board. Worst he has ever saw before. White River saloon use to have many deer from 180 to 220lbs(15 yrs ago)and the hunters success rate was close to 50 percent. Now that was some good hunting! Now the success is around 15 to 23 percent with smaller bucks. So what can You do to make it start climbing back?? Please have some one call me or email back. I have ideas!!

Not sure what county u guys are looking at but northern Bayfield has the lowest deer per square mile i have seen in 46 years. Northern Bayfield cannot be compared to Southern Bayfield! This unit needs to be split! Look at your own winter severity map for this winter, how can u manage in the same way an area that is hard hit by snow vs's an area with almost no impact? The entire country is shut down right now to stop the spread of disease. Humans are supposed to be 6' apart, but it seems to be ok for 10 deer to eat from the same 3' space of a bait pile. Isn't the DNR's job to maintain the health and welfare of the wildlife?? Then how in the world can this baiting nonsense take place with CWD in this state????? And please stop telling me from your office why i didn't see a single deer this past season. We are sick of the excuses about late openers, and snow storms, how about saying there just aren't as many deer in northern Bayfield and let it go at that. Hundreds of man hours spent in the woods by experienced hunters this year produced one bow kill buck. 0 deer gun season! And i mean "real" hunters! Not hunters sitting over a bait pile. Our camp has taken 100's of bucks since 1972 and don't think all of a sudden we don't know what we are doing! Get rid of baiting and manage this county for what it is "TWO" distinct habitat areas!
I am curious about deer repellent spayed areas in the national forest. Saw a number of signs that said deer repellent. Also saw many more hunters coming from areas that were determined to be cwd zones. They were coming here because our area allows baiting. Ending baiting is not a bad thing. Deer will go back to natural feeding patterns. Then it will become hunting again, not just shooting. Drove into a lodge by Delta this year and saw twelve deer hanging in a big tree. Two does and 10 fawns. Stop issuing so many antlerless permits. Got bitched at by a guy that owns hundreds of acres of land, yet he was hunting in the national forest and because he had a ladder stand and a big bait pile he thought he owned that piece of national forest even though I have hunted at least one day out of every season for the last 32 years in that same area. Raise the non resident fee. I hunt other states every year. Non residents are getting off cheap in Wi. Are people that are making all these decisions about the hunting actually hunting in this zone on public land?? If not they should be. I would encourage them to puts some boots on the ground in this Northern zone during the season and also walk the deer yards after the season. See what you see. Then make intelligent informed decisions on numbers.

The more I read the more frustrated I get. Why are you asking questions about crop damage north of highway 2? There are few crops north of 2. Beyond that get your heads out of the sand. There are very few deer in the northern part of the county. I don't care what your "studies" show. The results are giving you false readings. I am a professional researcher. I have taught statistics and econometrics at major research institutions. I publish in leading economics and finance journals. I know how deceiving data can get and I know that granularity makes a huge difference. Whatever you are seeing or hearing about overabundance of deer in northern Bayfield is just wrong. Get out in the woods and look for deer sign! I know that area like the back of my hand. Have hunted there for over 50 years and have seen all kinds of deer cycles. The deer are just way down and by trying to say otherwise you are compromising your credibility. It is almost laughable. I talked to 4 loggers who logged near the Flag last year. They told me that over the 4 months they were in the woods they saw '1 deer!!!!!! What the heck does that tell you? The loggers who logged the private land I frequently hunt on logged it 2 years ago and they said they hardly saw any deer at all. What does that tell you?

The mismanagement of our deer herd in Bayfield County has continued to destroy what was once considered a premier deer hunting destination in our state. One of the reasons I purchased my property and house 20 years ago was because of the excellent hunting and access to public land. I also owned a resort for many years that depended on deer hunters coming to our area and had a waiting list of people trying to find a place to stay. Lack of accounting for predators, severe winters, and over harvest of antlerless deer has created a depressing situation compared to the days of abundant deer numbers and small towns full of hunters pumping money into our local economies. Consequently, I've chosen to spend most of my time, money, and energy in other states that value their deer herd. While on an out of state hunt last year, the hotel was full of Wisconsin hunters that shared the same attitude. Decreasing license sales and declining hunting numbers seem to be a concern as my daughter and I saw 3 deer while hunting all 9 days of the WI gun season in Bayfield County. It's not a hard conclusion to make. Lack of deer results in lack of deer hunters. Please use common sense to help restore what was once a unique and prosperous tradition in northern Wisconsin.
Although we had a large snowfall during the regular gun season this past year, I was able to hunt the whole season. From what I seen north of US highway 2, the number of hunters did not go down as low as the number of deer sightings. I feel that, in the forested part north of US 2, there are many less deer than is believed. I am in the woods almost every day. I truly believe we need to address every year different and private from public differences are also to be considered. I have hunted both, and there is not only a different mentality about quotas, but private is also not accessible like public land, so therefore a whole different subject. I would like to see the 3 year proposal options be extinct. Every year should be looked at separate. Facts of numbers before estimates. Everyone involved tries to do a good job, but not all have the same interests. Our forests are changing do to soil impacts on what has been growing and what we try to grow. It will naturally change, we can only change with it. I would also like to add that, although I understand the whole covid-19 situation, I am very disappointed that this is the only way that I can add input, and not be able to ask questions publicly and have them answered.

First of all there needs to be more forest management/ clear cuts to provide feed and cover to wildlife. Giving away and selling unlimited antlerless tags is a joke. Too many hunters shooting fawns and wounding deer just to fill tags. I have watched this first hand. Call me and setup time to meet during deer gun season and I will show you. (715-570-7135). I have hunted in Bayfield and Ashland counties since 1989. Have watched deer numbers decline over the years. Hunters being the biggest problem at times do to the obscene number of antlerless deer tags sold or given away. Hunters should be given 2 tags a year use for either archery or firearm or combination. No one needs more than 2 deer. This should be about ethical hunting standards not how many tags one can get and kill. When DNR gives out deer AG damage tags force farmers to give and allow people to hunt property. In the past Nelson Seed Farms near Mason would not give away but sold to people from out of state that hunted his land. I was refused by Gerald Nelson personally, (currently White River Ag after he sold.) Yes there are pockets of high deer populations mostly in agricultural areas of these counties. But to many of the antlerless tags are being filled in the Nat'l Forest and non-ag areas.

WHY REDUCE?? For the past five years I have expressed to the CDAC great frustration about the low number of deer sightings my friends and I have had while hunting in Bayfield County. We’ve urged you to rebuild the herd. Is anybody on the committee even listening? It is truly depressing to witness the unnecessary carnage you’ve inflicted upon our whitetail resource. In my opinion, there is absolutely no need to further reduce the population on Bayfield’s public hunting grounds. As it is, predation and winter kill effectively neutralize 60 to 75% of our annual fawn recruitment. Overbrowsing? Seriously? Many of our most productive areas in the National Forest have become almost impenetrable due to dense underbrush taking over. Contrary to misinformation provided by an overzealous forester, there is hardly any appreciable browsing going on in many parts of the forest. After suffering 10 consecutive years of poor hunting, hoping for an eventual recovery, I’m at the point of totally abandoning my cherished 35 year tradition of hunting in this county. I hate to do it, but like many of my fellow hunters who no longer support your economy, you are forcing me to take my dollars and go to more promising areas of the state.

Our camp has hunted Northern Bayfield for over forty years, we usually run about a 70% success rate, several years we went 100% on our buck harvest. We do not bait and we only hunt the first 5 days of gun season. We run 15 hunters in camp that come from as far away as Texas. We average 80 deer sightings a year, both buck and doe, we hunt over about 5 square miles of mostly public land. Here are our numbers from the last 4 years. 2016-one buck harvested, 18 deer sightings. 2017-one buck harvested, 16 deer sightings. 2018-one buck harvested, 12 deer sightings. 2019-0 harvest, 14 deer sightings. 40 year average 9 bucks per year harvested, 80 deer sightings. Does it sound to you that we need doe tags??????????????????????? We already have plans with several camps in the area that none of us are buying deer tags for the 2020 season, over half those tags are none resident at $160.00 a piece. The biologist for Bayfield needs to take a trip out to the woods and the deer camps in the northern part of the county and stop managing everything based off southern Bayfield. How about no doe tags north of route 2? We also bow hunt our harvest and sightings from bow are worse then gun!!!!
I spend a lot of time each year in Bayfield County enjoying numerous different hobbies and am concerned that the deer numbers are steadily dropping. I enjoy trail cameras and have around 20 cameras out from spring until late fall and the pictures support a drop in deer numbers. The decrease in numbers could be from predators, hunters and most likely the late snowfalls of the last two winters. Each year it seems like another friend / property owner in the county decides to sell their property and start hunting elsewhere. The main reason I hear from these people is that they want to enjoy hunting with their children and if their children aren't seeing any deer they no longer want to hunt in this location. Maybe this also supports the drop in license sales. If the county was managed differently, north of Hwy 2 definitely doesn't have the deer numbers that the southern part of the county does. I have read about the lack of red oak regeneration for the last few years and this should be a concern also, but according to all the logging taking place and the size of the timber ( oak included ) being harvested maybe a different approach would save some of the oak trees.

547

I have made this comment before and realize I am wasting my time; but I have time so: my area near Port Wing next to the flag river has nearly no deer. I have hunted this private property for nearly 20 years and am accustomed to seeing many deer in a day; like 10 to 15 bucks and at least that many does/fawns. Over the past 4 years that number has gone steadily down and this year I had cameras out all summer and fall and had 4 small bucks 3 does and no fawns, by hunting season that number was down to two small bucks and 3 does. I hunted three days sat. sun. and tuesday dark to dark without moving and never saw a deer. the hunters in the cabins close to me (over 20 hunters) all hunted; but hunted elsewhere; never saw a hunter or heard a shot. I am not trying to say Bayfield County does not have deer and I know the southern part south of Hwy 2 has lots, what I am saying is the northern part has almost none. As far as youth hunts, they are a joke, dads buy their kids a license so they can shoot a doe and still hunt for a buck, doesn’t work except to kill does. Wolves and coyotes and bobcats are a major problem********

548

I’m satisfied with the proposed antlerless quota. However, I believe more emphasis should be made on antlerless harvest on private land. You drive through ag areas of Bayfield County and can see 40 deer standing in a 40 acre clover field. Then, drive 5 miles away into forested areas and not come across any deer sign. I believe we could log off more land. I believe tourism has been diminished due to poor public land opportunities. I believe that Covid-19 has hurt tourism to a point where hotel and restaurant businesses in the area might not recover unless there is ample hunting opportunity. It’s not just about the deer anymore. It’s about the livelihood of the people that live in the county. I believe we had a heavy winter kill. I walked through a wintering yard on Cut-Off Road in Delta and saw about 80 deer. I also saw 6 dead ones. The land was in the process of being logged because the equipment tracks were fresh in the dirt with massive snow around untouched areas. Deer were literally dropping over dead there. I would like to see 3,000 permits issued for Private Land and 1,000 permits issued for Public Land.

549

I have hunted these areas for many years and have seen a significant decline in the amount of deer seen and taken during the Gun Deer seasons. Just look at the buck pools in every bar. Some places have kept a record every year since I have been hunting here starting in 1980. Deer are smaller and in less volume. Opening days during the gun deer season are starting to be pathetic. Bow hunting is a little different. Wolf population and visibility of the wolf has certainly been a factor in the decline as well. There are days when we have seen no deer on opening day. We used to see 20 or 30! Enough said on that. My major concern here is that deer hunting and maybe hunting in general is dying here in the northwoods. A 40% decline in licenses issued is a tell tale sign that things are obviously getting worse. Something needs to be done to get the heard to a level that attracts hunters to the area and maybe even produce a few trophies from time to time. I would even be in favor of a "No Gun Deer Season" or two if that’s what it would take to fix this problem. We need your help and we need it this year.
I have hunting the same 27 square miles of public land since 1975 and I have seen the good, the bad and the ugly. We used to see a bunch of deer on a daily basis and now I will bet 3 of the last 7 seasons would be considered extremely poor with little or no deer seen. We have about 10 - 12 people in our group. When you have campgrounds and bars that fill up buck pools and 3 -8 people out of 50/100 shoot a buck, that is not good. I don't understand how this unit could be slated for a decrease in population as our entire group and people we know who hunt up here believe the decrease has already taken place and only getting worse with the bad winter and the amount of wolves and wolve tracks we now see again. My comments are directed toward the public land only. You should be able to break out antlerless quotas information for private and public in this area and my recommendation would be buck only in the public land for another 1 - 3 years. When I see wolves during the daytime running in open areas in 2 of my 5 hunting days, that is a problem as I saw more wolves than deer......I wonder why!

Bayfield county should be split into two zones. The northern portion is big forest and as a result the carring capacity and deer/square mile numbers are very different than the southern farmland portion. I have hunted both archery and gun season for 12 years in the northern Chiuwamagen National Forest on public land. The last 3 years I have not seen an antlered buck off stand. I have only seen around 4 antlerless deer over this time. The number of deer on our deer camps trail cameras is also dropped dramatically over the last few years. Deer sign during the rut is almost non-existent. Wolf sights are up in our area. The combined pressure between predators, winter severity index and baiting makes the idea of taking another 1500 antlerless deer from this area crazy. The biggest deer on a buck board in our Herbster, Port Wing, Cornicorpia area was only 130 lbs. Every hunter I spoke with said the deer population in that area is struggling and the kill numbers for 2019 reflect this. Please reconsider both issuing doe permits for this area as well as banning baiting.

been hunting northern bayfield county for 49 years. own a house there this was by far one of the worse deer seasons in our camp history. 0 deer harvested 12 hunters 16 deer seen in 5 days. you say this is over populated. I think a trip up to our camp and surrounding camps should be in your future just to see how tough it is here. we also bow hunt the rut and have 15 trail cams out for much of the year. we just do not have the deer you speak off. it would be shooting our selfs in the foot if we took does and fawns from this area.the baiting of all deer should be on ever biologist mind. why are humans told to stay 6 ft apart and deer can be congregated in a 2 ft pile face to face. its not natural and probably not good for them.we spend a lot of time in these woods and are not just weekend warriors. if anyone of the council members would like to visit us and discuss all outdoor activities I would love to discuss this with them. we are the pu camp herbster most people in this area know us and our love of the beautiful Northwoods . ps. winter wasn't the best either

I am a forester, so I am out in the woodlands of Bayfield county very frequently. I see more deer browse damage this spring than I ever have. In southern Bayfield county, you cannot drive down the road without seeing deer. They are everywhere. Regeneration of oak, and survival of oak seedlings is being deeply affected. Young white pine that were above the snow pack have been decimated, with every bud tip and growth shoot browsed off. We need to drop the herd numbers significantly for forest health and for herd health. Selling fewer doe tags than last year will not somehow raise the harvest. We need to combat the "old" thinking that only kids and women should be allowed to shoot does, that a "man" would not shoot a doe. This is not 1930, yet that attitude is still prevalent throughout the area when I talk to citizens. We do not grow large numbers of trophy bucks here in Bayfield, but we do grow delicious venison by the ton. Let's focus on the value of that and change perceptions, and we will have a better tool for controlling our deer herd.
I was satisfied back in 2018 with the amount of deer sightings on private and public, I usually set out 15 trail cameras and hunt in the Barrens area, Cornucopia & Bayfield area. This past 2019 season I hunted in those same areas as 2018 and had a quarter of deer as the previous year (2018). I’m not a weekend worrier when it comes to whitetail deer, there’s something awfully wrong with the deer population estimates that’s put forth. In all my years of hunting I have never seen the population down this low. The deer are just not there, even on private property low numbers are starting to show and the thing is, is that owners aren’t shooting the deer or seeing the big numbers that supposedly are there. This is my prediction, it’s plane and simple, this 2020 Whitetail deer season, the deer harvest will be the lowest it’s ever been and will continue every year after that until you stop authorizing antlerless tags. Stop making excuses for what is not there. Until Wisconsin has some sort of control with the wolf population, well that’s another story.

Of the 15 deer in my yard over the last hunting season, only 1 was an actual White Tail deer. The 14 other deer on my property all had black up around back of legs and down sides of tail, from my experience that is black tail or some form of a mule deer of which our DNR claims the closest herd being in South Dakota. Can we harvest these deer? I had to shoot the one white tail out of the group of deer and I did make the shot and kill in 1 shot, but if they had ran I could have easily lost track of the sole white tail and shot one of the others. Why does the DNR appear to ignore the fact that in the Town of Hughes in Bayfield county we have deer other than White tail and can or can we not harvest these deer.. They are a tad smaller than the other deer, maybe 15-25% in size... And after skun out would only look like shot a smaller deer, but do not care to get in trouble if I have someone else process and one of these deer with hide easily picked out from the pile waiting for processing... Please address the other deer in our state.

I would like to see more tags made available than what has been recommended. Last year I bought 1 antlerless tag, which I filled opening morning of the gun deer season. I was going to buy an additional tag since I had multiple opportunities at harvesting another deer, but all the tags had been sold out. All the tags selling out on private and public land tells me more tags need to be issued. Also, the harvest was down last fall, which is going to make hunters want to harvest more deer this fall. Based on these two factors alone, I suggest offering the same or more tags than were offered in 2019. The winter severity index was high this past winter, but we also had an early spring with no late snow storms. All the deer I have seen in late winter and this spring have appeared very healthy, so I think the winter mortality is lower than expected. Thank you for the opportunity to comment. It was also very nice to have the presentation by Todd Naas recorded and able to view even when not attending the first meeting, unlike previous years.

"You've got to hunt 'em where they are instead of where you want 'em to be". Best advice I ever got 45 years ago. However, if you're limited to public land this is now very tough. There is a huge difference in the number of deer on private land compared to public. I believe the only way to restore the herd on public land is to allow no doe harvest on public lands for a few years, even though it will limit hunting opportunities for a while. Predators including wolves, coyotes and especially bear seem to be abundant and it seems that more could be harvested. In my opinion, baiting is the absolute worst thing for the future of deer hunting. It holds deer on private land, it interferes with other hunters on public land, It's illegal and unethical in much of the country, it spreads disease, and most importantly - young people are not learning how to "hunt". They want the deer to be outside the window of the box blind eating corn instead of hunting them where they are! There's not enough of a challenge in that to keep them interested.
The goal of decreasing the amount of deer in Bayfield Co. was achieved many years ago. The areas I spend time in are mostly remote removed from the agricultural areas and populated areas. In these areas the herd has never recovered from the days of the bonus tags. The pressure from Wolves, bobcats and bears is a constant strain. In a 9 day deer season I will cover 100 miles or more tracking and still-hunting. I will usually see more predator tracks than deer tracks. Yes, there are deer but not numbers. You can cover several sections and not see a deer track. Bring back the Wolf season! 7-10 years for a bear tag?? 11 years for a bobcat tag?? Outlaw baiting! It is the feeling in our camp and the other locals we associate with that the State of Wisconsin is no longer committed to the deer herd in Wisconsin. I have no faith that you really care about the deer or the local economies of the state. The Timber, insurance and Eco lobbies have a bigger voice than the sportsman that pay a large portion of the bills.

There are already extremely low numbers in deer population in Bayfield county. TONS of migrant hunters come up here and slaughter the antlerless population. Many of the hunters who live up here leave antlerless deer to live. The problem is not that there is an abundance of deer. There’s exponentially fewer deer than past years, and this survey suggests the state is trying to continue that slope. THIS IS THE REASON HUNTING IS DYING. There will be no DNR wildlife jobs left if we preach that it’s a good thing to keep killing all of the does. It’s clear that money is the driving force of nature since we are trying to make sure trees can be harvested, not for the sake of deer. The amount of logging in the chequamegon national forest in the past years has been absurd. That should not be the number one priority. The message the state is sending that “we need to keep hunting culture alive, but we’re doing our best to make sure there’s fewer and fewer deer every year” is extremely contradictory. That’s terrible. Be better.

Having hunted in Bayfield since I turned 12 in 1993, this is as low as I have seen the population since the first 5 or so years that I have hunted. Bayfield has the same problem as much of the rest of the state. There are significantly more deer on private lands than public. My families cabin is near Winter in Sawyer cty and I hike and grouse hunt throughout Sawyer, Bayfield, and Ashland Counties. Wherever you have a clump of cabins throughout this whole area there are more deer. I deer hunt near Marengo lake. If you drive around the lake, you will see deer everywhere. However, if you drive 2 miles south into the national forest deer sign diminishes by 75%. Predator over-population, lack of young growth forest, and continued doe harvest has reduced the deer population to a point where I have seen very little growth over the last 5 years (except in areas with a large number of small land owners). I would like to see an increase in Bear tags, de-listing of wolves and a couple years of reduced doe harvest.

I feel it is high time that the gun hunters get an even break I have hunted since 1962 with 3 years missed while in the Army and have seen the gun hunting take a back seat to all the other seasons, an archery season that runs 4 months, Native hunting that goes on all fall, A youth hunt in October, by the time gun season gets here all the nice bucks are smart enough to sleep all day long and only come out after dark or when season is over. There is so much hunting pressure on the herd that by the start of gun season the deer have been chased, shot at or killed. I don’t see any reason for a youth hunt, I started hunting when the weather was much colder and we always has knee deep snow, I started my two boys off in the 1arly 1908”s haunting and they have brought all four of my grand children into the gun season and never any of us hunt a youth season. Keep gun deer season the thanksgiving week and give us a break and change some of the other seasons to give us a fare shake at a smaller herd.
I think the new electronic deer registration had an impact on perceived harvest totals since its implementation. I know from conversations with other hunters, there are many areas in the state with deer camps where there is no cell service, internet, etc and I am assuming a percentage of hunters from these areas simply will not register deer harvested if it is not available in person. I do think these hunters probably still purchase authorizations (tags) prior to the season opener. Another observation from past experience in Bayfield County is the fluctuating wolf population. I saw many sets of wolf tracks this winter, found two deer kills in the area, and have heard packs howling in the northern areas of the county multiple nights this past fall/winter. It is my opinion the wolf population is more widespread than numbers currently show. I have also seen more deer this spring than in some previous years, which I hope will contribute to a more successful season this fall.

Overall it was a nice presentation but I have a few additional comments. The numbers are likely difficult to decipher but, after a hunter harvests a deer I believe we should ask if it was harvested below or above Highway 2. I think we can come to find a more accurate deer population/density. The number of deer in the northern half of the county are in serious danger. Many of the deer were not able to herd up in the towns like they normally do in the winter due to the severity of the snow so early this year. Walking through the northern parts of the Barrons in areas with the large acorn count you will see quite a few dead deer in a days worth of walking/scouting. I think it would be unfair/inhumane to offer a doe season on the deer in this portion of the county after the struggles this winter. The deer numbers are drastically different in the southern(farming) areas of the county compared to northern half and shouldn’t be treated as equals. Just my opinion. Thank you.

I’ve mainly bow hunted bayfield country since 1995, there was plenty of deer till the state started issuing as many antlerless permits as you wanted to buy. After a couple of years of that decision went by the deer population dwindled from seeing 8-12 deer an evening to being lucky to see one. Shining fields that you would see 50-100 deer in them went down to 10-20. I remember of counting over 100 deer along the highway between Brule and Iron River on just about any nice evening. Now your lucky to see ten. People are generally pigs when they get a chance to harvest as many as they can and that’s just what they did. Now that there’re gone they blame it on the Indians and wolves, which I believe do take a considerable amount of game but now that the population is so far down there’s not enough for everyone and predators. My father was a DNR warden in Douglas county until mid seventies and he predicted this would happen when they gave out all of the permits in this matter.

I wish I could fully understand the entire process of the decisions being made. I realize I only hunt one small area of the forest near the town of Iron River. All I can do is observe the changes I have seen in the forest and the surrounding communities. The town of Iron River during the gun hunt used to be very busy. It was hard to even get a room at a local motel. Now, most of the motels are gone and the one remaining has vacancy during the season. The amount of deer seen and deer sign has decreased steadily since around 2005. It has gotten to the point that there are very few hunters in the woods. Its used to be opening morning would be alive with the sound of guns at 6:35. Now it is mostly quiet with only a few pops here and there. When hunters would gather at the end of the day, it used to be "How many did you see?" and now the question becomes "Did you see any?" I appreciate this forum. It at least allows me to voice my opinion. Thank you.

I’m all about managing the deer population responsibly. Special interest groups should not have influence on this whatsoever nor do I care about the people complaining that they didn’t get a deer last year. Deer hunting is a privilege. If you want a deer, get your ass in the woods and put in the work. I didn’t get one during deer gun season because I’m picky. I saw a shit ton of them too. Know why? Because I actually went into the woods and did the homework. So I’ll try again next year. If there’s a money issue in regard to the funding of things like managing public lands because of lack of hunting, the real outdoorsmen need to open their wallets to protect what we love without doing special things for the "3 days a year hunters" who are complaining because of one down year where deer didn’t walk out to the corn pile they put out last night and then stay there all the next 10 days of hunting. Bunch of lazy bing bongs. Rant over.
You guys just don't get it, private or public antlerless tags are all mostly shot on public land. A majority of land owners that hunt protect their deer herds. I hunt in far northern Bayfield county were the majority of the land is public. If you drive around at dusk you see very few deer in any of the fields. If I drive say 20 to 30 miles south were there is more private land you will at a lot more deer in the fields at dusk. Also I have seen hunters that I know have private land hunting and making drives on public land. The deer numbers in far north Bayfield County are too low. It is the norm now to walk a mile or so in the woods after a snow fall in early November and cut nothing but wolf tracks. And the closer to the lake the worse the snow fall. Last year we could not black power hunt because on the last Saturday of gun season there was 45" of snow on the ground. Do you think that that much snow that early didn't kill some deer?

In the distant past, we used to see 20-30 deer per day on opening day and usually the following two days. Then hunting pressure would drop and we would see less deer. This was in the national forest south of Iron River in Bayfield County. In recent years, we have had days where we have seen no deer on opening day in the same national forest and on private land near Port Wing. This has been very disappointing. We have seen and heard wolves in the early morning hours of the hunting seasons and expect that this is part of the reason for our lack of deer sightings. Lack of hunters is another cause and it seems like this problem is getting worse given the number of licences sold in 2019. Hunting in general is dying in my opinion, in this area of the country. Maybe I should start getting exciting about the overrun of turkeys that now grace our public and private forest land and take it up as my primary hunting adventure.

I have been out looking at deer mortality from the 2019-2020 winter and have seen an abundance of wolf/deer kill in the county. I have also seen vegetation eaten at the five-six foot level to pencil size twigs. The population in my opinion can not stand another hard winter and a reduction of does both. While there seems to be an ample amount of deer in the farming areas due to feeding and the ability to consume crops during the fall and early winter, I think the forest regions are experiencing low density numbers. While I understand that wolves need to live, I don't understand why we continue to put natural deer kill (winter, predation) on the back burner until it becomes a rally point for low deer numbers. Wouldn't it be easier to look at spring numbers after each winter than to base doe permits on the previous years fall findings and therefore save the headache of high permit numbers and low antlerless numbers?

In general I have total confidence in the scientific management of this DNR unit. Disease is a primary concern for me, preventing CWD &c. is important and IMHO trumps other issues. I also enjoy the wolves and other wildlife. I feel strongly that we need to protect wolves and other wildlife even if it means a thinner hunt for me. I don't know how this enters into your model for calculating the harvest but I hope that the entire system's health is more important than keeping a vocal minority of hunters from soiling their diapers. Finally- this may not be relevant to the model but if there is a need to increase cull, PLEASE think about having a bow-only extension. Extending bow season doesn't endanger or hinder other users of public lands. Gun hunting, as fun as it is, definitely precludes other people from using their public lands and prevents people from running, hiking, and gathering firewood in safety.

Own land in Bayfield county,hunted on this land surrounding area of Barnes for 47 years , only once in the late 1970s have I seen so few deer. Woods by the thousands of acres have been cut down , clear cut and planted back to pine. DNR has not listened to hunters like me in the past many years of going to the spring hearings. They continue to issue twice as many antlerless permits as they should , local people can see this and are vocal about it because it affects local business. The group of hunters in our cabin and many neighbors will not shoot antlerless deer to try and stop the over harvest. Please reconsider why you think the 3 year plan in 2017 should be to decreased the deer heard in Bayfield county. The predators and a bad winter of deep snow will take care of decreasing the heard.Bayfield county is pour but the sale of it's forest is a short sighted plan, hardwood forest are needed for game and tourism.
I have been in northern Bayfield county for many years. The deer population we have now around the sand river deer yard is almost non-existent. The deer herd has been very poorly managed in Bayfield county. That fact of the matter is all that the management CDAC comity is doing is deterring the younger generation from wanting to hunt. No kid wants to sit in a stand to only see one deer during his/her deer season. The DNR is only hurting its self. Once the older generation is done hunt they will see a dramatic decrease is tag sales. You can ask any hunter around this area and they will say the same thing. It’s sad to see this happen but you guys don’t listen the the hunters. Only the foresters that will go look where there is a decent deer heard wintering and say they are eating all the saplings. Of course they are they spend the whole winter there. Listen to the people that are out in the woods.

I have no idea why the CDAC recommendation for this unit is to reduce deer numbers! Over the past 10 years, I have seen the number of whitetails drastically reduced, and not only don’t I ever see deer while hunting, I rarely see tracks in the public woods where I have hunted for 31 years. It is depressing! One of the biggest changes is that the only deer we seem to see when driving around are within a few hundred feet of homes, buildings, and towns. Between deer baiting, feeding, and the increasing danger of predation, the deer have definitely adapted to living in close proximity of human habitation. It gives a hunter like me, who hunts the open forest with no bait practically zero chance to ever see deer. My grandfather started hunting Bayfield county in 1931, and my father in 1963. I doubt that I will continue to hunt there much longer if things do not change for the positive soon.

The public land that my friends and I hunt in Bayfield Co has seemed more and more devoid of deer. I grew up in WI and have always hunted in Bayfield Co, and still do even though I’m now living in IL. It’s becoming less and less appealing to make the trek up there to hunt in the land I grew up hiking, fishing, and hunting in. This is mainly due to the fact that the area we hunt seems to have so far fewer deer than years past. I can't speak for all public land obviously, but it seems like the numbers don’t add up to my experience. We will hear so few gunshots opening morning, and even fewer the next few days. It used to be as soon as the sun came up it would be non-stop shooting until the afternoon. I’d ask that there would at least be no increase to the antlerless deer quota, and a reduction may be better for the hunters (both local and out of state like myself).

there has been much, TOO MUCH, debate about crossbows taking too many bucks and not enough bucks left for the gun hunter. I agree that the buck numbers in the northern counties should be increased and the ratio of does to bucks should be decreased. This will not sell more licenses, but I believe we should go to one buck per hunter per season. If the hunter chooses to harvest a buck in early crossbow season or bow season they can not harvest another buck the rest of the year. This could only work if we brought back deer tagging along with the stiff penalties we once had for not tagging a deer. Also the hunter who harvested a buck prior to the gun season could not participate in group hunting of bucks. We really need to bite the bullet and make a sacrifice for a few years to bring back the number and quality of bucks. This rule stop the fight among hunters.

I have hunted the area for over 50 yrs,spending many hrs in the forest not only in deer season but bear and turkey/grouse.I understand farm land in some places has to many deer, but your lumping it in to all private land plus nat forest.this is not right,i have seen less deer year after year on my small 35 acre piece on woods,and time in the national forest even less deer.oh ya they is also more food in the woods then there was 50 yrs ago.and for some reason why is Douglas county not shooting does,in the last 5 yrs on my property i have only seen 2 fawns,i have lots of pics of wolfs it just does not make sense that Bayfield county shoot all the does.if you have a problem on farm land then issue permits for farm land only.year after year the hunters tell you no and you keep on shooting more does.its getting that hunters have no trust in cdac in bayfield county.
once again the Bayfield peninsula took a very hard hit from winter and the over abundance of predator's, the once premier largest winter deer yard was empty due to the states answerer to numbers control the wolf, I'm very dishearten with the state Wisconsin's management approach, example! using the road kill count to determine a population estimate when most of these deer are brought to close proximity to the Hwy 13 due to people feeding the out there back door. Mother nature is very capable of managing its own numbers, what needs to be managed is the managers trying to keep them self's in a job i.e. (foresters) deer have been eating brush sense management ever came in to practice, put your books down and get into the brush and take a look around its not real complicated, if you really care about the resources take the dollar bill out of equation.

Antlerless only should be out of the question. I very much have enjoyed how the Archery seasons are setup and like that the antlerless only 4 day hunts are in December after Muzzleloader season. Please keep it that way. As far as the gun deer season, it would be nice once in a while to alternate the start of the season as to be able to hit the rut and chasing stage more often rather than hitting the deer recovery time, extended bedding from being worn down etc. I propose the start of Gun deer season start a week earlier than Thanksgiving week and allow for muzzleloader to be during Thanksgiving week every other season or every third season. I would enjoy that and I think many would. We all get jealous of Minnesota's gun deer season as they almost always seem to have their two week season during prime times. Just a thought. Please consider. Thanks.

This past year was the first year that a pack of wolves had been in the hunting area my friends and I have been hunting in for years. We had no issues with the wolves. However, all the years past the number of deer that we would see on a daily basis were substantial. Last year the numbers were significantly less. Specifically, in previous years there would be at least one to two daily that end up within 50 yards or less within our stand easily walking toward us. Last year the deer did not last more than five minutes within my site and more than 150 yards away. The evidence of their activity was significantly different as well. Every day we could see the wolves on their run as well. I'm just guessing that with this pack of not more than nine, they were having an affect on the number of deer in the area we had been hunting in.

I have hunted up here for many, many years. This is the lowest I have ever seen the deer population. I hunt and hike throughout the area and see an increasing number of predators, wolves especially. The deer population becomes less and less apparent. I see less and less deer every year and 2019 being the worst. Something needs to be done about the large amount of predators and the lack of deer. License numbers will continue to decrease because no one is seeing any deer. Please adopt regulations that mirror successful states like Iowa and Illinois. These states are known for their mature deer and that is why the license sales are through the roof. Please adopt rules to sustain and mature deer populations. Current models that are being presented do the opposite. We will be one of the worst states if this trend continues.

Thank you Todd for the video presentation and to the CDAC members for their work. I support the proposed quota of 1500 antlerless deer, as well as the 60/40 private/public distribution of tags. I continue to have concerns about the spread of CWD to Bayfield county and support actions to reduce this risk (including lower herd densities). I was glad to see the CWD self-registration stations last year and encourage that to continue if possible. I was also glad to use the carcass dumpsters made available, and encourage that to continue if possible (maybe even put out earlier for those archery hunters). Lastly, I would like the CDAC committee to explore options to eliminate baiting/feeding as these activities are not beneficial to the deer herd and can increase the risk of CWD spread. Thank you!
Our party of 13 rifle hunts the Moquah Barrens area of Bayfield County. We “still” hunt large tracts of land toward each other and usually have reasonable success with 3 to 6 bucks taken during rifle season. We hunt hard for the first 4 to 5 days of the season. This year we not only did not shoot a buck in this area but only saw one legal buck amongst our entire group, not to mention there were also very few antlerless deer sighted. The one thing we did see a lot of was wolves and wolf tracks. I also do a lot of bow hunting on private land near Herbster. I hunt with a friend of mine from California. We hunted for the entire month of November prior to rifle season and saw only 2 legal bucks and very few antlerless deer. If there are too many deer in Bayfield County you couldn’t prove it by me!!!

Bayfield County has very diverse habitat areas and a one size fits all approach will not result in a satisfactory result in all areas. The farmland areas southwest of Ashland along the White River present a very different deer management environment than the forested regions further to the north, west and south. Deer densities within the Penokee Mountain areas are exceptionally low due to a lack of food and cover as well as very high predator populations. Consequently, it makes sense to consider these vast forested areas under a different management plan that can address the challenges presented. Primarily, I would vote to reduce the number of antlerless tags and eliminate the use of baiting which only serves to artificially congregate animals and reduces opportunities for other hunters.

We have hunted the forest with a large group of hunters (10-12) both bow and gun. We spend time early on preparing and spend 4 days hunting. It is not unusual for our group to only fill one maybe three tags. The last 3-4 years has been very good conditions for hunting and we have seen very few deer (Doe or Buck). The numbers have all ready decreased in this area near Delta to a point that makes it very hard to see deer at all. 2019 I saw 2 deer in 4 days of hunting. 2018 was not much different. The numbers in this survey should be take into account the Native American deer kill! Everyone should be able to see these numbers and how they are considered into this equation for the allowed permits. Thanks for all your hard work in creating the best scenario for all our benefits.

There aren’t as many deer in the northern part of the county. Have you studied the effects of bear and wolf predation on private land compared to public? When I personally saw more bear and wolf tracks still hunting through the woods, it’s very disheartening. We have a large group in our hunting party, when nearly half don’t see a deer in 4 full days of hunting it discouraging. It’s a big county, there should be north and south sub-units. Those sub-units should managed differently. Some "deer czar" from Texas really had no business telling Wisconsin deer managers one damn thing about managing deer in Wisconsin. He doesn’t even know what a real winter is or how vastly different the northern forest is from the southern private land. Texas also use deer feeders?

The Bayfield Co “Northern Forest Zone” is not just a Forest! There are many ag fields in Mason, Benoit, Ino, Moquah, and Barksdale where it is easy to see deer flocking to high dollar crops such as alfalfa, corn, soybeans, and clover off of nearby roadways. These areas have ZERO reflection on deer numbers in the Bayfield Co Forest, or in the Moquah Barrens, Ino Barren’s, or Iron River Barren’s. Even the heavily wooded privat parcels and suffering for deer numbers. I am lucky to be able to hunt both Ag lands, and the big forest and the number of deer & deer sign is not even relatively close to what it is on the Ag Lands. It is not fair to have doe tags available to private land hunters in Bayfield based of how many deer people are seeing in the Southern County Ag fields.

It is evident that the forestry interests would like to see few or no deer on the landscape, which is counter to the interests of hunters whom would like to maintain a reasonably robust deer herd (which is clear from the public input provided to the CDAC year after year). Fortunately, we have the tools where the Bayfield County Forest lands can be managed differently from the remainder of lands throughout the county via DMAP or damage tags where all parties can be satisfied. Why not use a solution like this which works for everyone instead of letting one stakeholder group’s interest control policy? Bayfield County already has among the lowest deer densities in the state. No more decreasing the herd! It is time to let the herd bounce back a little and then maintain!
In over 50 years of hunting diverse public areas of Bayfield county, I have observed the ups and downs. About 10 years ago, our crew began deploying cameras to scout. We observed many large bucks at night which were never harvested due to their nocturnal natures, but we enjoyed seeing them on cam every year and named them. In 2019, we noticed a drop in the number of bucks on cam over all, and particularly big drop in the number of 4 year old plus bucks that we like to shoot. Not sure why, but we suspected winter kill from the previous year? A bucks only season for a couple years would not hurt Bayfield county imo, as there is plenty of food for them, and the woods are not in the least exhibiting the over browsing that we saw back in about 2005 as I remember it.

I believe: Youth should get to harvest buck or doe deer if they wish with out restriction other than 1 deer per season plus additional harvest of the doe if desired. Seniors should get to harvest buck or doe deer if they wish with out restriction other than 1 deer per season plus additional harvest of the doe if desired. All other hunters should be held to quality deer management standards of outside the ears. I also believe private land owners should be given significant incentives to host youth and handicap hunters and potentially have less privilege if they do not. I believe Bayfield Cty should be working towards managing wildlife to be the leading location to hunt in the State and the Country. Not to just exist and maintain but to excel.

Given that there was a big snow storm during rifle season, and right after season, we lost 5 of 9 days up here, which is the main reason the harvest was down, paired with the late opener, not as much of the rut was into the gun deer season. I think there were just as many, if not more deer this past season than last. We hunt the big woods outside of Grandview and took 5 bucks off the property, 2 over bait, 3 without. I think the CDAC has done a great job looking at the numbers, and listening to their specific stakeholder group, however i would still like to see a quota higher like the previous season. The deer came out of this winter just fine contrary to what some may think. Thank you to them, and the biologist for the information.

1. Very few hunters on public lands. More hunters may increase deer sightings with more hunters in woods potentially moving deer. They won’t come unless they will see deer. There use to be a lot of downstate hunters coming north years ago. 2. To much baiting. Ban baiting. Some hunters will gripe but they will get over it. To many hunters sit all day over bait piles. The deer do not move because they have a food source from the bait. More deer movement, more deer sightings, more opportunity for hunters to harvest a deer. Encourage hunters to scout, still hunt, etc. 3. Maybe do a north south split season like waterfowl. Start north a week before south zone. Might increase hunters up north. Local businesses could use a boost in hunter numbers.

Certainly not an overabundance of deer where I hunt. I hunt the first 5 days of the season from sun up to sun down- in the woods- do not bait but actually hunt. Saw a total of 3 deer in those 5 days- all were antlerless. What happens when you have a severe winter? That’s something no one can control. Cut that antlerless quota to 500 or zero on public land- the baiters on private property can kill the antlerless. Baiting needs to be eliminated for the health of the herd and also I recommend one buck per hunter per year- regardless of the type of hunting you prefer to do- bow, gun, muzzleloader etc. Go back to issuing back tags and requiring registration be done in person. Crossbows should be for 60 and over or those with a disability.

I have hunted this forest for 55 years. Our camp has eight hunters. We are 4 older hunters and 4 younger hunters. We are about to lose those young hunters. They have hunted for about 10 years on average. This represents 40 individual years. In that time only 2 bucks have been harvested, by the youth. In the past 10 years, the 4 older hunters have harvested 2 bucks. During the same time period only 4 does have been harvested. The amount of deer seen in this time period (10years) is terrible. We are not baiters. We are convinced that the only way to shoot a buck, is to bait, and hunt from a tree stand. Walking has become a thing of the past. And that is a shame. The excessive harvesting of does in the national forest has got to stop.
From 6/17/19 until 4/22/20, only observed one deer on my 50 acres of mostly forested land in extreme northern Bayfield Cty. I have two neighbors who also commented to me having seen virtually no deer during this period of time. Since 4/22/20, observed one adult deer with what appears to be a last year's fawn (yearling) in close company. Also observed one other solitary deer on my land on 4/26/20. However, this is typical for this time of year, for the higher elevation of my land the snow level has just melted away the last couple of weeks allowing deer to move unobstructedly through. I continue to recommend a zero antlerless quota in Bayfield Cty., at least north of Star Route Rd., except for the youth hunting program.

Bayfield County needs to allow more bear tags and a wolf hunt needs to take place. We have a group of 32 hunters who have hunted Bayfield County public land for 26 years. From year to year many of us don't see a deer. We have to many wolves and bears on our camera’s that we put in the woods during Fall scouting. We drive 6 hours from our homes to where we hunt. 2 gallons of bait once or twice in the Fall is not enough for us as we compete with locals who can put out much more bait through the fall. Why do you think private land hunters harvest so many more deer than public land hunters. The number of hunters through the years has steadily decreased. I believe this is in direct correlation with hunters not seeing deer.

Our camp dates back to the mid 1930's. My father in law used to talk about the doe only seasons held in the 1950’s? According to the observations of the hunters in the camp at this time, it took a very long time for the herd to recover. I have had the opportunity to hunt a large variety of game animals across North America these past fifty years. The taking of anymore deer at this time in my life is not as important as it was when I was a younger man. I enjoy our camp, seeing my children and grandchildren charging into the woods to bag that big buck. Please don't repeat the mistakes of the past! Also note, that I like seeing all different type of animals while hunting, your problem is trying to strike a balance among all.

I have been hunting in the Town of Russell in northern Bayfield County for over 45 years. The past 8 years have been very disappointing when it comes to whitetail deer hunting. Previous to last year I decided to hunt the state of Wyoming instead of Wisconsin and had great success. Last year I decided to give it another try in Wisconsin and never saw a deer. Yes, you heard me correctly - not one deer. Not even a doe. I own property in the Town of Russell and feel the Wisconsin Department of Natural Resources have poorly managed the deer herd. In my view it all started to go south when the DNR had "Earn a Buck". The predator population continues to increase and the deer herd has dwindled. Very disappointing.

Baiting is out of control! Baiting needs more restrictions on public land. The majority of hunters are dumping these corn piles a couple of days before season, interrupting normal deer patterns for the season, so they can shoot there does. They don't have to go in the woods and actually locate deer or a look for a stand. After deer season is over the deer return to their natural patterns again. This is bullshit!! I have hunted in Bayfield county for 35+ years and this baiting gets worse every year. I have seen corn run in strings fifty yards long down logging roads! You need to do something different. I would like to see a antlerless season only, after the rifle season. No baiting for the 9 day rifle season.

Why bother? The CDAC ignores pro deer input and does whatever it wants to do. The CDAC in Bayfield County ignores hunter input and does whatever Bayfield's forester/deer-hater suggests. Hunters in 2 past surveys have overwhelmingly opposed the herd reduction and know beyond a doubt the Public ground suffers from far "below normal" numbers. The deer herd is in big trouble on most of the public hunting grounds and needs to be increased in order to even survive due to heavy pressure from predators and harsh winters. There is NO overbrowsing on the public ground. To the contrary, the forest understory is becoming so dense many areas have become almost impenetrable and almost too dense to even attempt a hunt.
Their are NO Deer in Bayfield Co., PLEASE stop the anterless hunting get the deer herd back where it was in the 1980's. Been hunting their since 1987 and their are no deer quotas and the Wolf population is killing the population whats left. State and the DNR needs to control the OUT OF Control WOLF population. this is WAY out of control. In 2019 my son and I hunted every day and between the two of us we seen two deer, he is now 17 and not really intrested in hunting, he say's its a wast of time Dad we dont see anything not fun to me. As a farther that grew up hunting that really hurts to hear, he already quit bow hunting, DNR and the State of WI, is hurting the next generation of hunting.

We are one of the few remaining deer camps in our area. It used to be unit 5. The reason camps have left is because the deer numbers are too low. Out of 8 hunters this year which is down by two from previous years because of no deer sightings, 4 never saw a deer this past year. We hunt the Pigeon Lake hills and the numbers are down. It's got a a lot of wolf and bear pressure and the tribal members also hunt it hard. No does should be taken out of the public lands and the private land owners are taking their does out of the public land so they don't take deer out of their private land. I realize it is awfully hard to enforce with the current system of no back tags. Please , no doe tags!

Douglas and Ashland have purposed antler only seasons, why? Because the deer aren’t there that’s why. But bayfield CDAC members think suddenly all the deer from Douglas and Ashland must living in Bayfield County now to be suggesting the amount of anterless tags that they are purposing. Come on people!!! The deer are not there. Hunters don’t want to come up here and spend their money and I don’t blame them, I wouldn’t either. What’s wrong with you???? When we can control the wolves when/if they are de‐listed and get a few mild winters, then reconsider issuing them. Nobody cares that they might eat a few saplings forestry dept is planting. Want tourism dollars, let the herd grow!!!!!

12 hunters in a experienced established deer camp hunting hard for 4 days harvested 2 deer, only 1 legal buck during gun deer season. in years past the same hunters would harvest 10‐20 deer over the course of archery, muzzleloader, and gun seasons. Wolves have been a major factor in deer numbers in Northern Bayfield county. I have been hunting for 40 years and this is as bad as I have ever seen it. Lowering deer numbers is insanity. lowering predator numbers should be a priority. My 10 year old daughter and I sat for 4 days in an elevated stand baited with corn. we saw zero deer and 3 very large mature wolves. we have lots of bears, bobcats, coyotes, and wolves. very few deer.

Hunting in the forest has been very frustrating the last few years, the populations where I hunt (public land) have dropped drastically. Using trail cams and lots of time hunting I only saw 7 different deer all season. 3 years ago in the same location there were a lot more deer, I had 23 in the area at one time. There has not been much hunting pressure in the area, I'm sure wolves are involved, hard winters haven't helped but personally I think not issuing doe permits for at least one year would increase the population so a guy can get a little excited about hunting. Sitting for hours on end and not seeing any deer or the same 5 does just doesn't cut it. Thanks

My family and I have been hunting in Bayfield County since 2005. Since that time, both the quantity of deer and quality of mature bucks has decreased drastically. Certainly, this is a multi‐factorial and nuanced occurrence. As an avid outdoorsmen, I hope to see Bayfield return as a premiere hunting destination. Given the recent harsh winters (including the most current), this is a difficult proposition and will take great consideration from the DNR decision makers. I think I speak for most hunters in the Bayfield area in saying we would rather have fewer anterless tags issued for several years to help restore the deer herds numbers. Thanks for the consideration.

I think that we should strongly reconsider the plan to "Decrease the Deer Population" in Bayfield County. I do a bow hunting camp and gun hunting camp on public land in this county in the Chequamegon Forest. Each camp has 10-15 guys. We usually spend 3 days sitting in our stands during the duration of the hunting hours. It is very normal, for 3/4 of us to never even see a deer. This was not the case about 15 years ago, when we would see anywhere from 2-10 deer a piece in any given day. It has been really sad and it turns young hunters away. Please reconsider this, the deer population is TOO LOW. This happened ever since you had the earn-a-buck seasons.
As a landowner and concerned hunting/trapper for years in years in Wisconsin. I feel that this deer baiting has to be shut down. Year after year we hear that we should do it and then it doesn't happen. Once the deer season opens all you see is bait on vehicles all over the county. We we are playing a dangerous game with letting this happen (baiting ) before its to late. The hunters that hunt this area will be here no matter what and welcome a more traditional hunt like many of us know it. It’s no good for the health of the herd to let this continue the way it has been going. Again Please ban baiting statewide and be done with this once and for all!

deer numbers on trail cams and bow season sightings increased 2018 and 2019 yearling buck numbers especially good. Mature buck sightings not increasing anywhere near 1990s levels.support earlier opener for many reasons:people that have to work opener would have a better chance,older hunters would hunt more during spells of nicer weather,deer movement is proven better. If people don’t want a longer season they don't have to participate at times the don't want to. Most hunters don’t seem to be aware if you add up gun,muzzle,and late doe seasons we already have a 23 day or more season. thank‐you.

I support the recommended slight decrease in antlerless permits for 2020 compared to 2019. I think the significant decrease in the 2019 deer kill compared to the 2019 deer kill was due to adverse weather conditions during the gun season, not due to a large population decline going into the season. The slight decrease in recommended antlerless permits for 2020 should provide sufficient protection to the herd numbers should deer numbers have declined due to tough early winter conditions. Likewise, should the deer kill numbers increase this year, proving that that the 2019 decrease was an anomaly, I would support increased antlerless permits in 2021.

Forest health on our property continues to suffer from extensive winter deer over‐browsing on young trees. There are a lot of deer in our area (Cornucopia) despite the heavy snowfall and numerous instances of coyote predation that we have documented on, or near, our property this winter. What’s more, as was noted in the DNR presentation, the deer that we are seeing this spring are extremely healthy looking, which is remarkable given snow accumulations this winter. The below-average harvest numbers during last year’s deer season have us concerned that current recommended antlerless quotas are likely too low, especially for northern Bayfield County.

I have observed the deer numbers in Bayfield county formerly unit #3 rise and fall over the last 29 years. But I have to say the biggest decline is witnessed is from the Wolf population. To create a proper herd balance the levels of the predators needs to be brought back into check. The wolves and unknown amount of fawns the bears kill each year have defiantly taken a toll on the herd. To say your goal is to decrease the population that is completely backwards from what we are seeing. For decades winter, hunters and locals keeping their freezers full kept the herd level in check. Get rid of the predators and let things go back the way they were.

There are more deer on private/agricultural land than public forest land for sure.I believe the predators stay clear, more so because of the human activity on these properties. However all parties where I stay, (10 hunters) hunt on public land and report wolf tracks/sightings and scat with deer hair. Much more than in previous seasons. The wolves and ( bear spring fawn depredation) takes care of any need to control the deer population on public forests. Years past, hunting thinned the deer population during the hunting season, now predators thin deer numbers 24/7. As far as I'm concerned you don't need any bonus tags on public forest land.

I’m really tired of the responses from this particular CDAC. It is very biased and has not taken into consideration the lack of deer in the National Forest areas. If we stop baiting and feeding we will keep deer off of the roadways and away from the general population and focus more efforts in controlling predator populations we may stand a chance of bringing back the wild herd. You will continue to lose hunters as long as you continue your focus on killing off the public herd. Public hunters are your variable not private that have there own little refuges. Sorry for being so direct but being professional with this group has been ineffective.
940 My concern is that to many deer are being harvested on public land. Deer herds on private lands are much greater due to very little hunting pressure or no pressure at all. Wolves and coyotes are running deer all year and hunters start in sept. And don’t quit hunting till January. At the first sign of pressure the deer all hide by houses on private land. Talk of longer seasons is not the answer, deer numbers are lower than years ago and could use being a little higher in this county not lower. You just need to reduce pressure an allow deer to spread back out in forest land. Lots of other issues to fix, but good luck pleasing everybody...

941 I was a CDAC committee member several years ago and Still do not agree with several meme era who wish to wipe out the heard by issuing antlerless tags in order to save trees planted, because they reported deer were eating them as fast as they were planted. Nobody hunts up north because with all the antlerless tags issued, more predators than we’ve ever had now with the wolves and the hard winters that seem to be the norm now. If you want tourists dollars, stop printing antlerless tags and let the heard grow until wolves can be controlled when released from the endangered list. More deer, more tourists dollars, sounds pretty simple to me.

942 the amount of clear cut logging of forests is adversely affecting the natural habitat of the deer and making it very difficult to hunt them and is having a negative impact on the number of hunters in the woods or should i say the lack thereof. nobody wants to hunt the pine plantings that are hard to navigate due to the deep plow furrows used to plant the crop of trees. i thought the county forests were public lands and yet they are made for the most part unusable for the hunting public. all i can tell you from my experience is that the number of hunters throughout the northern forests has dwindled along with the natural habitat.

943 Deer numbers have been down for the past few seasons. Heavy snowfall and too many predators. We have issues with wolves running deer all the time which affects out hunting season. I saw one deer last year during the shortened season due to the heavy snow. All I can say is there may be too many deer in some part of the county but there sure isn’t too many where I live. We do not even bother going into the national forest to hunt anymore. You can drive miles on the roads and never see a deer track. Lots of wolf tracks though. And coyote as well. The hunting experience in Bayfield County has sure gotten worse.

944 I have hunted the Iron river area since I was 12 and every year it get worse. I used to be almost guaranteed to see something sitting both morning and evening bow hunting, but now I can sit days without seeing anything during peak rut. You guys at the Dnr have destroyed the deer herd out there and it's a shame. One of the questions says "how do you feel about the damage the deer herd has on the forest and some plant species" how is that a question when you allow loggers to go in and clear cut patches of healthy oaks which acorns feed countless other animals? Then them beautiful oak forests grow up to be popil forests.

945 Thanks for listening. I see on the map that The bad river reservation and Douglas County are buck only harvest. Why would you leave Bayfield and Ashland Counties with anterless permits? You can't do that! Ban baiting in 52 counties, then sell 900 bonus tags in Bayfield County, and then make the surrounding Counties Buck only! That is not fair to the hunters in Bayfield County!. Everyone came to Bayfield County last year and hunted the national forests. It was public land where they could drop a bait pile and shoot fawns. NOT FAIR! I have never seen so many deer hunters in my life! It was dangerous and crazy!!

946 I have hunted this county for over 40 years. It started with the old party permit system with only 100 given out to where it is today. I enjoy seeing deer whether I harvest one or not. There is nothing wrong with the deer season as it stands. I think the NRB had a knee jerk reaction to the kill last year and DID NOT take into account the blizzards they had up north (2 within 3 days), nor the fact they claim they sold approximately 200,00 less licenses last year. You keep messing with the regulations every year and more people are giving up hunting. Do you not think these things have a major impact on the harvest?
Listened to the spring meeting and was impressed with the concern and interest by most CDAC members. Was extremely disappointed with the reduced quota in a county so large with a deer population that is above a reasonably healthy level. Was also disappointed by comments of alternate chair who said: "Folks will like this quota better as it's lower than last year." Reaffirmed my fears of CDACs where science means little, but social acceptance is paramount. This is not how deer or any wildlife population should be managed. Put the lead role back in the hands of competent, science-based biologists (and foresters).

Over the last few years I have seen a significant drop in the population, size and number of deer in Bayfield County. I have also seen the number of hunters drop in this area. Particularly northern part of the county. I would like to see a buck only hunt for the next few years to attempt to build up the herd in this area. I would be in favor of junior hunters being aloud to take an antlerless deer to encourage future hunting. In 2018 and 2019 I saw a total of 3 deer combined and I hunted a total of 7 days each season. Let’s work to bring hunting back! Thanks for your time and effort.

The amount of doe tags proposed is much too high. Public land for sighting last year totaled 2 with 52 hours hunted. There are pockets of high deer area such as Mason and Ondassagon rd. The forester on this committee uses deer yard examples to claim all of his “browsing.” With the predators, winters, and hunters, you can say goodbye to the awesome tourism chances that used to exist in the county from deer camps and hotels. I support zero doe tags except for youth hunters and people over 65. I also support the idea of breaking the county into sub zones and give out doe tags in more densely populated areas.

Hello. I have been hunting Bayfield County for 20 years and lived there for 27. Live in Douglas now. I have never seen the population in the northern half of the county this low! Besides that I have already found 27 dead and fully eaten deer this spring while stealhead fishing and shed hunting. I believe that Bayfield County needs to be split at highway 2. The population south of highway 2 is much higher in my observations. I also think that it would be a grave mistake to allow any antlerless harvest in the north half of the County. Their are just way to few deer. Thank you for your time.

I hunt mostly in the planted pines where the deer do not browse on these conifer species. Some areas will have some deer sign and other similar areas wont have any sign for several months or more. There is an incredible amount of predators in these areas which has an effect/affect on the deer populations and also their movements. There are pockets of heavy hunter densities in some parcels and other areas are void of pressure. More hunters where there is more deer sign or huntable property. I would like to see the traditional antlerless permit system where you apply for permits with less permits given.

I think that doe tags should only go to youth hunters in the national forests and state lands. This would improve the chances of kids getting a deer and keeping a desire to be in the woods and to come back year after year. The farm lands are another story, that is where you see 30, 40 or maybe even 50 deer in a single 40 acre field. Maybe make crop damage tags available to kids with the farmers permission and maybe allow the farmer to sell and regulate the number of tags available. No offense intended but I think that the farmers have a better idea of what is going on on their land than Madison.

Hello Like I said I have hunted area 3 (bayfield county) for 46 years, this is a wild and pristine area, and the white tail deer WANT to live there, I don't know where this quota, antlerless deer harvest comes from, management? This is not needed, mother nature does this in this part of wisconsin, we have no business in this, the hunting season are just fine the way they are, they should not be lengthened or enhanced. Seems to me the more we manage this area the less wildlife there is, stay out of it, mother nature is really good at it...... Truth, 46 years of watching change, is my data base.
I think Wisconsin’s deer population is down from many factors, but the main 3 that stick out in my mind. Winter. Our last 3 winters have been very brutal not so much in temperature as snow depth which makes it hard for food sources. Next is predators you don’t have to look very hard to find wolf or coyote tracks especially when it’s snows they’re everywhere. Finally sense the dnr has gone to call/online registration I think half of the deer actually get registered legally and ethically. I think we should make registration stations a thing again it helps businesses and keeps people honest. Thanks.

Every year the number of deer sightings in the season has steadily decreased. This last year, there wasn't a single buck worth harvesting. Every year it becomes more discouraging. As my deer sightings and sign decrease, the number of predator sightings and sign increase. Around every corner there's sign of predators. Coupled with heavy winters, the deer don't stand a chance. Our group started coming to Bayfield County since 1994 and are landowners, but we come for the hunting that has always been great. Since there's almost no deer left, there's no longer any reason to remain in Bayfield County.

The three year plan starting in 2017 to decrease the deer herd for Bayfield makes absolutely no sense. The DNR count on the number predators is terribly inaccurate, with the number of wolves being much higher. The continuously increasing predator kill along with the harsh winters is devastating the deer numbers along with hunter interest and youth involvement in deer hunting. It is hard to conceive how the DNR could do a worse job of deer management. Year after year the DNR has succeeded in decreasing the quality deer hunting throughout the state and thus is killing a once great tradition.

I hope we can continue to keep CWD (and deer farms) out of bayfield county. Food security will be an issue for many in the next 1-2 years, and venison is local, cheap, sustainable, abundant, and healthy. This CDAC seems much better at letting science and expertise inform decision making rather than the knee jerk “back when i was a kid, there was a buck on every front porch” style of persuasion and the strange obsessions of some with having the very biggest antlers, super beta prostate and safeguarding our bodily fluids with internal disinfectants, mypillow.com or some other such none sense.

Deer hunting in this unit has become an effort in futility. It's apparent that the area is (mis)managed for high bear, bobcat and wolf numbers with little consideration for deer. Our group of 11 hunters did not shoot one single deer in 2 of the last 3 years. In contrast we filled 5 out 6 bear tags in the last 4 years. Predators and crossbows are killing the gun hunt. Thankfully I love walking the big wood so not seeing or killing a deer isn't the end of the world. It sure as heck would be nice to have a reasonable chance though. Thank you for taking the time to hear my perspective.

I have hunted Bayfield county for deer since 1966. I haven’t harvested a deer in the last four years despite having doe tags all four years. This included the archery and the gun seasons. I was seeing very few deer during these years and with each passing year I have seen fewer deer. In 2019 I hunted with a crossbow for approximately 20 days and only saw one deer despite hunting several different locations. Because of this I did not gun hunt Bayfield county for the first time in 54 years. I strongly recommend that no antlerless tags be issued for Bayfield county.

WHY DOES THE DNR TRY TO ACCOMPLISH SOMETHING THAT VERY IMPORTANT ON A PIECE MEAL BASIS-----FIX A LITTLE ---FIX A LITTLE THERE....GET TO THE JOB DO THE HARDEST FIRST BUT NECESSARY---CHANGE RULES THAT ARE FAR TO LIBERAL NOW . CHANGE YOUR STUBBORN ATTITUDE TOWARD FEEDING SO THAT WE HAVE A HEALTHY BUNCH F DEER ----NOT LIKE NOW WHEN HALF ARE MALNURISHED AND DYING IN THE OFF SEASON. GIVE THE BUCKS A THREE YEAR NO HUNTING DURING RUT. THIS WILL GO OVER BIG --FOR ONE YEAR SHOOT ONLY FAWNS AND ONE YEAR OLD-----THIS HAS TO BE DONE------THERE IS MORE BUT THIS IS ENOUGH FOR NOW.

Report Generated:  Friday, May 01, 2020
I have been hunting Bayfield county for nearly 50 years and I watched it decline. There was a few good years in there but great times also. Just when we started seeing the deer come back in the past few years you let it get out of hand. Between the WOLF packs around Port Wing the antlerless season along with an occasional cougar we have on camera the deer herd has taken a step or two back. Give the deer a chance to come back. Get rid of the antlerless season and the wolf population. Thank you

PS I also am a tax payer in Iron River for the past 40 years.

Bayfield county needs to be divided into 2 units, northern and southern, because the cropland in the north holds many more deer and does not reflect numbers in the southern forest part of the county. The thought of many doe tags and no predator management (wolves) saddens me because the deer herd has no chance to bounce back from the harsh winters in recent years. When Douglas county, which has an incomparable abundance of deer in comparison to bayfield county, is considering no antlerless tags, bayfield county should take the hint and eliminate antlerless tags also.

I fully support private land doe tags, I am seeing both healthy deer and healthy deer number on private land. Public land doe tags should be severely limited if not eliminated. The amount of people participating in the annual WI Gun Deer Season will continue to dwindle as the amount of deer on public lands are not there. PLEASE consider splitting Bayfield county up into zones again, there are too many varying factors present in our county to consider blanketing the county with a general harvest goal, especially with the passion the foresters bring to the table.

There are a lot of deer in certain pockets around the ag areas, however there are very few mature bucks compared to the past. In addition I believe there are too many regulations and too many different season's and that is part of the reason less and less people are hunting these days. Go back to having back tags, registration stations, one bow season, one gun, and muzzleloader and be done. No early t zone, youth hunt, late t zone, and holiday hunt... It's all too confusing and frankly not needed. Go back to basics and just maybe people will start hunting again.

There are simply too many predators including the extremely fast growing wolf population. In the very near future I believe they along with bears will dismantle deer management control and therefore hunter participation will loose interest which may affect large losses economically for counties that count on hunter turnout and easier deer management. Early hunts have discouraged long time hunters as myself, knowing that youth hunts turn into hunts for adults bringing their children. These hunts have disrupted bow hunting times also. Hunting is loosing ground

Comment: I certainly do not want to see another doe only hunt in the area. The former "T-Zone" hunts decimated the deer population for years after which drove many hunters out of the area. The herd has come back since in a very healthy state and I think the management practice to allow a number of antlerless Bonus tags is a good one. I believe the snow fall this past year has to have a negative effect, the lower number of Bonus doe tags is just right and should allow hunters the option while maintaining a healthy herd. Nice work, nice discussion forums.

Deer population is low saw 2 deer during the gun season particularly due to over harvest of does there is disproportionate input given to the forest service concerning over browsing if our goal is to maintain hunter numbers and family traditions kept together by the love of hunting we need to maintain a slightly higher deer population to keep and grow our youth hunters how can we blame them for quitting unless you’re true goal is to eliminate hunting by not supporting the grassroots end of the spectrum (public land hunters) thanks for asking for our input.
The number of deer is down again. I wish people were only allowed one doe and one buck per season. I know too many people that legally take multiple deer and either keep or donate them. Secondly, the DNR survey last month asked for opinions for an extended gun season and also moving the season earlier. I am in favor of moving the season earlier by a week or two, but not making it longer and that wasn’t an option on the survey. If you agreed with an earlier season, you had to agree to the extended season. The survey wasn’t very impartial. Thank you.

While the WSI was severe at 102, my observation of deer through the winter and spring was that they survived the winter in ok condition, better than a WSI of 102 would predict. We have a good sized deer herd. I agree with the CDAC 3 year goal of reducing the population and continuing this for the 2020 season. I think the antlerless harvest goal for 2020 should be the same as it was for the 2019 season, which wasn’t achieved do to the late season and snow events in the second part of the gun season. we have a surplus of deer that can adn sold be harvested.

The deer numbers on public land are extremely low despite an ample supply of good habitate and forage. Hunter over harvest, and depredation by wolves and black bear for many years are to blame. On a different note crossbow hunting should not be allowed at all unless you are clinically disabled. We have a nice long archery season because it is very challenging to take game with a traditional bow. Non resident licenses should be triplete what they are now the quality of hunting would go way up and we would be on par with most other states in the country.

Our county needs to adopt a management strategy that accounts for the varying agricultural differences in the unit. There is a large difference between the farm/field edge land south of hwy 2 and the mature forest land north of hwy 2. Managing these as the same unit is not realistic and doesn’t benefit either area. More does need to be harvested in the field/farm edge land and fewer does need to be harvested in the mature woods. An imposed antler restriction on adult hunters would also greatly benefit our buck population. 3 point minimum on one side.

I am fine with the proposed number of antlerless tags for the area but also skeptical. History has shown that if the quota is too high and the ensuing winter is difficult (plus predators), the population could plummet. I like having the option to shoot a doe but I can also travel to a farmland zone to do so. It is really nice seeing a good amount of deer the past 2 seasons but I still haven’t forgotten about the 4 previous years that were rough. All it takes is a few too many antlerless tags and a tough winter to severely affect the population.

We have 6 people that hunt in our party and last year between all 6 of us bow hunting and rifle hunting took 5 deer total. Which some could say is great success but we didn’t see much for numbers of deer. So I would say it is very disappointing as an avid hunter to not have an opportunity to feed my family. As long as I have been hunting the numbers seem to be going down every year. I know thats what you guys want but as a hunter with numbers sustained or up give a better chance to fill our tags and provide a great source of food for our family.

Based on our observations this spring during our walks of our property, there appears to have been a significant amount of winter mortality. On our 80 acres of land we have found six different deer carcasses from the winter months. Typically we find one or two. While talking to our neighbors they have indicated the same findings of more than usual numbers of deer carcasses(bones) from the winter. When forming your conclusions, I ask that you not only consider, but do a thorough review of this years winter mortality in Bayfield County.

Start the gun season on Nov 15th thru the end of the month. Ban baiting in the entire state. In the 2019 season there were groups of hunters that came to Bayfield County from Milwaukee, Madison and Green Bay. They came here with numerous bonus tags and because baiting is allowed. Needless to say, they filled all the bonus tags with does and fawns. They could care less about Bayfield County other than the fact that baiting is allowed and bonus tags are abundant. Baiting is banned in 52 counties. Time to ban it in all 72 counties.
From what I heard at the on-line meeting was the goal for this unit was to lower the deer population by 2%. With the severe winter deer loss and the lower fawn production for the 2020 year this will already lower the overall fall population by more than the 2% goal. During the meeting I did not hear any scientific evidence from the forestry group that we need a high doe quota for 2020. I feel if anything the quota should be 500-750. I also feel the kill in this county is higher than recorded due to lack of people registering deer.

I think herd health like cwd, buck/doe ratio, age structure, poaching and predator control should take president over all other issues. I think as long as we have game farms and baiting, it's just a matter of time before we have a cwd infection rate similar to counties in SW Wisconsin. I also think if we adopt the extended rifle seasons that are being proposed, it will destroy the buck age structure in the state. All the states that have limited gun seasons, have alot older bucks doing the majority of the breeding.

My family has been hunting the National forest in Bayfield county for generations. I am sure many factors have played a roll into our declining deer numbers over the past decade. But it has gotten to the point that we are lucky as an individual to see a deer on stand for 5 days hunting sun up to sun down in the woods. Personally I believe that the low heard density is leading to a decline in people wanting to hunt “up north” and is concerning for the business that out of out of town hunters bring to the small communities.

Not sure why we bother to fill these out, the CDAC doesn't listen to anyone other than the foresters anyway. Why does Bayfield Co make recommendations so out of line with all the surrounding Counties? Deer numbers are down. Predators are way up. Regulation/rules changes (no back tags, no in person registration, relaxed transport rules) are encouraging poaching and poor/under reporting. Deer hunting quality gets poorer in Bayfield CO every year. We were better off when we had separate management units and NO CDACs.

Lowest kill in decades and the populaton is below goal and throw three feet of snow on top of that most of the winter. This unit should have no antlerless tags this year. The public has overwhelming been critical of the Bayfield County CDAC recomendations the past three years but the Bayfield County CDAC continues to ignore public input on herd recomendations and specifically antlerless tag recomendations. Whatever the point of public input in your never listen to it. Its truly sad. Let off the gas for one year.

I still believe, in my own opinion. An antler restriction would be a good idea. Like if you buy archery and rifle hunting tags your first buck can be any legal buck. But, Your 2nd buck should be 8-points or better. I would also like to see a rule like Michigan has. If you purchase rifle and archery you can harvest 2 bucks with archery gear but then you can NOT go rifle hunting. Or you can take 2 bucks with rifle if you were unsuccessful archery hunting. Michigan DOES UTILIZE an antler rule. Thanks for your time.

Ag areas in the northern half of the county cannot be regulated the same as the forested areas. Nor can public land be managed the same as private. The old system of smaller DMUs made more sense than countywide mgmt. It is ridiculous to manage a free-ranging animal by using artificial boundaries such as county lines. The boundaries used now were NOT created in order to better manage deer. They were made for political and economic reasons. Management by watershed, for example, would make far better sense.

Bayfield county with "decrease" population goals? Does Bayfield county have so many more deer than its neighbor Douglas county that is recommending buck only harvest? Maybe Bayfield county is so much better at counting the deer population? Maybe Bayfield county doesn't have the predators that Douglas county has? Or maybe, the entire county deer plan is based on the population in only the eastern 20% percent of the county with no regard to the population of the other 80% of the county. Unbelievable.....

I found I had to look for deer in new areas in 2019. And I found enough to be happy. I am concerned with ladder stands and baiting on public lands. Baiting is a huge risk for CWD. I would like to see baiting prohibited on public lands, and ideally on any Bayfield Co land. If we wait for a CWD positive and then try to stop baiting it’s too late. I hope the the deer committee does the most to ensure long term health for deer in Bayfield Co. Lower numbers is a good plan for deer and forest health.
On Public Land  I believe baiting of deer on public land should be prohibited. Since public land is meant for the "public" the baiting leads to hunters laying claim to there "baited" areas. It will also draw deer to those baited locations away from other hunters non-baited spots. Even if I wanted to bait (I don't) it is not fair to those who don't have the ability to bait for an extended period of time. Even though Bayfield does not have CWD, deer feeding from a bait pile can not be healthy.

We have hunted the exact same areas for 35 years and have noticed a major decline in deer sightings. We are old and determined so we hunt 9 hour days. Even with those hours of commitment we have members in our hunting party that do not see a deer all season. Part of the problem is the heavy logging of the county forest. It is hard to hunt terrain that is bald. We originally had 32 hunters in our camp but now have 3 because of frustration with logging and deer numbers. Thanks for listening.

I applaud the council for having at least a somewhat reasonable quota but it is too low. There are plenty of deer in the county and I have plenty on my land. Every timber sale I have the regeneration is browsed until there is nothing left. I am afraid to do any regeneration cuts because I will end up with bracken fern and raspberry and no woods. In 2019, we shot 4 deer opening weekend, 2 bucks and 2 does. Do not reduce the quota at all and I believe it should be the same as 2019.

While I may personally advocate for more anterless deer tags, I think the current quota strikes a balance between providing hunters opportunity to harvest venison, keeping a healthy deer population, and trying to improve desirable tree species regeneration. I applaud the Bayfield CDAC for making informed decisions based upon scientific data instead of knee jerk reactions to anecdotal reports. On behalf of hunters who hunt for more than simply antlers, thank you for the work you do.

I feel the desire to decrease population is out of line. There may be areas of the county that have over population, but the areas that I observe and recreate in I do not see overpopulation. I have kids that I am trying to get and keep involved in the sport, but to go out for the last 4 years and see 0, 1,3 and 2 deer respectively, putting in very good effort in several areas, that doesn't support over population. Please figure a way to more accurately make population estimates!

The wolf population is decimating the deer herd in my part of Bayfield co. Found 27 dead deer carcass’s by Wolf and or coyotes in the trout hatchery area this spring. The mature bucks have disappeared from our property for the last 5 years now. You would be lucky to harvest a 130 class buck or over 2.5 years of age. The wolves are just killing them off. All the landowners in this area agree on this fact. Need to reduce the wolf population to bring balance back to the deer herd.

Thank you for the opportunity to comment. Something to consider is making buck tags lottery during rifle season. I am originally from ND. Buck tags are lottery and doe tags are typically guaranteed. Recent years doe tags have not been guaranteed due to herd loss. Wisconsin needs to change its culture of shooting only bucks. Hunters need to learn it is OK and necessary to shoot does. Also by shooting fewer bucks we get the added bonus of having bigger bucks to shoot.

In the farmland areas of the county deer populations are doing well, however I believe those #’s are decreasing. In the forest areas like by the flag river area, there is hardly any deer at all. Wolf #’s are high there, but living in farm country I can tell you that wolves have moved in and are prevalent here as well. Which could be part of the reason farm deer populations are now decreasing as well. Not saying it’s all from wolves, but they do put a hurt on the deer.

Deer numbers in NW WI, are way down. The combination of severe winters and increases in wolf populations have done that along with generous doe tags. The deer that you see in the spring are usually taken care of by people with supplemental feeding or live on agricultural properties. The amount of deer sign and activity in the big woods of NW WI is minimal at best. We don't need any more reduction. If you want to kill the deer hunting in NW WI your doing a good job.
When are you going to realize you can't stockpile deer in northern Wisc. between the winter kill and your pet wolfs that now kill more deer then the hunters you actually think anything you recommend will make a difference. Please loose the GOD complex get off your chair at your throne desk and go talk to the loggers ,beaver trappers and farmers that see the deer herd every day. Suck up some of their knowledge and you just might do things right for once.

The wolf population is exploding in Bayfield county. I routinely see wolves on trail cameras and personally saw 3 last Fall while bow hunting for a week. Additionally I got a picture of a Cougar last year. There are far too many predators in this County. If a deer is shot in the late afternoon and it can't be found there’s a high probability that wolves will destroy it before you can retrieve it in the morning. Delist the wolves while there still is a deer herd.

You can't possibly compare Northern Bayfield county with southern Bayfield county (or even central portion) There are far,far,far fewer deer in the Northern portion. It is near impossible to manage them separately so getting this input will likely result in a true lack of valid information. Thanks for trying however. We appreciate your efforts. BTW, Please let the well educated biologists do their work and let the self important hunters to live with the results.

Let's get politics out of DNR decisions and go back to letting the scientists and local wildlife experts use data to drive decisions (fully funded and fully staffed DNR, including enforcement AND scientists. Public opinion is important, but sometimes poorly informed. Politicians and the interests/concerns they represent may or may not represent the best interests of local residents, state residents, or our natural resources, depending on their funding sources.

Compared to 10-15 years ago, the population of deer has decreased exponentially. About 15 years ago you could drive on the back roads and be guaranteed to see at least a handful of deer on any evening. Every year you see less deer. Although I love deer hunting, I love seeing deer even more. It is disappointing to see the deer population decline so much. We need to bring the whitetail population back to a level where hunting them is a sustainable practice.

The wolf population needs to be controlled, wolves are decimating the deer population in Bayfield County. The number of large and older bucks seen on camera and while hunting has declined dramatically over the last 10 years based on my experience. After the rut these bucks are vulnerable to predators and during the rut their scent leads the wolves to them. The number of wolves captured on my cameras has increased over the same 10 year period.

I live here and see the impact of winter and predators on a daily basis. ie: bear, coyote, wolves. The snow depth here in the far northern part of Bayfield county has had a detrimental effect on the herd. Walking through the woods as snow was melting this spring exposed those effects. The amount of carcass’s from either lack of food or predators was eye opening. Hopefully you will consider fewer tags and seasons for 2020 to help the herd recover.

Leave crossbow season alone. No one I know is taking long shots like the commercials. It gets more people hunting. I used to hunt with compound bow but now use crossbow. We need to stop fighting amongst ourselves the anihunters are loving us dragging each other through the mud on this. Leave crossbow season alone. And no either or license. I get a patrons every year and I don’t want to pay more for a crossbow tag. Please leave that alone too.

Last year after sitting in my same stand every day of season from daylight to dark for the past 25 years we saw a total of 4 deer with none being bucks. We usually have around 25-30 deer and are able To choose only the mature bucks. I believe the deer population is reduced significantly yet so many harvest the immature deer as they probably won’t get any. I would like to see the heard build more at least in southern Bayfield county.
good luck. you are experiencing declining hunters and deer. while the north has more hunters than ever. you cant blame it on baiting. let me ask you how the liberal crossbow rules, banning bait, increasing bear population, increasing wolf population is working out? wise man once asked about dolphin safe tuna...who is looking out for the tuna? in north we have bears, wolves, and less deer. dont let our northern deer become the tuna.

1004 If they continue to try and lower deer population there will be no deer in 2030. You can sit in an Apple orchard in bayfield for the full 10 day gun season and be happy if you saw 4 different deer. The deer heard has many predators, they are facing wolves, coyotes, bear, cougars, harsh winters and over hunting. It’s tough to charge someone 260 to come hunt a deer when the council is more worried about yards and accidents.

1005 The information in the video was very well put together in my opinion, thank you for that. I can only comment on the public lands in the county because that is all I hunt. What I’ve noticed in the past few years the depredation numbers climbing more every year and with the severe winter this year I would just like to say to keep the doe tags very low or none at all for this year for the public land. Thanks for the work you do!

1006 We have way to many deer in the agricultural areas but alot fewer in wooded forests, too many wolves pushing deer into agriculture areas. Maybe trim the wolf population and there will be more deer in the Public forest? There is too much private land inaccessible to hunt on. And the wolves do not venture into agriculture lands? That would be something to carefully consider! Thank you for the opportunity to share my thoughts.

1007 I want to see a wolf season. There are getting to to be too many. Many do not trust the wolf numbers that are being reported and feel they are UNDER reported. I also want to have a minimum antler point set for bucks (meaning, 6 point or higher). Exception: If you are 18 or under or if it is your first year hunting. I have family that cannot resist taking out a young buck, then complains that they never see big bucks.

1008 Why would we be trying to decrease the deer population in Bayfield county? Hunting has been almost pointless the last 5-7 years due to number of deer because of earn a buck, wolves, bear. Need to have a larger wolf season, way more bear tags, and never again do an earn a buck. Please plan to increase the number of deer if you want to build the northern community and make ‘up north’ deer hunting an actual thing again.

1009 Deer sightings both while hunting and on our cameras were WAY down. I have a 13 year old that is very into hunting. But last year during both the youth hunt and 2 day’s during gun season we only saw 1 doe and her fawn. Even he knew it would be wrong to shoot as it was the only Deer we saw. I hunted for 9 days beginning the the 1st week of Nov. passed 2 small Buck’s and saw the same Doe and fawn. All on Public land.

1010 I have been hunting in the Marengo non-motorized section for 17 years. I have seen the population grow and fall over those years. When I started, there was more of an abundance of deer and other small game (ie, grouse, squirrel, woodcock, hare, shrews, etc). In the past 12 years or so there seems to be more wolf tracks through that area and much less deer. What is the plan to manage the wolf population?

1011 Between our hunting land and the neighbors, so far we have found 10 dead deer remains between the winter kill and predators and 3 dead turkey remains. Most of them were from predators waiting for them to come out to an old corn field from last year to try and get food over the winter. Way to many coyotes and a pack of wolves have decimated alot of our wildlife. Rabbits, partridge, turkeys, deer, etc.

1012 I feel that the number of antlerless tags for this unit is acceptable. However, I feel the effects of the winter and the lower harvest from last year are overblown and the population is being underestimated because of those factors. I feel to help with deer damage to forests and car deer accidents more tags should be issued. I support a higher antlerless quota for this unit. Thank you for your time.

1013 Have hunted the area for 30 years and taking the last 6 years off. We decided to head back up for gun deer hunt 2019. We hunted hard in Drummond area and the wolves have decimated the deer heard. Six guys hunting and we saw 1 doe. Very few hunters because most everyone who has hunted the area has given up. Some beautiful country that I love coming up to visit. We will not be going back up in 2020.
I’ve hunted this unit for 37 years and have never seen so few deer as I did this past season - 3 deer total for the season. I am dumbfounded as to how the proposed harvest quotas were determined. There are essentially no deer in the areas I have hunted for all these years and I must truly question the decisions being made. Something needs to be remedied regarding the minimal herd presence here.

Our group has hunted unit 13 around Lake Namakagon for over 40 years. Over the period of the last 10 to 15 years the deer just are not there. We never saw huge numbers of deer but were usually pretty successful. Now, most of the group never even sees a deer with one or two smaller bucks harvested the last several years. Perhaps baiting has changed deer movement habits? We do not bait.

Last season I hunted 1 1/2 days because of circumstances beyond my control - weather, I’m old & and fellow hunters left camp because of no deer – and I saw 3 deer & 5 game wardens. Not a great show. Too many of the bucks are being harvested by the crossbow hunters. About ready to hang up the spikes unless changes are made and more bucks are around so the young hunters are excited to stay in camp.

I have hunted Bayfield county since I was 13. (45 years) When I was younger hunting was good. Most days our crew would all see deer. The last 10 to 15 years it has been dismal. I hunted 7 days and saw 2 deer. The rest of our crew say similar. When you drive a 1 miles section in fresh snow and don’t see a track, there simply isn’t any deer. We don’t need antlerless permits for a few years.

I support a ban on baiting starting 1 week before gun deer season and going through the last day of regular gun, baiting in archery and muzzleloader okay. Baiting reduces deer movement during day and reduces the amount of deer seen and harvested. Eliminating baiting during gun season would put deer on the move more throughout the daylight hours and result in better hunting experiences.

I find there is an excessive amount of hunting pressure from hunters and predators, during the 2019 season. We need to look at a 3 year ban on antlerless hunting in the state to allow for more prime bucks to grow. I find that vehicle collisions are mostly due to inattentive driving and excessive speed. I drive some of the most deer active roads in the state and have yet to hit a deer.

I feel strongly that baiting and/or feeding of deer should be completely prohibited. Too many feeding sites have totally changed deer habits and movements. Baiting has created a broad attempt to privatize a public resource. CWD is threatening hunting across the entire state and will destroy the sport if not stopped. A ban on baiting and feeding will help stop the spread of the disease.

Your ill-advised decision to continue to reduce the herd has forced me to go hunt counties farther south. I’m planning to take my sons to hunt where there is a reasonable chance they will at least see a few deer during their hunt. Bayfield was once a wonderful county to hunt in. It isn’t any more. Tell me, what will you do with your antlerless permits when you no longer have hunters?

I find IT UNBELIEVABLE that anyone would even consider issuing antlerless permits in bayfield!!!! Wolves and antlerless tags = no deer. I haven’t seen a mature buck in at least 8 years!! I’m done rifle hunting and about one bad year away from not buying an archery tag in Wisconsin and will never support deer hunting in northern Wisconsin until at the very least, there is a wolf hunt.

Decrease the deer numbers in this county? In the last 10 years I’ve seen 4!!!! I hunt national forest.... I put full days in (not leaving) the stand all day. I’m in areas that I used to see 4/5 deer in a couple days!!! I find wolf tracks, bear, but no deer. Why bow down to insurance companies and other outside forces... MANAGE THE DEER POPULATION!!! ALSO START SHOOTING WOLVES!!!!

I feel less antlerless tags on public lands needs to happen for a few years... I’m just not seeing many does or fawns during the season. Couple hard winter’s and we’re right back with very low numbers. Patience and time and we’ll again have reasonable numbers on public land. I hunt in several different townships in Bayfield County and see fewer antlerless than Young bucks.
The deer population is far above the environmental carrying capacity. Deer are not allowing trees to regenerate. Deer are killed by vehicles in Bayfield County daily. There are too many deer. Either they are thinned through hunting or disease will do it eventually. Hunting is the better solution. (Predators like wolves don't even make a dent in the deer population.)

The amount of deer in the bayfield area is way too low to support any harvest of doe deer. With hard winters and no wolf reduction possible we need every adult doe to reproduce and grow the population. When the wolf population is reduced by 50 percent or more then we can refocus on the deer population reduction but at this time there is not enough to allow a harvest.

Wisconsin needs to get back to hunting wolves in Wisconsin north woods. We see more packs of wolves more than deer in Bayfield county now. Used to see and harvest deer every year. Now lucky if we see a deer at all. Predator kill is way higher than what you anticipate. Wolf population way to high for the deer numbers to get back to where I'd like to see them.

I live in southern bayfield county, the northern portion(farmland) has a very healthy doe population where the southern portion has a very limited number of deer. I would like to see some type of restriction on buck harvest to try and get a better balance of older bucks in the zone. Which would age the buck population and get a higher satisfaction of hunters.

Big concern is smaller number of hunters in the area year to year. This impacts the movement of deer as well as the local small town economies. Consider lower non resident fees. That much for a license is a deterrent for non residents. If it were cheaper, would promote more hunters, more money to the local economy with hotels, lodges, restaurants, etc.

I live here and see first hand the detrimental effect snow depth and predators have on the herd. Walking through the woods as snow was melting revealed several carcass’s. From either starvation or predators. The hope is to cut back on the amount of antlerless tags and seasons. To help the herd recover we first have to give them some protection.

Hunting is about choices, which weapon to use, bait or food plot (they are both the same), case a gun or not. Deer game farms-reason why CWD exits in Wisconsin (big red truck that no one wants to address) Increase fines and hunting privilege's when illegally taking a deer and trespassing Increase out of state hunting licenses or limit them

I noted a defined browse line in my back yard this spring 2020. Have not seen that since the 2000-2002. This is just one spot in a big county and likely not the case everywhere. The herd needs to be thinned out in my little world. Thanks for your work and hope policy is based on science and not speculation. Chris Bulovsky Washburn Wi

I was just in Bayfield County this week and saw a lot fewer deer than previous years at this time of year. Not sure if they just weren’t out and about or if the winter had a large impact on them. I did find 5 deer carcasses on our property (about 60 acres) that I walked. Not sure of cause of death. I saw 3 living deer on the same walk.

I feel a lot of the problem with the regular hunting seasons for all species is the over abundance of youth hunts. By the time regular seasons come around, the animals have been chased into hiding or have moved on. This is one reason for the extreme differences in harvest numbers on private vs. public lands. Thank you for your time.

The deer heard is the worst I’ve seen in 35 years. From talking with several hunters this is the consensus of everyone and the same goes for a buck only season. But we all know that this wont happen. Many hunters are getting upset that the DNR will just not face the fact that predators are destroying the deer population.

Wolf and coyote population way out of control. I have seen wolves out of my windows a pack of 7 and several other pairs and singles. Something must be done or people will simply stop hunting. Very few mature bucks being spotted. After all my years hunting I have never seen such a decline on trophy or mature bucks.
The banning of baiting for an entire county should be reduced to the area of the CWD incident, say ten miles or so, possibly the adjoining townships. Banning an entire county is too broad, especially when it occurs at the outer edge of a county. The need to crack down on game farms for CWD should be enhanced.

Keep the crossbow season the way it is! It helps get youth, women, and new hunters into the outdoors. Why shorten the season when they can enjoy the best time for seeing wildlife? Who cares how I shoot my deer... long bow, compound bow, crossbow. Let hunters choose. Changing things up makes hunters very angry.

Number of wolves seen in the last 5 years has an impact on hunting. I have hunted over 50 years and the wolf population has impacted hunting regardless of the opinion that a small bob cat takes the most fawns. This is a flawed assumption based on actual hunting experience vs some computed modeling program.

Please do not extend the deer season. We live here and our world is completely disrupted by people coming up who think there is no law in Bayfield county. We can barely manage to keep people off our properties for 9 days and couldn’t imagine the detriment to our deer population of the season was extended.

the Wolves and coyotes are killing everything in bayfield county. Had Trax in the area I hunt and during the season did not see a single deer. The year before saw deer and a lot of deer trax, this year almost no trax and definitely no deer. The wolf’s are the problem. Get rid of them is the solution.

Increase out of state license prices to mirror those from where they are coming from. Crossbows should be used during the gun seasons only. No more youth hunts. Kids need to learn it is just not about the kill and hunting can be tough. If it is just about the kill give out passes to game farms.

there is no deer in the National forest. Maybe Bayfield County needs to be split up if deer numbers are higher in the northern part of the County. How can you decrease no deer? Hard to get youth interested in the sport of hunting when you spend countless hours without seeing a deer.

We've seen almost zero deer during the day in that area. Season is far too late again in 2020, deer will be moving overnight and hunkered down during the day again. Also, Wolves in that area can drive deer out of the area, resulting in almost zero sign of deer being seen some years.

I feel the deer population is very low right now. I don't think there should be so many antlerless tags. Maybe like 1000 or even as low as 800. But all juniors should get doe tags. They need to be able to shoot deer to keep hunting. If they can't shoot any deer they won't like hunting.

I think all land north of 110-10 highway should be looked at more closely for deer management due to predator's and lack of grassing opportunity plus the winters are more severe. I think these three factors should be put into some kind of formula for deer management.

I think the decision is of sound science and my personal experience supports this. I saw many deer last year, lots of young healthy deer, and we need to continue to provide doe opportunity for meat, tourism, and a balanced herd while keeping the population in check. Nice Work.

This state needs to go to either or tags for both bow and gun seasons. One tag per season. Also, change the rules to male deer instead of antlered 3 inch or more on one side. Go back to in person registration to verify. Too many button bucks being killed under antlerless tags.

I have watched deer numbers and deer sightings dwindle over the past 5 years. Trail cameras have taken fewer and fewer pictures throughout the year in each year also. And that is even with making habitat better on my land and growing deer forage. Deer numbers are down.

I am dismayed by the lack of scientific knowledge most hunters have. I am pleased with the work the DNR has done in the past and hopefully will do again when we get a legislature that respects science and quits meddling in decisions that should be left up to the DNR.
What can be done legally to get Wisconsin to remove wolves from the state (trap release elsewhere) or stop planting wolves. Please share the steps needed in our democracy to do this!

Make this real simple.. you want more hunters in northwoods again? More deer!, plenty of browse and clear cuts, herd way below carrying capacity, no antlerless tags for at least 3 yrs! Way to many predators and harsh winters.. please stop the war on antlerless deer!

I am not for an antlerless hunt only I fear it will only start leading into then a trophy hunting game. I will not by any license if an antlers only hunting is adopted. Hunting season for deer is just that. Don’t make this into just a head game for some!!

Why don’t we practice social distancing on the deer heard like we are doing on the human heard to help prevent the spread of disease? Let’s get rid of the feeding and baiting of deer. I think that most of us know that it’s not good for the heard. Thank you.

I travel 8000 miles a month across Wi. There are way to many car deer kills in Wi. Believe it or not Bayfield Co. is no exception. I’m in favor of an antlerless tag as an option along with Buck tag for a couple of years. So that we can reduce the numbers.

I want the 2020 crossbow season to remain the same as it was for 2018 and 2019. I’ve spent about $2000.00 on crossbow equipment with Wisconsin businesses and want the same opportunity to hunt as all other archery (vertical, compound, re curve) hunters.

Increase out of state hunting license Bring back back tags and tagging the animal (registration in person or phone is great) Bring back class b training license for bear Baiting and food plots are the same. Higher fines for road hunting and trespassing.

Personally saw much more wolf activity. Had wolves come by at point of harvest. Bear Coyotes and Wolf kills I believe are under represented. I saw many does without fawns. Northern Bayfield County north of Hwy 2 is much different than South of Hwy US 2.

Plenty of deer in the fields but all private property. You can’t take deer population numbers by looking in the fields. I hunt public land and the population in the national forest, county and dnr lands are down. Thanks for you time. Eric Bunnell

We own property next to private land and have been trying for years to get the deer population up. They wander into public land and they shoot up all the does. As a result fewer deer. Also we are seeing more wolves the area. More wolves fewer deer.

Micro manage the county. Northern Bayfield county’s population is hurting. Predators, hard winters and over harvesting. Take a couple years off of antlerless tags. Buck only and be able to manage the upper portion apart from the southern portion.

Driving around Bayfield County, especially in the National Forest, the only numbers of deer are seen in the farmland areas. The forested areas have very few deer. Last season I observed more wolf and coyote tracks on the roads than deer tracks.

It is not really hunting in this unit anymore. It is more just being out in the woods because there are really no deer to see. If it continues on this path I will stop buying a license and just bird watch. Leave the does alone for a while!

Leave it alone. Let there be deer. Quit trying to have your thumb on nature and justify jobs for DNR and county foresters. DNR plan to eliminate CWD was to eliminate deer. Sure glad they are not in charge of the COVID-19 situation.

Someone needs to take charge of the deer population. 10 years ago, the population was abundant. It did not start to falter due to hunters. It’s because of wolves brought here from other northern states. They are killing the deer pop.

Increase in non resident deer license we’re pretty much take out any young people that would attempt to hunt are you going and have a big factor and the amount of people in our deer camp

I disagree with the decrease population objective. I believe we are at a point where we need to allow for a little herd growth. I would support an antlerless quota in the range of 0-500.

My vehicle insurance increased cost $50 per month due to accidents involving deer and had several near misses with vehicle and deer so I support maintaining or reducing deer population

There are no deer along the flag river. I have hunted continuously every year for 31 years along with 4 other people that have hunted many more years than I that have the same opinion.

The predation ranking was particularly interesting, 1. bobcat 2. coyote 3. bear 4. wolf. Not interested in starting a wolf debate, but curious how these rankings are derived.

Please do not in return to the two season model of archery as we had in the past. Have one archery crossbow season that remains open during gun and black powder season.

The amount of antlerless permits is too high. There are not many deer on public lands. I am out in the forest often in fall and pay attention to sign and sightings

I feel that Section 4 of this survey was very poorly worded. To me it was like a trick question. It was hard to understand just exactly what they were asking.

The weather and late season played an important role in the lack of success in the 2019 firearms season - not lack of deer and not overharvest by archery hunters

To many predators for the severe winters we are having. Pretty soon we will have to eat wolves and coyotes because that’s all there is going to be left.

I feel there are too many doe permits being sold. When forming statistics on deer numbers how do you take into account all of the car/deer accidents?

I don’t know where you get this idea that there is deer everywhere in Bayfield County. But this is the first year I actually saw deer in 10 years.

Over the years, there has been a big increase in predators. Not just the wolves but also coyotes and bear. Definitely need to open up bear hunting.

Reasons for some of my opinions: During my 3 days hunting during gun deer season I have not seen a deer in 10 years. In my opinion that is sad.

58 years of hunting and last year was the first year I had to shoot a doe so we had some venison. Deer population is way down. Especially bucks.

The CDAC discussions posted online included consideration of a ban on baiting, which did not appear in this forum. I support a ban on baiting.

As much as you guys may not like reading this, I have seen predator population grow, and the deer herd in said unit decrease dramatically.

The wolf overpopulation has literally killed the deer hunting in upper Wisconsin. I’m very displeased with the lack of regulation.

It’s my opinion that the Bibon wildlife area is at carrying capacity and the population in that area doesn’t need to be lowered.

I hunt around the cable clam lake area and have found that every year even through bad winters there are plenty of deer.

We have a very serious WOLF/CYOTE problem.

Deer numbers need to be greatly increased

Thank you for the opportunity for input!

Hunted 2018 seen 1 hunted 2019 seen 0

Buck only for 3-5 years in this unit

Only one buck per year per hunter

deer population is too low!!!

Too many predators.

DNR= do nothing russians

I To many predators.

stop killing fawns

When’s wolf season?

Baiting not needed.

To many wolves!
The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

227 forms were submitted for this unit.

**Section 1: Information about who provided the input.**

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 177
   - I visit this unit for non-hunting purposes: 18
   - I hunt in this unit: 201
   - General interest in this unit: 36

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 177
   - Bow: 123
   - Crossbow: 92
   - Muzzleloader: 60

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 22.36
   - Maximum: 64

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 150
   - Mostly Private Land: 21
   - Public and Private Land About Equally: 7
   - Mostly Public Land: 8
   - Exclusively Public Land: 14
   - I did not hunt in this unit last year: 1

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 14
   - Not too crowded: 13
   - Neither crowded nor un-crowded: 7
   - Somewhat crowded: 10
   - Very crowded: 2
   - Not applicable: 4

**Section 2: Perceptions about the number of deer in the unit.**

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 41
   - Fewer: 61
   - Same: 85
   - More: 29
   - Many More: 7
   - Unsure: 4

**Section 3: Feedback on the CDAC’s 2020 preliminary recommendations**

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
Implement an ANTLERLESS HOLIDAY HUNT: 93 Support 121 Oppose 13 Unsure
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: 150 VALID 69 NOT VALID 8 Unsure
If the Population Objective is not "Increase"...
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 27 VALID 192 NOT VALID 8 Unsure
If a Zero Quota (buck only season) is adopted...
should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC's recommendations for this unit? [Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very]

</table>
Hello, To start, I'm a passionate whitetail hunter. I hunt roughly 75.0% of the whitetail season, to fill my freezer and to chase that trophy buck. All year round myself and roughly 20-30 other hunters communicate, talking about anything and everything hunting. As an outsider looking in, below is my thoughts and opinions.

Why are we trying to decrease the deer population in Brown County?

1. Do the deer not have enough food? In 20 years of hunting, I've never seen a sick deer.
2. Are deer hunters stating they're seen TOO MANY deer? Absolutely not. So why are we decreasing the population.

Per your Brown County video, there's 158 sq miles of livable land for deer and we have 10,600 deer on that land. That equals 67 deer per square mile. That's a joke, we'd see deer EVERYWHERE with that population. 15 years ago I could hunt and see 10-20 deer a night, now I'm lucky to see 2-5 deer a night. Comparing population to car kills is a bad thing. Decreasing the population to prevent less car-deer accidents is a bad idea. There's too many variables that go into this; each year there's more cars on the road, people drive more each year, cell phone distractions, drug use is increasing. It's ridiculous to trend anything with car kills to deer population.

When it comes to providing additional antlerless deer tags, will you increase your antlerless deer kill, sure maybe. As an avid whitetail hunter, I try to harvest 2 deer a year, because that what me and my family consume in roughly one calendar year. If you gave me 1-2 tags, I'll try and fill them. If you give me 3-10 tags, I'll try to fill 1-2 of those tags. How do you kill more deer..... more deer hunters. How do you get more deer hunters. That's a tricky questions. The younger generation enjoys, video games, computer time, sports, activities with there friends, etc. Along with that people that are not real serious about hunting but enjoy it, are backing off because everyone's lives are getting more congested with work/activities. Younger kids will NOT become interested in a sport, unless there's action. Less deer, equals less actions, less deer may also mean smaller/younger whitetails. The world of hunting is evolving, we need to evolve with it. Adults and kids watch hunting shows on TV, YouTube, Facebook, etc., people are killing big bucks. Everyone wants to kill bigger more mature deer. Example: if you're a golfer, are you content shooting a 50 in 9 holes, or do you continue to try and get better. Letting kids do this youth hunt from 0-15, is laziness on our side and false advertising. Hunting before to much pressure with a gun, during warmer weather. Then you expect that same kid to enjoy hunting mid-late November in the cold, where he/she may not even see a deer. I appreciate everything we have hear in Brown County, but we should continue to make it better. I don't know everything that goes on and by no means do I have all the answers. My thoughts on the future:

- Less tag sales equals less DNR funding and less deer harvested.
- Increase in tag sales equals greater DNR funding along with more deer harvest per year.
- A more mature whitetail herd will increase license sales/hunter interest. How do you get that, maybe an antler restriction. That'd force your hunters to harvest antlerless deer, while they wait for that buck that has 4 points on one side, per say.
- As the whitetails become more mature, WI will be more of a destination for out of state hunters. More out of state hunters equals more out of state money to our Wisconsin business's.
- Increase out of state license fees I hope you appreciate my feedback, as this is a topic I live for.
My family and I spend more time on our land recreationally then we do for hunting purposes and my only dissatisfaction with the current season structure is the amount of days we need to take precaution, or avoid certain activities like riding horses, due to potential hunter interaction. Also, I primarily bow hunt and I chose to bowhunt because of the natural tendencies deer and other wildlife tend to follow during the archery season. Due to the high pressure of open firearm season deer change behaviors. Although I do admit, I have had many deer in bow range while wearing legal orange requirements, however for archery hunters, an orange headwear only seems sufficient. I do appreciate the length of the archery season and I hope it continues to go through the end of January. Also, it may have been a rumor, but I do not support opening the regular 9 day gun deer season early. One of the only consistent seasons for deer hunters in WI has been the 9 day regular gun deer season and I would hate to see the tradition changed. Also, for many gun hunters the current season is already plenty long and they have a hard time finding the opportunity to get out and hunt, adding days would not add gun hunters, but instead take away archery (bow and crossbow) hunters. Most importantly, thank you for the opportunity to participate with this feedback. I pride myself in being first and outdoorsperson, second an archer, and finally a hunter. I want the tradition of hunting to pass on to many generations and this state has a great tradition of whitetail hunting that I want to see remain strong. Thanks again for readying and I wish you the best in your future. Stay safe and stay healthy.

Have to reduce the cross bow pressure BIGGEST mistake ever made was full inclusion of cross bows into the archery season Taking away from the time honored tradition of gun season and taking away the excitement of opening of gun season which has always held a special place in my heart with many good memories I’m not totally against cross bows (I have 2 brothers who shoot them but they are 69 and 71 yrs old) and they admit they are so much easier to shoot So they have their purpose The argument that kids and girls need them is flawed To many kids now days just want the easy way for everything Time for them to put down the phones for a while and get out and practice with a bow My daughter shoots a compound set at about 43lbs and has killed several bucks and does with her set up Keep shoots close and practice One other thing is while I’m not against youth hunts ;I think once a youth shoots a buck they should be done shooting bucks in the youth seasons I know several Youth that have shoot 6 or 7 big bucks already by the time they are 17 setting them up for disappointment when they enter the real world of deer hunting Thank you

I do have concerns with crossbow hunting. I have met multiple people who said they shoot crossbows because it’s easier and they don’t have to practice not because they aren’t capable of shooting a compound ... especially the younger generation. For bow hunting I think it takes away some of the tradition and challenge of trying to get a deer in close proximity and draw without being busted. With the ease and success of cross bows I think it ultimately affects the gun season numbers. People are able to shoot bucks in early September when it’s warmer out and then don’t have to sit out in the cold. I am not completely against cross bows but believe it should be limited to those that need it ... disbabled/elderly. I also think the youth hunt needs to be re-evaluated. I think it is very important to have in order to get the youth involved and grow the numbers in hunting. However, once they get a buck I think it should be limited to a doe tag after that ... unless of course they are hunting during the regular season like everyone else. Thanks for reading and taking this into consideration.

I Think this survey is a step in the right direction, A lot of what I read and hear always seems to be negative about the DNR and their impact on the deer herd. As we all know Brown County's hunting land is becoming less and less each day with the ever expanding housing developments that are seeming everywhere. What I have noticed in the past 5 years of bow hunting this county, is the closer I hang my stand to the suburbs the more deer I see. There is a lot of un hunt-able city or town owned land that is harboring high populations of deer very close to where the people are. I think a step in the right direction to lower deer numbers in this county is to work with the towns that own this land and have them open it to a limited number of bow hunters who would like to harvest Doe only. This would help reduce the numbers of deer in the county but more importantly the high population of deer where they are more likely to negatively interact with peoples landscape or cars.
My life used to revolve around hunting every spiecies, every year I looked forward to the Wisconsin hunting season which could not come soon enough. On the private Pittsfield farm area I hunt I have had no luck shooting a deer in 9 years and I barely see any. It's very frustrating every year going out with hope and barely see a deer, then the neighbors doing deer drive and I drive 3 people shoot 11 deer how fricken sickening should change the season to GUN DEER SLAUGHTER. The deer drives need to end along with all the baiting. I still have a great love for the outdoors and enjoy being in the woods. There used to be ruffed grouse in this area but they disappeared 10 years maybe longer ago. The only game animal with a population in the area are Turkey. The last time I hunted those took 3 days off work and it rained all five days and the short season was over, never pursued that hunt again. Good luck with the Wisconsin Hunting Future.

If The DNR wants to shoot more deer, Antlered and Antlerless. The solution is very simple. Open the Season November first, when the antlered quote is reached, close it. (Just like sturgeon spearin) Then keep it open an additional period of time closing it in units as harvest goals are obtained. The biggest obstacle to harvesting more deer is deer movement. Open the gun season during the rut. The number of deer people see will increase exponentially. The number of deer harvested in the quoata's your trying to achieve will be realized. Baiting will not be an advantage, the deer move naturally during the rut. The deer will be moving naturally. Keeping the rut for the bow hunters is really just an outdated (recurve bows) advantage. If you want to shoot more deer open the hunt during the rut, use what ever weapon you desire. It's time to end the nonsense.

I am concerned about the disproportional harvest of deer on public land, and support any measures that reduce pressure on the small area of public land we have available to hunt in Brown County. Based on my observations this spring, deer numbers appear to be very high. Which makes sense due to late gun season and mild winter. Unfortunately, providing more antlerless tags does very little to control deer numbers on private lands. Earn a buck is the only effective way we have to control deer numbers and at the same time provide more of a quality buck harvest opportunity. Unfortunately, most hunters are not skilled enough to shoot a doe when they need to, so it will never be an option that is supported by the general hunting population. Thank you for serving on the CDAC and allowing us to comment on season regulations.

Recommendation is to extend the muzzleloader season until January 31st and get rid of all Anterless only hunts including youth hunts. I own a large amount of property in this county and the quotas are not in line. With winter browse our herd health has never been better. I am satisfied with current deer numbers but a reduction I will not and cannot support. 2 anterless tags per season is unreasonable and so are bonus tags. If you want the meat shoot a doe, every hunter wants to have all options available, shoot multiple does and shoot a buck, again I cannot support this. I cherish wildlife and I harvest animals, I will never support season harvests where the animals are exploited by greedy hunters. The individual is a member of a community of interdependent parts. Stop the killing, return to hunting.

I do not like the private /public /county designations for the anterless harvest because I hunt adjoining counties. If deer run across the road in some hunting areas they run into a different county. I'd like to return to the unit boundaries. Presently if I shoot a deer and it runs across the road to a different county I would have to violate the law to go get it. Without back tags as a landowner I can't identify trespassers without a face to face interaction. Without registration stations one is unable to see large bucks that are harvested in the area. One only hears about the bucks. In addition the small local businesses are affected by the diminished foot traffic. Registration brought people into the small businesses. Covid 19 hopefully will be decreased by the next deer hunt season.
For too long, Wisconsin has allowed the deer season to go unchecked. After hours shooters in Brown county, people taking more deer than they have tags for, under-staffed DNR field offices, etc... I have lived and hunted in other states with not near the forage and habitat we have here in NE Wisconsin and have seen deer populations managed much more effectively. What you have here is a cultural issue. If you have a season, they will shoot till there are no more. That is why in some areas of the county you see many deer. In others not so much. One takes their life in their hands walking to a stand on public land in this county before daylight....sometimes even during daylight. In general the hunter in Wisconsin has been a poor steward of the deer herd.

I strongly disagree with the idea of restricting crossbows during November. Crossbows greatly reduce the amount of deer wounded during the archery season and never recovered. Also, the law was passed to permit crossbow hunting so thousands of people invested thousands of dollars to purchase one. I have spent about 1,100 myself. The use of crossbows was signed into law so it would not be right to take away the most important month of the year. That is when I take my vacation time and what I look forward to most than any other time of the year. If it was taken away, then the state should have to refund the large amount of money we invested. I'm sure that legalizing crossbows helped to sell a lot more licenses, so why screw up a good thing.

I support herd management and the DNR’s responsibilities to the overall well-being of our state’s natural resources. Antler-less hunts will help achieve the overall initiative of decreasing Brown county’s deer herd. I strongly oppose crossbow sharing the entire archery season with compound bows. The advancements in crossbow technology have made that option as lethal as a firearm (shotgun) during a critical season of herd replenishment (mating season “rut”). My concern is not with the methodology of herd management; rather, the means of achieving these numbers while protecting our state’s reputation as a region where trophy whitetail harvests are a legitimate possibility. Thank you for the opportunity to share feedback.

I am an avid/seasoned deer hunter and in my opinion if you want more hunters to purchase licenses and participate in the hunt you need to increase the herd not decrease it. If hunters especially beginners and not so avid hunters go afield and don’t see any deer it’s very easy to become discouraged and decide not to hunt or purchase a license at all. The more deer a hunter sees while he’s afield will help to motivate him to keep at it if he hasn’t already filled his tags. You can give out all the tags you want but if a person doesn’t see anything to harvest it doesn’t matter how many tags he has. You could possibly give out bonus tags to successful hunters as motivation to continue to hunt if they so desire.

If we stop killing the buck fawns and calling them does, there would be less complaining about NOT seeing bucks during the gun deer season, less complaining about bow hunters. less complaining about wolves. car kills don't reflect deer numbers but more cars on the road. we should have a 6 point minimum on bucks, you only get big bucks by not shooting little ones. I have seen hunters kill does and all the fawns with them on drives and then complain the next year that they did not see any deer and blame the bow hunters or wolves. We don't need 10 special hunts. If not the hunters would hunt during the regular seasons and move the deer.

Stop letting insurance companies and farmers affect the deer herds and if you say they don’t then u lie. Do you actually know how many fawns and turkey are killed every year by farms?? I work on a farm south of Greenleaf and because of the size and speed of the hay cutting equipment we killed about 40-50 fawns last year and I lost count of turkey after 75, the equipment is too big and going to fast to be able to stop nor do they care if they stop, because that will cost them time and money. This is one farm, so add up all the big farms around and the numbers and death count go up but no one ever mentions this.
My opinion... certain areas have a abundance of deer which I understand completely but not the whole unit! Nothing is easy to figure out and I don’t want your job but I hunt in Brown/Metro on 100 acres of woods and I see 5-10 on a normal hunt! Is that to many, not in my mind.. I don’t need to shoot something everytime I hunt nor do I want to, but it’s sure nice sitting and see something. As regards to hunting seasons, the seasons have been this way for how many years. Extending the gun season is fine but it should just be extended into the muzzleloader season, moving it into the bow season is wrong!

I definitely would not support shortening the crossbow season, because the stated goal is to decrease deer population in the unit. I did not see any rules for older hunters being able to continue to hunt with a crossbow all season, which is important considering a lot of older hunters are one of the most passionate groups of hunters. Additionally, older hunters often have the time to hunt more often. I was pleased to see a good number of antlerless deer were taken on private land, which is often not the case.

why would we need to decrease the population in the county? Seems like the DNR wants us to shoot every deer we see, especially in the metro unit. On family land this presents problems for getting the youth involved. Also makes for a long season seeing less deer than 10 or 15 years ago...many sits seeing nothing. If farmers are unhappy with crop damage we should allow them to get crop damage tags to control the land that way. Perhaps people would be more open to giving permission to hunt their land as well

I have seen and heard many comments on the deer population being low this last year in our area, but I really believe deer patterns change due to the high water table. Where I hunt, i only saw a few deer during the regular season. Typically they run the ditches; this year the ditches were overflowing and the weather was keeping the ice from forming. I went back for the late season, and the ditches were frozen - and sure enough, that is where we were seeing the deer!

Baiting needs to be brought back and legal! Cwd is not passed from deer to deer from saliva. Otherwise every deer would be dead and have zero chance of survival. They all lick each other. Form of communication with all. So please stop the cwd scare because anyone with a brain cell in their head and have sat in a tree stand and observed deer know this about their behavior. Real hunters know this! We are not selling what your buying! Bring bait back!

Hunting Brown County parks is the equivalent of hunting a school playground. Hikers, bikers, horses, dogs, overtake the park and make it nearly impossible to bow hunt. If the end game is to reduce the deer heard, maybe a renewed effort of giving public hunters a chance to harvest. Early season only bow hunts put us in contention with all others using the parks. Allow hunters access for late season bow, or limit access to others during early season bow.

The state is a bit off target thinking we would benefit from a doe only unit !! It’ll just drive everybody to a unit where you can harvest bucks. It will definitely have a reverse impact on the the doe population because nobody will be there to hunt them. Keep things the same but let’s take a look at how some states are managing there deer heard with plenty of doe tags and a point restriction of four points on one side.

If they go to a 16 day season I may to discontinue hunting at all and not allow any hunting on my property at all. 9 day gun season is long enough. I think all seasons should stay as they have been. If you really need to get deer populations down go with earn a buck where if you shoot a doe the year before you get a buck tag. You should only get 1 buck tag per year per person. Thanks

I’m fine with decreasing the herd in the metro sub unit which is pretty much all of the county. That's the hardest hit by deer. But once you get out of the sub unit. The deer numbers drop. Have the holiday hunt only in the sub unit extend crossbow and archery in the sub unit. More pressure on the deer they'll relocate out of the sub unit. The amount of tags given is fine.
Crossbow season should be the same dates as the regular bow season. You obviously want the deer dead, so don't eliminate the possibility of harvesting one with a crossbow in September. No reason for me to buy a deer hunting license - gun or bow - if you're going to unfairly limit when I can hunt with my crossbow.

I would really like to see in person registration make its way back. I know it becomes more man-power to operate but it was such a classic staple to hunting and plays a large social aspect. I also thinks it hold people accountable because with no in-person necessary then it gives more opportunity for violations.

The DNR constantly talks about Hunter recruitment, stop having all the extra gun hunts for antlerless deer so we can take kids out on rabbit hunts with hounds during the Christmas holidays and weekends. This is how most of us Boomer's got introduced to hunting by our ancestors. It was fun!

I'm 55. Been hunting for 40+ years. STOP giving away bonus tags!! The overall herd is lower...period! We get it, you're in the sales business. And the proposed extension is too long! Perhaps 16-day season, over three weekends. But then cut back on all the extra seasons.

I would be in favor of combining the Antlerless hunt and the holiday hunt rather than having both a few weeks apart. The deer start moving normally again after Antlerless hunt and then the holiday hunt is upon us. For me, deer sightings were way down after the holiday hunt.

Don't have holiday or bonus hunts it messes up rut and deer seasons before the crowd gets to hunt. Stop youth hunts make them go with adult when season is on they will have a better chance and also adults will get to kill more deer that are not disturbed

having gun season during or close to rut would help out great. 40 years hunting 30 years in same spot worst year ever seen 10 deer all season in 9 day hunt( which I believe in “9days”) I hunt in a spot that I can see for 100's of acres.

I believe it will be very difficult to increase the antlerless harvest on private land by increasing permits. It’s getting very difficult to get private land access each year and deer will congregate in these private properties.

Do not change the crossbow season. Our sport is already “dying”. Don’t give it another reason to get worse. I know people that have said they won’t buy a tag if it changes. Can’t take that chance on lost revenue. Thank you.

Please remove the requirements to pick a specific land type and county. That is ridiculous and turns away many hunters from using public lands in different counties. You are losing new hunters by imposing this restriction.

The population control objectives were achieved during the seasons with “ Earn a Buck “ regulations , with the added benefits of better sex and age ratios. I would welcome a return to the Earn a Buck framework .

Issuing Doe permits will not solve any problems if people with private land are not willing to use them. Having a Doe only season would more than likely make me not purchase a license.

If you held an antlerless hunt in early October, then more likely hunters would shoot another deer in late November. Perhaps a third during the holiday hunt.

Good Job DNR. Your hard work and communication over the past few years has made a significant difference in hunter awareness of issues. I appreciate it!

Would like to see the sharp shooter program where deer are herded up. Also feed the hungry is good. Also the carcass dumpster program is good.

It is grossly demoralizing when you or your group members DO NOT see a single deer during the entire gun deer season on 60 acres!!

If there is some kind of extension to the begging of gun deer season I won’t hunt any more , kill the heard yourself

Metro unit needs more anger less tags! Do not do anger less only or my family and I will not hunt!

I support a minimum antler restriction on bucks. 3 points or greater on one side as a minimum!

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

656 forms were submitted for this unit.

**Section 1: Information about who provided the input.**

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 220
   - I visit this unit for non-hunting purposes: 121
   - I hunt in this unit: 619
   - General interest in this unit: 123

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 556
   - Bow: 428
   - Crossbow: 234
   - Muzzleloader: 259

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 23.41
   - Maximum: 65

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 540
   - Mostly Private Land: 44
   - Public and Private Land About Equally: 14
   - Mostly Public Land: 6
   - Exclusively Public Land: 12
   - I did not hunt in this unit last year: 3

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 8
   - Not too crowded: 23
   - Neither crowded nor un-crowded: 13
   - Somewhat crowded: 10
   - Very crowded: 16
   - Not applicable: 6

**Section 2: Perceptions about the number of deer in the unit.**

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 137
   - Fewer: 220
   - Same: 217
   - More: 47
   - Many More: 19
   - Unsure: 16

**Section 3: Feedback on the CDAC’s 2020 preliminary recommendations**

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

Comments for  Buffalo, Central Farmland

Note: the comments presented in this report are the unfiltered opinions of individuals who responded to an online public input form. The viewpoints expressed do not represent the views of the state of Wisconsin, the Department of Natural Resources, or its employees.
This year for the first time ever I decided to sit in on (well I listed to the conference call) the first public meeting of a CDAC meeting on March 31, 2020. It was interesting and my intent was to listen and learn. The following comments are my own: First I’ll address the four areas you voted on during the meeting. 1. Setting Antlerless deer quota – Good discussion occurred. The 5,100 makes sense based on the discussion. But again, if you want to demonstrate to the legislature that you’re acting seriously to be proactive to reduce the deer herd it would seem you might not want to reduce the quota from previous years, even though it is unlikely the quota of 6,000 would be met. It seems that with the mild winter of 2019-2020 and the reduced harvest of 2019 that the deer population is going to increase. In addition to the COVID-19 situation and many people losing income there will likely be a higher demand for venison this fall. 2. Number of free Farmland Antlerless tags to be issued with each deer hunting license in 2020. Good discussion between two or three tags. I see both sides, diminishing returns of 3, but since you were discussing you don’t have enough tools in your tool bag, I thought it would make sense to recommend three, as your goal is to decrease the deer numbers in the county. How can you make the strongest case to the legislature if you are not using all your tools, even though the outcome would be small. As I believe Bob Brunco (spelling?) said, the harvesting of 180 or so antlerless deer is a decent number (2018-2019 numbers?) with the additional 3rd tag. I realize folks can buy additional tags, but it can be nice to have that third tag. I used all three of mine during the 2019 gun season. 3. Holiday Hunt – Antlerless only – again good discussion, the decision to keep it makes sense. 4. Extended archery hunting season – Jan. 1-31st, 2021. It would have been nice if it was explained why this season couldn’t be shortened to say Jan. 1-15th or 20th. I assume it is because they want to stay uniform throughout the state?? Again, there was good discussion about this topic during the meeting. It was good to hear why it might be beneficial to have this season, i.e. it might be the only time when construction workers and loggers can get out and hunt due to their work schedules. I’m not in favor of this season for the following reasons: a) The number of deer harvested is very small – insignificant. b) The deer season in WI is plenty long for everyone to get out and hunt prior to the end of gun season and muzzle loader season. c) Depending on the weather, deer can start to be stressed during this time of the year from reduced food sources (lack of woody browse in the county), deep snow covering food, cold temperatures, buck’s using up energy reserves during the rut and herd stress from the gun season. It was encouraging to hear the Committee and DNR personnel acknowledge the lack of woody deer browse in the County. I have noticed the same thing. Currently my brother and I have over 200 acres in the county with most of it enrolled in MFL. Without going into detail we have been trying to find a logger to come in and cut about 25 acres of mixed hardwood and aspen. Our goal is to create patches of clear cuts to regenerate (restore) the aspen component which is being lost quickly due to old age. Most of the timber is on gently sloping terrain accessible by mechanized logging equipment. I have contacted over 20 loggers and have met with 7 different ones on the ground to look at the sites over the last two years. To date not one of them has agreed (committed) to harvest our timber. I’ve even offered to give them all the wood for free. I would just like the timber cut and have it utilized. This has been a very time consuming and frustrating experience. I realize it is not in your realm of duties to tackle this issue specifically, but if the deer herd in the county is going to stay strong and healthy (not necessarily increase) this topic needs to be addressed soon. Unfortunately I don’t have any answers other than to somehow offer (financial) incentives to loggers to come on to private lands and be willing to harvest smaller acreages of timber. This past winter we cut about 2 acres of aspen/mixed hardwoods and just let it lay as it was in areas that were two inaccessible for a logger and we are growing impatient in our attempt to get some deer browse established. Private landowners should be educated about the benefits of harvesting their timber on a sustainable basis especially the benefits to deer (provide critical winter browse). With the many acres of land in the county enrolled in MFL and people dragging their feet to harvest, this might be a proactive action to encourage landowners and loggers to do more cutting. I realize it is a hard sell with most landowners, but most things worth doing are never easy. We have shot one buck off our land in three years (although we see and could harvest many). We are working with our neighbors to manage for QDM. We have shot 3-4 does off the land annually for many years. I would shoot more, but my brother is a doe lover and doesn’t shoot any and harasses me for shooting “so many”. He is only interested in seeing lots of deer and doesn’t care
about the long term health of our forests from over browsing. So, I’m aware of the frustrations of deer and
habitat management in general and more specifically in Buffalo County. I would strongly support Earn-a Buck
again. When it was implemented it was effective, people I’ve talked to (neighbors) were angry about how it
reduced the deer numbers, so it worked! Unfortunately the masses don’t care or understand the negative impacts
unsustainable deer densities are having on our states woodlands. Stay strong and keep fighting the good fight! I
appreciate everything you are doing.

I e-mailed my comments to DNRCDACWebMail@Wisconsin.gov. However I'm also going to try and include them
here; I would like to express my opinion of the current state of deer management in Buffalo Co., WI. It is my
opinion that the DNR is overreacting to the possibility of CWD infestation. To my knowledge, there is very little, if
any CWD in Buffalo Co. although it is currently right on our doorstep. The tools that we have available to combat
CWD are quite limited. The DNR has decided that drastic herd reductions are appropriate. We've finally
eliminated baiting, unfortunately that should have been done twenty years ago, but politically it wasn't possible.
Now that the horse is long gone we'll securely close the barn door. Part of the strategy is having antlerless hunts.
In other word, let's kill the breeders. I can attest that method has worked very well. It is getting rare to see fawns
and yearlings. In order to lend a little credibility to my comments, let me say that my education was at the Univ of
Minnesota in Wildlife Management. I was in the hunting and fishing guiding business in Alaska for 10 years. I'm
no stranger to the outdoors and wildlife. I have owned Buffalo Co. land since 2000. For the first 10 years of my
ownership, the deer herd was very prolific and hunting could only be called good to excellent. In the last 5 years
the number of deer has decreased substantially. During the 2019 9 day gun season, I hunted every day and did
not see a deer! I talked to several neighbors who also hunted and got the same reports. The deer numbers are
way down. I attended the Citizens Advisory Committee meeting last summer and was quite dismayed at what I
heard. The chairperson told us right at the beginning that our testimony wouldn't make a bit of difference. He
said I know a lot of you are going to complain that the deer are way down, but the committee would not take that
into account. According to their bylaws, they must use scientific (DNR) data for all their considerations. The DNR
states that the Buffalo Co. deer herd is increasing. I beg to differ. I’ve talked to a lot of land owners in the county
and we’re all in agreement that the herd is way down. How the DNR can look around and say there's more deer is
totally ludicrous. They are promoting this falsehood either to encourage more hunting mortality as a defense
against CWD, or they’re just plain wrong. I can't say which it is. There are several methods available for us to
determine a wildlife population. I submit that the DNR ought to use something different then what they're doing.
If CWD becomes a problem then let’s deal with it at that time. It's not the end of the world. Other states have
been dealing with it for years. It simply becomes another mortality factor, like car collisions, predation, tough
winters, etc. which must be taken into account when hunting seasons are set. We know where CWD is spawned
and incubated. The high fence hunting businesses and game farms are where it comes from. Why don't we deal
with that instead of killing all the sportsman’s deer? These are small, very localized plots to deal with as opposed
to all the rest of the world. Property values in Buffalo Co. are strongly related to the deer hunting. Take away the
traditional deer hunting and we’re all going to pay for it. My question is what is your plan to combat CWD? It
seems that your main item is to drastically reduce the deer herd. In that case, what are your numbers? At what
point are you going to be satisfied that your reduction has met it's goal? This reduction is going to have strong
ramifications on sport hunting, hunter recruitment, property values, DNR / landowner relations, and other
factors. Has any thought been given to just letting CWD run it's course? CWD is not new. It's been around for
decades and what have we learned from other locales? In closing, if a significant reduction in the deer herd is
deemed necessary, let's first look at the source of CWD and then let's start small and monitor the results.
Aggressively killing the breeders is a one way street.
I own 160 acres in the Cochrane area and for the past five or six years I have seen a steady decline in overall deer numbers. Every year it seems to be a little less and a little less. We also keep a lot of food sources standing for all of the wildlife throughout the winter which means that we call in wildlife from surrounding areas that otherwise would not be there. That number has also fallen. In the spring of the year we still have lots of crops in the fields that have gone uneaten. My neighbors have been the same neighbors for years and the amount of deer harvested between all of us really doesn’t change at all but the population seems to go down some how. I have also hunted large nearby properties that hardly have any deer on them whatsoever. Cameras pick up deer activity rarely and hunters can literally go weekend after weekend without seeing a single deer. On the flipside of that, a group of buddies that are hunting 15 miles away have the potential of seeing between 10 and 30 deer per day. That group does what they can in terms of thinning the doe heard. I know a lot of hunters and talk with a lot of hunters and it is my opinion that there are very cold spots and very hot spots for where deer actually WANT to be. The deer obviously are not distributed at all equally throughout the county so maybe it should be looked at a little bit more region by region within the county. The vast majority of the properties that I know about throughout the county have low or very low deer numbers with the exception of the one property I mentioned. So the idea that we are overrun within the county of deer numbers just simply does not make sense to me. The population has been going down for the last five years from what I’ve seen in all the spots we’ve hunted. The other topic that I’d like to put input on would be the four day antlerless only hunt in December and the extremely long holiday hunt in late December. I hunt with a group of 14 guys that Hunt throughout the county. During those antlerless only hunts, nobody comes to hunt. It’s literally a ghost town. They don’t come from out of town to hunt because they want a chance at shooting a buck. Throughout all the other seasons, they have plenty of time and Opportunity to harvest does. So during those antlerless only seasons, everybody just stays home which means they do not buy gas, groceries, food from restaurants or spend any money within the county when they are sitting at home waiting for the doe only season to end. I think if it’s completely necessary to have antlerless only seasons and those antlerless deer to be hunted with guns in December, the regular archery season should not suffer. The month of December for archery hunters has been dwindled down to very few weekends that you can actually hunt with archery gear for a buck. If people are coming from out of town, your weekend time frames are severely limited so everybody just Ends up staying home. I would like to see the archery season stay open to be able to harvest a buck with archery gear only. This obviously means that you will have to trust that people will not use guns to shoot bucks but you essentially have to give people the same trust not to shoot bucks with guns throughout any part of the year. We as hunters have been given a longer leash and have had more trust put in our hands with how we register deer and the gear that we use to harvest deer. So why not give hunters a little bit more trust And allow the archery season to remain open? Lastly, I do support the archery season staying open throughout the month of January. Thanks much for your time.
It is nice to finally see some sanity coming out of the Buffalo Co CDAC with the 2 antlerless tags per license versus the 3. I do thank the DNR for stepping in last year and preventing the antlerless only season recommendation coming out of this committee. Still disappointed there is going to be a 4 day antlerless season following muzzleloader and yet another Holiday Hunt for this upcoming season. Just not necessary. Ironically last year we harvested the least amount of deer since 1982 that is an amazing 37 seasons ago (see https://dnr.wi.gov/wideermetrics/DeerStats.aspx?R=HarvestHistory) during a season where this CDAC was recommending antlerless only hunting and only avoided it with the help of the DNR. Despite that very low harvest (yes lower than previous 37 years) this year's population is miraculously estimated lower than previous year!!! Only fuzzy math coming out of DNR can get us a lower estimation with such a low harvest. I see some comments in the recommendations it is due to lower fawn recruitment and "brutal" winter. Based on # of 1.5 year old bucks on camera this past season, both before and after I don't buy into that at all esp when DNR's own winter severity index listed the county as just moderate. Talked to several die-hard shed hunters who put many miles on every spring and they were not finding any dead deer last spring. Amount of fawns I had on camera this past summer were just like any other year, mostly twins but some singles. Like mentioned earlier.... only fuzzy math can make this happen. Tweak a few parameters here and there and POOF... it's like magic, you get the population estimate you want. No doubt all of the complaining about the antlerless season recommendation last year is playing into the fuzzy math for this year's population estimation. Anyways it is what it is and looks we finally might get off of the 3 tags per license. Maybe next year we can take another positive step and go to 1 antlerless tag and get rid of the Holiday Hunt and the following after that get rid of the 4 day antlerless only rifle season. As always thanks for allowing input, even though I know this isn't going to sway any minds.

1) I am not sure how the population estimates are determined, but I have lived in this county since 1975 and in my opinion we have nowhere near the number of deer that we did in the 1990s. I'm not saying those numbers were ok, but I will say that the number of does seems to have reduced significantly on my property and on the properties that many of my acquaintances own and hunt. There seem to be few enough that I do not understand the recommended slaughter of them. 2) The recommended extended archery hunt is pitting DNR user groups against each other in this county which is primarily privately owned. I not only hunt but I also snowmobile. It used to be that this county was primarily owned by local farmers which were very sympathetic and understanding of snowmobiles. Now many of the landowners are deer hunters who refuse to let us open snowmobile trails across their properties until the bow season has closed. That is their right and I have no issues with that I'd that is what they choose. I'm also a local snowmobile club member that signs trails so I am very familiar with what I am talking about in this regard. By extending the bow season until the end of January for the purpose of reducing the deer herd, you are effectively going to close snowmobile trails across much of this county until at least February. I highly doubt that the extended bow season is going to have a huge effect in decreasing the deer herd. Bow season already runs from early September all of the way until the beginning of January, so I'm not sure why it's necessary to extend it until February when it can impact another DNR user group so significantly. Honestly it's a fight that is a lose/lose situation for snowmobilers. If we complain about this and the landowners get upset that they lose their archery season, they can deny us access all together. If we allow it to happen without saying anything, we essentially limit an already short snowmobile season even more. Thank you WI DNR for even considering to allow this to be an issue.
I will start out by saying that I agree, Buffalo County does have high deer numbers, however, many still remember EAB and what it did in some areas of the county. I live in an area that has a lot of small properties that have multiple hunters on each property. In 2007, people in our area would go days without seeing a single deer. This has ingrained in many people's minds to let all does pass, to continue to build the population. Also, many people do not shoot does for fear of spooking their property, and spoiling their chances at a buck later in the season.

With this in mind, there needs to be an incentive for people to want to shoot does. I propose the following

- Changing the number of buck tags issued to hunters to only one buck tag for use with archery or firearm, but not both.
- Give property owners the ability to earn additional tags based on the number of acres they own by shooting does.
- Give non-hunting landowners the ability to transfer their additional tag privileges to hunting members of the family, much like they can do during spring turkey season. These proposals will encourage landowners to shoot does they would have otherwise not have shot, and increase the age structure amongst bucks in the county. While increasing age structure is not the primary goal, I believe that it will also encourage people to shoot more does if they are frequently seeing higher caliber bucks in their area. Give non-hunting landowners the ability to transfer their additional tag privileges to hunting members of the family, much like they can do during spring turkey season. I believe it would also be an additional incentive to those landowners that pay property taxes within the county as well. In order to avoid the lost revenue, from people harvesting a buck during archery season and then not buying a firearm tag, raise the cost of licenses, and sell buck tags as a valid tag with any weapon.

Our hunting group has owned property and hunted Buffalo County for over 30 years. Our children and grandchildren have joined us. We appreciate the opportunity to participate in this great tradition. We also appreciate the efforts of the DNR to keep our herd healthy. We follow all game regulations and have taught our kids to do the same. We do not bait and would like to see that banned. We also support a separate and shorter season for crossbows. We try very hard to take every opportunity to reduce our antlerless population, every time out. We average 10 to 15 antlerless per year, compared to 4 to 5 bucks. We have our bucks aged (via tooth analysis) and over 90% of bucks harvested are 4.5 years of age or older. We are trying to do things right. It is simply not easy to shoot more antlerless. We all eat venison, but only need 1 to 2 deer per person per year. We do participate in the food pantry donation program. In our opinion, making any season antlerless only would completely fail. We believe most hunters in this county travel to hunt there. We all do, as do almost all of our neighbors. Removing the opportunity to shoot a buck will almost entirely negate hunting effort in that county. While we all love to hunt, for the hunt itself, we pay to hunt there because of the buck opportunity. There would be few hunters in the field in Buffalo. We also do not support earn a buck. Due to our perspective on travel, we also do not feel an antlerless holiday hunt is effective. Why don't you try an antlerless gun hunt during the 2nd or 3rd week of October. It is not a good time to target bucks, but antlerless do provide opportunity. We would participate. We realize there are safety concerns with other activities, but with 92% of the county under private ownership, we should be able to negate much of that concern. It's an idea. Thanks for this opportunity.
Outfitters, should be required to earn a 50% buck. Outfitters lease huge amounts of land, bring in people from all over the country and only shoot bucks. They do not go to local bars, or restaurants, or meat processing places, if your hunting on a Licensed outfitter property make them earn a buck. The antler less deer can be party hunted. The earn a buck should apply to the 50% of the total amount of hunters the outfitter brings in for a season. Do not charge them for these 50% earn a buck tags. Example, 20 hunters under contract that outfitter needs to produce 10 antler less party kills for his organization. Hunting pressure is down in all areas of the county, deer do not move around like they use to during gun season, because everyone is waiting for a Buffalo County Monster. Bring back registration stations also, it helps the local economy and keeps people some what honest on the fear they need to register a deer. Phone in registration promotes people not registering deer, hurts local business's that use to register deer at the bar or gas station, or store, it also takes away the social aspect of hunting that was so much fun back in the day. Track the sales tax decline since phone in registration on opening gun season weekend. Keeping the bow season open till Jan 31, hurts the economy also, you can not snowmobile till bow season is over, and lets be honest what is the percentage of hunters out in the woods in late January, very low. There is a survey question, what weekends do you hunt the most and why. Apply common sense to each county and each situation respects the traditions also.

Hello All: I'm an owner of several different properties in Buffalo County and a leaser of a few others. An item that came up during the conference call was not extending the bow season until the end of January because it hurts the snowmobiles and the bar income. The totals that follow is the amount of snow in Alma for the last five years, in the month of January, from the website www.weathercollector.com: 2016 2.9 in. 2017 8.9 in. 2018 12.8 in. 2019 9.3 in. 2020 11.8 in. This being shown seems that there will be little to no conflict with snowmobiles. Also, believe snowmobiles and hunters can co-exist. If hunters take away their properties from the trails several safety concerns with machines in the right away would have to be addressed. Added to the fact that hunters also input money into the local economy, this seems to be a frivolous opposition or reason to vote against extending the season. During the conference call it seemed that several shots were fired from the CDAC side towards the NRB, would hope that all comments be taken into account when re-election occurs. Final note is that it seems very peculiar that all seats are not filled on the CDAC. Thank you for your time and would be happy to express other concerns if anyone needs to reach me.

Living and hunting in Buffalo county is an absolute joy. But, in recent years I have noticed a decline in the numbers of deer seen. At our farm 10 years ago there was an over population of does which we took upon ourselves to manage and bought bonus tags to make our buck to do ratio much better, which helped a lot. But with the number of tags in the recent years it seems the numbers are down near us but still healthy. As far as extending the gun season, I think that is absolutely crazy and unnecessary. I feel that move is just for the outfitters to put more money in their pockets and thus hurt the hunting traditions we are used to. There is no longer the big family and friends hunta around us and its the my deer crap that takes the fun out of hunting. We have a lot of passion for managing the deer herd and being able to chase trophy's while still harvesting does for meat and always have full freezers. As far as having all the antlerless hunta and later seasons I think is a mistake as more bucks that have dropped their antlers are being harvested, I know as I did it myself. I hope that we can all agree to keep our states traditions and normal hunting procedures and if the need to harvest more does then perhaps we look at all the outfitters leasing up all the land and their clients only harvesting bucks.
Since a majority of the county property is leased to hunters, issue extra doe tags in the areas where DNR/CDAC feel need more deer harvested, to those land owners that will make available to the hunters. Set up a program for deer processing to feed the less fortunate. With so many extra tags many hunters will not take extra game than they can consume. Issuing more tags wont help reduce the herd but, if you have the DNR pay for the processing of the donated deer may get more people to harvest the needed deer. Look at Iowa deer donation program. Do not extend any hunting after the normal seasons. End bow season first weekend in January, no extended gun seasons. Too much strain can be put on the herd and will encourage baiting which is illegal and wardens wont enforce because too busy. Keep gun season frame work at the 9 day starting Saturday closest to Thanksgiving as has been the tradition in this state forever. Your data shows that majority of deer are harvested the first weekend of gun season thus extending or making an earlier hunt will break up the tradition and more deer may not be harvest as one would hope. Data you showed regarding early vs late gun seasons was spot on. The reduction in numbers for 2019 should have been expected.

If you want to improve hunting in WI as well as the hunters experience I would suggest the following: 1. Make people physically tag and register deer like years past. You’ve made it easy for people to not register deer, and in turn drastically hurt local businesses who thrive during hunting season, not to mention killed some of the tradition of what WI deer hunting is well known for. 2. Implement earn-a-buck for zones/counties that need the herd reduced. 3. This is my opinion, but Crossbow use should be limited to senior citizens or people with medical conditions. If not, you might as well just open up gun season year-round. 4. Out of state license pricing should be increased. 5. The predator population in WI needs to be addressed (wolves) - It is no secret and yet the issue gets swept under the rug. I understand your position with the Native American Tribes but at some point you need to step in - this can be applied on many accounts (fishing/spearing). 6. The state owns a considerable amount of land, much of it is primarily served as public hunting land. Consider planting some food plots or crops; in all reality this will not cost the state much money (especially with increased revenue from more expensive out of state licensing).

While I do not agree with extending the bow season later into the winter (January) to help increase the number of deer harvested, I would suggest extending the bow season earlier, starting bow season in August or at least September 1. It is more likely that bowhunters would hunt more and therefore possibly harvest more deer in August or September instead of late January. It’s too cold in January and not only that, many deer move off of their original properties to winter elsewhere limiting many hunters opportunities in late winter. Additionally, if deer hunting ended at the beginning of January, that ensure that other winter recreation opportune that are also revenue generators for the state and local communities like snowmobiling can continue to happen. Extending the bow season I at the begging of the bow season makes much more sense for those reason. Additionally, if counties want to increase their anterless harvest numbers, I think the only way you are actually going to see an increase in harvests, you have to incentivize people to use those bonus tags. Right now in Buffalo county the land has been overtaken by hunters that are only looking for a big buck and don’t care to get a doe.

I would support an antlerless only season or an earn a buck season. Especially, if the earn a buck (shooting a doe in year 1 for example) meant you could immediately shoot a buck the following year (Year 2). However, failure to also harvest a doe in Year 2 would then require an earn a buck (harvest a doe first) in Year 3. This could be extra interesting if a T-Zone like weekend was also participated in late October or early November to give gun hunters a chance before the normal opening weekend. Any way to open up hunting to more group hunts, limit the overly extensive bow season, get rid of the extra holiday hunts, or even potentially extend the gun season by 1 week, are all ideas I would favor or have interest in. Too many people around seem to sit and not drive deer, are only concerned about trophy bucks and the pressure from early September through the beginning of January is way to long a time to harvest for a bow hunter, in my opinion. Putting fun and family into the sport is a great way to encourage new hunters. Sitting on your butt in a heated shack is not. Getting the deer moving, putting pressure on bow hunters to actually harvest does are some of my greatest concerns.
Thank you for your thoughtful preliminary recommendations this year. The extension of the archery season is complicated for many reasons but I support the committee's preliminary recommendation. While many in the snowmobile committee may not find it popular I would hope the committee members reference the CDAC’s own charter (below) which is to make recommendations for deer hunting, not to be overwhelmed by other interests. An extended season does not guarantee a negative impact on snowmobiling as the weather is very uncertain and as committee members pointed out does not close all trail lands or prevent trails from being marked after the ground has frozen. Lastly, I would encourage the CDAC to pay attention to increasing predator populations which in my opinion are impacting deer populations. County Deer Advisory Council Charter

- Gather public opinion on deer populations and goals, antlerless quotas and herd management strategies.
- Review and consider scientific metrics on deer herd trends, impacts to habitat and agriculture and human-deer interactions.
- Provide the department with recommendations on deer population objectives, antlerless quotas and herd management strategies.

I support what CDAC committees mission to maintain a healthy deer herd. Unfortunately, the ability to provide measures to support this mission is limited by the state government. A couple of thoughts as options are discussed: * I believe extending the archery season until the end of January is a mistake. We have snowmobile tourism and other activities impacted, this is not in the best interests of the many. Archery hunters have a liberal season and I am opposed to extending. * I like the 3 additional tags instead of 2 since there is still a positive impact on the deer kill numbers. I hope this decision is not made on some type of additional cost factor. * If some type of earn a buck program is not going to be permitted, simply extending seasons is not an effective strategy to reduce deer numbers. I hope that an emphasis is placed on maintaining a healthy deer herd and sportsman working together to reach goals is the focus. I believe trusting Science as it relates to Covid19 and CWD will help people understand how hunting and the impact of the decisions we make today impact the future of the hunting tradition.

While I truly believe in fact based management, I believe that inclusion of the premise of a MOST LIKELY to OCCUR rational MUST also be part of the equation. IE; If there would be no buck harvest allowed in 2020 what is most likely to occur? More hunters shooting 5000 antlerless or more hunters will simply NOT hunting and spending money in BUFFALO COUNTY or WISCONSIN on deer hunting? I'm not proving an answer just THE question. If the Post hunt population has been hovering around that 21 DPSM number (your data points for many years, what is the rational for doubling antlerless harvest the data doesn't point to that as a relative goal. Become MORE targeted in the approach, begin with removing more deer from areas that have received CROP DAMAGE Payments, go back each successive year and plot out POPULATION ESTIMATES in those areas then establish the numbers to be taken out that way. IF the population is truly to high. Enlist the opinions of the CROP FARMERS as they CAN TELL you where there are too many deer. they see the damage 1st hand! This is not really that tough if you break it down this way.

The land owner really is the person in control not CDAC. The rules should be written to cover all of Buffalo County private land ownership interests. Private land management rules need to change. Private land should be identified if leased by an outfitter or owned by an out of state party. The outfitters and out of state hunter typically have no interest in reducing the doe/deer population. The outfitters and out of state hunters are driven to harvest bucks only. Three years nothing has changed. Wisconsin should consider a points system to reduce buck harvest from non-resident hunters. What is the success rate of non-resident hunters vs resident hunters. I assume the non-residents are doing very well because of the outfitters leasing private land. I hunt in Iowa every other year because they have a point system. The buck management is superior to WI. I'd like to see an increase in the cost of a non resident tag. The Buffalo County rules need to change to reduce the number of bucks killed by non resident hunters. I'd like to see the numbers for success rate residents vs non residents.
I have hunted a private parcel in Buffalo County for the past 15 years. I am on stand during archery season a total of 30 sits, all day for 4 days of the gun season, finally an additional 2 entire days of the muzzleloader season. I see only about 1 deer per archery sit (3-4 hours) and 5 deer in an all day sit during gun and muzzleloader seasons. I am silent, scent free and by use of trail cams my hunt locations are well used by deer. I hunt locations based on the wind as well. I just don't see that many deer and neither do my hunting partners (the property owners). I don't know how you come up with your population estimate, but I trust your science! Just as I was trusted as a WIDOT project engineer overseeing major highway and bridge construction projects for 27 years out of the Madison District. Everything you present is spot on if the deer are there. We know we have deer from all of our camera (15 cams) data, but we don't see them much on stand. We can't help you decrease the population as we just don't see them. I apologize for the rambling! Thank you!

Our biggest concern in our hunting party has been the poor weather conditions for so many consecutive years. Too warm and zero snow cover during the season. Thus year literally one week after the season closed, there was snow. The conditions make it very difficult to see the deer, track the deer and even to drive the deer. One has to be lucky and be at the exact right spot on opening day. I only saw two deer I kicked up at once on Monday morning and they disappeared into the brush too soon to consider a safe shot. I our opinion, considering moving the hunting to just a week later seems to be way over due. Private land hunt's seem to do well up there for the obvious reasons but we not only cannot afford the land owners rates, but have not been even able to find private land available in the area to rent. Some of the public areas are not even accessible due to the wet swampy conditions and need improvements so hunters can safely make access. Hunting has been a family tradition for almost 50 years but of late has become increasingly frustrating.

As a Buffalo County outdoorsman, that hunts all season long, I feel that it is in our best interest to keep the deer populations strong in our county. We are the number one producer of B&C bucks in the country. By increasing the amount of deer killed every year we are lowering the amount of bucks to grow into their potential. That potential is why people come from all around to hunt here, and drives this economy. That is far more then just guides, that's hotels, restaurants, bars, etc. Also the deer population is not steady across the entire county. I hunt in the township of Dover, and do not see these hundreds of deer that were claimed to be seen on a simple drive around the block. Creating a measure to decrease the deer population substantially would decimate my local deer population. As far as an antlerless only season, it would drive more people to hunt else where. People would not come to Buffalo to hunt does. This measure would surely back fire, I would not even hunt in Buffalo county if this was the case.

Buffalo Co. never recovered from EAB and with adding crossbows the mature bucks will take another hit, every year there are more Predators, last year we had more pictures of Bobcats, coyotes, bears than mature bucks. The idea of handing out more doe tags is a joke, most land is private they want the big buck and don't shoot does, it won't happen because of greed but the only way to fix it is 1 Buck no matter which tool, the mature bucks are gone because, a bow buck, a gun buck, trimming does is being done on fawns by all the predators, I owned land in Buffalo for 47 years and its the worst I've seen it talked to several outfitters they say the same, I gun hunted opening to days in the Waumandee area, heard maybe 15 shots Saturday, couple Sunday, Buddy hunts Fountain City never saw a deer and the DNR claims over 4,000 deer killed, don't buy it, I had read record herd last year but the kill down 25%, then excuses. Kill everything that moves is your motto and add more days to the season.
The state of WI and the WI DNR should be able to limit the amount of liquified manure is sprayed on BOTH private and public hunting lands. Have witnessed an all but elimination of deer in certain fields saturated with liquified manure. Ariel photos of some of these fields resemble them being flooded and puddling due to the quantity of this manure. Maybe this is a good idea for farmers and the soil but certainly NOT good for deer or turkey populations. These corporate farms also lay their huge manure lines over 5-10 miles of roadways and they also have extremely loud and enormous gas powered portable pumps set up to keep the manure flowing for miles from their source. WI seems to be the only state that allows this practice as I've never seen it anywhere else. These 1000 head corporate farms are doing a terrible disservice to the wildlife in the areas they spray this crap. Our fields used to be full of migrating geese and other wildlife. Not anymore sadly!

During the 2019 deer season (gun and bow) it seemed to me there were very low numbers of mature bucks around. It’s a little unusual being most of my neighbors only shoot bucks if they are mature. There was still a very high doe ratio however. I know the CDAC advisory did not recommend having a antlerless framework for this year 2020, probably due to the nature of being Buffalo county. However, I myself and some other people I talked to really would not mind visiting a antlerless framework for one year. It would give the bucks a year to grow and mature and it would focus the hunting on does which would bring the ratio to where it needs to be. There seems to be enough does in the farmland area that during rut, each buck locks down his own doe and they don’t move. When the ratio is right, the bucks move more in order to breed. I’d like to see a year of antlerless. I wouldn’t even mind to see the antlerless season gun and bow extend to the end of January.

I have lived and hunted in this county for 21 years. The past 3-4 years I have seen the deer kills within our neighborhood continue to be reduced as well as deer sightings. That isn’t for a lack of hunting and our trail cameras only confirm this. With a tremendous increase in bobcat/coyote sightings and an over abundance of tags with a combination 30 +/- days of gun hunting I wonder why? How many people on the cdac committee couldn't even find a deer to shoot during the 2019 9-day? Now I hear that there is another proposal to extend the archery season, for what logical/biological reason would that be? I am not going to guess what games are being played behind the scenes amongst the board, but c’mon. How many individuals showed up last spring to voice their opinion and take time out of their schedule to only have this thrown back at them again this year. Slap in the face is an understatement!!! I am 100% against the extended archery season.

The first point that I want to make on your presentation video that I just watched is that you were comparing a declining archery harvest and showing a graph that starts pre-2008 with a declining archery harvest even then. You attribute the current decline to an increase in crossbow. I believe that in your estimation here, you have maybe unknowingly implied that the introduction of allowing and permitting crossbows is the reason that the vertical bow harvest is declining. When in fact the vertical bow harvest has been declining for multiple years even before crossbows were introduced. The other side of the argument that you should refer to before assuming and implying that crossbows are the reason that the harvest has declined is that maybe crossbow harvest has increased because of introducing new hunters to archery season. So those are some things you might want to think about before you post another video like this for Buffalo County.

I can not for the life of me understand why we are considering changing laws for hunting in June for the September through December hunts, of the same year. We need to know before we book a hunt 9 months in advance, what the rules are. Put yourself in the hunters situation. The hunter books a hunt for a Buffalo County trophy hunt, only to travel there and find out that they can only shoot a doe. Really need to be thinking of next year’s rules this year. This equates to a driver going down the highway at posted speed, and the state changing the speed limit signs behind him, and he gets a ticket for going faster then the new posted speed. I hunted six days at ten hours a day, and saw nineteen bucks, twenty does and only five fawns. That is sixty hours of hunting and only 44 deer. Just for the record I do not sleep while in the stand. Thank you, and I hope for no rule changes for this year.
I have leased farmland in buffalo county for 35 years and guided for over 20 of them basically covering the southern portion of the county. In my opinion there is more deer density in different areas of the county, where the big outfitters are there are a lot more deer (I personally guided for one of them for nine years). Because of the nature of there business they choose not to harvest does and focus more attention on the trophy buck. Those are the areas I have personally seen a more abundance of does. I believe something positive could be done in these areas working together and forming committees to help track and monitor the numbers, with the use of cell cameras nowadays that everyone seems to be running more accurate numbers could be achieved. I would personally volunteer to be or head up a committee made up of some outfitters and bigger land owners and crop farmers to help achieve goals.

Let's do what is right for the deer for once. We have too many antlerless deer and they need to be harvested. Its so simple I want my grandkids to be able to enjoy this as much as I have. A longer season is a joke. It does not address the problem of too many deer. Allowing them to shoot bucks as far as I can see helps the outfitters. If you are really letting bucks go you can bet the outfitter will have the best food plots. So if he is within a couple miles of your piece you can bet where those bucks will be. He can pick them off one by one. You keep changing everything exactly opposite what is best for the deer. You wonder why deer hunter numbers are going down. I get very passionate over this. Ever since Dr. Deer has been here the state is in a state of turmoil. Seasons are long enough and have the guts to do what is right for the deer. I'll stop as my blood pressure is going up.

The holiday hunts are great, but being they are antlerless they prohibit me from taking a buck with my bow. Extending the season into January forces me to use next years vacation if I want to hunt other than the weekends as sunset is very early that time of year. The time between Christmas and New Years is typically a great time to slip out and get a few more days in the stand with my bow and get that one that slipped by during the rest of the season. In the past you also had more than 1 special hunt in Buffalo county and it to was anterless, which took more days of Buck harvest out of my grasp. We can easily harvest more than 1 deer a day on our land, but choose not to as we selective harvest and if we donate the deer, there is still a lot of our time and labor put into giving it away. We typically let them walk as we harvest what we will eat over the next year.

Re-Implement the Earn-a-Buck program and allow some level of deer baiting. Reasonable give and take between hunters desires and appropriate measures for scientific deer herd management are critical to ensure hunters/landowners feel they have input into the process of determining regulations and to ensure the safety of the population and environment. Reducing numbers supports the reduction of environmental impact and CWD. Allowing some level of baiting maybe against the information about CWD spreading but it is something hunters greatly desire, which will create ownership and buy-in. Two further comments, the numbers for the Earn-a-Buck season support many more antlerless being taken during that program and CWD spreading through baiting is not 100% supported by the evidence, CWD spreading through overpopulation is supported better than the baiting argument.

I have no time for the holiday hunt, nor any late season antlerless. IF, and I mean IF, there needs to be an antlerless season, I would prefer a MUZZLELOADER ANTLERLESS season early in the fall. I fully support bow/crossbow to stay as is even though no one in my family uses a crossbow including as a future tool (and opportunity) should there be a need to increase antlerless harvest. This would be far better than extending or adding any firearm season. Though I know that this is not part of your survey (nor your decision) I also hope that we NEVER go back to in person registration. I often chose not to shoot a deer in the past because I do not want to go see anyone during hunting season. That's my break from the real world. Thanks to all the people that donate so much time and effort on behalf of our wildlife and hunting tradition!
Please consider earn a buck again to manage antlerless population. The best way to achieve this is earn a buck next year. This means if you want to shoot a buck next year you must shoot an antlerless deer this year. This doesn’t prevent the hunters who only show up for the antlers from shooting a buck, but also gives people a chance to stay in county and harvest a doe in order to receive a buck tag next year. This doesn’t affect the outfitters outside of guests that come every year, and if they come every year they should participate in antlerless harvest. This doesn’t hurt anyone from harvesting a buck this year. But it substantially prevents people from shooting their buck and running. It brings business back to the county. The only fear for a buffalo county hunter that will force them to shoot a doe is to threaten their buck tag.

I know that the deer population that the cdac reports are not accurate. Some areas have higher deer population then others but no where near what is being reported by the committee. Buffalo county does not need a holiday hunt or a extended bow/crossbow season. Just because there are a few land owners that want to decrease the deer population on their property doesn’t mean we all have to suffer. Deer population in my township of Dover is no where near what is being claimed and has been on the decrease for the past several years. Please keep this in mind that a one size fits all approach does not work. Also the creation of the CDAC was to give the public, hunters, land owners representation to the DNR not to just come up with their own plans without any regard to what the public input ask's/want's. Thank you for listening.

On my land over the past years I've not seen any increase in the number of deer. I see more does with only one fawn probably because of the high coyote population. The surrounding land area is hunted with moderate pressure and the harvest is accordingly. This area is not highly agricultural thus keeping deer of more controlled numbers. I understand that there's high density areas for deer but such is not widespread. I think if there'd be a way to increase deer harvest in those high density areas would be more sensible. At best the hunters on my property over the last few years only have about a 50% success rate. The car‐deer kill in my area is also of moderate if not lower over the past few years. I can only advise to concentrate on the high deer number areas which from my travels is not that much of an issue.

My feelings are that the firearms season(s) have become to long along with the antlerless only hunts. #1 The muzzleloader and regular firearms season should be combined into the regular 9 day season. If not, then muzzleloader should go back to the traditional (flintlock, percussion cap) black powder, open sights, lead ball (no sabots, no smokeless powder, no powder pellets, no optical sights, no inline, etc.) This season has just become an extension of the regular firearms season and has lost all attachment with the nostalgia of primitive firearms hunting. All of the additional antlerless only hunts have impinged on the ability to hunt either sex deer as an archery hunter when I have the time available to hunt. They have basically extended the firearms season to about a full month when 9 days used to be adequate.

I see more hunters on public land than I do any wildlife. Many of them do not respect the nature at all. If you walk through Tiffany Bottoms right now, there are still hanging deer stands that hunters leave behind to claim their spots. If you guys don't take them down, they are getting on Ebay very soon here as Covid-19 has me broke for a couple months. Please take them down so I don't do anything stupid. Please do take a walk through Tiffany Bottoms and see it's destruction these bad hunters leave behind. Anyways, deer has really decreased in this area due to over hunting. I see more deer on private lands along hwy 25 then on hwy 35. Please do take those deer stands down before I do please! 1/4 mile before duck lake along the atv road and to the east a long the creek is over a dozen of these hanging stands.
It would nice /beneficial to have an earlier muzzle loader hunt maybe the same weekend as youth gun hunt or change antlerless only to muzzleloader, as to make archery hunters only wearing orange on that weekend - i use a flint lock and have hunted the muzzle loader weekend for the past 10 years and have yet to get a deer its harder than bow in my opinion. I also believe the disruption to deer patterns during regular gun from hunter/ scent movement makes that weekend very difficult and its almost always below 0. Additionally i would think an early season for muzzle loader ( before regular gun) with the possibility of shooting a buck would yield a higher turn out and more anterless taken cause you can be more selective of deer size and would still have regular gun to get the “big one” so time to fill the freezer.

I think one thing that should be considered is multiple season overlap. For example, during the holiday hunt, you should allow bow/crossbow for bucks to continue, you’d have to wear orange still. I also think extending the gun season to a 16 day season would be good. Start it on week earlier. The muzzleloader season should encompass two weekends, but not overlap with gun. A wild proposal would be to allow muzzleloader before gun. On a side note, my favorite option would be an Oct/Nov 8 week, any weapon choice deer season. I think we’d be surprised by the outcome. Have the option to close the season once the quota has been met. You could also close the buck or doe harvest individually. Bottom line, a new concept would be monitoring the season based on quota, instead of time.

I have been hunting the same 100 acres for over 20 years. The first 10 years hunting was great, seeing a lot of deer an being able to be selective on the deer I wanted to harvest. The past 10 years, hunting has been horrible. We have not taken one doe off this property in the past 10 years and this year I hunted over 100 hours during the bow season and saw 11 deer, 7 bucks and 4 does. My neighbors group never saw a deer during the gun season and that is a 240 acre partial. Most of my friends from this area are having the same experience that I am having. I am not sure if predators or over harvest from past years is the cause, but I and many others in this area are losing our zest for deer hunting.

If the extended archery season does not pass, in order to allow the snowmobilers to have their normal season length, could the holiday hunt could be removed to allow archers to hunt antlered/antler-less deer following the muzzleloader season? To my knowledge there is not a running tally of deer harvest during the season. Hunters get a knowledge of the results but not a running knowledge of performance. What if we had an online running tally throughout the season of total harvest to give hunters a visual of the current totals and the progress toward the goal harvest? We register via phone or online already, maybe creating an algorithm to add to the tally with each registration would help hunters know where we stand throughout the season.

I understand why you guys want to reduce the number of deer. You have to remember all land is not equal. We have hot spots in this county. Our farm is not a hot spot. So pushing us to shoot more deer is not the right thing to do. It drives me nuts to drive around and see a 100 deer in a field. Like I said you will not see this on our farm. Unfortunately I think this needs to be handled on a land owner basis. I know you guys get alot of resistance but many of us really do not have the deer that you guys think. As far as crossbows go. The number of gun licenses sold will continue to go down as long as crossbows are legal. People are not going to freeze their butts in November if they can shoot their deer with a crossbow in October.

Deer numbers were down extremely this past season in our area. 200 acres of cropland, creek, river, and swamp land. Seen a few bucks and a couple doe during bow and crossbow season. Seen 2 deer during gun and muzzleloader. Pushed hard all seasons. Predator kills which I feel have been major the last couple years as we have had 8 different bobcats, a couple bears, and lots of coyotes on camera and seen in person. Car kills numbers are unknown as most are not reported. Fawn kill in the spring has been excessive due to predators. Seen 3 fawns grow up on the farm last year every day of which one was hit by a car, one was killed by predators, and one made through the season. That is not very good odds for Buffalo county.
Should allow archery hunting for bucks during the holiday hunt. This provides benefits for everyone, financially for businesses benefiting from hunting, allowing hunters killing deer of other species which is part of the overall deer reduction goal. I believe in the town hall meeting that I took part in last month the issue of extending the archery season through January was killed, you have given people false hope by putting it in the survey is misleading and unfair to the public as you are making people agree to the Holiday hunt in order to vote for season extension which you shut down; That is disingenuous. On behalf of CDAC and create lack of trust in the public.

There's barely any public land in this county and the public land that is open has way too many traffic or hunters for us to be allowing so many deer tags for public property, if we can separate public from private, that will be best interest for future generations. For example; Public should be down to one antler and antler-less for both gun and archery tags. And private can continue with their one antler and three or two antler-less tags as private has bigger deer population. Most if not all deer-vehicle accidents occur along lands in private areas than public. That is why I feel private land tags should stay the same but public land tags should decrease. Thank you.

The unregulated outfitters around my area promoting bow hunting are getting a lot of private lands that were accessible to hunters who asked and got permission, are now closed unless you pay them to hunt. The well organized bow hunters association has way too much influence on how, when, and where I can hunt as well as what deer I should be hunting like not what they consider their bucks. I favor closing buck season in buffalo county because all the antler crazy bow hunters would bale and go to other deer zones. They have single handedly closed private lands for other hunters who want to hunt grouse, squirrels, wood ducks, and fall turkey with a gun.

Seems that with a goal to lower the herd count that there isn't more emphasis on increasing the number of hunters/ licences sold. The season changes to accommodate gun hunters is ridiculous. The reason WI has a quality buck age structure is largely due to the current gun season timing. I don't understand the problem. Bow hunting is available to all. If anyone thinks that hunting during the rut or any other non gun season, they're welcome to join us. I heard allot about some people seeing allot of deer and others not. If you want allot of deer, you need to put in the off season effort and practice hunting methods that favor deer desires.

You would be insane to make an antlerless only season in Wisconsin's number 1 trophy county. You would put countless guides and outfitters out of business in a single year. What's more, each property owner manages his land how he or she sees fit. Not everyone cares about antlers (though in buffalo the vast majority do). Let us hunt, and BTW WE NEED A WOLF SEASON IN THE NORTHWOODS. I know MANY individuals who have stopped hunting because of your disastrous "management" of wolves. If you insist on having them here (lord only knows why, we are the predator in the eco system now, they are unnecessary) then at least let us shoot them.

I am absolutely opposed to an Antlerless only season! I invest thousands of $ each year in Buffalo County with businesses and contributing Property Taxes! I purchased my property to Hunt and Manage the land and Deer population. We contribute and set Antlerless kills based on the numbers of deer we actually SEE on properties. We harvest doe's every year! I will personally sell my property and not hunt this year or any other year if it is Antlerless only. See that what does to property values in Buffalo County? What will it do to Small Business owners like Feedmills, Implement dealers, Restaurants, Grocery Stores, Hardware Stores etc.?

I strongly disagree with holiday hunt. This completely screws up late season archery hunting with bow. You pound the deer with crossbow archery during rut. Pound them with guns for 9 days. Youth hunt. 2 days 10 day muzzloader. T zone doe hunt 4 days. And you still want to hunt deer into late season archery with guns. You should be ashamed of yourself. That is whiteman greed. You go buy a archery liscense and go sit late season. After rifle hunting and see how many deer you see on public. Wow natural resource board and lawmakers Make me want to puke. I'm hunting more worthy states from now on!!!
To me this topic is a double edged sword. I own roughly 400 acres of land. Both Ag and woodland and the deer population on these properties isn't that great. I'm lucky if I even see a deer when I go out hunting. But then I listen to others telling stories that they see 10 to 20 deer a night, plus driving around the county in certain areas I see this myself. So the problem at hand here reducing the deer populations in those areas and how to achieve it. Generally these problem areas are owned by landowner or a group of landowners where the hunters/ acres ratio is to low. So this is the issue in my mind that need to be addressed.

I believe you are doing a great job in trying to manage the deer herd. The crossbow/archery season should be extended, regardless as to whether there is a holiday hunt or not. What would be the point of not extending it if you want to reduce the herd? In addition, the Earn a Buck was actually a great way to reduce the antlerless population. Why not at least use it in counties where there are a lot of does? It is simple--you cannot shoot a buck until you have registered a doe! Bring back the back tags--you know who is hunting and who isn't. And, you know who has already registered a deer or not. Thanks for allowing input!!

I am 55 year old Male land owner in Buffalo County. I grew up in this area and plan to move my residence from La Crosse County to Buffalo County in the next 12 to 16 months. I have spent my life enjoying the outdoors. I have planted 25,000 trees in this county and believe I have a very in dept understanding of how our deer population impacts our environment. I appreciate the work this team is doing. My recommendation is simple! I ask that your team consider aiming smaller and then you will be more likely to hit your target:) In other words, make more antler-less harvest permits available by township. (Aim Smaller please)

As a non resident who is involved in a lease situation, even with the presence of cwd you need to return to some form of baiting in this county. So many private landowners are leaving standing crop to circumvent baiting it is having an adverse effect on deer congregating, previously where you could draw small groups with bait, now you have in the past 2 years fields with over 130 deer in them together, and I'm referring to some 2 acre plots on my borders, and the landowners refuse to harvest does because they get to potentially shoot 8 bucks in their family and don't want the venison

I have hunted for 65years and have spent many hours in the woods all year walking all over the land taking care cutting elm and other vines @buckthorn. I have hunters that next to my land that if its brown shoot it. I let my 1@2 year hunters shoot a doe or buck of any set of antlers and really gets them active in hunting. The rest of us shoot bucks with horns beyond the ears. If we don't get any then take a couple of does too share with all of the group. I see the deer numbers have drops over my 65 years of hunting. In my early years I would see over a 100 deer in 3 days.

There is no need for higher antlerless deer quotas. There was almost no claims for crop damage, there were also almost no claims for ag tags. The currently population is down right where it’s at. When I drive and hunt in Trempealeau County I don’t see any difference in the number of deer there vs the number in Buffalo County and yet that County is not be required to reduce the deer herd like Buffalo County. If there was truly and over population of deer like some are trying to push then there would be wide spread claims of crop damage and this clearly isn’t happening.

I know its hard to micro manage I understand that. but the northern half of buffalo county is way different than the southern half of buffalo county. I have lived in both areas and the northern half of the county has way less deer than the southern half and needs to be managed differently. I have said this for many years but nobody listens. I have been in these woods for over 50 years, the last 3 or 4 previous winters have been very hard on our deer herd and numbers and they have not bounced back. I hope this doesn’t fall on deaf ears again. happy to talk anytime.
Public Input on CDAC Preliminary Recommendations - Spring 2020

578 I have had the great opportunity to hunt in the best place in the country. BUFFALO CO! The deer numbers are not what the officials say they are! I think we need to get back to how buffalo used to and bring back shotgun only! This would help build more trophy class whitetail, and larger deer herd. Buffalo Co was know for trophy whitetail and it's been in a decrease. With going shotgun only it would increase the deer herd and size of bucks. It would help all outfitters in the county which would help the communities in that area. Thanks for listening.

579 I would like to see earn a buck brought back to Buffalo County. We have to many deer and our neighbors do not shoot does. They sit and wait for one buck and than stop hunting. You can give them all the free doe tags you want but it doesn’t make them pull the trigger. I am all for the doe only season but I don’t think that will fix our problem. People that don’t want to shoot a doe just wont hunt. Also bring back registration stations. More people might submit their earn a buck CWD sample. It also helps the small town economy.

580 Keep our traditional firearms season in place. Close the archery season the Sunday before like years ago so the deer are not as spooky. Encourage landowners to let people hunt. Do not allow a youth or firearms antlerless season prior to the regular firearms season. Again do not spoke the deer. They are way to nocturnal now. If you ever make it earn a buck or antlerless only season I will not buy an out of state license. I get no satisfaction out of shooting does and worse yet a fawn. thanks for listening!

581 It does not matter how many tags are issued if people are unwilling to harvest deer and take pride is managing their own heard on their own private land. Extending the season will not increase the kill numbers and it will take away from the snowmobiling season as well. Holding a Holiday Hunt is not worth it either. Many hunter target late season bucks during this time. They have had plenty of opportunity during the regular gun and muzzleloader season to kill a doe if they were looking to fill the freezer.

582 I’ve hunted in Buffalo for 22 years and have seen a consistent big drop in quality of deer. I was against earn a buck and I was wrong. I’m all in now and I know others are as well. Is there any potential to doing something to increase the quality of the bucks we have? Even as a landowner I’d be ok having to draw a tag. Isn’t it time to raise the price of non resident tags? Other states sell tags for $4 or $500 with no problem. Why doesn't Wisconsin? How about outlawing baiting? Time for change!

583 The deer are not moving during hunting season. Too many people sit and wait. Hunters need to move the deer by driving them. Since Buffalo County became a money making industry the quality of the hunting has gone down. Some pocket never are touched during the season. Also hunters can tell if a deer has CWD, don’t need a state official to drive out to confirm what is clearly visible. Thank you for repairing the trout streams they are a lot of fun now, not as good as the Kinni but getting better each year.

584 We believe that the number and quality of bucks has decreased significantly since 2008. The Buck harvest numbers back that concern as we’re down almost 30 percent since 2012 with almost a steady decline annually. This used to be one of the top counties for quality bucks in the US but has been getting worse every year. Tourism, land values, and building activity have all benefitted substantially from that perception. In order to keep those benefits, it’s necessary to keep that quality intact.

585 We need to bring back earn a buck. I know it is not popular but it is the only way to reduce the population. If the DNR is truly worried about tourism they should bring back in person registration. That one thing has hurt the local revenue during the deer season. No one comes to town anymore because they don’t need to. You need only to drive through towns during the season. The streets used to be full of vehicles and the businesses full of people. Now the towns are like ghost towns.

586 There are so many deer and it seems like the “guides” only care about there clients taking a trophy buck. This area needs a few years of intense doe harvest to help balance the herd size, stop over browse and prevent deer illness. The guides need to be mandated to harvest doe in some manner or lose their guide license. They are not being good stewards of the land and species they hunt. My average deer sightings last November were over 35 deer a day, everyday! My freezer is overflowing.

Report Generated: Friday, May 01, 2020

Buffalo, Central Farmland
Any suggestion of an "No-buck season" would absolutely be detrimental to people who lease land and the values tied to those parcels. Hunters help drive these local economies, improve these lands and can improve the health of these herds. We need to make sure we don't drive these hunters out of these deer havens but motivate them to help improve them. If reducing the population is the goal, increasing the number anterless tags is a good idea. A "no buck" season is not the answer!

Grow the crossbow season its the most versatile you can hunt from the ground or tree. Crossbow will out pace gun and bow combined if you let it. With the heard managemet practices, and growing your own big buck, harvest rates will continue to fall. Also deer wont move much with the new hunting strategies. Party hunting is not done much anymore, and maybe a good thing. However it moved the deer. In order to achieve your harvest goal you will need to bring back earn a buck.

If the archery/crossbow season is going to be extended, I would like it to be either sex, but only to the middle of January. Extending the hunting season to the end of the month puts too much added stress on deer. By mid-January, deer will have been hunted for exactly 4 months - that is a long time. I would not add 2 more weeks to get to the end of January. Deer need time to recover and deal with the rigors of winter which will be well underway by the middle of January.

The extended archery season is not needed, there is ample opportunity to harvest a deer. In my opinion the number of doe shot in that season would be minimal and wouldn't do much for herd control. There is also a very real possibility that other recreation could be shut down because of it. Like access to land for small game hunting, trapping. Also snowmobiling, which could impact the county economically and hurt our businesses. There is more to do in this county than hunt.

Extending the season until the end of January won't result in more antlerless deer being harvested. DO NOT extend the season until the end of January. Bucks are casting their antlers and anyone with a buck tag unfilled will target bucks, not does. Bring back EAB (if legislative changes are made after the spring hearing) or make 2020 in buffalo county antlerless only for one year! Holiday hunt (anterless only) and late t zone (anterless only) must stay in place!

There's more deer in this county than you think. I think earn a buck or 1 year of antlerless would justify the correct amount of deer. Open up crop damage tags for everyone to use/ask to hunt on the land. The biggest problem is the outfitters don't shoot any does on all the land they lease. They might say they shoot deer and register them but the majority don't. Just drive around by all the land thats leased and you will see the mass amounts of deer on them.

The hunting season and pressure put on the deer in the Buffalo County area has increased throughout the years. I’ve noticed a big increase in deer being shot but not found on property because of the extended season. I’ve noticed a big increase in how long the hunting season for Whitetail. I’m not quite sure the purpose behind it all but it’s affecting the quality of deer and how often you see deer in the woods. Thank you for ability to express my opinion.

After hunting this area 5miles NE of Nelson, and through studying our group’s deer cam photos, our concerns are: 1. Serious drop in trophy sized bucks seen, 2. Significant increase in predators, mostly coyotes and bobcats, 3. No corresponding increase in does/fawns even though we don't harvest any, and 4. Contrary to some views, we believe the quality of Buffalo bucks has dropped steadily since 2011 and our overall deer sightings are declining.

No matter what you do, you will never be able to force people to shoot does. We need to make less rules so we can get people into hunting as we are losing hunter numbers. Leave crossbow and bow seasons alone and stick to a 9 day traditional gun season. Bringing back in person registration stations would be nice too. If this state gets too messed up with their regulations, I will just take my money elsewhere and hunt other states.
We do not need the 4 day doe hunt, holiday hunt, or an extended bow/crossbow season. What needs to be done in this unit is bring back earn a buck. This unit is considered a trophy buck area for the state and the only way to get landowners and others that hunt the private land is to make them shoot a doe to get authorized to shoot a buck. With earn a buck enough does will be harvested so we will not need the extra seasons. Thanks.

The number of deer are not as high as some would make it out to be. Until hunters get it out of their minds that Buffalo County is all big bucks and start shooting some does, we will continue to be overpopulated. With all the land being bought up by Big Buck Hunters, the deer have too much area to take refuge without any hunting pressure. Makes it very difficult for the basic meat hunters to even have a chance to harvest a doe.

Our WI dnr is the worst dnr in the country!!! Baiting should be legal in all counties but regulated like it was before. Registration of deer and turkeys needs to go back to the way it was so numbers are actually accurate. Earn a buck for buffalo county wouldn't hurt but needs to be regulated and monitored to does only; not nubby bucks or doe fawns. Turkey season should be like deer season and not limited to a certain time.

2019 saw few deer, hunted 19 days both gun and archery. Shot a old doe with rifle, nothing with bow. 2017 and 18 saw many deer, harvested nice bucks with bow and hunted 6 days combined the 2 seasons. Shot 1 buck in 17 with rifle, didn’t need to harvest 2 deer for 2018. Last year saw fewer deer and less signs, did see an adult black bear on our trail cameras near Fountain City, maybe kept some deer away, don’t know.

Stop giving out so many tags and hunts we don’t see any deer like we use to 30 Years ago go back to anterless the first two days and that will be only deer you shoot or use it as buck tag! No one I know see the deer they want........... half as much as I use to because the deer that is shot durning bow hunting is so much more than it was 30-40 years ago..... hunting pressure is way worse than it has ever been.

Deer numbers in our area last year were way down. I don’t know where the DNR get there figures from on deer numbers. We did have more deer than needed in the past but the high amounts of snow last February 2019 along with high coyote numbers killed a lot of deer. I think the DNR should quit trying to add more hunts or make big changes. It just upsets more hunters to quit hunting. Let’s use some common sense!

weather was the number one factor in our 2019 deer season. A quicker reaction to this factor would have changed the harvest numbers for sure. Here in Buffalo County, town of Buffalo, we just could not see them due to the snow clinging to every branch in the woods. My family is doing this for the meat as top priority, but if a buck comes through on a drive, he should be eligible for harvest also. Thank you.

I personally think that Holiday hunt is absolutely a terrible idea! Even with the extended season if approved. Leave those poor deer alone. You have deer that are trying to recuperate from a long rut. Also do we not see a direct correlational with no baiting and the doe harvest? ALLOW baiting again and watch the does get killed!! I am sick of this cwd crap and the dnr taking my rights away THANKS.

In the past 15 years I have seen less and less deer. Drive the tops or the bottoms on a nice evening. Used to see 100 deer or so. Now driving 88 or blank hill rd during the evening you will see 20 deer tops. I have experienced less deer interactions while hunting. However, more importantly is the amount of deer overall in the county as noted above. You do not see them AT ALL like I used to.

I would like to see a separate muzzle loader season with a separate buck license. If I shoot a buck with my gun I will not be in the woods during muzzle loader season if I can’t shoot a buck. I am 63, have shot who knows how many deer over the past 50 years. We eat 2 deer a year. I fill doe tags early so if I am in the woods during muzzle loader it would be to only shoot a buck.

Earn a Buck? Oh, that's right, not a possibility, after the $$ saving online registration decision. I guess the possibility of the overpopulation of deer wasn't discussed when making this decision on deer registration. I don't know why we are filling these input surveys out. Just let the geniuses that decided to make the Earn a Buck impossible figure this all out.
I do not believe there are too many anterless deer. I also have heard the decision on extending the archery season thru January has already been voted down, if so your tricky way of asking the question and tying it to an anterless only season was misleading and dishonest. The only way I support a holiday hunt is if you leave either sex open for archery.

I farm 1700 acres in Buffalo county. I also bow hunt and rifle hunt. The amount of deer damage to row crops is bad. There are way to many anterless deer. The buck to doe ratio is to the extreme more does then bucks. The quality of bucks is way down. Doe only season would do well for the overall heard. Earn a buck needs to find its way back some how.

My belief is that outfitters need to apply for a permit in order to guide. I also feel that wether you put alittle bait out is no different then allowing food plots. Both are in interest of drawing deer. And it doesn't help any that private land owners buy up all the land in order to maybe harvest 1 deer. And not allowing anyone else to fill tags.

It will not be popular but I believe you should consider earn a buck. It forces hunters to harvest that doe immediately and not wait until the end of the season when those chances diminish or hunters decide not to go out. Please consider changing the youth hunt to, youth and seniors. By seniors I mean over 70 or 75 years of age. Thank you

The CDAC needs to have tools available to them to decrease antlerless deer numbers across Buffalo County. What they have now isn't working. Get the legislature to bring back earn‐a‐buck and people will finally shoot antlerless deer again. It's the only thing that has worked in the past and it's the only thing that will work in the future.

Much Fewer deer seen than carrying capacity indicates. 19 day gun season is insane and will not help you rid the area of the deer the DNR seems to dislike so much. Hunting has changed for the worse each year. Farms have been broken up into so many small parcels no matter where you are. Archery is the future of deer hunting in Wisconsin!

Buffalo county has become a haven for tax sheltered properties for the wealthy and is no longer a priority for locals to hunt on their own land. The DNR should limit the amount of non resident licenses and the ability to create "private deer preserves. This infringes on the family traditions and culture strong with Wisconsin citizens.

I would prefer that the extended season harvest also be "anterless only." The deer population needs to be managed with "best practice" for sustained health of the deer resource. And the overall well being of entire ecosystem needs to be considered as the deer population imposes significant effects to forests, prairies, and crops.

Going back to the 80s and 90s where we had hunters drive there woods. Now we have to many hunters that either sit or not even go into there woods causing sabe haven for deer I can go into the woods the first weekend if I scare the deer to neighbors never see the deer again..they dont go through there woods to move the deer around.

We need to bring back back tags and physically tagging the harvested deer. Quit kidding ourselves on how many deer are taken illegally being that 92% is private land! Also should bring back physically registering deer to give the wardens a fighting chance! I believe the deer kill is much higher than the deer that are registered.

Two thoughts on population. First: 80% of all does I've seen the past 3yrs have a maximum of 1 fawn by autumn. Second: My experience in the NW section of the county doesn't show the over populated landscape I've been led to believe. Buffalo is a large county, populations vary by location. Please take that into consideration.

20 years of hunting deer in this area (archery only), I have seen a remarkable decrease of deer population in the areas I hunt. Driving 35 miles each way through Buffalo County to work, I have seen a significant decrease in winter deer yard numbers this past year. Spring counts year to date also are significantly smaller.
We see more bear now than we ever have, we also have a large coyote population. I believe these factors are having a larger affect on the deer herd than the DNR accounts for. Before we started seeing bears it was easy to see 20-40 deer opening day gun deer season. 2019 I didn't see 20 the deer the entire season.

I live and hunt in buffalo co. but don't see the population of deer increasing. Seems the effort to decrease the herd numbers is unwarranted. You can give out any number of antlerless permits, but people can’t be forced to fill them. I’m afraid if we decrease the herd and CWD takes hold we won't have any deer left.

We hunt near the towns of Modena & Urne in Buffalo county. The number of deer seen within our group of 10 in the last couple of years are down significantly from previous years. This is based on trail cams and individuals during the hunting seasons. 2 years ago, we seem to see more bucks than does.

Huge supporter for having an anterless only hunt for as many years as it takes. Let's get back to the roots of hunting in this area as they were 30 years ago. When did conservation of our wildlife get trumped by tourist hunters who are not part of the community for the other 50 weeks of the year.

I think we should keep the season the same, due to the weather condition's we experienced in 2019. I also believe crossbows should be used only by 65 plus, and hunters with doctor approved disability s. How about being able to use the two Doe tags for ether private or public? Thank you!

Thanks for allowing me to voice my opinions. I think it would be nice if land owners would be able to harvest 2 adult doe year round by providing them a Special free owners license as long as they own the land. It would help reduce the population that the DNR is concerned with. Thanks

Buffalo County needs to either have an antlerless only season or bring earn a buck back. Earn a buck was the best thing to ever happen to the county. For health and quality of the heard. It also improved rutting activity by bringing the numbers back in check for a couple years.

I suggest keeping buck hunting available for bow only during the holiday hunts. Extend either or weapon for does till the end of the year. That gives us "deer property managers" ample time to decrease the herd on our property. Ultimately were looking to decrease antlerless deer

Keep fighting for EAB to be an option again, while working on bringing back in person registration. DO NOT extend either sex hunting until the end of January. ...Keep the holiday hunt and t zone hunts, all antlerless...bring an antlerless only season back to the table

The southern half of buffalo county's deer herd is way down. when I was hunting I seen very few deer. I think the problem is in the norther half of the county. Where you have all the Buck hunters and the outfitters. I think outfitters should be outlawed and done away with.

The CDAC needs tools to get hunters to harvest antlerless deer. Hunters aren't harvesting near enough antlerless deer in Buffalo County. The tools the CDAC has do not work in counties with high deer populations. The evidence is the the past 3 years of harvest records.

Need to consider going back to Earn-a-Buck; that's how the antlerless population will be reduced. Too much private land where hunters manage their own property and don't harvest enough antlerless deer. This is only way to influence reduction on antlerless population

On my farm near Nelson wi the deer population was the lowest i've ever seen it in the 25 years i've owned my farm. This was due to a harsh winter in the prior year. I found many dead deer and remains of Turkeys. We do not have an over population of doe in our area.

100% against extending the bow/Xbow season. Kind of like deja vu here. Pretty sure we went down this road last year! Stirring the pot is not something you do especially with what’s going on in society today- keep the season framework the same as last year.
bring back earn a buck. the cost and time to process an antlerless deer causes hunters traveling any distance from taking a does. Many have good intentions but don’t follow through due to the cost and time balanced with work and family commitments.

I am opposed to extending the bow season, I believe it will affect other tourism brought in by snowmobiling. I believe if someone really wants a deer they have plenty of time to harvest one either in early archery or gun season or muzzleloader season.

Doesn’t make sense to decrease farmland tags when the goal is to decrease the population. Extending season to the end of January MAY impact snowmobile trails but the snowmobile clubs should not be the determining voice. It should be the landowners.

Thank you for your diligent efforts. I understand that there are many divergent interests in the mix of these considerations, and that there are great challenges to the chore of balancing the load. Again, I appreciate what you do. Thank you!

WE HAVE NO DEER TO HUNT ANYMORE THANKS YOUR GREAT ANTERLESS HUNTS !!! IVE BEEN HUNTING FOR 56 YEARS AND NEVER SEEN IT IS BAD !! FORGET ABOUT YOUR DAMN ANTERLESS HUNTS AND JUST LET THE HUNTERS CONTROL THE HERD BECAUSE YOU SURE CANT....

the outfitters should have some quotas set based on acreage owned and leased to harvest antlerless deer. they have large tracts of land with very few does taken. other states have programs that require outfitters to take set number of does.

Earn A Buck Worked for herd control. Bring it back. Have October T-zone hunt so gun hunters have an opportunity before 9 day season to Earn their buck. Regardless bring back October T-zone. Nobody wants a late/cold season antlerless hunt.

Please bring back the earn a buck program or another substitute. Although not well liked by many, it was an effective tool to reduce the deer numbers. Farming is tough enough without fighting overabundant wildlife for your profits. Thanks!

Only 1 buck per season per hunter. Not 1 per archery and 1 per gun license. My hunting area had a number of doe with no fawns. Running the season to Jan 31 is too long. I don’t feel it does anything but divide the hunting community.

I oppose change to the crossbow season. A crossbow hunting is just another type of bow hunting. If you are going to change the crossbow season by starting it later, then also change the regular bow season. Treat all bow hunters alike.

It is quite clear just by driving around at night in our county that the herd population is still rising. The abundance of deer is hard to ignore and anything we can do to help actually meet our quota for the year should be done.

Please do away with the holiday hunt...it screws up the whole December hunting....too much pressure I believe. Also do away with crossbows and put it back the way it was...or at least not let them hunt the rut. Thank you.

The deer hunting was fine back in the day when it was regular seasons. Bow hunt, rifle, and then muzzleloading, and then followed by late season bow. Let’s get back to the roots and stop trying to reinvent the wheel.

I feel the DNR does not have a good population estimate. 10 to 20 years ago there were much higher numbers. Yes there are pockets of high population but over all the county does not have the population of past years.

Please keep the 3 free antlerless tags with each license. It is very helpful in keeping the doe numbers in check. It would also be great to have a one buck per person per year rule and no group bagging of bucks.

Many hunters in our area won"t harvest a doe anyway that is the biggest problem. Much of outfitter controlled land never sees a doe harvested.I Also think licence prices should be raised after the season opens.
The increasing coyote population is very concerning. It seems to be having negative effect on small game population and deer/fawn population. What is the DNR planning on to control coyote population growth?

I feel the weather played a role in the gun deer season, causing kill to be down. I think the seasons should stay the same. Also the use of crossbows to 65 or older and fisical injured hunters. Thank you!

Holiday Hunt would be more desirable if it was Antlered and Antlerless. Crossbow use in November archery is important to get more people hunting. Crossbows allow for more people to confidently participate.

There is very few deer on the public land in the county. From what I hear the land owners will take anterless deer on public land but only a few off the private land so it does not hurt there deer herd

Go back to back tags, enforced deer registrations, raise the penalty for unlawful possession of a deer another $1000, consider bounty on coyotes, and double the number bobcat tags in the south zone

The deer herd is decimated. Poor management and promoting the slaughter of the animals has ruined the hunting seasons. Shooting more deer than you can eat should be a crime not encouraged!

Concerned about the coyote population taking a large toll on the deer numbers, found 6 carcasses on 80 acres this spring looking for sheds and know there are at least 2 active den sites there

The extended season is the only season we have not tried in Buffalo County. We are being told the no other seasons will be available until we try this as per NRB. So I say lets try it.

The only effective tool for controlling the deer herd in Buffalo county is Earn a Buck, It should be available to use when needed, and stopped when your herd is at the level you want

My suggestion is to raise the cost of out of state licensing. Also do a draw for out of state license to harvest a buck. Look at the costs to go else where and buy/get a buck tag.

Bring back the earn a buck that carries over from year to year. Encourage hunters to harvest does and mature bucks only so keep the heard in check and keep disease levels down.

Triple the cost to out-of-state licenses. Infuriating when I apply to Colorado and Wyoming and get screwed on licenses and out-of-staters to Wisconsin get by with minimal cost.

I would like to see ideas of how to help local DNR initiatives in Buffalo county. They mentioned something about white oaks, but it would be nice to know how we could help.

I believe there should be more restrictions on who is legal to hunt with a crossbow. It should not be open to everyone! They have a distinct advantage over vertical bows.

I hunt in Buffalo county next to a large group that shoot lots of deer. The numbers there have been down for the last 20 years since that family purchased the property.

I am in favor of the extended season for many different reasons, Number 1 it provides more time afield for some people that are off or that can get time off in January.

I would like to see a longer gun season. The last 2 years I had to leave a few days early due to bad weather. I am from Minnesota. I have to keep an eye on the roads.

I seen very few does this last year hunting bow and gun. I'm not sure if it was because all the alfalfa froze out on the farm. It's was a very strange year for sure

There are a few pockets where there are higher deer numbers but for most of the county the deer numbers are not as high as our cdac committee is making it seem.

do not consider earn-a-buck as a option. do not shorten the crossbow season. I would leave every thing as is. You are over estimating the size of the deer herd.
I like and support opening gun deer season earlier much like Michigan. I also would support the regeneration of the earn a buck program. This works.

Way too many deer being harvested!!! Definitely do not extend gun season people are already piling deer on trailers and not reporting the harvests!!!

Southern BC hasn't recovered from the EAB seasons. Low antlerless numbers and very low fawn numbers observed while hunting and with trail cameras.

Some questions we no opinion from me as I usually only hunt from just before Halloween until guns season begins. Then I go home and take a break.

Do Not extend Crossbow and archery season and expect the proper kill ratio you want. Work on legislation to secure earn a buck option again.

Bring back earn a buck. Require outfitters to harvest a quota. They have large tracts of large leased land with low numbers of does taken!

I would like to see ALL of Wisconsin follow what MN does. There deer population of mature whitetail dwarfs Wisconsin. Please consider it.

You all should consider a single buck tag for hunters that bow and gun hunt. It might help prevent an antlerless only season in the future.

Earn a buck is a very good way to decrease the doe population. On our land this spring we have been counting 30 to 45 deer each evening.

I do not support an antlerless only deer season. The potential interest/revenue loss from having this type of season would be great.

Too much gum pressure in Buffalo county. Doe and holiday hunt have ruined late season bow or muzzle hunts. Deer go nocturnal!!!!

Come on! Extending archery through January to provide more opportunity for archers? They already have four months! What a laugh!

After years of hearing how many deer there are, do you know amazing it is to go out and see three deer in a sit? Amazing.

Extending the archery season will not help kill more does. EAB and/or antlerless is the only way to reduce population.

Years ago we had an over populated doe problem, not anymore. When I go hunting I see bucks like I use to see does.

Allow hunters to shoot Wolves all over the state. Stop with the non-sense at the DNR level. I approve this message.

Continue with antlerless only holiday hunt. Don’t extend archery to the end of January, unless it’s antlerless only.

Predators numbers have grown including coyotes, bobcats and the occasional bear as has evidence of predation.

I didn't see on this report, but was told about an extended gun hunt season. I oppose extending gun season.

Thanks for the "feel good" questions. Nothing like making us feel like we have a say in anything.

At least CDAC is listening (kind of) to the evidence there are not as many deer as once believed.

What about your buck tag is no good until a reasonable amount of does are killed for the county.

Bring back the deer please. Everyone knows he alleged numbers are so over estimated. Get real.

Less and less #'s...people complain there are so few deer and yet cdac wants to keep killing.
If ever an antlerless only hunt in Buffalo co, then I will not hunt all seasons for that year.

My comments are too long for this venue. I will e-mail my comments to DNRCDAC@Wisconsin.gov.

Bring back earn a buck. Use a format where a hunter can “earn their buck a year in advance”

We need more control of big land leasers and guides. Need a season like Ilinois has:-)

Bring back earn a buck and early t zone hunt. I support a longer and earlier gun season.

Bring back "Earn a buck", this will greatly help the buck growth in Buffalo County.

I would like to see one buck harvest tag per hunter per season no exceptions.

Limit of only one male deer, Buck per year regardless of hunting method used.

I would rather see earn a buck seasons than extra holiday/antlerless hunts.

We need to have the outfitters and people that lease land under more control.

Please make Buffalo County either antlerless only or earn a buck in 2020.

over the last 15 years, year over year I have seen less and less deer.

Strongly support (1) one buck per person per calendar year.

no antlerless holiday hunt keep bow hunting open instead.

Seen herds of 20 to 30 deer grazing fields this spring.

Remove crossbow hunting unless disabled or over age 60.

Earn a buck would clearly increase antlerless harvest.

Cross bow should be for the old and handy caped only.

I feel all deer farms should be closed now! Thanks

Bring back the Earn a Buck rule I have heard of?

Extend the youth deer hunt from 2 days to 4 days

start the season the beginning of November

I love the oppurtunity to hunt here every year

Keep everything the same as the past years!

start the gun season beginning of November

DO NOT EXTEND THE 2020 GUN DEER SEASON!

Don’t get rid of the holiday hunt!!

I'm in favor a a one buck season.

The outfitters are the problem

Bring back earnabuck.
Public Input on CDAC Preliminary Recommendations - Spring 2020

Burnett, Northern Forest

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

494 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 178
   - I visit this unit for non-hunting purposes: 131
   - I hunt in this unit: 465
   - General interest in this unit: 90

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 425
   - Bow: 220
   - Crossbow: 150
   - Muzzleloader: 108

3. How many years have you hunted deer in this unit?
   - Minimum: 0
   - Average: 24.69
   - Maximum: 67

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 166
   - Mostly Private Land: 73
   - Public and Private Land About Equally: 95
   - Mostly Public Land: 55
   - Exclusively Public Land: 73
   - I did not hunt in this unit last year: 3

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 14
   - Not too crowded: 64
   - Neither crowded nor uncrowded: 71
   - Somewhat crowded: 64
   - Very crowded: 79
   - Not applicable: 4

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 72
   - Fewer: 141
   - Same: 187
   - More: 68
   - Many More: 10
   - Unsure: 16

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th>The Antlerless Quota is...</th>
<th>Much Too Low</th>
<th>Too Low</th>
<th>About Right</th>
<th>Too High</th>
<th>Much Too High</th>
<th>Unsure</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>12</td>
<td>67</td>
<td>233</td>
<td>124</td>
<td>47</td>
<td>11</td>
</tr>
</tbody>
</table>

Report Generated: Friday, May 01, 2020

Burnett, Northern Forest
Section 3 (continued): Feedback on the CDAC's 2020 preliminary recommendations

8. In your opinion, how would you rate the number of $12 Bonus Antlerless Harvest Authorizations recommended for this unit by the CDAC for the 2020 season?

<table>
<thead>
<tr>
<th></th>
<th>Much Too Low</th>
<th>Too Low</th>
<th>About Right</th>
<th>Too High</th>
<th>Much Too High</th>
<th>Unsure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bonus Harv. Auth. - Private:</td>
<td>10</td>
<td>28</td>
<td>228</td>
<td>129</td>
<td>84</td>
<td>15</td>
</tr>
<tr>
<td>Bonus Harv. Auth. - Public:</td>
<td>19</td>
<td>60</td>
<td>205</td>
<td>111</td>
<td>76</td>
<td>23</td>
</tr>
</tbody>
</table>

Bonus Harv. Auth. - METRO Private: Not applicable in this DMU

9. In your opinion, how would you rate the number of FREE Antlerless Harv. Auth. recommended by the CDAC to be issued with each license for 2020 season in this unit?

Note: Farmland Zone and Metro Subunits only.

<table>
<thead>
<tr>
<th></th>
<th>Too Low</th>
<th>About Right</th>
<th>Too High</th>
<th>Unsure</th>
</tr>
</thead>
<tbody>
<tr>
<td>FARMLAND ZONE Antlerless Harv. Auth. per License:</td>
<td>Not applicable in this DMU</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>METRO Antlerless Harv. Auth. per License:</td>
<td>Not applicable in this DMU</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
Implement an ANTLERLESS HOLIDAY HUNT: Not applicable in this DMU

If a Holiday Hunt is held in a Farmland unit...
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021:

If the Population Objective is not "Increase"...
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons:

47 Support 401 Oppose 46 Unsure

If a Zero Quota (buck only season) is adopted...
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?

272 VALID 156 NOT VALID 66 Unsure

11. How important were each of the following concerns in forming your opinion about the CDAC's recommendations for this unit? Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

<table>
<thead>
<tr>
<th>Concern</th>
<th>Average Rating</th>

</table>
Hi, I joined the conference call on April 7th and agree with what the CDAC is advising for this year. Last fall I hunted for 9 days in early November and didn't see many deer. The reasons for this were fairly obvious. First, the corn was still standing around my property and a lot of deer were spending many hours feeding due to the very cold temperatures. Secondly, also an outcome from the cold temps, I only sat about 3-4 hours per day. Normally I will sit 6-9 hours per day. The numbers did seem to be a bit down from 2018, but not significantly based on trail camera pictures. This could also be a result of the standing corn. There is one topic that was discussed briefly during the conference call that I would like to touch on. A possible extended or shifted gun season was brought up and I am very opposed to the idea. I've spent a lot of time in Minnesota working on conservation-type projects, fishing and hanging out with other hunters. For the ones that enjoy bow hunting, the gun season during the peak of daytime movement drastically decreases their chances at a quality buck. There are many other reasons why it is not a good idea as well; changing the tradition of the Wisconsin gun season, making it harder to make an ethic shot while deer are in a frantic state from being shot at by guns, encountering more wounded deer while hunting and having to decide to put down a wounded deer with one's bow tag, less of a chance of a trophy buck (MN 8th in B&C rankings since 2010, WI 1st) when many more young and less intelligent bucks are shot with the gun, etc. It is already quite difficult to have a shot at a 135"+ in Burnett county, why make it much harder. Sorry for the rant, but my fellow hunters and I pay a lot for our property, tags, food plots, and other hunting expenses and we don't want to have our hunting made worse. Another topic I didn't hear discussed during the conference call was crop damage tags. I understand this is a difficult subject and I support helping farmers, but some things I've seen and heard have been a little unsettling. One example is a farmer being able to shoot deer basically unchecked while does are pregnant and bucks haven't developed antlers yet. I've heard of a farmer shooting deer in the spring and claiming to have 30 tags for 100-200 acres of farmland. Shooting buck fawns, pregnant does and bucks without antlers during the spring absolutely cripples hunters who own forested land around the said farmer's property. This doesn't make much sense to me. If we want more hunters, wouldn't we want more bucks and bigger bucks to draw hunters to our county? Thanks for taking the time to read my input!
First off... thank you for giving us this opportunity! I grew up hunting the barrens, and around County rd O. We have owned private property SW of Siren since 2011. We saw very few deer that 11’ season. The hunters before us had shot a lot of does. Since owning this property only 1 doe has been harvested and that has been a choice. 2019 was the first fall any of us had bow hunted it. I put in lots of time and saw great deer. Cameras proved it. That being said, our group was interested in shooting 8pt or larger. Many of the neighbors were in the same vote. Unfortunately, I did not stick a buck but had great opportunities. A “learning experience if you will”. The part that does concern me is gun season. I’ve never missed an opener and although I shot a nice buck in 19’, it was the ONLY one I saw sitting by myself and it was Tuesday. This is concerning, odd and strange. It’s a great location and that spot was ONLY used for gun season. Again... cameras proved very nice bucks frequented the area but were NON-existence for gun. I had both my kids with me in our 8’ box stand for Saturday and Sunday and we didn’t even see a spike! I hunted every day and my 11yr old who I mentored did shoot a 6pt at 9am on Thanksgiving day. These 2 bucks were the ONLY ONES SAW by the 3 of us during the 9 day season. That small buck was the only deer we saw that day too. I personally like the tradition of our 9-day season but it was disheartening to only see 2 bucks the whole entire time. We have a lot of oaks and like the guy said, it was a huge crop! But why didn’t the bucks visit them during gun is beyond me. Cameras proved they did not go to them. It’s almost like once the rut shut down the bucks took cover, laid up and just didn’t move. We have 80 beautiful acres and it was just odd. Cameras also proved coyotes were chasing deer around and off the property. We didn’t see any to shoot during gun season though. Not to mention, both of the bucks taken from my stand were walking by themselves. Thank you for letting us provide feedback. FYI... on the way home from the cabin last Sunday eve, we saw 26 deer near a corn and bean field just north of the county line to Polk. Very encouraging since it was within 2 miles of our property!

Please do everything you can to manage the wolf population and raise deer herd numbers in Burnett County. I hunt in Anderson Township near Oeltjen Road, Bernstingel Road and Cty. Rd O and have seen wolves in person on 3 occasions going back to the first time in 2005 when I was young. I see many more wolf tracks now than I do deer tracks. This is not hyperbole and it was not always this way where I hunt. It is now a common occurrence to hear more wolves howling (multiple directions at one time) than deer sightings. In 2004, my Dad and I encountered a pack of 5 wolves at 50 yards while on stand (I was under the old youth hunting requirements at the time). In 2017, I witnessed a pack of wolves (approx. 8 wolves) run right beneath my bow stand, in September, in hot pursuit of a 10 point buck. I saw a lone wolf somewhere in between then. I also have, as I’m sure many others do, have many trail camera pictures of wolves (some near Oeltjen, Bernstingel, Cty. Rd O and some Near 280th and Evergreen Avenue near the river. I know that WI DNR has very little control at the moment but please consider adding more emphasis on the impact of the wolf population on deer herds. I on average hunt 5 FULL days of rifle season and the rest partial mornings or afternoons. Though I do not reside in Burnett Co, I also spend numerous afternoons bow hunting/grouse hunting Anderson Township near Oeltjen and County Rd. O. Hunters in this area are getting discouraged by the lack of deer and seemingly over-abundance of wolves. It’s discouraging to the up and coming hunters to hear stories of days gone by when a hunter could see 10-20 or more deer a day (easily) and now I’m lucky to see 5 deer all season. There is no doubt about it, we are facing a crisis of poor hunter participation in the near future if the deer herd continues to struggle in Burnett County and adjacent. With that will come a lack of funding for wildlife research, amongst other things. In closing, please consider limiting the amount of antlerless tags available in Burnett County as I believe the whitetail deer population is over-estimated and has been for quite some time. Sincerely, concerned sportsman.
Basicall, I advocate for maintaining as close to what would be a historic "natural balance" in the deer population. Obviously, humans have irrevocably changed the ecosystem, and we'll never be able to return to a system where weather and natural predation controlled the deer population. Hunters may be the most effective tool currently for managing the population. My only input is that I'd like to see the population controlled to the best of our ability at a level that is as close to what the natural order would have been. Maintaining the population at a level greater than that results in significant crop and property damage, promotes the spread of CWD, and negatively impacts other species that compete for resources with deer. Having a huge number of deer to improve hunters' chances of harvesting a big buck or seeing "lot's of action" should not be part of the calculus. While I've heard a lot of griping about "not seeing that many deer," I haven't found there to be any difficulty in harvesting deer, particularly if you're hunting for meat rather than trophies. The father of one of my friends (a very avid trophy hunter) was complaining that there were many fewer deer present in 2019. I asked how many he saw on opening day, and he said "30-40." In my opinion, that is still ridiculously high for sauntering 400 yards from your house and never once having to leave your stand. If I wanted to be confronted by a sea of deer after sitting on a stand for a few minutes I'd hunt over a pile of corn on a "ranch" in Texas. God forbid our deer season be at all sporting! Thanks for listening - keep up the good work.

I have hunted the Burnett county since 1981 so I am leveraging my extensive history of the county that I care deeply for as I provide this input. I believe your team has a very difficult job in maintaining wildlife and wildlife resources. As such you have to deal with everything; patinate hunters, hard cold facts, special interest groups and politics. To put it bluntly until Wisconsin game management wants to be accurate, honest and forthcoming about researching and reporting of predation there really isn't much value in all of this CDAC process. I can tell you with a great deal of certainty that the vast amounts of miles I have put on my boots in Burnett county for over 40 years, the amount of predation sign has been ramping up each year for more than 10 years. The shear amount of wolf scat with deer hooves and bones is obvious. Listen to late night wolf howling through my cabin window. There are areas that are so overrun by predation out by Danbury for example that I no longer even hunt because the deer numbers are not there. Sure the wolves will have to continue to move south to follow the food. I am aware that black bears are also taking their toll on deer as well, heck they even took a doe that was hung 14 feet in a tree outside our cabin. I know it’s a lightning rod issue, but until someone that cares enough about the wildlife resources truly wants to turn things around, you’re only going to continue to tweak just half the equation. Signed unbiased nature lover and avid sportsman.

I feel changes in peoples property ownership ideals, "I have my 40 acres, you stay off it", change in trespassing law ('1990?), the way most people hunt today (walk or drive to a stand, sit in the stand, walk or drive back out), and the use of bait are the main contributing factors to fewer deer sightings. Hunting for most people will never go back to the days of deer drives on any land (public or private) that is not posted, and that is fine. This technique pushed deer around which increased deer sightings. This is a bygone era. Also, kids have too many options for instant gratification today to have and maintain any interest in hunting. Society has changed, and hunting numbers will never come back up. Deer hunting in Northern WI is sadly, a dying tradition. Eliminate baiting statewide if you are really seriously concerned about CWD. Could CWD conceivably become so severe that there will be no real estate market for deer hunting properties someday down the road? Seems severe, but did anyone forecast the lack of new hunter recruitment 40 years ago. Baiting also severely handicaps the true "hunters" that choose not to bait. I respect the work the Department does with the limited resources you have, and am concerned budgets will only continue to shrink. I wish you good luck with future deer herd management, but hunting in WI as those of us that started 40 years ago know, is gone.
In the Public Lands area in the SW portion of the county there is a tremendous amount of influence made by deer baiting effort by camps during the gun season. Personal observations during the bow season when there was less baiting as compared to gun season when all the camps filled up near public lands clearly identified lands that are baiting. This behavior goes against every idea of fair chase and does taint the numbers. It was especially evident in 2019 where the ban on baiting was announced late, and many did not adhere to the restriction. The large tract public parcels in the SW portion of the county were void of deer in 2019 during the gun season, with many of the deer either chased away by predators (for the last 10 plus years), or drawn away by the bait piles 1/2 mile to 1 mile from the borders of the public lands. Please reduce the antlerless quota on public lands some, since there are not many deer there as compared to the private lands nearby with bait piles. I suspect my anti-baiting opinion is clear, but what I dislike even more is how neighbors will post pictures online of 6 or more - 8 point or better bucks on their buck pole that were shot over illegal baiting on a couple hundred acre parcel.

Proposed changes regarding extending the rifle season are a major concern. The tradition for the whole state regarding timing of rifle season would be a bummer. More importantly I think it would really negatively impact the deer herd. The deer herd has grown in my particular area after being decimated by over hunting and an unfortunate wolf pack that ranged on to our property for a number of years. Just seeing deer numbers climb I would hate to destroy the deer herd with a 19 day rifle season. That takes away the fun of the rut because the number of people going out for opener of rifle season puts massive hunter pressure on the deer pushing them to mostly nocturnal activity. This will have a huge impact on breeding activity and ultimately result in losing a big portion of our deer herd. This sounds like changes proposed by rifle hunters jealous of their neighbor who got the buck they were after 1-2 weeks before rifle season. If that is the case, pick up a bow and join the bow hunt.Educating rifle only hunters on how to be better hunters and better deer conservationists would be a start in stead of limiting the bow hunt. Frankly, consideration of changes like this in the first place is an embarrassment.

There is general concern about the number of wolves in the area. My concern is chatter I heard from other hunters who were using code language to snark about making deer carcass piles (after butchering) as "wolf bait," implying that they were hoping to take it upon themselves to shoot wolves to improve the deer populations for future hunts. I discussed my concerns, stating that implications sounded illegal, and was not consistent with good conservation efforts. My comments were not well received. I have no evidence that this actually happened, but I have grave concerns about hunters not following the letter of the law, and trying to "take matters into their own hands." The concerning hunters were not a part of my hunting group/party in the northern county. I therefor applaud any efforts to obtain a legalized and regulated wolf hunt where appropriate. If I am able to get names of concerning hunters in a safe manner this year, I will pass this on to the local DNR specialist for their information. While it is sometimes tricky, we all need to play a part in well managed, thoughtful management of our wildlife resources.

I have continued to experience increased encounters throughout the year with Black bears in this area. My elderly parents live in Burnett county, so I am up there a lot. I have never had so many bear encounters, as I have had in the past 3 years. My parents have also noticed increased encounters with bears being destructive on their property. I have noticed a steady decline with the amount of deer encounters in the last 3 years. Obviously, there are a lot of factors that go into the deer population of an area (i.e.food abundance, harsh winters, and other predators). I am no biologist, but I do spend a lot of time in the outdoors. Are we doing any studies into the impact of an increasing bear population and the population of cervids in the area? Secondly, I am concerned regarding the practice of captured cervids in the area with the discovery of CWD in this county. What type of restrictions are being placed on captive deer in the county to prevent the CWD positive deer from escaping and infecting the local population. Is there anything the DNR is doing to start to eliminate or restrict this type of practice?
The DNR has mismanaged the Burnett Cty and Douglas Cty Barrons for years. Trying to re-start a sharp tailed grouse population for years has been a complete failure. With trying to grow this population they destroy prime whitetail habitat and food. I have hunted this area for most of my hunting life and have watched the deer herd do nothing but diminish because of habitat loss, baiting, over harvest, and to many antlerless permits issued. When there was 0 antlerless permits or very few permits issued the deer herd had started to increase, until the large amount of permits issued the last few years the deer were few and far between this past season. Baiting also not being allowed in Burnett or Douglas Cty allowed the deer to go back to natural foraging and movement away from people and cabins. Since it was legal again the deer are living back closer to people and cabins thus reducing natural movement and less chance for seeing deer let alone harvesting deer. There for this year there should be no antlerless tags issued in Burnett or Douglas Cty, with the exception of youth hunters, which should be 16 or under.

We keep talking about the lose of deer hunters in Wisconsin, yet we are changing stuff up every year adding season, talking about doing away with or limiting the cross bow season. Maybe step back and see when the numbers started falling off, I'm guessing right around the time that seasons, and tags(public/private) started being changed. I say limit each hunter to one buck per license and one doe if you buy a gun and bow license you have 2 bucks, and 2 does. I have seen the hunting in Burnett county go from some of the best to as poor as parts of Minnesota due to killing all the does. If we want to go a step farther I would support a 4 point on one main beam APR similar to southeast Minnesota. Bear numbers are high, we baited and killed a bear but had upwards of 15 bear hit our bait through the season. Wolf and coyote population is through the roof, we are also seeing pictures of a few cats in the south side of the county. The baiting ban needs to either go away or stay permanently and increase fines for it. I want to see the sport grow and get back to what it was.

I hunt a 50/50 mix of private and public land in Grantsburg township, Dewey, Roosevelt, West Marshland, Trade Lake, Anderson, Wood River and Lincoln. I spend 30 or more days per year hunting deer and I can assure you that the reason our harvest is down is a direct relation to hunter participation and hunter effort. Few hunters are driving deer anymore and few are willing to put in any work on public ground. I passed over 27 immature bucks during archery season, nearly half of them on public land. I also would have harvested many more antlerless deer had tags been available for public land. Last night, I drove from the village of Grantsburg to the West Marshland town hall. I saw over 60 deer in this 15 minute drive. The strategy of maintaining this population is poor judgement on the part of the CDAC. Overbrowsing and CWD are going to become a huge problem in the county if we continue with this unsustainable population. We need to offer more antlerless tags on public land and find creative ways to encourage more antlerless harvest on private land.

I honestly believe that the predation rate where we hunt, (Namekagen Barrens), is much higher than assumed. In 2017 and earlier, we observed high numbers of predator sign, including tracks and stool, from wolves and bear. Actually, seemingly more of those than deer sightings! We actually saw an average of 10 deer for the entire season! In 2018, we didn't see much for any of those same predator signs. We saw 53 deer opening weekend, and 47 the second weekend! We were very excited! And then in 2019, we were back to seeing the signs at high volume again. I personally only saw 7 deer all season. I don't know if the rest of the county is expressing this observation, but it is very prevalent in the Barrens, and is very frustrating! I am fearful that my 16 year daughter, who is still looking to harvest her first buck, is quickly loosing interest. I'm guessing that she isn't the only one who is feeling this way! This is one of the reasons that we are loosing the future hunters! Respectfully my opinion.
I've hunted in the same public county forest in Burnett county my entire life. The quality of the deer hunt has declined substantially in the past decade. Poor management and overharvest years back combined with increase in predation leave the public woods void of deer. Our group is experienced, dedicated and patient, devoting full days in the woods. I've seen approximately 10 deer from my stands over the past 3 years combined. Less than a deer a day over the course of a dozen days dawn to dusk. I'm a good hunter. I scout, I position my stands, I am careful about scent. The deer density is very low. Deer sign is lacking. The lack of deer in the woods is reducing my interest and excitement in the annual hunt. It has caused our next generation to lose interest in deer hunting as well. Our camp is now just adults in our 50's. It’s disappointing how the quality of the hunt has gone down. You need to reduce the antlerless harvest and raise the population. You’re losing hunters.

Please make archery an either sex tag again. For most of my hunting life I’ve only been able to eat one deer a year and would like the opportunity to only have to buy one tag. I hunt a mix of public/private land and have forgotten to buy a doe tag the previous two years (my fault) but I feel like the DNR should be able to look at the amount of antlerless deer killed by archery and factor that in to their anterless tag quota. Having forgotten to purchase a doe tag for public land the last two years before they sell out has forced me to hunt buck only making a challenging hunt all the more challenging. I have the date saved in my calendar to buy doe tags now but I would rather have the flexibility of being able to harvest what I want should I not be able to obtain a public land tag. I feel the data the DNR has on hand could easily make this happen without ultimately changing the anterless harvest numbers. Thank you

Please go back to a tag system that’s valid, the not tagging at site with permanent tag is impossible for the dnr officer and too many people take it to casual. If a deer doesn’t have to be tagged with a good tag at site anything goes especially for the less honest, there’s no fear of dragging to truck and arranging who will tag it. Your tagging ideas are the worst for controlling good count numbers. You want good deer management manage the way it’s manage and this will never work. 25 plus year non resident hunter and I’ve seen when you think numbers are high or low and no one believes the numbers, the actual kill and registration could be part of the problem. In MN the first thing you do is put the tag on because you fear moving it without a tag then you fear not registering them because that’s how it’s just how it’s been done make that important then you’re numbers will mean something

Please consider an increase in antlerless quota and permits on public lands. Deer numbers look very good at this time. My observations last fall were better than for a number of years. Observations over winter and this spring have been very good as well. While the number of private land permits is likely close to the maximum number that deer hunters will currently harvest we need to ensure that there are enough tags available to continue to harvest as many antlerless deer as possible from private lands while adding harvest opportunities on public lands. The presence of CWD needs to be considered in coming years when considering quotas. Lowering deer populations in the county needs to be considered from a long term management standpoint. Hunter behavior has changed so drastically over the past few years that observations during the nine day deer season are of limited value.

From what I see, living here, the deer population in northern Burnett County remains among its all-time highs. Too many deer represent a driving hazard throughout the year; damage to gardens and ornamental plants is unbelievable. It is impossible to grow native plants that the deer have decimated. The old system of many more management units was more effective at controlling deer numbers; e.g., the dense forests above Highway 77 are vastly different than the agricultural lands south of Highway 70. The Namekagon River seems to be the dividing line; north of it you'll see fewer deer, and fewer still as you enter Douglas County; south of the river deer numbers continue to increase well into Polk County. Yet the new system treats this vast area as a single place, from its boreal forests and sand barrens near the St. Croix in the north, to cornfields and Trade River in the south.
First of all I want to thank the CDAC committee for the fine job that they do and the time they put in doing it. Even though I personally, did not see a lot of deer this season (hunted 5 days) I know that they are there as I saw many while doing late season crossbow hunting. As a group we did very well, had eleven deer hanging with two of those being does and only one came from private property. Everyone one went home happy with one deer and some guys had two. We had five doe tags unfilled because we had enough meat. Maybe this year we will not see the bucks and shoot more does. One thing else I can say is that the hunting pressure was again real low, we hunt primarily public land and did not have any conflicts, where as in the past we might have to wait to drive some areas that other hunters were in. Hope this helps and again THANKS again for the job that you do.

my property is next to public hunting land. since the public land was gated off hunters have been restricted in there activities therefor most of it is not hunted this effects all the land next to it as no deer are moved by hunting pressure. I don't think many hunters want to drag a deer up and down hills for a few miles. I hunt in Minnesota also and they allow hunters to retrieve there deer with atvs ect. I don't know why wi doesn't allow this you would have more hunting in public land after all the land belongs to the public not the state or the dnr. the additional hunting on public would improve the deer harvest and add more hunters. I used to be able to drive my truck to the trout stream on an logging road thas was high and dry now I have to walk more than a mile just to get to the creek at 73 I soon won't be able to do that.. thank you

I think they need to stop changing everything around every year I have been hunting my whole life and it’s so confusing all these new rules every year. I know several guys with family's that used to hunt and now have given it up cause of deer numbers and stressful rules that change all the time. The Dnr needs to start killing wolves or open season on them that would be a good start. I have land and I shed hunt a lot of land in Burnett county. I found more deer carcasses this year then I have ever found. Let’s keep this a fun and enjoyable time for everyone and there families. I also think splitting the bow and crossbow season is a joke. My wife loves hunting and the crossbow has made that possible for her. I own 300 acres and it would be a shame to tell her she can't hunt certain times of the year cause she shoots crossbow on my own land.

I have hunted the same properties in Burnett County my entire hunting life (57 years). The past 10 years have been among the poorest in terms of deer seen/harvested that I have experienced. In good years sightings of 100+ deer were not uncommon. In recent years deer sightings have dwindled to single digits for the 9 day season (and in two of those years, zero deer sightings). Were it not for the fact that the land I hunt is part of my family's original homestead I would hunt elsewhere in the state. The area surrounding us has not seen a significant amount of development or a reduction in agriculture. It is adjacent to the Wild Rivers area so habitat is not the issue. My recommendations: 1. It is imperative that the wolf population be reduced. 2. Archery season should be suspended during the rut. 3. Baiting of deer must end.
Hello, I believe the antlerless numbers are too high because while listening to the phone conference in April the numbers were copied from 2019 because of the late deer seasons and the low harvest rates. The 2019 antlerless season was based upon deer populations from 2018. If we adopt the same numbers for antlerless harvest in 2020 we are basing it off of the 2018 pollution all while Burnett county has seen a declining deer population recently. I believe the 2020 antlerless quota should take into the percentage decrease in deer population from 2018 and decrease the antler less harvest by the same amount. Population estimate for 2018 was 23,500 and for 2020 it is 19,700. 17% less deer should result in 17% less doe tags. Thank you for listening to the public and I hope you take this into consideration.

WI DNR has destroyed gun deer hunting. What's next a mother in law doe hunt during the rut. Keep it simple stupid. We see very little deer for gun hunting. The pressure is way too much with all these pre hunts. Go back to one, I said one gun hunt, 9 days. As a young boy we all hunted together young and old. Now they take the kids out early, hot weather, rotting harvested deer. Then a few more hunts of the drunks road hunting. Leaving no more of an opening day, a special Saturday. It's all watered down. Straight up, you can see the statistics, hunter numbers down, buck kills down, total harvest down! You have destroyed WI gun season. This is not only in Burnett cty it is state wide.

I am pleased with the work you all are doing. I do all my scouting/hunting on public lands and I see a bigger issue with predation. In 2019 I ran 8 cameras for 6 months (June-Jan.) where I was seeing very few fawns. This concerns me that the population will not be a maintained status with an increase in antlerless permits. Most of the wolf kills I find over the year are young antlerless in fact I've never come across a buck wolf kill. Another thought is the new breed of deer which are wise to the weekend warrior syndrome. For some numbers, I noticed a 70% drop in photos taken on Fri-Sun. Lastly I had almost as many bears on cameras as did fawns. Thanks to the DNR for trying to get the wolf delisted for us, hopefully in time it will happen.

The quality of the deer herd has diminished over the last 6 years. Antlerless deer harvests have taken many of the fawn bucks out of the herd. I have about 120 acres in Burnett County and have had as many as 25 does in my fields at one time, but only a couple of bucks on camera all year. The deer I have seen are young. I have not seen a mature buck on camera in 2 years. I have killed enough deer in my life to where I have little interest in harvesting a young animal. My family doesn't eat venison, so I see little reason to kill them. I do enjoy the thrill of hunting mature bucks. Sadly, I have been forced to travel to other states with better management to find such animals. Quality deer hunting in Wisconsin has really declined.

First, "Thank You" for your service on the CDAC. However, in my opinion, the number of antlerless deer harvested must be drastically reduced in order for the herd to recover. Look at the statistics, how can there be so many deer when so few get harvested? Mild winter for temperatures but not for snow depth must not be considered? You're telling me we have no predators in Burnett County? If you continue to harvest a large number of antlerless deer you will never rebuild the herd. You wonder why the # of deer licenses sold keeps going down - look at the harvest #’s. You can not harvest a deer that isn't there. Shoot more antlerless and the number of deer available is less and less each year. Thanks again for listening.

The public deer population in Burnett County is disappointing. We have a camp that has been hunting deer on the west side of the Fish Lake Wildlife Refuge for over 50 yrs and we have seen the population plummet the last few years. I firmly believe that we should be building the herd rather than just maintaining it. The buck numbers are especially disappointing. I attribute this to selective buck harvest by bow and crossbow hunters. Their technology and success rate continues to climb and they primarily shoot bucks. Being able to hunt during the rut allows them to selectively cull the herd and that is frustrating. Bow hunters from the Twin Cities target this area and take a lot of the bucks with bow and string.
S. half of burnett has MUCH more cropland. N. Half is very similar habitat as Douglas co. Please group them together, at least north of danbury anyway. Douglas has a much better population. Small gmu's equal more accurate data. Please take it easy on doe tags until the population can handle the harvesting. Having a hard time keeping my wife and daughter interested and it's not for lack of trying. Corn piles and crossbows a death sentence to the deer population. I dont know anyone who was upset with the deer hunting around 2000....I will forever tell stories of those to my wife and daughter! Not saying I know everything but please listen to the public...we care about our hunting.

Baiting needs to return to legality. People are cheating and it's not being enforced or can't be. My party shot 3 deer opening morning and all 3 were full of corn. The nearest cornfield was over 3 miles away as the crow flies. We have well over 100 acres of land and were not cheating by baiting yet shot deer on our land that obviously had been fed. By making it legal at least it doesn't put law abiders at a disadvantage. Btw, without baiting we saw significantly fewer deer than the year before when it was legal. However our cameras showed us throughout the summer that the population had increased but suddenly became scarce a week before gun season......hmmmm.

I am a bow hunting and I love spending as much time as I can in the woods. The last couple years of has become very difficult to harvest a mature deer buck or doe. With all the youth hunts, gun seasons and crossbows it’s my believe that the deer have so much hunting pressure from long range weapons its getting very difficult to get a deer into range. I would also like to add I and many more in the burnett and polk counties are very sick of road hunters and poacher, I feel that a lot more effort needs to be put into stopping this problem and the fines should be raised to a point where people will be more concerned to get stop for these kinda of crimes.

My father in law owns land in this unit and 25 years ago all the hunters respected the land and managed it well. But since the DNR has allowed the predators of the 'endangered' species to 'protected' i have had several close calls while hunting and the deer population has dropped immensely. I now carry a handgun while hunting for my own safety and question how much longer i will hunt. I am the last person to say what species will stay or evolve, but is if nature makes that decision, then you should not override it. Please stop trying to believe you should be controlling all of the creatures of the world.  A Very dissatisfied Wisconsin resident

Raise the price of non resident deer tags. The location I hunt in Burrnet County when I see other hunters they have Minnesota plates. Majority of them are hunting public land and are from the northern Minnesota area where they have a 16 day hunting season. A few years ago at the local sporting goods store some people from Minnesota were buys there licenses. They got doe tags for southern Wisconsin County's. That raised a red flag to me when they were hunting Burrnet County. With the new one registration they could of killed a doe and never registered it or registered it and claimed thats where they were hunting. There needs to be a change to that.

I’ve been hunting in Burnett Co since 1977. I’ve always had an opportunity to see and harvest bucks. Since the last 5 years the pulping has effectively hurt my area. I continue to hunt in the same area as my grandpa and my father hunted for Years since 1957. We need to see more deer populations in what was called Zone 10. I did see a spike in Accorns crop in the woods witch is great. Hopefully that continues. I think the pulping of woods have effectively had an effect on deer movement and no hunters moving them around. I need feedback on what you as a management team think. Please respond to me .

Growing up, graduating, and getting married in Osceola, I have hunted at our camp in Burnett county for 40 years. I have been a nonresident for the last 25yrs. I have been in a financial situation that makes the nonresident fee affordable. But in my opinion this was always high priced. Think about the nonresident who has 1-2- maybe 3 kids, who wishes to hunt in his or hers home state, good old family deer camp. They can't afford to introduce their kids to hunting in good old Wisconsin. You always hear license sales are down, while here is a way to get more hunters in the mix. LOWER your nonresident fees!!!! Thanks.
Bring back baiting with certain restriction on amount placed down and spread it over wide area so it's like browse, makes no sense on a county next to you, its legal and your county isn't. Baiting is done across country with no problems, let the public hunters make the decision to use bait not a few DNR people, we bring in $$$$$$$ hunters are a dieing breed cuz younger generations are not doing it anymore. you need to make it easier for hunters to see and harvest a deer, that means you will attract newer younger hunters!!!!!!!!!!!!!!!!!!!!!!

I think it is fake news that because CWD is found on a fenced game farm that you ban baiting on public land. Also that you give out tags that are private an DC public specific. I took 3 kids up for youth hunt and had to deal with ATV and UTV trail riders ruining their hunt if you want more kids involved maybe you should close the trails for that weekend or do it after trails are closed. Nothing worse than some jibbertyjabber blaring his music and ripping down the trail while u sit with your child and have to explain why no deer will show up and he is bored.

Last gun/bow season, we were once again robbed for a chance to harvest a deer. We saw more wolf tracks than deer all season. I pay hundreds to hunt my own land as a MN resident only to get skunked. I do not plan to pass along the four generation tradition of hunting to my future children. My father spend the last two decades designing trails and food plots, providing deer resources to grow and thrive. And for what? I love wolves, but they are ruining our hunt. I wouldn't advocate a hunting season for wolves, but there has to be another way.

Three years ago I had two daughters and four grandkids hunting with me. Two years ago I had one daughter and two grandchildren. Last year I had one grandson hunting. If they don't see any deer it's not likely I will have anyone with me this year. My grandson saw two doe last year, period!!! I saw the same two doe and a spike buck. If you want more people to hunt you better figure out a way to make it more interesting while they're out in the woods. If I don't have anyone hunting with me this year it'll be my last year also. Figure it out!!!!

I have never seen an antlered deer on public land in the 15+ years I've been traveling to Lake 26 yet, that is all I can get a tag for on public land. I consistently see a very fair amount of mature does both on and off the private land we have a cabin on and all the public land around the area. It's very frustrating to pay an out of state fee only to get an antlered tag. I enjoy harvesting and eating the meat as much as being in the woods but, I would like the ability to harvest antlerless whitetail in the Burnett forest region.

I want WI develop a system where spike and fork bucks are not being shot. We need to adopt a rule to protect smaller bucks so they can grow. I cant stand passing up young bucks just to be slaughtered by MN hunters who come here to "meat hunt" Also why do MN residents or any out of State resident continue to pay the same price for antlerless tags. This is seems crazy. They should not be able to purchase a antlerless tag for the same price. WI needs better manage the mentality of Meat hunting in our state.

I would strongly recommend a shorter bow/crossbow season and a longer or split gun season, which would include muzzel loader. No other season. I also recommend we go back to a tag system, keeping all honest and a method by which we have a better idea of the kill numbers. I have been hunting out of state as well and where it is only a call in system. Can't figure out how the DNR has any idea of their deer population in their zones or counties. They also ban natural deer scents, which is a good idea.

The VERY uneven distribution that is present in this county is concerning. I now hunted 18 days last season on 3 pieces of land, public and private, and only saw a total of 4 deer. However while driving to/from hunting spots, there are areas I would see 5-8 in a field. Overall we need an increase in the population to provide a reasonable opportunity of harvesting animals. I will likely only hunt 4 days this coming year as it's not worth wasting my time in an area with little chance to harvest.
We need more older deer in the herd to be considered a healthy population. There is too much stress put on young deer to sustain the population. Buck harvest must mirror antlerless harvest to have this. These questions do not address heard health with age structure just total numbers. This is a poor management practice. IF you limit the amount of does you have to limit the amount of bucks harvested, it is the only effective way to keep a large amount of mature bucks alive.

Need shorter bow season it is way to long, state wide baiting ban, get rid of the public, private division of antlerless tags and just make it antlerless tags county wide, stop holiday hunts, go back to the either sex tags. There are just to many hunts and this has changed the way the deer act, like going nocturnal. In the 70's and 80's I could see deer every day of the gun season and they would move all day. Now I am lucky to see one deer a day or even one deer a season.

I bowhunted this the burnett county public land regularly threw the fall and was lucky enough harvest a mature buck in November. The two major negative impact I witnessed on deer movement and hunt quality was 1. Bear season and the amount of traffic and dog noise significantly impacted deer movement and deer hunting. 2. There is an over abundance of wolves in this area which directly negatively affected deer movement and many chances at harvesting deer.

The whole county was declared a CWD county when only one deer was founded to be infected in the extreme southern portion of the county. I think Minnesota instead uses a 15 mile radius circle with the location of the infected animal as the bullseye to delineate the infected area. I think this is a much more effective and accurate way of designating the infected area and suggest Wisconsin follow this procedure.

I haven't seen a deer drive in at least 5-10 years, public lands that used to be fairly crowded on opening day, now you have to look hard to find a track of a person...the hunting camps that had a pole full of deer, the camp is there but they look like they don't hunt much...a few fawns and does hanging...can't remember when I have seen a young hunter...lots of the over 65 crowd buy a license but hunt sparingly. Nothing new with any of this...

I'm a nonresident. If it weren't for family I would not hunt anymore paying the fee. My family including me have seen a small population of deer during gun season. It’s tradition so I’ll go but it is very frustrating getting excited seeing a group of does once in the day. The population needs to rebuild. Quit handing out doe tags. I would advise going to a one buck per hunter system. Follow Indiana rules. This will increase buck population.

With the mild winter we had in Burnett county this year, I've been seeing quite a few deer this spring out in the fields just before sunset. I'd like to suggest starting the gun deer season on 11/14 instead of 11/21 this year on a trial basis. It would be interested to see the success rate (private / public) with being able to hunt the rut. Experiment with an early start this year and re-evaluate. Thanks for allowing my input.

I see far fewer deer in Burnett County than I used to 30-50 years ago. We used to be able to spend an afternoon or even just drive around at dusk and see lots of deer. Now we are lucky to see any at all. I am now considering hunting elsewhere, even in another State, which is sad. I recommend 1 buck permit per hunter per year. I agree with your video that I don't want to kill 3-4 deer per year. Not really even 1.3. Just one.

Thanks for all your hard work, I own land in Anderson township for the primarily hunting. I would like To see the bow/crossbow/gun/ black powder season stay as is, but maybe go to one buck per year any weapon. I also saw that the no baiting reg. Made harvesting deer harder and I had to fill doe tags with a firearm instead of a crossbow that is more fun. The people with food plots or fields seemed to fill tags sooner. Thanks.

We need to get things streamlined again. Leave the seasons alone, we just got crossbow season let it be the way it is. The DNR tried to fix a problem that wasn't happening and created a problem. Have the late doe hunts, let the youth season happen in October, keep it going so we can bring new hunters into the sport. Let's just let the seasons alone, if we need revenue for lost license sales raise out of state fees!
The issue in Burnett county is the county is NOT only Northern forest in the south half. So the information you gather is not valid. The DNR needs to divide Burnett along hwy 70 so that the numbers of deer and the harvest quotas reflect the actual deer heard in those two diverse areas. You get many replies saying there are lots of deer and that is true when you are south of hwy 70 but not so true north of hwy 70.

All in all, I feel that the DNR has us taking out WAY too many antlerless deer. The population of deer is so much lower than what it used to be. I do not feel that the DNR is doing a good job of managing the deer population. In fact, I think humans need to back way off of trying to manage the population of any animal. It isn’t our job. I do enjoy hunting, but we have taken the deer almost out. Not good. Shame!

As an avid hunter in Burnett county for the last 15 years i can personally attest to the decline in the deer population. It is time for us to attempt to restore the deer population to past levels. The area has never been the same since the large harvests in 2007 and 2008 (if I am recalling the years correctly). Thank you for your service and you consideration of my comments.

Predators and physically requiring deer tags are, in my opinion, have the biggest influence on the deer herd, excluding a severe winter. Predators are what they are. Requiring a physical tag on a harvested deer would promote registration and reduce the ability to go out and illegally take another deer. Our deer sightings have dropped dramatically once doe tags were available again in Burnett County.

I feel corn left in the fields all season kept deer from moving normally. 2018 season deer were everywhere, 2019, saw 3 deer through out entire season in the woods. Saw plenty of deer bedded down around fields while traveling to and from hunting areas. Also, less hunters in the woods over the past 2 years. Cabins around me sit empty all season now, before, they would be packed like a holiday weekend.

I believe that on private land of 40 acres or more, we should be able to hunt for ANTLERED deer with a rifle in the same season as bowhunters. It irritates me that as a farmer, I have to feed the deer all year so some nonresident can shoot a trophy with his bow. Also, I live in farmland that is included in the Northern forest area. We should be going back to the old units of mgmt.

My group hunted the Namekogen Barrens wildlife area during rifle season. Four of us sat in ladder stands the first weekend and saw 1 deer and very few shots. During the week we made a few deer drives and scouted around. We saw no deer and an abundance of wolf tracks. A few years ago the hunting was good here. Something is failing with the deer management in the northern Burnett County area.

Far too much pressure on Deer on Public lands in Burnett county. Numbers have been awful for years, too much predation & too many out of state archery hunters. I hunt 7 days each year during gun hunting, have not shot a deer in 10 years & see an average of about 6 deer a year. Even though I have a Doe tag I don't kill any because I feel sorry for the few that are left.

When it was buck only, the second year I saw a significant increase in numbers. It went from zero deer to five deer in one year, then to 13 deer the year after that. This was while sitting for at least 7 hours a day on private land. When doe tags were issued the numbers plummeted again. Two or three years of buck only would help the deer numbers significantly.

1  Buck and your license is filled. Have license on back of jacket. Skip a year of multiple deer licenses in some areas I mean only 1 doe license in specific areas. Have In person deer registration again from what I hear as skittle but many deer aren’t registered. Only 1 deer in certain areas as operated in larger areas Mann western states do this. Thank you John

I think you got it about right. 2019 was a weird year for hunting (for bow and gun). Where we moved around to new areas on public land we actually saw some deer. Traditional hunting spots were very slow. The deer we did see were large and apparently very healthy. We just couldn't connect on any of them...that's just hunting. Keep up the good work.
1436 I seen many many does last season, probably 50, some being the same ones and only 2 small bucks, compared to the year before I seen several bucks, some very nice, I would like to see 1 or 2 years of no buck hunting in Burnett county, in my opinion too many hunters are taking bucks only, we need to give the bucks a break, please consider this. Thanks

1437 More enforcement on hunters trespassing on private land would be greatly appreciated. Would love to see the deer population boom and keep predator population managed through hunter support. How can I support coyote and wolf reduction in my area? Bagging a deer is great but simply SEEING a few deer warms up any hunter on a chilly November hunt.

1438 Please keep the 10 black powder season and add a special 10 day traditional black powder season during the rut. Flintlock / cap sidlock open sights patched roundball season. This is comparable to crossbow shooting ranges today. Also keep the crossbow hunting season the same. I would love the traditional old style hunt with loose powder. Thanks

1439 I feel Burnett county should be split in half. The north half of the county differs drastically from the southern half. There is many fewer deer in the northern half. The one size fits all approach doesn’t work here. The numbers have obviously been set exclusively by people from the southern half of the county in recent years and it sure shows

1440 Over the past few years it has seemed like the amount of deep present on the public land I hunt is directly impacted by the amount of wolf sign I see in the woods. I spend lot of time out trapping and years with high wolf sign seems to have low deep populations. I would like to see wolf population control measures put in place.

1441 I’ve noticed we’ve been shooting smaller deer. If one hunts public land, there should be a rule that only allows buck harvest with a minimum number of points on the antlers, for example. Up here you’re only allowed to shoot a buck with more than 2 points on one antler so spikes have a chance to grow into a decent sized animal.

1442 Get rid of public vs private tags. Land owners get more tags. Also, please keep the crossbow season as it currently is. Hunter numbers are declining enough already. Don’t pit hunter against hunter. As long as people are out hunting legally and ethically, it shouldn’t matter the weapon of choice. Thank you for what you all do.

1443 Need to address the wolf population. Saw more wolves and wolf tracks then ever before. I believe that predation is starting to take a major toll on the population. I also believe that baiting keeps the deer staying on private land. I do believe that baiting has a large portion of the deer herd migrating to private lands.

1444 Please move the season earlier in November like the first two weekends. Late November most deer come out at dark and we never see them. And it gets cold end of November less people want to hunt in the cold weather. Also thanksgiving is in the season now I wish it was not we have go home for that and not hunt that day.

1445 Public lands continue to be over hunted and contain far fewer deer than posted, private land. The policy needs to address the over hunting on public land by decreasing antlerless permits rather than increasing the number of permits, just to sell more permits and balance the harvest at the expense of the public land.

1446 I’ve seen a crushing amount of business impact due to the lowered antlerless tags offered. Some businesses are no longer opening during the early AM hours of the first day’s hunt. This has greatly reduced the number of hunters, and it did increase the antlerless deer in that area. (I didn’t see any bucks in 2019)

1447 I have watched for past few years as more doe tags and taking of young antlerless deer the deer herd has reduced drastically. Creating a youth only antlerless tag with some manageable numbers of doe tags for both private and state land will correct the herd, create good hunting, increase of revenue of tags sold.

1448 There is a lot of deer on private property. (Too many) I think your doe quota is a little low for private property. The deer had an easy winter and the does are going to drop a lot of fawns this spring. I’m noticing much more car kills the last two years. Please consider more doe tags for private property.
Before increasing the amount of antlerless quota, predators need to be reduced by significant levels. Since the inception of bear licenses, the deer population has steadily fallen as the bear population has grown. A bounty on coyotes would also be a help in making sure fawns would have a chance to survive.

Personally, on private land, we are still hoping to build the herd a bit so we can feel comfortable shooting a doe for meat. Right now, numbers are low enough that we feel harvesting does around us is detrimental to the population. We’d like to grow the herd so we can take 1-2 does per year for meat.

I believe that all the studies and opinions being formed about our "northern" county deer populations are not taking into consideration the high amount of predators the deer are facing. Something must be done about the wolves or else we are going to lose our deer numbers and hunters in this area.

We noticed a lot more Minnesota Hunters makes you wonder if they do have license removing the back cage with a big mistake they should have one bag tag for life and anybody can call it in to see if they’re legal we hunt Forest land the owners asked us to leave because they had family coming to hunt.

I do not live in WI, however I own acreage in this DMU and pay property taxes just like everyone else. I spend a lot of money at the local stores, bars, restaurants, and shops, year round. I feel, as a property owner/tax payer I should be able to receive a discounted hunting and fishing license.

I do not support the feeding ban in Burnett county. The ban was caused by CWD found on an “antler farm”. There we 0 found in the wild in 2019 with CWD. Please reassess this. There are many people up here that rely on deer for there freezer and this ban makes it allot harder for them. Thank you.

Changing from being able to bait to not being able to bait had a big impact on me personally. If I would have known in early May that we could not bait this year I would have planted more food plots for rifle hunting. Bowhunting you have a lot of natural deer movement because of the rut.

From what i seen on public and private land was even less deer in the 2019 season. We did not see many fawns in the summer, in the fall or this winter so I think we have a problem the numbers will be even lower in the 2020 season in our area I hope my input is helpful and Thank You.

The biggest issue is the late start of the season. You might want to start the season before Minnesota instead of after? The late start diminishes the harvest rates significantly. Would be better for ALL Wisconsin deer hunters and bring more business to Wisconsin. Just a thought.

I would whole support moving to antler restrictions for adults. Kids should still be able to shoot legal bucks but adults should have antler restrictions. I understand there is usually a lull in bucks taken but after 2-3 years areas like southern MN have had great success.

If we don’t get rid of deer/elk farms and get serious about cwd all of the above survey questions will become non-issues. Buy out the deer farms and increase funding for cwd research and mitigation. We’ve got a fire in the basement and you’re worried about patching the roof.

Quitting giving out antlerless permits. Our hunting group of 10 has gone from seeing 20-30 deer opening day to seeing maybe 1 or 2. Local farmer has killed over 150 deer with his crop damage permits, lots of bear and wolves and hunters killing every deer they see.

2019 was one of the poorest seasons we've had in our area and its tough to understand why. The coyote population seems very high with multiple packs heard howling at sunset. They could be impacting deer movement but have not witnessed much depredation by them.

Three years ago I saw one deer that was very sick and this spring I saw one on my game cam. I hunt a great deal in the fall. Shouldn't these deer be put down and handled so as not to contaminate the soil around the kill and brought in for testing some how?
Hi. Was wondering if a antler size minimum to harvest was ever thought of. I was against it in the past but have seen it do wonders in south east Minnesota. Bigger bucks and healthy herd of deer. Also the population has grown to a healthy number. Thanks.

more kids would hunt if they saw more deer, DNR needs to make it a law= 4 point restriction on bucks, no party hunting or cross tagging of deer, only you can tag a deer that you have harvested, more public land doe tags for those hunting public land,

I oppose the ban on feeding deer because of a reckless high fence operator screwing all of us regular guys. Get rid of the game farms ------ Let us hunt the way we always have - don't screw thousands of hunters to protect one game farm moron.

There are still very few deer in the Crex Meadows area on the public land. There should not be many, if any, antlerless tags available. This used to be a premier hunting spot for hunters from many states to hunt. Now it is not.

A) Doe tag preference should be given in this order 1) resident of the county 2) resident of Wisconsin 3) non resident  B) The Burnett County CDAC should oppose the current push of the DNR to eliminate winter time feeding of deer.

I feel there are to many hunting days per season (sept-early Jan). Youth seasons are good too try and get new hunters introduced. It seems to me also many people are giving it up on account of changing regulations and license fees.

Deer populations have been down for years. Limiting public tags is a good idea. Allowing crossbows during regular bow season is ridiculous, it just allows gun hunters an easy alternative. I quit hunting due the DNR regulation

Deer numbers where we hunt do not match what the DNR has been saying. Last 3 years we are supposed to have a “deer around every tree”, but very little deer period. Due to many factors, predators, winter, poor estimates, etc.

Burnett County is under a baiting and feeding ban, due to a captive cervid (elk) testing positive for CWD. There should be an outright prohibition of baiting and feeding statewide. No exceptions, and it should be enforced.

I also favor leaving the deer gun season run during the week of Thanksgiving like it has been. If someone feels there is a need for a longer one, add a week on the end of the traditional week. Thank you

I have watched the actual deer numbers seen when hunting decrease over the last 10 years. If this continues I will no longer be deer hunting. I hunt the entire day all 9 days. Deer sightings are very poor.

For season 2019 I saw the fewest deer I have seen in maybe 10 or more years, hunting 7 of 9 days. Six of those seven days on my deer stand I saw zero whitetails, hunting exclusively in Grantsburg township.

I have hunted mostly private land over the last number of years, hunted the weekends of the season and have seen only 1 live deer during legal shooting hours. I have hunted an average of 8 hours per day.

We see a lot of deer in our area of Burnett County. The population appears very good. Proposed permits are fine. Last year was a “off ” year - late season and a lot os snow in the second half of the week.

Keep the same season structure. It is a tradition. Make the baiting ban state wide. Baiting is not hunting. It is just shooting at that point. Scouting and a little luck makes for a good experience.

I would like to see harvest authorization be valid for both public and private again. I feel that the current harvest authorizations overly limit hunting opportunity and reduce predictable deer harvest.

Please consider using more of a selective timber cut of forests verses the current practice of clear cutting entire sections. Public lands are looking very bare in the county now days. Thank you.
we need better numbers of deer in this area east on A towards A & H. i have hunted this area and have went back to polk county hunting land because of lack of numbers lack off mature bucks

Last 2 yrs havent seen a deer in woods really down great area least pressure is down no deer drives till after opening weekend raise outta state tags price lower antlerless stop harvesting wood

The number of deer is low, more wolves kill we need to preserve for the kids an let bucks grow for a year, an 9 days are plenty for a season. way more does then bucks, exstend the youth hunt

Burnett County population and chance of harvest has been pleasantly consistent over the past couple of years. In previous years, the quota and chance of harvest seemed inconsistent.

Manage the deer population and when having antler-less deer tags, limit it to ONE per hunter. Same for private land. Private land owners are hunting and harvesting on public land.

Although I didn't harvest a deer the past two years, the herd is in good shape and a dramatic improvement over the prior 5+ years, so I think the current approach is working well.

The regulations continue to to become more complex. Reverse this. Reduce or limit non-residents of management units to gun youth weekends and gun opening weekend hunting only.

I believe that archery and crossbow licenses should come both with an antlered and an antlerless tag. Having to buy the antlerless tag extra (if available) seems unnecessary.

I saw 4 deer in the area that I hunted. Lots of carcuses and to many Wolf tracks and occasionally seeing one. Everywhere I would see fresh deer tracks the Wolves were on them.

With the decrease of crops last year we saw a huge decrease in deer in our area. Seen more Coyote and Wolves in our area seems to of also affected deer in our area.

Dramatically reduce the number of out of state bow hunting licenses. Use a lottery system. Too much Minnesota bow hunting pressure where we hunt and own property.

Increase the permits we need to get the numbers down the does will have a good fawn crop this year and I have seen many buck with antlers into mid February.

Support wolf management by the state. Very low deer population on public land. Bear and wolf predation is higher than we think for Burnett's deer population.

Please consider a single license for all types of weapons. In other words a deer season that lasts from the third week in September until December 31st.

Although I do not believe deer numbers should be managed by issuing more tags on public lands, the data supports more tags can be issued on public lands.

Wolves are hammering the deer.. they are everywhere in our area. The deer herd Hasn’t been able to recover between high bonus tag numbers and the wolves.

I would like to see baiting allowed and making it legal to use bait as an aid while hunting. I think a gallon or 2 of bait would be a fair amount.

Continue to maintain the deer herd at current levels. Proposed antlerless quotas seem appropriate. Don't reduce public land tag numbers.

Very pleased with the great job you do managing this county. Would like to see more three year bucks. Keep up the good work. Thank you

We really have a Wolf and coyote problem in the area and need to do something about it. In areas they have wiped out deer population.
I do not support a quiet period before the rifle season. I do not support a longer rifle season than the regular 9 day season.

Keep the length, time and rules of both gun season and bow season the same as it was last year. There is no reason to change it.

I would like to see regular CWD testing being performed in the unit. I am satisfied with the number of deer I saw last season.

I trust that the DNR will make decisions based on the good of not only the deer herd, but the environment in general.

Hearing gun shots at night during the rut is quite discouraging. More enforcement officers would be a welcome sight.

We have had a significant increase in bear where we hunt and a decrease in deer sightings. Too many bears.

Glad to see the increase in public land doe tags. There is no shortage of deer on our public lands.

I believe the CDAC recommendations are good. Seeing a lot of deer in northeast part of the county.

Keep the 9 day gun season. People don’t even hunt the second weekend why would they hunt a 3rd?

We are seeing the wolf population grow as we are seeing them on all hunted property.

Wolves are out of control throughout the unit. Ag tags are out of control as well.

More field checks by wardens on pop up blinds with no blaze orange. Safety first

I appreciate your efforts. Very little public interaction in home state of MN.

Non resident hunting license for land owners should be at a minimum 1/2 price.

Leave the traditional WI deer season alone, open up a wolf season instead

Would like to see an earlier start to rifle season more in line with rut

again....the sky is not falling. Let people harvest some more deer.

I would like to see a 2 week deer season starting mid-November.

keep the seasons the same as it been for the last five years

Like to see you keep the band on baiting indefinitely

The population needs to go way up in our area

get rid of the wolves that would help

Need to get rid of the wolves!!!!

We have far too many wolves!!!!!

Way to many wolves in the area.

Way to many wolves in the area.

I do not want earn a buck!!

Keep up the good work

We need a wolf season!

We need a wolf season!
Public Input on CDAC Preliminary Recommendations - Spring 2020

Calumet, Central Farmland

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

172 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 118
   - I visit this unit for non-hunting purposes: 18
   - I hunt in this unit: 154
   - General interest in this unit: 29

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 141
   - Bow: 92
   - Crossbow: 64
   - Muzzleloader: 74

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 25.49
   - Maximum: 63

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 89
   - Mostly Private Land: 28
   - Public and Private Land About Equally: 18
   - Mostly Public Land: 9
   - Exclusively Public Land: 8
   - I did not hunt in this unit last year: 2

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 12
   - Not too crowded: 18
   - Neither crowded nor un-crowded: 11
   - Somewhat crowded: 11
   - Very crowded: 6
   - Not applicable: 5

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 41
   - Fewer: 59
   - Same: 55
   - More: 12
   - Many More: 4
   - Unsure: 1

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th>The Antlerless Quota is...</th>

</table>
We are starting to get too many deer seasons. The youth hunt is one thing, but then continuing to extend and add additional seasons is getting ridiculous. I want a healthy herd that is able to sustain itself. All my deer are taken to be consumed by my family and myself. If I have extra to spare, I will give meet to family friends or individuals I know who are in need of meat. I usually don’t have meat to spare though. This is my main source of red meat. My concern with all the multiple seasons and the extending of seasons is that it does not allow for deer to live in peace, without constant hunting pressure. In order for them to remain healthy, we need to take a specific quota, reduce the urban sprawl that is leading to large herds who cannot be hunted and are at risk of spreading disease. We also need to look at land conservation. The more these deer are forced by housing developments out of their natural habitat, the greater risk we have for disease increases across the herd. Many of the deer kills I see are on major highways, near urban areas. I would consider expanding the hunting grounds to include urban areas for bow/crossbow, but in the regular season. I believe this may be occurring with special hunts, but again, I think these areas should be hunted by bow/crossbow during the normal seasons. This past year, was very sad for me personally. I have always harvested at least one deer per year since I was 12 years old. This year, I saw one deer for a three second glimpse and that was it. The timing of the gun season hunt was awful coupled with the inability to get standing corn crops off the fields due to rain/saturated ground. I was blessed to have gotten a large buck the season before, so I have some remaining meat to ration until this fall. Thank you for conducting this survey.

I've seen a significant decrease of deer encounters over the years on the 1200 acres of private land my family owns. In my youth I’d see large groups of deer and have several opportunities to harvest an animal. Hunting was fun, everyone wanted to go, we had a high success rate. Now I’m lucky to see 20 deer over bow and gun season. I primarily hunt near the Hayton swamp. My father has crop damage tags which is hate but I’ve assisted his efforts for over 20 years. I’ve find it challenging even when hunting winter months when the deer are grouped up to meet the quota. Use of rifle has assisted in meeting quotas. Based on my observations around 2001 after the hail storm I witnessed a significant decrease of deer sightings and that has maintained. For 15 years of hunting I had minimal predator encounters I have had an increase of encounters over the past 5 years. I’ve seen a decrease of hunters in the area I hunt and the current hunters share three above observations according to their accounts to me. The style of hunting has changed the first 5 years of my hunting career there was a larger group hunting strategy with deer drives. However with reduction of encounters and success hunters that used to hunt in our group lost interest and quit hunting. Now we see primarily still hunting in our area, deer drivers occur out of desperation to see a deer. I believe there are many factors that attribute to the change in observations regardless I can say there is a shared frustration in my area and the owners don’t want an increase of tags or doe only seasons. I strongly believe if numbers do not improve future generations interest will diminish.

I will stand by this. I’ve hunted calumet county for nearly 22 years and cant stand what I’m seeing. Deer drives have to go on public. Too many people have filled tags and are still out filling more. They disturb other hunters trying to enjoy a fair hunt. For many years I experienced these issues. I watch fawns smaller then my dog get shot. For the thrill not the meat and enjoyment of the outdoors. I finally got private land and will very seldom hunt public until deer drives are banned from public grounds. Not only is it un ethical and un fair to others who have to hunt public its un safe. People don’t know the area and just shoot, not caring or knowing what’s beyond. On private you know who should be there and what’s beyond your target if you disturb your land and your hunt that’s by choice but hunters shouldn’t be affected by others who don’t care ro show respect to the hunter that was there before them.
In my opinion the seasons need to be less and simpler. No extra hunts, no extra doe tags, no earn a buck. No youth hunt, kids can hunt at earlier age now then ever, no need for early gun hunting. Keep it to something kids have to grow up and learn the right way, respecting the hunt and nature. 1 buck and 1 doe tag per license. Very against extending or changing gun season framework. Like most people getting a deer is important, but not as much as seeing more deer, having a larger herd, and not over harvesting is more important. I've hunted calumet count my entire life and the herd is about 3/4 of what it used to be. I live near winter staging areas and seeing 100+ deer in the field at a time was common 15 years ago. Last ten years that number is about 30 to 60 deer. All in all tho, still very enjoyable hunting in my area and I think management has been respectable.

Less tags for county over all. Ive seen less deer the last three years than in previous years across the county. I drive truck through all parts of county and only see a few deer per week. Also the public land numbers are lower than in the past. Harvesting a doe use to take 3 or 4 hunts now it takes 7 to 10. Last please change the tagging system to one doe tag for all of the central farm zone. It is hard to hunt public lands when your limited to one county. Give one doe tag for all of zone and additional for county. This would also help with simplicity for people. Last antle point restriction. 3 points to a side. I think it would help people shot does and in 2 or 3 years ther would be more bucks shot with bigger antlers. Hunter excitment might in crease with this also. Youth and seniors shot what they want. No restrictions

I think it should go back to the way it was when I started hunting. You have to buy your buck tag and apply for a doe tag everywhere in Wisconsin and also buy a bonus tag if you want one. No antlerless only hunts, no holiday hunts. Close bow season a week before gun season. After gun season have one week muzzleloader hunting then late season bow hunting. I would like my son to have good hunting like I did when I started hunting. I know that a lot of people would agree with me on what I said in my feed back. Thank you

One of the things that I believe would help harvest more deer with a cleaner kill is allow baiting to continue. In all the years I have hunted I have never seen anything transferred from baiting if we follow the guidelines you set forth. When you get a population of deer that we have you are going to see issues like CWD and like anything else needs to run it's course. I also believe that it has been around for longer than we even know and now that we can test we have things we can deal with. Thanks for listening

Earn a buck should never happen again in this state it was a joke, antlerless deer were being harvested during the bow season in other DMU's and out of state (Michigan). One archery season no matter what bow style is used (recurve, compound or crossbow) Starting the the gun season a week earlier is a poor decision, First thing said after the season is over "to much corn standing" you think starting the season a week earlier, more corn will be harvested?

I feel the only real place to see deer in Calumet county is in 2 or 3 places. It's where some people own alot of land and lit very few people on it. Most other places in the county have very little deer. Public land is very over hunted in the bow/crossbow season where people shoot every deer they see because there don't if they will see another one. So very year public land gets a real beating on deer population. Thanks.

This county absolutely needs to the goal of INCREASING the deer herd. It is a shell of what it used to be in terms of deer population and sightings. Take a drive around much of the county and you are lucky to see many deer out in fields --- maybe small isolated areas, but overall the population is down. Please do not support any extended gun seasons or 19 day season. That is unwarranted and unnecessary.

Those of us who hunt public land, know that there is a lot smaller amounts of deer located there. Somewhere a long the line we have to figure out how to get the private land owners to take more deer form those areas. Some of these private land areas have huge numbers of deer that eventually could cause or may already be causing issues with over browsing and eventually disease.

<tr>
<td>1863</td>
<td>I really feel you need to let the land owners manage their deer population on their land. I took my kids hunting for the youth hunt and regular 9-day gun season. We saw 1 doe the whole time. My kids were bored and don't really want to go hunting anymore. You need to let things alone and get the population back up. Or soon you won't have many hunters buying tags anymore.</td>
</tr>
<tr>
<td>1864</td>
<td>Every year for the last 10 years, I have seen less and less deer. Last year for all of the archery and gun seasons, I didn't see one buck. Gun season I've seen a total of 5 does. This will not get new people to start hunting. I'd like to see an 8-pointer or better and outside the ears implemented to compete with southern states for big bucks being harvested. Thanks.</td>
</tr>
<tr>
<td>1865</td>
<td>Too many deer on private lands is dictating the entire county. Deer in the Killsnake, Brillton, Collins is nonexistent compared to years ago. I have hunted the Killsnake since I was 12. This was my playground. Now at 48, I make it a point to take my kids out there once during the deer season to point out the good old days.</td>
</tr>
<tr>
<td>1866</td>
<td>Wisconsin should implement all out-of-state hunters are required to purchase a qualified license before being able to purchase a non-resident deer hunting license. The qualified license would be an annual non-resident fishing or small game license. Most western states require this and it produces significant revenue for them.</td>
</tr>
<tr>
<td>1867</td>
<td>Deer populations on public lands have reduced dramatically over the last decade. I have not seen a Deer the last 3 years. I have been hunting on the east side of Chilton for 40 years now. Insurance companies wanted to reduce car crashes so the state reduced deer populations. Tell me I am wrong!</td>
</tr>
<tr>
<td>1868</td>
<td>I would like to have the holiday hunt and extended archery season for additional harvest and recreational opportunity. Also bring back the October antlerless season as another tool for managing deer population and gun hunting in warmer weather.</td>
</tr>
<tr>
<td>1869</td>
<td>Thank you for giving me the opportunity to provide this. I love hunting public lands especially the Killsnake. Water was the biggest issue in 2019 with flooding. Need to figure out a better drainage plan as access was severely limited.</td>
</tr>
<tr>
<td>1870</td>
<td>Over the past few years, I have been seeing more and more does than bucks, actually if any bucks at all. From what I have seen through bow, gun, and muzzle loader people need to start taking more does or more mature deer.</td>
</tr>
<tr>
<td>1871</td>
<td>Worried about the possibilities of CWD with the outlook for a growing herd in the county if one does not harvest more deer. Have already seen many deer in uncommon areas when out on the landscape and when driving.</td>
</tr>
<tr>
<td>1872</td>
<td>Please consider longer season and same or fewer tags. Changing weather patterns make finding time and a “sunny day” hard to come by. Thank you, also could consider handgun hunting during muzzleloader season.</td>
</tr>
<tr>
<td>1873</td>
<td>I have hunted here for 30 plus years. In the past I could look out my window and see deer in the field. I see little deer now. The farmers get extra tags and just slower the deer. That needs to stop!</td>
</tr>
<tr>
<td>1874</td>
<td>Would like to see more adult deer. My son is a new hunter and he has yet to see a deer on the hoof during gun season. I would like to see increased harvest opportunities.</td>
</tr>
<tr>
<td>1875</td>
<td>I dislike the DNR ‘giving’ away any bonus tags. I believe they should always be sold, folks that want to harvest an extra deer for their family will gladly purchase one.</td>
</tr>
<tr>
<td>1876</td>
<td>I would like to have the ability to leave portable tree stands on state land similar to placing trail cams. This will increase odds of seeing and harvesting a deer.</td>
</tr>
<tr>
<td>1877</td>
<td>Eliminate enclosed structures/dwellings to be hunted out of. People see and harvest less deer because they don't move and rely less on skill and more on opportunity.</td>
</tr>
<tr>
<td>1878</td>
<td>Please, please, please, STOP making me choose between harvesting a deer on public or private land. It makes absolutely no sense.</td>
</tr>
</tbody>
</table>
State lands are over crowded. Deer drives should not be allowed on public land until Monday after the opening of gun season weekend.

You need to improve conditions on public land. I do some hunting there and I would like to do more but it's not worth it.

I would to see an antler restriction put in place similar to what Missouri does with at least 4 points on 1 side.

I feel that the deer number in this unit are not as high as you think or they are all hold up on private property.

I would support shortening the season for allowing crossbow harvested deer to 2-3 weeks prior to the gun season.

I personally think that the regulations should go back to the way they were 25 years ago when I started hunting.

We need to make a rule that has to deal will hunting on line fences some people push the limits.

regardless of statistics we supposedly have there does not seem to be near the old days numbers.

Since about 2016-2017 till now are deer harvest numbers in our group are down 8-9 deer.

Youth hunt should be done after bow/crossbow season. Not before.

do away with having to choose public or private land.

Buck only for 2 years to bring Hurd back.

Public Input on CDAC Preliminary Recommendations - Spring 2020

Chippewa, Central Farmland

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

293 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 188
   - I visit this unit for non-hunting purposes: 53
   - I hunt in this unit: 262
   - General interest in this unit: 50

   The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 245
   - Bow: 152
   - Crossbow: 98
   - Muzzleloader: 93

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 23.96
   - Maximum: 62

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 178
   - Mostly Private Land: 53
   - Public and Private Land About Equally: 19
   - Mostly Public Land: 5
   - Exclusively Public Land: 6
   - I did not hunt in this unit last year: 1

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 9
   - Not too crowded: 26
   - Neither crowded nor un-crowded: 13
   - Somewhat crowded: 17
   - Very crowded: 8
   - Not applicable: 9

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 33
   - Fewer: 74
   - Same: 111
   - More: 59
   - Many More: 11
   - Unsure: 5

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>

</table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...

Implement an ANTLERLESS HOLIDAY HUNT: 90 165 38

If a Holiday Hunt is held in a Farmland unit...

EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: 133 129 31

If the Population Objective is not "Increase"...

Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 36 230 27

If a Zero Quota (buck only season) is adopted...

...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?  VALID NOT VALID Unsure

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit? Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

“Does anyone have any verifiable documentation of any domestic herd present day management administrative process, weather it be for dairy cows, horses, pigs, sheep, goats etc that promotes the random (nonselective) slaughter ( because that is what tag promoted hunting is ) of their prime and not so prime breeding stock, prime stud contributors, this years and previous year yearling offsprings? Does anyone have any verifiable documentation that this process of random slaughtering of the deer herd would promote a herd quality that would produce quality stock, especially inhibiting health problems, and further promotes quality herd numbers and herd quantity?” I don’t know of any efficient dairy or beef farmer that uses this sort of ridiculous random slaughter and irrational management method to control their herd populations or for any domestic animal health and populations for that matter. The sportsman should find this fact of the DNR counting the dead deer to estimate the live ones, a practice that has been accepted by the DNR for decades and has never been questioned by our elected representatives who are supposed to be continuously controlling these bureaucrats. Our elected representatives should be religiously questioning the DNR bureaucrats for using and promoting such ridiculous and irrational administrative deer herd control methods and ask for verifiable proof of the DNR using the dead to count the living. Those elected asking the hunters (their constituents ) directly probably wouldn’t be a bad idea ether - the conservation congress gathering in the spring isn’t close to the answer either. I know some quality deer hunters, and so have many others who have been questioning these estimations of the DNR White Tail Deer herd population control methods for sometime. These existing DNR methods of controlling deer herd are a total disregard and disgrace for any White Tailed Deer management method and existing privately controlled hunting property White Tail Management methods proves this beyond a shadow of a doubt by consistently producing quantity, quality, and healthy deer. There is sane reasoning why our federal government uses a live census to determine a living population.

I feel the CWD concerns are overly exaggerated, issues with baiting in these farmland counties are ridiculous. This notion that hunters are causing CWD to spread from baiting is outlandish. Deer are heard animals and group up all winter feeding the same corners of fields and same watering hole. It is not uncommon to see 15 to 60 deer working the same area of field digging and grazing the same spots as the deer in front of them. Or digging and eating under the same oak tree for weeks at a time scavenging for acorns. These kind of sites happen naturally drawing in large numbers of deer, from multiple properties so wouldn't having more options allow the deer to be more spread out, keeping them more centralized in their home areas? Granted that putting out extensive amounts of bait (corn) (+100lbs) is not acceptable by any means, adding mineral to areas that lack natural mineral sites only seem to aid in the health of the deer population. Why eliminate the ability for conservationist (hunters) to add mineral sites to these lands that lack them and increasing the over all health of the local deer population. Obviously bucks use the extra minerals during their antler development in the spring, but does are by far the main visitors of these mineral sites especially in the spring and summer months. The majority of hunters interest revolve around the health of their deer herd and how to have healthier deer.
I think that instead of issuing antlerless tags for the metro sub unit would better be handled by giving people the option whether or not to hold one. Because a large number will go unhunted and unfilled due to people who are not even interested in hunting the area. Whereas if someone that is very interested in that particular subunit is interested then they could have access to possession of up to 2 at the time. Option for more as issued ones are filled. I don’t believe that extending bow season would affect harvest substantially because archery already only makes up for such a small percentage of deer harvest to begin with; so no real harm in giving people more opportunity to be in the woods. Where extending Gun for probably have a very large effect on harvests and population because a couple days of really nice weather can dramatically affect # of deer harvest by rifle.. Also maybe take small steps in preventing loss of significant trees by means other than killing deer to prevent overgrazing. Or start really evaluating when that damage is occurring to narrow in on how to prevent it. Maybe compare the amount of cleared land to your brows data. Take brows away on this 20 acres then the 80 acre next to it is going to absorb that extra brows pressure. Thank you for taking the time to hear the publics opinions.

When I started deer hunting 46 years ago it was nothing to see 8 to 10 deer before 8 in the morning. But with the same token there were no free antlerless tags being given out by the DNR. Yes we had smaller bucks at that point but still we had more deer. Now ever since they started giving out free tags and extra tags the deer population has plummeted. Yes I do realize a lot of this is due to the lack of hunters compared to other years. But I feel a lot of that also is price of tags and people not taking the time to get their children involved in hunting. Myself and my surrounding Neighbors all started doing what we like to call herd management which is no buck shall be taken unless he is at least an eight point and outside the ears. Now to keep our kids and grandkids hunting we are allowing them to shoot antlerless deer. Because I’m sure as you know if you don’t let them do some shooting and all they get to do is watch you are going to end up with a kid that does not want to hunt. As far as myself I never seen ONE deer all gun and Black Powder season.

Hello, I would like to start with thanking you for this opportunity to give our feed back as outdoors men. I have bow and gun hunted the last 24 years in the NW part of Chippewa county where I grew up. Yes, I understand times change but I have never seen the deer population as it was when I first started hunting. I will say the last 3 years of the gun hunt have definitely been disappointing in numbers. I hunt several different properties and it differs some, but still scarce for a healthy population. I am a management hunter but willing to take that doe about every other year, but not of late. I have a son in the mentor program and a daughter partaking this fall and it is definitely hard to gain there interest and stay focused with a dwindling population. I feel there should be NO extra hunts (Holiday/TZone) and few if any Bonus tags issued. Hunters choice or Buck only tags until the population can bounce back. Hopefully this information helps and again thank you for the opportunity.

it seems we have more car collisions, more farms being sold off and that changes hunting ethics and amounts of deer killed and loss of habitat due to houses popping up, I think we need to do some changes with the crossbow buck kill situation. Its getting hard for older hunters to keep track of all the different hunts going on and not knowing the times to wear blaze orange when you finally do get time off of work to hunt. I think last year will allow us to see more deer and a few more bucks when we have these late rifle hunts. It seems we are hearing a lot about of arrests for non registration of deer. I almost wish we could not shine deer anymore, if it would help wardens find more poachers and shooting off roads. In conclusion, I think one free antlerless tag is enough, We maybe could do less bonus tags. We’ll see how this season goes and next year will be a new three year commitment for Chippewa County cdac.
I would like to see more mature bucks. Lack of bucks reduces my interest in hunting after I get my one Doe. I am hearing of more many hunting deer in other states or going West to hunt elk during WI gun season now. Most of WI is simply not worth hunting anymore because of low deer numbers and mature Buck quantity, especially on public land. Its just not as fun as it use to be 15-20 years ago. I would also like to see Non-resident tag prices increased. Other states have much more expensive tags than WI. I believe most of the people coming from out-of-state would pay more. Stop making all the rules so complicated. People cannot keep up with them. Require people to register deer again, No back tags, but must register at a station. this will reduce all the outlaws out their taking too many deer or using private land tags on public land, or tags from other units in wrong unit.

Thanks for listening. Please do not invalidate the archery tags during the gun season. I hunt the metro zone that does not allow firearms to be used. It's private land, and archery only. I would hate to miss out on the rut hunt in November just because gun season is taking place. If I can't go gun hunting, the metro private land is close to home and allows me to take my traditional bow and hunt the rut. Please do not invalidate archery tags during gun deer season! I don't feel that I should be punished because the gun season is taking place. Where I hunt is private land and archery only! I gun hunt up north, but if the season is going to be extended this year I won't be able to hunt the whole season with a gun. Nor would I want to. The land I can hunt with my bow is close to home and I get go hunt it daily. Thanks

I think it would be better to only sell antlerless permits and not include them free with hunting license. More revenue. Also, I like the way it used to be when I was a kid. Get an archery license and you could harvest just one buck or doe with that license and then you were done. Used to see a lot more deer when I was young, hunting in the same areas. That's how you get youngsters and new people interested in hunting - if they go out hunting and actually see the animal they are hunting, it's a big plus. I dont know why we've been so con earned with deer numbers the last 20 years. Hunting was ruined in the northern part of the state all because of trying to manage deer numbers. Leave it alone, let people take a buck or a doe with their license and dont play God, let nature take care of nature.

If Chippewa county is broken up into farmland and forest then the baiting regulations should follow the same boundaries. Baiting isn't ideal but for people with small tracts of land baiting might be the only option to attract deer. Even if you lease land the owner may have the fields in set a side and not allow you to put in a food plot. Anyone who spends time in the woods knows that deer at social creatures. Even if they aren't feed, they still groom each other and would spread CWD by nose to nose contact. The areas of Eau Claire County that tested positive have significantly higher deer densities than most of Chippewa County. Instead of having blanket policies it would be encouraging to see the state isolate the area and talk with the local hunters.

Explain to me why new hunters, of which I am one, enjoy the longest deer season in Wisconsin? Why do they get the first chance at deer? Is there something sacred about now hunting? Many compound bows and cross now cannot meet any definition of "primitive" Compound bows 80 percent let off, crossbows that shoot accurately to 75 yards? An individual proposed a deer season open in September through December; hunters choose what weapon to use a number of years ago. Have you given any thought to this proposal? I expect a response. If you continue to ignore us, why go through the pretense of engaging the public and then doing as you please. Why can you not respond to individual comments? Too busy?

There are way to many deer in this unit. As a young logger, timber regeneration is important to me. We are very careful to sustainably manage forests, it makes me sick when all of that planning and hard work goes to waste due to deer overbrowsing. I do deer hunt and would like to see a reduced deer population for that reason also. I could tag out by 8:00 opening morning every year, it's not even fun anymore. I would rather see hunters kill more deer than to let a disease get them all. I would estimate the deer population at least 60 per square mile, it's nuts. We need more doe and crop damage tags. I would also like to see crop damage tags offered for damage to timber regeneration.
I think the dnr has their head so far up their asses they have no idea what’s really going on. While there are enough and almost all of deer in these southern units go up north and hunt and tell me how many are up there. There should be another wolf hunt and many more bear tags given up north. With one bad season for a mix of reason the dnr wants to completely turn the hunting season framework upside down. Maybe it was just a bad year. Stop having so many hunts to irradiate the deer and keep the framework simple. It's getting to the point if the dnr keeps going the way they are I will not hunt deer in wi and I will take my money out of state.

Starting the bow season later into the season Moving the gun season up one week or extending it No buck harvesting until the last week of October Adding a 3 day no hunt between the bow and gun season Making meat processing businesses responsible for testing each deer that they process (I’m pretty confident I’m not getting my whole deer back every year with how busy they are with the number of deer they have to process) Requiring everyone that’s not taking their deer to a meat processing business to have the dnr test them at stations(somewhere utilizing a punch system on the tags to show proof of this) the old tags that is.

deer numbers in western chippewa are about the same or slightly below 3 previous years im retired and hunt at least 4 days a week it was a different year for rut i have 4cams out most activity was at nite hardly any day movement start rifle season on 15 run it to dec 1 this week before thanksgiving is outdated to say the least no body goes to hunting camps no one is in woods after noon on thanksgiving give every license hunter a vote see what the real results are meetings are nice but majority of people don't have time its 2020 we can vote on our phones i'm 64 and i get it

Year after year I purposely leave my antlerless permits go infilled in an effort to increase deer populations in my area. I am a land owner and should be able to put an antlerless deer in the freezer without feeling guilty for adding to the low deer numbers. I have introduced 3 grandchildren to hunting but after many hours of sitting and seeing sometimes no deer it is difficult to get them excited about the sport! I realize this is not the case everywhere but that doesn’t help the situation I continue to find myself in. Thank you!

Im retired hunt about 3*4 days a week everyday when rut and rifle to end of muzzleloader if you want more deer harvest and quality hunt start rifle on november 15 to dec 1 all this nonsense about hunting camos and thanksgiving is bull...t look at states around us no one goes up north there are no deer no one has off hardly for thanksgiving new economy plus i do not understand why when a cdc deer is found its location is a military secret wouldnt help to know specific location so one could make an informed decision on testing

Please do away with all the youth hunts and all the other special hunts. They do more harm then good. You have an adult shooting adult bucks and then claiming that a human under the age of 12 shot the deer. When you shoot a doe you end up taking up to 3 fawns out of the food chain. That in turn leads to bears, timber wolf’s and all other top predators having to find other forms of building fat in the spring. That brings them closer to area’s that humans are giving them a free meal. Garage and compost piles come to mind.

I do hunt mostly private land in Chippewa County farmland There is no where near the deer we had a few years ago it has been going down the past 4 years I had cameras out and only a 3 fawns that I seen, most years there are at Least 6 set of fawns . I talked with the neighbors that live by the land I hunt and they see the same a lot less deer. Plenty of bear and coyotes though is there comments . Not all private land has the deer numbers that we have on town. We do not need all those bonus tags. Thanks

Just curious on the boards position on CWD and predation of the Chippewa county deer herd. What have you seen works and why? What have you seen attempted in other counties/states and was a cluster you know what and why? What have you learned from this and how can we as hunters and and also stewards of our private lands do a better job at maintaining that balance of deer herds and ratios within those herds and also with other wild game species? Thanks for the update on your presentation!
Hello, I am happy for the most part with the Dnr structure of the annual deer harvest. But I'd recommend making it required to test your deer for cwd regardless of unit. Doing this could help locate more accurately where cwd affected areas are. Also bring back registration station to register your deer instead of online business. Bring deer to these stations makes folks more incline to register their harvest I think. Plus have cwd testing on site would also favor the stations. Thank you.

I like the youth hunt but feel there should be a minimum age such as 9 or 10 years old. I feel like 1 doe tag with a license purchase is all anybody needs. I feel like the debate on limiting crossbows is unnecessary, we are losing more people that hunt every year, we need to give more to hunters, not take things away.... I also believe we should go back to having back tags and registration stations, I believe the numbers are farther off due to people not registering deer properly.

I applaud the council for having a quota but how can they reduce it so much from last year? There are plenty of deer and the deer were not overshot. Look at the surrounding counties and what their quotas are, I do not see how Chippewa County is that much different. It is a farmland unit that to me the challenge is to shoot enough deer. With CWD, the population needs to be managed responsibly and at a lower level.

I think one of the biggest concerns for the 2019 deer season was the lack of deer sightings not only during the hunting seasons but also the lack of pictures on numerous trail cameras. With 3 young hunters in the group it was a tough season. It not all about the harvest of a deer but the experience of seeing and observing them for these youngsters. Eight hunters, 160 acres, saw six deer, harvested zero.

I like the idea of a longer deer gun season. 9 days is too short because things like bad weather can really impact opening weekend, and that's when most deer are shot especially bucks. After opening weekend.....the deer harvest seems to drop off considerably through out the week. Having another week to use rifle or black powder as an option will give more hunters a chance to fill their buck tags.

There are too many deer in this unit. The quotas for this unit should not be lowered. Measures should be taken to increase the antlerless harvest. More antlerless harvest authorizations should be given to private land license holders. If measures are not taken to reduce deer numbers there will be a devastating impact on the deer herd, Agricultural crops and forest regeneration.

The idea of extending deer seasons makes no sense. You have people that drive deer constantly and stress them to no end and makes it difficult for others in those areas that stand hunt. There are to many people that consistently try to hunt others property and or road hunt on a daily basis. People need to hunt with integrity and not just go out for brown is down mentality.

We are seeing too many deer in our area for the land to support. There is to much browsing in fields and forests causing crop and forest damage. We try to plant trees and promote forest regeneration but the deer are killing it. We support a much higher antlerless harvest in our area including multiple antlerless harvest authorizations with private land licenses.

I commend the CDAC for once again recommending 1 free antlerless tag to be issued with every license. We need to continue to keep deer numbers in check. That being said, the CDAC could increase the bonus harvest availability to levels closer to what was available last year, especially within private land....it wouldn't hurt a thing....There are plenty of deer!

I have hunted public lands not only in my unit but through the region. I watch the herd get decimated through past practices. Had to go find different places to hunt. I felt that I had to lease land to have some control over deer herd. I myself can eat so many deer in a year. No matter how many tags that are supplied I'm only shooting what I'm going to eat.
Be advised of Chippewa County and the land ownership. Acreage/Owner. The southern portion of Chippewa county is mostly farmland with larger tracks of land owned by less individuals vs the northern portion. Less hunting pressure equals more deer. The county is to large of a zone to manage across the board. It should be split from Hwy X. Have a north/south zone.

I would prefer a doe tag per gun and archery seasons. And if not then make it optional tag for either buck or doe. Then you have the same chance of taking a deer without hurting the herd with mass amounts of deer taken. I believe we need back tags back. Because I believe deer don't register deer or even buy tags since the new tag system started.

I feel the population on private land is very high in this unit, I have always felt tighter regulations for public land doe harvest has been needed for many years, this is based on my experience working for Chippewa County Forestry department for 33 years. I also feel that baiting(well regulated) should be allowed in this management unit.

Overall way too many does being killed all over the state. If it is brown it is down especially on public land. Not even fun hunting public land overall with the lack of deer even seen.I never hardly see an older doe over one and 1/2 years old anymore. New hunters/kids don't want to start hunting when they hardly ever see anything.

If you wish to have more happy hunters, please start the regular season earlier. Old folks don't hunt in cold weather; therefore, don't buy a license or hunt. The amount of deer in Wi. is great, but the kill by wolfs is too great in the counties were we did hunt when I was younger. Anyway, good luck, in making WI hunters happy!

Our family own and hunt 700 acres. Predators are a major problem in deer herd. Need to increase bobcat tags, also fisher bear, coyotes, are taking a toll. We have an area farmer claiming we have to many deer. The poor crops this past year were from late spring, wet spring, and poor farming practice. Not over browsing.

If we as wildlife managers aren’t aggressive with the management of deer in this area we will soon have overpopulation like there is in nearby areas. Antlerless tags need to come with the purchase of a license and not bought as bonus tags. Many people would use this tag if they had it but won’t bother buying one.

I heard reports that the X-bow season may be more limited in the future. I hope that is not true. X-bows help people be more accurate shooting and result in less wounded deer. I believe it opens up early fall hunting to more people during a time of declining hunter participation.

I heard reports that the X-bow season may be more limited in the future. I hope that is not true. X-bows help people be more accurate shooting and result in less wounded deer. I believe it opens up early fall hunting to more people during a time of declining hunter participation.

I have heard rumors about extending the gun season and possibly pausing the archery season around the first of November. On both these issues I am extremely opposed. If I had a vote I would rather hunt archer and not gun season. Archery is much more satisfying to me. Thank You.

I already voted no to it but want to emphasize that I am not in any form a supporter of the holiday hunt. In my opinion there should no extra hunting seasons other than bow/crossbow, rifle, youth, and muzzeloader. And I even think rifle season should be shotgun only.

I think the winter of 2018 was more severe than was predicted. When we had a record amount of snow and the length the winter lasted we lost lot of are older deer for there was know acorns to. So the winter had a bigger effect on the deer herd than figured.

Bring back baiting with a permit for bow, crossbow, gun and muzzleloader this way you know who's baiting and where and as stands the 2 gallon or 2 1/2 gallon baiting rule with the other standers 10$ or 20$ per permit can be a add on to the any license.
I think the committees recommendations are good. I think the free tags are good. There are lots of deer in the farmland. I just wish there was more public land available south of 64 because obtaining permission on private land is tough.

Leave season lengths as is. Talk about tradition and seeing deer compared to harvest numbers. You extend gun season I will not buy license. What a shame the DNR has done to public land numbers and hunting in general.

No baiting - free bonus tags (no charge) - no night hunting for wolves (brush) - more wardens - expanded cwd testing - lower license fees - permission requirement for running dogs on private land with enforcement- thanks

I think the muzzle loader season should be before the gun season to much snow and i think the deer yard up and its harder to see them, it would get more hunters who enjoy muzzle loading out in the woods

I have hunted each year since I was able. I only did not hunt 2019 because I gave birth to my youngest child. Hunting is a very important tradition for our family and provides food for us.

Stick with tradition! Cut the cross bow season, to many bucks are killed so it's wrecking the hunt and trophy quality for everyone else! Stick with the 9 day gun season! No holiday hunts!

If you do decide to extend the rifle season please think of making the muzzleloader season before the usual 9 day hunt I don't enough people get out after that do to weather

It seems like that all everybody wants to kill the does off, you do that and you are killing off the factory no new fawns and no additions to the herd.

I disagree with the no back tag number and registration by internet. Seems like this gives a green light to people who wish to skirt the rules.

Cut down on the amount of seasons. I saw 3 deer all rifle season and not much more than that during archery (about ten times out)

I would like to open up a wolf season. I've seen multiple wolves kill deer and let the body rot. We have way to many wolves.

I personally think that a shortened bow season would be nicer. If not a shortened bow season then a extended gun season.

Just not the numbers of deer that there are in surrounding counties and herd health I don’t think is as good either.

se Chippewa cty has an abundance of deer on private land that is negatively impacting habitat and ag crops

Whatever is done I hope to see more deer population and ensure a healthy population for our future hunters

There is a forty acre corn field and seen 100 deer in the months of february march not a big area.

The high volume of baiting should be a big priority as it affects many of the questions asked

Crossbow should only be allowed for disabled and hunters 60+ years old. Like in the past.

There is not much public land so why give out bonus tags when you already have free tags?

Go back to back tags and party tags for deer harvest. Also shorten the cross bow season.

I believe there should be two antlerless tags given out with each tag purchased.

I did not see much sign of a winter kill during the 2020 spring turkey hunt.

Let us enjoy our time with Family and do not make us shoot Bambi

No Holliday hunt. Seasons are already too long!

Chippewa county dmu should be split in two.

Do not extend the gun deer season.

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

160 forms were submitted for this unit.

### Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 53
   - I visit this unit for non-hunting purposes: 39
   - I hunt in this unit: 152
   - General interest in this unit: 21

   The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 142
   - Bow: 93
   - Crossbow: 55
   - Muzzleloader: 53

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 20.73
   - Maximum: 64

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 59
   - Mostly Private Land: 26
   - Public and Private Land About Equally: 33
   - Mostly Public Land: 7
   - Exclusively Public Land: 26
   - I did not hunt in this unit last year: 1

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 4
   - Not too crowded: 32
   - Neither crowded nor un-crowded: 18
   - Somewhat crowded: 19
   - Very crowded: 18
   - Not applicable: 1

### Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 16
   - Fewer: 38
   - Same: 58
   - More: 31
   - Many More: 15
   - Unsure: 2

### Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
Implement an ANTLERLESS HOLIDAY HUNT:
Not applicable in this DMU

If a Holiday Hunt is held in a Farmland unit...
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021:
Not applicable in this DMU

If the Population Objective is not "Increase"...
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons:
VALID 13
NOT VALID 136
Unsure 11

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit? Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

10871 PLEASE PLEASE PLEASE INTRODUCE A MINIMUM ANTLER SIZE FOR BUCK HARVEST!!!!! I hunt all public land, and in my opinion I hunt very hard, I put my time in, do the research, and all the other things that involved quality deer/buck management... from what I have noticed in public hunting areas pretty much anything that is brown everyone shoots. I think that has to do with people not caring what they shoot on public land... if everyone practiced a little bit of deer/buck management it would better the odds for everyone on shooting their dream buck. Now, I’m not no trophy hunter by any means, I understand filling the freezer is important. But quality deer management would help fill that freezer just due to size factor of the deer after its first couple years of life. It also let’s the animal thrive for more then six months in its life. I feel and notice that in the most recent years of hunting public land, the deer body size is getting smaller and smaller. It is very hard and rare to find/see/shoot a mature deer on public land.

10872 Had the most trespassing we have ever had since back tags have been gone I think we should have a patch with dnr number visible on back of clothing. I’ve seen a lot more wolves and coyotes this last season and have found at least 12 predator kills on deer while scouting land and hunting. I also have resorted to hunting rusk county also to try and get a deer Chippewa has been over hunted in my opinion I haven’t shot a deer in quite a few years while rifle hunting because I either can’t get a doe tag for our county or even see a mature deer my father and I only try to take one animal per person but there’s years we have went with nothing we’re relying on deer hunting to help feed our families over winter two deer per fall get us almost through I hope many other hunters fill out this survey and voice there opinions I love being outdoors even if I don’t see or get a deer.

10873 Thanks for the opportunity to comment on the 2020 goals. From my observations, the idea to still, MAINTAIN, the deer herd for the next three years would be most beneficial in the NORTHERN FOREST region if Chippewa Co. It finally seems that there are slightly more deer than in the past 5 years, which is encouraging, and also indicates the management choices of the CDAC along with the DNR are working. Over the past three years I have not seen as many bucks, but the does are showing some increase. I still believe there is a problem with ALL predators in the Northern Forest of Chippewa Co. Keep making wise, informed, decisions and the herd will eventually come back to a good balance. This winter was very helpful for the general health of the herd. The majority of deer I have seen this spring look very healthy. Thanks for all your hard work!!!

10874 Our hunting party of 12 hunted hard for 8 of the 9 days of gun season and seen limited deer. we are being told the deer are there and we need to put in more effort. We pounded some ideal whitetail habit and are very successful deer drivers. Very few deer to be found. I am sick of the excuses! The DNR wants to recruit and retain hunters yet mismanages the herd year in and year out. I have a very sound background in wildlife management and I am dumbfounded that doe tags continue to be given out even after everyone complains about the lack of deer? Is this about wildlife management or money? One has to wonder and if the poor management continues I will be another hunter than forgoes the sport and invests my time and money elsewhere.

10875 I can see deer just about every night when I take a walk. It's not uncommon to count 10 or 12 in a radius of about a mile. I live 1 mile north of hwy 64. The summer of 2019 I found at least 2 fawns that were probably victims of bear. The reason I believe that is all that was left was the skin. Even the bones were gone. I observed bears crossing the road and the field. And I observed the bear in the same field where the fawns were killed. However, there are plenty of deer because they just about destroyed our apple trees. They come right in the yard to browse on the cedar trees next to the garage. We have deer tracks in our garden all summer long. I am pleased with the online information survey. Thanks.
While deer numbers are certainly increasing in the northern forest, consider increasing the quota to 500 instead of 675. The CDAC discussions over the past several years have emphasized the “lack of deer” in the northern forest. In my opinion, tripling the number of anterless tags for 2020 has the potential to swing the population too far the other direction. Since we’ve been so low on tags for the past few seasons, it seems logical that we should open the spigot more gradually and monitor the data for results. If it holds for 2020, then another gradual increase could be considered for the following season. Consider looking at the 1300-1400 range for 2020. Thanks for allowing the input.

Thanks for having a quota and for increasing it from last year. I think there is no shortage of deer, it is just hunting methods are different and hunters are not as dedicated, which can be why less deer are being shot. I have concerns for forest regeneration and CWD, which are both good reasons to keep the deer population at a reasonable level. Having said all this, they should do away with different zones in the same county. I do not think they are needed and it is confusing. Certainly some areas have more deer and some have less, but it is that way for everything.

Limited deer numbers and limited mature buck sightings are making it difficult for new hunters to grow their interest in hunting. I would like to see fewer bonus tags and go back to Hunters choice. I would also like to see limitations on antler size to allow bucks to grow. keep it simple. for example, Three or more points on one side. This will allow the spikes and fork horns the opportunity and also require hunters to get a solid visual before pulling the trigger. Hunters choice and antler restrictions could also reduce hunting accidents.

On public lands it’s hard hunting because there isn’t that many deer and not many bucks. And the few bucks are mostly taken in bow season. Which in my opinion lead to a sharp decline of gun hunters because the chance of a buck is slim. If it was up to me I would shorten bow season and make it earn a buck so it’s not just trophy hunters. Leave gun season 9 days to keep with tradition and make it buck only with limited doe tags. And eliminate late bow season and extend muzzleloader season.

In general: I would like to see the cross bow season stay as it is. Reducing it will reduce the amount of people hunting in general. Crossbows allow older people to hunt and busy people who don’t have time to practice a lot with a bow (all more likely to wound deer). I also would like to see the firearm season move a week or two earlier. More people would hunt as they would see more deer during the rut and the weather on average would be more tolerable.

First off I would like to say thank you to whomever put up the signs in the county forest last gun season reminding people that they needed a doe tag specifically for public land north of 64 to legally harvest a doe. I hope to see the same thing in 2020. I am in favor of the numbers that the cdac is recommending. I hope to see the county forest separated as it is for years to come. It is certainly allowing for the herd to rebuild.

Opening weekend we had a group of 17 hunters. It dropped down to 9 during the week and then back up on Thursday. We drive public land. In 7 days of hunting i seen 3 deer. All of them on Tuesday. I cant even imagine how there can be any quota for anterless deer. there should be a ZERO quota for antlerless deer in the northern forest zone of Chippewa county. I don't necessarily need to kill a deer but like seeing them.

My biggest concern with deer and the seasons in recent years comes with most deer I have seen are all those and very few bucks and any bucks that I do see are very small due to having not enough doe tags available for public land. the amount of deer I have seen in past years has also gone down I am unsure if it is due to the lesser amounts of hunters I see on public land or the deer herd size itself.

I think private land owners with 20acres or more should get an antlerless tag WITH the buck tag instead of charging them again for bonus tags. Between my father and I, we own 93 acres bordering the county forest and we have to buy bonus tags in order to harvest an antlerless deer. I feel since we support and feed these deer year round, we should have an opportunity for the deer to give back :)

Report Generated: Friday, May 01, 2020  Chippewa, Northern Forest
I have hunted this area for a very long time and deer numbers are at and remain at an all time low and now with the amount of predation from increased Bear and wolf numbers along with the private land hunters filling there antlerless tags on the public land I don't think deer numbers will ever increase. I think there should be zero antlerless tags for the northern forest area of Chippewa county.

Tag numbers are still too high! The deer population is still trying to rebound in this unit so keeping the doe tags low is a must. The Chippewa county forest public land used to be a very good spot to hunt but now it is hard to even see a deer. We need to kill a minimal amount of doe so the heard comes back as well as the better hunting opportunities. KEEP THE AMOUNT OF DOE TAGS LOW!

There were way too many antlerless tags many years ago. Chippewa County Forest. The deer never came back. It’s buck only but way too late to do any good . There used to be a hunters choice license. Allowed one deer and you were done . Had plenty of deer every year . I’m so disappointed with the way this was done with the bonus tag system I quit gun hunting and only bowhunt.

I think that the goal of maintaining the population is correct. Also the number of antlerless tags is correct as a start to determine effectiveness of control this year. I think there are more deer out there than you think. While turkey hunting last week, I counted 21 deer in one hour (6 to 7 pm). They all looked healthy and most were does or yearlings. Thank you.

Would like to see the gun deer season extended more before Thanksgiving so hunters would have the opportunity to hunt in better weather and with more rut opportunities. Lengthing the entire season will help prevent injuries because gun hunters wouldn't feel pressured to take shots at deer that may be the only deer they

I seen far more does and fawns compared to bucks only seen two bigger bucks all small spick bucks landowners are buying for tags and not using them which is unfair to people who want to put meat in their freezers to much posted land surrounding mfl land and no access to the land but owner getting major tax breaks

It seems like a lot of hunters buy tags for every member of the family, whether they hunt or not. Just so they can harvest more. On a separate note, bear populations are high while the chance for a tag are low. Need more ability for residents to get tags before nonresidents.

Roughly half of adult does seen during the fall season have lost their fawns by predation or other mortality ! Bear numbers too high ! Along with coyote and wolfs ! Most of the hunters hunting public land are buying private doe tags and using them in the county forest

Lower quota limits on antlerless deer for public hunting land over the last few years seem to be working in reviving the deer population on public hunting grounds. I fear that to large of increases to quota limits will offset this progress.

Hunted many years and observe deer size is generally smaller. Crossbows should be regulated as shotguns. Equal or greater accuracy, silence contributes to additional trespassing, poaching, extended hours, and general lawbreaking.

In past 2 years I've only seen 4 deer and I hunt public land between 2 different privately owned land. If land owners have a problem with deer then let someone who needs a deer come in and help them out.

Leave the seasons alone. Charge for antlerless tags don’t give them away. Stop with the antlerless seasons. Maybe charge for a tree stand pass on public land for hang on stands or ladder stands.

This should not be maintain deer numbers unit. This should be increase deer numbers. There are too many predators and not enough deer to be shooting does, even on private land.

I love seeing deer again. I think that the recommendations are on track, but slightly too high for private land antlerless only tags. I think there should be fewer offered.

Public Input on CDAC Preliminary Recommendations - Spring 2020

Clark, Central Farmland

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

312 forms were submitted for this unit.

**Section 1: Information about who provided the input.**

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 119
   - I visit this unit for non-hunting purposes: 72
   - I hunt in this unit: 295
   - General interest in this unit: 57

   The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 278
   - Bow: 160
   - Crossbow: 120
   - Muzzleloader: 88

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 24.68
   - Maximum: 67

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 179
   - Mostly Private Land: 56
   - Public and Private Land About Equally: 38
   - Mostly Public Land: 7
   - Exclusively Public Land: 11
   - I did not hunt in this unit last year: 4

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 11
   - Not too crowded: 24
   - Neither crowded nor un-crowded: 24
   - Somewhat crowded: 23
   - Very crowded: 22
   - Not applicable: 8

**Section 2: Perceptions about the number of deer in the unit.**

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 52
   - Fewer: 98
   - Same: 106
   - More: 43
   - Many More: 10
   - Unsure: 3

**Section 3: Feedback on the CDAC’s 2020 preliminary recommendations**

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

#### If a DMU is in a Farmland Zone...
- Implement an ANTLERLESS HOLIDAY HUNT:
  - Support: 64
  - Oppose: 222
  - Unsure: 26

#### If a Holiday Hunt is held in a Farmland unit...
- EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021:
  - Valid: 117
  - Not Valid: 161
  - Unsure: 32

#### If the Population Objective is not "Increase"...
- Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons:
  - Valid: 29
  - Not Valid: 267
  - Unsure: 16

#### If a Zero Quota (buck only season) is adopted...
- ...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?
  - Valid: Not applicable in this DMU
  - Not Valid: Not applicable in this DMU

### 11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?

#### Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

Comments for  Clark, Central Farmland

Note: the comments presented in this report are the unfiltered opinions of individuals who responded to an online public input form. The viewpoints expressed do not represent the views of the state of Wisconsin, the Department of Natural Resources, or its employees.

i want the deer population to be what is was like 15 years ago when i could go hunting and see deer. I walk in the woods now and some days do not even see a deer. At night at the hunting cabin i can now hear wolves howling every night i did not see wolves 5 years ago. I have seen wolves and many tracks the wolves need to be managed better we don't need this many wolves in Wisconsin. We need to issue more permits to trap the wolves. If you add in the winter kill because of bad winters this makes the population even worse. I think we as hunter only need to harvest 1 deer. I would prefer to pay more for a licence and harvest 1 deer. As it stands i purchase 4 or 5 bonus permits every year so i have options in different areas to hunt because who know if you will see any deer in some of these areas. This gives me options to move to and area where their may be some deer. I end up paying about $60 $74 each year to have options and i will only hunt until i harvest 1 deer. The DNR could make some changed to manage the heard better. In some areas i have seen 12 to 20 or more hunters on deer drives and they slaughter everything in their path if they have the permits. I don't have a problem with this as long as they have the permits but the issue is their are no deer in these areas or very few deer for the past 4 or 5 years because they take everything they are permitted for. To sum it up you need to take the wolf population down and issue more trapping permits. This will help to manage the heard. the DNR cant manage our winters but you can do this. As a hunter for the past 40 some years it is disappointing when i go hunting now and see what i see in the woods. I want to take my grandson hunting here in a couple of years and teach him how to hunt and what are his chances of harvesting a deer in these days. It is slim because the deer population is not their and if the population is not their he will not be interested in hunting if he is not interested in hunting then no hunting license sales. Issue more wolves permits please. Thanks Mark

The youth & handicap hunt should coincide. You need to bring back the back tags. We have had many trespassers on our land during gun hunting and I have been advised to call the sheriff and give a description. So that description is "some guy in blaze orange with a gun". That doesn't help very much. Before I could give a back tag number and they at least knew who they were dealing with. I also know during the Rice Lake massacre, if one of those that was killed had not written a back tag number in the dirt before dying they never would have caught the guy who did it. If that had been now when we have no back tags those murders would be unsolved. YOU NEED TO BRING THEM BACK! I am very willing to pay extra for them. Deer season needs to be earlier in November like the 1st-14th. It needs to be extended past a 9 day hunt. The longer the season is the more people who participate, more money is spent in the areas they hunt in. Earlier in the month would also coincide more with the rut and hunters will have a better chance of success. When you go year after year and hunting is unsuccessful you then decide to just give it up. That means less tags bought, less money for the state & less money for the area businesses where we hunt.
As an advocate for sustaining the hunting tradition and past time that many Wisconsin residents enjoy (as well as license revenues), it is critical to create an environment that attracts the next generation of hunters to the sport. A young hunter that has a positive experience through the multiple interaction with deer, is a much more effective means to ensure the creation of a potential lifetime hunter. Conversely, a young hunter that has a negative experience (i.e. seeing no deer all day), is much more likely to limit the potential that the individual will continue in the sport. I equate this to taking a kid fishing for bluegills versus muskie for generating interest in a sport. As a result, it should be the CDAC's highest priority and objective to ensure the success and interest in hunting for the next generations. To achieve this objective, policies should be weighted heavily on strategies to increase the overall numbers and quality of deer to increase the likelihood of a new hunter having a memorable encounter. Additionally, similar to other states, antler limitations should also be considered and adopted to improve the quality of encounters as well.

First I would like to say deer are shot with bow, crossbow, rifle, or muzzleloader once you purchase a license you should have the ability to take a animal with whatever weapon you choose to take game. people think that since deer are on their property that they are theirs and if they don't want to shot a doe it is their choice but when deer move an round anybody can shoot. second I would make a comment on all deer laying dead in medians on our highways and nobody cares by picking up they are rotting and materials from rotting going into our water supply. third giving out more antlerless will not help if landowners will not harvest antlerless deer but the Mennonites will shot anything that is brown is down then wonder next year when they have no deer on their property and take out all brushy and woods for ag land fourth the whitetail has one of the best defensive system in the animal kingdom. Pumping gas in the same boots you wear hunting is not ideal but the same people that do this also complain about not seeing deer. Crossbows are NOT like rifles but people believe they are...not the case at all. The gun season over Thanksgiving week is long enough. Gun hunting during the rut will kill off all of our breeder bucks...our herd will suffer greatly.

I'm not sure if this questionnaire that I just filled out directly effects this or not. I am against any changes to the time frame of the 9 day gun deer season. If there are needed antlerless hunts like in the past so be it. I also feel that bow and crossbow should be considered the same weapon. I feel that there are many hunters who switched from hunting with a compound bow to a crossbow because it made them feel more comfortable that they will actually kill a deer instead of wound one and not find it (more ethical hunter). I know for myself I’ve never missed an bow season since I was 12 I’m now 38. A few years ago I switched to a crossbow because as a small business owner my free time has become very limited. Which was making it very hard to practice as much with my bow as I felt necessary. By being able to hunt with a crossbow during the bow season I’ve been able to still get out to do one of my favorite past times during one of my busiest times of the year for me. It will deeply sadden me if the opportunity to hunt with my crossbow is limited to less time than with a compound/long bow.

It is a horrible idea to extend the gun season or even to consider gun hunting during the rut. Proposed Nov 1st. If hunters aren't seeing deer it is not due to there being no deer. You can't smell like bacon and eggs on the stand. You can't be munching on dorritos or smoking a cigarette. Its frustrating to see people complaining that they dont see any deer and they are not doing the right things as a good hunter should to up the odds. The problem isn't the deer it's the hunter and the way they hunt. The whitetail has one of the best defensive system in the animal kingdom. Pumping gas in the same boots you wear hunting is not ideal but the same people that do this also complain about not seeing deer. Crossbows are NOT like rifles but people believe they are...not the case at all. The gun season over Thanksgiving week is long enough. Gun hunting during the rut will kill off all of our breeder bucks...our herd will suffer greatly.
We own and hunt on some land in Clark County. It is farmland in the Central Farmland zone. I run trail cameras all year round and observe a very large deer herd in the area in the fields and on camera. We had an aggressive deer harvest plan on our property to help reduce the population. The deer have wiped out the understory in the woods. We had a mandatory harvest in the woods last winter and we wanted to reduce the deer population so the next forest stand has a chance to regenerate. The timing and the weather conditions last season did not aid us in our deer management goals. We did not harvest as many antlerless deer as we wanted. We hope the DNR will offer the tags and give us the season framework to accomplish our deer management goals this season. We are not alone. In talking with the farmers in the area, they are concerned with too many deer too.

I hunt in the mead lake area exclusively on public land. I believe deer numbers are dropping again because they moved the farm land zone from highway 73 west to county rd M. Why that was done made no sense as there is way more forest than farm land. Doing that opened up thousands of acres of public land to the doe slaughter. Alot of land owners choose to fill doe tags on public land rather than shoot "their" does on private land. The over population of does is on private land so why give out free tags to be filled in the Clark county forest. The deer heard was coming back nicely once they quit giving out doe tags in this area and now the heard is dropping greatly on public land. I hope to see this changed in the future to keep hunting fun for all. I hope there is a decent years left in ten years to teach my young kids to hunt.

Gun Deer season starting earlier is a TERRIBLE idea! The best part of bowhunting is the rut which any hunter can experience with archery equipment or crossbow. Extending Gun season would in no way promote new hunters to bow/crossbow. If that is the case just open the entire hunting season up to any weapon. Another bad idea is a week of no hunting before gun deer and not being able to use lesser weapon during Gun season. Also by proposing a crossbow only season you just divide hunters the sport must grow and alienating any segment of legal hunting is counter productive! I realize their is a lot to juggle here - but it should be viewed through a lens of including new hunters especially youth in the Heritage and Tradition... Regards

LIMIT archery especially with the new bows and crossbow, cut there season, many of nice bucks and many does are killed off before gun season gets here. Many hunters around the area don't see any deer during the gun season. The past two years I haven't been able to fill my antlerless tag, we just don't see any deer. Many are getting frustrated and aren't going to buy a license anymore. Once season is done the deer are all over in the fields. Add revolver to the muzzleloader season. Think some hunters would like to try it. I know we can use them during the gun season, but can't get close enough to any deer, close all seasons for week then open a muzzleloader/revolver season

I hunt in the part of the farmland zone that was removed from the forest zone a few years ago. In six partial days of gun season hunting, I saw about 80 deer. I shot four and two of my neighbors shot a total of five. My overwinter snapshot Wisconsin trail cam had about 1900 pictures of deer with up to 12 deer in a frame. There are too many deer in this area, and the population needs to be reduced to prevent ag and forest damage. More bonus tags need to be available in this area. Also, it appears you have transposed the Public/Private bonus tags in your minutes. It is opposite of that stated in this survey. Steve Gress

I believe they’re needs to be a focus on restructuring the crossbow season and regulations. I believe for the length of the archery season a crossbow is too effective to be used by anyone. I would support either a shortened crossbow season or for implementing a system of age/health permitted use of the crossbow. I also believe many people using a crossbow are treating the weapon more like a firearm, the capabilities to shoot further with the advancement of the technology of crossbows is leading to more hunters to take unethical shots and is leading to an increase of wounded deer that are unable to be recovered.
I believe that the area between State Hwy 73 and Hwy 10 in eastern Clark County should be removed from farmland and placed in central forest. This area is mostly forest, and the public access section have low deer populations due to the number of available antlerless permits. I realize that Hwy 73 has been a unit line from the beginning. My observation is because of the number of antlerless permits available and the limited amount of public access this area receives it gets excessive pressure. Habitat wise it is closer to central forest than central farmland. Steve Schwanebeck 715-572-0865

With wolf numbers out of control the deer population don’t stand a chance between bear and wolves. The northern part of Wisconsin used to thrive with hunters from all over. Now it is a ghost town because there are no deer because of predators. We should also be charging non residents reciprocal of what we are charged to hunt their states. If a non resident can show proof of land ownership than they should be allowed to have a resident license. Wisconsin will continue to lose Hunter dollars if the wolf population goes unchecked.

Hunting Clark county Central farmland I have seen fairly consistent numbers with a slight drop in herd size over there last couple seasons. Unfortunately it appears to be both buck and doe numbers. We have always had an unbalance herd in our area with way too many does. However early antless hunts have also seemed to take a large number of button bucks. I agree with issuing antlerless tags along with the normal hunting season and late season hunts. I agree with the numbers being used to justify the current herd goals.

A area that needs to be addressed is the bow hunting, and high rate of buck kill, many bow hunters will only shoot a buck, many hunt until they have shot a large buck, you need to address this in many units, including this one. I would propose, only 1 buck per year, either with bow, or with rifle. If only a bow hunter, then he can only harvest a buck, every other year, the buck to doe ratio is getting way out of line, the longer you wait, the bigger problem this will be. Larry Oehmichen

I feel the deer licenses should go back to the way they use to be a buck or doe with a bow tag and buck only for a rifle tag unless you sent in and received a antlerless bonus tag. My concerns are also with the number of predators in this unit with wolves (not huntable) bears, bobcats and coyotes the fawn recruitment is not what it use to be and more doe tags does not help the matter. Wolves are the main concern there. I am also opposed to a longer rifle season frame work. Thank you.

I would love to see air rifles be made available for all hunters. I have talked to a number of hunters and they would like to see this as well. The air rifles out today have the speed and energy to ethically harvest a deer. We should be doing all we can to allow for our young as well to have other opportunities available. I know a number of hunters suffer with hearing loss issues and that’s another reason they would like air rifles to harvest an animal.

1. Change hunting season to the beginning of Nov.(1-14) 2. GO BACK TO ADMINISTERING BACK TAGS!!! That way hunters and DNR officials can identify trespassers. Remember when the family of hunters was killed by a trespasser I believe near Rice Lake many years ago, the killer was identified by his back tag # that one of the hunters scratched into the dirt before he bled to death. BRING BACK THE BACK TAGS!!!!!! 3. Combine youth hunt with disabled hunt.

With no longer having check in stations for deer, it really opens the door for not following guidelines and too many unregistered deer. I think we really need to go back to deer registration stations. One other very common consensus when talking with other hunters, is it really takes the fun out of talking with other hunters about the hunt and showing off their deer. Please take this into consideration as this is a very hot topic locally.

I hunt about 5-6 days of the 9 day gun season. Between my group and I we just don't see the deer we used to. I believe baiting is the biggest problem but also believe the numbers are low. Amish harvest is also a big part as I know many do not register their deer and they are shooting them out of the Buggy's with Crossbows now. This is a very efficient way for them to take deer as the deer don't run from the horse & buggy. It's a shame.
1937 Deer baiting should be allowed. It is no different than standing crops and natural fruit trees and acorns. The CWD concerns are low and have been used for excuse for poor deer management as hunters have cooperated and tolerated these changes with no measurable proof of damage to our deer herd. Data used from single deer farms has been used against hunters and does not reflect true picture of the deer herd health in my opinion.

1938 Wolves, amish poaching, and registration only being done via online registration has lead to severe numbers of deer not being registered in our area leading to seeing very few mature buck not even including buck just mature deer of any sex. Locals are killing the wolves as fast as they see them and still not keeping them in check. Would like to see the deer herd grow for a few years with limited doe permits.

1939 Is their any possibility to have a 4 point on side antler restriction for clark county. Their is way to many young buck getting shot with properties getting smaller. Many out of state tags could we sell with big buck running around. We could do a 3 year trial. We could still let junior an first time hunters shoot small buck... Or Make that only one buck a year per person.

1940 Quit giving out bonus tags like there candy. If you need the money that bad then raise the out of state license prices that we have to pay when we hunt other states. Tags should be on a lottery draw and should be at least $450.00 with a $30.00 application fee non refundable. If you are drawn for a license then the license would cost an additional $100.00.

1941 I appreciate the job that is being done to maintain and keep all of Wisconsin's wildlife numbers and viability at an optimal number for all to enjoy. I would welcome the opportunity to visit about any topics for which you would like additional input. Thanks very much for all that you do. We are all in this together, and Wisconsin is the perfect place to be!

1942 Too many deer on private land, but landowners do not allow other hunters because of overharvesting of bucks. And the no backtag law creates more mistrust. Also believe it is time to outlaw baiting statewide because of CWD, it's just foolish not to because it's changed the way deer behave by hunting season, and if you don't bait you almost feel disadvantaged.

1943 My main concern over deer population is predators (wolves) that are not huntable and too many antlerless tags together equals declining deer numbers. Most people I talked to in area agree. No questions on extending firearm season. NOT if favor of extending rifle season, think it appease low percentage of hunters. Not a good idea.

1944 Hunter numbers will continue to decline when little to no deer are seen. Young hunters have lost interest in the sport due to not seeing animals. They are interested in having the opportunity to see them, not just harvesting them. When they go out a dozen times and not see a deer of any kind, they find other things to do.

1945 I feel that maybe we should consider one either sex tag for archery season and gun season as well for a few years establish a very good healthy heard of deer then manage it at higher numbers. It is hard to get youth interested into hunting when you don't see a lot of deer, they get bored easily of it and lose interest.

1946 Please DO NOT support any extended 19 day gun seasons. Would like to see December Antlerless Hunt eliminated. It eliminates a bow hunting weekend for 200-300 does to be shot? How many more are taken than just an average archery weekend while we are eliminating the possibility to hunt a buck with the bow.

1948 Keep Clark county headed in the right direction! I feel overall deer numbers are just a little low but I would say quality from what I have noticed is down, hopefully that will start to get better in the near future! Thanks again for all your hard work and dedication to the deer herd in Clark county!

1947 There are too many special hunts. Youth hunt, disabled hunt, veteran hunt, enter-your-own name hunt... These do not seem to be included in the CDAC recommendations and they should as my impression is that they do take a reasonable number of deer that should be considered in the management decisions.

<tr>
<td>1949</td>
<td>Don't change or lessen the archery bow season, Don't make it a longer Gun Season, Don't extend the Crossbow season. I would love to see a 5 county area that would become, a Trophy Buck Zone, Only one Buck per year per person(Gun or Bow) and It would be a earn a buck area.</td>
</tr>
<tr>
<td>1950</td>
<td>I think that the numbers set forth by the CDAD are about right. We think that the deer numbers have recovered significantly from the 2014/2015 winter kill and we are seeing enough deer on our property so we have started harvesting antlerless deer again.</td>
</tr>
<tr>
<td>1951</td>
<td>If we keep harvesting all the does the way we have been the population is going to continue to drop! People will get as many tags as they can and just shoot whatever they see just to shoot something! Too many unethical hunters in this area!</td>
</tr>
<tr>
<td>1952</td>
<td>have you thought about doing a antler restriction, the number of year and a half old bucks shot are crazy, I looked into where they did it in Michigan and it got a lot of support and actually raised hunter numbers in those units</td>
</tr>
<tr>
<td>1953</td>
<td>Do not mess with the bow hunting season. Let it open in mid Sept and run as is. Don't mess with tradition and what we've all grown to love n enjoy. Please raise all out of state deer license. These are our deer.</td>
</tr>
<tr>
<td>1954</td>
<td>I feel we have a deer herd very appropriately in balance with our carrying capacity and surrounding agriculture. (I believe the population certainly has some headroom to grow before it becomes a problem)</td>
</tr>
<tr>
<td>1955</td>
<td>You need to reduce harvest numbers, between hunters, predators, and the tough winters, there aren't no deer around anymore. Focus on more of the predators, i.e wolves and coyotes killing everything off.</td>
</tr>
<tr>
<td>1957</td>
<td>Please think about QDM state wide by restricting bucks to 3 points or more on one side Us older hunters on private land are tired of letting small bucks go by only to be shot when they go off our lands.</td>
</tr>
<tr>
<td>1956</td>
<td>I would like to know or see some information that talks about poaching or how to combat poaching in my area. I haven't seen a warden in five years. I would like to know how I can help prevent poaching.</td>

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 45
   - I visit this unit for non-hunting purposes: 98
   - I hunt in this unit: 341
   - General interest in this unit: 49

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 321
   - Bow: 196
   - Crossbow: 134
   - Muzzleloader: 89

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 25
   - Maximum: 66

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 85
   - Mostly Private Land: 29
   - Public and Private Land About Equally: 58
   - Mostly Public Land: 62
   - Exclusively Public Land: 105
   - I did not hunt in this unit last year: 2

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 16
   - Not too crowded: 63
   - Neither crowded nor un-crowded: 62
   - Somewhat crowded: 56
   - Very crowded: 54
   - Not applicable: 3

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 89
   - Fewer: 109
   - Same: 104
   - More: 34
   - Many More: 11
   - Unsure: 7

Section 3: Feedback on the CDAC's 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
- Implement an ANTLERLESS HOLIDAY HUNT: Not applicable in this DMU

If a Holiday Hunt is held in a Farmland unit...
- EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: Not applicable in this DMU

If the Population Objective is not "Increase"...
- Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: Not applicable in this DMU

If a Zero Quota (buck only season) is adopted...
- ...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? VALID 154, NOT VALID 140, Unsure 60

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?  
**Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very**

Wolves are taking over much of this unit and it's sad to watch and frustrating to be an avid hunter and see the deer population suffering due to the predation. You say you want more hunters afield, more licenses sold but how can we do that if the deer are not out there. A large portion of the hunting population is getting older, so they look at it as if I can't go out and see a deer what's the point. Want new hunters to join in, well if you can't put deer sightings in front of them yeah good luck keeping they're interest going. Add in the sound of wolves lighting up the evening hunts minutes before prime time and you have to walk out the direction that they were just howling, yep that's a great feeling and kids don't like the sounds of that either. I never use to fear anything in the woods back in the day but now hearing them on a regular basis and knowing they are out there it makes for less enjoyable hunting and a more hasty, nervous, hair stand up on the back of your neck walk out of the woods at night. How has that benefited WI hunting in any way, it hasn't negative cons down the list without a pro that I have found yet. I've taken up hunting out West and love it. I see deer every time out and it's great. I am 37 years old and a traditionalist and watching the structure of the WI hunting tradition and all the changes over the past years has been hard to watch and sad. I have a 10 year old son that loves to go with me hunting and its great and makes me a proud father but if Wi continues to go in the direction that it is and has been we will look forward to our out West hunts every year and spend our time out there verse here in WI. Thank you for the option to voice my opinion, I hope to see some quality ideas and suggestions in the future verse the questions that were brought about this year which seemed silly and poorly thought out if you ask me. 19 day gun season, come on, shutting down hunting for the week before gun season, taking away one of the most highly hunted weeks of the year, just so people with guns that have a huge advantage over bow hunters already might have a better hunt, seriously! Moving the bear season opened back a week and jamming it right into the bow openers lap was a poorly thought out mistake as well. Not sure where that idea came from but that was a bad one. I said with my last bear tag a few years ago I'd never buy another one and these new changes have solidified that decision for the time being until something changes for the better. The crossbow thing and the issues that revolve around that are another sore topic. Should have left crossbows to elderly people and people that can not draw a bow back.

There still is a lack of deer in the Central Forest compared to prior years dating back almost 10 years when i noticed the numbers drop off. Gun season has really been disappointing for several years now. The last 2 years of gun hunting, our group has seen less than 6 deer each season- we used to see 10-20 deer for opening weekend. My (2) nephews didn't even show up last year (2019) to hunt (teenagers). Why would a teenager now hunt in cold weather to sit all day and not see a deer? Yes our group hunts all day from dawn to dusk and that seems like a waste of time nowadays. There is a lack of gun hunters as well in our area compared to years ago-maybe many have quit because of the low deer population.... The lack of hunters in the woods means less deer getting pushed for others - primarily the midday movement. The deer numbers are not there, still. The State needs to eliminate bonus tags for adults and juniors. Give us all a bow tag (used for either sex) and then when you shoot (1) deer, your done for the year. That is how it used to be years ago. Gun tags should go back to a hunters choice - every other year you can shoot a doe, like it used to be. You get the deer numbers up, you will get more hunters back and more spending money on licenses, more for the local economies, etc,etc. Certain parts of Central Wisconsin are becoming like Northern Wisconsin - not much for deer to be had. Boulder Junction for example used to be a big deer hunting destination, your lucky if you see any hunters show up anymore. I can say this because i know people who live there and what a shame for that small town and the dollars that would bring in. Your losing the interest in all of us that once loved this great sport and tradition. Stop issuing so many tags and listen to us who have the real data going back 30 years or more of deer density in our specific areas of where we hunt.
I am relay concerned for the future of my family concerning deer hunting. If they can’t afford buying or renting some private land the grandchildren just won’t be able to sit and see hardly any deer. At my age of 72 and spending over 40 years of hunting the same area in Clark county (some years very good and some very bad) I still enjoy sitting out in the woods. The last few years have been the worse for me because I have not seen a deer but just think what that will do to the Grandchildren that want to begin hunting. The hunting pressure has gone way down (at least 50%) because the only people I still see are the old guys like me that have always hunted here. I can honestly say the biggest problem for the area I hunt with my two sons (saw one doe last year between the three of us hunting only the first two days) is the be wolf population right where we hunt. My son witnessed the killing of a small younger deer a few years back on opening day of hunting. The past few years I have talked with the wardens for that area about the wolves in this area and they answer me each time with the comment just come and listen after midnight. I was hoping that the wolves would leave for greener pastures. I know my kids will have to do something different if they want their kids the chance to enjoy the deer hunting traditions of my family. I listened and observed all the statistics, graphs and so on to try and maintain a healthy deer herd. I think they are doing a good job. For the most part my friends are seeing deer and that keeps them happy. I just can’t afford deer hunting land and I don’t have friends that are going to invite me to theirs.

First off, I'd like to thank the volunteers and professionals of the Clark CDAC for their contributions to the effort. I suspect it can be a thankless job, but I appreciate what they do. I support their recommendations. Our hunting party had a good year in 2019, which I don’t believe can be said for most of our hunting neighbors. I myself have not seen the numbers of deer while hunting, that I did when we bought our property back in 2006. We have seen 3 bobcats on our property regularly, bear, and also wolves are on our trail cameras. We have 7 grand kids; and the number of predators we see has caused me to mow a larger area around our playgrounds, and limit the kids playing in the woods by themselves. I wish the wolf lovers would contribute funds to the DNR in the same amount as all other hunters. The real wolf population needs to decreased down to the goal. I don’t think our deer harvest limits will help to increase the deer population as much as will the appropriate and regular harvest of wolves. Finally, I hear lots of complaints about cross bow users having an unfair advantage over other bow hunters. When I looked at the total archery harvest for Clark Central Forest for the last few years, the total archery kill has not increased. That tells me that folks have just chosen different tools (crossbow vs compound/longbow). As hunters we should stop whining among ourselves; we are under attack by "antis" and we need to stick together. I am in favor of keeping the traditional time periods for bow and gun hunting, and don’t favor all of the additional periods/seasons. thanks.

As an advocate for sustaining the hunting tradition and past time that many Wisconsin residents enjoy (as well as license revenues), it is critical to create an environment that attracts the next generation of hunters to the sport. A young hunter that has a positive experience through the multiple interaction with deer, is a much more effective means to ensure the creation of a potential lifetime hunter. Conversely, a young hunter that has a negative experience (i.e. seeing no deer all day), is much more likely to limit the potential that the individual will continue in the sport. I equate this to taking a kid fishing for bluegills versus muskie for generating interest in a sport. As a result, it should be the CDAC’s highest priority and objective to ensure the success and interest in hunting for the next generations. To achieve this objective, policies should be weighted heavily on strategies to increase the overall numbers and quality of deer to increase the likelihood of a new hunter having a memorable encounter. Additionally, similar to other states, antler limitations should also be considered and adopted to improve the quality of encounters as well.

<tr>
<td>1989</td>
<td>Over the last 20 years of hunting in this area the number of deer has steadily dropped. The deer population rapidly declined when the Bonus Tags and T Zone hunts were introduced and have not bounced back since. I believe over harvesting of antlerless deer and the number of deer the wolves are taking out are the main two causes. I spend a lot of time in the woods in the fall and see VERY few deer. It is getting to the point where it almost isn't enjoyable sitting days on end without seeing a single deer. The land can easily support a larger population as we have seen in the past. The numbers need to increase in order to keep people hunting. I have also seen a decrease in the amount of hunters in the area and I believe it is due to not seeing any deer while in the woods. If we want to keep hunters in the woods and introduce new hunters to the sport we need to be able to have them see deer when hunting. I also believe a reduction in the wolf population in this area would help tremendously. I appreciate you taking the time to reach out to hunters such as myself regarding this matter.</td>
</tr>
<tr>
<td>1990</td>
<td>I've hunted in Clark county, central forest, for 50 years and from my experience, there are less and less deer population in this area. My group of 6 hunters, feel very fortunate to actually see a deer on opening day. I actually saw 1 deer in 2019 opening day. First deer that I've seen in 4 years. And we hunt hard. My group of hunters (6) saw a total of 7 deer a few wolves and coyotes in 2019. So we summarized that the wolves are getting our deer. We sit in our stands all day and not go in for anything. In my humble opinion, we need to 1) eliminate the doe harvest completely with an exception for some youth hunters. 2) Going back to the past rules on crossbows where they can be used only by the elderly or handicapped. 3) Eliminate Doe harvest by all bow hunters. Suggestion: how about selling a deer permit where a hunter buys a tag and is only able to get 1 deer in any way that the hunter would like to get it. Bow, gun, muzzle loader, extended season ect. That would prevent the over harvest of deer.</td>
</tr>
<tr>
<td>1991</td>
<td>Please ban baiting in this unit. Far too many hunters baiting over 50 lb bags of corn feed per bait. I've seen it personally at multiple baited sites while scouting the forest. I also know far too many hunters having 10 plus baits each on any given day of the week before and during regular hunting season. Every hunter using the synder and wild cat campground are 99% guilty of this practice. The majority of public hunting acres are littered with bait piles and that changes the deer activity/movement to nocturnal. Also a number of hunters at synder and wild cat don't register thier antlerless deer harvest. I've heard one group of 3 hunters harvested 23 anterless deer during the 2019 archery season while still holding thier one bonus doe tag because they never called in to register after taking thier deer harvest home. They bragged about it too some of the fellow hunters/campers at synder and wild cat. So many hunters using clark county central forest practice this. This is Unacceptable. Please do something about it soon.</td>
</tr>
<tr>
<td>1992</td>
<td>Increasing available permits to hunters on public lands can further economic contributions to the local economy as compared to hunters on private properties. Anecdotally observed decreases in herd population over the years is also a major concern for hunter success rates and overall satisfaction. In my experience, overcrowding on Clark county public lands is also a major source of frustration and growing concern regarding hunter safety. I support an overall decrease in permits but increasing public/private permit availability ratio in order to protect deer populations and stimulate greater local economic contributions. Additionally, increasing the duration of gun deer season could further help local economies and possibly limit overcrowding to boost hunter morale and safety. Finally, an authoritative, consolidated, easy to access and understand source of information on public-private land boundaries and accessibility could further minimize overcrowding and again increase overall hunter satisfaction and safety.</td>
</tr>
</tbody>
</table>
1993 I have hunted the central forest for 15 years know and I can say it was great when we started hunting there. Through over harvest by hunters and the large predator increase the hunting has become less desirable. Numbers of bears and wolves have but a big damper on deer numbers every year. Most mornings I find. Fresh tracks of wolves. A reduction in predators would be great. Also in the Congress they were talking about removing the zone and only having units. I hope that it will stay separate because of the vast difference in the county land usage. Last I would like to see an antler point restriction put in. 3 points or more on one side. It worked in Pennsylvania and Missouri to increase hunter happiness. I believe that it would help with people's willing ness to shoot a doe to put meat in freezes. In lone run it would also produce a greater number of bucks that have big antlers. Which would increase excitement for hunting. Thanks

1994 I have one big concern. I had heard that there is talk about only allowing crossbow hunting for the month of October. I enjoy hunting during the rut but due to a bad shoulder I am unable to hunt with a compound bow. This is concerning to me. It actually may cause me to not bow hunt at all. I also heard you may extend the gun season. I do gun hunt and enjoy it very much. I would like to see gun hunting open a little earlier than normal. Maybe a week earlier and make it so that it can only be solo hunts. No party hunting, no driving, etc. Just a suggestion. Also, I do like crossbow hunting because you can achieve a quick humane kill with the crossbow where that is not always the case with a compound bow. A crossbow is not like shooting a gun. You still need a clear shot to ensure you get the shot you want. I see a lot of attacks on crossbow hunters. I have yet to get a trophy buck in the four years i have crossbow hunted. I got one younger buck. Thanks

1995 I think with the abundance of data available, including a couple of years now of the revised Forest Zone, and the unusual weather conditions during the 2019 gun season, the committee has arrived at a fair conclusion on how to provide an adequate hunting experience and on how to continue working to increase the deer numbers in the Forest Zone. In the early 1980s, there was an increase in the number of hunters when the economic times were a challenge. It is very possible that in 2020, a similar increase in year over year hunters may occur due to the COVID-19 crises. That could create an anomaly in the final results. The success rate on Bonus Permits has dropped off from 2017 by about 30%, but has been consistent the last two years (2018 & 2019) with the total kill down 10.84% in 2019, but with the total kill of Bonus - Public down 27.42%, thus cutting back on Bonus Permits, it may help bring the success rate up.

1996 I was very up set with the wording of the "Special Cross Bow season. I know a lot of people did not understand that question. You should have ask if the favor in eliminating part of the cross bow season. I think all of Wisconsin Bow Assc members should not be allowed to vote on this. Cross bow lic is the only lic that are increasing in Wisconsin. The cross bow is more traditional them the compound bow. I also think your bear baiting question was miss leading. To help the dear heard and help us bear hunters in zone "C" you need to get rid of the dog runners. Those dogs chase bears off other hunters bear bait pile.They also get deer wild up. It is not the baiting a bear that gets people up set it is those dog runners who do not give a darn about us private property. Eliminate dog running where dogs are not allow to hunt. Also make it legal to shot those dogs on private property they are trespassing .

1997 As someone who has hunted the Clark County Forest since I was a kid, I would love to see 0 antlerless tags (except youth hunters). The amount of deer in the county forest is very low compared to what I experienced in the past (my family used to do very well, we worked hard for them but it was worth it when we would actually see deer--not the case anymore). I have 3 young sons who I would love to hunt, but based on how the hunting has been recently, I’m worried if I’ll be able to keep them interested. If we do have antlerless tags next year, can we have some kind of arm band or something to mark the person has an antlerless tag? Otherwise, I sometimes wonder if people shoot antlerless deer on public and then tag them with private tag. Thanks for reading.. I really hope changes are made, like I said, i fear that future hunters won't have interest (unless they are lucky enough to hunt good private land)
I really dislike the new zones. I feel like it should go back to old unit numbers so you can manage more areas. Plus I have Clark and Jackson county border on my road so I would have to buy 3 different kinds of doe tags to hunt places I used to hunt. I feel like private tags and public tags are stupid as well. The deer are moving through both and just seems like something to write more tickets out. It used to be so easy to know all the rules and seasons when I started hunting. I used to see 8 times the amount of deer as well. Now every year you have to read through the entire reg book because there is so many changes year to year. Now thinking of a 19 day gun season. Just plain stupid. Since we brought in the wolf's and t zone hunts. You just wiped out the deer herd and now it's hardly enjoyable going out because you usually see nothing. Just my 2 cents why it sucked hunting the last several years

I heard that some people are complaining about crossbow hunters and that CDAC is looking to trim the archery season for them to two or three week of the entire season and excluding crossbow hunters from hunting the Rut. I think that is a very bad idea. In my opinion I would very much like a rule in place that would allow only hunters with a disability or hunters sixty years of age or older to be licensed and authorized to use a crossbow. This would be close to what the old requirements to use a crossbow used to be. I have been hunting for 50 years and in my youth never had the opportunities the youth of today have. I don't think kids under the age of twelve should be authorized to hunt with a mentor. They should go through the safety program and sit with a mentor to learn about hunting before, putting a firearm in their hands and at twelve years of age hunt with a guardian.

Seems to be plenty of hunting pressure in this unit. Have hunted in it my whole life and the deer numbers last year seemed to be lower than the previous couple years. I still was fortunate to take a buck and a doe but I know of quite a few hunters that didn't see any deer at all. I usually run about 15 trail cameras from late summer through late archery season. Predator numbers seem to keep rising. Lots of wolves, bobcats and coyotes on the cameras. Deer numbers seem to be down. Most all of the bucks that I had on my cameras had shed their horns before Christmas. Some had already shed in the middle of the muzzle loader season. I found 3 dead deer this spring in a pretty limited time shed hunting. I believe 2 of which were wounded bucks that were on my cameras after gun season. Do what you wish with this info.

They are logging Bald Peak lane during deer season. I understand it provides new habitat and economy but recommend no logging Thurs before thru Thanksgiving week. Also no hunters (Very few) indicate no deer if I am correct. Those metrics will go hand in hand if more deer. I cover a lot of land off Bald Peak and haven't seen a deer in 2 years. Been there 40 years. We may stop going and rely on our private land bow season. We used Bald Peak as a central family gather but that is dwindling. Heard wolves also chase deer out. Recommend review of that. No gutpiles...no chickadees...whole ecosystem seems wiped out. Maybe see a squirrel here and there. I would always keep Youth hunt and permits available. Let does reproduce to increase the herds. Plus meat industry getting slammed more families will rely on venison.

When I started deer hunting in this unit 42 years ago, hunting was fun and enjoyable because deer sightings were numerous. This past rifle season my son hunted for six days and I hunted four days. Neither of us saw a deer. We did capture numerous photos of wolves all fall, with one photo containing seven different wolves in the pack. As a result of our horrible hunting experience, my son and I went wild boar and ram hunting in Tennessee in Feb of '20. We saw tons of game and filled out tags. What a great experience! If something isn't done to increase the deer population (i.e., reduce the wolf population and stop killing any and all does) we will likely cease the purchase of hunting licenses in Wisconsin and will opt to spend our money in other states that are much more hunter experience centric.
Our family has hunted the Clark Forest unit for over 35 years. The deer herd really started to decline when the Party tag issuance stopped yet you still give out antler-less tags each year. I spend at least 3 full months in these woods each year scouting and just can't understand why the DNR wants to decimate the entire deer herd by over harvesting on a yearly basis since the early 90’s. If in fact as some say it is for the revenue, then raise the cost each year. That would be a wonderful trade-off rather then seeing no deer. Not only has the deer herd been declining each year due to over harvesting but with that also deer hunters have decreased as well. This DMU needs to stop anterless hunting for several years in a row so we maybe will see more then 1 or 2 deer seen in the season-PERIOD!

I have hunted the Koehler Ford Road area since 1988 and have seen the deer population drop to 20% of what it once was. We have a +/-15 man crew and do drives so it is not as if we just sit and wait. From 1988 to 2006 it was common for us to move 20-50 deer in a day. Now it is less than 50 deer a year. The deer that are there are much bigger (buck rack size) with 8 mounter size bucks taken in the past 10 years, only 4 in the 20 years before that. But my preference would be a higher population than bigger bucks. I have not shot a doe since 2007 in this area due to this fact. Trail cams now produce more wolf pics than deer. But even the wolf population seems to be a lot less than it was 10 years ago. After opening weekend there are very few hunters compared to 10-15 years ago.

I was to the Deer Committee about 3 years ago in Loyal, WI and there was about 6 spectators there and the DNR and the committee. First of all most on the committee do not deer hunt, the next thing at the meeting it was a consensus that the doe harvest was to high by all the spectators there or hunters as we are the ones in the woods. Seeing that the hunters thought there doe permits was to high did not make any action by the committee as they did not listen to the hunters at the meeting. So I quit going. I have hunted this land for over 64 years and know a time when the deer used to migrate to Rock Dam. I seen them going west on the first snowfall. Used to stand on what is Hwy M and there deer used to go right past me on both sides. in a bunch. Just for your info. Ken

I understand that where we hunt in the county forest, we are surrounded by farmlands heavy in deer. - but the forest area we still see too few deer. The establishment of 2 different approaches to management (farm VS forest) was the best thing the DNR has done for this problem! Please continue to manage these vastly different areas in accordance to their specific needs. As for deer kill quotas and bonus tags and additional seasons etc. My preference is to drastically decrease until the herd returns. Why are you offering any of these tags - until the herd returns? I am especially against the antlerless tags on the public land, where land owners go to public land to fill their doe tag, - (like they had done for so many years previously)

I live on 30 acres by Neillsville and we now have an over abundance of deer with some reportedly dying of disease. I have seen deer in my backyard with large patches of hair missing. It is very difficult to get a coveted private land doe tag. There are too many deer on private land with no one killing does, but the public land is where all out of town hunters have to hunt. I propose an earn a buck policy on private land only, with the does having to be killed on the private land hunted. The number of doe tags on public is a little low in my opinion as I’ve been seeing good numbers of does and fawns in areas without the overpopulated wolves.

To accurately control the whitetail herd in Clark County forest zone, we fist have to control the Timber Wolf population. I have more pictures of wolves than I have had of deer. As my children are at the age to start hunting it’s hard to get them into it, sit all day not to even see a deer. Ever wonder why hunter numbers are dropping every year? Hunters are sick of not being heard. We that spend most of our time in woods in the spring and fall are just feed up with it. Only if the state of Wisconsin officials had a back bone like those of the western states that allow a hunting season for the uncontrolled predator.
2009  Winter of 2019-2020 was relatively mild in this unit on public land. Over the winter/spring I found 35-45 sheds from many different bucks across the entire central forest unit in clark county exclusively on public land. The acorn crop this year was excellent providing an abundant food source for the deer over the winter. Throughout the winter and spring I came across about a half dozen wolf kills where the deer were yarded up for the winter. They were mostly last year's fawns. Only one of the 6 was an adult doe. Every week this winter/spring I spent 40-60 hours on public land in this unit between work and recreation.

2010  I hunted more this year than the last 10+ in the butler lanes area (early season archery, gun, muzzleloader and late season archery.) Definitely seeing an increase in population and quality deer. Based on hunting and deer cam slightly concerned with the lack of doe population. Had plenty of bucks in the area, but very few does. Overall, much better quality hunting than 2010-2015 +\- a few years. I do not miss the large groups making drives and shooting every deer they see when antlerless tags were abundant. Can definitely see the difference (positive) in deer population since cutting back antlerless tags.

2011  I left comments in the Jackson Cty Forest zone that could be repeated here. I'd like to add that archery season the number of hunters is manageable, but gun hunting is very unsafe in some areas. More private lands need to open up to hunting. It's a shame that QDMA and other programs don't have some sort of program they open up and share they're sanctuaries or do some sort of mentorship program. I've had a hard time going to their fundraiser dinners anymore when it's all about them and their sanctuaries...they can find other methods to raise money then getting it from this public land hunter.

2012  County has allowed *extensive* logging in a LOT of the last remaining hardwood/tree stand huntable areas. I recognize that this has potential benefits in terms of browse, but a lot of the logging the past two years has been in areas that were already recently select cut and are now extra select cut. It has turned a lot of forest into oak savannas and ruined some good areas. This has the added drawback of consolidating hunters into the few remaining hardwood forests. Finding and learning a new area only to have it logged out the following winter is getting damn obnoxious.

2013  bring back in person registration. distinguishing public and private land antlerless tags have helped a lot. We use to run into large groups of hunters that were only hunting the public land to shoot does because they didn't want to shoot them on their private land or especially when it was EAB. If EAB comes back without distinguishing between public and private it will once again destroy public land hunting in this area. We are finally starting to see deer while hunting!! Something needs to be done about the predator/wolf population in the central forest zone.

2014  In my opinion. Especially for young hunters as well as myself. Part of a successful hunting season is number of deer seen. The deer numbers have become so low that the hunt has become less desirable. I have refused to shoot antlerless deer for several years due to the population decline. Selling an antlerless tag per day allows those individuals that shoot brown it’s down to stuff their pockets with tags. Self registration allows for more illegal harvest. Failure to enforce baiting regulations also allows some hunters to actually charge the natural behavior of deer.

2015  I have been hunting in the Clark county forest area for 30 plus years and have seen the quality of the hunt deteriorated year after year we hunt both public and private lands. It has come to a point where my children and grandchildren don't want to sit day after day and see nothing. we have gone from a party of twelve to a party of five. This also has an economic impact on the area. We need to work together and resolve this and quit passing new laws that benefit somebody's agenda. The DNR has not made it better over the years they have made it much worse.
2016 I will use this space to repeat as I do every year that we need a wolf hunt in the state in my opinion if you look back to 2007 in Clark County which Black River was once called the deer hunting capital of the state the kill numbers are down by 66%. Much of this I blame on wolves and if you look at the auto accident numbers they are actually up with a lower herd then we had in 2007. I feel when the herd was up people drove more safer thinking they would encounter deer now we know when we hunt we don't see any so we don't drive with caution.

2017 Most people I know in this DMU are buying bonus tags to prevent the doe harvest. They and I would rather eat the 125 then let population suffer for years down the rd. In 30 years of hunting public and private in clark county the hunting pressure has declined substantially, but the number of wolfs have not. As a group we see them quite often and get numerous trail camera photos of them every year. I know we cant do anything to reduce there numbers but we cannot keep the deer population low and expect hunters satisfaction to stay high

2018 The past 3 years sitting on a stand all day opening day and Sunday morning my brother-in law & I did not see a deer. This was pretty much the case with most of the other 15 guys in our group. How are you going to get the youth interested if they do not see deer. How are you going to keep the interest of the remaining gun hunters. Thin the wolf population, Spring beer season to thin them. Cut back on all the bow & cross bow seasons. By the time gun season comes around everything is either dead or nocturnal.

2019 as i showed i have hunted the central forest area since 1973 ! beginning some time in the 90,s i have seen a yearly decline in deer numbers, I am not a rookie, I have 43 years experience in the same area, I feel I could almost name the deer in the area. because of the lack of deer and the growth of wolves very few hunter remain in the Clark County forest area, For years their were so many camps, it was so much fun to visit these camps ! Last year there was 1 camp and they said they are moving ! Very Sad

2020 Feedback from many indicated few deer seen on public land. Coyote population is huge. Dozens on trail cams. Would say that in general there are too many seasons. This comment voiced by many often. Let youth hunt with parents as we grew up with. Late for season a bust. It's a meat hunt pure and simple and a turnoff to most. I own private land that borders county land and I must say it gets old having people hanging on your line fences from Sept. Through Jan. Consider one buck per Hunter per year.

2022 People just complain to much. People hunt the first weekend of gun hunting and then don't hardly hunt after that, just ride around. You don't have to change the bow hunting seasons, crossbow seasons, or gun seasons, people just got to get out and hunt. Not sit in a box stand all day with 2 or 3 people or sit in them with a big chair and heater and take a nap, get out there and hunt, and not complain there are no deer. Just ride around the country side in the spring and there are deer all over.

2021 I am 56 years old and I have hunted in this area all my life. I honestly feel the deer herd is way down. Did not see near the deer this last bow season as we have in the past. Rifle season was even worse. We had three different guys sitting bye the blue swamp in the town of Butler. Three of us sat from dark in the morning, until hunting hours were over. We did this for three days and together saw a total 4 year. To me that says a lot. Just my opinion! Thank you for the opportunity to voice it.

2023 GET RID OF DEER DRIVES FOR GUN HUNTING! These have been dangerous tactics for years. What I really don't like, is that you find a nice spot on public land for opening morning and your in your stand for a couple hours and all these trucks roll up and they start driving the woods. This ruins your hunt for the day and the rest of the weekend. Not to mention the way half these people just open fire on deer wounding them and putting bad shots on them. In my opinion it's unethical.

2024 I believe between poaching, wolf and coyote kills, over deforestation from logging and antlerless permits, these factors are making an impact on our deer herd in a negative way. I seen 3 deer between gun and archery hunting last season. I hunted many days too. I dont understand why we the hunters are subject to these conditions year after year for the past 15 years. Before that everyone seen lots of deer. I pray you do the right thing and bring our deer herd back.
We are in the island of the Central Forest Land and we have deer coming out of our ear's. We manage our own herds of deer and they are thriving. The county land is what is getting hammered by hunters, wolves, bear etc. without much change in the past years. I don't know if all of the private land owners are having the success that we are but my thought is if they have the deer populations that we do private land shouldn't be included in the cut back.

I haven’t seen a deer in the public lands that I hunt the last five years. Oh there’s deer on land you can’t hunt. I’m done hunting in the state of Wisconsin. The dnr has destroyed what used to be a great time with friends and family. I’m sure folks from Minnesota and Chicago who bought all the land are still enjoying it. That’s why I’m for getting rid of the dnr. Your sure not going to get any money from myself if I can help it.

1. Go back to when you had a draw for a doe permit. 2. Eliminate some of the wolf problem. 3. Cut down on the number of hunting seasons. Like youth hunt, doe only hunt, holiday hunt etc... 4. Prosecute those people or nationalities that hunt out of season and illegal. 5. Quit handing out so many dang (permits) for every person who buys a license. People should not buy and license and end up with 10 doe permits. Its dumb!

Private land owner within the central forest zone should be given an antlerless tag for this zone with the purchase of their license and not have to purchase a bonus tag. You should have the opportunity to select that your extra antlerless tag be for the forest zone and not the farmland zone. This would provide us the same privilege's that owner in the farmland zone get "a antlerless tag that we could use on our own property".

The sport will die if we don't gain interest by younger generation. They don't see deer result in no return. Our group of six hunted from dawn to dusk in tree stands. We saw only a couple of deer. We had much success in the past. Now we are losing interest in the sport. Fewer deer + fewer hunters = dying sport. It is like church. Only the old people are going. When the older generation die, the numbers will drop dramatically.

We see a lot of Does every year. We see about 20-30 come through our stands every hunting season. During the off season these Does walk up to the cabin and are in the back yard all the time. There is only 4 of us that hunt there yet most years we can't even get a doe tag because they are all sold out already. For the last few years we have not been able to get a deer during gun deer season because all we see are does.

There is a reason the elders pushed the wolves away from Wisconsin. It seems that the wolves being back in WI is more important than having a good chance of harvesting a deer. The last few years the lands around our property as well our hunting areas are lacking the deer we had for decades. It's sad I seen more wolves then deer. Multiple times being followed and herded by packs. It's getting worse every year.

Way too many wolves. Why all the talk about changing the seasons and not even a single word about the out of hand wolf population? That is the biggest factor in a lot of units, and not a word is mentioned by the Wi DNR. Time has come to do something, just letting the wolf population go unchecked to the absolute maximum carrying capacity has decimated the deer population and that is the elephant in the room here.

I had trail cameras up through the entire hunting season on public land in Clark co forest near pray wi. More wolves on camera than ever, black bear are popping up Also. Bobcat coyotes. There is definitely plenty of predators in the woods I truly believe these deer of the year don't make it all the does I Caught on camera we're all single moms no little ones around definitely need wolf control in that area.

We need to go back the way it was in the 80's. 1 buck and 1 doe tag. Along with the metal tags and names on back tag. I think to many people are taking advantage of the call in. Don't call at all. Get rid of the zones. Open the state to all for where ever they chose to hunt. Or divide state in 4 sections. Down and across the middle or some thing like that. NO FARMLAND OR FOREST ZONES.
The wolves in this unit have done unmistakable damage, along with many concurrent years of T zone. Stop issuing public land doe permits until this critically low population can rebound. This area was a pumpkin patch 27 years ago. Now we rarely see a hunter not from our group. No deer left. Do not take youth doe tags away ever in any unit the future of our heritage hangs in the balance.

We hear very little shooting on opening weekend. I mean less than 10 shots. I has been that way for quite awhile. Our bow season has been very slow also. I have 80 acres and we hunt pretty hard. I say ban the baiting and go to one buck per person. Try to regulate cross bow hunters in some way. I hope we don't go to a county wide Cdac because the central forest will suffer badly.

I started hunting in the Clark County Forest in 1982. I quit hunting there in 2001 and went back there to hunt opening day of rifle season in 2019. I never saw a living thing from sun up to sun down...no squirrels, birds, or deer. Gun shots were heard from far away, but nothing within the area I was at off from Koehler Ford Lane. The big woods of Clark County were dead.

Aloha, Obviously I'm a non-resident hunter. Have hunted Clark County for 25 years, Sherwood area. I see less and less deer each year for the last 5-10 years, but more carcass, most times more than one in a bunch indicating wolf kill. Though bear may be an issue too. Many of us get bonus tags and never use them, hoping the does will increase and deer population as well.

Have a lottery system for doe tags like they do for turkey first you get 3 dollars for every application second it's unfair for people who work to think everyone can stop working and go on line at 10:00 on Monday its unfair for the vast majority of working class come on you guys can do better than the last few years don't want more tags just a fair chance to get one.

The goal was to increase the deer population. So why are you giving out all these bonus tags. Shows gross negligence and miss management. Not to mention going against the goals set. For me it's not about killing a deer. It's about seeing them and enjoying the experience. That experience has been getting few and far between the last couple of years.

I used to see 10-20 deer every gun season up until about 2010. Then the wolves showed up. Now we see more wolves and wolf tracks than deer. I personally have seen 1 deer in the last 4 years of sitting all day for 9 days. We need to go with a hunters choice system or totally do away with bonus tags for a few years to let the deer recuperate.

I feel we need to have less doe permits to get the herd numbers back up. I seen much fewer deer this past season. Also, is the DNR taking into consideration that some folks might not be reporting their deer kills since the new phone in system was implemented? Might want to allow for potentially more deer being taken than reported.

I have not watched most videos and not looked at all the metrics. However where I did look there were no, no mentions of predation. Wolves are a huge factor here and it seems nobody cares. I believe there should, at the very least, be an acknowledgement that wolves play a role in the size of the deer herd.

ATV use on the trails. ATV users were handicap exempt yet seen them use climbing treestands. Noticed more wolves in the area also. One big concern of mine is the higher number of cross bow hunters. I feel that higher crossbow kills at some point may limit the archery season to shorter season and or less tags.

Why do hunters have to pay for a bonus tag in the forest zone? It's like we are penalized for getting an antlerless tag while farmland zones get free tags. We should still have to apply for an antlerless tag for forest zones in August. The first tag should be free and additional tags charged 12.00.

I have criticized the dnr for their over harvesting of does since I have begun hunting Clark County in the early 70's. Starting at 24,000 doe permits and only slightly reducing each year. I have never received any response even when I would fill out the entire hunting season surveys.
Honestly the herds I have seen are very out of whack. There are very few mature bucks and from what I’ve seen hanging too many antlerless are being taken. Too many does for too long. Many nonresident don’t care what they shoot, it’s a cheap tag so they fill it with anything.

Over 300 acres of private land that I own and hunt, I have pictures of 12 different bucks. At the same time we were over run with does and fawns. Never saw a buck from stand from Oct 25 thru the end of gun season over 20 full days of hunting. I did see deer on every sit.

Please, please include predation estimates in your public statements concerning deer herd size, winter kill etc. Wolves are a problem not a solution! wis. DNR does not have a lot of believability without predation estimates and previous years actual figures. Thank you.

Go back to a lottery system for antlerless deer permits. The site has opened up mid morning on a work day making it exceedingly difficult for hunters working regular hours to be able to get antlerless permits if unable to log in and stand in queue while at work.

I believe more central FOREST PUBLIC ANTLERLESS permits should be available for a $20 permit fee instead of $12. That would increase funds for CDAC and give public land hunters a better chance of putting food on the table.

The bow hunting pressure on public forest is high. Would it be possible to spread these hunters out, i.e. less pressure in certain areas. By gun season the deer have been harassed for months, and thinned out.

Do not shorten the crossbow season to 2-3 weeks and not included in the rut. I’d like to see people 60 and older and with disabilities able to use crossbow. I object to special hunts and kids under 12.

I really don’t see the reason for lowering the antlerless quota and number of available tags in this unit this year. I think the deer population has been on a steady rise over the past 3 years.

I put down no opinion because I don’t know enough about managing the population, no hunter has the info you have. I just go by what seems to be out there in an area I have hunted for years.

Many hunters start walking or pushing on 2nd days gun deer. DNR should come up with the rule like days 4 hunter can start pushing so it respect other hunter who hunt only first 3 days.

Need to control the wolf population, I’ve had numerous in counters with them while bow hunting on public land, some are ok but there’s quite a few in the southern part of the county.

With the deer numbers down hunter numbers have followed. Also with the logging clear cut activity it has become a group making drives area. Stand hunters mainly sit over a bait pile.

I recommend suspending all hunting for a period of 7-10 days during the rut to allow dominate bucks to pass on their genes. If not every year, it could be done every other year.

I saw 1 deer (small buck) at 7:15 on opening morning. Hunted all day for 6 days and never saw another. 2 more people in my group hunted 4 days each and never saw a single thing.

I would like the DNR to consider allowing non-residents who work in Wisconsin and pay income taxes in the State of Wisconsin to purchase their license at the resident rate.

The land I hunt on is split between central farmland and central forest. This makes hunting very difficult. I would love to see Clark county made all one or the other.

I don’t want crossbow to be limited to only 2-3 weeks and be excluded from the rut. Bow hunting should end at least a week before gun season. Gun season suffers from bow.
I have hunted this area for 35 years and the deer population is nowhere near what it used to be, especially since 2000. It is getting hard to see any deer most days.

I would like the week gap between gun and bow reinstated! Also no archery during gun season whatsoever and bring back harvest tags and physical registration.

Your management of the deer population is extremely poor. There are so many wolves that the deer do not stand a chance.

The large tracks of land in this unit, now have a markedly lower population of deer and turkey numbers have plummeted.

I think you should consider raising the non resident game tag price an have a 4 point one side antler restrictions.

Ban crossbows (cross rifles) during BOW hunting season, let them hunt with the gun crowd where they belong.

In 4 countries Clark, Dane, rock, green I saw two deer from October to the end of January all public land?

Keep the Gun Deer Season at 9 days, please do NOT change it to a 16 day Season. Keep the tradition!!!!!!!!!

Don't take away our cross bow season! My grand daughters need that option or it's not gona happen for them

Too many wolves and way to much clear cutting of county forests with little to no grow back of trees.

Just like to express a concern that hunters are using central farmland tags on central forest lands.

Wolf population in Clark Co needs to be controlled. Dangerous to hunters and wiping out deer herds.

Get rid of the crossbows. Or no crossbows in November. Leave the gun season the same 9 day hunt

Not enough antlerless tags for public hunters. Especially if you're a bowhunter and gunhunter

over harvested deer dnr sold to many doe tags in the past look at the 90 s bad mangament

bring back the $ 3 doe tags . where u had to have them in by July or u didn't get one .

Dnr should bring back land owner preference for antlerless tags before general public.

Haven’t been able to harvest a deer in the last 6 years population of deer is very low

Possible to bring back hunters choice for both gun, archery and crossbow season.

Don’t have to worry about overbrosing with all the clear cuts available

19 deer season was the worst I have seen since I started hunting in 1974

Please leave the deer seasons as they are. Thanks for listening

Would like to see more antlerless tags for public land hunters

Crossbow changed to handicapped,males over 62 and females only.

Are they ever going to stop clear cutting Clark county?

Recommend increased antlerless harvest on private land.

Need more antlerless permit for public land hunters

Not enough antlerless tags for public land hunters

Not enough antlerless tags for public land hunters

Need more antlerless tags for public land hunters

Need more antlerless tags for public land hunters

More antlerless permit for public land hunters

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

646 forms were submitted for this unit.

### Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 345
   - I visit this unit for non-hunting purposes: 120
   - I hunt in this unit: 598
   - General interest in this unit: 114

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 555
   - Bow: 353
   - Crossbow: 211
   - Muzzleloader: 186

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 21.72
   - Maximum: 61

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 388
   - Mostly Private Land: 100
   - Public and Private Land About Equally: 33
   - Mostly Public Land: 24
   - Exclusively Public Land: 49
   - I did not hunt in this unit last year: 4

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 36
   - Not too crowded: 78
   - Neither crowded nor un-crowded: 37
   - Somewhat crowded: 24
   - Very crowded: 21
   - Not applicable: 10

### Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 83
   - Fewer: 184
   - Same: 271
   - More: 65
   - Many More: 28
   - Unsure: 15

### Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>

Report Generated: *Friday, May 01, 2020*  
*Columbia, Southern Farmland*
I am an avid outdoorsman and believe keeping populations healthy and sportsmen healthy as well thru interacting with wildlife in any manner. It is extremely important to have plentiful game as it will keep our younger and new sportsmen interested and invested. I’ve been hunting since 1984 with that being said hunting is changed a lot over time it is no longer family driven yes they’re still our families and parties that hunt together. I support all hunters. The opportunity to hunt with a bow through January is a great opportunity for us to help control the population and get out back in the woods where there’s less pressure. Keep the holiday hunt as it provides family traditions. Don’t change regular gun deer opener. Hunting has changed and so do time frames Deer will always be there As well as sportsmen. A contributing factor in disappointment with later openers I believe is related to how society and individuals need the quick interaction and or attention span. True quick fact look at the average attention span of our youths today. It is around 7 seconds. This is a proven fact based statistic. This was Presented to me through a coaching clinic and how we need to adjust our coaching style for our youths. I believe the same thing holds true for the younger generations of hunters (youth thru mid 30’s). In this age. I believe everybody needs to see something immediately Patience is no longer relevant in most of our society today. I support a Standard Bow season mid Sept thru Dec 31 with an extension thru The end of January. No special bow or cross bow season all can co-exist as stated above. Yes to Holiday season Keep muzzle loader no change. Possible increase doe harvest by one additional free tag and have one earn a buck tag per hunter per season. So the most a hunter could harvest would be 3 bucks and the three buck tags could be shot with either weapon. As long as they had buck tags in hand or authorization numbers. If a proposal is created to increase the doe and or earn a buck harvest please limit it to Residents/Property owners of Columbia County only and accordingly to other counties in the southern farmland. With this please limit the number of out-of-state tags permitted in southern farmland zones. Other states currently have a lot of restrictions similar in number of out-of-state tags etc. Thank You

If you really want to shrink the deer herd in Columbia County you'll need to go back to earn a buck. I know it may sound crazy, but there is a large number of baby boomer hunters in the county that will absolutely never shoot a doe unless they are forced to by shooting one for a buck tag. I'll admit i'm what some would call a trophy hunter, but i'm also smart enough to see where the deer herd has gone after earn a buck was stopped in the county. For trophy potential hunting from 2003-2016 was dynamite and its no accident it coincided with a smaller doe population in certain areas of Columbia county. Some baby boomers can't see it that way and only want to see a massive deer herd. Maybe its because they grew up in the 60's & 70's with a very small deer herd, i'm not sure. Some will argue it would be too difficult to implement earn a buck again as deer don't need to be registered. To that i say, why can't the doe be registered still to receive the buck tag and if a buck is tagged it could be registered by phone or online? It's not a huge burden to drive to a registration facility to register a deer. Plus if those hunters that shoot a buck every year for meat really want that buck to achieve their man card every fall they'll shoot a doe and drive to town to get that buck tag. A registration facility could be added to every town again like pardeeville, Cambria, fall river, columbus, rio etc. I'd also debate the proposals to extend seasons to kill more deer this fall will actually kill that many more deer. There's a huge shift in human behavior the last 10-15 years and we've become lazier every year. Hunters are using every excuse out there these days to not head out to the woods. Add in the temps in january and good luck getting hunters out the door. Are archery hunters going to kill 500-1,000 or so more deer in January to achieve your objectives? I'd say no every day of the week and 5 times on Sunday. I'm not even sure extending the regular 9 day season would kill a huge increase of deer. of the 600,000 deer hunters every year how many of them hunt after opening weekend? How many of them make it past Thanksgiving day? I'd love to look at the numbers in more detail, but i guess i just don’t see it.
I run my pointing dog on Dane and Columbia city public lands, 2-3 times a week throughout the year (when legal), so I see a lot, very often. I am a long time Patron, although I rarely gun hunt (deer) any more. I bowhunt with traditional gear, for most all game. I bowhunt very often, generally from the ground. Being out a lot, I have noted the last two winters showed an big increase in over winter deer herd size, especially in Columbia city. In very selfish fashion, I bowhunt and find it exasperating that after mid November I have to share the woods with rifle hunters, whether they are present or not (meaning, I have to wear orange). My personal feeling is they don’t need a month and a half of gun seasons. Once it is cold most folks hang it up, unless they have heated blinds. I would like to see the season continue thru Jan, but reality is, its ****ing cold and the deer are scarce, obviously because of the gun season. I say obvious because I am out there seeing it. I would suggest you dig in to advising the public and hunters of the need to thin the herd, advertise and advise. Also, maybe, advertise and come up with ways to share the deer. As much as I hunt, I do not need ten deer a year, but would be much more serious about harvesting more does if I had a way and place to relatively easily give them to someone who might want some. Make sure we know about these avenues. Last...I am not gonna judge crossbows, although you can tell I have no use for one. I do, however, ask that you keep the licenses separate and the tracking separate so you continue to have fresh data to make good decisions when that time comes, and it will. Heck, why not ask if we killed the deer with modern (compound) or traditional (longbows and recurves) equipment, since we traditionalists likely constitute very little pressure on the herd dynamics. Since everything is computerized adding a category is no issue. I would even like you to consider some sort of traditional only situation or location. Ah....that probably wouldn’t work. Keep it it. Thank you for all your hard work and decision making.

I think that creating an antlerless only hunting season for 2020 would be a great mistake, many hunters want to see more deer in the woods. I am included in that large majority, for many of the previous 16 season I have seen minimal deer while hunting but the last 2 years I have seen an increase in the number of deer. I am very particular on what I am going to shoot, I will only shoot a mature doe or a buck that is 8 points or bigger. I did not harvest a deer this year but I did see over 40 throughout the season. I enjoy hunting much more when I can sit in the woods and see a lot of deer movement and sign instead of just praying to see one all season. I took my 7 year old step-daughter into the stand hunting with me during the 9-day gun hunt and introduced her to the sport I love. She loved that we could see so many deer but also understood why I wanted to wait for a bigger deer to show up. If you want the tradition of hunting to continue and get the next generation excited about hunting then we need to have the deer population larger and give them more opportunities to see and harvest great deer. I hate that so many tags are available to hunters because some of them abuse the system, they will go to public lands and drive deer and shoot whatever they see because they are allowed so many tags. That is the perfect example of what is going to kill our deer population and ruin hunting for mine and future generations. There is a lot of tradition involved in hunting but the new tradition that I am happy to welcome is seeing larger deer populations, it certainly gets me much more excited to get out of bed during the season, knowing that I have a much better chance at seeing a deer worth harvesting.
I have been hunting this property for over 30+ years. Prior to the DNR introducing the high permits available to harvest deer due to the CWD issues, we enjoyed an accepted amount of deer sightings during the hunt. Along with an opportunity to see a large mature buck. After the introduction of the high availability of permits to harvest deer due to the CWD issues, we no longer see deer every time we hunt. Along with not seeing a large mature buck. The past years I have spend more time in the woods and have seen less deer than the past. With the introduction of trail cameras, provides great opportunity to understand the deer herd on the property and nearby. Again the lack of deer and larger mature bucks. Why would there be a recommendation to decrease the herd when the majority of the presented data suggests a stable or slightly lower herd?? I don't have much confidence in the model currently used, raw data suggests the herd growth is stable yet the model suggests the herd is increasing....... I would strongly suggest not increasing the number of antlerless permits or opportunity. Also during last year's 9 day gun hunt after the first weekend it was very windy, deer tend not to move much during this condition. Also hunters don't go on drives much anymore so, deer are not pressured as they were when I started hunting this property. In the beginning, during the gun hunt the deer would be running by with their tongues hanging out; from be pushed continuously. Now the deer appear to be not pressured, browsing and walking during the gun hunt. Very few gunshots are heard than in the past during the opening gun weekend. There aren't as many deer in the area anymore.

You know back in the sixties I used to have over 100 deer go passed my stand on opening day. I could pick the buck I wanted to shoot. When I started bow hunting there was about 8000 bow hunters in the state. So our success rate was quite good. Now that was with recurve bows only. No compounds or crossbows, And no tree stands. These people now days don't have a clue about real hunting. I had a young man that owns the woods adjoining ours tell me 2 yrs ago that the deer in our woods ( meaning his n ours ) only run north n south, they don't ever run east n west. He has watched to many outdoor shows by the EXPERTS ! LOL! This past opening day I saw 12 deer 10 doe , 1 spike and one scruffy 6 pointer that I shot for some meat. I threw your 2 doe permits in the trash. With all the Amish families in our area and each have numerous offspring and each have 3 licenses . How many deer are left. Don't get me wrong I have a lot of Amish friends. They're good people. What I am saying is there is to many seasons and to few deer. A lot more hunters too. I would like to know just how you guys come up with your deer herd estimates. I worked for the Wi. Conservation Dept (rough fish Mng't) back in '65. However I was called into the service. But in the winter you guys used to get into a plane n fly the county n count the deer herd. What is it easier to ask a computer now days ? I can understand why a lot of older guys are giving up deer hunting in this state. I can name a few. I surely won't quit my deer hunting trip to Neb. That I do every year. But I'm not sure about Wi this next season..

The CDAC needs to listen to the people of Wisconsin in Columbia County when they show up to testify. time and time again sitting in the bleacher section I heard the Chair continue to say you do not represent yourself you represent your group. The people on this committee do not listen to the testimony given to them. no Holiday Hunt and stop these other foolish hunt let's go back to the nine-day hunt you either work for your deer or you don't get one. My kids and grandkids no longer hunt our 1800 Acres of owned and leased land rather stay home. A committee's members representing themselves is ending deer hunting in Columbia County. I hope you pay your chairman well. I don't know why he stays I can see the frustration in his eyes as members represent themselves not their group. The DNR and Governor need to reassess who is on this committee and who they are truly serving not the people.
A little background information first: I started archery hunting in WI in 1974 and have not missed a season in 46 years. I have seen many changes over the span of years, some I have been in favor of and some not, so I appreciate the opportunity to chime in on the future of Deer Hunting in WI. I would support a version of Earn a buck program but not to the extent of shoot a doe and get a buck tag. If the goal is to reduce the population with other hunts such as the Holiday hunt, I feel there is more opportunities to harvest deer during the pre-Rut and Rut, speaking from an arches point of view. So with that said, if a traditional archery hunter, not a crossbow hunter could harvest 2 or 3 does to earn an additional buck tag, as I pass up a lot of smaller bucks waiting for a Trophy. There are many, what I will reference to as “Cull Bucks” but with only one Archer buck tag for the entire state, I am very selective in what I shoot as well the group of hunters I hunt with. I know many archery hunters who follow the same rule and may not harvest a buck as they are holding out for a Trophy and do not want to waste their tag on a smaller buck. Again, thank you for the opportunity to inject my opinions.

Thanks to Sara for the very good presentation about the facts. In western Columbia County we have had a very high—and still growing—deer population since about 2008. Deer browse on young trees and the forest understory of herbaceous plants and shrubs is ridiculously high. In my area of the county (Caledonia) numerous neighbors have worked with foresters to regenerate oak through various shelterwood and other harvest techniques. Almost all of them I have visited have utterly failed due to deer browse, specifically on red oak. Furthermore, my wife struck a deer with her car this year; car-deer collisions are very common nearby. So, we cannot achieve the goal of 8800 antlerless deer harvested in Columbia County with the current season structure since we are consistently harvesting less than half that. The ONLY way we will ever come close to that goal is with an antler-less or earn-a-buck season structure. Short of that we might as well give up on the goal of reducing the population, because currently we are utterly failing and deer populations continue to grow. The devastation to crops, forests, habitat for all species and vehicles is OUR problem to fix rather than letting disease do it for us.

Hunter satisfaction is declining rapidly in this state. Personally, my level of enthusiasm has dropped to a level I would have never thought just a decade ago. Columbia County is NOT overly populated with deer. I live in Dane County, and question how it can be labeled as "Maintain", yet Columbia County is to "Decrease". I do not dispute science in managing this herd. But I do question the data and information that hunters have been fed by the DNR for the last 20 years. What is not fully appreciated by the DNR is that there has been SUCH a divide created between the DNR and hunters, that hunters are losing engagement. (Just look at the embarrassingly declining license sales). There is no single solution to this, nor is it a quick resolution. But, maintaining/restoring hunter engagement is key. Hunter engagement fuels trust. Hunter engagement creates action from hunters. Hunter engagement will help the DNR in achieving some of their management goals. Engagement, just like with any employer, will contribute to the success of restoring deer hunting in Wisconsin.

Two items come to mind while filling out the questionnaire. 1) There were issues that neither the hunters could anticipate which makes part of this inquiry invalid. That is the weather. Colder than normal temperatures last fall, way too much rain and freezing rain later in December and the corn could not be cut on time. Hunting gun seasons were extremely limited to access from above conditions. So to conclude, it was a bad year to conclude hunting effectiveness on the deer population. Leave the system alone and the same, and try again this year. 2) The number of deer processing companies is dwindling. Those still in existence in Columbia county have limited hours during gun deer season. This may have limited the number of hunters in that area. Most people don't have the time to butcher an animal on-site and go home according to current state laws for Colombia county. I don't understand why a hunter can't butcher a deer at home and bag the remains and put in a municipal garbage collection.
My family farm of approximately 1600 acres located in SE Columbia county is deer hunted by 12 Wisconsin residents who hunt all of the deer seasons and enjoy the current deer season structure. I feel our deer herd is slightly above adequate levels. I believe that the kill numbers were off during the gun season due to the late harvest, post rut hunt and what some would consider less than ideal weather. I think the DNR has to consider that people are not registering their deer kills. A lack of DNR presence and online/phone in registration allows for deer to be shot without concerns of being caught. Extending a gun deer hunt into early November would really disadvantage bow and crossbow hunters who are doing a great job harvesting the number of quality deer that they currently harvest. Please leave the quality of deer hunting and quantity of deer on private land to the land owners. We have worked for many years to build the herd to what we have today, a healthy and quality herd that we enjoy.

I feel the proposed idea of a 19 dat regular gun deer season is a horrible idea. This idea takes into favor of only a small part of the deer hunting community rather than the overall deer hunting community. The fact of most row crops were still standing due to wetter than normal conditions I feel was not taken into consideration as people saw less deer as more deer were able to hide in row crops such as corn. Strictly only rifle hunters were complaining due to this fact. I challenge these people to pick up a bow or crossbow and hunt during the archery season which runs about 3 months rather than 9 days. This would dramatically increase their chances of seeing and successfully harvesting a deer. By extending the rifle season, we are taking the interests of a small population of the overall numbers over the general welfare of the deer herd and hunting opportunities for the rest of the deer hunting community.

I believe the deer population is very healthy in Columbia County. My frustration with deer hunting in this county is the high number of deer hunters on public land. I feel private land owners have premier hunting while public land hunters have limited options. When I go deer hunting I like to see deer, not other people. I normally end up seeing more people than deer when in the woods on public land. I can't fault private land owners and the success they have deer hunting, but it is frustrating for me on public land. There are too many hunters on public land who have little regard for others. I actually ended up buying land in another state where I do most of my hunting now. I may rifle hunt in Columbia County this fall as I heard the number of hunters has declined. The last time I rifle hunted in Wisconsin was a few years ago. I was mortified due to the high number of hunters and little land to go around.

Private land owners seem to harvest at 1/1 buck doe ratio, do they feel that is appropriate for their land? Public tags need to be applied for, DNR can control harvest better that way and NO tag should be free. Maybe back to party tag system for public land. Columbia county has a lot of public land that DNR has to manage better, they need to make those tags worth something for financial reasons. Get rid of youth and holiday hunts, go back to nine day gun season, make crossbow/archery tag good for buck or doe with bonus tags purchased only good with weapon of choice when 9 day gun season starts. Go back to registration stations for better information, research data, and monitoring of the deer kill. Not to mention financial benefit to local business. Only 349 antlerless deer killed on public land last year? Let landowners decide how many deer they think should be killed by tags they are willing to buy.

I know this concerns Columbia County, but the sweeping changes to season structure/weapon use are crazy! The goal for Columbia is to reduce deer numbers, but we are proposing limiting choice to do so. We not only have to manage deer numbers, but realize that limiting choice WILL ABSOLUTELY REDUCE the numbers of hunters in the field. I am 57 and hunt with my 8 yr. old granddaughter. We both use a crossbow. If you eliminate or limit crossbows, you are destroying the experience that we have together. She can't shoot a bow, and I don't want to due to physical limitations (severe car accident injuries). I am not disabled but bowhunting is very difficult for me. And our kids have so many activities thrown at them, so hunting in youth has suffered. Please DO NOT limit crossbows to certain times/ages. And we both crossbow hunt during the gun season, do not take that away!
Deer hunters in this county simply will not fill enough antlerless tags to decrease the deer herd with the limited options we have. Earn A Buck has proven the only way to have a significant reduction in deer population. An entire season of antlerless only would possibly reduce the herd numbers but, I fear it would also reduce the number of hunters going into the future. Many, especially the older hunters, are frustrated with the many different seasons and changing rules. I feel a significant number are teetering on the edge of "giving it up". We would never get them back and also lose a number of future new hunters that they would possibly bring in to the sport. We need EAB! Limited to one buck only per license. Even that may cause a few hunters to quit deer hunting but, is the only way to harvest enough antlerless deer without going to an entire season of no horns.

I have a recommendation to the way that licenses are appropriated. I would love to see a bundle where gun and bow licenses are sold together. Between the two buck harvest tags, it would be hunters choice of harvesting bucks with a bow and gun, or two bucks with a bow. I could see many advantages to allowing hunters an option. Most important, would be extending the season for archers who harvest an early season buck. With this option, they could continue to hunt and take an opportunity at an even bigger deer later in the year, especially during the rut when every hunter wants to be in the field. If I had this choice every year, I would almost certainly never touch my rifle again. But, I would still be hunting MORE and contributing to the goal of herd management. I would just be doing it in a way that I find more exciting and enjoyable.

I have not seen any significant increase on deer population where I hunt. When we had the EHD come through our area a few years ago it took out about 75% of our herd. It has slowly started to get a bit better but nothing like it was prior. The deer hunting seasons have been way over extended over the years and I strongly feel that has depleted the excitement of the gun deer hunting season. Families and friends used to get so excited for the 9 day hunt but now with so many other options for other seasons, it has lost so much of what it used to be. That's sad! The deer are chased down for way too long of a period and they start to become more nocturnal. The animals need a break. Once the 9 day gun hunt is over....all deer hunting should be over. That would bring back the excitement of the set seasons that are offered.

Judging by the 2019 numbers it looks like private land hunters are doing their part to shoot does, so it would have been a terrible decision to have a doe only season. Looks like more does need to be harvested on the public land. When getting 2 free doe tags in the southern farmland I understand why you have to pick private or public, but why can't a private land hunter also choose to hunt public; as that might help to shoot more does on public land if hunting with a group of people as well as to increase new hunter license sales. By not allowing private land hunters to also harvest does on public without purchasing another tag, the number of hunters per acre is limited, but I feel that the private hunters could help public only hunters to harvest more deer on public land. Thanks for considering my input.

The unit is large, I understand that. But there are still areas recovering from EHD that severely affected the area I hunt. Combined with the overall wet weather the past few springs, the number of deer is significantly lower than when I bought my place in Lewiston township. I happen to leave 8 acres of corn over the winter for wildlife, and I still have probably 25% of it remaining in the field. This, along with the significant amount of time I put into my property tells me the numbers are lower than thought. I hunt close to 45 days a year. So I do put my time in, and have been reluctant to shoot too many does. I also get pics of wolves (confirmed by your biologist) almost on a weekly basis. Predator harvest as confirmed by finding animals may be more significant than thought.
I do oppose the early season youth hunt but not the disabled hunt. The extra doe only seasons are a great tool for reducing the herd where needed especially considering the deer are starting to herd by late December in areas where it's needed most. However extending the rifle season or having special early season gun hunts could make this more difficult considering deer are easily educated and prolonged pressure from gunfire would drive them to be nocturnal, that being said the traditional 9 day rifle season with scattered antlerless late seasons is the way to go, also extending the archery season would give more opportunity to hunters that don't have that much time earlier in the season and keying in on deer with a bow arrow is less challenging when the deer are focused on food.

As a dad with young daughters and no private land to hunt. It was very difficult to set my daughters up for success this year. We hunted for 5 days on public land and did not see a single deer. We did however have a lot of hunter pressure. I heard no shots on the surrounding 500+ acre public parcel during opening weekend. That was very suprising. Is there any possibility to make the youth seasons longer to help get the kids a better success rate. I'd love to see some statistics about youth success rate in your data. Can we evaluate if the youth season is "working" -- i.e. are youth who are successful using that weekend? or is their success more likely to come during the regular seasons. This would be very helpful to a dad who wants his kids to enjoy the outdoors like I do.

I hunt private land surrounded by mostly private land where people's idea of qdm is harvesting only bucks of trophy size. I firmly believe this has resulted in genetic mutations since a majority of does I've harvested have shown no signs of reproduction. I also think that the number of does is so high that bucks don't need to be as active during the rut therefore reducing daylight sightings and harvest opportunities. If we are ever going to have a well balanced population people need to be more educated on what a healthy deer heard is and get out of the idea that if they don't see high numbers of deer everytime they go out that there's not enough, most of those people aren't educated enough to know that deer smell them or see them and aren't going to be active as a result.

Please don't Change the Crossbow season. Keep it Simple. No hunting group should own hunting during the rut. I decided not rifle hunt the 2020 and future gun season's and I am just going to crossbow hunt the bow season. What is the difference between shooting a buck with the crossbow or a rifle, it is still one deer. If you would stop bringing up input on crossbows all the negative feedback would go away and hunters will get use to it. Focus on encouraging hunters to get in the woods not scare them away and anger both sides to this topic. If you decide to change the crossbow season then put a provision in there that if you don't rifle hunt you are allowed to crossbow hunt the whole season. Thank you for taking the time to read my input.

Plez... 1 buck per year per hunter. I live in Lowville Township and own 200 acres in two parcels. Doylestown being the other. The buck to doe ratio is so poor...about 8 to 1 at my house and 5 to 1 at Doylestown I won't let anybody shoot a buck on my land. I also own 360 Acres in Northern Dane County. My employees hunt there... doe only... or Mature Buck. This will never fly... cause you are funded by license sales. Sad. I hunt out West and in Alberta every year on private land... you should see the difference. I will never convince idiots not to shoot yearling and 2 year old bucks.. But pkez.. 1 buck a year. My neighbor has 40 acres hunted by 3 "good" hunters with crossbows and rifles... they tagged 6 young bucks and lost 2 more... pathetic. 1 BUCK TAG A Year.

Thanks for the presentation. I run have run a lot of trail cameras the last couple years. Deer numbers were down slightly in our area. I do agree that the poor season success of gun hunting was related to a late start and bad weather. To the presenter... for being a data nerd I do not understand how you can dismiss car/deer collision numbers. Yes they may or may not be reported, but that is the same for every year. To me there is a clear trend down in those numbers. Stable harvest over the last few years suggest that deer numbers are close to the same. It was not presented here, but I do not want the return of earn a buck. Thanks again.. I prefer this format versus having to attend a meeting and yes I filled out the spring survey.
I believe the best course of action would be to require people to harvest a doe before harvesting a buck again so EARN A BUCK because currently some hunters shoot a buck then they quit for the season which means more doe are left. I have counted over 200 plus deer in my area mostly being doe because of this reason. I would also recommend going back to having people go in to register their deer because I believe some people are not reporting their harvests... It also helps our economy by doing so because people would go into town for social gatherings now that is pretty much been taken away! These numbers are most likely completely inaccurate. Our Family took out 31 deer two seasons ago and it still was not enough I counted over 30 just the other night.

Please monitor the new king road target range I (Larry Saager) have deer habitat next to the ranges south boarder and the shooting of automatic pistols is non-stop sun up to sun down and I think it adversely affects the quality of hunt in the king road public area. Also who's brainless idea was it to leave it open DURING OPENING WEEKEND in 2018? I don’t object to the range but it needs to be closed during gun hunt. There also needs to be a 30 foot berm round the entire facility to force the noise up. As of now the noise is being reflected south/west towards CS/22. And it wakes me up every weekend. Nobody deer hunts this area anymore like the good old days. 9-5 hours would be great plenty for the range us locals deserve a little peace and quiet.

Hunted public for 46 years, and not just deer. I spend a lot of time in a wide area of our public land. The public land deer herd has been destroyed in Columbia county. As a result, hunting pressure and interest has dropped. The inequality of the private vs public herds is laughable. Feast vs famine. I bow hunted 21 days straight in Pine Island and saw 3 deer. I hunted through that cold snap and stuck it out every day. 3 deer. I hunted 2 areas, and scouted after the snow to see where the deer were moving. No tracks to be found. Stop killing off the doe on public. Any earn a buck just brings more private land people to the public land to get their doe. It is bad and getting worse. Please ban crossbows too, except for the disabled.

Hunted public for 46 years, and not just deer. I spend a lot of time in a wide area of our public land. The public land deer herd has been destroyed in Columbia county. As a result, hunting pressure and interest has dropped. The inequality of the private vs public herds is laughable. Feast vs famine. I bow hunted 21 days straight in Pine Island and saw 3 deer. I hunted through that cold snap and stuck it out every day. 3 deer. I hunted 2 areas, and scouted after the snow to see where the deer were moving. No tracks to be found. Please ban crossbows too, except for the disabled.

I do believe years ago the deer population was to high. After all the years of earn a buck and the antlerless permits handed out like candy the population is in my opinion down considerably. I hunt all day without leaving my stand. I do not see anywhere near the amount of deer I saw in years past. I really wish you would cut all the special hunts down some. My favorite season is bow season. With all of the special hunts that have been added it has really screwed up the bow season. I also feel the youth hunt for kids should be a one and done. Once they harvest a deer in the youth hunt I feel that should be it. not year after year until they are 16. Please consider scaling back on all the special hunts that have been thrown into the mix.

Please do not bring back earn-a-buck. I get the idea but for some hunters it becomes an obligation rather than actually enjoying their hunt. Also with online deer registration there is no way to prove if an antlerless deer is harvested. The amount of deer I’ve seen over the past decade has decreased dramatically. During gun season it’s almost impossible to get a deer after opening weekend. I’m not sure of the numbers but I feel as though when we had the earn-a-buck for some many years is the reason for the decreased number if deer. The 2-3 years directly after those seasons were by far the worst with some of us not getting any deer on opening weekend. Although I will say the past couple seasons I have “very slightly” more deer.
Public Input on CDAC Preliminary Recommendations - Spring 2020

2137 I farm here in Columbia County, the deer damage to my crop is extensive, I have contacted the USDA about ag tag hunting and found that it is more difficult than it is worth because I would have to hunt when I am most busy farming, so I consider it a no option. We had a CWD deer confirmed on our farm last season (2019). I really enjoy hunting and have been quite successful over the years. I am concerned about crop damage, the health of our overpopulated deer herd and all of the car deer collisions. We need to drastically reduce the deer heard. I would be in favor of earn a buck and four antlerless tags with your buck tag. I would also support hunting through February when I would have the time to hunt.

2138 I'm tired of AR's in the woods with no clip limit. I'm not against the gun, but shotguns require a plug. why the heck is there no enforcement for the AR's? makes zero sense to me? why are allowing crossbows for people who are not of a certain age or handicap in some capacity? Hunting is not just about killing!!! Why are farmers spraying fungicides and pesticides that eff the wildlife up? I saw two deer last year with giant tumors on public. these are growth issues from farming. My neighbor just removed his entire tree line for farming, and one of your questions was "did I care about deer eating new growth?" Sounds like you do, but you are attacking/blaming the wrong thing here.

2139 Find a way to encourage access to private land. Zero dollars should be awarded for crop damage unless those lands are open to the public. That will solve multiple problems. I will not be purchasing a deer hunting license this year. I have deer hunted (bow and gun) for 30 years. I have purchased the patrons license for roughly the last 20 years. This year I didn't. It still bothers me a bit. I hunt public land and it has only gone down hill. I used to see deer every outing. Sadly, now about one per ten outings. My kids (now teenagers) have zero interest. Reluctantly, I have many better things to do with my time. I wish you the best in making impactful changes.

2140 First of all the proposed 19 day gun season is absolutely ridiculous. I just had to get that out there. Now for Columbia County, all the southern farmland zone really, should look into muzzeloader or bow to the end of January. I've seen more good bucks out-feeding because they have to eat- than any other time of year. Keep the 9 day gun season the same. Some years are just better than others and it happened to be a down year last year. 86 the holiday hunt-pointless and not many people I know enjoy or partake. Don't threaten bowhunters with withholding days to hunt to possibly better gun season. That is losing license sales for the state and nothing else.

2141 No doubt deer numbers are too high in 'some' of the area. Would hope at some point in the future that biologists would visit the major landowners and help establish 'neighborhood' goals--one small parcel landowner can be next to a many parcel landowner that has tons of deer, and not see any on the small parcel--and then you folks hear from the small parcel landowner as seeing 'no deer'. We do not segregate opinions --everyone has been given a voice--tough job for you all until you get out to each neighborhood and evaluate from there. Yes--this takes resources--appoint some folks in the field to help. Do not envy your positions--grateful for the efforts on this.

2142 I am over 60 and I believe that bring crossbows in for everyone was the biggest mistake the DNR has made, making it easy isn't the answer there are a lot more dead deer not recovered. I believe 1 buck, pick your weapon and sell doe tags I relize that it is all really about money, so charge more for the buck tag, and doe tags 5 dollars don't give any away. It is time to stop making everything easy. Over last 20 years the DNR has made a lot of mistakes yes there are a lot of deer but that isn't all good, I own farm land rent it out, so understand the farmers that want all deer killed, but I really enjoy see deer everytime I go out and remember the days when I didn't.

2143 I, for the most part, agree with the information presented. I will put forth some food for thought. With the current reporting system, how would the DNR ever know who is accurately reporting a doe harvest if the earn a buck concept returns? I am certain that there will be hunters who only want their trophy buck, that can, and will report harvesting a doe via online or phone that does not exist. I will say that I am not against the earn a buck, however, I am against an antlerless only season. With that said, the only truly effective way to implement the earn a buck would be through the registration sites of the past to actually prove a doe was taken.
I feel like the deer population is in a very satisfactory spot. The introduction of more antlerless tags is un-needed and frankly disappointing. Every hunter has a responsibility to harvest and maintain their own deer herd on their own private property without added tags. Since most of Columbia is private land this should be more than enough. As the holiday hunt has been ok, I completely disagree with an extended archery/crossbow season. The last month of the year, the deer are on food sources and finally unpressured. Allowing hunters to harvest for an extra month is basically extending the gun seasons with the crossbow hunters.

I appreciate that the county offers a holiday hunt, but believe that both gun and bow hunters should still be allowed to harvest an antlered buck using any unfilled buck harvest tags for that year during the hunt. This will potentially get more people in the woods and increase the chances of a few more does being harvested. As a private land owner, I feel that we play the most critical role in deer management. I would support an earn-a-buck format for those of us on private land to ensure an adequate number of does are being harvested in the county and in order to better mitigate the spread of CWD and other zoonotic diseases.

I am opposed to choosing public versus private lands. I have bought licence and hunted all but a few when i was in the service. My dollars have helped purchase and maintain public lands, if i receive an invitation to hunt public lands it limits or eliminates me. Property owners adjacent are even more so if they wound a deer and retrieve such a good chance they do not have proper tags, vice versus if it gets on private lands. Is not reporting where it was tagged enough. I took a resolution to this effect to congress and Columbia Co. two years back. It bothers me to not be able to hunt on public lands because of this. Doug Cole

The larger problem in Columbia County is that private landowners and hunters shoot a big buck opening morning and then you never see anyone in the woods the rest of the week. This seems to have gotten worse in the last decade. Also I am seeing a lot of deer over the winter and Spring with leg injuries. One doe has a back leg where the ankle is almost turned backwards. Another doe has a large growth around her right front leg. They seem to have made it through the winter and the coyote. That is the larger problem in my area the coyotes seem to attack the fawns before they are able to protect themselves.

In my opinion I would reinstate earn a buck. Reason being many people I know hunt for buck Only, I would even consider 2 doe for a buck tag. The reason for this, in the 2019 season on my property we killed 3 buck and 13 doe. It didn’t make a difference because the rest surrounding area were hunting bucks only or my shoot a doe for 5 people. Shooting the 13 doe at this point hasn’t made a difference. And this years fawns aren’t hear yet. Try to manage, how? You can’t even put in a food plot they nip it off before it can get established. Have a nice day!

I have read that there is the recommendation to shorten the crossbow season to only October and then after the gun seasons. I don't believe that is good idea. A lot of young hunters start bowhunting by using a crossbow when they aren't old enough to draw enough poundage to be deadly using a vertical bow. I have young kids and know a bunch of other families who have used crossbows to get their young hunters started. Limiting their opportunities during the prime of the season is going to hurt the number of young hunters recruited into the hunting community.

With opening up the use of cross bow’s, the harvest will be higher. I use both!! The population of deer has greatly dropped over the past two years, seeing a deer during the gun hunt and while bow hunting has decreased to the point that the numbers will never get back to where they should be. When harvesting a antlerless deer, you are not dropping the herd by one, but possibly by three. ( doe with fawns ). How can harvest be down, but amount of deer increase???? I do not agree with your numbers. I can only report on what I am seeing out in the field.

There are too many hunts before the traditional 9 day gun deer season. Because of this pressure the traditional 9 day season has become less appealing to many hunters. Furthermore, allowing crossbows, other than for disabled hunters, has significantly increased the number of large bucks taken before the 9 day gun deer season. I believe in a youth hunt to encourage kids to get into hunting. I also believe there is a place for crossbows similar to muzzleloader. There should be a separate crossbow season after the traditional 9 day gun season.
As a Wisconsin deer hunter for well over 50 years I've concluded there is no longer the sport of deer hunting but rather harvesting. There are complaints about the number of hunting licenses decreasing - IMO there can be only 2 reasons. First, fewer deer on public lands where hunting for the masses takes place and second, the introduction of sniper towers and tents to hunt from. Here's the crux of the whole thing. It isn't very much fun to kill an animal innocently browsing in a food plot while sitting inside a motel 6 in the sky.

The Biologist stated "statistically the desired antlerless harvest has been inadequate due to the selective harvest of deer by the private property owners. Bonus tags will not change that dynamic. Clearly there is a widespread desire to harvest Mature/Trophy Buck. Private property owners are not going to participate in this effort until the herd around them is too large, regardless of DNR Recommendation or Special Interest influence. The only thing that may change the aforementioned desire is COVID 19 driven economic depression.

I travel Hwy 33 from Beaver Dam to Portage between the hours of 9pm and 5am with both my car and the truck I drive. This winter I struck 3 deer with my personal car and one with the truck between 12-2019 to 3-2020. Toteled my car In December due to this. I see many deer each night on this stretch sometimes more than I can count. This area has an over abundance of deer especially from Hwy 44 west to Portage. I have traveled this route for 12 years and have not seen a decrease in deer at least on the road in front of my vehicles.

Columbia County should consider implementing 1 buck per year only. One buck tag only that could be filled either using a bow or a gun. This would allow for more opportunity on public land to harvest a buck. This would allow the age class to increase in the county. Currently the average age class of bucks is young due to the high amount of pressure on the bucks. Lastly, going to one buck only would entice hunters to harvest more does in the county as they would want to continue hunting after harvesting their one buck.

When I was a child, I would go out hunting and see deer every time I went out! Throughout the years I have witnessed the decline because of the dnr interaction with the herd numbers. Even to the point that I was sickened and disgusted at the very few numbers I’d see. It is finally starting to come back because of hunters that care about the future of hunting for our children! I’m a firm believer that one doe and one buck per tag would be the way to go. Nobody wants to go out hunting and not be able to even see a deer.

I did not see it anywhere so I am hoping that the proposed 19 day gun season is not happening for Columbia county at least for 2020. I had heard that this may be a possibility and strongly oppose it. The structure of the standard nine day gun deer season and tradition should not be changed. Many many people in this county work very hard as archery hunters to ensure success and management practices. Archery season should run through most of November as it always has with a gun season being the last week.

If you’re serious about decreasing the population, expand the gun season by at LEAST a week. That should be a no-brainer. I also support a week of non-crossbow hunting at the beginning of the deer season. (I am a crossbow hunter, by the way...) While the effective range of a crossbow is about the same as a standard/compound bow, it is easier to remain concealed with a crossbow. Non-crossbow hunting is a greater challenge and I think these hunters should get the first week all to themselves.

I would be in favor of a later muzzle loader season, using primitive or even flint season away from the regular gun season. Muzzle loader season as it presently is; (using scopes, 209 ignition and pellets) is just an extension of the regular gun season. I would like to see a real muzzle loader season at a different time allowing only primitive weapons; perhaps January instead of the extended crossbow season or at same time would work, just get it away from the regular gun season. Thanks

Not only have you let the female deer numbers in Columbia county get out of control there is getting to be a large concentration of smaller racked bucks which nobody wants to shoot, last nite I saw a group of 30 deer in an area I’ve never seen that many before and in the winter it’s nothing to see over 100 plus deer in our area. I think it’s about time you start to manage the deer herd and not the dnr’s pocketbook!! If you think I’m kidding about the numbers talk to Phil Peterson at aphis
2161 I sent a separate email to the Columbia County CDAC chair and DNR Liaison today 4/24/2020. In summary: do more to reduce the herd. Such as have an extended archery/crossbow through January. Maybe have a bonus harvest area in the portions of the county that are so over-populated. The harvest is way below the quotas. Need more innovation and maybe statutory options. Otherwise, it's doing the same and expecting for/hoping for different results. Not a recipe for success. Thanks.

2162 We have not seen on our property the numbers of deer or damage done as shown in your information. Our numbers seem low for our area compared to the decades of hunting information given by our neighbors. This may be due to a recent outbreak of EHD. We purchased this property primarily for our personal hunting. We spend a lot of our time and finances managing our property for deer hunting. We would like to be able to judge ourselves when to take antlerless and when not to.

2163 I would like to see the holiday hint be authorized to shoot a buck if u have not used your buck tag already. Mainly for military and family members that come together for Christmas gives them a chance to enjoy the outdoors together and put some meat in the freezer! Outdoorsman that are nice enough to help the health of the deer herd by putting in food plots every year would maybe get a chance a one of their mature deer since he/she has passed many younger deer so far

2164 In my area just south of Wyocena, mostly all my neighbors and I have not shot any does for at least 4 yrs now. Our doe population just stays about the same with no increases. The doe population in my eye is that its low. We do have a coyote predator problem which is really hard to control. If we would have been shooting the few does we have we wouldn't have any right now. Don't know the answer but shooting more does is not the correct answer here!

2165 Please keep in mind that the 9day gun season was actually 1 calender week later for 2019 I feel it did affect some hunters, but not me I also feel that the 2020 deer hunt should remain the same as previous years I noticed more dead deer on the roadsides since January 1, 2020, I think the slightly warmer winter got them to move more, and some farmers did not get fall tilling done so there was also more corn trash on the surface for them to eat

2166 I have been hunted for 45 years. And have been seeing a drop in deer. There are properties around with a ton of deer on them the big land owners. That have everything to keep them there. Its not fair to smaller tracks or public lands. Where you can sit all week and not see a deer. I tried to keep my kids interested in it but not seeing deer its hard. I also think we should raise the non resident cost. if we go out of state we have to pay a lot more.

2167 Lets face facts, the only way to get private landowners to shoot antlerless deer is earn a buck or only getting one buck tag for all deer hunting. Meaning you get one buck tag that a hunter can use for bow, gun or muzzleloader. If/when you fill the buck tag, hunter can only shoot antlerless for the remainder of the deer seasons. Otherwise it doesn't matter how many permits you give away or sell, landowners aren't using them the way you want them to.

2168 Too many specialty hunts. Hunters who have always hunted the regular gun season only do not see deer after the number of bow hunters and special hunts take place. Deer have become nocturnal by the 9 day gun hunt. Specialty hunts should all take place after the gun hunt or move the gun hunt to an earlier date. With the gun hunt often taking place after the rut on the land we have hunted we are seeing less than 10 percent of what we used to see.

2169 I appreciate the Columbia CDAC’s attempts to reduce the deer population in the county, especially in light of CWD. I wish their were better tools in place to increase antlerless harvest, as we clearly are not meeting the necessary harvest objectives to reduce the population. I fully support the high quotas, extended holiday hunt, and I would support an extended archery and crossbow season as well if it would contribute to antlerless harvest.
Ten years ago we had a run of 3 or 4 great years of hunting. Including a mix of bucks and does. I have not seen a buck during hunting season in 4 years. And the does are few and far between. It's getting really hard to get behind any dnr plan to decrease the deer population when I don't see many to begin with. We have 100 acres of property and 7 hunters. We have not filled all our tags in several years. It gets very frustrating.

I would like to see a shorter season for people using crossbows who don't have a doctor's recommendation or over the age of 65 or a youth hunter who can't shoot a bow yet. I think that crossbows are much too effective to be used for the full archery season. They are just like shooting a gun at animals at close range. I have no problem with people using them I just think they shouldn't have as long a season as other archery hunters.

The 2019 season was maybe one of the worse gun seasons I have had in Columbia county. I did see a few deer while archery hunt but the 9 day deer season seem to be a flop. It wasn't until the Holiday hunt that I was finally successful. The other option would be is having an early gun antlerless deer season in October again. Like when the earn a buck program was going on. It wasn't much but it gave some people that extra chance.

I don't understand why antlerless only season is the only option presented. Earn a buck would increase the anterless kill and still allow the taking of a buck. Statistics have proven that hunters will take a buck over a doe in most cases. Issuing more bonus tags will not significantly increase the anterless kill. Forcing the taking of a doe first, before a buck, will reduce the dies and still allow you to hunt bucks.

Maybe Wisconsin should track how many deer are actually getting registered with this new on line or phone registration, think u would see more deer are being killed than registered. Deer population is definitely not over abundance, from what I used to see 20 years ago, but if these doe hunts are going to take up more hunting days, it would be nice to see an extended bow season for us who truly in joy archery season.

Columbia county should consider going to one buck only per year per hunter. One buck only per year that could be harvested with a gun or a bow. This would create more opportunity for hunters on public and private land. This would also increase the age class of the bucks in the county. Also, this would encourage hunters to harvest more does as they would want to continue hunting after they harvested their one buck.

I would hope that the DNR would keep the cross bow season the same as the traditional bow hunting season as it a peers that there are some ladies and younger generation kids getting into the sport because of the cross bow. as long as we do our part and the DNR does there part from a harvest number, I believe this is of great value to hit the numbers we want from a kill perspective and an economic prospective.

Antlerless only would be OK or even go back to earn a buck that would help knock down some of the population of deer. I would also like to see the archery/crossbow season either stay the way it is or have it extended . For deer gun season I would like to see it stay as the nine days instead of an extended season. Thank you for allowing us to voice our opinions and also for including us in this conversation.

Too many predators, espescially wolves, bobcats and coyotes. We’re shooting too many anterless deer. The private sector does not allow hunting it seems unless you’re related. I wish they would allow access for the second weekend of gun and late bow seasons. Maybe DNR could help developer a program to assist in finding areas willing to allow long time hunters with no records or violation a place to hunt.

Go back to how hunting was in the 1980s before the state and DNR ruined Wisconsin deer hunting. GET RID OF ALL THE EXTRA SEASONS AND ALL YOUTH HUNTS. The reason the numbers have gone down is because people stopped hunting because deer herd has never had a chance to grow back since the herd was eliminated because of CWD. Put things back to how it was in the 1980s and your sales will go back up.
I have a question about CWD. I have never heard any determination about the origin of this disease. Is it related to deer farms or escapes from them? Has there been any advances in a vaccine for deer to prevent them from getting this that could be applied to food plots, woods, etc? Overall I am glad to see the improvements in registration etc. You've been doing a great job, keep it up.

certain parts of columbia county have more deer then others. when you get in the farm region by Cambria on the prairie there are few to no deer at all so i beleive each county should be split down more into 4 different sub zones. Not just public or private. if you dont have a marsh by your farm land you dont see deer but I cant hunt a doe on puplic land because my tags are for private.

Realistically leave the 9 day gun season alone, cancel all antlerless deer hunts and put a limit on crossbows again. Go back to the registration stations because your numbers are off due to the amount of people who can and will shoot deer and dispose of them before they ever consider registering them. That gives them the opportunity to carry a tag and continue hunting.

Deer population is extremely high in areas where crop damage tags are implemented and the population does not decrease. The 1000 acres of private forest land we own a small portion of does not have a tree younger than 25 years old due to over browsing. I would propose a earn-a-buck program, I know it was not liked, but it reduced the doe population in our area.

If hunters do not want to harvest antlerless deer, there will always be over population. Not sure how to get hunters to harvest. Earn a buck may have to come back. I personally will not harvest antlered deer this year. I love to eat deer. Worried about CWD. Always get mine tested. Most people do not. Hard to get good data if there is not a enough tests. Good luck

I don’t support the holiday hunt or the extended hunt until January 31. I support the traditional length seasons. Longer seasons overlap into other hunting opportunities and into snowmobiling season. Later hunts limit the ability to put in trails before frost and snow. Attempting to put in trail during a hunting season could disturb a landowner's hunt.

Public land I hunt gets hunted very hard. I did not see a decrease in hunters and I hunt 7 different public areas in the county. I hunt 5 to 7 days a week through archery,gun,and muzzleloader. How can we get the land owners to open up their land to help control the deer population? I don’t think the public land has a problem with population control.

CDACs for each county should collectively decide on a statewide deer season framework. We need a continuous 16 day gun deer season. The current archery season is correct. Crossbow or longbow should remain a hunters choice. Emphasize mentoring and family hunting opportunities. Extend CDACs scope to decide on collectively on statewide deer management.

I and many others believe the countless attacks on crossbow hunters are a reason you will lose many hunters now and in the future if the rules are changed to appease the archery clubs doing the complaining about crossbows. Also and I realise it is a federal issue but wolces need to be addressed as they continue to deplete our deer heard. Thank you

I think overall the seasons are consistent I have seen personally population growth in my area which is great. I haven’t seen too many mortality rates from other sources ie predators or starvation I am out quite a bit and only saw a couple which in my opinion is great. I have seen lots of healthy herds keep up the good work I know I notice it

I would like to see a better choice in the harvest of antler less as to land type. When I choose private land both antlerless are for private property. I would like to have one for each private and public hunting. The private properties I hunt are bordering public and many times haven't been able to shoot onto public due to tag restrictions.
I am in support of all of the preliminary recommendations for this unit, other than not having the extended bow/crossbow season. Considering the decrease population objective, failure to meet antlerless harvest quotas in previous years, and the rapidly expanding distribution of CWD, this option should be included in the season structure.

I think earn a buck would reduce the deer herd and still allow the taking of a buck. Why is anterless only the only option provided? The issue isn't the number of tags issued but the number filled. We have proven the most hunters will take a buck over a doe. If you want to reduce the herd you have to force the taking of a doe first.

Please do not change the crossbow season. I'm 64 years old and the only way I can hunt during the bow season is with a crossbow. I also hunt on my own land that I have paid property taxes on for 36 years. I should absolutely be able to use a crossbow on my own property - regardless what they compound bow hunters say or want.

I am strongly against an elongated rifle season. 9 days is plenty, to get a deer. I saw a large decrease in deer seen especially on opening weekend where there is usually deer running around all day. I am unsure of the reason for that, but I think a little more preservation of females to produce fawns is important for a few years.

No holiday hunt. If there are so many deer then why aren't more killed during regular firearms seasons. Holiday hunt interferes with snowmobiling, cross country skiing, late archery, waterfowl, small game, and any other activity on public land. Everything is held hostage to shoot 100 deer that should be killed in other seasons.

Deer populations in Columbia county are VERY property dependent. Giving out more tags and having more seasons does not manage these high density populations, it reduces numbers on already overly hunted lands. The DNR should use a property specific motto that benefits land owners when the property manage their deer herds.

Since anyone can now hunt with a crossbow, I would like to see gun season started earlier, and longer, instead of all the other seasons and get rid of youth hunts, so many adults shoot the deer and claim a kid shot it. Also bring back the back tag so an owner would have something to go by when a hunter is trespassing.

Bow hunters have to much say over crossbow and gun hunters unequally hoarding the rut period. Bow hunting and crossbow hunting should be equal opportunity not separated times. Gun season should be given the opportunity to participate in the rut hunt late oct, early nov with earn a buck every other 4 years.

Give land owners an opportunity to get free antlerless tags. Reduce the ag tags and allow others the opportunity to harvest those deer and actually utilize the deer instead of it being wasted. Force the people getting ag tags to have to MANDATORY allow hunters on their property!

If the goal is to harvest more deer. Don’t limit anyone from hunting. No antlerless only hunts, no quiet time before certain seasons, and once a season starts it goes till the end. For example, don’t stop archery hunting during gun season and then resume after gun season ends.

Things are being made too complicated with too many seasons. No need for extra for seasons. Keep a standard bow season, gun season, and muzzleloader. We don’t need a bunch of special seasons. If people can’t get out and hunt during the regular seasons that it their problem.

In the beginning you ask the question if I think there are too many hunters on public land. During archery season there is not too many hunters during gun season there are way too many hunters. Structure your questions better to differentiate between gun and now hunting.

Go back to the 9 day season with a tee zone and you will get your kill up because it will get everyone One The woods at one time and will move deer around In Stead of having a Late season wear people are able to go and choose to hunt late season and deer don’t get moved.
I have seen more deer than anytime since the 1990’s and am concerned that there are too many deer to remain sustainable. I would recommend returning to an earn-a-buck format in the next few years. Maybe every other year to encourage the harvest of more antlerless deer.

Since CWC was established and implemented, the deer numbers were decimated and especially took a toll on mature buck sightings. Deer populations have not rebounded and remained low for the last 6-8 years. Need to keep regular gun season framework, and no holiday hunts.

It’s not just to increase my chances of harvest to be selfish. I wait for a 3+ year old and I do not see very many so my age class is gone. Lucky to see one per year, never more than 2 the last 10 years. I have some cameras out too. none on cam last 2 years.

Allow bucks to be harvested!!! Way too many does. For every 20 does I’d see a night I’d only see 1 or 2 buck, regardless of their maturity. Allow 3 or 4 does to be harvested by each hunter with the purchase of their licence instead of just 2.

Deer numbers are back to pre-CWD/eradication zone times, which were too high. Need to figure out a way to reduce doe numbers, maybe consider bringing back earn-a-buck. I am also very concerned about the number of positive CWD tests in our area.

Already killing too many deer. I am a farmer. My farmer friend want all the deer killed. Yet they make plenty of money with the crops they harvest. My forest land is doing well. Not too much foraging. Too many does killed. Too few bucks.

I haven’t seen a deer in almost 5 seasons. If you say the population is too high, I say B.S. Why should I continue to buy a licence and spend time hunting when most likely I won't see a deer let alone get a chance to harvest one.

We need to bring back earn-a-buck in our unit. Some landowners in this unit do not allow the harvest of antlerless deer. I shouldn't be able to take a 5 min drive and see 200 deer. We need to harvest more does! Please help!

too many coyotes and wolf's... need to have a wolf season.... and a Sandhill crane season as well... makes no since not to have a Sandhill hunt... most other states allow it.... "its the ribeye of the sky" Ted Nugent

I found the video very informative. I’ve been enjoying the online surveys the dnr has been putting out since public meetings cant be held. I hope the online surveys and voting continues. Thanks for all you do!

I was hunting on public land this last gun deer season and I only saw 2 doe... that was opening morning about 30 min BEFORE the season opened. I hunted hard for 7 days. I saw Tracks and deer sign but know deer..

If there is a holiday antlerless season it makes no sense that it is antlerless for archery. Or if there is a holiday hunt why can’t you fill any unused gun tag? You purchase and it is intended to be used.

I would support efforts to increase the age class of deer in my unit such as earn a buck, 1 buck limit per hunter archery, gun, or muzzle loader. Hunter could only harvest 1 buck by a weapon of choice.

I want to thank the group for the hard work they do. It is a tough job with little reward, but I think their recommendations represent the views of most of the people who live and hunt here. THANKS!

CWD is of utmost importance. Total ban on ALL baiting & feeding. In person registration. Testing of ALL deer harvested. Close ALL "deer farms" shooting preserves. Total ban on ALL live transport.

We need to Greatly reduce the deer population in the core CWD area(s) to prevent the spread into other areas (like Columbia county). I had my first CWD positive deer in Columbia County in 2019.

Things should be alot more simple...you should be able to fill unfilled gun tags with archery equipment...who care what weapon harvested the animal. We pay for the licences let us fill them.
I didn't see the number of deer that I have seen in the past especially does and fawns. It would be nice to see more deer possibly by harvesting less antlerless deer for a couple of years.

Would like to see earn a buck brought back so that more bucks could be harvested due to the overall amount of deer present in the county and not as many hunters attempting to harvest them.

In light of CWD, high deer numbers, hunters unwillingness to focus harvest on antlerless deer, and a population objective of decrease, I support having an antlerless only season framework.

I feel that it should be a straight 9 day season you get 1 buck tag & 1 antlerless tag extended season's and extra season's are not a good idea in mine and majority of other hunters minds

Drop the license requirements for selecting public vs private hunting when buying the license. For research just have the type of property noted when you register the deer.

The DNR and CDC. Are very interesting on how they can screw up tradition and camaraderie..thank you for screwing up so many years of hard work and dropping hunter numbers.

Remove early firearm seasons (early antlerless, youth etc) close archery/crossbow season 5 days before firearm 9 day season and allow buck harvest during holiday hunt

Our Wisconsin deer population in no way could ever overturned. I am not a Trophy buck hunter or a buck hunter. This is the only red meat to eat for us. Thank you

I saw very few doe this season. I saw 15 different bucks. I did not have a doe that I could have harvested with the bow. I saw NO deer during the gun season.

To eliminate the youth hunt. I ask for this due to most kids already hunt at a young age and if they are interested they would go out with an adult either way

2019 was by far the worst hunting season i have seen in many years. The population is down and the gun deer season being a week later then it normally is.

I would like to use my gun buck tag as a late season bow buck tag. Gun season is getting more dangerous every year. Or let's be like Iowa, no rifles.

There are not enough deer in our area. Disagree with extending bow season. It should start earlier not go later. Gun season needs to be longer.

To reduce or at least limit deer numbers, seasons and restrictions for Columbia County should encourage maximum harvest of FEMALE deer.

There is no need for a doe only hunt or holiday hunt. The deer population is already significantly lower than it was even 5 years ago.

Would like to see earlier gun hunt for buck. Extend the length of gun hunt. Less over lapping of bow hunting into gun hunting.

Too few deer in our area. Does are off limits due to low numbers and a doe only season would deplete the population for us.

Extending the rifle hunting season will limit other use of lands for winter activities. Somebody innocent will get shot.

Earn A Buck should be used again to reduce the deer herd. It worked well when we had it and horn quality was much better.

Give landowners more FREE tags if you want more deer shot, but not a fee for all like the days of getting 4 tags a day!
I would love to see either choice and one doe tag per hunter for archery and gun seasons. The deer numbers are down

Do not extend the gun season and remove the antlerless only hunting seasons (or limit it to one in early December)

The doe to buck ratio should be dramatically reduced in my area but the issue is where do you donate the doe kill?

Let the people that own the land do what they want with the deer numbers. The DNR does not own the deer herd....

Add buck harvest to the holiday hunt. Leave the bow and crossbow the way it was. Leave the gun season at 9 day

Not a fan of youth gun hunts during archery season. Keep the seasons simple with no special season dates.

seeing few and few deer every year, go back to the old systems. one antlerless state wide with license

In the 70's and 80's I usually saw 60-80 deer opening weekend. Last year I saw 8 and we shot 3.

Do not change the structure of the white tail seasons, if anything limit the use of crossbows

Instead of antlerless only consider earn a buck. Take a doe first to qualify to take a buck.

A crossbow should only be allowed for older people or people with documented health issues.

Continue the holiday hunt. Our family really likes to hunt together during the holidays.

crossbow should have it own season and run shorter than regular compound bow.

Get rid of the holiday hunt. Lower the amount of antlerless permits.

Make crossbows be only available for hunters with disabilities.

Bring back earn a buck or hunter's choice for buck harvest.

Strongly support a holiday hunt and extended archery season.

More shotgun muzzleloader areas. rifles are too dangerous

Open the gun season a week earlier for a longer season.

Our deer numbers are lower then what people think.

Leave crossbow bow and gun seasons the way they are

Holiday Hunt open to both bucks and does....

Please keep current crossbow framework!

Please continue the holiday hunt.

Increase non-resident tag fees!

do earn a buck this fall

Hold the holiday hunt.

Not enough deer
Public Input on CDAC Preliminary Recommendations - Spring 2020

Crawford, Southern Farmland

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

437 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 140
   - I visit this unit for non-hunting purposes: 115
   - I hunt in this unit: 413
   - General interest in this unit: 91

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 386
   - Bow: 242
   - Crossbow: 139
   - Muzzleloader: 129

3. How many years have you hunted deer in this unit?
   - Minimum: 0
   - Average: 19.92
   - Maximum: 60

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 274
   - Mostly Private Land: 74
   - Public and Private Land About Equally: 33
   - Mostly Public Land: 11
   - Exclusively Public Land: 18
   - I did not hunt in this unit last year: 3

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 16
   - Not too crowded: 45
   - Neither crowded nor un-crowded: 27
   - Somewhat crowded: 17
   - Very crowded: 21
   - Not applicable: 10

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 75
   - Fewer: 140
   - Same: 167
   - More: 31
   - Many More: 14
   - Unsure: 10

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th>Antlerless Quota is...</th>
<th>Much Too Low</th>
<th>Too Low</th>
<th>About Right</th>
<th>Too High</th>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...

- Implement an ANTLERLESS HOLIDAY HUNT: Support 198, Oppose 197, Unsure 42

If a Holiday Hunt is held in a Farmland unit...

- EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: Support 254, Oppose 143, Unsure 40

If the Population Objective is not "Increase"...

- Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: Support 36, Oppose 376, Unsure 25

If a Zero Quota (buck only season) is adopted...

- ...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? VALID, NOT VALID, Unsure Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?  

<table>
<thead>
<tr>
<th>Concern</th>
<th>Average Rating</th>

Comments for Crawford, Southern Farmland

Note: the comments presented in this report are the unfiltered opinions of individuals who responded to an online public input form. The viewpoints expressed do not represent the views of the state of Wisconsin, the Department of Natural Resources, or its employees.
19 day gun season: - From what I understand, the 19 day gun season is being proposed in order to promote more opportunity for hunters to harvest a deer. However, us hunters have from mid-September to January to harvest deer between the opening and closing day of bow season. Within that timeframe, there are already more than enough opportunities to harvest a deer with a rifle or a muzzleloader. The deer are already exhausted from rutting for the previous 2-3 weeks so extending the rifle season to 19 days to pressure them some more makes no sense. We absolutely do not need to extend rifle season to 19 days. 4 harvest authorizations per license purchased: - Like the majority of the hunters in Crawford County (I'm assuming), I purchase a bow and gun license. With that, I am allowed to shoot 8 deer myself. If everyone I hunt with shot the amount of deer that we are allowed to (4 of us hunt 400 acres), there would be hardly any left for the future years. How does 8 tags per person per year correlate to healthy herd numbers and not mass harvest? Instead, my way of thinking is this: if the goal is to shoot more antlerless deer, Crawford County should implement earn-a-buck, each license purchases 1 doe tag to start with in order to get a buck tag, with the opportunity to purchase additional doe tags for 15$/apiece, with the limit stopping at 2 per weapon (archery/crossbow and rifle/muzzleloader). The 15$ price tag is the key to this, as it is cheap enough that if someone really wants to go shoot 2 more does they have that opportunity, but on the flip side each hunter isn't just given 4 tags to go shoot 4 deer with which eliminates the "I have the tags so I'm going to use them all" mentality. Lastly, the number of allowed harvest authorizations still stays the same (4), but if a person wants more they will have to pay more hopefully meaning only the people that need to kill more deer will buy them. Out of State Price Tags: - This issue, to me personally and others I've talked to, feels like it has been so neglected. Sometimes issues are as simple to fix as they seem and this is one of them. Let's erase Minnesota from the picture because their out-of-state tags are way too cheap as well. How is it fair that if I want to purchase a bow buck tag in Iowa, I have to pay and send in for preference points for multiple years just to spend more money on the tag itself but if someone lives in Iowa (lets just say close to Crawford County since it is right across the bridge) they can spend $150 or $160 and get 1 buck tag and 3 doe tags. On what planet does that seem right? Let's not even mention the comparison of the cost of turkey tags between the states. My recommended solution is simple: Wisconsin should copy what Iowa does. They are a premier whitetail state, as Wisconsin should be considered as well. People from all over come to hunt counties like Crawford/Bufalo/Grant/Vernon/Richland etc., and can do so for such a small price tag. Wisconsin needs to treat whitetails like Iowa does, plain and simple. We have the genetics and large tracts of timber to make this state an even greater whitetail power house. If Iowa doesn't have a problem getting out of state hunters to wait 3 years to get a bow tag, Wisconsin shouldn't fear it either. I would also like to make a quick mention regarding going to hunt mule deer in other states. For a Wisconsin resident to draw a tag in a zone with trophy potential and a decent harvest opportunity in Utah, they can expect to wait at least 5 years while paying 70$/year for a preference point then the actual tag purchase price which is exponentially higher. Let that sink in. In conclusion, Wisconsin needs to raise non-resident license fees. Changing the crossbow season dates: - I do agree to this proposal. Closing bow season 5 days prior to rifle season: - This proposal is absolutely absurd. Taking away 5 of the best days of bow hunting to appease rifle hunters is not what the hunting community in Wisconsin wants. The reason I say it as "appease rifle hunters" is due to the fact that if you are an avid bow hunter, you would never want this proposal to go through as it only benefits people who are mainly exclusive to rifle hunting each year. Again, this is probably going back to the creating more opportunity argument which is completely flawed. If this happens, the opposite is happening no matter what way people try to spin it. To piggy back off of that, the next thing that goes along with this is having opening weekend of rifle season be the closest Saturday to November 15th. This would destroy archery hunting opportunity during the best time of the year, especially if this is coupled with the above proposal. The avid archery hunters wait all year to hunt in November and these proposals would eliminate that. In conclusion, Wisconsin should not extend its rifle season as 9 days is more than enough time to harvest a deer (don't forget about Muzzleloader season directly following), non-residents do not pay nearly enough or have to wait long enough to have the opportunity to harvest deer in Wisconsin, hunters are given way to many harvest authorizations with numbers already dwindling (not according to "estimated" numbers, but actual in the field observations with a mention to the EHD that hit last year), there should be no 5 day relief.
Public Input on CDAC Preliminary Recommendations - Spring 2020

period prior to rifle season, and lastly, opening day of rifle season should not be on the closest Saturday prior to November 15th. We as hunters in Wisconsin have 4 months to harvest a deer/multiple deer with multiple different weapons. If a person cannot get an opportunity in 4 months, they are not putting in enough effort or simply just don’t care enough, it really is that simple.

I have hunted in the Kickapoo river valley for the past 8 years. We were slammed with EHD and I do not believe the numbers reported accurately reflect the deer mortality from EHD. many were never reported as many were never found. I had 2 on my property that I found pre archery season. During the hunting season I found over 20 carcasses and I know farmers found many more during harvest. Our group of 30 hunts over 2000 acres of both public and private land. While shed hunting this spring I came across several more carcasses. How do I know this was from EHD? Because the predators/scavengers do not eat these. The 1st deer I found had not been dead long and was 100 yards from my cabin. I watched it decompose to a mush within a week. No vulture, Eagle, possum, coyote, I mean nothing came to eat off this. It was a perfect skeleton of bones as were the ones I found later during the season and while shed hunting, no broken bones from a bullet no bones pulled away from scavengers just a perfect skeleton. I support the antlerless hunts but do not support 4 tags per license. Drop it to 2 per license and increase the bonus tags to generate more finances for the DNR. As seen in the video increasing to 4 had very little effect on the number of antlerless deer harvested. I am retired and hunt 75% of the archery season as well as 100% of the firearm season. On my private 158 acres I saw 2 deer during the firearm season and I hunted all 9 days. Yes I move around. Out of 8 of us that hunt on my property I took a fawn doe during the archery season and 1 buck was taken during the firearm season. Sightings were down drastically during both the firearm and bow season. You mention the low red oak density, how much of this is due to poor land management and land clearing for both agriculture and housing? I support any and all legal means of hunting to include crossbows. If we had 20,000 deer pre-harvest (not a chance with the EHD and CWD) and we harvested 4000 deer that is a 20% harvest bringing us to the 16,000 goal. I doubt we will be at the pre hunt level of 20k deer even though I support the antlerless hunts. As I said I support the use of crossbows but do wonder how many people have went to crossbows and no longer hunt the firearm season? That may explain the drop in the firearm license sales. Never during this presentation is there any mention of the affects of poaching or anyone "forgetting" to register their deer. Yes it does happen as I read about it all the time. Now moving forward if any county was to implement earn-a-buck you will see your success rate on does sky rocket. Why well you don’t have to register them in person so how many people will call in a false kill on a doe? I have heard about several un-ethical hunters that shared a doe so they could get their buck tag back when earn-a-buck was around. I heard stories of one doe that was registered 7 or 8 times. Earn-a-buck was considered a joke. I personally like earn-a-buck as it helps the buck population grow older and more mature I just don’t think you can have it without in person registration. In person registration would also help with the collection of lymph nodes in the study of CWD. Up for discussion was also the possibility of making man made waterholes illegal as it "MAY" spread CWD. So a 300 gallon cattle tank MAY spread CWD. How about the 3 small natural water puddles that are loaded with deer tracks on the lane between my fields? This is ridiculous. You better require every land owner to fill in any ruts that hold water (a lot less than a 300 gallon tank does) as well as cut down any tree that holds water in the base. I have several of these trees and actually use them for my dog when we are out walking in the heat. I have cameras set up on these trees and have several pictures of deer drinking from them as well. A small water source like a tire rut will contaminate at a ppm faster than a large water source. Please use science and common sense.
First off, thank you for having the presentation Dan Goltz put together available for viewing and reviewing. It really helped get a better understanding of what information is used to estimate the deer population in each county. I do not live in Crawford County, thus I am not able to attend the CDAC meetings. As a Wildlife Biologist with the US Fish and Wildlife Service, I like this type of data. Having this information this year was helpful in forming my opinions on deer management in Crawford County. It was a good overview of the trends in the deer population. After looking at the graphs associated with each portion of Dan’s presentation I differ in Dan's opinion that the population of deer in Crawford County is clearly showing a trend of increasing population. I see a stable population over time. The fawn:doe ratio data seems to have a small sample size as is evident by the long 95% Confidence Interval (CI) lines. It also says that the recruitment of fawns into the population is less than 1 fawn per doe suggesting fawn mortality is high. This does not support the narration in the presentation that the population is increasing. In relation to the Deer Population Trend Post Hunt graph I again see a stable trend line not an increasing population trend. I do not know what variables are used to develop this model so I can only comment on what the graph shows. The CI’s look to be +/- approximately 3,000 animals while the actual estimate fluctuates approximately 1,000 animals along the trend line drawn. The population is maintaining not increasing significantly over time. The commentary suggests that it shows an increasing population but it is evident by the words used in this commentary that it is a subjective opinion and speculation, not a comment completely based on the data. I fear that these comments might influence the CDAC committee's decisions and wanted to point this out. I think the allocation of 4 free doe licenses is too high as well as the extra doe licenses available for purchase based on the recruitment data presented and my own personal observations while hunting Crawford County. The data and my observations leave me with the opinion that you are not reaching your doe harvest quotas because the does are just not there to kill. I hunt mostly public land in Crawford County. In 40 hours of tree stand hunting last year, I saw 14 deer during the peak period of rut activity. Of those 14 animals, 3 were does. This was during the peak chase phase before lock down occurred. During the last 4 years hunting Crawford County the buck to doe ratio I have observed has been similar. The data in the presentation back up my observations. 6 does out of 100 Bonus Public Land tags were killed. People who buy extra tags when they already have 4 free antlerless tags in their pocket are most likely going to hunt to kill those animals. Having a 6% success rate for these tags suggests the antlerless deer density is not very high. Raising the Bonus Tag allotment from 100 to 200 doesn’t make sense to me as a way to kill more does as a 6% success rate is biologically insignificant. Selling more tags does equal more revenue for the WI DNR though, and if that is the goal, the CDAC board and the opinion of it’s constituents are not needed. One final note, I am concerned the Crawford County CDAC board is not taking the responses to these questionnaires seriously. I have read all of the responses to this questionnaire the past 2 years and the majority of the comments regarding the Holiday Hunt and the Extended Archery Season have been against this recommendation yet these two opportunities are implemented in the season framework. Please value the opinions of the individuals that actually take the time to fill this questionnaire out. It has been evident the last couple of years that those of us who fill these out don’t have much impact on the decision making process. Thank you for your consideration.
First of all I'd like to start out saying, I scout whitetails 8 months out of the year, I run a good amount of trail cams throughout the county and I hunt about 3 months out of the year very hard. But being out there all the time I am able to see what's going on. I hunt mostly public because I have better success. I think we should be the first county in this state to set the bar and pass a 3 pt on one side antler restriction. Not to grow trophy bucks but to protect spikes and forks so they have a chance to go through the cycles of life and maybe they will have a chance to mature more. We do not have the quality of bucks like we did in the past. (One important detail I need to mention is this county was devastated by EHD which means our buck population is even lower). People like seeing a nice buck, it brings business to the area, and when one is harvested the business continues onto the taxidermists, maybe the butcher shops. If muskie fisherman can get a 50" size limit why can't we get something to help deer in the whitetail capitol of the world? We should try it, what's it going to hurt? People will have more success and they will be happy. This should be an option and many of us would like to see this. Otherwise we would like to see one buck per hunter a year. We are losing hunters not because they aren't seeing deer, because they aren't seeing any decent bucks. The extended rifle season will hurt our buck population, and the continuation of crossbows for anyone all archery season is really having an impact on the buck population, I do not agree with either. We need to have a crossbow season and stay with the traditional rifle and muzzleloader season. If people are in the woods with rifles at the tail end of the rut it will be devastating to our buck population, they are like sitting ducks. One way we could make things a lot easier is change the way the seasons begin. This is a suggestion for the whole state. There are years we hear how the season started to late like 2019 so that lowers the harvest of bucks. There is a simple fix, make rifle season open on the same date every year like MI. This is my idea on season structure and I believe it would improve our state and simplify everything: Archery Season - Sep. 15th-Jan. 15th statewide continues Crossbow Season - Nov. 15th-Dec. 15th statewide continues Rifle Season - Nov. 20th-Nov. 30th statewide, weapon of choice Muzzleloader Season - Dec. 1st-Dec. 10th statewide No extended archery hunts, no holiday hunts, no youth hunts, no baiting statewide, no CWD tags, let the counties control their herds as needed. Let's make this the greatest state to hunt whitetails because right now we are falling off the map, losing business and losing hunters.
1. Extending the gun season to 19 days? Why? No reason for it. Leading up to the traditional rifle season deer are already run down significantly due to running non stop for the past month during the rut. Bucks especially don’t eat hardly at all during this period, their bodies are weak and they have almost zero fat reserves. Then they roll right into the rifle season and have to run for their lives due to the flood of hunters pushing them from one property to another conducting drives. They do this for 9 days and then maybe, if we don’t have an early or long winter, they finally get to rest and replenish their bodies. Otherwise, we get large winter kills because the deer are too run down and weak to survive the winter. Now, let’s add another 10 days onto the rifle season so whatever deer are left are almost certain to be dead by spring. Those who aren’t, will likely have a low fawn mortality rate due to the added stress related to all the previously mentioned factors. Absolutely irresponsible idea....especially when we already have a 10 day muzzleloader season that immediately follows the current rifle season. The idea is to have a healthy deer herd, not a non-existent one. 2. Prohibiting hunting for two or five days leading up to the start of the November gun season. Prohibiting hunting in the week leading up to opening day? Again, why? Now we are contradicting what eradication efforts they are proposing. They want hunters to harvest deer but now they want to eliminate archery hunters from hunting for a week leading up to the season.....during one of the absolute best weeks of the entire year? Now they want to alienate archery hunters because they think the non existent deer will magically flood the woods two-fold during that week before rifle season and they will explode on scene and be running everywhere for the new 19 day rifle season? 3. Hunters could still legally use crossbows and bows instead of firearms but would need firearm tags for any kills. What’s the difference? I can legally archery hunt the gun season now and use my rifle tag if I shoot a deer with a bow or my archery tag. Now they want to just eliminate us from using an additional tag. I prefer to archery hunt during rifle season. My family doesn’t do drives, we prefer to hunt deer on natural movement so I like to bow hunt. Why take a tag away that I could use to help the DNR eradicate more deer. The only thing I did agree with was increasing non-resident hunter’s license fees and eliminating the 4-day doe only hunt in December.

Getting 4 antlerless tags for each license is way too much! If you buy a bow and gun license that is 8 doe tags which is insane, especially for public land, and you still have the option to buy more. No one should have 8 doe tags for public land. Private land is different, as populations can be much higher and the deer can be better managed. I support eliminating all anterless only hunts and going back to the archery/ crossbow season, 9 day gun season and muzzleloader. Leave it at that. I recommend if you buy a Crawford county public land license, have one doe tag included with that license. If you buy a Crawford county private land license, have 2 or 3 doe tags included. Public land in Crawford county gets very heavy pressure during gun season, busy enough where it is not safe at times with so many people in some areas. Having this many people around with all of these doe tags is craziness. I had more tags in my pocket during the gun season last year than I had sightings for deer, and I hunted 7 of the 9 days of gun season. I had 7 doe tags and 1 buck tag, saw 3 deer the entire season hunting exclusively public land. I would like to see the deer populations on public land increase. It seems all of the focus is on private land management by reducing/ maintaining the herd, which I agree with as some areas have too many deer. I know some private land owners that don’t shoot does off of their private land, but instead do deer drives late season on public land to shoot does. This is not fair to the public land hunters. I would like to see an emphasis on increasing the herd on public land which would be easy to do by reducing the number of public land tags. This would increase the hunting experience for public land hunters, many of whom are first time hunters that may not have the money to buy land or connections to hunt on private land. My cousin started gun hunting the last two seasons and has yet to see a deer either year. He said he probably won’t hunt this year. It is hard to recruit and retain new hunters if they are not seeing any deer.
First off thank you for looking to up the public land bonus tags. When you look at data the private land tags do not even come close to selling out. Even though public land bonus tags only harvest 6 deer last year at least the state is gaining revenue for license sales. If we do not come close to selling all of our private land tags why not open more up to public land and at least gain something. So again thank you for moving that forward. Now as far as an extended archery and crossbow season goes. I truly feel that this is something not worth limiting other wintertime hunting opportunities for. Last year a total of 18 deer were harvested in our county during the extended archery season. that is .44 % of our total deer harvest. When taking only archery equipment into consideration that is still only 1.8% of our total archery harvest being done during the extended period in January. I personally lost one month of other hunting opportunities so that 18 more deer could be harvested. My beagles had to sit home, my coyote dogs sat home so that the one or two people still out hunting for their deer on public land did not have conflicts with me and my dogs. I strongly feel that extending bow season an entire month for less than half a percent of deer to be harvested is not worth the restrictions it places on other outdoor activities. If Crawford county was to eliminate the extended archery season we will not see a decline in deer harvested and it will not affect the overall management plan. There is little to no added value to increase the length of time archery hunters have in the woods. Thank you for your consideration.

Hunting in the Crawford County Farmland zone isn’t hunting anymore. It’s just deer shooting. With the expansion of recreational land and the loss of small farmers more land is posted to access. Everyone is scared to hunt as they think it will move all of the deer off of their property. So everybody climbs up a tree and sits there. Most of the land that I hunted on for 54 years is now inaccessible. Deer drives and still hunting require land access. I sat all day on opening day and never saw a deer. Others in my hunting group had similar stories. Driving into the cabin after dark there were 20 deer in the field 300 yards from my stand. They simply don't move in the daytime as no one bumps them out of the brush anymore. The farm where I hunt has very little woodland and most of the woodland around him is posted. He feeds the deer that others hunt. I have no idea how the DNR could help with this human social change. Deer numbers will continue to rise because hunter access is blocked. Hunters that don't see deer will quit hunting and the young hunters won't start. I fully intended to take at least 3 antlerless deer last year but shot only the one that I saw. 20 years from now it could be like shooting prairie dogs. Kill them just to get rid of them. Perhaps the bobcats and bears that are moving into Crawford county will control the population or the wolves can join them and decimate the deer herd in the southern part of the state like they have the north country. Just the ramblings of an old man who has 54 consecutive Wisconsin opening mornings under his belt. I don't envy your job.

Overall, I agree with proposed season structure and harvest authorization recommendations. I do, however, feel that much of the data and observations are pointing to a need for higher antlerless harvest. Simply giving out more antlerless tags or making more bonus tags available is not the fix. The option of an antlerless only season for all seasons seems too extreme in this part of the state. I think a happy medium does need to be implemented. Going back to the data, it clearly shows that “earn-a-buck” or even “earn-a-buck light” as Dan Goltz referred to in the video, was an extremely effective management tool for antlerless harvest. I know this type of season structure was met with some opposition at the time, including myself. But the more I educate myself and think about what needs to be done for a sustainable resource into the future the more apparent it becomes to me that earn-a-buck should make a comeback. Not only do I think earn-a-buck needs to come back because it is the most effective herd management tool for herd structure, I also think it is one of the best ways we can try to buy more time with CWD. CWD isn’t going away and is a great concern of mine, especially for the next generation’s sake. I know some of my response gets anecdotal, but I try to base my opinions and thoughts in science and research and not just try to push a biased, opinionated and politically based personal agenda. I truly hope my thoughts reach out to many people and they take an unbiased look at things and consider what is the best for the long term sustainability of our resource.
4 doe tags with a license is ridiculous. I Hunt private and public in Richland and Crawford. I try not to shoot any doe on public because of the amount of pressure and I have some opportunities others don’t. If you look at the amount of actual acreage in the county vs. The amount of acreage of just public. It’s not even close if you used that ratio to differentiate the amount of tags public vs private there would be no tags on public hardly at all. The public gets the most pressure on top of that. The private that I can hunt has 4 other hunters on it so 5 total. We each get 4 doe tags and one buck tag for bow and gun. 10 deer tags per person 50 total deer in one group on not much acreage. I feel we have a pretty standard situation. I really don’t understand the 50 tags? Are we expecting one group on a small private tract to accomplish that? There isn’t 50 deer to shoot. You may have some large tracts of private land with excessive deer #’s but 95% of the hunters can’t help with that. But it seems to fall onto them to shoot more and more deer. The situation doesn’t have an easy fix but maybe some encouragement or kick back for doe only youth hunts on large tracts for youth, veterans, disabled, etc... we need to stop pretending the average hunter or recreational property owner can do his part on private when 40 to 80 acres is a typical piece. 300 or even more acres with 5 hunters is different than a 40 with 5 hunters. Public lands should almost always be set to maintain or increase the herd. So much more pressure and more deer get shot per acre.

The deer season should be as it was when I started hunting in 1988. Bow season would open around the 15th of September and close the Sunday before gun season. I believe in allowing a bow to shoot both a buck and an doe. No more tags are necessary. Gun season should be 9 days only. Again a buck and a doe for each hunter. This holiday hunt and doe only season is ridiculous. You want people to hunt and buy licenses stop exterminating our deer heard. Stop introducing wolves to our woods. Stop putting a liberal in charge of the DNR who has there pockets lined by the insurance companies to exterminate our deer heard. Deer hunting used to a family tradition, like a holiday for most. Maybe have opening day start Thanksgiving morning. Our how about run our state like Iowa does. Maybe have them shoot deer, they have there shit together there. I’m fortunate to have 110 acres of prime hunting land with neighbors that share in my beliefs about hunting so we can control our herd. Which is a good thing. I grew up hunting public land around Palmyra, it was excellent hunting until 2007 or 2008 when you all decided CWD was a problem and decided to exterminate our deer heard. I have my main home in Palmyra in the kettle moraine state forest. I see maybe a deer or 2 a month. That’s sad. So sad. No matter what you decide to do it will be wrong.

In regards to spreading CWD - Wouldn’t it make sense to stop the sale of all deer baiting materials?! It’s illegal to bait - so why does every wal-mart/sporting good store - have mineral blocks and other baiting products. Same goes for deer urine products. We know it spreads it - we know deer urine products are from captive deer - so why are they allowed to sell it. Do we think people are buying a mineral block in Viroqua and taking it to Texas where it is legal to bait... Literally makes zeros sense. It would probably be cheaper to make it illegal for them to sell it and subsides their sales -- which is absolutely ridiculous but there has to be a reason they are allowed to sell it and my guess is lobbyist and money. Also, outlaw captive deer herds. Again probably cheaper in the long run to buy them out. The sooner we get rid of captive deer herds the better. There is almost zero upside to allowing them to continue - and a massive lists of bad stuff that can happen. I think the state has done a great job with the kiosks and all the other testing sites, the dumpsters are great idea. We need to do all we can with the CWD keep up the good work. Thank you.

CWD is a large concern for me. Does are down as no one is interested in does for meat with CWD still being prevalent. Everyone is opting for large bucks only. The increase in the antler-less seasons coupled with the self reporting has led to numerous deer being taken illegally during these seasons and never reported. I have see numerous times were antlered deer where taken during an antler less season and never reported. I am a big proponent of quality deer management and would like to see more done around this effort. The chance at large antlered deer are what drives the increase in the number of hunters which feeds the local economy. What about a plan built around needing to earn your buck for the next year vs earn a buck for the current year? This will help you realize how manyucks can be taken, but will hopefully produce more mature bucks, and keep the doe population in check. Other notes: Don’t mess with the 9 day gun deer season please. What about making the whole month of December Muzzleloader season?
Please stop the antlerless only holiday hunt. This is very frustrating for many people as they finally get a few days off of work for the holidays but can only shoot does. Many people don’t even go hunting because they cannot shoot bucks. Does at this point in the season should be protected as they are likely pregnant. The DNR says the holiday hunt is a great way for families to get together and hunt. This is false since most people don’t bother going since they can only shoot does. The archery season should end the first weekend in January like it always has. It’s time to give the deer a break at this point, they have been hunted hard the past 3.5 months already. Many bucks get shot that have already dropped their antlers. The more gun seasons there are the more spread out the hunting pressure is. I think eliminating all extra gun seasons and going back to just the 9 day season will force everyone to hunt that one week, which will help push the deer around more and increase success.

Deer populations statewide have been greatly reduced since the 1960’s through the 1980’s. Since the onset of unlimited antlerless tags. I used to count on seeing 20+ deer a day hunting and now see 3-4 on opening day and days without seeing a deer. Most of the youth have given up on hunting because they don’t have a chance to shot at a deer and have gone seasons without seeing a deer. The low count is killing the sport and revenue that supports all of the DNR programs. Over hunting is going to end this wonderful tradition. I see more killing just to kill with kids boosting about it after hours. Get back to a program of no more than one buck and a doe (Not earn a buck) per hunter. I have watched herds that were 20-50+ Deer reduced to 2-6 deer. I have hunted all around the state and the story is the same. It is shameful that the people put in place to manage the herds are destroying the herds.

Re: late season archery (Jan - Feb) - this year was the first truly late-season hunting experience over my 25 years or archery hunting, and to say I was absolutely thrilled to have this opportunity would have been an understatement. This time period presents one of the best opportunities for hunters to see and harvest mature bucks, and can be a great time to fill that doe tag. I believe this time period will become increasingly popular amongst other archery hunters in the years to come. A few reasons why I support this: more time in the woods (more return on hunting investment), patternable deer herd (concentrated on food sources, more sightings), easy tracking and less spoilage (assuming snow and freezing temps), no bugs or ticks (enough said). I would recommend making Jan 31st the last day of the archery season, remove any if/then criteria (e.g. holiday hunt).

Thank you!

NO HUNTING EXTENSIONS< ADDED PERMITS OR HIGHER KILL NUMBERS PLEASE!!! SEE COMMENTS FOR REASONING. I think your original estimation of the number of deer lost to EHD/Blue Tongue, was way low. I personally heard of numbers close to 200 to me East AND West, and the deer sittings on my own private property almost went to null starting in early October and the rest of seasons. Now granted, my property is all higher in elevation the the property to my immediate East with creek bottoms and some marshy areas. During harvest time I spoke to the farmer there, and he told me they found upwards of 30 dead on this piece of property alone, and 2-3 times more then that,just 3 miles further East from my property, in Richland County, all this aside from what was mentioned the night of the call in forum, when you guys mentioned the 200 or so in the Kickapoo Valley area to my West.

I heard rumors that WI was thinking of closing the bow season at the end of October in hopes that more people would gun hunt because there would be more bucks for the gun hunters. I think this is an absurd idea. Bow hunting is challenging but hunting the rut is what makes it so much fun. I have harvested many nice bow bucks in mid November and would be extremely upset if you took that period of time away from the bowhunters. People are either going to gun hunt or they aren't and I doubt they base it on bowhunters. And I hunt both bow and gun. If you want more gun hunters focus on recruiting more youth and implementing other gun hunter friendly rules, but do not take away from the bow hunters as I feel bowhunting the rut is the most fun experience in the woods. And obviously the rut occurs primarily the first 2-3 weeks in November. Thank you!
Do not extend the gun season or place restrictions on bow/crossbow hunters that give them fewer chances to hunt. Women and kids are much more comfortable with a bow rather than a gun and bringing in new hunters is the whole point of hunting and make the DNR necessary. I don’t like crossbows but I still don’t want them to be limited in their use. In reading some of the proposed changes it seems like almost no actual hunters had any input. I know hunters of all ages who use all weapons and no one supports these possible changes. If someone is upset they aren’t shooting a 180” buck on opening morning tell them to scout more, work to acquire better land, try bow hunting, and/or put in more time afield. Changes to manage the herd are fine. Changes just to appease the loud mouths who didn’t get a deer last year are not.

Hello. My main concern with the deer population this year is the impact that EHD has had from the fall 2019. We own 70 acres and have now found 7 deer carcasses on the property assumed to be due to EHD last fall. Our neighbors have also found multiple deer carcasses. I realize not all of them may have been due to EHD, but there was a known issue last fall in the area and speaking with the neighboring property owners, they did not see the same amount or quality of deer during the bow/gun hunting season as previous years. Have you considered the impact of EHD when estimating the population and looking at why the harvest numbers were lower? Would an antlerless only hunt help with recovery of deer lost, particularly mature bucks. What are the risks of another outbreak this year? Thank you

I do agree that there is to many deer in certain areas.. I hunted around Steuben and i seen a huge decrease this last year but i am sure it will rebound just fine.. I think earn a buck would be a good thing if you would like to kill more deer.. There are a lot of hunters that are out there just to kill a buck so if you would like to get numbers down i think earn a buck would be a good thing.. Also i think there is a good percentage of people that don’t register deer with this new system so the numbers could be skewed a little bit.. i would like it to go back where people had to register deer at local business which also brings money into the county since most people stop and will buy something.. thanks for letting us put our opinions out there for someone to review during these times

I am concerned about the large deer herd, in that I fear eventually there will be a new disease or virus that wipes out many deer. However that may be nature’s way of bringing numbers back to a healthier level. However I am not saying I disagree w/ maintaining the current numbers, just concerned about growing the herd. A longer gun season would probably help to maintain. Another point - I believe the herd in the area we hunt is healthy. However our party of 5-6 have noticed (over the past 5yrs or so) the large number of smaller deer. There is always a good fawn crop but the yearlings (1.5 yrsold) seem to be small when compared to those a few yrs. ago, according to our memory. May be an inbreeding issue. We do have some decent bucks now, due to not shooting the small ones.

I know it was proposed to extend the gun deer season to 19 days I think that is a bad idea. I would be 100% in support in moving the muzzle loader season in front of the normal gun season. I would also make the Muzzle loader tag separate from the normal gun deer tag. I don’t know what price to put on this additional tag but to be afforded the opportunity to hunt deer prior to the normal gun deer season should come at a price. Depending on the dates you could be hunting during the rut with a muzzle loader. I believe this would increase the interest in the muzzle loader season and would raise more money for conservation through the extra tag fees. I know I would not hesitate to but an extra tag for that season. Thanks for your time.

I see that the Crawford county CDAC if offering 200 public tags for 2020 even though the harvest did not change with an extra 100 tags in 2019. What is the thinking behind this increase? If it is to just raise money through tag sales shame on you members whom voted for this increase, deer are a resource not a source of revenue. The public land in this county is deer poor because if you look at the harvest data the numbers haven’t changes since 2010 it is apparent there is only so many deer on public land. It is the land owners that control the deer harvest not the DNR, you need landowner input but from the attendance at the meetings I have gone to there is none. So if you feel the need to raise funds just offer unlimited tag sales.
Hello I been Hunting Crawford county now for the last six years. I on private land and I hunt with three other hunters. The deer numbers where we hunt is very very low. The only reason why I still hunt there is because there is mature animals on the land. We’ve been managing it now going on our sixth year the numbers are so low that we did not shoot one doe now In six years. There are so many doe tags per man in this unit I think it’s ridiculous. Even the farmers in the area state we do not see any deer. Usually a farmer that sees one deer states that’s way too many. I was convinced that in the area there has to be major poaching because of so many little deer sightings. No doe tags should be given out in this area.

My 40 acre forest is severely impacted by too many deer over the winter. This spring, some areas are showing little to no growth of spring plants. I have done some timber harvest a few years back and am trying to get oak regeneration, but am not seeing young oaks surviving. There are just too many deer, according to my forest health. In addition, less hay and more corn and beans offers little for deer to eat in the spring. Many plant "deer plots" and feed deer near their deer stands for the hunting season, and come winter, the large herd has to scour the forests for food. Coyotes are being heavily trapped in my area as well. I used to have an incredible array of spring ephemeral plants. Now most are largely gone.

I believe there is a few reasons why the deer kill was down in 2019 deer season, #1 2018-2019 winter was a rough year very cold for the deer to survive, does may have aborted their babies to survive the winter which means less fawns in 2019, #2 there was a-lot of crops left in the fields which means the deer stayed the corn fields.#3 private land has changed so much in the last 20 years that farmers sold their land now or in the past that hunters lost place to hunt and new owners don’t hunt or let you on to hunt, I lost my private place to hunt so I’m forced to find new place to hunt or try public land which is very unsafe in my eyes, public hunting I've seen people dressed in camouflage during gun season!!

Don't understand the reason for the Holiday Hunt or extended bow/crossbow season until January 31st. Barely anyone hunts during those times and the harvest numbers are very low. Why not just run the late bow/crossbow season until December 31st? There's a good number of deer both does and bucks but not an overabundance of them. Don't see why I need eight does tags if I purchase patrons license. Two or three would be fine. I think some does need to be harvested but not that many. I know hunters out there that will never shoot doe and others that shoot everyone they see. Both mentalities need to change. Hunters have to understand that some does need to be harvested but not every single one they see.

I have been hunting Crawford county for the last 12 years and I would like to see us get back to in person registration and laminated tags. Although this new system is convenient In its own way a lot of people in Crawford County do not have cell service where we hunt so registering over the phone can be hard to do at times without driving a half an hour and the local bars are hurting as well I know of several people that did not register their deer because the new system has many flaws. I know there where many more deer harvested than what’s reported and it’s throwing off the management plan for Crawford. And it’s frustrating to see as a law bidding hunter.

I would like to see no holiday hunt. Just put the bowhunting season back to the way it was and let bow hunters hunt through the holidays. Deer have been pressured enough by that time of year with gun hunting and muzzle loader seasons. Do not doe hunts and only issue one extra antlerless tag to hunters. Make a season for crossbows that is a week or 2 long. Hunting with a crossbow is just like hunting with a gun u just cant shoot as far. The deer numbers are down and I would like to see them come back some for the young hunters I take out into the woods. It's more fun hunting when u see some deer. Thank you
Leave the rifle season the way it is. Have it start the Saturday before Thanksgiving and end the Sunday after. 9 day season. Keep muzzle loading season the way it is. Bow hunting till the Friday before gun hunting should stay the same. It doesn’t hurt the gun hunting at all. Ever since the earn a buck season's the deer numbers have been down and it seems like they just keep getting worse. Predator numbers are up and they play a big part to them. Especially since we have alot of Bobcats around now. I see alot of does without fawns now than I ever have before. Coyote numbers don't help either.

I would highly recommend the state would not alter the deer seasons and leave them as they were in 2019. If we are to maintain deer population we as hunters need every day to harvest the deer each hunter has purchased and given. Extending gun deer season will not increase or improve deer harvest. An important item Dan Goltz provided was 89.9% of the deer harvested is on private land thus private land owners will manage their properties. We as hunters should not argue or oppose one hunting method versus another, nor should we allow individuals apply their thoughts to the whole state.

I feel you need to keep the Holiday hunt going. because of my job and ability to be out hunting during the 9-day gun deer hunt, I usually don't get to harvest a deer at that time. I really enjoy the Holiday hunt and usually, get my deer during that time frame. I would also like to state, I feel that it would be beneficial for you to allow buck tags during the holiday hunt. I see more bucks during that time than the rest of my time deer hunting. I usually don't get to harvest a buck because it is antlerless-only during the Holiday hunt. Thank you for the opportunity to share.

The only other piece of feedback I would like to offer up is a consideration for people that own land in WI but live in another state, like myself. While I don’t expect to pay resident prices, I would like to see a break for those that own land, pay property taxes, and contribute to local economies in other ways. We visit our land/cabin regularly throughout the year so it would be nice if there was some middle price point for folks like me. I only hunt my private land (no public) so Somewhere in between resident and non resident prices would be nice.

Giving 5 tags tota with each license is counterproductive. I do not shoot does because everyone with a license has 4 extra tags and I am concerned other hunters use those tags to the full extent so I need to pass on harvesting does to make sure the population isn't decimated. If each license came with 2 tags total I would harvest does to fill my tags to do my part, but knowing someone who hunts bow and gun can kill 10 deer makes me worry about overharvest. Online registration makes poaching very easy as well, so I advocate deer registration stations.

Please quit try to micro manage our deer herd. So many new hunters and old are so confused by all the changes they say its not worth it. Private land owners have started to just manage deer the way they want it. I have hunted for over 50 years in the same area around gay's mills we have more deer and larger bucks than ever before. I do own land and manage it for deer but so do most people around me. We shoot does not all of them. The one thing that i have seen is a large increase in bob cats and i think that will affect our fawn crop.

This Blue Tongue that took a large percentage of our deer population is a concern. I hunted 9 days of rifle season and saw 11 deer...total. I own 155 acres and live to hunt. I spend money on food plots and try to create an environment to harvest Quality bucks. We need to rebuild the deer population in Clayton township and not add any more seasons or doe permits at this point. I have a neighbor that harvested over 20 antler less deer because they can. Too many! Please limit the harvest in fall 2020.

This herd is the biggest in the history of our eastern forests, we will not have forests left if the herd is allowed to continue at such high numbers, we need our forests healthy more now than ever, mature trees are carbon sequesters. I'm a hunter and think that a hunter should not expect to have deer parade by the stand, that isn’t hunting, we need to address CWD by reducing the size of the herd, the reasons-arguments for a much smaller herd are plain and abundant.
I am a disabled veteran and only with the help from my brothers I am able to hunt and get out and enjoy the outdoors. It also helps with my cost on meat for the year being on a fixed income. Please keep the seasons the way they we're last year. It helps me see more deer with archery hunting going into the rut. I also think the use of the crossbow is helping bring new hunters to our sport. I am so blessed to be able to get out hunting and to enjoy the outdoors.

Do not bring back the Earn a Buck regulations. Please strongly discuss bringing back the either sex opening weekend, then buck only gun season. However, make 1 revisement. If you purchase an antlerless bonus tag, limited to 2 or 3. You can use those antlerless tags to harvest a doe, during the buck only part of the gun season. That will generate Revenue, still help maintaining the doe harvest numbers. But it will also help to manage the over all deer herd.

Would like to see deer registration stations again By not having this it takes away sales tax as most hunters will spend $ at the registration station, it is always nice to visit with other hunters and see their harvest. If the state is going to have an antler less season, which I do not agree with, however if they decide to, have a party tag like many years ago, 4 hunters go together and get a doe tag. I do not support earn a buck at all. Thank you

I understand there is talk of extending the gun season and slightly shortening the bow season, not allowing people to bow hunt during the gun season. I believe the way the season have been structured in the past are just fine. I feel it is taking away from bow hunters when gun hunters have an equal opportunity to purchase a bow and hunt that season. I also feel that people should have the choice to use either a bow or gun during gun season.

There was talk of having an earlier full gun season to help coincide with the rut. With exception of an October Youth Hunt, I AM OPPOSED to this early hunt if it's even up for consideration. Family traditions in hunting revolve around the week of Thanksgiving in Wisconsin, if Wisconsin holds an early Gun season other than the youth hunt, it will screw up the tradition and i believe you would see a rapid decline in participation.

To remove more deer from the Crawford County hunting area. You need to consider implementing a harvesting doe first before you could harvest a buck. There are way to many people who own land in this county and only shoot bucks and do nothing to eliminate the doe population. I also think that people that live in this county should be given different considerations for hunting in this county then people coming from the big cities.

please stop hunting 5 days prior to the gun season, I use to see alot more deer on opening morning when there was a 5 day stop on hunting. This gives deer a chance to relax and get back to normal movement. Please stop early gun seasons, once gun hunting is done in an area the deer act totally different and are very spooked. Bow hunting is alot harder after these early hunts which is one reason the bow hunting numbers drop.

Having hunted the same private property for 14 years now we have not seen an increase in deer as suggested in the presentation. Our doe harvest has dipped a bit our buck harvest pretty steady. Just an observation on our property. I also hunt on the Iowa side of the river and there are many more deer on that side-hunter satisfaction in Iowa is extremely high because of that. I know its different just my observations.

I would reccomend allowing 1 buck per license sold 1 for bow and 1 for archery/crossbow. Also it would be nice to lower anterless tags to 1 per license, with an option to buy 1 or 2 more for a fee. It would be nice to increase the deer population in Crawford county, especially since ehd wiped out many deer in the area I hunt. Doesnt help giving people more tags as they think they need to hunt until they fill them all.

This was my first year hunting this unit. I support the plan for this unit based on the scientific data presented on the unit. I do not have enough history of hunting this area to form an anecdotal opinion. I am in favor of having a buck harvest, however, if the data truly supports an anterless only harvest, I am in favor of what is the best for the unit. Thanks for the opportunity to weigh in.
Public Input on CDAC Preliminary Recommendations - Spring 2020

the amount of deer in areas where hunters are using there four anterless tags have reduced the herd to basically nothing. and areas that they choose not to or dont allow hunting the population is too large. in continuing to allow some underscure hunters the opportunity to shoot 10 deer in a year is pushing some of us hunters with private land to quit hunting because the deer numbers are not their

I understand that in summer 2019, in the Crawford County/Wauzeka area, a vast number deer died of the bluetongue virus. This is the area where I hunt. I have hunted this same immediate area since the year 2000, usually seeing an average of 10 deer overall while hunting during the 9-day rifle season. In 1999, I saw only 1 deer. It is my experience that deer numbers have decreased drastically.

The habitat on the public land north of Wauzeka does not hold the deer like it should. Different hunters that I talked to didn't see much if any deer while hunting it over the 9 day gun season. If they aren't seeing deer they will stop hunting so maybe the DNR needs to do a little better job of creating habitat by select cutting trees to open up the canopy to create more natural brows.

We have lot of deer. More antlerless deer need to be taken. Hunters need to let the little bucks go. Otherwise we will have to have an antlerless season to keep the heard under control. I personally have not taken a buck under 16 inches for 25 years. I would rather take a doe for eating than a little buck. They won't get any bigger if we don't let them grow.

Hello, I feel that the main reason that I do not see the Deer I used to is lack of Hunters moving the Deer. The DNR is constantly scaring people about CWD. No one has ever contracted this Disease from consuming venison or Elk meat from out west. People are feeling uneasy about Hunting because of the CWD warnings. Thank you for the opportunity to voice my opinion.

I've been hunting for more than 50 yrs and been a Patron license holder for as long as I can remember but starting this year going forward I will not buy any hunting license till just before season. If EAB comes back I am done, while I have nothing against taking does I will never again be told I have to kill any animal so I have the " right to kill another "

No 19 day season. Continue with the same framework for archery, crossbow and gun seasons as last year with the exception on removing the holiday hunt. Don't shorten or eliminate the crossbow season as many hunters have invested money in bows and if the season is shortened or removed I believe there is going to be an even more decrease in license sales.

Let non-resident hunters shoot coyotes during the fall seasons. Worry more about poaching and non-registration than the Compound v. Crossbow. That is a selfish matter from what I read. Don't mess with the muzzleloaders season. I think more people will get into muzzleloaders. Keep hunting affordable and recognize the economic impact.

We have noticed in the past 3 yrs that we see a lot less Does and a lot more young Bucks. In the extended hunting seasons we would like to be able to fill our buck tag. It is very hard to tell a buck from a doe at 200 or 300 yards. So we lose our chance to fill our tags. We seem to see more bucks then does in the later seasons. Thank you

It is becoming more difficult every year to find a place to hunt on private land. I believe this is due to the increased failure of farm industries where the land is sold to be either broken into smaller "no hunting" plots or sold to intensive corporate type farms that deny access. I don't see a good future for Wisconsin deer hunting.

I hunt on County N right in between Rhein Hollow and Plum Creek. I did shoot a small buck last year but never had a chance to harvest a doe, I never saw a doe while in the woods. In my modest opinion I just think 4 doe tags per license is too many, but I do try to trust the people that have all of the information like the DNR.
I like the numbers of deer where I hunt but I believe there are too many hunters not taking deer to maintain herd control. They are too interested in wanting the big buck and are refusing to even take a doe or smaller buck. This in turn will allow the herd to get to large and also lead to health problems in the herd.

We saw no deer last year in Crawford County when hunting on a property that should have lots of deer. Also the neighbors only saw a couple we talked to which is rare. The population is not as high as you think it is.

The number of coyote is increasing based on the number new dens and the number of deer remains (mostly fur and bones) seen this spring. Given the property 130 acres 1 old den active and 2 new dens found and 3 found remains. Also the lack of turkey which was never a problem in the past.

The effect of the blue tongue type illness has a great deal to do with my response! Our crew didn't harvest a deer in Crawford for the first time since I can remember! The early onset of cold weather? The later start to the season? We've been through that before but never got skunked!

I appreciate what has been done over the past years to keep the deer population thriving in Crawford County. I also understand the responsibility of keeping those numbers in check. Thank you for information regarding the population... well done!!! Keep up the great work.

It seems as though hunters will only harvest a given number of deer regardless of issuing more tags. The most effective tool to reduce deer numbers was the earn a buck framework. I have been seeing more deer than ever in my location. Deer browse damage here is extensive.

I would like to propose a season/license structure where we buy one deer license, good for any weapon, season dates can remain the same—perhaps extend archery to the end of January, but limit buck harvest to only one. Not one with a bow and one with a gun—but only one.

I think you should be able to harvest deer on private and/or public ground. Having to have a tag for private or public is crazy. Need to go back to being able to harvest a deer on either piece of property and not have to worry about a public or private tag.

On our private land deer harvest has been down the last decade. Last year I saw more coyotes than deer and am every disappointed by this fact. Due to the decrease in the the herd count on in our area we debating if keeping the hunting land is worth effort.

Holding a holiday antlerless season prevents a person from taking advantage of the use of holiday time for the end of the fall turkey season. Why not forgo the holiday hunt but still extend the archery/crossbow season? Why must the two be tied together?

I think the dropping of back tags was a big mistake!! I caught on 2 different occasions trespassers and couldn't identify them. We need that back!!! Also we need registration stations back. To many loopholes for illegal hunting and identifying.

Do not do a 19 day gun deer season there is no point. Between all the coyotes and vehicle vs deer meetings there isn't alot of deer and the heards are not looking good. Keep the 9 day season with no holiday hunt and you would have more deer.

Like I stated in this survey 51 years and I believe the management has went south I am to the point of not buying licenses any longer really discussed. This unit needs more deer when you see nothing for days on end why hunt more

Because of the proven toxicity of lead contained in most bullets, consider strategies for phasing out the use of lead ammo for deer hunting. Non-lead bullets work just as well for killing deer, and probably keeps your gun cleaner.
Stop deer registration online or through the phone. If you want to worry about the economy, make gas stations/bars register deer again. It provides the business with business. Removing in person registration was a big mistake.

I WILL NOT hunt AT ALL if earn a buck is enacted and certainly not if it is ONLY antlerless hunting. I refuse to shoot does. This is not at all why I am a hunter and I am more than happy to stop hunting if this is the case.

In the summer of 2019 EHD has a devastating impact on seer populations in the parts of Crawford (comprised of over 2200 acres in 3 in adjoining sects) we hunt. That should be seriously considered in the quota for 2020

Keep the crossbow season identical to regular bow season. It is still hard to get a deer in bow range even with a crossbow. I can no longer pull a regular bow back and should be able to use my crossbow during deer rut.

I would like registration like it used to be, where you brought your deer to a local gas station or tavern. this gave a chance for people to see what had been harvested in the area and hear stories about the hunt.

I would like to have two general buck tags. Both tags could be used for archery season, or the tags could be split between archery and gun. Only one of the buck tags could be valid during the gun deer season.

I believe our state would definite from a 3 day season. 1 buck tag 1 doe tag per hunter. Pepple have the ability to hunt for 4 months right now, so there isn't as much pressure. Not as many people moving deer.

I wish we could bring back the opportunity to harvest bucks during the holiday hunt. My son and I used to enjoy hunting during the holiday season when that was still an option, but don't anymore. Thank you

It is absolutely moronic to give out four doe tags with each license. If every hunt filled every tag their would be zero deer left in the county. Just give out a buck tag and a doe tag, two deer is enough.

Why do you hold a holiday hunt in Crawford county, but not in Grant county ? The deer population is much higher in Grant then Crawford but they never have a holiday hunt.

The EHD virus impact in Crawford County was much higher than reported. There were dead deer everywhere in late summer. You could even smell them driving on the roads. Many cases not reoprted.

I think we need to go back to the earn a buck season, to many trophy hunters that just shoot big bucks and leave the rest to destroy our crops. Loose way to many crops to deer and turkeys.

I have seen a steady decrease in population since 2002. I hunt bow and gun and almost weekly from open to close. Our big buck population on camera and personal observation is LOW!

Predator mortality of herd definitely a concern.see trail cams and personal observations of wolves, and lions it's becoming an issue.large predators don't belong on private land.

Increase bonus tags on public land to 200. Decrease bonus tags on private land to 2200. Antlerless tags with each license to 2. Hold a holiday hunt with extended bow season.

I feel like the gun season opens a week after the rut in the past several years and there is very little movement opening weekend. Would like to see it slightly earlier.

I personally think that all doe tags should cost extra why not generate extra income for the DNR to help with keeping our great pastime and state great for everyone.

I think that I should be able to use my tags for all seasons that are open, if I was not able to use them opening season... This would include my buck tag.. thanks

Last year the deer numbers were dramatically down from the previous two years many many deer were found dead from what was presumed ehd in the areas I hunt

Blue-tongue hit our area extremely hard last year and between a few farms the confirmed total of dead/dying was over 100. Most of which were mature deer.
2320 Have seen less and less deer year after year. I’m given more tags every year and see less deer. Would recommend getting rid of doe only and holiday hunt.

2321 Too much corn standing in the fields that was not harvested due to weather. I still have corn standing in my area that was not harvested last year.

2322 Has the impact of EHD/BLUE TONGUE been taken into consideration? The number of dead deer near me did impact the number of deer I saw dramatically.

2323 Please do NOT go to an antlerless only season. Allow more antlerless tags. You will lose hunters in this area if it goes antlerless only.

2324 How many people in this DMU who had 4 antlerless permits actually used all 4. I feel that 2 antlerless permits per license is sufficient.

2325 Increase in deer harvest as a deer management tool will only be effective when access to private land for hunting becomes more available.

2326 How about a test in Crawford county. Use the 24 system. 8 points with 16 inch spread. To see if there could be a higher age class of bucks.

2327 I don’t understand if you hunt in different counties during the gun season (but same zone) you can’t use bonus tags in those counties.

2328 My preference would be to extend gun season to a three week season for antler and antlerless deer and get rid of the holiday hunt.

2329 Please respect the other hunters and hikers who use Wisconsin woodlands. The traditional 9 day deer season is long enough.

2330 Just wondering why there was no message of extending gun season or making October the only time you can use crossbows ????

2331 Keep up the great work! Thank you for the effort you put in to keep our deer herd and all plants and animals healthy!

2332 Recommend more warden presence in the county on private lands. Significant trespass and poaching occurs in this unit.

2333 Bucks must be at least a 6 pointer before it can be legally taken. Probably not realistic, but it sounds good.

2334 Deer population is lower than what is perceived by DNR, stop issuing so many deer authorizations for this unit.

2335 Get Rid of any and all can use a Crossbow go back to Seniors and Disability people only get to use Crossbow.

2336 I bow hunt frequently and have been seeing fewer and fewer deer every year and less during gun.

2337 Thank you for all you do, I know it’s a hard line to walk between hard science and people’s wants.

2339 I feel the quantity of antlerless permits are too high. Give us two, that is all that is needed.

2338 For what it is worth, in the 20 years I’ve hunted my property I’ve found the remains of 13 deer.

2339 Concerned of the EHD mortality of the deer population in Crawford and Richland counties.

2340 Stop selling doe tags if you are giving 4 to each hunter, why would I buy more?

2342 I do not believe that the DNR is taking adequate steps to address CWD.

2343 I’d like the opportunity to take more than one buck during gun season.

2344 Damage to agriculture crops is unacceptable at this population level.

2345 There are way too many deer. Find a way to reduce the population.

Public Input on CDAC Preliminary Recommendations - Spring 2020

Dane, Southern Farmland

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

555 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 408
   - I visit this unit for non-hunting purposes: 97
   - I hunt in this unit: 500
   - General interest in this unit: 112

   The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 445
   - Bow: 286
   - Crossbow: 185
   - Muzzleloader: 126

3. How many years have you hunted deer in this unit?
   - Minimum: 0
   - Average: 19.39
   - Maximum: 63

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 293
   - Mostly Private Land: 96
   - Public and Private Land About Equally: 35
   - Mostly Public Land: 30
   - Exclusively Public Land: 40
   - I did not hunt in this unit last year: 6

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 33
   - Not too crowded: 65
   - Neither crowded nor un-crowded: 39
   - Somewhat crowded: 33
   - Very crowded: 15
   - Not applicable: 16

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 65
   - Fewer: 126
   - Same: 248
   - More: 77
   - Many More: 23
   - Unsure: 16

Section 3: Feedback on the CDAC's 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>

1. Set your hunting seasons similar to how it was in the 70's. Your numbers are inaccurate due to buying license online (or not) and not having hunters take the deer someplace to be registered. Online registration is convenient but make the hunters work for it. 2. Go back to only people with disabilities can use crossbows. Crossbows are like a gun, they are more accurate and shoot further. 3. Too many hunting seasons. Go back to regular bow season with a 1 week lapse then the 9 day gun season. You will have a lot more deer taken otherwise people will take it for granted that they have 2 months to hunt so no need to plan for it and will loose interest. Make them plan to go up north, make them plan to get up before day break. That's what makes the whole hunting experience. 4. You aren't teaching the young/new hunters anything if you make it so easy to get a trophy buck by using crossbows. Kids need to learn to appreciate what it takes and the reasons for hunting. You are taking the meaning of the hunt away from them. I've seen far too many young kids take a nice trophy and don't appreciate the meaning of what they just did. Bring the excitement back to hunting. 5. I know it is more costly to print tags but for those of us who have collected all our tags for every season we've hunted, you have taken that away from us. I have passed collecting tags on to my kids and you have taken that away from them. By matching up the numbers on the tag, we predict what the hunting season will bring. Duplicate numbers determine the size of the trophy you will hunt. 6. All of these have taken away the fun and spirit of hunting. There is no more sitting around the fire discussing the hunt or hearing the hunting stories. Hunters like to show there trophies by leaving their tailgates down to start that conversation with people they don't even know. How people drive by and take pictures so they can take them back home to show their friends and family. Think back of how it was with you, your father, your family and friends. That is what we should be teaching our young hunters.

Recommend at least 2 antlerless permits be issued per license as in surrounding hunt units....does are currently being under-harvested (less than 50% of total harvest) and when compared to the antlerless quota of 5,400, the doe harvest is not coming close (only about 1,900) so you should try to increase/correct that without making hunters buy an extra tag! Further, over the years, of the 3 CWD positive deer on the property I hunt, all 3 were does. Even further, look at the number of vehicle collisions involving deer....all three examples point to the need to take more deer, and especially more does. Given white-tails high reproductive potential, which your data indicates is pretty consistent, harvesting at any less than 2 does per buck I a mistake and will eventually lead to an increasing population unless other mortality factors, like CWD take over! CWD is still a real issue that requires additional attention, not less....and herd density maintenance at the most, but more likely herd reduction! RE the hunt dates for the gun hunt, given that archery/crossbow participation trends, and if I interpret the harvest data correctly, archery/crossbow are taking an increasing % of the harvest, and gun hunters a decreasing %. Given that un hunters still comprise the majority of the hunters, this trend is disturbing and may lead to the need to evaluate hunt dates and length....ie keeping the same one buck and at least two doe tags per license, you could run the gun season through Thanksgiving week, but start it earlier, either a number of days or a full week in consideration of employed hunters...making it 16 days instead of just 9...still far fewer days than other methods/seasons but a good way to increase opportunity to the majority of license buyers, hunter success, total deer harvest, increased doe harvest and improved deer herd maintenance.
I feel like the Wisconsin DNR is turning the image of the White Tailed Deer from a highly sought after big game animal that makes for great table fair into that of an unwanted, disease filled vermin that needs to be exterminated from the landscape. Enough already with all the CWD crap. Your never going to be able to control the disease, it doesn’t transfer to humans and it’s most likely been here forever. Give people a way to easily test their own deer and move on. The Crossbow Season needs to be eliminated or severely shortened. Only elderly or the disabled should be allowed to use that weapon. It is basically a rifle you’re allowing able bodied people to use during archery season. Another example of trying to exterminate the White Tailed Deer as they are vermin. The DNR would be wise to put a premium on deer by going back to traditional bow and gun hunting seasons and eliminating the Holiday Hunts, Crossbow Seasons, Antlerless Seasons and Youth Seasons. Put more people into the woods at the same time and you will see the deer kill go up. Right now there is no urgency to harvest a deer because you can basically hunt from September to February. Instead of pulling the trigger on that marginal buck or shooting a doe people let them pass because they figure they can always get one in the later hunts. Our hunting party would never let deer go by until we had plenty of meat but do all the time now. It's just not as much fun as it used to be when you only had 9 days to fill your tag.

I am new (4 yrs) to Wisconsin from Colorado. I am a 69 yr old traditional (longbow) bowhunter in really good health and shape. I won't be deer hunting in Wisc. anymore. Reasons: I am not rich enough - don’t own private woods, and you tell me I am too old to hunt public land - can not put up a treestand. Longbows require too much movement drawing the bow (no let off like mechanical bows so can not hold at full draw) to hunt on ground for a 20yd or less shot. Putting up and taking down a ladder stand in the dark is way too dangerous and it really takes 2 persons to carry and erect. Not using a climber at my age. The treestand set up is the most dangerous part of treestand hunting. A deer is not worth the risks you expect me to take. Why can’t a treestand be set up with name and number and a rule that if it is not occupied 1/2 before sunrise, it becomes public use. (Even though I can't imagine anyone using anothers stand due to safety concerns) There are many options for me to spend my money to hunt in other states where I can set up a stand safely and be able to use my longbow.

There have been way too many deer for years. In spite of an extensive deer take during the hunting season and massive active protection of smaller trees, my moderate size farm is struggling to produce a crop of future native trees. The only foliage that reproduces without intervention are undesirables such as box elders and honeysuckle. Anyone like me that is trying to reintroduce native plants and trees is fighting a losing battle against deer. Too much of the land and forests in Dane county can no longer support deer in the winter. Once snow covers the landscape, crops are harvested, and food plots are depleted, deer move into my farm in mass. If you cannot figure out how to manage the deer through hunting seasons, you should consider extensive use of deer damage permit without restriction. I am already maximizing deer take on my property during the seasons but, if others don’t it does not do me much good. For the first time, we have taken at least three CDW positive deer on my property in the past two years. At some point, hunters will lose all interest in deer hunting.

The DNR keeps going in the same circle of failure, more seasons, longer seasons, special seasons, extended seasons all while hunter numbers continue to shrink and deer hunting in WI has been ruined,..by the DNR! It all started with Gov. Thompson and the DNR Secretary appointee change from the Natural Resources Board. Game management needs to be removed from the State DNR bureaucracy. Land, air and water are important and unfortunately for game, game management, citizens and hunters, they are doomed in the $500M machine called the WI DNR! So what does the current DNR do? Create a faux disaster called cwd, increase wolf population = less deer by far, import elk to feed the wolves if they don’t die of cwd first. What a total waste of tax payer money all the while hunting and hunters go down the tubes. Every Gov. since Thompson promised to restore the DNR Sec. to the Resources Board. They all lied! That is the problem. Not the red season, the blue season, holiday season, the funsy season. Pull your heads out!
I would like to see more CWD testing to get a better idea of CWD spread and prevalence. Unfortunately many hunters do not think it is as big of a problem as it is. CWD has become more and more prevalent in my hunting area. My hunting party is now harvesting a positive deer nearly every year. If CWD becomes even more prevalent I may consider no longer hunting in Dane county and possibly in the state of Wisconsin. I would love to have faster CWD testing so that my tag can be replaced within a day if CWD positive. We have been throwing away CWD positive deer and end up with no meat for a year. Additionally we don't want more than 1 deer per year (won't eat all that meat) - if we have a positive deer we end up with no meat for the year.

On the over 200 acres that we hunt and manage with extensive camera monitoring and also many days a field, we are confident that our local deer herd has a buck to doe ratio that is very close to 1:1. However, most of the doe harvest that we are aware of happens during gun season and holiday hunts. Because of this, I do not want to see more antlerless tags as this will hurt the overall population in my area (town of Vermont). This area already has a very low population of deer based on experiences hunting in surrounding counties. I also believe that the age structure is healthy in our area as we have a good balance of mature and young deer despite low numbers. These reasons are why I am also very opposed to making this a doe only county, and I would no longer lease land here if it became one (even for a year).

I'm 72 years old and have been deer hunting for the past 44 years (gun/bow/crossbow). I've had two serious injuries in the past 10 years that have resulted in my switching from bow to crossbow. I love it! Keeps me in the woods and venison in the freezer. However, I've noticed a significant number of persons who only use a crossbow because it is "easier" and more effective than a compound or traditional bow. Anybody can now buy a crossbow and seemingly try to kill deer at distances for which they are not competent. I support the use of crossbows for those that are needy (elderly, handicapped, those unable to effectively handle a bow, etc) but not for the "sportsman" who wants a device that makes killing a deer during bow season a "sure thing".

Hi, This is the first time I've participated in this survey even after hunting deer for 11 years, and have to say I couldn't be more excited that you are making this information available and seeking input. One thing that stood out to me was the significant increase in the number of antlerless deer harvested during the Earn-a-Buck years. That was during my first couple years hunting, so I didn't pay much attention, but wasn't a goal of that to reduce herd numbers to try cutting down the spread of CWD? If not, forgive me. Looking at the antlerless harvest quota and the actual number of antlerless harvests, has there been any discussion of bringing this back to help reach that quota? It's certainly not something I would be opposed to. Thanks again!

I do not enjoy all of these "extra" gun seasons. I know i am in the minority, but i love bowhunting, and hate that after gun season theres so many antlerless only hunts or gun hunts. I would be in favor of extending gun season 1 week and then no more gun hunting the rest of the season. That way the extra week gives people more than enough time to get their deer, helps control deer numbers, but lets the archer go back to a quiet woods for the rest of the season. I dont gun hunt because on public land its just too unsafe, so i bow hunt like crazy when there arent gun seasons. The times i have gun hunted public lands are not in dane county, gotta go north where people are more spread out and safety can be had. Hope this helps.

The holiday hunt is a great way for families to hunt together and provides an additional opportunity for antlerless harvest. The population trend is increasing as expected and while the holiday hunt may not produce a large antlerless harvest I think that any additional opportunity to increase antlerless harvest is a wise choice. Otherwise you will be looking at changing your population objective from maintain to decrease and chasing a runaway train. Unless the public and private land type designations are removed then I think there should be at least 2 free farmland tags provided with a license. It is too complicated and burdensome to deal with accounting for land type when trying to plan for antlerless harvest.
I hunt approx. 100 acres in Dane county. I am surrounded by farmland / forest on all sides. Every year, for the past few years, I have seen a decrease in the number of mature does. 2019 was the worst. I saw 2 mature does (3 years or older), 2 yearlings, and 3 fawns. I believe the reduced number of does is a direct result of antlerless hunts. One of the mature does was shot by a neighbor. Next year will be a sad year for mature does in the area that I hunt. Everyone I know hunting in Jefferson and Dane county have expressed a concern in the number of mature does seen. I seriously question the authenticity of the data you presented in this presentation and I am against antlerless/ doe only holiday hunts.

The deer population on the property I hunt in SW Dane is growing beyond what the land can sustain. They are over browsing and crowded. Over the past three seasons I've harvested 2-3 deer each season leveraging bonus tags. Juvenile bucks are everywhere, and they are mating with the does at a high rate. I have had every harvest tested for CWD, and in the past three seasons have 4 positive results, including two mature bucks. Both my deer from 2019 tested positive. Please consider giving flexibility to landowners to cull the young buck population. Every mature doe also had twins last year. Please continue the generous bonus antlerless tag and season length to enable these deer to be harvested.

Public land in Southern Dane Co has been overrun with hunters the last few years. Need to provide incentives to landowners to open up private land access. Having to choose public vs private for antlerless tags is a barrier. Why not just go back to being able to use anywhere you can hunt. Success rate on public seems dismal according to data anyway and forces the overcrowding issue. Doesn’t give incentive for hunters to at least try to get permission to hunt on private. Data seems to support renewing interest in earn a buck as well. Also all of the extra antlerless seasons don’t seem to work that well and as an upland hunter with dogs I hate them with all the trigger happy bozo’s on public.

Wisconsin is soon becoming known for large trophy bucks. This is because many hunters who used to shoot any buck that came through the woods is passing up the 1.5 to 2.5 year old bucks in search of a larger buck. If they want venison they shoot a doe. Otherwise they are looking for trophy mounts and finding them. DNR should promote the let them grow and have bucks get into the 3.5 years or older range. This promotes hunters and with increased hunters does will get shot for venison if hunters are allowed that option. With fewer younger hunters this is a way to promote hunting in this area. Actively promote the "let em grow" program.

Get rid of the youth, disabled and holiday gun hunts... Gun hunting ruins the bow season. I know it's tradition and all but there are so many gun hunts it's getting ridiculous. I enjoy a nice long bow season and then during gun, hunting gets easier. When you have 2 gun seasons before November the days during and following the gun hunts you don't see as many deer. They get scared and it kind of breaks up the bow hunting season. If you can't shoot it during the 9 day deer gun season then you should learn to bow hunt the rest of the year. That's what I did and have spent more dollars on hunting as well as time in the woods because of it.

I scouted deer on private land during the 2018 season and saw plenty during the 9 day gun season. I decided to hunt during the 2019 season and did not see any deer. None during the 9 day hunt, antlerless hunt, nor Holiday hunt. It was incredibly disappointing to sit out every day and not see anything aside a lone red fox during my first deer hunting season. I had suspected the rut was far over by the time the 9 day gun season started, and found out after that it surely had. I'm not sure what all CDAC can do to ensure the gun season falls earlier, or during the rut, but I'm just incredibly disappointed in this past year.

A nine day gun season is sufficient. Allow black powder hunting the week prior to the gun season. This give BP hunters a "chance" to harvest a buck. The bow hunting would not change for time periods. Do not restrict Cross bow to no hunting in November as many have invested a lot of money into hunting with the crossbow and taking away any hunting dates would be very unfair. I feel crossbow hunting has caused fewer wounded deer than the compound bow or the re-curve bow. A late season bow hunt is favorable but not too many can endure the Wisconsin cold weather at that time of the year thus it is kind of a mute issue.
Far SE Dane Co: Bring back EAB that is not weapon specific. The buck to doe ratio is way out of alignment in my area. I see guys out hunting all gun season with multiple/dozen antlerless in the field in front of them, but yet they come back day after day, I assume looking for a trophy buck, of which there are only a handful of mature bucks in the area. There are so many sexually mature doe in the area that it gets very difficult to find a mature buck during rut because there is no need for them to travel. I'm also worried this area, if exposed to disease, could be hit very hard due to the population.

Why are antlerless tags public or private land specific? In my opinion they should be county specific only. It would make it a lot easier since I hunt both public and private. I wish there was more mature deer especially bucks compared to a “deer”. Every deer seems like it’s just a deer or number. This year was the worst year in 10 years bow hunting for mature bucks seeing’s and on multiple trail cameras on multiple properties. I believe the biggest reason is crossbow hunters shooting lots of 2-3yr old bucks yearly during the end of October and early November.

I am primarily an upland bird hunter. As such, I have reservation regarding extending the gun deer season as I have reservations about taking my dog into the field during any firearm-based deer hunting season. Extending the gun deer season would reduce the number of days afield for me to hunt the limited pheasant population available on public lands. If the firearm-based deer hunting were to be extended, I would respectfully request that consideration be given to extending the length of the pheasant hunting season and additional late season bird stocking.

Stop trying to extend the gun season. Hardly no one hunts the regular season. You may be selling a lot of licenses but I see no one in the field. Where I hunt I can see for miles in all directions and will see a handful of hunters out on opening day and NO one the rest of the week. There is no one out there to even move the deer around for the rest of us. You can extend the season all you want but it will change anything. It only messes up other sports like Snowmobiling season . You need to find a way to get more people in the field, that’s the bottom line.

PLEASE consider reinstating earn a buck or a bonus buck program similar to other states. For instance, allowing the ability to use your gun buck tag to harvest an additional archery buck, however your archery tag could not be used for an additional gun buck. Or a modified earn a buck program that allows for an additional buck tag to be earned if a certain amount of antlerless deer are harvested by that hunter. Or lastly, additional land owner privileges or tags. Thank you for all your time and work you out into the Wisconsin whitetail Herd!

Season length and harvest numbers are adequate as they stand. If hunters want to harvest more deer annually, there are ways to do so with purchasing over the counter for tags. The Youth hunt is a joke. If a youth hunter can’t find pleasure and or experience in the established gun season or archery season, they are hunting for the wrong reasons. The Youth season as it stands reinforces the idea that in order to have a "successful season" you need to shoot the biggest buck in the woods. Implement antler size restrictions....pleaaasssse!

Keeping things (harvest and antlerless) tags the same...I see consistent #’s of deer not too much but also not too little. I had years where I did not see any other deer than the one I harvested. The land owners whose land I hunt on continuously over the last couple years explain they like to see the number of deer and not too much home plant damage. they expect some by living in the country but not enough to want more deer than we can eat. keep up the great work and keep the CWD testing available for free

I am asking you to consider this provision for archery hunters. I hunt in four different counties (private land). Dane, Iowa, Richland, and Vernon. I am only able to hunt a limited amount of time due to work and family time. It is expensive and a waste for me to have to purchase antlerless tags for three of the four counties I hunt when I’m only going to harvest one buck and one doe. Can you please make a special multi-county antlerless tag that is good for one deer out of all participating counties?
2384 My honest feedback is as follows. You’re giving out far to many tags and trying to kill of the herd around any growing city, town, or village. You’re policies and deer numbers have everything to do with reducing deer in populated areas and nothing to do with actual herd management and/or health. It’s obvious your more loyal to insurance companies (auto and farm) then you are the people (hunters), and animals you’re supposed to. It’s a shame what the DNR has turned into! I couldn’t be more fed up!

2385 Cross bow hunting is very important to older people, I myself started 2yrs ago love it after 45yrs of gun hunting about to quit I found this to be something I will continue. Now a group of us head north to hunt which I see other older people doing helps the small northern businesses, better weather and less hunters makes this hunting enjoyable. My relatives from out of state are now making this a great get together, DO NOT LIMIT CROSSBOW HUNTING TO END AT THE END OF OCTOBER!!! Will lose hunters

2386 Hello, I am an avid bow hunter who believes his rights are dwindling every year because all of the doe only and holiday hunts. I do however believe in the importance of herd management and willing to do my part. Maybe we can extend the bow season on the front end, such as opening season starting 1 month early or August sometime. This would allow bow hunters to have opportunity to harvest a velvet buck, which would be cool. Thank you for my recommendation opportunity!!! Much appreciated!!!

2387 Earn a buck was and is a good program to maintain and control numbers. The best version of it was when one could earn a buck for immediate harvest including into the next season (via a sticker). CWD seems to be a greater concern with greater numbers, other than that, the season structure has been good at least in the western portion of Dane Co. with the exception I believe late season hunts e.g. holiday hunts, stress the herd going into winter even in the southern portion of the state

2388 LAST WEDNESDAY (4/15/2020) I WAS DRIVING ON S HIGHLAND AVE, SOUTH OF HOLY NAME SEMINARY, WHEN THREE (3) ADULT DEER RAN ACROSS THE ROAD TO GO TO THE FARM FIELD. ONE HIT THE REAR OF MY CAR AND DID EXTENSIVE DAMAGE TO IT. THANK GOD THAT THE DEER DID NOT RUN INTO THE DRIVER’S SIDE OF MY CAR OTHERWISE I COULD HAVE BEEN INJURED SERIOUSLY. MY VIEW IS THAT DEER WITHIN THE CITY LIMITS SHOULD BE DESTROYED.

2389 The deer seasons going past jan 1st or even December 1st is getting out of hand. There are many hunters that like to hunt game other than deer and have almost had to give up on there hobby do to deer seasons. With the deer seasons going so long in the year people aren't able to get permission to hunt other game or do other activities outdoors do to the deer seasons. Tradition bow and gun hunt is all that's needed. The extended hunts are ruining the outdoors enthusiast

2390 The crossbows should only be allowed during rifle season. No matter what weapon of choice is used, you should only get 1 buck tag per year. I would like the hunting season to remain with a 9 day traditional gun hunt, and the muzzleloader hunt. When there are so many gun seasons, those who live on the private lands have their lifestyle changed drastically. We fear for all the guns going off around our home. We are unable to enjoy our own home and land.

2391 I feel harvesting a buck in the metro area of madison should be allowed for bow hunters (traditional) NOT crossbow. The numbers harvested is still only at 3 to 4 percent of tags sold so I feel like it’s taking away my hunting close to home for a archery buck. I don’t agree with doe only for all seasons. We should get to hunt for our big buck within 15 minutes of home here in madison. It’s one of the great things about living here.

2392 Cwd is out of control and if we don’t control the herd numbers eventually most deer harvested will test positive. It’s time to take real action to control this disease through aggressive herd management or the hunting heritage of Wisconsin will be lost forever. If cwd prevalence rates hit 40 percent both myself and my family will stop hunting deer and traditions will end and we’ll have a deer herd that will be out of control.
Public Input on CDAC Preliminary Recommendations - Spring 2020

there are too many deer in dane county. This is apparent in all the hunting and non-hunting observations I have made. I counted 26 deer while cycling two days ago in a 1 square mile area around blue mounds. deer collisions in the metro area are a significant danger to the public. I see way too many deer hunting near perry and primrose.Ive seen as many as 40 deer/day during a 3-4 hour bow hunt during the rut. Less deer is better.

very short gun hunting season and very late season leading to increase vehicle collision overpopulation and spread of CWD. By increasing the harvest tag numbers and two gun seasons early rut and post-rut buck tags as well as extending the antlerless gun season to four months will ensure CWD eradication, and decrease in predator volume as well as safer roads leading to less traffic-related accidents in the shape of collisions.

I hunt in wood county and Dane. In wood county we have too many Does and the ratio just isn't ideal(20:1)ish based on me sitting in a tree and observing. While in Dane county behind my residence we have maybe 5-6 does covering 600+ acres of farmland and woods. While it doesn't seem alarming we have maybe 50 unique bucks on camera alone so the ratio isn't there when we had an earn a buck it depleted our local doe population.

I do not believe the DNR's assessment of how many deer there actually are. Personal observations of mine and of many other hunters I know say the numbers are not there. Most crop damage to corn is from coons. Quit messing with the seasons. Leave 9 deer gun season only. Deer/car crashes are a result of more people not more deer. Quit playing politics. CWD is a natural occurrence. Stop trying to eradicate the deer.

if you continue to listen to the insurance companies and reduce the deer population more I and others that I talk with will stop hunting. We don't see the number of deer that we expect to see. More and more people are not hunting because of the reduction in deer population. Hopefully at some point the sportsman will get together and not buy any hunting license for a year or two and then where will the Wi DNR be!

I as well as many other people feel that out of state hunters need to have a higher cost and more limited as to how many deer can be harvested. Tired of seeing them harvest anything and everything that walks in front of them. I've also been seeing a lot of deer being left after shooting and their antlers only have been cut off, saw three 1-2 year old with antler removed, carcass left, as well as 4 larger ones.

As hunter numbers decline and the deer population is maintained or increases, I am worried about the negative effects of high deer pressure on ecology and impacts to drivers and landowners. I would be in support of programs and incentives that make deer hunt access more available on private lands. I would also support the authorization of additional antlerless tags and extended hunt timelines for those tags.

I would like to see the blackpowder season be moved to the end of December 26- January 10th. How stupid is it to have a 9 day rifle season and go right into a special blackpowder season. If you move the season to the end of December you could sell a separate tag, gain revenue and have more hunters participate in the season because it's right after the holiday season and you need to get in the woods.

The proposed 19 day gun season is absurd and should not be considered at all. An antlerless only gun season is ridiculous and tag sales will dramatically decrease. It will ruin the sport. A large quantity of bonus antlerless tags should not be sold. One per buck tag is plenty. With how many deer are killed on the roadways and by predators each year, the last thing we need is more antlerless deer killed.

I hunt on less than 4 acres of woods and saw more deer last year than ever before. The population appears to be on the rise as I observed and as the models appear to show. More antlerless deer need to be shot in Dane County and I am full well ready to shoot them. I would like more opportunities to shoot any deer antlered or not. I am very satisfied shooting antlerless deer. They taste just fine to me.

I enjoy the crossbow season. Please try to not ruin it for the bow Hunters by increasing the gun season.... or taking away the use of a crossbow, many Bowhunters enjoy bowhunting but are not always able to put the time to practice with a compound bow, to be an ethical Hunter. The crossbow allows us to still enjoy a bow hunting with the limited amount of time that most of us have to practice.
CWD is a definite problem and needs attention and solutions. However, there are too many deer tags for one hunter, and there are too many gun seasons. It doesn’t seem to be an effective way to manage deer health problems, is more dangerous, interferes with other hunting, etc. We need encouragement of hunting from the broader population and a focus on alternative mitigation practices for CWD.

I feel that the deer numbers are still down from the EHD that went through about 3 to 4 years ago. The herd has not rebounded from that yet. I yuse to let people hunt on my property, no longer till I see deer #'s go back up. My question would be, if Dane became a doe only unit. Would you pay back my gun and bow licenses? Because I would not hunt. A lot of my neighbors feel the same way.

You want to encourage new hunters. So best to have plenty of upside in the number of permits available. I have not typically hunted the "Holiday" season. But that's more a function of the rest of my life, rather than my desire (or lack of desire) to hunt. I have been fortunate and bagged a deer in the traditional 9-day hunt that last several years I went. (I missed a few in there.)

An extension of the muzzle loader season should be brought to the table. This season should run until the end of Jan. Having the season right after the 9-day gun season is worthless! Let hunters enjoy the outdoors, not having to deal with aggressive hunters, frustration of not seeing deer. Vacation time not available. Would allow weekend hunting with more days and options.

I feel more education on how hunting can help deer populations health wise and showing how money from licenses is spent to help manage habitats would be a good thing. I worry since recruitment is dropping and people aren't hunting as much, the deer numbers rise to their own detriment. I just know a lot of people who support the environment, but do not support hunting of any kind.

As an avid hunter - crossbow, muzzleloader and rifle I would really want to buy additional buck licenses. I do take does but I am not going to have people buy a license and I take a deer illegally. I am sure this is being done by some unethical hunters. Please give this some strong consideration. You can buy one extra Buck tag for $$ and it can be used with ANY weapon.

I walk my dog a lot in the winter and by adding additional hunts or extending current hunts I have to worry all winter about wearing orange and making sure my dog is too so that she doesn't get shot (even when we are on our own land, just in case). I also don't see that many deer while I'm hunting and wouldn't mind if the numbers went up. Thanks for doing this survey!

Crossbow laws should revert back to how they were, allowing those over 65 or with a disability to use them. Opening it up to everyone did nothing but cause more infighting between hunters and harvest methods. It did not help retain hunters or achieve most of the supposed goals. Hunters with a superior weapon should not have the long "bow" season to hunt with it.

I strongly support limiting gun deer seasons to the traditional 9 day firearms season only. I strongly support eliminating antlerless only seasons. I strongly support eliminating the crossbow season for anyone physically able to use "traditional" compound bows. I strongly support "traditional" compound bow and crossbow use during the 9 day firearms season.

I strongly believe earn a buck was the best tool you ever implemented to manage deer numbers and balance the herd even though it was supposedly unpopular among hunters. Anyone who understands deer management feels it was a good program and it would be nice to see it reinstated for a year. Not enough people are will to prioritize shooting antlerless deer.

We need to restructure crossbow season and reduce season length and not extend fun seasons. The population is down significantly in the last ten years and has not recovered with crossbow being given months to use a weapon that is proven easier and more effective and the numbers don't lie. I am all for crossbow hunting just not the entire archery season.
I would like to see an antler restriction law some day for Dane county. I think the public would accept it because most private land owners in this county are practicing it already. It would just make it more firm. I've seen this implemented in other states and it really works for producing mature bucks. Hopefully a thought for the future.

I actively hunt town of Dunn. The number of deer I see both hunting and on trail cameras that I use do not change much from when I started ten years ago to the present. I do not see an over abundance and it is common to not see a deer on a hunt. I do not feel there is an over population of deer in this area which is located in the metro zone.

Extend the crossbow season, but do not extend or have additional gun seasons. Crossbow or bow hunting and people hiking on public lands coexist very well. The gun seasons essentially push away other recreation users from using public lands out of safety concerns. Reduce the population of deer to decrease the spread of CWD and car accidents.

If you pass a earn a buck or any thing like that my 4 sons n I are going to Mo to hunt, we’re getting tired of seeing no deer all season, so you will lose 5 more hunters, I have hunted 5 countries over the last 50 years, never have I saw so few deer, I believe you will do what you want anyway, I have hunted Mo, they want you to see deer!

Please consider methods to decrease the population of deer. CWD prevalence could endanger to the future of deer hunting in the county. Reducing the population density is really our only tool to combat this apart from increased testing. Whatever method incentivizes hunters to take the most deer is what should be implemented.

We have been seeing a rebound in the deer population for the Deerfield area. When there was a summer with the blue tongue disease (?) many died off and we were not seeing as many bucks. Last year a member of our group shot a nice 8 point buck and I have been seeing signs this spring there are more bucks out there.

I am opposed to all of the "extra" hunts such as the Holiday hunts and antlerless only hunts. I also do not find it necessary to extend the archery season through the entire month of January. I believe the best scenario is to continue the traditional 9-day firearm season, followed by the 10-day Muzzleloader.

For the most part leave it all alone. Except, limit crossbow usage and bring back in person registration. Crossbows are basically like using a firearm and many people don’t need to use them. In person registration keeps hunters honest and prevents over bagging which is now more prevalent than ever.

I appreciate the free bonus antlerless permits for the metro zone and Dane co farmland zone. I usually kill all my deer with a bow rather than gun. However it’s nice to have the later season or an extended season so that I can assist the kids I mentor or my sister or friends get a deer.

Need a earlier season of both now & gun w/ a longer bow season. Also predator tags in all of WISCONSIN all year. Your numbers of wolf tags do not currently keep up w/ the number of newborns every year, and those adolescent wolfs are moving farther south looking for their own territory.

Stop changing things every year. Don’t you dare try and limit my crossbow season because of the elite bow hunter organizations. Stop charging us for bonus permits when I’ve already spent 165$ on a patrons. Bonus permits should be a management tool and not a source of revenue.

Maintain existing Crossbow regulations, and keep existing gun season at 9 days. Please stop micromanaging the deer season.. it is getting as bad as the trout season rules with respect to confusing rules with more mini-rules. Hope that doesn’t come as a surprise.

Please keep the extended archery season for metro subunits. It’s some of the most fun hunting all year. I am strongly opposed to a quiet period before the nine-day gun season. It doesn’t make any sense. If you want more license revenue, raise the non-resident fees.
The bow and cross bow season should be a set of Jan 31 or that last Sunday close to the Jan 31 even if it would Feb 2-3-4 and it shouldn’t be tied to the Holiday Hunt. I also would like to see how a year with earn buck would change the kill number up or down.

The deer population seemed a little higher than the year before near our property. I would rather have the population on the lower side to keep disease, accident, and plant life to a minimum and make deer hunting more interesting by being more challenging.

I Would like to have rotating seasons make it more fair for everyone not just a rut season for just bow hunters. More programs for youth hunting possibilities. Establish a new patriots license that signs you up for every game offered like original was.

Have "stay the same" as a population goal makes no sense given the level of CWD prevalence in Dane County. We should be attempting to reduce the deer population as fast as possible and disease control should take precedence over recreational hunting.

Antlerless hunts just shut deer movement down further, when you could be bow hunting. If you want one, do it after late bow season. How many people want to bow hunt late season in mid to late January because of the Holiday Hunt Anterless Only. Not me.

Overall the 2019 hunt was successful, but 2018 recorded a better harvest because of the presence of snow. Deer numbers appear to be creeping higher in our area which could indicate a drop in hunter density and less interest in the sport.

Too many seasons. Go back to the 9 day and than black powder hunt and be done with it. Give away doe tags if the number goes up too much. In my area, no one even hunts anymore. I hardly heard any shots and I hunt everyday, all season.

There is other winter sports and hunting that I’d like to enjoy other than deer hunting... such as rabbit and coyote hunting. Some Snowmobile trails have to be rerouted because of the late deer seasons. 5 mouths is too long of a season.

do have some concern on crossbows becoming as powerful as a gun would like to make sure bow hunting remains bow hunting. dont want to lose the hipe of a good bow season as are regular gun hunt seems to not be a tradition anymore.

Get rid of the antlerless only holiday hunt. This is a time of year many people have off and can get out in the woods to have a chance at ANY deer. At least allow bow hunters to still shoot a buck if they have a bow tag for it.

I am older and started hunting with crossbow 2yrs ago enjoyed it a lot. I do not want the crossbow season to end at the end of October, this would discourage me from continue to hunt, I have lost interest in the gun hunt.

North of 18-151 the deer herd/population is non existent compared to the past, South of 18-151 the deer population is far higher. I feel this is leading to misleading numbers for this area and our deer herd size.

I would not be in support of the Gun Deer season being any earlier the it has been for years! I enjoy the peek rut to be in the Archery Season! Thank You for your work and seeking the public opinion!

Please do not implement a 20 day gun season. We need decreased tag numbers. One buck and one doe for gun. The same goes for Bow. One bonus tag per gun or bow antlerless. We need antler restrictions as well.

I feel the deer heard has diminished drastically in the last 5 years. We need to take steps to increase the number of animals in this unit. Also somehow controlling the number of coyotes in this unit.

If a buck is taken, 2 does should be taken ! Encourage something of sorts. Can't only have trophy hunters ! I understand that earn a buck is past and history but it was a good system. Too many does.
I hope bow hunters don’t think that crossbow hunters should have shorter season. If they think crossbow hunters have an advantage then they should buy a crossbow. We hunt in different places anyway.

I oppose the use of crossbow by non-disabled hunters and the 19 day gun hunt proposal is a terrible idea. Also, think of your going to have a holiday hunt it should be open for antlered deer also.

Last year's weather and unharvested corn provided better cover than the last few years for animals. I saw fewer deer and the ones I saw were full of corn and not on the move as in the past.

Hunting zones need to be bigger and tags good for private and public hunting each tag good for multi-county zones and good for private and public!! And spring turkey season a month long.

The hunting season needs to be extended. The harvest quota should stay the same but the season should be longer to thin out hunters on the landscape at 1 time during the season.

I would hate to see the traditional 9 day season changed. Any hunting after this should include a break of 1 week, starting the following Saturday. Keep the 9 day a tradition.

Stop the hunting from September to February. This is stupid as a landowner and grandfather to 6 future hunters get back to the regular seasons and quit this 6 month hunting.

Keep crossbow season same as archery. Weather in 2019 is main reason for reduced deer kill. Excessive rain deterred hunters from going out or even accessing hunting areas.

I would like to see earn a buck added back in to increase the buck to doe percentages or allow only 1 buck to be harvested per hunter per year no matter what method used.

To many deer. I live in the cwd hot zone. I fear that the same is coming for this area if the numbers are not reduced. Not that it can be stopped, but hopefully delayed.

I would think that if we are missing our quotas, we should continue to offer bonus authorizations for the Metro Sub Units, especially since the unit size was increased.

The only reason I saw less deer but support higher harvest numbers is because of the number of fields that weren’t harvested and had corn for the deer to find refuge in.

So much standing corn in 2019. Lots of tracks in and out of standing corn and very little if any movement of deer in standing corn in the area I was hunting.

The wet grounds left many cornfields standing, which limited hunting in some areas, the deer stayed in the corn fields or the corn limited hunting views/zones.

Would like to see a better muzzleloader season and maybe an earlier one than after the gun season. Maybe one late October and with and after gun season.

I Think we should just stick with the traditional 9 day gun hunt and that's it for gun. I do support extending bow/crossbow season into January.

I tagged a cwd positive deer this year and saw a few deer that also looked affected...I found a couple of dead deer in our woods this spring.

Current management is going well, please continue the crossbow season as concurrent with archery season, do not shorten the crossbow season.

Consider qualifying buck seasons to mature bucks only, ie 6 points or more. Self penalties should be minimal, ie $25. No harsh penalties.

In my opinion if it isn't broke, don't fix it.. We have a great heard in Dane county. Leave all regulations and seasons as is. Thanks.
If you go to an antler less only season you will lose a lot of hunters. That's not what you want. Your revenue will be impacted.

Encourage people of all ages to get involved in Deer hunting. The younger generations would benefit from getting out into nature.

From my observations and trail cam data the buck to doe ratio in western Dane County is abysmal. 1 to 6 or worse in some areas.

Adjust the season when late in the year. Separate crossbow from archery season. A crossbow is 10 times deadlier than a bow.

I do not want to see any changes to using crossbow during the bow season. It should remain equal to all bow types, period.

I would like a longer gun season been hunting this area since I started hunting and you don’t see the deer as in the past.

CWD is ubiquitous. When are we going to bite the bullet and do something? One year of extremely heavy harvest?

Do not make gun season 2 weeks long. Take out the anger less hunt and quit releasing Wolves to Wisconsin!!

If there is an antlerless only holiday can the antlerless only hunt in early December be eliminated? Thanks

Make the traditional gun deer hunt one week earlier to encourage more hunters, while bucks are still in rut.

I do not like the fact that you have to choose whether you will harvest a doe on public OR private land.

To many deer killed by cars & trucks need more and better signs. HWY 51 Mcfarland to Stoughton.

I am VERY happy that the DNR is more science-based again, under the current administration.

Thank you very much for your hard work and dedication to Wisconsin's wildlife and hunters.

If bow season is opened then crossbow season should be also. Do not change the way it is.

Didn’t see any deer this past year and that included anyone that I TALK WITH

The antlerless only/holiday hunts need to go away! They are very unnecessary!

Im against extending the 9 day and any additional antlered gun seasons.

Allow crossbow hunting throughout the entire regular bow season…!

Thank you for your work on the CDAC. Please keep up the good work.

I would like to see the Holiday hunt include antlered deer too.

The deer population around my area is way down from last year.

Thank you. DNR does a great job. Too many barstool biologists!

The CDAC should consider limited baiting on public land.

Please extend the deer season in November to 2 weeks

Why can't archery be used for gun season with a gun?

Thank you for all your hard work. It is appreciated!

Make lead shot illegal, have an earn a buck program

Thank you for inviting me to fill out this survey.

There should be NO changes to the X bow season.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 313
   - I visit this unit for non-hunting purposes: 54
   - I hunt in this unit: 422
   - General interest in this unit: 66

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 391
   - Bow: 245
   - Crossbow: 177
   - Muzzleloader: 161

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 21.77
   - Maximum: 62

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 240
   - Mostly Private Land: 71
   - Public and Private Land About Equally: 45
   - Mostly Public Land: 20
   - Exclusively Public Land: 41
   - I did not hunt in this unit last year: 5

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 34
   - Not too crowded: 65
   - Neither crowded nor un-crowded: 28
   - Somewhat crowded: 23
   - Very crowded: 13
   - Not applicable: 14

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 79
   - Fewer: 149
   - Same: 167
   - More: 44
   - Many More: 22
   - Unsure: 9

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

- **If a DMU is in a Farmland Zone...**
  - Implement an ANTLERLESS HOLIDAY HUNT: 150 Support, 280 Oppose, 40 Unsure
  - EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: 222 Support, 192 Oppose, 55 Unsure

- **If a Holiday Hunt is held in a Farmland unit...**
  - Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: Not applicable in this DMU

- **If the Population Objective is not "Increase"...**
  - Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: Not applicable in this DMU

- **If a Zero Quota (buck only season) is adopted...**
  - ...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit? **Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very**

Just want to say like I have in the past, Dodge County is very vast compared to many counties. I've hunted the farmland with only family for 35 years as an organized group that primarily drives deer on neighboring farm properties near Hwy 33 and Hwy P. The number of deer seen the past 3 years has gone down dramatically, especially last season 2019. I strongly believe the DNR get’s much of it’s data for the county from the Horicon marsh area which holds a significant amount of deer as compared to other places in the county. It's not an accurate representation of the herd in total when you have that large of a deer sanctuary in your data pool which dilutes what is believed to be a good size herd where we hunt. Just my thoughts. Another point I would love to have the DNR explore is to consider something for archery. I'm an avid compound archer. I have no problem with the crossbows at all. However, it is my strong belief that any archer who draws blood on an animal and doesn’t recover that animal should have to consider that tag filled. Because there is no regulation on any of this, including gun season, many archers take risky shots at deer and because it didn't die quickly, not much effort is being put in to track since they can just continue to hunt again. I can tell you there are several people in our area that have wounded several deer without harvest every year, and generally they are larger mature bucks. We find them dead during our deer drives. Our group will find several every season and this I have to believe is not unique to our area. It's a problem everywhere. Maybe a little DNR point of emphasis or something to consider addressing and calling attention to this issue.

I wanted to finish the rest of my statement from previous statement. I lived in Tomahawk and Pelican lake for over a decade. I know what a wolf kill site looks like. You need to quit trying to reinvent the wheel. We had something good mid to late 90's and you let it go to hell. Fine we have wolves as a management tool so knock it off with the excessive hunting pressure. These animals need a brake after a certain point. It’s probably time to start to worry about the tic. Sure seems like that’s going to more detrimental than any cwd. I hunt multiple states and see how other places are run, we can learn from some of these. Sometimes over thinking and everyone needs to be happy needs to take a back seat to what is best for the deer. Just because your college educated doesn’t meet you make the correct choices. This was the first year bunch of us were going to attend the meeting. Pause should be pushed for this season with major decisions. Not much of a give and take discussion on the matter, for something as important as this. Good luck, hopefully you guys make a good decision.

I really think if you want to increase the herd even slightly you need to eliminate for one year any bonus permits on private and public hunting grounds, if that really scares you as a committee then at least cut it in half from 4000 to 2000 on private and from 125 to 63 on public. Also eliminate both antlerless hunts, right now the way the seasons are laid out it is putting a major amount of pressure on the herd and they need the break. I know, I think, that would take legislation to complete but at the very least you as a committee could recommend it to the board to show concern. I think this is really the only way to increase the herd and increase deer sightings in the field. Also, seeing that the May meeting is another call in and listen, I think you should still let the public voice their opinions the night of the meeting, it wouldn't be hard if you post that people must contact you prior to the meeting and you could go by name live on the call one at a time. Thanks Rick Firari

<td>2510</td>
<td>Please do away with the holiday hunt and antlerless only seasons. Public hunting lands in Dodge County are becoming more pressured every year. Once pheasant hunting opens, it is difficult to even see a deer on public hunting grounds. More and more people are using public hunting grounds to take their dogs for a walk right before sun set. The last few years, I am seeing more dogs than deer. Instead of charging hunters $12 for a permit, maybe recommend charging non-hunters a fee. On highway D their is a dog training trail where I USED to hunt. I have a bad knee and it is difficult to get back into the marsh, where the deer are pushed by pheasant hunters and non-hunters. I would also recommend setting up designated pheasant hunting areas. Possibly eliminate the release of pheasants on public lands. Thank you for listening. Respectfully, conservation patron for many years.</td>
</tr>
<tr>
<td>2511</td>
<td>We are very disappointed that our land that borders the Rock River (125 acres) has been under water for 5 years+ the river did not go down completely during this time and is still extremely high. We are a farm and without the area under water, there are virtually no deer on our land (Hustisford Township). They do have some listed as &quot;wasteland&quot; and it is taxed as much as the tillable land. The rest is taxed as recreation taxed 4 times as much as tillable acres. This is depriving us of a livelihood - $1,000's a year. The DNR magazine is full of stories of restoring wetlands and wildlfie habitat. In our case, the dam operators are completely destroying wetlands, killing thousands of trees including 200yr old Burr Oaks. This also destroys wildlife - the deer are killed on the highway because there is no place for the deer to bed down.</td>
</tr>
<tr>
<td>2512</td>
<td>The DNR's poor deer management has caused me to stop purchasing deer hunting license. Living near the DNR property I can tell the number of hunters has dropped greatly. The previous high kill rates issued by the DNR along with the out of control coyote population has made hunting difficult. I would also like to add the information given by the DNR conflicts with other DNR reports very often. It is hard to believe anything being issued. This report doesn't show trends over years. How many hunting licence were sold over the past 10 years? How many deer taken over the same time? The number of people hunting is dropping and the rates are increasing. I use to work with the DNR wardens in this area for years. Now, I'm not sure when the last time I saw or spoke to one. Manage in the field and not at your computers.</td>
</tr>
<tr>
<td>2513</td>
<td>In my opinion, the highest negative impact on deer numbers in my area of Dodge county, is related to party or group hunting. land owners with large acreages have tendencies to use groups that may be as high as 10-30 or more members strong. The deer &quot;drives&quot; often result in a literal slaughter. Often hunting safety and ethics are dismissed as pushed deer emerge from cover. The ensuing &quot;Maylay&quot;, of gunfire is common in my area. Wounded deer are a common sight. Deer found dead with gunshot wounds are equally as common. My recommendations are to take a fresh look at hunting party rules and ethics as well as how efficient and safe party hunting is. My solution in part would be to limit hunter group size and consider penalties for violations. Irresponsible methods using trucks and ATV's should be considered as well.</td>
</tr>
<tr>
<td>2514</td>
<td>I support herd management and the DNR’s responsibilities to the overall well-being of our state’s natural resources. Antler-less hunts will help achieve the overall initiative of decreasing Brown county’s deer herd. I strongly oppose crossbow sharing the entire archery season with compound bows. The advancements in crossbow technology have made that option as lethal as a firearm (shotgun) during a critical season of herd replenishment (mating season “rut”). My concern is not with the methodology of herd management; rather, the means of achieving these numbers while protecting our state’s reputation as a region where trophy whitetail harvests are a legitimate possibility. Thank you for the opportunity to share feedback.</td>
</tr>
</tbody>
</table>
I feel the deer population is lower than it has been due to over harvesting alone. While I have opportunity to view various deer during the hunting season as well as off season, there is no way to know if I see the same animals multiple times or I am seeing new arrivals to the area. I feel the antlered Buck harvest is adequate. My opinion is that hunting in groups or party hunting has resulted in high harvest rates of immature antlerless deer. I would like to see the CDAC consider regulating group hunting. For example, 3-4 hunters per party or group. Currently the groups or parties can exceed 20 or more hunters. Safety is an issue. Immature deer are harvested far faster than the population can recover.

We need to stop killing so many deer. Especially the does and let the population come back strong and abundant. We need to establish/maintain deer for future generations to hunt or you won’t have any hunters in the future. I’ve been hunting 20+ years and have always been able to harvest 1 or sometimes 2. The last few years I have not even see any to harvest. If you have 1 hunter shoot 3 deer, and 3 hunters not shoot any, you’ll lose the interest of 2 hunters next year. Sales go down and DNR loses jobs! This is not hard to predict. You’re ruining the family tradition and working on losing your job at the same time by shooting off to many deer.

We should recieve 1 doe tag and 1 buck tag for statewide for both bow and gun. We should have the 4 point rule on one side for ages 16 and up. We need to get rid of the b.s. which county and public or private. It’s just an extra way to create b.s. revenue. If your money was managed properly you wouldn’t need more. I live in the corner of a county I have public land from 3 different counties within a 10 mile radius that I hunt different days depending on time of season wind run/shine. I’m sick so sick of buying 3 different tags to legally shoot a doe at each place. It is absolutley bullshit so thanks for the headaches.

I own Martys and Son Sausage Haus in Rubicon. We processed little over 1200 deer. So when I say this, I get alot of feedback from hunters. There are more deer in dodge county than there has been since early 2000's. From what people have told me, to hunting in Rubicon. Everybody is a trophy hunter now. Its all ablout antlers, I firmly believe this is the main driving force your quota is never met in all areas. I have no idea what the answer to this is but the kill numbers are misleading. Especially last gun season, with it being so late is the main driving force that led to that crappy kill. The deer are there.

I for one would rather see bow/crossbow season shortened. It will increase a chance for someone who doesn't hunt this season a better chance at getting the buck that he/she is dreaming about during the gun season. With kids in sports it is getting harder for me to get out to hunt as it is them. If there is a holiday hunt make it a buck or antlerless. It is not fair that gun has to shoot antlerless only but if the bow and crossbow season is extended they get to shoot either or. Unfortunately the weather sucked this year with a lot of standing corn yet. Hopefully season will be better this year.

There has been large herds ( 60-120 deer) in the Dodge county Columbia county region for several years that continually build. I have driven 15 miles and have counted over 200 deer grazing in three different herds. I presume this concentration of the deer is killing localized agriculture and wildlife areas while not affecting the rest of the county. Or has there been large herds reported across the county? Is there anything that deer management has looked into to decrease the concentration of deer in a single area while maintaining your overall objectives?

I would like to see an extended archery and crossbow season without the Holiday hunt. It would also be nice to see the season start the first weekend of Sept. every year. There seemed to be some talk of moving the start of crossbow season back a month, I hope not. The land I hunt is by public and after a reason start the deer move out of the area. Too much movement in public land as season gets later. I would also like to see the early gun hunts eliminated, bow hunters and gun hunters are a bad mix and it is asking for problems by someone behind shot.
I hunt the Horicon and Theresa marshes. The deer heard is very low compared to 20 or 30 years ago. There shouldn't be any does shot on public marshes as of now. All my hunting friends and family always had fun seeing and shooting deer. We need to stop catering just to wings over wisconsin. There is getting less land to deer hunt every year with impoundments and tree cutting. Hunting license sales declines are getting blamed on everything under sun. Most of the people I know that quit are for 2 reasons. Loss of land with trees and a small deer heard.

Having been very closely tied to deer hunting in dodge county for many years and hunting some of the amazing properties in the Beaver Dam and Lost Lake areas, I can say from experience that the earn-a-buck years were the good old days. I don't know the science to it but there is no question about it. Plus, the earn-a-buck is a great teacher for the next generation. I've hunted Iowa, Kansas, and Missouri. The earn-a-buck years in the big Dodge county cattail marshes were as good as any of it. Amazing buck quality and buck to doe ratio. Thank you.

Would like to to gun deer season start week earlier and run for 2 weeks. Give hunters minimum of 1 year notice for this change 2 year notice would be best. If they ever want to limit kill on bucks i would be happy with 1 buck per person for all license holders. I actually feel the buck to doe ratio is to low. I see good changes with dnr being able to do these surveys on line getting more hunters and non hunters input. In my 45 years of deer hunting i see wisconsin dnr doing alot of good things for hunters and wildlife. Keep up the great work!

We don't need a holiday hunt or an extended archery. There are alot of deer I'm sure that are not reported. Not because of the phone in system. I've had 2-5 poached deer a season for the past 6 years on our and neighbor's .Vehicle tracks in our fields that lead to deer blood and hair. Who knows if they're accounted for. Wolves were released in I think it was 2011. On the places I could shed hunt I found 33 carcasses and we've been recovering since. Amazing on average before and after I averaged about 2-4 dead deer a shed season.

lets get back to a 9 day season total. no extra hunts. hunt with what ever weapon u desire. don't change the crossbow season at all. if u want more killed limit amount of time to 9 days people get out and hunt. not many people go hunting deer for 3 month season. everyone is getting older and sit no one drives deer any more. so by lowering the time people will be more app to go after them. the dnr sure screwed up this state by getting greedy for money. go back the way it was many yrs ago and people will be very happy.

I have heard rumors of season dates being changed in regards to the archery season being shortened and the gun season being lengthened. My opinion is that shortening the archery season by one week would be OK to provide more opportunities to harvest bucks in rut during the gun season but I would not like to see it done any earlier than November 15. Many times the best hunting for the archery season is between October 28 and November 12 and I would like to see that season maintained for the archery hunters.

The season was suppose to co-inside with the rut but it appeared that the rut was running down for the gun season. Maybe try one more season the same but keep a close eye on the peak of the rut and the deer harvest during the gun season. As far as the extended crossbow/archery season or the holiday hunt I would suggest one or the other but not both. Also, you have a discounted price for resident fishing license for those 65 or over. Why not offer the same for hunting licenses as well?

I support only allowing crossbow use for disabled and elderly, like it used to be. It's not true archery hunting. It's more like a gun, to some degree. You have further range, a scope and a trigger. It should be reserved for those that can't bowhunt anymore. I believe that allowing anyone to crossbow hunt hurts QDM efforts. It's easier to kill a deer with a crossbow than a bow. And because it's easier to kill with a crossbow, those not following QDM can more easily mess up QDM goals.

I feel across the state deer in general are stressed. We as hunters have the ability to harvest deer from September thru January that's 5 months! I feel that is way to long. I am a conservative by nature and feel that most deer in size are small. The deer worth harvesting buck or doe no longer exist on public land. The majority of hunters do not own private land. Therefore your license sales has decreased and conservationists like myself just sit and watch the sunrise and set.
I feel the private public land split is terrible and ruins deer culture in Wisconsin. Food plots have ruined deer access to the general public in my opinion. I’ve had the luxury of hunting several private food plotted areas in Wisconsin. One 20 acre area in The Horicon area holds 50 to 70 deer daily till nightfall. Several 160 plus class deer taken Annually. Testament to what food plots, water, and cover will do. It also keeps quality deer or any at all from the public.

There are too many problems because of too many hunters on private land. Other Hunters are creating dangerous situations by not complying with the state DNR regulations, such as wearing blaze orange during hunting season and when they are hunting. Because everything is online now, there is no accountability for these Hunters. I think those are issues that should be addressed more so than the number of permits that the state wants to issue or charge a fee for.

We have been hunting with the same people the last 30 plus years and have seen less deer in the past 8 to 10 years. many bow hunters are killing more than one deer. They use tags from others and dont get checked some shoot 5 to 10 deer per season plus wound others that later die due to injuries.We need more wardens checking tags. we drive deer within a 2 square mile area. We see less deer and dont shoot does. we take bucks with horns past the ears.

I think it would be beneficial to extend the archery season until the end of January, as most of the ideal late season hunting conditions do not occur until mid January as of late. I do not believe a holiday hunt for antlerless is necessary, as most gun hunters are done hunting at this point and do not have the time to hunt, as well as not having ideal hunting conditions for this time of year.

The deer numbers in the north eastern portion of dodge county have steadily been declining. I think I saw 1 living deer from the end of gun deer hunt through march 1st. I would be in favor of buck only and limit it to 1 per person. We need to limit the number of does that are taken to get back an established population. Thank you for reading this and I hope you take this into consideration.

I did here rumors of stopping the crossbow season on Oct 31st. I do not agree with this at all. I here the gun and bow hunters complaining there are no bucks left by Nov. I don't agree with that statement at all. Last years gun season was later than normal also with all the rain there was a lot of standing corn. That played a bigger part in not seeing bucks than anything.

I would like to see more public land antlerless tags available. There have always been more than enough deer on public lands to go around. I am seeing more antlerless deer now than ever before in Dodge on public lands but I can only harvest 1antlerless. I’m very concerned about the health of our public forests and can see the impact our deer herd is having on them.

I read an article awhile back that mentioned the thought of having the gun season extended and moved up to early November. I did not see this addressed in you meeting, therefore I am assuming that it is not actually being considered. I hope that is the case as moving up the gun season to early November would greatly impact bow hunters during the rut. Thank you.

It seem there is a want of a better age class of bucks. Were gun hunter’s saying theres none for them buy gun season. I’m not for changing the dates of gun season ,or cutting other hunters seasons. Would like to see a antler restriction proposal. I think hunters under the age of 18 yrs old ,as well as first timers should be exempt from the antler restriction.

We need more deer to help deer movement, ive noticed in my last year of gun hunting that I barely seen any deer this year. It was almost like they werent moving at all in my area, the late season was definitly part of it but I dont think it was all of it. Also I think crossbow season should be shorter like october only, they are too much like guns.
I’m okay with keeping everything in line with last year’s numbers as harvest numbers are very similar to prior years. I like the holiday hunt option for adding the opportunity to harvest an antlerless if I wasn’t able to in regular season hunts. I’m okay with also extending archery if we have the holiday hunting season.

This advisory committee has NOT addressed any collaborative initiative to provide more opportunities for hunters to connect with landowners (i.e. listing of landowners who may be amenable to allow hunting) so that said hunters could work out an agreement for accessing land for hunting. When is this going to happen?????

I have heard of not allowing crossbow hunting for certain portions of the year. I feel that is a mistake. I hunt with crossbow and to have a portion of the season taken away, especially during the rut, is not what I wish to see. It will discourage those who already hunt and not encourage others to take up hunting.

Please consider elimination of the public/private designation for hunting does. It just reduces the hunting of does on public land and may be reducing the number of hunters that buy bonus tags. It just complicated the hunting regulations and angers hunters that now have to choose in advance where they hunt.

I hunt/live/work in 8 mile radius of 3 counties on small private land plot adjacent to public hunting. The county only and public or private restrictions on antler-less tags are very restrictive and greatly reduce my hunting abilities. I know that few people are effected by this, but it should be considered.

Your goal was to increase the number of deer in this unit. How can this be done, if the number of does killed does not decrease? It seems to me that you are fighting yourself. Why not cut the number of doe tags in half, and issue the remaining doe tags at random with the purchase of a hunting license?

It’s very obvious that each county/township the deer herd up on certain properties were these people do not shoot does, hunt or will they let anyone on their land to hunt. We have too many Trophy hunters and not enough sportsman even willing to shoot does in certain area as well.

The number of deer in the area I hunt has been declining for quite a while. There has been over harvesting going on for about 10 years now. I used to see deer just about every time out. Now it’s about every 5 times on average. I’ve been hunting other counties because of this.

Dear folks, I agree with the county quota and your proposals. Not sure this is the right time or place but just wanted to make a statement about the bow and gun seasons and would recommend that the dates, times and lengths of the seasons stay the same as in 2019. Thank you.

I am not happy with the amount of pressure put on deer herd too many hunts too many tags bow hunters are filling! I am also disgusted with the talk of lengthening the traditional 9 day gun season! If the season is extended it may be the last time I deer hunt in Wisconsin.

Please do away with public/private designation for antlerless tags. Some people hunt private and public, and having to hunt a specific DMU and then narrow where they are going to harvest an antlerless deer down to private or public is too specific.

I would like to see the dnr remove the public and private tags and the county tags go back to the zone tags and let the hunter fill in when they register this is getting crazy if you like to hunt different county's or line on an a county line

There needs to be some type of coyote control in this area. Bring the bounty on coyotes back. The deer population is relatively stable but on the high side. The coyotes are preventing the growth of the herd and a major impact in turkeys.

STOP ALLOWING BAITING. It has altered hunting habits and not for the good. Can't reverse the Wolf decisions but northern Wisconsin business has been ruined by it. What was a enjoyable experience 15 years ago is no longer an option for me.
People have food plots around my area. The deer don't go to public land anymore. If you don't have private or leased land most likely you won't see anything. Pretty sure you guys can't count. I don't see a increase in deer population.

Do not take away the crossbow season or shorten. Or give the gun season the rut. Cant shoot big bucks because of bowhunters not crossbow hunters. Gun season should be during the rut. The bow hunters have an advantage for too long.

best hunting ever was with earn a buck, it would be terrible idea to take away crossbow hunting during typical archery season or creating special season for crossbow after allowing it and having people spend $1000+ for equipment.

I would like to see a holiday hunt in this unit I go out weekend to look at the deer situation and notice there are more deer in this unit then last year I can count up to 50 deer in a mile radius including public land.

Hard to know what to say. I'm not a “honeyhole” guy. But in recent years there’s been alot of hwy expansion in my area wich in the early season may have increased deer sightings but come late season they vanish.

Over harvesting of young bucks and anterless deer have had negative impacts on the overall quality of the deer herd. A trophy regulation such as 4 legal tines on a side would greatly benefit this county.

I started crossbow hunting last year, and invested the money. If crossbow season is shortened I will be forced to quit hunting. I have fringe deer hunting property, so I have to hunt the rut to see deer.

The deer hunting on the horicon marsh has become a joke. Let’s kill all the deer!!! Good plan Wisconsin dnr!!

Bow hunters have many more days to hunt than gun hunters. I would like to see an extension to the gun deer season, as this would give more time and more opportunity to those who do not bow hunt.

do not extend the deer gun season. It will drive decreased traffic of hunters. We have good years and bad years, it is not a mandatory to kill a buck or doe. Weather is something unpredictable.

I believe we did not meet the quota last year due to hunter poaching the deer population. Since regulations have changed more hunters no longer register harvest and numbers are off.

I have heard rumors of stopping the crossbow season at Oct. 31 because the bow hunters feel they are being slighted, and the gun hunters the same. I do not agree with this at all.

a once great resource has been decimated do to over hunting and handing tags out like candy. I would like to see a canceation of hunting for 1 year to let the herds rebound.

Why can’t disable gun hunters hunt both public and private? What are we hurting, there are only 1045 class A and B permits. If I hunt one I can’t hunt the other.

Raise the price on all of the out of state licenses. Time to double the price for all the out of state people who come and pollute the lakes rivers and woods.

The last 3 years I have seen barely any deer bow hunting during the rut. Before that I would have alot of success every year. Not sure what changed. Thanks.

I do not want to see the 9 day regular gun season extended. 9 days is plenty, it is a tradition, and most people plan around those dates year after year.

I want no changes to the crossbow rules! I spent a lot of money to get setup, and now everyone wants to cut back on crossbow use - that is just wrong!

mild winter more deer survived. Farmers leaving corn up during the deer season is another reason for more deer surviving and less deer being harvested.

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

416 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 251
   - I visit this unit for non-hunting purposes: 75
   - I hunt in this unit: 370
   - General interest in this unit: 73

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 343
   - Bow: 184
   - Crossbow: 185
   - Muzzleloader: 131

3. How many years have you hunted deer in this unit?
   - Minimum: 0
   - Average: 22.3
   - Maximum: 65

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 235
   - Mostly Private Land: 71
   - Public and Private Land About Equally: 29
   - Mostly Public Land: 7
   - Exclusively Public Land: 23
   - I did not hunt in this unit last year: 5

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 8
   - Not too crowded: 47
   - Neither crowded nor un-crowded: 21
   - Somewhat crowded: 25
   - Very crowded: 16
   - Not applicable: 13

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 57
   - Fewer: 129
   - Same: 167
   - More: 39
   - Many More: 12
   - Unsure: 12

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...

- Implement an ANTLERLESS HOLIDAY HUNT: 229 Support, 149 Oppose, 38 Unsure

If a Holiday Hunt is held in a Farmland unit...

- EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: 288 Support, 97 Oppose, 29 Unsure

If the Population Objective is not "Increase"...

- Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 69 Support, 322 Oppose, 25 Unsure

If a Zero Quota (buck only season) is adopted...

- ...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC's recommendations for this unit? Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

As a Door County landowner (southern Door) and one that manages our property for proper habitat and benefit to wildlife in general, I see a wide variety of opinions on how to manage DC's deer herd. Deer density here is no doubt higher than in some other parts of the state but numbers were definitely down in my local area last year. I base this on a number of factors, not just deer seen while hunting. Hunting pressure during firearms season is very high locally and moderate during bow season. I'm all for giving people more opportunities to hunt including continuing to allow crossbows during the general archery season. I say this as a person that does NOT hunt with a crossbow but know it to be an effective recruitment and retention tool. Participation numbers support that. Why are more deer harvested with crossbows than vertical bows? Because more people WANT to and are hunting with a crossbow. Why try to tell those people it's wrong? The firearms hunters that complain about bucks being harvested prior to the traditional 9-day firearm season also have the right to hunt with a crossbow. It's not a "them vs us" debate like some make it out to be. I am against lengthening the firearms season since I honestly do not feel it will accomplish the intended goal. Deer are thrown off of their normal patterns due to the pressure as is, lengthening the season will only prolong that and not increase the harvest significantly. The problem is that I like many other people, simply do not enjoy firearms hunting as much anymore. There's too much pressure which honestly lessens the enjoyment. Why do you think so many people are picking up a crossbow to hunt? More peaceful, more deer seen, more solitude, better weather, etc. This is a trend that will continue and the state needs to embrace it and continue to use it as an effective tool to reduce deer numbers. The reality is that firearms hunters numbers are declining and will continue to do so. Giving more firearms seasons (or lengthening season) will not reverse this trend. I personally would rather sit in a stand with a bow late season and hunt deer on their "natural patterns" than see less deer during a firearm season. It comes down to personal enjoyment. Giving out more doe tags than we have now will not increase the harvest. There is a limit on how many deer people are willing to shoot- period.
I live in Southern Door on 80 acres - 55 of which are young forest (planted 1997-98) and the remainder open. I want to preface my remarks with the observation that there are too many deer in southern Door. When the crops are off the fields it is not at all unusual to count up to a hundred whitetails picking thru bean field stubble. Furthermore, as a consequence of the severe deer browse there is no more natural forest regeneration. The understory has nothing either - just pine needs and dead leaves. Everything in reach is eaten. Deer this winter even began eating white spruce which is not on their A-list of winter browse. I also share that my wife and I have taken daily walks in our woods with our two Labs and in the last two weeks - with the snow gone - we've found the remains of three dead deer on our 80 acres. It's possible their were wounded deer that wandered over from a neighboring property and died here but there is no way to know for sure. We recover all the deer we kill and last year we killed 15 antlerless deer between the gun and bow season. No bucks. That's my rule. And we've been doing that on the same scale for three years running and haven't made dent in the herd. As for the deer carcasses we found this spring I'd sure hate to think those deer starved this winter as that disrespects the resource. Observations about the CDAC framework for 2020: The antlerless quota of 4000 is too low - but I 'get' that you have to set it there seeing it isn't attained anyway. Same for 5 bonus tags per license. That's two bucks (gun and bow) per hunter plus 10 antlerless deer. I've never know of any one hunter to kill 12 deer in a single season. The most for me is 3. What Southern Door needs to solve this runaway deer population is EAB - even if only once every three years. That would knock back the population and make for some mighty fine buck hunting the following year. Nobody likes EAB (including me) but sometimes you have to swallow some bitter medicine to make things healthy and in balance for the critters and the forest. The legislature needs some common biological sense. Unless something is done my grandchildren will not see a healthy forest when they become adults. Thank you for taking my views into consideration.

Please see my survey answers again but also please read what I have below. As a passionate deer hunter for many years of my life in Door County, I think it is time for there to be changes implemented for this upcoming deer season. I recommend looking into the state of Michigan's opening date and would like to see the state of Wisconsin, including Door County, to take this date into effect as well. I will make this claim now, because I do know that a bow hunter might make a counter argument to this and say that an earlier opening date would take time away from the rut; however, this would not be true. A November 15 opener would not affect bow hunters because if a bow hunter is hunting on private property, or property with permission, they can still use their bow/crossbow to hunt. Therefore, an earlier opening date for the deer hunting season would benefit all of us. Also, if there was ever a time to really look into implementing changes of the opening date, now would be the time to do so. With this current pandemic, now more than ever, there are many people in need of food. Let's give the families in need the chance to have the time they need to harvest a deer so their family can have food on their plates, food in their bellies, and food in their freezers. This will also help deer processing plants in the area make up for the decline of a season they had last year. Another suggestion I have is to make a 4 point antler rule. This would mean that we would not need to have an antlerless only season, but that there would need to be rules in place for those hunters wanting to harvest a buck. Again, now is the time to look into implementing changes such as these. Thank you for allowing me the opportunity to state my additional comments.
I have hunted in Door County the past 3 seasons. I have scouted extensively prior picking a location to hunt. I have spoke to Josh at the DNR each year for recommendations. I apprecaite Josh's help. I havested a buck on Crop Law land in 2017. I saw 5 deer total opening weekend with 20 hours on stand in the woods. I did not see a single doe. I hunted near Bailys Harbor in 2018, I sat 20 hours on stand opening weekend and did not see a deer. I hunted Gardner Swamp in 2019. I visited 4 times prior the season, saw a fair amout of sign. I hunted 20 hours on stand, and did not see a deer. I hunted with two friends each year, and they did not see a deer in 2018 or 2019. I spoke with a local hunter, and he told me the land owners in door county support the 5-deer antlerless tags and holiday hunt. However, do not allow the harvest of does on their land. Let that sink in. Please stop your effort to kill so many does. I don't see the numbers one would expect if there were a large population of does. On another note. Please shorten the crossbow season, or shut it down during the bow season and open it only during the gun season. Requires little to no skill with first time users easily harvesting deer with little to no pratice. Just not right. Takes the fun out of it and low deer sitings discourage our kids from wanting to spend time in the woods not see anything after hours of hunting. Not helping the DNR's long term management objective. As us older hunters hang it up, going to be tough to maitain the number of hunters required to actually manage our dear popluation. How are license sales holding up? Thanks for taking time to read this.

I personally noticed an extreme decline in deer population from 2018 to 2019 in my local area. I spend hundreds of hours in the field every year both scouting and hunting. I did not harvest a deer last year in neither bow nor gun season. I must admit I did pass up a few good sized whitetails in early bow season. I live on Washington Island, which of course is included in the Door County management unit. I believe our population is very susceptible to over harvesting. I understand that separating Washington Island from the rest of the county would take some effort, but I believe this is very important. Mainland Door County has far more agriculture, natural browse and overall acreage than our small island. The hunting pressure here is increasing every year as the public land availability increases. Please consider separating Washington Island from the Door County management unit. During the 2018 gun season, a single hunting party of 7 hunters harvested 52 deer. I understand that mainland Door County as a whole can easily tolerate harvest numbers such as these. However, on our small island, it makes a huge impact. During these uncertain times, our deer population is more important than ever. It is extremely important for many of us to harvest deer to help feed our families. In order to help sustain our deer population for the future, please consider either separating Washington Island from the rest of Door County, or lowering the number of antlerless tags available to all hunters in the unit. Thank you for your consideration.

From the presentation it looks like hunters and seasons are doing well to properly manage the deer population, with a plateau and small decline over the past three years. I’m not sure why the CDAC recommends 4000 for a quota when 3500 is recommended, and a realistic kill is 2600 to 3500. If 3500 would give about 8-10% reduction, why even try for 4000, especially since it won't happen. I'm ok with getting 5 antlerless tags but I would at most use 2 maybe 3. Anything after 3 antlerless tags the return is diminished, why even have them. I'd be fine with the buck tag and 3 antlerless per license. Myself and most of the hunters I know seemed satisfied with their past season whether they shot bucks or does. The ones who weren't successful for rifle season seemed to attribute it more to weather and the late season this year limiting deer movement than anything else. If there are specific areas in the county where deer density is high, especially since we have 92% private land, then those landowners should find ways to harvest some of those deer. The public land kill is 10% on 8% of the landscape, so any forestry or gardening problems lie with the landowners and town ordinance, not the overall deer population. Car accidents hopefully also take into account the amount of traffic up here in recent years. Overall it seems that because deer populations are stable with a decline, we should just keep doing about the same as we've been doing. Put the quota around 3500 and don't make any significant changes. Thanks and enjoy the 2020 season.
Great Job Josh! Nice preso.  1. County is too large of a management unit. Data needs to be collected in southern, northern, Washington Island / Detroit Island, and rock island separately. There’s no way to manage one size fits all here.  2. With proper data, locally specific programs can be implemented to align deer populations with habitat. Locally specific quotas seasons and requirements can be implemented.  3. Earn-a-buck program should be introduced county wide to get the antlerless numbers in check.  4. When a hunter purchases his or her gun tag, they should be given the option to purchase an archery tag. If bought at the same time, the gun tag should be available for an archery kill provided 1) antlerless deer has been previously registered, 2) archery buck tag has been filled, 3) 2nd archery kill has 4 pts or more on one side and an inside spread of 14”, 4) animal killed with archery gear. Basically a gun tag should be an archers second buck tag for a season. With such an arrangement, land managers can fill both tags in archery season and use the 9 day gun season as a doe harvest. Again, guys can get after it killing does. Most guys let ‘em walk bc they don’t want to ruin their buck opportunity.  5. County wide antler point restrictions should be put in place. Only relief should be to register second doe (assumes earn a buck).  6. Bow hunting should remain open all season and extended late season. I think josh has the numbers right.

My recommendation is to simplify the statewide seasons and have minor additions to the statewide plan within each county. I have hunted many other states for deer, and by far, Wisconsin is the most backwards, confusing season and regulation setup. Season Dates: Archery: Sept 1-Dec 31 Rifle: Same 9 day as always (around Nov 20-Thanksgiving) Muzzleloader: Dec 1- Dec 31 ** Archery runs through rifle and muzzleloader season, must wear orange. ** Archery means Archery. If you use a crossbow, recurve, longbow, or compound it is considered Archery. **Muzzleloader is a separate tag than rifle season. Encourages MANY more hunters to take to the woods and is a time when "real" land managers would harvest does to knock down numbers. Also adds additional revenue to DNR with purchase of Muzzleloader tag ** Double the price for non-residents hunting Wisconsin. Most states are $400+ for non-residents, no reason we are half that. DO Not: ** Do not split archery season for crossbow hunters, that makes no sense. ** Do not extend the rifle season to a longer season, most hunters are burned out after 10 days, the deer don't move until midnight. You will not get more hunters or deer harvested by extending the season. Having a month long muzzleloader season will add harvests and hunters. ** Do not add "holiday hunts" and other hunts to interrupt the seasons. In general, PLEASE keep it simple.

I live in Jacksonport, and in my opinion there are far fewer deer in northern door county. To me there’s no reason at all to offer 5 doe tags for each buck tag. This past year was far less enjoyable, because I saw far fewer deer, which resulted in less harvest opportunities. People like to see deer when they’re hunting plain and simple. I suggest only offering 2 doe tags with your buck tag in northern door county. This way you still allow people to have the opportunity to harvest multiple deer, but also this will let the deer numbers rebound a bit. I don’t think there should be a holiday hunt, or extended bow season. Deer season literally starts in September. With more crossbow hunters now, and your typical gun seasons, that’s more than enough time if you’re motivated to shoot a deer. The deer have it hard enough to be hunted till February. I’m a coyote hunter with hounds, and these late hunting seasons put us in a bind, when all we’re trying to do is manage the coyote population. I suggest ending bow season on December 31. It’s more than enough time to shoot a deer. Also all of these late season doe hunts are not a favorite topic, because it doesn’t allow late season bow hunters much of a chance to kill a late season buck. It’s one of the best times to do so. In recap, I suggest only 2 doe tags, no late season doe hunts, and no extended archery season.
If Wisconsin wants to be serious about CWD, there should be a statewide ban on baiting AND feeding and Door County would be included. It should be the #1 focus of every CDAC and if it’s the right thing to do once there is a positive CWD case, why not be proactive and implement a ban before we have CWD issue? Secondly, in the CDAC video for Door County, the biologist mentions that the DNR expected the kill to drop due to a later opener. If so, why didn’t their season harvest expectations reflect that? Seems contradictory that they knew all along that the kill would be down but their communications of expected harvest going into the fall was much higher (even leading right up to Opening Weekend of gun season). Lastly, hunter behavior is changing given age demographics and amount of time hunters commit throughout a season. Too much effort is being put into crafting changes to the season structure. Especially in a unit that is consistently determined to be a “Decrease” unit, let people hunt when they can with the weapon they choose. Seems odd that there is concern about killing too many deer in October and November but then we have to extend the season through January just to kill an extra 100 deer? Thanks to the CDAC Committee for volunteering your time and energy.

I recently listened in on the last door county deer advisory meeting and was surprised there wasn’t greater overall support for the extended archery season from the members. Members seemed to dismiss the effectiveness of the season due to low harvest numbers. Myself and others in the county were faced with some of the most severe weather conditions possible as the polar vortex hit Wisconsin that January. Temperatures were consistently 20 below zero and made hunting almost impossible the second half of the month. The numbers the one year we had the extended hunt are skewed due unhuntable conditions. The extended archery season should be allowed at least one more year to get a true and accurate estimate at the effectiveness of this management tool. Was very disappointed that multiple members were influenced by county coyote hunters. You are members of a board making decisions on deer, not coyotes. We simply have too many deer and the board recognized that. Why wouldn’t we use every management tool we have?

Over the last 4 decades I have witnessed an overall increase in the Door County deer population. Two days ago we went for a drive around the neighborhood block we counted 48 deer. And that was seeing no deer in the fields that the day before we counted 18. So, more and more deer in the Spring, Summer, and early Fall while enjoying our evening bike rides starting about 30 minutes before dark. Last fall while bowing at the start of the rut I observed as many as 7 deer under my stand at any one time. A couple of days later the problem started as it has the past couple of years. The War Starts with everyone and his brothers and sisters sighting in their deer rifles for days on end. And after about 3 days of this the vast majority of the deer herd goes into hiding and does not show themselves until after muzzle loading season is over. There would be plenty of deer for all hunters if sighting in deer rifles was prohibited from Sept 1 – Dec 1 on all lands except for at established gun clubs and rifle ranges.

There were fewer deer in our local area of southern Door County this past year. Still a fair number but fewer than the past few years for certain. Everyone gets 5 antlerless tags already, what good is issuing more bonus tags? How many people are shooting 5 or more antlerless deer? Extending the rifle season will not increase harvest to the extent that some think. Deer movement is so disrupted from opening weekend that success rate (not to mention participation) is diminished greatly. Crossbow usage and success is increasing so embrace it. People are hunting with crossbows because they want to - plain and simple. Rifle season is more about strategizing where deer movement will be due to the pressure and activity on neighboring property not about patterning normal deer movement. That’s partially the reason for reduced rifle license sales and increased crossbow license sales. Rifle season is not as enjoyable as it used to be. Adapt and adjust to the change in preferences in hunting styles.
We as outdoorsmen have to find it within ourselves to harvest more deer. Issuing a greater number of antlerless tags is not effectively addressing the problem, as most of them go unused during the season. The legislature took “earn a buck” away from us, but we also have to think about a one (1) buck rule like the State of Pennsylvania uses (1 legal buck per season with either a bow or gun). This will inevitably move more hunters to harvest more antlerless deer. Our legislature is failing us in regards to CWD management. Ignoring it, will not make it go away. We seriously have to impose tighter restrictions on the transportation of carcasses and live deer (deer farms) from neighboring CWD positive counties. If we value our wild deer hunting heritage, we have to take tough measures to get the population goals back in balance. CWD is just waiting to make its ugly presence in the Door Peninsula. We need to return the authority to our science‐based DNR, to manage our wildlife and forests.

Door county as a whole needs to split into two zones. You can’t compare the two. The deer population is much different between little sturgeon and sister bay. You guys really gotta see the brighter picture. You allow five doe tags per season buck tag purchased your allowing people to no longer have a need to distinguish between young and mature animals. If you guys would spend more time opening weekend of gun season driving around seeing the number of fawns and small does taken off public land in northern door county then you’d see where the idiotic, unrealistic quotas are coming from. The deer population is decreasing so rapidly with in the past five years up here it won’t be able to take much more beatings. You’re lucky to see 20 deer going for a two hour show from sisterbay to gills rock. And even seeing 20 deer those numbers are still 1-3 deer groupings. Split dc into two zones and end this constant debate between too many and not enough deer. It’s a simple concept.

I would be in favor of the Holiday Hunt with Anterless for gun and Either Sex hunt for Archery. I think the January extended hunt provides very limited results where if you allow the hunters to better utilize that Holiday week you would see more results. I also think many Archery hunters stay away during this time because they do not have the option of trying to fill an unused buck tag. I see no downside. Also, you need separate to limit the crossbow season. It is undercutting the Archery season. I think you could add it to the gun season and musklauder season holiday hunt and still have similar results. Or revert back to a age limit to use a crossbow. I have lived and hunted in Door County for 45 years. You need to break the county up into a northern and southern zone. You are right the population differs in each area. The one county approach does not fit well in this county because populations vary a lot between north and south.

I have owned 32 acres for 23 years I purchase specifically for deer hunting only with my immediate family so we could hunt safe. Last season I saw zero deer during bow season, zero deer during gun season, zero deer during muzzleloader season and zero deer during the extended season. Not even road kills along my property. This is the first year I was unable to see any at all, while sitting in stand or “snooch” hunting. Barely saw a squirrel. I am totally disgusted with the inability to accurately provide honest numbers. I usually buy a conservation patrons license but for the first time ever I have not purchased this years license as my disgust will probably result in only buying a fishing and sturgeon spearing license this year. FYI I also bow hunt in Waukesha county. My experience is very similar there to what I experience in 80B. It’s too bad. A tradition is dying really fast in this state.

Extending archery season is nice to have extra time to harvest deer, however the likelihood of a buck that has shed his antlers of being harvested as doe is too much of a risk factor. I am also very concerned about the lack of registration stations and how accurate the data actually is, not to mention the ease at which a hunter may just plain not ”call in” a harvested animal. Between the youth gun hunt in October (which I think is GREAT for young hunters AS LONG AS it is being conducted properly: I do not agree with a group of adults taking a few kids into the woods and DRIVING deer to them potentially taking running shots is what this hunt is intended for, take the young hunter to a stand and sit!! This is on the mentors/adults, not the DNR, but it would be nice if there could be some sort of restrictions.) There is a T Zone hunt and the Holiday Hunt, the latter is just not worth it!
2624 I have seen fewer deer every year I hunt. Used to see a lot of during during a sit but now can not see one during a sit. I don’t see any deer mortality on the 140 acres I hunt. I still think our numbers by us never recovered since the EAB and with crop damage. I also believe that archery hunters put the most time in the woods and would harvest more deer if we could actually get out in the month of December. Gun season is fine the way it is but then there is muzzleloader then doe hunt then holiday hunt which doesn’t leave much time in December for archery. I also enjoy the years that gun season is late because in the next years we have seen more and bigger bucks when their not all shot during the rut. If gun season is changed and permanently moved earlier people would be happy for a bit but then the buck population would go down and deer wouldn’t be able to mature.

2625 I understand the idea of lowering the population in our county, but i think the goals needs to be reachable. Our 2020 doe harvest is not even close to being reachable, when we see a number like 4,000 does, that is almost the same number as total deer shot in 2019. they can keep giving us more and more tags but i think the public has showed we still are not going to shoot more deer than what we need. also i am against the extended bow season, as weather gets worse less and less hunters are in the woods getting after deer. this cuts into winter hunting opportunities and activities. and as a hunter we already have around 111 days to hunt deer, if anyone is our county can not harvest the deer in that amount of time does anyone really believe they are going to do it come January? thanks for your time and everyone stay safe

2626 I have hunted in Door county for couple years now and seen more deer in the area than ever. I also hunt brown and outagamie county and also out in north and south Dakota, I can say door county has more deer in square mile than these other areas. Reasons for low count is blue tongue, extreme weather Ndfood starvation. I understand door county has a deer problem, and the state is proposing a extended gun hunt to bring in more revenue. I would recommend we have our regular 9 day gun hunt, however have another gun hunt during the holidays open for Bothell anterless and antler. This would be perfect for families coming home from different states, college or more free time from work. I also think we should have more buck management, don't shoot anything 6 points or less. I would also recommend extending the archery season.

2627 I hunt in the northern half of Door County on private land. My observations reflect the data presented in the video, that there are probably more deer in the southern half of the county. However, over the last four years, I have seen fewer deer in each successive year, and with the late opener and bad weather this past season, I did not see a deer during legal shooting hours, despite having spent more time hunting than in prior years. Also, having also participated in the Holiday Hunt, with better weather than during the 9 day gun hunt, while I did not see a deer, I observed plentiful tracks, leading me to believe there are deer in the area I hunt, but by Christmas time and probably shortly after opening weekend of the 9 day gun season, most of the deer activity is at night, after shooting hours.

2628 Very concerned with the amount of bucks taken by bow/crossbow hunters prior to the gun season. Every year the bow hunters in our area seem to get some of the bigger bucks before gun season and by the time gun season comes around a lot of the bucks are harder to find. I also believe we are beginning to see the affect of wolves in our area on the deer herds. I also gun hunt in another northern county and have done so for 35 years. When I first started hunting that county there were plenty of deer (bucks and does). After numerous years of promoting doe tags and then combined with the increase in size of the wolf population, the deer population took a real hit. Lucky if I see 6 -10 deer over a 7 day period, hunting from sun up to sun down. Sure hope that isn't the goal for Door County.

<td>2629</td>
<td>I do not believe in a 19 day gun hunt for Wisconsin as opening weekend has the greatest population of hunters afield and as the season goes thanksgiving holds the next best population to hit the woods by week end there is few and far between for hunters afield. I only prefer a 9 day hunt. Also I do not agree with no crossbows in the month of Nov. I do not know the percent of archery hunters that also gun hunt as compared to the number that only gun hunt but stopping the crossbow hunters in Nov. makes no sense to me. As I personally see it I would not take a shot with my crossbow that I would take with compound bow. I do not see an unfair advantage that I have heard seems to be an issue with compound and gun hunters.</td>
</tr>
<tr>
<td>2630</td>
<td>I have hunted WI since 1975 and have been successful for many years, but one thing I’ve often hoped for is an extended season; instead of a 9-day season, make it a 16-day season, and maybe cut the number of antlerless tags available by 1/3 (or not). That way, hunters have a longer time available to hunt and if weather is bad, you don’t have to issue a “special” longer hunt. It accommodates work schedules, as well as giving hunters more time to attain their deer. I moved to Indiana in 2012 and enjoy the 16-days available to hunt. It also allows me time to hunt both states, which I’m sure many other hunters do as well. I miss Wisconsin very much, but feel more states should adopt similar schedules and rules. Thank you.</td>
</tr>
<tr>
<td>2631</td>
<td>What are concerns for Covid-19 virus contamination to deer population and other animals? Will this affect deer herds? If so, what are safety recommendations? Is or will there be treatment for deer herds? Dairy cattle are currently treated for virus, will this treatment work on deer? Many concerns exist with venison meat consumption and safety hazard to human transmission of virus. Are current studies underway to provide answers? If so, what are studies? Any information that can be provided very important to hunts ahead. Will the hunts occur if deer or other animals affected with virus becomes present? What are long-term outcomes of populations? Has Federal funding been requested to study? Let’s of work ahead…</td>
</tr>
<tr>
<td>2632</td>
<td>I mostly provided input to SUPPORT the recommendation of passing the extended archery hunt. I mostly hunt here during late/extended season when marshland and swamps are hopefully accessible and hunting pressure is lower. Without the extended season last year I spent much less time here and did not kill an antlerless deer, which I did the year prior when extended archery season was available. I likely would have harvested an antlerless deer late had it been available. Therefore I am hoping the extended season is passed as proposed this year so I can get back to harvesting deer where they are moving earlier at this point in the season as the hunting pressure is lower on them. Thanks for your work.</td>
</tr>
<tr>
<td>2633</td>
<td>If you want the deer population reduced, the ONLY way to get this done is to open the gun season a week earlier and run it two weeks. All of these after season openings is an absolute joke and VERY few hunt these specialized seasons. I’m tired of hearing people complain about crossbows and that we shouldn’t allow the opening of the gun season earlier due to tradition. You DONOT need a masters degree and spend months and months studying spread sheets to figure this out. USE COMMON SENSE!! Also, if the season was opened a week earlier, all our WI residents traveling to MI to hunt would stay home.</td>
</tr>
<tr>
<td>2634</td>
<td>As a northern door county resident and deer hunter I have seen the number of deer go down when I first started hunting I would see deer every time I went out now I only see maybe the same 4-5 deer all season. South of sturgeon bay the deer Hurd is doing very well if anything there is too many but north of the bridge There is not that many. Many of my friends and family refuse to take a doe to try and make the Hurd come back to where it was 10+ years ago. If anything I would like to see door county split into 2 zones to help the deer numbers come back to northern door. buck only with an option for hunter’s choice no extra or free doe tags thanks.</td>
</tr>
<tr>
<td>2635</td>
<td>There were multiple instances in the video where the visual showed at decrease but the audio used the words plateau/maintain, clearly there was actually a decrease. Also, there was a moment where the audio said we do not have the evidence to support that yet there is a 5 free private land doe tags given out for both rifle and bow. If there isn’t evidence to support that decision something needs to be re-evaluated. I’ve hunted northern door county for 15 years and 2019 was by far the least amount of deer I’ve seen. Even back when your graphs show 08-2010 being very low deer numbers I had more deer sightings then than in 2019.</td>
</tr>

</table>
2636 The goal in this DMU is to decrease deer population. At the CDAC initial meeting - while the extended bow season was supported - support was tepid at best. AT least one CDAC member voted for the extended season "just to put it out there". Last year - antlerless only was put out - knowing it would not happen - and then the extended bow season was not used. What sense did that make? Coyote hunting and snowmobiling being disrupted by a few bow hunters?? That was an excuse - not a reason. The CDAC should use every tool available short of antlerless only to bring the deer population down - INCLUDING the extended bow season.

2637 The reason I gave no opinion on some, was not that I don't agree with reducing antlerless deer, but the only way it is going to happen with a limited earn-a-buck season. At tops, 2 years. The last time the DNR implemented this, it went on way too long and then it was permanently stopped by the legislature. However, if the DNR had not pushed this for such a great length of time, it was a great tool for reducing antlerless deer herds. You can hand out as many antlerless tags as you want, but this is not going to change habits. Lobby the legislature and governor for more control, and use common sense this time.

2638 please do not push for extending archery season, into jan please let winter sportsman enjoy their limited time in the outdoors too such as hound hunters that need access to private property to pursue the sport with out bumpin into bow hunters that already hunt 4 months of the year? another thought to consider is some sort of a kick back to hunters that shoot antlerless deer and donate them. as we put in all the time to pursue, kill, register, gut, drag out, transport, a lot more would be harvested this way and are numbers would be solved!!! thanks for your considerations,

2639 As a new hunter I'm curious if there would be a way to have a tag be transferable to other DMU's? For those of us who have to travel, if we don't harvest in one area but have the option to hunt in another, closer area, it would be great to have a tag (or portions of a tag) be transferable if the area where the tags were not purchased had enough deer population to support it. I would not support this if it put undo pressures on a population and fully understand that part of hunting is the chance that you won't get one (which is part of what makes it exciting).

2640 1. Hunters I know only take the number of deer they can use 12 tags-2 deer 2. Washington Island and my property are extremely over browsed 3. Perhaps coincidental but 2 deer with mange have been reported on Wash. Is. 4. Weather plays a big role in harvest and hunting effort on the island 5. Earn a buck should be reinstated 6. Doe only in my opinion would result in less harvest and hunting effort 7. I hunt mainly for does (venison not antlers) 8. Societal pressure for big antlers should be diminished through education

2641 Door County should be broken into two zones (one south of Egg Harbor-lots of farmland and one north of Egg Harbor (not much farmland, lots of posted property). It is not accurate to measure this county as one due to the size and differences in land use. Holiday hunts in Northern Door are not the best with all the tourist. There should be strong consideration to move the gun hunt up one week so it doesn't go over the Thanksgiving weekend due to the number of tourist in Northern Door at that time of year.

2642 Seems to me if you want to knock down the deer pop, why not open gun season say from end of oct till quota is met like sturgeon spearing, that way everyone has a chance to hunt in nicer weather. Holiday hunts in Northern Door are not the best with all the tourist. There should be strong consideration to move the gun hunt up one week so it doesn't go over the Thanksgiving weekend.

2643 I'll be honest, I'm just a passionate hunter and have little knowledge on what's best for deer and deer hunting other than just some personal/anecdotal observations. If you feel your data is good and you know what's best for long term hunting opportunity, the herd, and growing big bucks act on it! I'll support your decisions. If there's something you think can be done to encourage people to pass on shooting younger bucks in the hopes they grow big and old I'd support that too. Thanks!
I am a land owner in Southern Door County. The 2019 gun season was by far the worst I have had due to only seeing one doe during gun and black powder. Prior years have seen numbers of 20 deer daily. I feel numbers are down and with the other special hunts added, the deer have become nocturnal. I have owned the same 40 acres since 2011 and continue to add more food plots and fruit trees each year for the local deer herd. But again I feel we have a large decline in our population.

I would like to see the main gun season run concurrently with muzzloader...then when its it's done. These wait a week have another doe hunt, holiday ext makes it an impossible task to late season bow hunt...which when I bought my property was what I looked forward to as I had zero time to hunt during normal bow season...I liked it when they extended it through the month of January...a trip to up and a polar vortex made it unsuccessful, but at least the opportunity was there.

I very much believe that the Door peninsula needs to be split into 2 separate zones. I very much understand the reasoning for the higher quotas in central-southern Door, but those high quotas are destroying the herds in northern Door. Hunting has lost its appeal due to the terrible herd numbers. It's become a waste of time to me. It’s nothing like it was when I started hunting as a boy and that’s discouraging. Please, I beg you to listen to the hunters in northern Door.

1. Heck no don't extend the darn archery season. Modern crossbows give that group an unfair advantage in having the choice time slot to hunt the rut, they also have fall food that promotes deer movement. Gun hunters are left with the 'pickens.' 3 1/2 months is a long enough archery season. 2. If you insist on extending the archery season, how about gun hunters get an early November, 4-day hunt? You want deer down, that'd help. 3. Issue more Crop damage tags.

Stop wasting everyone's time with the 5 tags; total nonsense. Although we should eliminate the free tags altogether statewide and make everyone pay their $12, five is obnoxious and a waste of paper. Harvest is no where close the quota so clearly printing tags isn't doing anything. Enough please, 1 or 2 free tags or better yet, just make them non-free bonus. I've spent thousands on my equipment and thousands on property taxes every year; $12 isn't too much to ask.

DNR should consider adjusting gun season Last year was too late in the rut. I didn't see a deer in the woods the whole season And when questioned about low harvest on opening day the DNR spokesman didn't have a clue what had caused it The CDAC were idiots for not allowing the extended january hunt Some concern about not needing as many deer thinned in Northern Door. Could create a metro type unit to the south with different harvest numbers if needed.

I have hunted deer for about a decade in the central part of the Peninsula on a small parcel of private land and occasionally on public land or land open to public access. Starting in 2017 I began placing trail cameras on my land and in the areas I hunt on public land. They are showing fewer and fewer deer (most notably bucks) year-to-year. I hear fewer shots during the gun-deer season and don't see the quantity of sign and sightings as I used to.

I agree with the management you are requesting to decrease the deer population. My hunting the last few years have been impacted by the amount of turkeys in the area I hunt. They make a lot of noise when you are walking to your area of hunt. I think that the management of turkeys effect the hunting of deer. Is there any talk about how to decrease the turkey population? I believe there should be an open season to control the population. Thank you.

Crossbow hunting has ruined the deer gun season and is the reason why you have a decrease in gun hunters. Deer aren’t moving during hunting hours like they once did because of the increased hunting pressure with all these additional deer hunting seasons. Also, there isn’t any need to put additional winter stress on these animals with your extended January season since there is an overpopulation of coyotes already running them.
2653 I am in favor of the earn a buck program and doe only season to get the buck to doe ratio improved. As a deer hunter in Door County I am more interested in improving the quality of the buck population and would like to see larger antlered animals. Here is my solution for the future to control deer numbers and increase the buck age, have a doe only season every other year in Door County. Simple and easy. Thank you for your time.

2654 despite the numbers reported by DNR, I see very few deer on stand. I really only see deer when I walk Consider adding a bonus buck to each license- It might keep people in the woods I tagged 3 antlerless and one antlered deer last year- I would have had more incentive to go out again if there was the possibility of taking an additional buck and I would be more inclined to take a shot at a possible spike/antlerless.

2655 I believe the holiday antler-less is a great season in Door County. It is a good way to bond as a family. Our family has begun a tradition of doing a few Christmas Day deer drives. It is a good way to get everyone involved even if they don’t want to shoot a gun. Our antler-less numbers are high and we are given plenty of tags so this would help decrease the antler-less population. Thank you for considering my input!

2656 I feel there should be most consistency in the gun season. The 2019 season was late and the results showed that the harvest was down. This was the worse time I had hunting in Door County in 3 years. I recommend starting the season the weekend after the 15th of November. This will hopefully get the hunt more in line with the rut. I also recommend halting bow season the week before gun season starts.

2657 I feel we should bring back earn-a-buck for only two seasons then hold off and see what the numbers look like, also having a minimum of 4 points to a side for bucks allows the small bucks to mature and breed, let’s face it, most hunters want to shoot monster bucks or a mature buck, earn a buck gave us that, it just went to long and to many years in a row which pissed people off. That’s my opinion.

2658 I think your over harvesting the deer in Door County. I was a farmer for many years in this county, and I put up with a little deer damage, because I liked seeing a few deer year round not just in the deer season. I also think if you thin the deer out too much you will be discouraging our young generation from hunting. It's going to be hard to get them interested, if the don't see anything.

2659 Door County should be split into 3 zones like it once was (South of Sturgeon Bay, North of Sturgeon Bay, and Washington/Surrounding Islands). The frame work and harvest quotas for all of Door County seem to be based on the southern Door County herd, not northern Door. I don't agree with this approach. I hunt in northern Door. I’d rather have earn-a-buck than doe only.

2660 I believe hunters who would like to purchase extra permits should be able to. I do not think the herd is a problem, and I hunt in a “hot spot.” I put in a lot of hours in the woods this past deer seasons and most days I saw the same 3 deer and only those same 3 deer where 3 years ago I would see 6-9 deer every time out. I do not think more permits or antlerless tags are warranted.

2661 In my 30 years of living in and hunting Door County, I have never seen so few deer. I think we over harvested deer during the EAB years and Northern Door County has not recovered because we continue to have liberal (5) doe tags issued with each archery and each gun licence. The deer population in the north simply is not high enough to support such a radical management objective.

2662 For the farm owners/land owners that are complaining about deer damage, please tell them to open their land to hunters. There are plenty of hunters in door county that simply can not find a place to hunt and would be happy to harvest deer off their land. Also with holiday hunts, don’t shut down antlered bow season. Almost 3-4 weeks of bow antlered hunting has been taken away.

2663 The youth hunt needs to change, these kids are out there at the best time to hunt. Too many of them shoot their buck of a dream and they turn into trophy hunters, I hear it at every deer camp, these kids are passing up really nice bucks. We were always happy to shoot a buck. Don’t know the answer, it really Frustrates me when I hear these kids talk about trophy hunting.

<td>2664</td>
<td>Personally our group continues to see less deer, back in the early 1990's our group would pass deer up because we would see numerous deer and were selective and usually had our tags full by opening weekend of the gun season. Currently our group is lucky to see 10 deer total in the 9 day deer season and do not hunt for the Holiday hunt because lack of deer sightings.</td>
</tr>
<tr>
<td>2665</td>
<td>A earlier gun season or extended season would bring harvest numbers up. We also need to bring registration sites back!! Their are a lot of people not registering deer online in spite of new system or registering same deer several times. We all miss the comerotory of showing our deer off and supporting our local businesses!!! I support Jan 31st extended bow season.</td>
</tr>
<tr>
<td>2666</td>
<td>While a late season likely contributed, lack of access to land is also a major issue. I hunt with a part of about 12 people, and the amount of deer seen by this group is substantially lower than expected, and has been every year for the past five years or more. It is hard to justify taking more antlerless deer when, as a group, we see less than 30 per season.</td>
</tr>
<tr>
<td>2667</td>
<td>I feel that Door County needs to be put into two separate zones. My reasoning is that there is definitely more farmland from Southern Door than Northern Door. In Northern Door, they have more woodland habitat area for the deer without as many crop damage concerns. You should consider a survey of people (hunters) from Jacksonport to Gills Rock...</td>
</tr>
<tr>
<td>2668</td>
<td>NO Late season bow/cross bow season! All your doing is pissing people off that want to coyote hunt, snowmobile, small game hunt at this time of year! No one is out trying to shoot a doe, freezing the butt off at this time a year, there out there to try and shoot a big buck off a bait pile!!! We have a long enough season already to shoot deer!!!</td>
</tr>
<tr>
<td>2669</td>
<td>I think earnabuck is the only way to do it end all the special hunts..... youth holiday move muzzle loader to dec 26 to jan 31 with late bow better harvest when things settle down not so nocturnal muzzle so close to gun has little impact think about it.you cant get hunters to hunt 9 days spread it out later muzzle and bow would help latter!!!!!</td>
</tr>
<tr>
<td>2670</td>
<td>January hunt a total waste of time . almost 30 days of gun / muzzle loader more than enough you only need a 2 or 3 days of hunting pressure to make them nocturnal trail camera shows deer coming out to feed on fields at1;30 am back in heavy cover by 3;30 4;00 am the snow mobile trails across my land will remain closed till deer season is over</td>
</tr>
<tr>
<td>2671</td>
<td>Deer and other wildlife management is an issue because we are taking away the land they have to roam and survive on. We are invading their space as we take more roaming land away from them. Yes we do need to maintain their population but not diminish it to the point where there are no deer and other wildlife around for the hunter’s pleasure.</td>
</tr>
<tr>
<td>2672</td>
<td>During the 9 day hunt in Jacksonport township we say 1 deer we could shoot at in 9 days gun and during the entire bow season. By October the deer are nocturnal. We need more hunters and or access to private land. No one is moving the deer around. We heard shooting day 1 of gun season and about 10 shots the entire rest of the season.</td>
</tr>
<tr>
<td>2673</td>
<td>This unit needs to be divided in half somewhere around county WD between Valmy and Carlsville. The land and deer populations are vastly different between southern and northern Door Country. The only way to scientifically manage this county is to divide it accordingly. Then people who live here will respect the decisions and outcomes.</td>
</tr>
<tr>
<td>2674</td>
<td>I think there should be a look into separating door county into a Northern and southern zone because I hunt the northern zone and see very few deer and don’t understand why we need to be giving out so many antlerless tags and he even talks about in the video how there is more deer in the southern part of the county then the north.</td>
</tr>
<tr>
<td>2675</td>
<td>I would like to see the youth hunt be doe only If you want numbers down start there and I was told it would be to hard for them to identify a buck or a doe if that’s the case they shouldn’t be hunting or once they harvest a buck they should be considered a full fledged hunter and no more youth hunting or doe only for them.</td>
</tr>
</tbody>
</table>
Would not like to see an extended archery season in January due to the fact of other winter enthusiast recreating such as hound hunting can’t kill in 4 months why make winter activities all about deer hunting sure turns stomachs about are cdac not listening to other winter sportsman trying too enjoy such a limited opportunity.

Please strongly consider lowering the price of hunting licenses for non-residents that are hunting on land owned by immediate family. Prices should be comparable to resident hunting licenses. I hunt exclusively on my family’s property, and sadly I spend too much money each year to keep the tradition alive for my family.

Every hunting parcel is different and I don’t think someone behind a desk should make a decision for everyone. Let the season be what it was and get rid of the stupid holiday hunt that only stresses the herd. If you haven’t gotten your meat by the end of normal season I think you should take a look at the way you hunt.

Please extend the Archery/Crossbow season to Jan 31. Last year it was not extended yet they wanted more deer harvested. The does I harvested the previous January season were both pregnant so you really are getting 2 for deer harvested. What is the downside of extending the season when there is self registration?

The deer herd is larger in the winter by our land, because of yarding in my area, but thin out considerably when Spring comes and the herd disperse’s and numbers are far fewer. This may not give an accurate account of deer numbers to the DNR where we hunt. Thank you for the survey and allowing us to participate!

Not real fond of the online registration. That has hurt local businesses across the state and where I hunt and own a home on Washington Island it was always a tradition to see at the registration station what was shot for the day and who got what. We don’t even know how many deer were shot on the island.

While I support the present Deer season as it stands, the one problem I see with it is that many of the hunters I know are buck only shooters and won’t harvest antlerless deer. The other issue I see is that a majority of the deer hunters are from the baby boomers and our group is getting older and smaller.

Speaking as someone who works at a processing facility during deer season. I saw more spikes, button bucks, and yearling bucks than I did does and adult bucks combined. I believe if we want to allow the bucks to grow and to keep the population down, we need to have at least one antlerless only season.

Door County should be divided into 2 or 3 management units to better control the units population. The population is higher in the southern half of the county vs. the northern half. The county can go back to multiple management units like it used to be. This is practiced in other counties in the state.

Some of the problem with the population of antler less deer in Door County is the people that own private land. They say that they want to have the antler less deer decreased, but will not shoot the antler less deer on their own property. Those land owners want everyone else to solve the problem.

Instead of having all these long seasons, the deer gun season should be shorter and people would shoot more deer knowing that they don’t have 30ish days to shoot a buck or doe, they would shoot the first thing that comes through and I feel more deer would be harvested knowing the season is shorter.

I think Washington Island should be a separate management unit. It’s clearly a separate herd/population from the rest of the county and should be managed as such. It would seem to be easy enough during the online game registration process to indicate whether a deer was harvested on Wash. Island.

When people complain about their plants being eaten yet post their property. Shouldn’t be considered in planning. They should be told to allow a few people hunt to pressure deer to move. Tired of implants claiming its their county. Pressure moves deer so can be shot. It worked years ago.

If the county of Door moves toward an antlerless hunt exclusively I will cease to hunt deer until such time as an antler hunt returns. I believe if an antlerless hunt only is enacted there will be overwhelmingly less hunters as a whole and will drastically impact Door county economically.
Split the zone. A lot more deer south of sturgeon bay. I hunt north and owned land for 20 years. The deer numbers are not there. We had the same two family group on our property for years. We are not over crowded or over browsed. Don’t agree with the DNR findings or inventory methods.

I think it is important to note that 5 extra antlerless tags for DOOR County may be too many. The last 3 years straight I’ve been seeing less and less deer. Perhaps dropping the additional tags down to 3 or 4 would be appropriate and allow more hunters the chance to get a deer.

I would like to see another week added to the regular week. I have interruptions during the regular season or weather too bad to go out in frequently which cuts down on my time on post. A lot of times I see deer in the same place I hunted the week before/after season.

I believe northern and Southern Door County are extremely different. There seems to be much more farmland in the south, and a lot less deer in the North. I am sure there are other counties that have similar differences, but it seems to be magnified in Door County.

Deer population in door county are more normatic, they travel farther and in large groups so one day may see many deer and then several before you see any again. Orchard crop damage or car collisions should not be the driving force in harvest quotas.

Make Washington, Plum, Rock, and Detroit Islands a separate unit for herd measurement purposes as the "islands" unit are completely separate from County herd and harvest data should be tracked for management purposes for a host of good reasons.

Leave the Does alone. Work to create big bucks. Ignore tourist and tree huggers. This is our sport and freedom. We have this right.

If you want to cut down the number of deer, have a 15 day hunt like Michigan has. It could start on the 15th and go through the 30 of Nov. and you would hit the rut in it's prime. Last year the rut was over by the time the season started.

Stop messing with the traditions of deer hunting and you might start getting more hunters again! All of the dramatic changes is what caused the huge decrease in the number of hunters today so learn from these mistakes before it’s to late!

We should have an “earn a buck” program like in the past. In order to shoot a buck a hunter would be required to shoot an antlerless deer and register it IN PERSON to avoid any fraudulent or false registrations online or over the phone.

As a 78 year old hunter, I waited until I was 65 years old to use a cross-bow. Now I need to pay an extra $3 to use it. I do not think this is right. Please consider the older generation when making these decisions.

Stop giving out 5 doe permits. If you feel the absolute need, then one is plenty. The herd needs to rebuild. You have to not turn the sport of hunting into the sport of killing. That’s the way I feel about the current hunting situation.

The mentoring hunters needs to go away because to many people are following the rules and the kids aren’t even shooting the animals and also the gun deer season should be two weeks with rifle and that it should start a week earlier.

North of Sturgeon Bay, Door County should NOT be considered "Central Farmland." It has vast tracts of forest and marshland and NOT VERY MANY DEER. I have GLIMPSED a total of THREE deer (total) during the last two deer-gun seasons.

Our council member is not good for Door County. He’s selfish for his own agenda, and most people don’t like him. Please get another council member that is logical and and working/supporting for all our deer hunters in Door County.

**Report Generated: Friday, May 01, 2020**

*Door, Central Farmland*
Douglas, Northern Forest

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

759 forms were submitted for this unit.

**Section 1: Information about who provided the input.**

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 373
   - I visit this unit for non-hunting purposes: 203
   - I hunt in this unit: 705
   - General interest in this unit: 152

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 650
   - Bow: 352
   - Crossbow: 272
   - Muzzleloader: 227

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 25.69
   - Maximum: 70

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 191
   - Mostly Private Land: 109
   - Public and Private Land About Equally: 140
   - Mostly Public Land: 122
   - Exclusively Public Land: 133
   - I did not hunt in this unit last year: 10

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 12
   - Not too crowded: 100
   - Neither crowded nor un-crowded: 91
   - Somewhat crowded: 116
   - Very crowded: 171
   - Not applicable: 14

**Section 2: Perceptions about the number of deer in the unit.**

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 112
   - Fewer: 180
   - Same: 208
   - More: 167
   - Many More: 84
   - Unsure: 8

**Section 3: Feedback on the CDAC’s 2020 preliminary recommendations**

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>

Report Generated: Friday, May 01, 2020
I would like to see a private forester on the CDAC, not County or DNR foresters. They claim there are too many deer and the deer are eating all the trees. What about the fact that when the deer numbers were much higher years ago, how were the trees able to survive? The foresters' answers to his question were quite vague. How is it these government employees, who set foot in our forests minimal amounts of time, are able to determine deer numbers more precisely than those of us who actually live and/or hunt in these woods? Why is it that career loggers (who spend their lives in the woods and know first hand the deer numbers) claim that the browse problem is due to poor management from the forestry department? Why should we take the words of government employees (some who have not even been in our County for more than a few months) over seasoned inhabitants? It makes one wonder what truly is the agenda of the Forestry Dept and DNR? We have a hard time buying the browse depletion theory year after year. The same browse presentation/theory was given to various counties of the state... come on. The copiousness of predators have a genuine impact on the deer depletion, but no one is including that in the discussions. In fact, we were discouraged to bring the topic up. Why is that? The Council is getting setup for its own agenda and becoming a Conflict of Interest group. No paid County or DNR government employee should be allowed on the board if you want the consensus of the public. I believe it would be in the best interest of Douglas County to have a real estate agent or land appraiser on the Council to give input. My guess is they would want increased deer numbers to improve land sales (prices) which would also help businesses. It would also be beneficial and balanced to have person(s) from the local business communities that can talk about the impact of low deer numbers on businesses. Again, having a Council member that is a private Forester, someone not paid by the government, would allow additional objective and honest feedback on deer damage. When the Council is heavily made up of persons whose jobs are at stake, as ours is, they tend to project the agenda of their employer...the government, in this case.
Unfortunately we are starting to manage our deer herd like we used too in the 1960's and 1970's placing heavy stress on buck harvests and minimal stress on doe harvests thinking that this will increase our deer numbers. The problem with an overly stressed buck population is they are less resistant to harsh winters, predators and even diseases. The other unfortunate side of this is that private property owners have no say whatsoever in the deer management on their property. Each year I go to the deer hearings and am told that our County Forest's bring in 12 million dollars to the county. Well they are not a zero sum game as they have many employees, a beautiful building, a shop, vehicles and equipment and anytime they think the public lands that have less deer than private lands need to harvest more does they can get tags in a heartbeat. Private property owners which pay over 5 million in property taxes plus another 5 million in other taxes in this county and have no say in getting tags even though some of our lands are being over-browsed by high deer numbers. Part of the reason for this is the predator numbers tend to be lower on private lands, especially closer to dwellings than they are on vast tracks of public land. Our local CDAC is terrified by the recent predator studies and the fact that two members represent the the county forestry issues and most of the other representatives hunt in low deer density areas of the county so it is easy for them to dismiss the concerns of private land owners in higher deer areas. Everyone does agree that managing counties by units would be the best way to go, but until then why not trust private landowners to make responsible decisions. If they felt that numbers were low they wouldn't let people harvest any doe's on their land. By the way, when last years doe tags sold out in 18 minutes does that sound like a hunting public that thinks there are no deer out there. Somehow there is a dis-connect between the CDAC for Douglas County and many of it's private landowning hunters. Perhaps it is because they are already biased in one direction and are not really listening to other concerns in the County. Sadly, most counties cannot get hunters to adequately harvest doe's the way they need to. Our CDAC is taking a different approach by destroying the social structure of our herd by over harvesting bucks and under harvesting doe's on private land all in the name of increasing our over-all deer numbers. Overly-Stressing the deer herd socially is not the path to a healthier, better deer herd. I do also wish our DNR Wildlife Biologists would show more leadership in this area by strongly encouraging appropriate doe harvest numbers in our county for private land. Their more passive approach in this is contributing to our overly-stressed deer herd. The CDAC needs to reconsider it's most recent decision and do the right thing by providing doe tags for private land owners in Douglas County.
30 years hunting in Douglas county and shed antler hunting and every season gets worst and worst. Countless hours of shed hunting on public land has produced ZERO antlers this year and I have logged in over 100 hours. I personally have a really hard time believing your buck harvest numbers from any of the last 10 years. Yes there are some deer and deer sign but mostly from does and buck sign from last fall is virtually non existent in areas of Douglas County. Wolf sign is still there with 24 dead deer carcasses found this year so far. I have been saying the same thing for the last 10 or more years. The DNR needs to completely shut down deer hunting for one year period. The buck to doe ratio has to be 15 or 20 to 1 and possibly much much higher in areas of southern Douglas County. You cant have bucks only for the past 5 or more years and cause serious issues with the deer heard. It is absolutely unhealthy to have this serious imbalance. You will never find another person that spends more time in the woods than myself and the wood ticks have been out since early March and they are the worst I have ever seen the deer ticks. My observations should not be taken seriously. I have zero reason to lie. I have nothing to gain. My life is deer. Its just my thing. Its something 99.9% of people do not understand. I am considering writing a book and making videos because this is my passion. Do what you wish with my information but just remember one thing. The facts are the facts and the deer are not rebounding as expected by the Wisconsin dnr and to say the least I am beyond disappointed

This has become a political issue more than a scientific one. They are two different and not necessarily connected issues, #1: The county's northern half is dominated by private lands, lands that are over populated, while the southern pine savannas are probably near target density. One fix will not, cannot fix both issues. I am perplexed by the CDAC's intransigence to separate the county into northern and southern districts. THIS is the political trumping the scientific! #2: The lack of science used to support the decision to reduce antlerless harvest county wide. Too often "hunters", or maybe I should more appropriately call the "casuals", or just "shooters", complain about not seeing any deer. What is disturbing, but not surprising, is the credence the CDAC gives to these complaints. As was mentioned in press releases, the weather plays a huge role in sightings and harvest. This doesn't mean that fewer deer exist. Every night I go out looking for the sun, but can't find it. Did it disappear? Of course not. All that said, it is clear to someone like me who lives in Bennett and spends a tremendous amount of time afield that deer numbers in the central part of the county are stable, if not increasing, and the northern 1/4 is grossly over populated. Deer crop (fruit trees & garden) damage has vexed me for years. fences and dogs do little to mitigate the carnage. I apply for and receive a landowner preference tag every year and offer it's benefit to anyone willing to hunt near/on my property(all private). I usually end up filling it and giving the butchered deer to a family in need. All in a vain attempt to cull the local herd. More permits for private land, especially in the northern half might help balance the numbers, but it will raise the ire of public land hunters(shooters). To mitigate this, perhaps a program that incentivizes the private land owner to allow access is in order? Or maybe the simplest solution is to split the county into north and south zones. For the record, in 37 years of hunting central Douglas county, only once did I fail to fill at least one tag. In this age of instant gratification and short attention spans (thank you electronic gadgets), people have been led to believe that they should see, and should harvest an animal simply by showing up. More deer isn't the answer, better management is. And that my friends falls on the CDAC. Practice science, and by science I don't mean political science. And by management, that includes managing the expectations of shooters. Thanks for your time and patience.
I started hunting in Wisconsin around 2009 and have yet to miss a season. In the beginning we saw so many deer there was hardly a moment throughout the day that you didn't have deer around you. Because of that, the DNR allowed unlimited doe tags at $2.00 each. Now I never participated in that, but thought that was extreme especially when I heard all the shooting and also hearing about how many does other deer camps were taking. Within a couple years the population definitely declined, but there were still plenty of deer around, you just had to put more time on the stand to get your deer. I don't remember when the DNR limited the doe permits as I never bought one because I didn't go there for the meat. I went there for the primary purpose of carrying on a family tradition of "Deer Camp" and all the great things that went along with that.....which is the card playing, joke telling, reliving past hunts and the camaraderie. Well, as the years went by and the population continued to decline, so did our harvest and because of that we had some guys getting so frustrated with not seeing a deer for days on end that they started to cut the days spent in camp back or elected to quit coming altogether. Again, I cannot say I know how many doe permits were being issued and what percentage of those tags were filled, but I can say that I know for a fact that over the last couple years that it has to be extremely minimal due to the lack of shooting I'm hearing. It sounds more like it is the last weekend of deer season instead of the first. Now, what I have witnessed is an increase of wolves. On multiple occasions I've seen wolves from my deer stand......the most being a pack of 5. Therefore, I firmly believe wolves are a direct link to the current decline in the deer herd around that area and if there is no attempt to control them this problem will be never ending and the great family tradition of spending time with family and friends in Wisconsin "Deer Camp" will fade off into history. I sincerely hope and pray that the legislators start taking this seriously and get something done that will allow the people of Wisconsin to take charge of this issue through the form of hunting or trapping. Lastly, I want to extend my THANKS to all members of this committee for the efforts you have obviously put forth!

I would be in favor of opening up doe tags for private land hunters in Douglas County. Being that myself and my family manage our properties for the deer herd, we have built up strong deer herds on our properties. But not being able to manage the doe herd as much as we should have these past number of years with no or limited buck tags has really hurt our hunting and deer herd. Bucks (especially mature ones) avoid living in areas with high social stress with other deer. They often seek out a quiet and remote area they will not be disturbed. But when does are not managed, they consume a property and push out all the bucks except for random rut cruising. But since people can only shoot bucks, we have lost ground towards managing for bucks because a large number of immature bucks are being killed each year and the doe population is bursting at the seams. In many ways, we face worse high quality deer on our lands than ever before we started managing because all we have are does. It is not uncommon to see 30-40 does in one hunt, yet maybe 2-3 small bucks at best. Our buck to doe ratios are so out of balance and that causes great stress to the bucks that are already few and far between. When people say they want to see more deer...the majority of them mean they want to see more bucks. Buck only hunts for years on end do not give people that experience. We are harvesting ourselves out of bucks and screaming all the while that they are not seeing deer. We see boatloads of deer each year, but rarely even see a 2 year olds because they have been kicked out of the area by all the does. In my trail camera surveys, I find that public land areas have a more balanced sex ratio and I get more big deer on camera on public land than I ever do on private. It is rare to get any mature deer on camera on private land now. My proposal is to let the private land hunters have access to tags, let them decide on management goals for their own property, give the rights back to the people to decide, so that they can make a difference in their local deer herd.
I've ran over 15 cameras in multiple locations across the Superior city subunit, as well as on private land near county road B in Douglas county. I keep an excel file for every single buck that appears on my camera, date, time, wind, temp, pressure etc. You name it, I probably have it. Your proposed antlerless quota of 0 seems quite drastic in my opinion. Certain areas of this region have had lower doe numbers over the last two years- such as areas east of I-35 in between Pattison State Park and Amnicon State Park specifically. On the other hand, other areas have had an antlerless deer increase, even drastic at spots. These areas include areas along highway b in douglas county, Parkland area, and certain areas south of Oliver WI. I understand your point of view, but a blanket coverage here seems unlikely to make much of an impact. Cold, wet winters have taken a toll, especially this past season as 4 feet of snow made it extremely difficult for deer to survive against predators. I believe habitat improvement could go a long ways. As for bucks, I believe more and more small bucks are shot each year. Although this is great for kids and first time hunters, it takes a drastic toll on the quality of our herds. I urge you to consider a over 4 point rule in which every buck harvested much have 5 distinct, one inch or greater points. Even one season of this could boost our quality of deer, especially in these northern zones. In my opinion, we should be focusing more on bucks than antlerless deer in these northern zones. The ratio has been trending towards more and more antlerless than bucks over the last three years. I’ve always believed a correct population of doe deer leads to a better herd of bucks. And as of now, on average, I believe our doe population has gotten actually slightly higher than it should be.

My opinion... There's a fine line about managing the wildlife for money or conservation. Your managing for money I believe. Hunting is declining I get that, but it has a lot to do with costs all around. It's not a tradition to most people any more. It's a very expensive hobby. I here a lot of younger people say why should I spend money on licenses an stamps when I can go to the store and spend less time, don't have to buy gear/gun/ammo. Thinking has changed. Pus there's less wildlife and now days and people get board fast. Your studies may show different but where I'm at I spend more days in the woods then I do on the roads. People are being taught from professor's that don't hunt/trap or fish and from a book of other people opinions from other parts of the country/world. Then you bring in so called deer professionals from other states to tell u about your deer herd. Yeeks.... Before I'm dead the USA will be like Africa an Europe. We will have to pay the land owner to harvest a animal, they will be the new DNR. And only rich people will get to hunt. If u haven't noticed there's no English Sparrow to speak of anymore, frogs/salamanders are gone. Bees are down. Ducks don't live here like they use too. I get the fly way changed a bit. Fishing sucks. Trout fishing is really bad. There way to many chiefs and not enough Indians in the field seeing what's going on. No farmers cultivate anymore, they spray everything. The fields look like a Barron waste land not a weed or fence line in sight hardly now day. I get its tough but for what the top people get paid they should see it or be able to figure this out. There's a lot of us poor dummy out here seeing what's going on so why can't u see it? Sorry for the vent but let's get this figured out before it's to late.
Over the last several years we have noticed a severe decline in deer numbers. At the same time we have noticed and have seen an ever increasing number of wolves. If the average consumption of deer is 20 per wolf per year it does not take long to significantly negatively impact a deer herd. I do not think it is a coincidence that while deer numbers are decreasing the wolf herd is increasing. The fact is that along with all the other predators killing our deer we do not need/want an apex predator significantly reducing our herd in the northern forest. Note, again no coincidence, in areas of no wolf population/predation, there does not seem to be a decrease in deer population numbers. The State of Wisconsin needs to be in control of the wolf population so they can be properly managed. I do believe that the high wolf population is having a negative economic impact as well as a decrease in the enjoyment of seeing and opportunities to harvest a deer. Deer hunting is very important to me and my family/friends. I have seen first hand the impact of a high wolf population in northern Minnesota and we do not hunt there any longer as the wolves have decimated the deer herd. If unchecked, they will greatly reduce deer numbers here as well as they hunt all year and deer is their only food source here. I ask you to please consider the fact that the decrease in the deer herd is largely impacted by the increase in the Wolf/predator numbers and population. Again it not a coincidence!! I just fear that because of my age (67) deer hunting will never be the same as it will take a long while to rebuild the herd with the high number of predators. Thank you for having this forum and allowing input!!

I currently live in Douglas county and have Bow hunted for many years. I drive 15-20 miles a day to and from work. Since the snow melt many the local hay fields are loaded with deer 15+ per morning and evening. I have 5 trail cameras set out on different fields, there are a surprising numbers of DOE's and Healthy does that have survived the winter. Yes alot of your observations are highly dependent on where one is located in the county, The population might be low in the southern 1/2 of the county but high in the northern 1/2 where there was less snow and more food. To say no permits throughout the county is not fare to those who have a large populations of deer. The deer population will high this year (2020) since we had a blizzard during the gun season, preventing hunters from making it to there deer stands and the deer stopped moving over that 3 day period. Limiting doe tags is the right move, but a doe harvest is necessary to maintain a healthy population of both Bucks and Does. Over the last 4 years we have decimated the younger age groups of bucks, since we have been bucks only for the last 4 years. Bucks have not been able to get to a mature age because hunters are desperate to shoot anything with antlers. In most years a hunter might pass on the younger bucks to have a chance at mature deer, This is not the case now. Managing the heard like some manage there property is the right move. Look at the populations in areas, Open ZONES with in the county for doe harvest might be a option but management is key to a healthy deer herd. Thank you

During the 14 years that I have hunted Douglas county I have seen a continued increase in the amount of predators (bobcats, coyotes, & wolves) and an overall decrease in the deer herd. There were some years with a bit of an increase and some years with more of a decrease, but overall for the 14 years there are far fewer deer and far lower quality bucks than there were 14 years ago. I would have to say that the number of bobcat & coyote animals & sign that I see has remained consistent over the 14 years. Actually, the number of hunters in and around the area that I hunt has gone way down over the past 14 years as well. When I started hunting there, we had more people on the private land that I hunt and there was a huge (10+) group of guys that hunted the public land that adjoins it. Now, we never see anyone on the public land and our camp is smaller by 2 people. The HUGE change for me has been the number of timber wolf animals & sign. It has been an unbelievable change. 14 years ago we never saw a wolf and rarely saw any sign. Now we have wolf sightings and there is fresh sign all through our area every few days. We also find places where the wolves have killed deer. I ask that you seriously consider doing something more drastic with the wolf population. They have added an additional burden on the deer population that has reduced not only the number of deer, but significantly degraded the quality of bucks as well. Thank you for the opportunity to provide this feedback. Good luck in your work.
Due to weather, predators and overharvest of does, the deer population in my area in the southwestern part of the county is as low as it's ever been in the 35-40 years I've hunted there. I think the CDAC is correct in it's recommendation to not issue antlerless deer permits in 2020. The DNR seems to be keeping bear and bobcat numbers in balance through hunting, but wolves continue to have a substantial impact on the deer population. I recognize that wolf hunting is tied up in the courts, but I do think that the DNR should be working through our national legislators to adopt legislation that would again permit wolf hunting and trapping in the state. Such legislation is apparently stalled right now. In light of CWD, I feel that baiting and feeding of deer should be banned state wide. Even if the disease weren't a threat, baiting and feeding should be banned. It's responsible for the most conflicts between hunters, it disrupts deer movement patterns, and it simply lessens the hunting experience. While the deer population is very low in the area I hunt, I realize that is is not necessarily that low throughout the county. In fact, some parts of the county may have too many deer. That's why I think the CDACs should be able to delineate deer management units within the county and set management objectives on a DMU basis. Obtaining more local input through CDACs was/is a good idea. Switching from smaller DMUs to countywide recommendations/regulations was not.

I've been hunting the same private land, over 500 acres, in Douglas County for over 20 years. Deer numbers were very high in the 2000's, probably too high, and they plummeted after the winter of 2013, and never really recovered, especially buck numbers. I attribute this to a diminished number of antlerless permits, so hunters start killing young bucks, and finding a mature buck to harvest is nearly impossible. Not allowing any antlerless permits in 2020 will further exacerbate this problem. Secondarily, wolves have become too numerous. They have always been around, coming and going, taking a few deer here and there, and causing the deer to hunker down and not move until the wolves move elsewhere. The last several years the wolves are so prolific the deer hardly move at all, and only at night. Wolf-killed deer are a common find, and deer behavior is severely altered. I have a large, lush food plot that has 3 trailcams on it, wolves were on camera daily, and the deer completely avoided that food plot all fall and winter. They used several other food plots, mostly at night, mostly closer to human habitation, but never did touch the large, isolated plot, and the beets, turnips and oats rotted under the snow. I realize the wolf problem is out of the control of the DNR, but if other hunters are seeing the numbers of wolves I see, and are experiencing the decline in their deer herd, then I expect them to take over predator control for a government that can't/won't.

The Douglas County CDAC has done a great disservice to hunters by recommending a zero quota for this unit. While there may be some areas with low deer abundance there are many areas that contain large numbers of deer. The sand country in the SE part of the county is one of these areas. There are many private parcels in the clay plain farther north in the county that have very good numbers of deer as well. Hunters should have the ability to obtain an antlerless permit and use it to harvest a deer. There is absolutely no excuse to not have an antlerless deer quota on private lands as the landowner ultimately makes the decision on how many deer will be harvested. Allow landowners to make this choice and take the deer they need to remove from their property. Having a minimal number of public land tags available will give public land hunters an opportunity to have a chance to harvest a deer and take some pressure off younger bucks. With the deer numbers present in the county a zero quota is unacceptable. I have the option to hunt multiple counties in NW Wisconsin and having antlerless tags available as an option to harvest a deer is something I look forward too. With no tags in Douglas County my desire to hunt there is much less. Biologically the herd can stand a quota and still have growth. Stop worrying about things you cannot control like busting the county up into smaller areas and concentrate on providing opportunity for hunters where they can find it.
I have hunted in Douglas County for more than 30 years. I have harvested at least one deer in Douglas County in most years as well as the neighboring counties. 2019 was no exception as I spent a limited time in Douglas County and yet seen several deer including a harvest in the rifle season as well as one during archery season in the metro unit. My hunting is done on public land. I found that by moving around there were plenty of deer, they were often in different areas last year compared to previous years which I attributed to snow. I hear the comments from the other hunters about the population but I also observe them going to the same one or two stands everyday without moving to attempt to find the deer. In my opinion that is a poor basis for which to assume where a population stands. We are trying to increase the interest in hunting season not reduce it by limiting the harvest to buck only. This will reduce dollars coming into the area and drive hunters like myself to go to other areas to harvest does to fill my freezer. We need to offer some permits and a harvest of 67 antlerless in as large of a county as Douglas will not have a dramatic impact on the population. Please do not let the comments from a select group of exclusive buck hunters affect the ability for others to harvest an antlerless deer. Thank you.

I feel like the 90's and early 2000's gave hunters in Douglas County a false representation of what a healthy deer herd looks like. We need a balance and not an over-abundance. Hunting was never meant to be easy! Another issue that is never mentioned is that the methods of which many are basing there opinions are not a good measure of what is really going on with the deer herd. Most of our land base in Douglas County is dynamic and is always changing. Deer react to this change and follow preferred food sources. If a hunter bases their population estimate off of their 40 acre hunting property, they are not seeing the whole picture. We need a balanced herd, but that does not mean that the deer will be spread perfectly even across the landscape. It will never be like that, people are fools to believe that there should be deer around there box stand on a hunting property, when deer migrate to food sources that are more advantageous to their needs. Some areas are void of deer for a reason. For success you need to be mobile and committed to working hard for deer. Contrary to popular belief, corn baits are not preferred food sources and give hunters a false sense of deer behavior and population distributions. I hope that our hunting community will realize the totality of all the issues related to deer populations and not their vision down a narrow site window of their own special interest. Thank you.

My hunting group has had a very small cabin and consists of 12 members since 1950s. We love the tradition. We hunt only public land. The biggest impact I have seen on our deer herd is harsh winters, surplus antlerless tags, and wolves. We cant help harsh winters. My only comment on wolves is I hope they get de-listed. Wisconsinites showed how efficient they were at harvesting wolves when it was open. Fingers crossed. As far as antlerless tags our group has never shot a doe. EVER. When I first was able to hunt with the group in late 90s we sat opening weekend and then started deer drives Monday morning through friday. I typically saw over 80 deer over the week. We still hunt the same way except now we go home Wednesday and have now for 6 years. We just dont see the deer. For years we watched large groups of out of state hunters (20 to 30 people) take full advantage of endless antlerless tags for basically no cost shoot 20,30 doe in our area. We as a group new this would have a devastating effect on our herd. Low and behold it did. Those groups no longer come citing no deer. This also has had a drastic impact on the small towns economically. Our herd is very important, even to the non hunters in that area. We still need to be very cautious with our herd in that area. Thank you for any consideration. Douglas northwoods is a beautiful area.
The deer herd is healthy and does I witness on a daily occurrence are bigger and showing no signs of stress. I expect in my local area there will be above average of fawns this spring. There are way to many does for this area and there have been interbreeding because of the lack of antlerless permits. Your causing the deer herd to interbreed with such low numbers of permits. They are destroying there natural browsing which such of influx of does to bucks. Your failure to address the problems are creating a much wider and broader problem for the herd. I avoid on average 5-10 deer potential accidents per day. There has been a rough guest estimate 20% increase in deer mortality because of motorist accidents. I do not go 1 day without seeing a deer kill on county road Y and on interstate 53, highway 27, 77, and 63 in surrounding counties. I see a lot more deer than i ever did before. No question there are more urban deer than rural deer. Your lacking one major factor when it comes to determining permits. Winters do matter but not as much as they did because of urbanization and the fact that deer can survive winters better now because of people feeding them and the fact they inhabit areas of metro areas for food sources and protection from predators. I hope this feedback will help you in determining your predictions.

I will be buying a NR Crossbow permit in 2020 because with it I can harvest either sex of deer, I want venison in my freezer (the Covid ordeal is a great example of why this is so important - people need to provide food for themselves). But I will most likely also purchase a NR gun permit as well - hopefully get two deer this year, I tagged zero deer last year with a NR Gun only permit. The Bow/XBow numbers in your video seem to support my intended actions, as an ever increasing trend we hunters are engaging in, given the continued Gun antlerless restrictions being applied in recent years. In my hunting area (Private Land, surrounded by public paper company land) I've see 98% antlerless to legal bucks over the past 20 years hunting. I've only harvested 4 bucks in 20 years of hunting, antlerless are my best option to get venison, in past years I would purchase bonus antlerless permits and take two antlerless deer every year I could - because they are always available - even last year, I saw 11 deer, all were antlerless in the first 4 days of the season - no bucks, I did not hunt any other days. As a NR, spending $160/yr for a NR License and getting no venison is quite frustrating. I'll be spending that on a XBow license this year to increase my odds of having venison for my freezer.

One way to help increase the deer herd in Douglas County is to reduce antlerless permits. It is quite evident that during the last couple of years, the overall kill has been decreasing. We had one of the earliest gun openers and one of the latest gun openers during the previous two years, and both resulted in a decline in the overall kill. In fact, wolves killed more deer in Douglas County than all of the deer hunting seasons combined. If we’re unable to control predation, we need to be very conservative with antlerless tags. We’ve been unsuccessful in increasing the deer herd, even with issuing minimal tags over the years. We also need the Douglas County DMU boundary redone in order to maximize and control the deer harvest. I would also like to comment on having paid public officials on the CDAC board, who are only looking out for their best interests and livelihoods. To some on the board, there will always be too many deer which could threaten their jobs with the County and State. If that’s the case, lets put a real estate broker or appraiser on the board and discuss on much real estate values have dropped with the lack of deer. I strongly encourage the CDAC Board to put in a final vote for zero antlerless tags for the 2020 hunting season. Thank you!
I would like to have the county split at hwy 53. There are hardly any deer west of 53 and those people on the east side say they are overrun! It's not fair to have a doe slaughter on the west side of 53 when there are about 5 deer per square mile, and east of 53 a lot more. With the amount of wolves and bear in Douglas Cty the deer herd is not going to increase, west of 53. The DNR put out kill all deer in the early 2000’s, people did slaughter them. Now the DNR is concerned about license sales. These are supposed to be educated people. If they can't figure out that no deer means no license sales. Then they say we are having dwindling hunters. I am sick and tired of all the excuses they come up with instead of taking responsibility that they are there own enemy. Now I hope our CDACS have it in them to stand up for doing what’s right and help the deer herd and the hunter get back on track. Common sense would tell most people, if you have more deer you will have more hunters. I know forestry's a big industry in Douglas Cty. I look at all the trees they are harvesting now and there were more deer back then, the trees will grow. Any business that micromanage there business struggles, fact. We can’t micromanage our deer herd, we have proof. STOP please!!!

First off, sorry for any grammar issues in this comment as I am doing this on my phone. I utilize public land for just about everything. The amount of antlerless deer I saw while hunting douglas county forest land is astronomical. Every night I sat I would see 10 to 15 antlerless deer. It didn't matter where I sat there are a ton of antlerless animals. They are taking a toll on regrowth in logged areas, everything is heavily browsed but there is no indications of bucks. I have walked close to 30 miles this year along looking for sheds and found nothing in cut covers trampled with tracks. I also sat 20 to 25 times last season and never saw a buck. Not even a spike. Yet every sit I had 10 to 15 antlerless animals walk past me. The current DMU system is broken state and needs to be fine tuned. For instance Douglas county could be divided into 3 zones. A lake farmland zone, warmer climate due to the lake results in a longer growing season, results in cropping, which results in a lot of deer. A forest zone in central douglas county, still plenty of deer but not as many due to the boreal forest land cover. Lastly, southern douglas county which has quite a bit of crop land and a lot of deer. A highway should not determine a management zone.

I am in support of the Douglas County CDAC issuing the same antlerless quota for 2020 as they did in 2019. I think zero quota is too low. Yes, the 2020 harvest figures were down but so were the number of hunters in the County during rifle season. 500 antlerless quota shouldn't have a very statistically significant impact on the overall population and would be a great opportunity for those dedicated hunters like me who are of the minority and just like to hunt for meat and not antlers. A zero quota would force me to think about hunting elsewhere where I can harvest an antlerless deer. I also would like to see the Committee support a "maintain" the population goal for the deer herd at the next goal setting meeting which is in 2021 I believe. I see fewer vehicle accidents and less human conflict with deer while still offering plenty of deer to hunt with the population being at where it is currently at. There are plenty of solid arguments all across the board based on nature and ecosystem health to keep the deer population maintained where it is now and the only argument to increase it is for hunter greed. Thank you for this opportunity to provide input and thank you to Committee members for doing the hard job you all do.

I think it is absolutely absurd not to issue any antlerless tags for Douglas County. The areas I frequent and hunt in Douglas County are full of antlerless deer. I don't see many bucks but there are a few there. The herd dynamics are really screwed up in areas, especially on the Brule, and the answer isn't to not kill any does. There are already too many and the herd needs to be brought back closer to normal. People need to be able to kill does and hopefully not small bucks if they are just looking for something to eat. Not everyone just wants to see a million deer and kill a big buck, or just any buck. Some people just want to kill something to eat and if they have a doe tag they will use that and trust me there are plenty of does to go around in areas of the county. I strongly suggest you issues at least some antlerless tags on public and private land. I think not doing so is a gross overreaction and I feel that the winter wasn't nearly as bad as some people think, the deer I have seen came out of it looking very healthy. I also think population estimates are low because of lack of hunting the last 4 days of the season last year. That had more to do with the lower harvest than any lack of deer. Thank you for your time.
The wolf population is out of control! How do you expect youths to want to hunt if they don't see deer.... a child hearing a pack of wolves in every direction during a hunt and not seeing deer day after day is a terrible thing. The northern forest area is a tragedy. Between bear dog hunters that are lawless and wolves that are out of control, land owners are selling their property and ending generations of hunting legacy. I used to be proud to say I owned property in the northern forest, which was one of the greatest whitetail hunting areas in the world, to being embarrassed at what it has become. We are on the verge of losing a entire generation of big woods hunters because of this. There is so much that has to be fixed and it will take decades to do so. There needs to be an incentive for a person to own land or keep their property for hunting. Not once have you ever mentioned antlerless landowner tags. Why? Too many of the landowners/taxpayers in the northern forest this would be an incentive to keep property. That is just an idea.... I am not speaking just for myself but speaking for many other landowners and hunters of the northern forest. Please call me with questions or feedback.

Stop using baiting and feeding as scapegoats for CWD. Limiting the amount that can be placed is more than adequate. (You do realize that deer yard up in the winter, correct? Maybe crack down on the real cause - DEER FARMS!) And, btw, mineral blocks are not bait, they are essential supplements, especially in areas with poor soil quality. Always have antlerless tags available for private land. Go back to an application process (the fee would add revenue) and track them to specific parcels to spread them out evenly (this would work for public land tags as well...). Cut off junior tags at 13. Especially since there's no minimum age anymore (which is ridiculous btw...). Only allow 1 buck harvest per hunter per season. Sell the tag as gun, bow, or crossbow initially (for those who hunt only 1 season) and allow additional weapon authorizations to be purchased as add-ons (for those who want to be able to hunt different seasons). Online and phone registration are fine, but EVERY deer should have to be verified at a physical location. This allows for much more CWD sampling as well. END the Dec. antlerless only hunt! Period! Go back to smaller management units.

The timber wolf population is out of control. The "estimates" that are put out for the general public are nowhere near the actual number of wolves in Douglas County. Talk to farmers or people that spend a great deal of time outdoors to get a better estimate. These are the people that continually come across these predators and the damage they cause. I have never feared going in the woods until last season when I had a pack of 8 wolves come within 50 yards of my tree stand on opening morning. These predators do not fear man and are becoming more and more of an issue. I also foresee that the number of deer licenses sold will continue to decrease as the wolf population increases. Not only for the reason of less deer in the woods, but eventually someone will lose their life to these animals. It is time for the state to take back responsibility for the predator control of the wolf. If there is nothing done soon I feel as if the interest in WI deer hunting will unfortunately perish. There are simply too many other options for our youth to spend their time with than sitting in a tree stand staring at empty forests and fearing for their lives.
I would like to remind the CDAC council that there is more that matters than just seeing a lot of deer and hunter harvest levels. Remember, last season had horrible conditions for most of the 9 day season. Combine this with the average hunter hunting less than 5 of the 9 day season and you see low success rates. This is not a fault of low deer numbers. Also keep in mind the impacts on the forest. High deer numbers lead to irreversible damage for the forests of the county. Deer populations that get too high destroy regeneration county wide. We also need to take into account the aging hunter population in the state and the limits that poses on participation and access. It is better for our forests and environmental health to avoid high deer populations, regardless of hunter satisfaction. I also regularly hunt Shawano County and have seen what those levels of deer do to forests. We DO NOT WANT THAT LEVEL OF Damage within Douglas County. The deer heard has grown in size and it only makes sense to have the same level of harvest permits available. 800-1000 antlerless quota should be the desired number.

I have not hunted for the past 2 years because of my frustration with how things are being handle by the DNR. Years ago they handed of doe permits like they were candy and levels have dropped since. I am starting to see a increase in doe population and would like to have the chance to shoot one but low doe tags prevent that so I started shooting bucks cause that's all I had a tag for. I stopped hunting cause all I saw was small bucks that need to grow to become something to shoot at. Also if you keep shooting the small bucks there won't be enough of them to populate the deer HERD. Meaning the doe population will keep declining and a unhealthy deer herd for next year. My suggestion is let the hunters have the ability to shoot one or the other so we have a balanced doe/buck population and happier hunters with a higher turnout rate. If they don't see the mature buck they want to shoot they can shoot a mature doe instead. Then let God do the rest and keep man's nose out of it. Charts are just numbers that don't add up to much. Have a good day!

I have hunted for 14 years in Douglas County. I saw more deer (does and fawns) last year than the last 5 years combined. There are without a doubt more deer in Douglas County than in previous years (including a SIGNIFICANT INCREASE in numbers seen already this year!!!). With that said, I believe there should be a few antlerless permits (100) outside the metro subunits on public land. However, we will never get to the true desired population numbers or the desired harvest quotas if we don’t discuss managing predators (wolves and bears). Last year was the most predator sign I’ve seen in the last three years. They’re out there and way more than your “numbers” state. In addition, I would like to address another issue that affects the deer harvest numbers and economy. We MUST return to mandatory in-person registration. It holds people accountable and stimulates the economy the town registration stations, which we all know that these businesses will desperately need in light of all that has transpired over the last month.

Because of the low deer population in most areas of Douglas County. The CDAC is still in the increase the deer herd mode. With the high numbers of wolves, coyotes, bears and bobcats, it is going to take years to get the deer population up enough to achieve the buck kill that the CDAC is trying to accomplish. We have way too many coyotes, with the DNR doing nothing to control their numbers. At this time they can't do anything to control the wolves. But they can try to reduce the coyote numbers. (Or is it that they like a large coyote population, because like wolves they kill deer 24/7. Then they don't have to rely on hunters as much to control the deer herd.) Until we kill close to the 3,000 bucks for all hunting methods in Douglas County that the CDAC has set. I don't think that the youth hunters should have antlerless tags available to them. The potential to kill 550 antlerless deer is a little disturbing to me. Only have them available to the handicapped and the military. I believe this is a fair alternative.
I personally have been hunting (Only Bowhunting) in Douglas County for 17 years now. When I first started back in 2003, it was incredible deer hunting in the southwestern part of the county. We seen plenty of deer throughout the season and seemed like the herd had a well balanced age ratio. From 2011 right on through this past 2019 season, there hasn’t been near the amount of deer in our area. Hunting has been quite poor to be honest for most guys. I hope that we can make the struggling deer population a priority starting in the coming season. I fully support the 0 quota for antlerless tags. This is a great idea. I support the youth antlerless tags though. It is important to allow our youth the opportunity to enjoy the outdoors and grow the sport we all are so passionate about. I can’t say that I am a big fan of allowing anyone to hunt with a crossbow. I think the youth until age 14 and adults over 60 or with a medical handicap should be the only ones allowed to hunt with a crossbow. Thanks for your time.

I have hunted and lived in the same area for all of my 49 years. I have seen more does and fawns this year than I ever have. Last rifle season I was able to watch up to 12 does and fawns come into my stand every afternoon that I hunted. In the area that I live in, I have seen more deer feeding in the fields than there has been in the past 10 to 15 years. I have seen very few bucks over the last three to four years due to the fact that they are being killed off due to buck only hunts. There is an over population of does in the area and not enough bucks. In the past three seasons, I have trail cam footage and personally watched 6 to 8 does for every buck that I have seen. Last season, I did not see a buck during the season and still saw as many as 12 does and fawns at my stand each day. I know that there were that many due to the direction that they came from and the timing of when they came in. Please reconsider the amount of antlerless permits that you will be giving out. Thank you.

I feel having no antlerless permits is ridiculous, the winter though it was hard was short in comparison to other years. I feel that a system that allows landowners of 40 acres or more an antlerless tag with purchase of license should be adopted before any public tags are given out. These land owners are paying property taxes on the land and should therefore have first chance at antlerless harvest. They also contribute the most towards support of the county lands that are plentiful in our unit. Lastly we need to implement some sort of large predator control as soon as federally legal not only to balance deer harvest but to prevent livestock depredation. If it is determined that this would be too detrimental to the youth antlerless should be preserved first and foremost as we need to keep those who are hunting interested, and allow new hunters the success that will hopefully be the start of a lifetime spent in pursuit of the outdoors and nature’s bounty.

By not issuing antlerless tags, hunters are more likely to harvest the first buck they see, regardless of size, because they simply want a deer. More spike bucks and smaller bucks are being harvested, which doesn’t allow very many bucks to become mature. I could harvest a spike buck every single year, but I pass them up because I want them to get bigger. Not all hunters have that mentality and will take the first buck they see. It’s frustrating. When hunters aren’t successful for years and years, they quit. That’s why the number of hunters has significantly decreased. Banning baiting, not issuing antlerless tags, cutting down the crossbow season, will only make it worse! More and more hunters will decide it’s not worth it anymore. It’s not always easy sitting out in the deer stand for countless hours, in the cold, day after day, only to walk away empty handed. It’s discouraging. Why make it even more of a challenge?

The tradition of hunting "up north" is still alive in our hunting camp. When the deer population was higher, we hunted harder knowing we had a good chance of seeing deer. Now with lower numbers, it is easy to get frustrated and not hunt as hard. The style of hunting also has changed. We were very successful doing deer drives back in the early 90's. Now we mostly sit in stands knowing no matter the style of hunting, we won't be seeing many deer. I also think the youth season needs to be addressed. We need to give the kids a better chance at seeing and harvesting deer. The season should be a little longer and I do agree that the youth should have the option of shooting both does and bucks no matter the quota. We don't go up north to see a lot of deer, we do it for the hunting camp experience. But it would be nice to start seeing more deer again like we did back in the early 90's. Thanks.
2783 Hunter numbers / pressure has dropped significantly over the years due to the introduction of wolves in our area and the resulting drop in the deer herd. The initial proposal was for 350 wolves in Wisconsin and now the count is approaching many times that number. Open up the wolf harvest and reduce the number to the original 350 over the next 3 years. I realize I hunt in an area with a high concentration of bear which also reduce the deer herd dramatically. Give out more bear tags and even bonus tags if necessary. Also... get rid of the Public vs. Private designation on the deer applications!!!! I have hunted both public and private for years and now I have to choose?? BS. We can't force people to open up their private land. Tracking where the deer are shot is fine when registering but don't limit hunters by forcing a choice to carry the "correct" tag in order to hunt. Simplify the process!!

2784 I believe the biggest issue with deer numbers are primarily winter kill and predation. Increase the number of bear tags issued to hunters and manage the wolves and I feel deer counts would move up. I would like to see a graph on the affect wolves have on the deer population. Before introduction and after. The antlerless kill was down not because of lack of deer but due to the snow storms we had during the season that closed up a lot of deer camps early. Those hunters went home. I'm seeing plenty of deer signs and bodies but less hunters every year it seems. I hunt the southern part of the county and understand things are different along the lake. Deer numbers in the southern part of the county I'm sure are higher than up north but we're getting lumped into the low numbers areas. Maybe quota areas would address this issue. I don't feel our deer herd is that depleted to warrant 0 antlerless authorizations.

2785 Until this county is able to be split into sub units, it will be incredibly difficult to balance the antlerless harvest. My property in Amnicon Twp., and in townships to the east, could stand to have a limited harvest. I also feel that those hunters in those areas that have had declining deer numbers (SW part of county for example) have to just realize that the deer aren't coming back. We had several years not long ago that had mild winters and no antlerless harvest and they still complained of not seeing deer. The landscape has changed with CWD, wolves, etc. If someone is staring at the same bait pile from the same blind and seeing four deer all year, year in and year out, maybe time to find a new spot or create more suitable habitat. Based on my observations in 2019 of seeing few if any fawns in the fall whether it was due to winter or predators, I support zero antlerless tags for 2020.

2786 My crop farm was in its initial stages and I ended up abandoning the effort. While some of the reasons were related to poor weather, I found the crop damage each year to be substantial. It was not uncommon to see 30 deer grazing on my crop. In addition to the crops, we own a horse and it again is not uncommon to see 10-15 deer in the small area all winter, grazing on the hay we purchase for the horse. They mingle with the horse in a herd and I can't help but think they are transferring disease to our pasture. We have had to spend thousands of dollars treating our horse for Lymes and I believe the deer are spreading the ticks that carry it. Last year we also had a doe lingering around our house and I observed it eating ashes from our fire pit. The next day the deer was found under the back of my car, dead. Warm and dead with no sign of any wounds. I think it was diseased.

2787 Hunting in Douglass county isn't even fun anymore compared to what it was years back. The deer herd has been low for awhile and we don't even see the hunters like we used to. I would go elsewhere myself, but we have some property and a hunting shack here so we keep coming back. I sure wish we could get the herd back up so my grandkids could experience fun hunting like I did when I was younger. It would be nice too see a bunch of hunters come back to the area again! The doe tags are bad news, period. Even for youth hunts, they are bad news for the herd. Let's face it, the youth get a lot of help from the adults and the herd goes down. When my kids were just starting to hunt, they came with me and hunted the opener. Let's go back to that. It makes every thing more enjoyable for all!!!! and it would help all the bar & grill establishments make a living!
I own a large plot of land in Douglas county (600 acres) and I have seen many deer on my land during all seasons and a lot of deer sign in the woods. I have seen many does and fawns and almost no bucks and all of them 1-1.5 year old. With the large imbalance in the population, I am concerned that many bucks are worn down after the rut and subject to kills by predators. There have only been 2 bucks killed on my land in the last 4-5 years. I tried to get a doe tag last year and was on line at the time you could buy a tag and was so far down the list I was not able to get a tag. Most people who hunt private land say there is a large population of does in the area and we need some doe tags. Most of the private land is a mix of forest and ag land and as deer are creatures of edges they thrive in this mixed land. I have had damage to my crops due to deer.

I think that the decision to not have doe permits is flawed. I have consistently seen more deer every year. Because hunters are not allowed to take does, the buck-doe ratio keeps getting worse and the buck age population appears to be getting younger. I have property with young timber growth and I have extensive deer browse. I was hit by a deer riding my motorcycle last summer. There is no lack of deer in this county. I believe out of area hunters are not coming because they don't have the opportunity to shoot does. They go to counties where they can. I drive through the deer gauntlet some evenings to hunt in Bayfield Co. looking for a doe. You can not stockpile game and I believe not allowing a liberal doe harvest is poor management with our deer numbers. Please reconsider this decision and allow a considerable amount of doe tags in Douglas Co.

Rather than unit-based management, the county-wide management of deer is seriously flawed. The county CDAC group seems to focus on the one area in the county where deer populations are low for whatever reason, rather than looking at the county as a whole, where deer populations remain high. The 1300 quota limit, while conservative in my estimation, should be the minimum rather than the maximum for this discussion. The damage to forests from over-browsing is having serious, long-term effects, both from an ecological and financial standpoint to the county, state and private forests. I am seeing fewer bucks and more small-bodied deer. Is this refusal to shoot does unintentionally selecting for smaller deer? With CWD knocking at our door maintaining herd size at or below carrying capacity, rather than raw deer numbers should be the goal.

I have lived in this area for 28 years. I have and hunt on private land. The doe to buck ratio is all out of whack. I see 10-15 does for every buck. On the land I hunt, the doe population continues to grow each year. We have to be able to harvest some of the does to balance the herd and protect the habitat as it is being overbrowsed. I know there may be areas in our unit/county that don't have all of deer. But the area around my home and property has many deer and we need the ability to harvest the does. I did apply this year to be part of a review for a possible DMAP program to possibly get some doe tags and hope that this program can assist us in managing the herd where we are as we have an abundance of deer. Earlier this Spring I counted 72 deer within view of the property and acreage near my home and property the majority were does.

I live north of HWY 13. We have about 40 deer per square mile. The buck to doe ratio is way out of whack. We have 8 or 10 does per buck. Also mature bucks are missing. I feel we need to harvest more does on private land to get numbers down. I feed deer in the winter which is creating part of this problem. I have been having youth hunters harvest 5 or 6 does each fall. This still is not enough. Last fall I had 9 fawns that made the winter. I only found 4 winter kills this spring. Shed antler hunting less than most years. I personally believe our county needs to be split up into 3 or 4 sections to properly manage the deer herd. North of HWY 2 has too many does and south of HWY 2 has a lot less. I think baiting is the biggest reason we have less bucks. Maybe we should only harvest 1 buck per person for a few years to get the buck population higher.
I really cannot understand the extremes that are constantly put into practice for Douglas county. 10+ years ago they'd give you multiple tags for just buying a license and allow you to buy more! That led to the drop in population that has us for the last 5 years being bucks only unless you are lucky enough to get a doe tag through the lottery. Now, they're proposing 0 antlerless deer for 2020?! I don't know where they are looking at but last year I have seen more does than I ever have in the last 12 years hunting in southern Douglas county. It's stupid. Allow us to buy 1 doe tag. The population allows it but for some reason, the DNR is being extremely stringent with does in recent years, even though there is no need for it. Stop yo-yo'ing gun between the extremes in antlerless tags and come up with something sustainable for the county.

I think the Chair did an outstanding job in moderating the meeting. For the first time in the 6 years, I think the Douglas Co. CDAC is fully "getting it" as far as understanding how bad the situation is out there. He did an excellent job of explaining our kill levels are down at the levels of the 1960's - when we didn't have compound bows, crossbows, trail cameras, maps on our phones, baiting, box blinds, ladder stands, and the greater knowledge of whitetails we do today. The constant push for antlerless tags has to stop until we turn this situation around. We are at the end of a 3 year push to "increase" and instead we greatly decreased - including 2 large misses the past 2 years. It's a combination of too many antlerless tags issued, predators, bad winters......we're in a pit we can't get out of. The DNR needs to recognize that.

I've hunted Douglas county for 10 years now and the biggest problem over the last four years for me and my family is the ever growing wolf population. I've had more trail camera pictures more sightings than ever before. I manage 120 acres of my dad's land South/East of Superior I have many food plots on this land for the deer and in the past few years as been heavy populated by wolf as the food attracts higher deer numbers. I also run around 6 trail camera's on this property ever year and every camera get pictures of the wolf. So I don't know what the solution is to the problem I do know these animals have to eat every day and there not just killing rabbits and squirrels, deer are there number one target. If you would like pictures of wolves from trail camera’s feel free to contact me by email lucasberthiaume98@gmail.com

I would like to see an Antlered Deer restriction, minimum antler size be raised to 10 inch inside spread or 13 inch main beam. Any antlered deer with a 3 inch antler is being shot before it has a chance to mature. This would raise the entire deer population and eventually open up antler less deer hunting. You would also attract more deer hunters, more revenue. I know that we don't eat the antlers but because deer hunters are only able to shoot bucks they are shooting all of them! I do not know how to manage the Douglas County deer herd so that we have more mature bucks, but if you look at other parts of the country they are doing it with success. Look at similar geographics with success and see what they have done. Try it. What we are doing doesn't seem to be working great. Not bad but not great either.

I do not have a very high opinion of the winter severity index. WSI is Dec thru March..? We have had some very early starts to winter, in November. Also, the month of April has been very bad on some years. As a result, as was the case last fall, buck age and horn growth, as well as overall numbers, were down. Also, I still see too much wolf sign. Winters and wolves are taking a toll on the deer herd. Just my opinion, but I am starting to question the deer habitat on public land. The aggressive cutting done by the county is leaving behind large tracts of marginal deer habitat. I do realize some cutting, and the first year or three after, are of great benefit. But... Not much left in parts of the county. Again, winters and wolves are taking a toll on the deer herd. And the aggressive cutting..?
Please keep common sense at the top of policy making decisions. We are on increase, we have decreased the last two years. Excuses are not facts. The DNR says the amount of hunters are on a decline. The DNR wanted deer slaughtered in the early part of 2000s. People did there part. Then the wolves and bear took over with no control on the wolves and not enough bear harvested. So the deer have a hard time recovering with tough winters and heavy uncontrollable predators.(remember common sense) So anytime I hear we are loosing hunters, it’s kinda back to the common sense thing. No deer no hunters! So the last two years have been in decline and we were told the deer herd was 2,000,000. Fool me once shame on you, fool me twice shame on me!! Not going to happen. No antlerless tags

I believe the deer numbers in the agricultural areas of northern Douglas county (north of hwy 2) could sustain modest harvest of antlerless deer. In my family, venison is a significant part of our diet. We also value the chance at harvesting mature (2+ years) bucks. Eliminating doe harvest completely may result in higher pressure on young bucks and decrease peoples chances at obtaining venison. Eliminating doe harvest also reduces the opportunity for newer hunters (women & youth in particular) to harvest an animal and stay engaged in hunting. Our family could definitely benefit by harvesting one antlerless deer. When I travel on county roads through this region, I often see anywhere from 10-40 deer per field. I don't believe a modest harvest will hurt population goals.

I own 130 acres that I bought a few years back and had pretty good deer numbers including decent buck numbers and I had great grouse numbers. Now I have very little deer and grouse but I have a TON of wolves on my land. We see them regularly and I get game cameras pictures of them every week-they do not pass through they live there. My son had a pack of eight go right by him in gun season this year. I no longer run my setters on my land for fear of losing them to wolves. I also do not let my family go anywhere on my land without personal protection. It is like we are being held hostage on our own piece of property and it is very sad. I understand the need to protect all species in the wild but I am telling you with 100% certainty we have too many wolves right now.

Hi. I think Douglas county is too diverse to prescribe a one size solution of zero antler-less tags. Generally in my opinion the 'population' is in fact good. My concern is just the ratio of antlered to antler-less deer being off...I rarely see antlered deer on game cameras(private land) or while driving. I don't know why, but one theory is the high number of doe and fawn pushes the bucks away from the fields and into the dense forest where predators are taking advantage(or we just don't see them). In any case, my opinion is Does should be protected in public land and harvesting antlerless deer should be encouraged on private land (if you can convince land owners to even harvest antlerless deer). Specifically in the farm areas surrounding Superior. Thanks

For as long as we've lived and owned land in Douglas County, the foresters consistently find the deer numbers too high. They often base their findings on browse damage and little else. It suspiciously seems like they have a hidden agenda (i.e. lobbying of special interest groups (anti-hunters, insurance companies, wolf organizations, government purchasing of 'cheap' land, etc.)). CDAC needs to have fewer government employees on their council and more people who actually live, work, and hunt in the area. Those are the folks who will have more accurate deer numbers (which are much fewer than the foresters claim).

In the past 10 years hunting this county I have seen a HUGE increase in the amount of wolves in this area which has resulted in way less deer encounters. I have seen a pack of 5 wolves at one time and there is wolf sign all over. In 2019 I sat in my stand for over 30 hours and saw 2 deer. On 2 occasions I saw wolf tracks in my tracks from the morning of the same day. I am a non-resident and if this isn't addressed, I will no longer purchase a license for 160.00 to see no deer, wolf tracks, and scat everywhere. The person I hunt with lives in Douglas County and is very concerned as he spends much time in the woods and has found multiple wolf kills of deer this past Winter. He is 67 years old and is very concerned. Please help keep our fun tradition alive.
Seen less deer during the rifle season. I seen one spike buck opening day. Half my family of ten will not shoot a yearling buck during gun season. I could every year shoot a buck opening day of gun. Less deer 2019 the rut was done. 2018 seen a buck every day no doe and had a doe tag. Fill my bow tag the last 2 years. Pass on small bucks to. End up shooting a smaller buck for meat getting closer to gun. I think that less bucks getting kill during rifle people are letting them walk. Less meat hunters now people want trophy. Bow hunted since 1969. Use a crossbow now. Older guys rather hunt when it's warm. Shoot a deer then go south for winter. I am not one of them because i do not have the money for a place down south.

The mismanagement of the Herd in Douglas County has been no secret. There was no reason to issue as many permits in the late 1990’s into the 2000’s. We continue to struggle to increase the Herd since then. 2006 forward has been a disaster on hunting there for 44 years. We need To ban antlerless deer hunting for years to come. Douglas County doesn't have a balanced eco system due to this. We need to open up more Bear permits by triple. Do that for 2-3 years. Also Open Wolf hunting up. If we could get about 200 wolf permits for the county for 2-3 years that would help. We need to continue not to issue any Doe tags for atleast 3 years. Maybe even transplant a few does from the metro units instead of hunting them. Just my opinion.

I live in Cloverand township, and I hunt exclusively on private land. There are does galore here, even after the severe winter we just had. There is not an abundance of bucks here. As an avid deer hunter, my wife and I love venison, and we make good use of any harvest I get. I would very much like to take a doe early in the season so I could spend the remainder of hunting for a mature buck. However, with no antlerless permit, I am forced to take the first buck I see, because it may be the only one I see all season. Therefore, I often end up taking a young buck to ensure I get some venison for the price of my license. The bucks in the area don't get a chance to mature because of the inability of hunters to take a doe for meat.

In stead of only worrying about the doe population maybe you should also worry about the buck population. It's hard to find a quality buck these days especially on public land when your trying to control the doe population. Most people want to get a deer and what's most likely a deer they'll see that the can shoot. It's going to be a year and a half old deer not allowing it to mature. Have you ever thought about a point restriction on bucks or not worrying about the money and not put so many hunters in the woods. maybe a draw for non residents or something. They call it the Orange army for a reason and they'll shoot anything they can and now you want to extend the season. that is crazy. Just my 2 cents.

Hunted in Maple, Brule, Poplar, Lake Nebagamon for over 50 years. Yes, I'm kind of an old guy. Own land in both Maple and Lk Nebag for a long time. If you are going to make this a bucks only area, then you MUST limit each hunter to ONE buck only whether it is xbow, regular bow or gun. Please listen to me...you are really hurting gun hunters if you don’t. I am so sick of seeing all these photos of beautiful bucks in numerous outdoor publications like Wisconsin Outdoor news of nice buck shot by bow/ x bow hunters. SAD that gun hunters have to endure that crap and see no bucks at all. Really time for a change in hunting in Wisconsin especially for the gun hunters....time to be pro gun hunter.

I have hunted in Dougals county for 19 years. I have seen more deer in the past 3 years then I have ever seen before. To not have any doe tags is ridiculous. You will majorly impact the number of tourist that would come hunt and provide money to the economy. Do not be foolish and give out a limited number of doe tags. Also with the dwindling hunter numbers to not allow a kid under the age of 16 to harvest a doe is just going to hurt us. We all know as season hunters it is hard to harvest a buck in Douglas county. These kids have many other options other than sitting out in the cold waiting for a buck. Let's give them a chance to harvest a deer no matter what the sex.
I drive 46 miles each way to work and back everyday, most of that travel is in Douglas county which I also live and hunt in, during the winter and summer alike I see many deer on the roads and my property, I can safely say the doe population in south western Douglas county is easily 12 to 15 to 1 does to bucks last fall during the months of Sep. through Nov driving everyday I saw one 6 pt buck, now that there is a crossbow season more people are hunting with them and by the time Nov hunting season shows they are either dead or spooked deep into the woods, I believe bow season should come first, then rifle, then crossbow to close the deer season out, just my thoughts.

Every year I sit in my stand for days hoping to see something I can shoot and since it has gone 'buck only' I haven't shot a deer. I haven't shot because I'm not seeing any bucks, just does. It makes it very frustrating to sit in the stand all day and not be able to put ANYTHING in my freezer because I have no antlers to shoot at. I'm highly discouraged and may not even bother doing the gun deer season this year. Why spend the money on a license to sit in my stand and freeze my tail off for nothing…. Also, my views on Junior antlerless hunting - let the kinds harvest does. Get them excited about hunting and being out in the woods with their family members.

Generally in the area South of Lake Nebagamon we have seen a significant increase in the deer population particularly this year indicating a highly successful bucks only program. There are so many does now that I rarely see a buck. I am surprised that there are enough happy bucks available to increase the overall population. Damage now to yard plants is so bad that all new growth is destroyed even plants like lilies, daffodils and hazelnut that are normally left alone are eaten to stubs. My opinion is that in this area there are far too many does and the bucks have been over harvested to the point where many hunter friends have given up on the hunt for now.

Although anecdotal, it seems that I am seeing larger numbers of antlerless deer year over year while I am hunting private lands in Douglas county. The group sizes seem to be increasing and the frequency of antlerless sightings to antlered sightings is going up. For example, last year during bow season, all the animals we saw were antlerless, that's maybe 50 to 75 animals in a couple weekends of hunting. My son was able to harvest a doe with his youth antlerless tag, which makes him want to hunt this year again. I may have missed it in the presentation, but I'm interested if the number of hunters is increasing, decreasing or staying the same in the county.

Many of my family live in Minnesota, they used to live in Wisconsin. The out of state license cost is destroying our family hunting - a history of more than 90 years. The next generation can not afford to hunt. Combine this with the 4th highest state in property taxes and it a sad story. We have a choice to fix and expand the deer shack or migrate to Minnesota. Currently the older hunters are for staying in Wisconsin, the younger ones that are still hunting vote for Minnesota. We are currently looking at property in northern Minnesota. Our younger hunters will come back in if we move, which will probably be the case. A 90 year tradition gone.

There should be antlerless permits available in Douglas county. Deer hunting is a friend and family affair and requires time, effort and expense. There should be an opportunity to harvest an antlerless deer to enjoy the bounty. Deer hunting in Douglas county is a hit or miss depending on the weather. It is still a challenge to harvest a fine animal. Not every year do you get the opportunity. In 2019 where I hunt we lost about half the rifle season due to weather. If permits are not available I might not hunt this year. It just might not be worth it to see a fine antlerless deer and not even have someone in our party being able to harvest it.

In the most recent years when a buck only season was implemented the seven hunters in our camp fired our guns zero times. During that time we saw the numbers of hunters sharply decline and the number of deer increase. There have been successive harvest declines as well as number of hunters/hunter days in the field all while from our perspective an increase in deer population. At this rate we will have no hunters left participating in the traditional gun season. I would recommend a buck only season for all non youth/traditional gun season hunters and a closing of all deer hunting for a short period of time before the traditional gun season.
the deer herd on the east side of Upper St Croix lake has increased greatly in the last few years. With no doe permits it continues to increase every year. People have reported seeing up to 50 deer along Engstad Road which is not all that long. I would rather see the doe numbers reduced by hunting where the deer are feeding people rather than having them herd up in people’s yards all winter being fed by those who feel sorry for them thus risking the chance of CWD. I feel no one at the dnr listens to those of us who have what we feel are valid concerns. Maybe the limits should be set by different areas, rather than for an entire large county!

I do not support 0 antlerless quota numbers for the 2020 season on public, but especially on private. With the recent pandemic unfolding now more than ever are citizens going to be forced to look to fill their freezers with the necessary game to provide for their families. While i understand some of the reasoning, making an exception or modifying the 3 year plan to increase deer population by one year should be evaluated. The true economic impact of this decision was not mentioned what so ever. Taking into consideration, tourism, small businesses that process game, etc., are going to need the support of anterless tags in our county.

The deer harvest in Douglas county in 2019 was DOWN 29% from the prior year. Hunter traffic (and local revenue) is down because of the lack of bucks. Selling doe permits like 5 cent candy is absolutely absurd. Furthermore, the wolves have had a significant effect on the deer population; wolves need to be harvested or the deer count will continue to decline, despite other efforts. As I see it, liberals (lack of wolf hunting) and insurance lobbyists have far too much influence on deer management. Hunters are discouraged and giving up going to northern Wisconsin to hunt because there are virtually no deer, and it gets worse every year.

At least some antlerless permits should be allowed. This gives some incentive to some more hunters or groups that may not participate if they don’t have this chance. A possible way to increase the herd also could be a season where you are only allowed one deer per hunter. This would apply for the entire season Possibly this could be done every other year. Also the season should be moved up a week not back a week, After the Thanksgiving weekend all deer hunting should be done. The deer don’t need more chasing during that winter season. Those extra days are not a traditional time which seems to be what a lot of people complain about.

We have to balance the heard better. If we aren’t going to issue any doe tags , then we can’t issue 2 buck tags ( 1 rifle and 1 bow ). One of these tags should be an either sex tag . That way meat hunters are more likely to kill a doe instead of 1.5 yr old buck . I want to see the heard grow . But the buck to doe ratio is out of wack . If we don’t issue any doe tags , theucks will continue to get slaughtered at a young age . States like ND issue each hunter 1 either sex tag and there heard structure is perfect and it grows . If we don’t do something like this than we have to get back to managing units instead of entire counties.

All the doe only hunts has really hurt the quality of bucks in the unit. Running 30+ cameras around 10’s of thousands of acres of public land and struggling to find a buck over 4.5 years old has started to be the normal in this unit and before we had 0 antlerless quota it was common to have 8+ bucks on camera over 4.5 years of age. The age structure of the population in my opinion has over loaded with young bucks and few if any making it to older age classes. I think this is due to hunters that would normally shot a doe and be happy with meat are now having to wait and end up shooting the first young buck they see.

Whereas I support the concept of providing preference to youth hunters for antlerless permits, I would like to see similar preference given to seniors. While it is important to try to engender a love of hunting in the younger generation, many of us seniors find it increasingly difficult to venture as far into the woods or drag deer long distances through the woods, yet we still enjoy the sport of hunting and the taste of venison. Extending the preference for antlerless permits to seniors where numbers of permits are limited would be a nice gesture of appreciation of their support for hunting over the years.
As a grandfather starting out two new hunters and not seeing any deer, it makes it difficult to compete with all of the phones and games they have today. My grandsons have had doe permits with the youth hunts, but I have not allowed them to harvest does because of the decline in the number of deer. When explained to them, they do understand. As a hunter, cross bow hunter, and a hunter of every form, I am tired of the attacks on the crossbow hunters. I am the driving force of our hunting group, and if this continues, I will end up quitting hunting, and that will most likely end the entire family's hunting.

I firmly believe that making all of Douglas county 1 Zone is the wrong management practice. The County is large enough to split up. I live in the northern part and we are covered up with does. There isn't a field I drive by in the morning or evening that doesn't contain multiple deer. There are fewer bucks, mostly because we are unable to harvest antlerless deer. We need to be able to open up doe tags in northern Douglas. If we continue as we have and even offer fewer antlerless tags the next normal winter will result in significant mortality. Please allow northern douglas county antlerless tags.

The deer survived this winter much better than I expected with the early snow. I have noticed quite a few small deer that survived the winter and were still in good shape. I recently counted 55 deer on a drive while scouting for turkeys in South East Douglas County. A couple of days before that I saw at least 70 deer on a scouting drive in the same area. I have hunted in this area for over 40 years and the deer herd has rebounded to reasonable numbers. We absolutely need to allow junior antler less deer harvest. We should have an overall antler less quota at least as big as last year.

To the Douglas County CDAC and the Wisconsin D-N-R; I would like to see hunters 80 years of age and older obtain a permit/tag to harvest an antlerless deer. It could be an extra tag offered for purchase with the hunting license or as a hunter’s choice on the deer license. Many senior hunters don't have the stamina nor the abilities of their youth to hunt deer as they have enjoyed for many years. PLEASE consider this option for those elderly hunters who still enjoy deer hunting, and especially, for those seniors with fixed incomes who need the venison to supplement their diet.

Any county/unit that has a 0 quota on antlerless deer means no antlerless deer should be taken by a youth or disabled hunter. A lot of antlerless deer that are harvested are not shot by the youth that carries the permit. This has gotten worse since the introduction of no minimum age requirements. Also, non-resident hunters should not be able to buy bonus tags in any unit that bonus tags are sold. Do away with non-resident first time hunters getting cheap deer hunting tags. The non-residents should pay at least double what they do now. Thank you for your time and considerations.

Antlerless tags in Douglas county should only allow a certain number of tags per hunter. Every year if you don’t buy a doe tag the day the tags go on sale, someone buys them all up. The impact that has is one area of the county has a lower population of doe and depending on where the DNR does research that can offset numbers. Some people I hunt with won’t even go up to Douglas county sometimes because if nobody has a doe tag their chances a buck in that area is so low its not worth the 5 hour trip we drive one way. Thank you for your time and consideration.

The deer population is about the same as the previous year. The amount of deer seen while traveling Douglas County seems to be spotty some deer observed in some areas and none in others. The number of buck rubs are also very spotty. In walking the clear cuts, after having a fairly large acorn harvest have observed many oak trees in the 3-6 foot height have observed NO browsing with many oak trees growing. I believe that where oaks have been observed as being browsed upon may be in deer yarding areas. I also do not believe that oak trees are a major browse feed for deer.
The amount of deer seen is a trick question being there are so few deer around east central Douglas county that seeing 3 or 4 deer in the several days hunted is now a big deal. Very very few deer around at this time. Our area has a serious predator problem that needs to be taken seriously and addressed immediately. Wolves, bears, coyotes need reductions in numbers now!! I realize the predator issues are not involved with CDAC but needs discussion and for once addressed. Zero quotas is a start to build the herd but still needs a boost from other angles to recover.

We are on increase from 2017 and we decreased for two years. No excuses, the DNR said there were 2,000,000 deer on the ground going into last season. Remember the model is only as good as the data put in. Too many wolves and other predators for the herd to grow. Please do the tough thing and don’t have any Antlerless tags, even for the youth. We all know the youth don’t shoot all there own deer. Please get the county split at 53. 5 deer per square mile west of 53 and more to the east of 53. Please don’t cave to those east of 53 like last year. Thanks for all you do!

I feel as a deer hunter and what I see during this time, there should be more wardens on patrol. A lot of unsafe practices with firearms and respect to the wildlife. I have seen it, almost got shot by someone running down the road shooting a deer with me in the firing path. I think that having an Antlerless season should be stopped for a few seasons, or really tightly regulated more. Also what we are seeing is with their habitat being changed from so much logging, we are not seeing the deer like we used to. Private land owners are having more of a success because of this.

This area has for many years been a great place to hunt and harvest deer. However over the last 4-5 years, there seems to be a mismanagement of this area as the deer harvest season has been very low compared to years before. Deer sightings, sign, and harvests have been continued to be low. There seems to be a large increase in predator pressure and much more sign of these predators than I’ve ever seen in the past. There should be an concentrated effort to get the deer population back to a sustainable level or I dont see why people would continue to hunt this area.

In the metro sub unit, other hunters I am in contact with through the season reported seeing significantly more deer than anytime since 2010. In fact, one hunter said he had the most exciting day in the woods in his life due to the amount of buck activity during the rut. I more bucks and does than I have seen in quite sometime. I think the antlerless tags are appropriate given how many does I saw on virtually all my hunts. The number of older, mature bucks is still not back to what it was in the past but they are there. A lot of 3 year old bucks walking around.

I sat for two full days on state property Brule forest during gun season and never saw one deer. There is plenty of wolf sign in the woods and very little deer sign. Something needs to be done with the wolves to bring the deer numbers up. I have plenty of wolf sign on my 40 acres also. I’m 62 years old and when I started hunting you did not get to shoot a doe you had to shoot a buck. If we have no doe permits for hunters over 16 why do we want to have the kids shoot does. It makes no scenes to me to have the kids shoot does. Dead deer is a dead no matter who kills it.

I think zero antlerless permits are a joke period. But if zero it should be zero for ALL thats private land and youth just because someone owns a piece of land they shouldn’t be able to dump a bag of corn to lure the deer off public land and let the kids shoot them. We are teaching our youth nothing about the sport of hunting when we let them sit in a tower over a corn pile and let them shoot does. We continue to make everthing easy for them so they just expect it lets get some programs that actually teach them something beside sitting on a corn pile.
2838 CDAC should not over react to hunter complaints about lower harvest in 2019. The reasons presented for the lower harvest are valid and data based. I run multiple trail cameras on public land throughout the year and numbers of deer on camera including bucks were as high or slightly higher than the previous 3 years. Cameras verified the cessation of buck movement beginning about 11/20/19. Deer numbers around my house on the southern edge of Douglas County continue to increase as evidence by sightings and increased damage to gardens and landscaping.

2839 I have spent a lot of time outdoors this late winter and early spring. There seems to be a decent number of deer in Douglas County. with the limited number of doe permits in recent years there is an imbalance in buck to doe ratios. The herd needs to be managed in such a way to correct this. I hunt Minnesota, and the area I hunt has sold tags that allow for the harvest of one deer, but the hunter choice of either buck or doe. Why not allow only one antlered deer, for either archery or gun seasons for those who hunt both seasons? Just a suggestion.

2840 I hate the fact organization s are protecting wolfs. They kill every thing and destroy wildlife. You really want to save deer numbers get rid of wolves. I hunt deer to provide meat for my family. When I can not get tags it puts an incredible strain on my ability to feed my family. It seems not a single organization task with wild life or wilderness cares about that. For years I have watched wolves move in to areas and destroy the deer population, only response is to limit tags. Wolves are the real problem, not responsible ethical hunters.

2841 I live in rural Douglas County, within a mile of my home there has been 5 deer killed by cars this spring. If you don't fence your garden, fruit trees, plants around the house the deer will eat them to the point of killing them. I can count at least 15 deer and a friend a few miles away has more to me this is over population of deer. Last season thru archery, gun and muzzle loader seasons I never did see a mature buck only spikes, if you go with only bucks the young bucks will never have a chance to mature. In closing we need to shot does.

2842 On 4 wheeler rides today April 22, 2020 we counted 44 deer in T43N - R112W Town of Wascott Douglas County Section 29. On this same day we counted 25 deer in Section 20 of T43N R 11W These were all different deer. We need many more doe tags available for this area for the upcoming season 2020 so we can harvest some venison. That is about 75 deer in one area of 300 acres and 300 acres across East Bondwood Rd. Near Bond Lake. We have deer in our yard, deer on our walks, deer everywhere. A zero antlerless quota is way off the mark!!

2843 If you’re going to have an antlerless quota you should notify license vendors and the general public of the antlerless application due date asap and also in multiple media outlets including radio internet tv and printed signs. I noticed that the news around my area of antlerless permit availability was not very known until it was too late. I feel that a quota would be good due to the fact it gives a potential new hunter a better opportunity to harvest a deer. Which will make that hunter want to continue to hunt in future seasons

2844 With regards to the general health of the deer heard and the trying times myself and my fellow hunter’s have faced this year I strongly believe that antlerless tags should be issued this year. While not all hunter’s rely on deer for sustenance, I believe that we could offset some of the financial hardship that we all have faced this year. I believe that a great solution for this would be one either sex tag issued to each hunter, that way trophy hunter’s could pursue trophy buck’s and sustenance hunter’s could stock their freezer.

2845 Eliminate Year Round Back Yard feeding. Turn Bowhunting back into Bowhunting, Crossbows should be for elderly and disabled ONLY, Modern Muzzle Loaders make it easy enough to harvest a deer for those who want one, (no need for X bows). Help turn hunting back to a family event. After a completing a Hunter Safety course a 12 year old or older can hunt with an adult for their first hunt, then it might stay in their heart for Life. Allowing a small child to hunt with dad because dad thinks it will make the baby a hunter is Wrong.
We need to let the deer regain a normal population. I’ve heard too many stories about the old days how there were so many deer. Let them go let them grow. You need both buck and doe to make fawn. People from Minnesota come over take deer and leave. And take deer from home. Maybe no visitors for a year or 2. I like having venison in the freezer but I like many people might not even go next year because it's so thin out there. I’ve heard stories and seen pictures. Things aren't the same. At all. And hope theres hope for them.

As a person that was raised and lived on a farm for many years I think about how we improved our herd. We did not kill off all the good bull caves and then kill our best bred bull to get a very good strong herd. This seems to be what we are doing with the deer herd by having a bucks only season. Soon we will have only small deer and not a healthy herd coming up. I have noticed that last years fawns are smaller than what we had several years before. I have also noticed fewer bucks small and large as body wise not rack.

I have hunted in this area for 32 years and agree with a zero quota for antlerless deer for the 2020 season, except that Junior antlerless tags should be valid to allow younger hunters a chance to harvest a deer and become involved with the sport. 2018 was a decent year for hunting. 2019 was way worse in terms of deer sightings and harvest. The amount of predator sign (wolves) was also more prevalent in the areas we hunt in 2019. The early onset of winter with deep snow in my opinion drastically impacted the herd yet again.

1, I feel the doe tags should not be a "bonus" deer, rather a hunters choice of either harvesting 1 buck OR 1 doe. 2, I feel that issuing all youths a doe tag is being abused by adults, and they should be included in the lottery. 3, I also believe the current lax harvest registration is too easily abused. 4, Finally, the season is held too late after the rut. The three weeks prior to the firearm season i saw many bucks at all hours of the day. During the nine day season not a single buck was seen. last year was similar.

The deer population still seems very low. I see very few does on the pipeline or logging roads or on bowstand or on my own property. I also have seen a trend with the youth hunt...im actually seeing all adults out and not seeing any youth with them. It appears to have turned into a ‘poachers’ hunt. I was all for the kids to have a chance to be out there in a safer more nature focused environment. And i saw that for a few years. Now i see groups of middle aged men out in the woods with rifles and no youth present.

I feel that the way the doe permit sales are now are very unfair as many of us older folks don’t have the means to get on the computer, and print the info and licenses. we face a real neglect by the DNR of fair treatment . my wife has not been able to hunt because of this and i think if you take a deer by any means that ought to be the only deer of the season, also bucks need to be put at 4 point to preserve a good ratio of bucks to does. we need to be able to purchase doe licenses over the counter for it to be fair.

I am concerned by the lack of regulations when harvesting, tagging, and reporting a deer. My father and I both received the bonus antlerless hunting permit but neither of us harvested a deer. Same issue with many of my surrounding neighbors - no deer harvested. I don’t believe the numbers are even close to accurate. I believe strongly in the Youth Hunt but I believe parents are shooting and using their children’s tags for themselves. There is a lot of illegal hunting and not nearly enough regulating. Feeling hopeless.

I hunted 3 days opener through Monday. I saw no deer in the woods. I saw 6 wolves. 5 bobcats,. Lots of coyotes. Areas that I have hunted for years there was very little deer sign. Even with snow during the week I found no beds and very few tracks of deer. I have brought my boys hunting with me over the years and one has been hunting for 10 years and has never had a good opportunity to shoot a deer. My youth Hunter has came along with no gun the last couple of yrs and is frustrated we have not seen deer.
After hunting in Douglas county for over 30 years and seeing these proposals it breaks my heart. As an out of state land owner that likes to deer hunt in Wisconsin this has me reconsidering whether I will buy a license or not for 2020. I see areas east of Bennett that are loaded with wolf sign that once held many deer and The deer are no longer there. I fear that hunting regulations lately are geared to reducing participation and opportunities of the sport much like the fishing regs have done in the near past.

I think there should be some antlerless permits for Douglas county. I have seen as many deer this year as I have in the past few years. I have owned and hunted on my property for the last 5 years and have seen no noticeable decline in the deer population. I would ask that you reconsider allowing bonus permits on private property! I would also like to see you split bow season off as a separate section when it comes to deciding on antlerless permits, and or allowing a choice of either sex for the bow season.

We need to stop allowing the recreational feeding of deer in Wisconsin to avoid the irreversible consequences of CWD. Additionally, the rule of allowing feeding where the ‘posted speed limit is 55 or greater’ allows people to feed deer where the default speed limit is 55. Speed limits are 55 where not posted. We hit a lot of deer due to people feeding and we’re going to lose our pastime by spreading CWD. Feeding deer doesn’t help the deer or the herd. It is selfish, ignorant and very short sighted.

There are too many does in this county and I hear this from my friends and neighbors. I’m sick of people poaching does because you won’t let them harvest them. I have almost nothing but does on my game cameras and it took me ten days to get a spike buck last year. I didn’t want to shoot it, but it was the only buck I saw. Selective harvest needs to be employed regarding these does. I see tons of them dead on the side of the road. These are wasted on the crows and should be taken by responsible hunters.

The wolves where I hunt are rising as I witnessed 9 wolves running in front of my deer stand last gun season. I haven’t seen 9 deer on my stand in almost 10 years. Also, as a father with a next generation hunter, it would be hard to invest the time, effort and hard earned money to keep up with this downhill trend. Over the last 2 decades I have witnessed a steady decline in herd activity where I hunt. Our trail cams have been steadily producing more and more predators every year to back up this info.

Tons of does on my private land and all surrounding lands. Absolutely no reason not to be able to harvest does. During deer season people harvest tons of small 1 2 year old dear. Just to shoot something. Thus no nice bucks are ever available. Just take a ride up highway 13 east of superior and tell me how many does you count in the fields! Easily over 70 every day in a 10 mile stretch. Just the ones you can see!! Cmon some doe tags, especially to land owners need to be made available!

Tons of does on my private land and all surrounding lands. Absolutely no reason not to be able to harvest does. During deer season people harvest tons of small 1 2 year old dear. Just to shoot something. Thus no nice bucks are ever available. Just take a ride up highway 13 east of superior and tell me how many does you count in the fields! Easily over 70 every day in a 10 mile stretch. Just the ones you can see!! Cmon some doe tags, especially to land owners need to be made available!

A zero quota is ridiculous. There are deer in the county and hunters should have a chance to harvest an antlerless deer. It is better to harvest some and keep the population in balance then have them die in a bad winter. That is irresponsible. I believe the council should be using science rather than just conjecture or preconceived notions to manage deer numbers. The quota should be at least like 2019 if not higher. What are you saving them for? A quota is not going to wipe out the deer.

Opening day. In my chair 730 am. I heard a wolf howl. Thought it strange as it was daylight. Heard howl again but, closer. Then heard another wolf howl, getting closer. After a few minutes many wolves were howling. It seemed that they were about 75 yards away. I left the area as if wolves were there, no deer would be there, On my way around the section I saw two wolves heading toward the other wolves as they crossed the road. I left the area and will not go there next year, if I even hunt.

<tr>
<td>2863</td>
<td>There are too many wolves. Our group sighted 7 different wolves. All on public land. We also harvested zero bucks. We have a large group (ranging from 5-20 guys, about 25 different hunters in all) and we hunt hard all day - we do a lot of deer drives. The previous year we harvested about 7-10 bucks. And the year before was even better. Most hunters went the entire year without seeing a buck. It seems to me that the wolf and predator population is a greater problem than many people realize.</td>
</tr>
<tr>
<td>2864</td>
<td>I think baiting needs to end. To much corn out there deer do not have to move. See more deer during bow season than than gun season and start and there is nothing and the only thing I see that change is gun hunters and more corn. Also the wolves are taking a lot of dear. Bears are also taking look of fawns. First twenty years of hunting you had to go to a dump to see a bear and never did see one know you see than all the time. I think the bear population is also to high along with the wolves.</td>
</tr>
<tr>
<td>2865</td>
<td>I do not believe in the youth hunt and if it brings in additional hunters. I think it should be eliminated. With high predator populations and deep snow, I believe we should limit antlerless harvest in the county. In particular in the southwestern part of the county. Unless and until there is more predator management or a succession of very mild, low snow winters, I do not think we should harvest antlerless deer. Thanks so much! Appreciate the work of the committee.</td>
</tr>
<tr>
<td>2866</td>
<td>Way too many does in the area I hunt. I have seen as many as 30 deer at one time in the area I hunt. I hunt in the Lake Nebagamon area. Please consider doe permits for at least this area. The deer are so bad now that the eat everything. The never used to eat rhubarb but now do. The rip up apple trees. They even try to eat the plastic flowers we put out. They over browse the forests. They are a pain in the butt and taste great so its a win win if we could thin them out a little.</td>
</tr>
<tr>
<td>2867</td>
<td>I strongly believe that antlerless harvest permits should be issued to the general public this coming season. I believe we should have an increased quota over last year as it seems the deer population is rising in many areas of the county. The people that hunt Douglas County clearly want to shoot antlerless deer as shown by the quick sellout of permits. It should also be taken into account that if no permits are issued antlerless deer may still be killed only without a permit.</td>
</tr>
<tr>
<td>2868</td>
<td>Over the past 5 years I have seen a steady increase in the Wolf population, to the point of seeing more wolves than deer. The wolf population in Wisconsin is becoming out of control. Your numbers on the population are way under estimated to say the least. These animals kill for just plain killing. They deviate deer populations wherever they are. Trail cam by a wolf den, 31 fawns in 26 days, really? The population will never rebound unless something is done about the wolves.</td>
</tr>
<tr>
<td>2869</td>
<td>Deer still are no where near as plentiful as when they were horribly mismanaged by the DNR in the 2000’s. After the biggest Winter kill of deer back then, they issued doe permits. Where we hunt I personally saw 7 dead doe in the woods by hunters. Huge mistake, been downhill ever since. We even left to try and find other spots in Northern WI with more deer. NO doe permits until numbers get back up there and then do it to prevent big Winter kill in a bad Winter. Thanks!</td>
</tr>
<tr>
<td>2870</td>
<td>Foresters always state we have too many deer and they cause browse damage. I find this very hard to believe. We have not been able to find ANY validity or examples of damage done to our woods. Total BS. What is the County’s Agenda here? Why do they NOT want deer? I had about 40 acres that were flooded out because of Beavers. Almost all the trees were killed. These were mature tree’s, DEAD, not browse damaged. I think the Beavers are doing much more damage than the deer.</td>
</tr>
<tr>
<td>2871</td>
<td>I am sure like many DMU’s there are pockets of deer. Where I have been hunting their is an abundance of deer. It is common to see 8-15 deer per day. Sometimes they are traveling in groups of 5-7 deer, so I’m not seeing the same deer multiple times. I know many people that will not shoot a doe or a small buck anymore. They don't eat the meat, so the complain that because they don't see a bug buck that deer numbers are down. My cameras tell a different story!</td>
</tr>
</tbody>
</table>
I hunted Douglas county with my son for the youth hunt, by myself for bow and rifle season and I counted over 50 doe versus the 4 bucks I saw from my stand and blind. My mother lives in Douglas county and has on average 20 antlerless deer in her yard daily. From my trail cameras and physical sightings I would say there is not a shortage of antlerless deer in Douglas county and anterless permits should be available the same way they have in the last few years.

Hunting number are way down in this unit. Not ouch pressure like there used to be. The weather was not good for the 19 season so that was a factor in harvest. Junior tags need to be valid in Douglas regardless of doe harvest. Should issue bounus tags on public to keep people hunting! We need to encourage youth and in general hunting back the way it was. Wolves are not helping this situation. People are not coming which is why less deer harvested!

Why is it when you talk about deer population it's only about the doe population and tags. What about the bucks? There getting slaughtered because of the lack of doe tags. It's hard to find a mature buck and getting worse every year. Why don't you also put a point restriction on the bucks or limit the amount of non tax payers coming up and shooting all the deer. It used to be a great place to hunt with a lot of quality deer. In my opinion its miss managed.

I live @ 20 south of the city of Superior. We hunt private land in Metro Unit 1. I have seen a large number of antlerless deer throughout the fall of 2019, the winter of 2019/20, and now the spring of 2020 both where I live, and around our hunting property. I notice dead deer on many roads, and have had close calls avoiding some while driving. I drive a motorcycle as well as a pickup truck, and don't like all the deer I see on and near the roads I travel.

Please, please, please bring back the party permit to control antlerless deer. I believe this is a better way to control the number of antlerless deer we have, therefore easier to manage. The estimates by the DNR of how many deer that are in Douglas county have not been consistent with what we see during the summer and fall, for years! Whatever there means of taking populations, it has to get better. Also, take the wolves off the protection list.

Having deer hunted in Douglas county for over 35 years, I’m in total support of BUCKS ONLY for the 2020 season. The deer herd is not where it should be and needs to be grown. Having spoke with over twenty die hard hunters in the area that I’ve known for years, this is the unanimous opinion of the group. We would all sacrifice the opportunity of harvesting a doe in 2020 if it meant helping the long term goal of increasing the herd for future hunters.

Douglas County has somewhat of a predator problem. My family and neighbors are always on alert and don’t let young children out alone and walk with others (Some packing protection). You can tell when they’re around as Deer somewhat disappear. Deer fairly healthy looking. Need to break county DMU. Northern agricultural land (What’s left), has plenty of deer. I sympathize with the Southwest part of the County. Maybe transfer some within the County.

I like the way things have been going. I see , 3_4 deer when I am hunting. The way I hunt, I will always see deer. , But of course day bucks is another subject. Whether we kill 500 does per season or 10 does doesn't make any difference. I have many years of experience under my belt @ priviely would like to give a very strong @ factual opinion to the state of wis. On there proposal of no baiting. Coming from years of baiting @ not baiting.

I am dismayed that the CDAC largely ignored the best data available provided by the DNR biologists and instead relied on a series of anecdotes. It was clear that some of the CDAC members had either not seen the biologist’s presentation or had not understood it. A junior antlerless quota makes no sense to me. It seems counter to raising the deer population. Cross-bows seem to be almost as lethal as rifles. They should be classified as such.
I have hunted this area for many years and seen the population drop dramatically over the last several. We used to never see or hear wolves but they have moved into the area last 20 years or so. Too much clear cut logging in Douglas County. Although it provides new growth it eliminates safety habitat and likely increases poaching chances. Bear hunters are a pain during bow season and trespass, drive recklessly and are generally rude.

I feed deer from snow till good grass, 4 yrs ago I had 11 deer come regularly up to 15 at times, 3 yrs to present 3 up to 7 come. They are a mixed bag big bucks to yearlings, none of which were over 120 lbs, therefore I have killed no deer in the past 2 years. This year the bunnies, mice and deer decimated my forest, 75% of the deciduous saplings are dead now from bark stripping, 3' off the ground. That's my words for the birds today!

In my opinion the doe numbers are way too high! So many people complain about not seeing many bucks. The buck to doe ratio is out of balance resulting in very little buck movement. Combined with so many hunters wanting to get "their buck" and not harvesting does. States with lots of bucks and lots of trophy bucks also protect the young bucks. If I remember correctly in Missouri bucks need to have at least 3 legal points on one side.

I think the longterm issue will be encouraging people to hunt. I hunted 7 days (two gun,4 bow) on public land and saw no other hunters in the woods other than our party of three. Every year we see less and less hunters. We hunt out of Solon off Pierce road. With no antlerless permits I have less incentive to hunt. I hunt deer for the camaraderie of camp life, the joy of being out in nature and because I really, really like venison.

Seeing lots of deer this spring, seems like end of winter was mild and survival rate near me was good. Have 3 sons, trying to get them into hunting and fishing and need to have success early to “catch the fever” and become lifelong hunters. Competing with technology is hard to do so I feel giving junior deer and turkey tags to youth is key to keeping the next generation outdoors and not staring at a screen all day long. Thank you

There’s more wolves and because of that less deer to hunt Something needs to be done about wolves before you start shutting down seasons Seen more does then bucks in Douglas county And very small amount of tags available for does When first started hunting brule River State Park Roads were filled with hunters Wolves came in know no one hunts there Need to fix problem with wolves and deer will return Not shut seasons down

I am very lucky in that, I have two adult sons who still hunt with me. They started hunting when they were 12, to me, it is very important to keep the youth involved. I still teach Hunters Ed and have done so for the past 28 years. It is very important to get these young folks involved in hunting. If no antlers tags were issued, I believe it is still important to provide an opportunity for a young person to harvest a deer.

I have been hunting this property since 1993 both public and private and seen a lot of swings and population over the years. There are so many factors obviously that influence, like logging, wolf packs, winter. I’m encouraged and supportive of these efforts. My only other comment is, stop the proliferation of deer farms. This state's "business friendly" climate at the expense of natural resources has got to be examined.

We are finally getting the deer populations back up, my fear is that they will issue to many antlerless permits in the future like the did in the past, unlimited, and it’s taken years to recover. Wolf and bear predation is also a problem, perhaps a few more bear tags, and I hope the State will get control of the wolf population from the Federal Govt. and reinstate a wolf season. Finally, good presentation, lots of info.
Based in actual hours per day hunting out in the field (9 hrs), the sighting of deer was one to include Zero bucks. The habit is sufficient to support considerably more deer. Natural predation seems to be high, along with nocturnal movement, may account for these results. Other factors may be residents or others providing feed influencing their movement. (Speculation). Area hunted was private forest land open to the public.

If this unit is to be buck only, it must also apply to the tribal hunting as well. Some areas are being over hunted due to the length and set up of the tribal season. Changes and harvest amounts need to be made to secure future herd quantity/quality. Deer I hunt are skittish and nocturnal by October due to being shot at with guns due to the structure of the tribal season. Makes hunting without bait nearly impossible.

Douglas county has a serious deer predator problem combined with multiple harsh winters. I've been hunting public land for 25 years in this area and this last year was one of the top three worst we've ever had hunting. I agree completely with the zero doe permits for these areas. We need to control our predators also to increase the deer population. There are as many bears and wolves on trail cameras as there are deer.

I have never seen so many Does in the areas of Gordon to minong and over to dairyland. Driving around dark its not uncommon to see 100 deer in a couple square miles just on the side of the roads. All of them are Does and Fawns. This has significantly reduced bucks and the over pressure has pushed bucks out making it harder to harvest antlered deer. There has to be some Doe tags issued to limit this population growth.

I still believe that you will never be able to get the deer herd back to where it should be until you get the Wolf numbers down where they need to be. Hopefully we can get someone to pull there head out of the sand and tell us what the real number of Wolves is up in this area and not the number they want us to think there is. I am starting to believe that there is more wolves in some of the areas then there are Deer.

I believe we should change the gun deer season dates. I would prefer a system similar to what MN does. They have the season opener earlier in Nov. This would give us a season more closely to the deer rutting season. We could have a longer season date of say 18 days which you would choose the 9 you wish to hunt. Few hunt on Thanksgiving day and usually after that up north the weather is too miserable to hunt.

I have hunted this area for 40 years. I hunt both the bow season on private land and the rifle season on public and private land. My observations of deer were very low during both seasons. I hunted the first eight days of the rifle season and only saw deer on the opening day. Many in my party of ten hunters saw 0 deer for the rifle season. This is the lowest number of sightings I have has since the early 80's.

I saw more wolves than deer, yet again this season. I know it's a federal problem, but until we get the predators under control, the deer will never rebound. please keep the crossbow season as it currently is. Hunter numbers are declining enough already. Don't pit hunter against hunter. As long as people are out hunting legally and ethically, it shouldn't matter the weapon of choice. Thank you for what you all do.

The wolf population is out of hand, also I believe that the old style of registering you harvest was better and kept more un ethical hunters honest. I also believe that due to the electronic registration process there are actually more deer harvested than reported. Just my two cents. I also only crossbow hunt in early November and would like to continue to do so, please don't change the season structure.

During the 1,000 hours I spend in the field annually, I have seen ample deer numbers that are affecting regeneration of oak, jack pine, white pine, and other hardwood and conifer species. I saw plenty of small bucks and does, especially in oak cover types and I passed on numerous forks. I would like to see more larger bucks and I don’t think that increasing the herd quantity increases the herd quality.

Four of us have hunted SE Douglas co. (Cheever rd area) for decades. We are dawn to dusk hunters. We have not seen an increase in population reflected in the harvest totals over the last 5 years. I would be happy to see buck only seasons until the deer numbers rise. The only exception to this should be to allow youth hunters to take a doe as youth interest in hunting is so important for the future.
Deer density varies widely through Douglas County. Big public woods numbers are very low compared to private land habitat close to roads. Agricultural land, food plots, feeding and predator suppression result in higher deer numbers. I believe a significant number of deer harvested in Douglas County are shoot over bait on private land. Big woods public land deer numbers are down significantly.

COVID-19 is putting financial pressure on all. Meat costs are going to increase. Give hunters a legal chance to feed their family. Allow COVID tag option. If beef prices at SuperOne increase by more than 15% over last year, allow every buck tag to become buck or doe in Douglas. Give me a chance to fill the freezer. If it is buck only, it might be better for me not to hunt at all this year.

The idea of allowing zero authorizations is ludicrous! All we see on cameras are antlerless deer. The idea that we won’t have an opportunity to harvest deer on our own property is extremely frustrating. Who cares if we have a huge population of deer if they are all the size of large dogs and we can’t shoot them anyways. Maybe strive to improve the overall quality instead of the quantity.

Living on the land I hunt, I do not feel that the WDNR is taking predation seriously. The amount of wolves in northern Douglas county is under-reported and has grown substantially in the past 5yrs. Their impact on the deer population and on other animal life has been very noticeable. Something more needs to be done to control the rapid growth of the wolf population in NW Wisconsin.

We will continue to struggle with trying to increase our deer herd if we don’t finally realize our predator numbers must be reduced. Our deer herd and keeping our young hunters interested. How about we error on the plus size of our deer herd numbers. Now that would be something new. Less predators means we could enjoy our hunt again. Is that asking too much for our young hunters.

Why have the biologists spend his time and my $$ putting together a recommendation and then the CDAC morons don’t even take into consideration what the biologists has said go by his recommendation. The biologists has been doing this for over 20 years. Also how about a landowner who has 80 plus acres and is not able to harvest an antlerless animal on his own property this sucks !!!

To have a healthy deer herd the predators need to be managed. Hunters are managed by the number of tags that are available. What is out of balance is the bear and wolf population. Way to many bear killing fawns in the spring and early summer. Put out more bear tags! Also the wolves need to be managed. A large portion of the wolf population is is the northern third of Wisconsin.

no doe tags again for the average hunter in seven years it will be four years with no tags and three years that i believe were 600,then 1200 ,then 800 totaling 2600 all of which sold out in a extremely short amount of time which tells me people want them i think people are tired of watching deer they cant shoot and the buck to doe ratio is getting way out of balance

I commute from southern Douglas county to Superior daily. I see multiple deer daily. Most of the deer I see are mid to southern parts of Douglas county. I have had damage to my vehicles from deer collisions. I also have several "near misses" each summer while on my motorcycle. I believe the deer population is too high, especially in southern Douglas county. Thank you

Having both bow and crossbow hunts prior to the gun deer and muzzleloader seasons is resulting in a reduction of overall deer seen (especially bucks in the 2 to 4 year old range) during the gun/ muzzleloader season. Suggest shortening bow / crossbow seasons to limit harvest, or combining muzzleloader with crossbow / bow season and calling it primitive weapon season.

Since the introduction of wolves to the Brule River State Forest, there has been a steep decline in the number of deer in the region along the Jersett Rd. No recovery has taken place. Deer sightings have gone from 6-8 per day to 0-2 per week. This happened as fast as you can flip on a light switch. Deer trails that have existed for decades have completely disappeared.
I have been out Turkey hunting and scouting over the past several weeks in Douglas Co. I have been seeing a great number of deer and wolf sign at almost every stop, have seen 3 different wolves in different locations. I believe we need to up the doe harvest but also control the wolf population. Does the DNR even have a clue about the wolf population in Douglas Co.???

First. Stop the late season doe hunts!!! You cant even hunt bucks during the archery late season because they have lost thier antlers to early. I have multiple bucks on multiple properties losing their antlers before or during the doe only seasons. Stop the junior hunting seasons. People still like to bow hunt. Now it seems every weekend is some sort of gun hunt.

I seen more deer last deer season then in the last ten or so seasons. I've said it before and I'll say it again. BAN baiting and we will all see more deer. More natural movement. Take a ride in the evening and you will see plenty of deer all over this county. Please leave the doe tags at about last years level. Give more people the opportunity to harvest a DEER.

I would like to see 0 antlerless quota in Douglas county. No junior either. Need to split county from 53 east. Need to get our legislative people to get wolves numbers down. We have been in a increase for 2 years and had antlerless tags and the kill has decreased. If we are going by statistics than it should be a no brainer to have zero tags across the board.

I have owned cabins in the county for over 40 years. The timber harvest the last 10 years has encouraged new growth and helped the deer population. I return each fall to hunt deer with bow and arrow. Seems to me the herd is growing. I have seen more bucks over the past 5 years. I believe the management of forest areas is on the right track. Thank you.

I own 120 acres in the cloverland and we have about 3-4 doe's for every buck and of the limited bucks few are mature deer (based on trail cameras and stand hours over the previous years). We do not have a healthy balance in the deer herds in that area. We see more and more doe's each year and less and less bucks with each year of buck only licencing.

appear to be a lot of road kill this Spring which suggests that the population may be higher than expected. Very heavy snowfall early this winter suggested a high level of winter kill, but Spring observations of deer in my neighborhood show no impact. There are a lot of deer with the same family groups around now as last fall, no losses observed.

In my observations, there are many does on private land. There are few bucks. I have seen farmers fields filled with 75 deer with 95% of them being does. I do not know how farmers in the country in Douglas County can even bring in any crops after the deer are done feasting. I own property and the deer (once again, mostly does) are over browsing it.

1. Science & research should weigh heavily on decisions (not politicians). 2. Children are the foundation/future of hunting in Wisconsin. Absolutely need to keep antlerless harvest open for kids. How can you truely love this sport and not give kids the option for early harvest. 3. Baiting deer is not natural to our habitat. Please stop baiting

Over the past decade and a half, the total number of deer (buck and doe) observed from an elevated tree stand throughout the entire 9 day deer gun season has been fewer and fewer; however, the predator tracks left in the snow (weather permitting) has been on the increase in the area of Douglas County closest to the town of Barnes (Bayfield county).

I am 67 years old and have been an avid deer hunter in the northern forest zone since I was 13, particularly in Douglas and Bayfield counties. There are two ongoing/major problems in these two counties:  * Excessive logging.  * Baiting. The deer populations will never fully recover until the Wisconsin DNR moves to control these two problems.

<tr>
<td>2924</td>
<td>I would like to see a rifle season with an earlier opener. I understand the, “Thanksgiving” tradition but deer hunting is the tradition and regardless of the season start date, the heartburn over an earlier start would soon be forgotten. Possible start the 2nd Saturday in November and extend the rifle season to the Sunday after Thanksgiving.</td>
</tr>
<tr>
<td>2925</td>
<td>I work as a deputy with the Sheriff’s Dept., patrolling approximately 150 miles/day, and also run approximately 25 trail cameras 10 months a year. Based on daily observations, the deer numbers are recovering in some areas such as NE Douglas but areas with heavy wolf and bear populations such as SW part of the county seem to still struggle.</td>
</tr>
<tr>
<td>2926</td>
<td>Although i can’t speak for all of douglas county the deer numbers along the western half are low as i have seen. The 2019 deer season was the fewest deer i can ever remember seeing during any of the past deer hunting season. I contribute this to over harvest on antlerless deer high number of predators and a couple of severe extended winters.</td>
</tr>
<tr>
<td>2927</td>
<td>For the first time in the 15 years I've saw 4 different wolves in the 9 day rifle gun season and bow season saw bear and 3 Cubs, bar and 2 Cubs and 1 lone bear thinking that was a Male in 21 days of bow season. My hunting season both bow and gun I saw 2 deer both females. I've never had a hunting season like 2019, I'm not a happy hunter!</td>
</tr>
<tr>
<td>2928</td>
<td>I am very concerned about the idea of no antlerless permits being issued. All I see are does along the road. It’s almost impossible to find bucks anywhere. You’ve more than shown your lack of concern with people being able to provide food especially in a time like this. All this will accomplish is deer getting killed and not registered</td>
</tr>
<tr>
<td>2929</td>
<td>I agree with the CDAC that this DMU needs to be adjusted to have at least 2 different units. Farmland/private, or County/public land. To many antlerless deer, Young bucks and Does have been harvested over the last 12 years on the public land that I hunt. That factor along with predation has had a negative result on the deer herd.</td>
</tr>
<tr>
<td>2930</td>
<td>Every evening we see between 15 and 25 deer in our 20 acre parcel as part of our 300 acres. Many deer. Possibly 30 to 40 in our half square mile. Motley does. We need more doe tags. I think land owners should get a doe tag. Much to eat. Clear cut poplar. Clear cut oak. New sprouts. Grass. Buds. Oak brush from stumps after cut over.</td>
</tr>
<tr>
<td>2931</td>
<td>The wolves need to be taken off the endangered list and hunted. Not to such low numbers to endanger them again but controlled. There are pictures of six wolves in one trail camera picture in Douglas county. SIX! That’s just one camera. How many others have similar pictures. Every year they go un checked the more we see of that.</td>
</tr>
<tr>
<td>2932</td>
<td>I believe issuing 0 antlerless permits for Douglas Co. is a mistake. The overwhelming factor leading to the reduced deer harvest in 2019 was the weather. I saw a large number of deer come into my stand before the storm hit. I would hate to see an outbreak of CWD in Douglas County due to overpopulation in the upcoming years.</td>
</tr>
<tr>
<td>2933</td>
<td>There are to many wolves in the Gordon and Solon Springs area where I hunt. There needs to be a season for them soon because I have already seen a few carcasses ripped apart from wolves and tracks all over our property. Wolves are becoming a serious problem to the deer herd in Douglas county. Please think about this. Thank you</td>
</tr>
<tr>
<td>2934</td>
<td>There are too many predators making an impact on the overall deer population than hunters are. Since governmental regulation and lottery tags prohibit predator seasons or severely limit the number of predators than can be killed, the only other alternative is to limit the tags issued to hunters in order to grow the herd.</td>
</tr>
<tr>
<td>2935</td>
<td>I am frequently in the wood and driving many of the roads in Douglas County and the actual visual evidence this Spring does not support a zero antlerless recommendation. Quite honestly I have never seen more deer than I am seeing this Spring. That is also the observation of many people I know who live in Douglas County.</td>
</tr>
<tr>
<td>2936</td>
<td>Make sure in the future not to give out so many tags when the population is good. Keep it reasonable, or it will drop to the point where you will be giving out 0 tags. It is really hard on hunters to propose 0 tags. Have more frequent short surveys on deer sightings, throughout the year. So that you don’t propose 0 tags.</td>
</tr>
</tbody>
</table>
How many deer do you need in this unit?? Increase the number of antlerless tags. There are far too many deer in this area. It seems like the management by county system is broken - too many deer in one part and too few in another - all in the same county. I believe we have moved backwards in deer management in Wisconsin.

I've hunted Douglas county for 3 yrs now, I see a lot of does in this area. It gets frustrating that Wisconsin late start (after the rut) to try to get a buck. Any chance you can start the season earlier like Minnesota? Maybe the years that you don't have antler less tags, you could start the buck season earlier. Thanks

Hunting in South Range area of NW Wisconsin, it's not a problem seeing deer where we are, it would be the lack of buck deer sightings. Either the ratio is completely skewed, or most bucks are not getting a chance to mature, or are dying off after the rut is over. It has been this way in this area for at least 15 years.

should increase slightly antlerless tags back to 2019 totals. In many places I see an increase of deer numbers. Mostly in more southern part of county where big swamps are numbers are down. Wish a way to divide county better to help control densities. Within 20-25 miles of Superior deer seem to be in very numbers.

In Ofer to increase the herd junior antlerless harvest should not be happening. I would bet a high percentage of the junior antlerless deer are harvested by someone other than the junior tag holder. The free antlerless tag that accompanies a junior license should not be allowed to be filled in a bucks only county.

to have a recommended antlerless number of 0 is way to low. I drove down a 3.3 mile road where we hunt public land last Saturday and counted 64 deer. People have to actually spend time in the woods if they want to harvest a deer. Last year by 12 on Sunday, everyone had called it a season. Saturday was terrible.

I agree with the buck only idea even though I have a lot of antler less deer in my specific area, Poplar. I know a lot of fellow hunters in Douglas County that don't see the numbers I do. I would also like to see a buck point minimum in coming years to boost mature buck population, say a 6pt or more restriction.

I'd like to see a minimum size requirement for the antlered harvest. Douglas produces very few large bucks these days. A minimum size requirement would increase both quantity and quality of deer in Douglas. Also, the crossbow harvest has gotten too large in my opinion. The crossbow season needs to be shortened.

Our group of older hunters have started crossbow hunting have ready enjoyed it. The weather and less hunters have made this a option that we have started, which otherwise was starting to end. This helps the local businesses at this time of year, please Do Not End Crossbow Hunting at the End of October. Thanks.

Need to worry on getting rid of wolves before you try to bring deer heard up. Need to get wolf numbers down and deer heard will grow. We had buck only for last 3 years with very little doe tags available. Bucks are hard to come by in Douglas county last few years. Just looking for non-resident license money.

Zero antlerless quota is exactly what we need to increase the amount of deer in Douglas County. I am very appreciative of the Douglas County biologist action and recommendation to help restore deer numbers. Furthermore, we need a much higher wolf harvest and bear harvest to help restore the deer numbers.

No antleress hunting for at least 3 yrs, then reviewed. WHAY to many predators! Harsh winters! plenty of browse and clearcuts. YOU the dnr just have to give the herd a chance to rebound! Quit the war on antleress deer! You want more hunters out there put a better product out there.

There are too many wolves. The DNR should focus on live trapping them and relocate them to Madison so that our high population areas can enjoy them. When they are gone, you can start on coyotes next, then move on to bears. There is a reason Grandpa killed all the wolves. Grandpa was smarter than you.

opening day had wolves to the west of me in the morning and wolves to the west of me in the evening. Too many bear hunters running dogs all fall. the dogs woke me many mornings. the deer don't like the domestic or the wild dogs you released. there must be deer near me because thats what the wolves eat.

<tr>
<td>2951</td>
<td>I think it's a good plan to have 0 zero, doe tags available with the exception to junior deer hunters for 2020 season. The does need to be left alone until deer population in northern WI forest is higher, also believe northern WI has too many wolves and other deer predators at this time. Thank you.</td>
</tr>
<tr>
<td>2952</td>
<td>I bought 80 acres of forest land this year and could not believe how few deer I have using my property. I am working on providing better food sources, but would very much like to see an increase in the deer population in the area. I moved here from southern Minnesota, tons of deer down there.</td>
</tr>
<tr>
<td>2953</td>
<td>With the deer numbers being so low compared to the past, I think there should be increased tags for bear hunters, more bobcat trapping tags, and opening a hunting season on wolves. Also stop the hunting of does entirely until herd numbers get back to levels that bring hunters back to hunting.</td>
</tr>
<tr>
<td>2954</td>
<td>Went I go driving and glassing the fields for deer on private land areas, I saw over 500 deer and only 30 of them were antlered deer. I believe there is almost an overabundance of antlerless deer in comparison of antlered deer. I would like to see more doe tags for the private land areas.</td>
</tr>
<tr>
<td>2955</td>
<td>We work very hard to provide for the deer on our property. We saw more deer last year than many years prior. We hunt for meat and are not horn hunters so for us it's a question of weather to make the 6 hour drive to our land or just pass on the deer season which we have done in the past.</td>
</tr>
<tr>
<td>2956</td>
<td>I found 3 times in less than 12 months where Wolves had killed deer on 60 acres. Wolves are the problem!!!!!!! If we don't get control of the Wolves in Douglas county the deer will be gone. I sat all day Saturday and Sunday of opening weekend 2 years in a row without seeing a deer.</td>
</tr>
<tr>
<td>2957</td>
<td>In the past 3 years I have not seen an antlered deer within 3 miles of my property. This includes trail cams as well as daily driving on the roads surrounding it. It's hard to increase a population when the dies aren't being bred because there isn't any bucks around to breed them.</td>
</tr>
<tr>
<td>2958</td>
<td>Doe bonus tags not being given out is very sad, the deer population is healthy like Bayfield Co. Yet we vary greatly, not allowing for doe tags limits successful harvests &amp; impacts our youth's experience in a negative way which will impact the sport/tradition for our future hunters.</td>
</tr>
<tr>
<td>2959</td>
<td>We hunt private land in Gordon and are always tracking deer count seen on our land and surrounding public land. My husband and I both fully support 0 antlerless deer. Thank you for making this survey so user friendly and I appreciate your care for managing our deer population!</td>
</tr>
<tr>
<td>2960</td>
<td>I honestly have very little confidence in the deer population estimates. When we go two days seeing two wolves and no deer, something is wrong. Way too many wolves in Douglas county and I think they are much more influential on deer populations than we give them credit for.</td>
</tr>
<tr>
<td>2961</td>
<td>I would like to have the longer gun season starting with the first Saturday in November and ending the Sunday before Thanksgiving Day. Open the muzzloadder season after Thanksgiving Day, such as the following Saturday for one week only. No Holiday hunt up North.</td>
</tr>
<tr>
<td>2962</td>
<td>When antlerless quotas increase in this DMU, consideration should be given to include Antlerless authorizations with archery licenses, thus reducing the number of bonus antlerless authorizations available for gun licenses. Far fewer bow hunters than gun hunters.</td>
</tr>
<tr>
<td>2963</td>
<td>The online sale of bonus and antlerless tags in 2019 was terrible. These tags should be a lottery or only available at brick and mortar vendors. Private landowners should not have priority rights on the deer since the deer do not respect property boundaries.</td>
</tr>
<tr>
<td>2964</td>
<td>I hunt in a quiet area with few hunters. I’ve always found it interesting how few deer are around compared to the forage available. (Deep forest with acorns and running river) Is it the winter or predators? Keep working as you do to manage our deer population.</td>

I am concerned about the growing wolf population again in Douglas County. In 2019 I saw several wolves during the 9 day hunt, along with numerous wolf tracks and sign. I think this puts the deer on high alert at all times, making them much harder to hunt.

I believe that due to the size and diversity in many of the northern counties it is not appropriate to make blanket decisions for the whole county. Northern Douglas continues to have a large doe population and not harvesting some of these doe's is a concern.

There is not enough deer in Douglas county to have a buck season let alone a doe season. In my opinion I think it should be a drawing to even get a buck tag. Then get the wolf numbers under control by working diligently to get them off the endangered list.

Douglas county should be managed for everyone, not just the vocal minority. Landowners should have an opportunity to manage our herds as best we can based on our own judgement not that imposed by the minority who are unwilling to hunt where there deer are.

I think it is time to use non county employed people on the cdac board. There could very easily be a conflict of interest because of this.

We have kept track of our deer hunts for over 20 years at our cabin and the number of deer we see is way down. There are also hardly any does around. Predators are high in number between bear and wolves as well are really hurting the deer population.

Since Douglas County enjoys a wide but clearly delineated range in private/public and Metro/Forest, is it possible to consider splitting the unit in half allowing one set of rules for the northern section and another set of rules for the southern section?

I want the crossbow season shortened. Its a joke that so many antlered deer are being harvested before the firearm season even starts. A crossbow is not archery. It should not be given the lengthy season that compound bows and traditional archery is.

The early snow storm this year has decreased the population around my area severely as far as I can see due to observing decreased number of deer coming to feed now. I think since we had two hard winters that the youth hunt should also be only antlers.

tere a lot of deer in the northern and eastern part of the county where I spend a lot of time. we have plenty of deer here. we need and should have an antlerless harvest in the county. if some people don't want to shoot does, they don't have to.

management on deer populations should not be based on gov. boundaries. there is to much variation within landscapes using this as a criteria. System should ignore government boundaries and shift to habitat classification and ownership patterns.

Private lands North of Hwy 2 have an over abundance of does and young bucks. There is alot of competition for food sources and deer grazing on livestock feed in the winter months. Please look at issuing more private land antler less permits.

The Douglas County CDAC made solid decisions to aid them in achieving their deer population goals. I believe forestry concerns are being given too much consideration in regards to deer management in the Northern Forest Counties.

Much thanks to CDAC members for volunteering their time and efforts! The buck kill last year was almost right on the 59 year average. Let's attempt to MAINTAIN the deer herd. Issue some antlerless permits - same as last year.

Phone visit with resident owners of tree farms 4/27/2020. Commenting they still see deer herds around the farms with up to 20 deer together. Herds sighted in varying numbers from 4 to 20, regularly. Gordon / Minong areas
When are you going to call a spade a spade? The wolf abundance is a huge detriment to the Deer population! The thought of extending the duration of rifle season and limiting crossbow hunting in November is ridiculous.

I think whoever is coming up with these recommendations needs to spend a little time actually out in the woods to see what is going on not just go by skewed numbers with the new easy to cheat registration procedures. We have had many mild Winters. If a terrible Winter would arise it could hurt deer populations for years. I think the carrying capacity is where it should be. You can’t expect there to be a deer under every tree.

Open up some doe tags I would say about 1000 to 1200. Loosing hunters in the north. Seeing plenty of deer. Let the youth have state wide doe tags need to get kids hooked on hunting for the future of the sport.

I would like to see the deer population in Douglas County increased so my family can continue to enjoy the hunting there otherwise we will have to seek property ownership elsewhere, where there are deer to hunt.

I BELIEVE ANDELESS DEER ARE MUCH HIGHER THAN 2019. I SEE MANY DEER JUST DRIVING SEVERAL MILES PER DAY. EVERYDAY I SEE MOSTLY ANDELESS DEER. EVERYOTHER DAY I SEE ANOTHER THAT WAS HIT AND KILLED. HOW MANY MADE IT?

I would like to see numbers as high as 2006 or later as deer management was see as its best in the last 15 plus year. As both deer harvest and sightings were significantly higher than 2012 and to present day.

Deer demographics are being compromised with far too many does and far too few mature bucks. 0 Antlerless quota is only increasing the severity of this issue. Far too much deer browse on forest regeneration.

Our hunting group saw more wolves this past hunting season than whitetail bucks. Need to have control measures in place. Also, it is concerning the amount of logging taking place around the town of Brule.

while traveling in and through this zone I see a considerable number of deer on the roads and in the fields. I don’t think the winter was severe enough to warrant a reduction in what the quota was last year

Issuing a few hundred doe tags will keep hunters happy and allow the herd to grow. I would recommend a quota system where you have a target harvest for does and when it’s met, shut down doe hunting.

I find the 0 tag availability to be ridiculous, the number of antlerless deer in the area is way above average when compared to other counties. For further proof just drive around for 10 minutes.

Plenty of deer around the last 2 years. Could not get antlerless permit last year. Lucky to have harvested a buck. I would prefer to have antlerless option. Especially on my private property.

The biggest problem with the low deer population is the number of wolf packs and cougars. Unless the predator population is decreased, there will never be a rebound in the deer population.

I did see fewer deer last year than the previous two years and the deer I did see were all young deer however, I believe there are enough deer to support a very limited antlerless harvest.

I hope we can manage our deer like Wyoming. Need more bear tags. Longer bear season. Wolf season. Sadly the hunting season for our children is gone if we don’t do anything mentioned.

I think during the current year there should be zero bonus tags for military personnel and zero bonus tags for junior hunters. Sorry but I did not see a single deer last deer season.

I’d like to applaud the efforts of WI DNR for the platform they’ve instituted to make sure that all constituents are heard regardless of their availability to attend a CDAC meeting.

There should be antler less permits. I and my family have owned property in Dairyland since 1946, and I think landowners ought to get first crack at private property bonus permits.

I have seen less deer starting last spring until now and I am in the woods 3 to 4 days per week for about 11 months out of the year, please keep it with no antlerless permits issued.
Let the kids shoot the ford saw plenty last year. Open a fair amount of doe tags for hunters. We are loosing hunters in this area big time I would saw open up about 900 doe tags.

I have noticed a increase in dow numbers of about 15 percent over last 2 years because I hunt the farmland around were I live I can watch total deer numbers very closely in my area.

My opinion is that the deer numbers are back up well enough that an antlerless tag should be sold with the licenses. And also any NON resident licenses should be $400 not $180.

Dont change the traditional hunting season time just because you think you can control deer population by having earlier during more rut activity. Leave it for the bowhunters.

I believe that doe permits need to be offered in 2020. I see a tremendous amount of does in the Gordon and Barnes area and travel these roads five days a week to go to work.

I think you are doing a great job, lot's of wolves, deer are coming back, keep doing what you are, bring back the wolf hunt and trapping too balance it out. Thanks. DNR.

Damage to gardens and orchards are very high in my location. Seen no decrease in number of deer seen this spring. Number of deer need to be controlled to reduce damage.

Hi, I wish more of you folks could have hunted deer in this area back 50-60 years ago to see how good deer hunting really was in the old days. It will NEVER be the same.

I would like to see an option for elderly hunters maybe 80 years of age and older the option to harvest an antlerless deer. They deserve a better chance at a harvest.

I think cross bow hunting is really making a mess of bow hunting and the other thing is baiting of deer should be outlawed because all it does is make deer night deer.

The youth hunt should not occur. At the very least Doe’s should not be allowed. It is a known fact that adults are shooting many of the claimed “youth shot” numbers.

I hunt 900 acres of private land in Douglas county WI and I've seen 95% does last year the doe population needs a little control to get a good population ratio back.

As a land owner I've seen a increase in antlerless deer, decline in big buck age structure and bucks. I believe we need to take more antlerless deer on private lands.

Severe winters are hard enough for deer, wolves do NOT belong in our society, this is the 20th century! Put a bounty on them and get rid of the wolves for good!

The amount of wolf predation on the deer heard is way too high. Most of the questions in this will have little or no meaning if the wolves are not also managed.

Like to see the wolf population go down, seen 1 deer track for every 2 wolf tracks, I'm sure the wolves are decreasing the deer where I hunt near the brule river.

Let the junior hunters harvest an antlerless that will hopefully interest more to hunt to increase the heard cut your predators down that means the WOLVES also.

Saw 0 deer last season. Hunted 4 days, the wolves moved in and where there were previously deer and then none. Way to many predators impacting the deer herd.

There are too many does and no trophy bucks. Open doe hunting in Douglas and stop the cars from hitting them. They only feed the crows on the side of the road.

Wolves have killed at least 8 deer since December on my property. These are just the ones I've found. A wolf season would really help the deer population.

Report Generated: Friday, May 01, 2020  Douglas, Northern Forest
With the amount of antlerless deer that are on my property it is not prudent to give up a year of harvesting them.

So far in 2020, I've been seeing a ton more deer in the poplar, lakeside, lake nebegemon areas of the county. Who are you saving the antlerless deer for? Quota should be the same as last year. No reason to decrease.

Doe tags should still be available for youth. The small harvest will not effect the herd size at all.

I think there should be at least the same number of antlerless permits for 2020 as there was for 2019. Plenty of doe open some tags let kids shoot what ever they want. Sport is dying up in Douglas county keep xbow season keep bow season keep gun and muzzle loader all the same 0 does except for youngsters.

Predation, especially wolves, is affecting my herd. I found 6 wolf kills on my property this winter. Great reporting and explanations. Thank you for putting in the effort to increase the populations. The buck/doe ratio is out of proportion. There are too many antlerless deer in comparison to bucks.

The area needs wolf management. Far too many and if they move into an area deer are gone for weeks. My opinion is the deer season lengths and start and stop dates need to stay just as they are.

I believe the rifle hunting season should be permanently moved 1 week earlier every year. Too many wolves killing the deer. Too many exceptions for people to hunt antlerless deer.

I own 25 acres, and I been seeing about ten antlerless deer every day, very few bucks. I would like to see a ban on baiting, not only in the northern region, but statewide.

I would like to see this unit go to a 4 point minimum on one side for buck harvests. We need to return to the old DMU units to equally manage to deer across the county.

We see so many deer every day. It's outrageous that the DNRIs proposing 0 premits. No antler-less harvest, need more bear and cat tags, and open the wolf season.

Keep it buck only in Douglas county until wolves come off the endangered list! We need to bring back the wolf season we have more wolfs on camera then deer.

In dmu 4 2019 season I saw sixteen antler less deer in three days of hunting. The deer population has decreased because of the rapid increase of predators. In 2019 I didn’t even see a deer during the 9 day gun season while hunting.

Been a very drastic increase in predator kills of deer this past winter. We have way to many predators in the area. Need to do something about it!

I hunt in dmu 4 saw 16 deer in three days all antler less we tagged one. The two places that I hunt in Douglas County are overwhelming with does.

Good call. Herd numbers are down and predation is taking a heavy toll. I strongly support zero antlerless permits offered in Douglas County.

Increase beer kill tags and allow tags to decrease wolf population. Deer population is struggling and is very lie in Douglas county.

Close all whitetail seasons for one year to rebuild population.

no antlerless tags for the next 3 years then revisit this again.

Public Input on CDAC Preliminary Recommendations - Spring 2020

Dunn, Central Farmland

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

511 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 285
   - I visit this unit for non-hunting purposes: 90
   - I hunt in this unit: 471
   - General interest in this unit: 92

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 448
   - Bow: 283
   - Crossbow: 172
   - Muzzleloader: 185

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 21.49
   - Maximum: 63

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 280
   - Mostly Private Land: 90
   - Public and Private Land About Equally: 56
   - Mostly Public Land: 24
   - Exclusively Public Land: 18
   - I did not hunt in this unit last year: 3

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 25
   - Not too crowded: 77
   - Neither crowded nor un-crowded: 40
   - Somewhat crowded: 20
   - Very crowded: 18
   - Not applicable: 8

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 61
   - Fewer: 154
   - Same: 208
   - More: 56
   - Many More: 19
   - Unsure: 13

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>

</table>
I grew up in Northwest Dunn County. I currently own 130 acres of prime wildlife habitat. Trout stream and the whole package. I purchased 38 acres 10 years ago, and another 92 acres 2 years ago. I have been managing the woodland for wildlife habitat regeneration through the MFL program (80 acres). So I see the problem of overpopulation of deer has on our forest lands. Dunn county is almost all private land with a lot of summer feed through agriculture. Basically, we have doe factories. You folks are concerned about the drop off of gun license sales, which in turn creates reduced revenue number one, but also reduced doe/deer harvest. Which is actually a bigger problem. I do not bow hunt or cross bow hunt. But I have NO problem with the folks who do. I do have issue with them hunting, only targeting "the big buck". I have never been a horn/trophy hunter. Or what I affectionately call a "TV Hunter". This is really what has caused an issue/change in our hunting culture. People want instant gratification and not understand the science of woodland management. I have been studying the harvest data from WI the last few years and it is obvious that many hunters are killing bucks with bows and using the gun hunt to kill does. BUT we should not pit the gun hunters against the bow/crossbow hunters. As my family and friends that hunt on my property have killed more does the last 10 years, the body size and health of the deer population has improved. 2 years ago we killed 18 deer of which 13 where breeding age does (2 where in the Holiday Hunt when it was -17 degrees. Best deer hunt of my life, please bring it back). Last year we killed 14 deer, of which 10 where does). What people need to understand the fewer does you have on property, the number of bigger bucks that call your property home will be. Mature bucks HATE density and love privacy. As I have gently suggested to my land neighbors this fact, and they started removing more does, the number of bigger bucks on our properties has increased. And I am not a horn hunter but it has changed! I understand that you folks are talking about changing hunting season to get more participation in gun season. The issue is private land owners (like myself) and public land hunters. To hunt public requires scouting time to ensure a great hunt. Most gun hunters are only going to spend 2 days hunting and NO days scouting. That is a fact. The social aspect of hunting has changed. Public land hunting has many different challenges than I have. When WI had the mass slaughter of deer a few years ago with multiple doe permits, it was the public land that got wiped out but the private lands, we never killed enough deer. You add on top of that a couple of hard winters in the last 5 years and a liberal judge on Milwaukee who stopped the wolf hunt, and you have a lot of folks saying it is not worth it. I get it. I will end with this, do NOT limit the bow hunters or cross bow hunters, do not pit one group against another. And for God's sake, have a Holiday Hunt PLEASE!, Educate land owners on the importance to ALL wildlife of having a balanced herd on their land. Our forests are being over browsed. One other thing before I end, hunter recruitment is key. But taking a kid out and setting them up for a certain "kill shot" is not the answer. They do not experience the time and work that goes into making a successful hunt. For this reason I respect the bow hunters, to have success you need to put time into the woods.
The 2019 season provided the numbers to maintain the county’s objective. My biggest concern is with regard to registration data. Registering online is very convenient and effortless. Not having to take your harvest to a registration station introduces the possibility of harvests going unregistered. The data regarding car/deer accidents is also only as good as the source. If (as the video suggested) there is a lack of reporting due to decreased funding, then it may be worth investigating an alternative source for our data. I don’t think we can look at the data we have and make assumptions that the numbers aren’t right due to a drop in funding for a given department. Crop damage is another topic that I feel is difficult to measure. Is it possible to offer tags to land owners reporting this damage? Reducing the amount of crop damage could be mitigated by issuing tags to those farmers rather than to an area that likely includes property that is not affected by crop damage. Tags could be issued to the land owners for them to distribute as they see fit. It’s not a perfect solution but a suggestion and opportunity for dialog to solve this problem. White Oak sapling data also raises some concern. How is this data gathered and do housing developments or other man-made structures play a role in what the data says. The area I spend most of the time hunting is East of Menomonie. Here we see a consistent deer herd each year. So far in 2020, I suspect we’ve seen about the same number of deer in our area than in previous years. We do our best to manage the population each year during both the archery and gun seasons. We communicate with our local farmers/land owners in understanding their concerns with crop damage, etc. While it’s a lot to ask, promoting a positive relationship between hunters and land owners can go a long way. The DNR website could execute a mission to promote this relationship and broadcast it on their website and related hunting documentation. Understanding the concerns of local land owners can help hunters understand the situation in their area. Finally, I’d like to just say that all the work put in to these numbers is greatly appreciated. Getting better data should be key in future decisions. How can we get better data? Can we engage volunteers across the state to report on local areas and apply that to adjacent parcels? Can we utilize insurance claims to gather current, accurate data regarding car/deer collisions? How do we differentiate between crop damage via deer or weather? I think the policies in place for 2019 will be relevant in 2020. Thanks.

* There are a concerning number of deer that are being harvested in this county that aren't being accounted for. Without in-person registration, there are hunters shooting deer and not registering them. It is a problem. A very high number of private land acreage, large farms, and there are more deer that are not accounted for. I personally know a fair number of older farm families that just shake there heads at the direction things have gone. Dunn county has very hilly topography. Very likely that it is difficult to get cell phone coverage to call in and register your deer, and without tagging regulations required anymore, there is alot of numbers not being accounted for. Unfortunately, there is likely a large number of bucks in this number, in addition to does. Read through the Warden reports through just about any county in fall, and it happens everywhere. I believe Dunn is worse than "average". * Crossbow season needs to be reviewed. By law it was supposed to be reviewed after the first 3? seasons, and it was never evaluated, or changed. The percentage and qty of bucks being taken w/crossbows necessitates a review and change. * Outlaw Baiting. Too many confusing regulations based on county/county. If 75% of the state is no-baiting; make it easy and outlaw it everywhere. Give Wardens meaningful tasks to perform and investigate important matters. Hunters that aren't seeing deer are likely the lazy ones, and ironically are probably the ones that are more likely to bait. Hunting is hunting; need to put in effort, scouting, and time in the woods. * Outlaw Shining in Dunn County; There is no reason to support continuing to make it legal to shine deer. There is nothing positive that results from the practice of shining deer. Nothing. There are other methods such as glassing fields during diurnal hours, talking to neighbors, going out and sitting on edges of woods, etc. Trail cameras are wonderful tools to understand what is out in the woods. Use other methods to scout; get rid of shining. * The combination of shining and crossbows is a big issue; Dunn county has too many violators. Get rid of shining and a homeowner/landowner will never have to look out the window late at night and wonder if that person shining the fields near their house is violating. You see shining, you know it is not for a good reason.
Land access, as in private property, is a big issue. For many years after I first started hunting families hunted in groups and did drives to move deer, with younger hunters actively doing the driving and eventually getting to stand. Their was alot of activity, tradition, interaction with young and senior family members. Now it is standing only, no large family groups, young hunters starting out get bored and lose interest. You rarely see any hunters out after opening weekend, or hear any gunshots. If deer pushed off your property onto posted land the deer will stay there because nothing is going push them back to your property. There needs to be some type of incentive i.e. tax break, deer damage payments vs no payments if posted. Back tags need to come back for accountability, for reporting violators by complainants or witnesses and enforcement by wardens. Deer registration stations brought back to help businesses with revenue. No crowds in town of people eating and drinking and enjoying the camaraderie, comparing big bucks. All part of the experience and tradition that is changed and gone. Deer kill tags brought back to prevent violations, and make enforcement easier against unsportsmanship, illegal kills and poaching. I see groups of hunters shooting and transporting deer to residence where they have commercial meat possessing equipment to process without reporting the kill and going back out to hunt again because they did not fill their tag. This skews statistic and makes it hard for enforcement actions or track exact number of deer actually taken from deer management areas if not being reported. This is going on. Kill tags and deer registration stations would help keep senior hunters hunting because the do not use computers, and tech or have cellphones. They have just gave up hunting because they don't understand tech or do not have gadgets and became frustrated.

I feel that for too long we have had too big of an emphasis on eliminating our doe herd. We offer way too many "free" harvest authorizations and then add the opportunity for several bonus authorizations on top of it. Harvesting a doe earlier in the season was always one of my personal objectives which allowed me to be choosier while hunting mature bucks. As of the last 5 years I have not even had the opportunity to harvest a doe and was surprised when I did see one from the stand. While I agree that there are certain isolated pockets of large deer populations including does, many of these are "unhuntable". These pockets of deer reside on private tracts of land that if hunted at all, are only hunted by the landowner/family. Many of these circumstances also include ownership that have a no doe harvest mentality. In these circumstances it doesn't matter if we offer no doe tags or a million, the does will not and cannot be harvested there. With the ever growing troubles of over crowded public land opportunities I feel that doe harvest is still necessary, but may best be suited with the "old" hunters choice permit. With that a relatively equal balance of harvest would most likely be seen, while hopefully increasing public land populations slightly. As someone who has been hunting hard and smart here for so long, I can honestly say my seasons have been declining in quality each year, and I'm sure there are many others similar. Without wanting to lose any more hunters in the system, and in the sake of preserving our resources, I hope that you take my comments into consideration. Thank you.

Somewhere in the algorithm for all of this, there needs to be an account for hunting season pressure. The trend used to be on "pushing" woods, but now everyone sits and and prefers to wait for deer to come to them. Also, land ownership makes it hard to set up pushing woods that can be done safely or non-infringing. The cost of property and taxes has added to this. It is hard to ask someone who owns property to hunt on their land when there is no benefit to them to allow it. They would rather not take the risk of hunters and people on their property, so there is a lot of land that goes untouched each year. When we push, we are able to see deer, but then the area pushed is essentially used up for days or the rest of the season as they hang low in less pressure areas. It is not uncommon to push public woods that people have been sitting in for days and have deer come out. Therefore, the model should be based on not the number of deer you see gathered in a corn field, but on the number that will potentially move during the season. This is why nobody says they are there. A good assessment would be to have each property evaluated first if it is even hunted and the type of hunting that occurs (sit of push or both). Lastly, please publish the methodology for counting deer populations and add in wolf, bear, coyote, and turkey. Perhaps a heat map style for each type of wildlife, etc. Thank you.
About 15 years ago we had earn a buck for my zone in northern dunn county. At that time i was hard pressed to see more than a couple deer while driving through checking crops. The deer population at that time seemed like a adequate amount. Last night april 25th 2020 i drove a total of 5.5 miles around the country block and counted 62 deer. They ranged from groups of 2 to almost 20 at a time. There are way too many and They are destroying fields that i farm. I have been unsuccessful in getting deer damage tags because of a lack of cooperation to where i called. People say the will get in touch with me to get the problem figured out but they dont. Dealing with this problem has been like hitting my head against a brick wall over and over again. My neighbor has tried for damage tags as well. His experience was everyone passing the buck and telling him to call a different person until he went full circle. Everyone told him he needed to talk to someone different about the problem. He called the different places where each person told him to call eventually ending at the first person he talked to. The deer population in my are is out of control! I am quite certain if it does not go down local farmers will take the matter into their own hands.

Has anyone ever thought about moving muzzleloader season back a week and extending it to a 3 week season in place of all these extra hunts that no one likes or enjoys? For example after the 9 day gun season give the deer a week to regather themselves and get back to their natural movement patterns and then open up a 2-3 week muzzle loader season like other states. I think you would be surprised at the number of people who would partake in a season like this! Having a season like this would also increase out of state license sales as well.... Just my two cents take it for what it's worth, but as a long time conservationist, a member of the Dunn county fish and game board, and someone who observes and studies whitetails year round we need to take a better look at how we manage and go about harvesting whitetails in this state! Extending rifle season to a 19 day season is going to do nothing but upset people and turn them off to hunting. I like the fact that the DNR is actually asking the opinions of the people who spend hundreds of thousands of hours a year Devoted to whitetail deer and harvest preparations. Thank you for your time and effort in managing our resources.

If you want to increase harvest numbers, re-educate people on the importance of passing on a tradition to all kids. IMO, too many private landowner restrict access to hunting through no trespassing signs and lack of access. Too busy caught up in the pursuit of a "trophy" deer and restrict others until the landowner harvest "their deer" roaming across their land. That and the ideology that kids can't even hunt for a less than agreed upon antler size by general public and hunting celebrities makes it increasingly difficult to hunt in the traditional form of hunting. As an acreage owner and bordering neighbors who chastise my young teenage daughters from harvesting a buck rather than harvesting a mature 3 1/2 + year old giant versus having an enjoyable experience, I say that with the utmost confidence. Until that mentality changes, we will see less numbers and harvest rates no matter how long the season. The increased proposed season length will only allow selfish private landowner to harvest a "trophy deer".
I'm just going to use this space to give you something to think about. All these meetings on how many tags to be allowed to be available doesn't really matter, especially as far as doe harvest. Unfortunately today's deer hunters no longer like to share land or should I say share "there deer"!!! I know this because every year I'm knocking on doors trying to get access to private land, and it's getting very tough. My point is no matter how many tags you give out people don't hunt the same anymore, meaning no more big hunting parties doing deer drives. We still hunt the old fashioned way and try to bring our kids up the same, but it's very hard when your the only group pushing deer (deer drives). We push them off of the land we can hunt and now there's no deer there for 2-3 days! They go into someone else's land who goes out only to shoot his 200 inch buck and are never forced back out. So releasing 20,000 doe tags isn't going to help anything. The people just aren't going to shoot them!

I think opening weekend of the 9 day gun hunt there should be a rule of no driving public land. With that said my reasoning is I live by some of the public land and I know people that don't have land of their own to hunt on so they rely on being able to use public land to hunt to get food for their family but there are groups of Minnesota that come about twice a day or more to all the public land starting opening day and are around till just about Wednesday doing nothing but driving everything out and shooting everything that moves so it's no good for the people who need to use it to actually hunt on and they are very disrespectful drinking going on private land and wounding a deer and just letting it go something should be addressed about this problem so everyone can use the land like it's available for not just walking through and shooting everything I don't find it fair for the people that live around here that need to use the land and will actually sit and hunt.

I am not sure if farmers still receive crop damage money or tags? I would suggest not paying a dime to any land owner/ crop farm that is not open to public hunting. Population control will never be achieved with the large tracts of land that a huge reserves to deer with very little hunting pressure. That being said I am a firm believer in control of ones own property. I think large tracts of land in managed forestry should have to be open to some extent of hunting. Large tax breaks to people who own large amounts of land that find loop holes to keep other hunters out are very detrimental to the plans you are trying to implement. Anyone who can afford to have 200 plus acres should be able to pay regular tax or move over and let the general public who is making up for the lost tax revenue by paying higher taxes on there own property. Just a few thoughts. There are several examples of this that I know of in Dunn county.

I would like to see all of Wisconsin go back to a 9 day gun season. One tag per hunter with an option to purchase a hunters choice permit. In the end one hunter one deer. No extra tags. This way hunters will have to choose when to shoot a deer versus, what u see now is shoot them all no matter what size we can just go buy more tags. I and my family see a lot of small fawns and yearlings being shot just because of all the extra tags available. I firmly believe if it goes back to a one deer per hunter, people will start letting the small deer go by and wait for a much larger buck too. It just seems that Wisconsin has gone from hunting deer and enjoying the hunt to rather just hand out extra tags and shoot all the deer you see. If you have read my comment this far, I would like to say thank you. I do appreciate all the hard work the DNR does every year. God bless and God speed.

Earn a buck I believe is the best solution here is why no matter how many special doe seasons you have or make people are not going to go into there woods they own rent or lease to wreck there chance for the buck there after to shoot a doe there is way to many does to buck ratio almost every we're I go I put in food plots for a living c it coyote hunting, trapping in general driving around and talking to a variety of hunters people are going to wreck the heard due to superstition make them shoot a doe with earn a buck it's that simple and by extending seasons it's not gonna do a damn thing other than for the hunters to wait longer in the stand for the trophy buck. Extending seasons doesn't help a damn thing other than for trophy hunters trust me 80% of the hunters can get meat on the table with in the 9 day gun season if need be Earn a buck make em shoot some does. Thanks.
I have no doubt that the deer numbers in the area of Dunn that I hunt are overwhelmingly high. This poses a serious health risk to the herd. I have observed that 90 percent of the regen in the forest is browsed off, this is a clear indication of too many deer. I am certain the numbers in this area are over 200 a square mile. I can not speak for the entire county, but overall numbers must be reduced aot maintained. Because this problem is most present on private land more Antlerless harvest authorizations must be given to private land licence holders. It is up to them to manage and reduce deer numbers so the resources to do so must be available to them. If action is not taken to reduce numbers it will leave a devastating impact on the forest, farmland and the deer herd. Today’s poor management policies are robbing timber and hunting opportunity form future generations.

I understand the DNR wants lower deer numbers. I appreciate the efforts to do this through antlerless harvest. I hunt for meat but mostly sport and enjoying seeing older/larger bucks. I think earn a buck is the best tool to push the doe harvest numbers up. More opportunities aren’t needed. The seasons are watered down and drawn out too much already. People need a push to harvest more does. Free tags won’t get us to the harvest goal. I do support an antlerless only season every 4 years or so. This would help establish some age structure in the buck heard which is badly needed if you enjoy hunting larger bucks. However, I don’t see how it helps with harvest goal. However, if passed I would do my part to shoot multiple does to try to help. Thanks for taking the time to do these questionnaires. I know the public is impossible to please.

An antlerless only season would be terrible I know a lot of people who are against that and the proposed extended gun season my family are bow hunters and gun hunters and I think everyone is satisfied with the ability to get more mature deer nowadays than it used to be there is not too much deer cwd is like for any other thing in nature it will run its course a lot of deer sickness will a rise it’s nature don’t change anything because people are already getting upset with your people’s decision making it’s been a yearly tradition nothings different please don’t change anything this year I will not hunt if their isn’t a chance to get a buck or my bow season is cut short by gun hunting and all those extra doe hunts if nobody can’t get a doe in 9 days there’s something wrong in my opinion and they shouldn’t be hunting

Overall I think this unit doesnt need to be changed. Deer herd seems to be staying steady or increasing even where I hunt. One thing I wish the DNR could change is how crop damage is handled. I hear alot of farmers where I live complain about crop damage from deer, turkeys, and bears. But when you go to ask these said farmers if you can hunt their land they say no, rightfully so because it’s their land. But if they are going to take a check for crop damage then they should have to be allowed to let people hunt. Since taxpayers are now paying for their crops/income. Overall I hunt 3 different spots in Dunn county and all 3 spots have a very good deer herd. Last year I’ve seen the most fawns I have in a while. I think this unit doesnt need any changes and might need to allow more doe tags in the future.

I think our biggest problem in the state of Wisconsin is the land owners that own alot of property, for instance we a gentleman where I hunt that own,s 1300+ acres,Tand he problem with that is he only lets 6 people hunt the land and bitches about how many deer are getting hit pon the road by his land. this samefella also guards the road,s around the property like he owns the Damn road and accusing hunter,s of pouching deer off his land. i understand this is his land but everytime he approaches someone with a young hunter in the vechile and starts yelling, what is doing to this young hunter? it is turning him away from hunting. The DNR needs to also raise out of state liecense, look what Wisconsin residents have to pay when they go out of state.

Last year was the worst year yet. I have hunted the same area for years and the deer were not there. Never seen a deer during the gun season and never heard a shot close by. Very poor. My young sons are still waiting to see deer during the gun season. Not sure how much longer they will want to hunt if they know they are not going to see anything. I hunted a lot in the 90’s and that was tops. I may never see it like that again. Every day I could see deer while hunting. Now, I see just a couple all year long (bow and gun combined). Need to save some does. I live and hunt south of Colfax. I know north of Colfax deer numbers are much, much more stronger has I drive around there just to show my kids what deer look like.
I was hoping this would have more to do with the new hunting regulations. I am against having a longer season. If you are going to have it longer I am against having it earlier and affecting the bow hunters ability to hunt the rut. I gun hunt Dunn county but bow hunt Washington county. All in all I trust you the experts to manage the deer population I just think an earlier gun hunt would mess with gun and bow hunters. I hunt an open field and if you made it earlier I wouldn’t have a spot because crops would still be on. Also I consider the rut a bow hunters best opportunity to see a nice buck. Especially in public land so why take that away from them... just my thoughts since I couldn’t make the meeting. Thank you

I believe it would be in our best interests to limit antlerless permits to no more than 1 per license for public land. The deer numbers on public land have been reduced to minimal numbers. Many groups coming thru public land doing drives are shooting any deer that are make an appearance. Thank God for all the cornfields in 2019 that gave deer a place to survive! I live next to public land and see the activity first hand. Last season that I spent a lot of time in my stand; I seen no deer. This isn’t normal. Gets worse every year almost makes a guy want to quit hunting deer! Please consider this; if the board hunted public land it would be obvious how bad its become in last ten years! Please listen!!! Thank you

The gun deer season is becoming a waist of time. Hunters don’t move deer around anymore. They tiptoe in and out of there heated mansions of a tree stands because their afraid they might kick a deer to there neighbor’s. I hunt several other states and have been much better success gun hunting those states then here in Wisconsin. Mostly because there is much larger public tracks to hunt. Bow hunting is so much better then gun season is in Wisconsin. One more thing when you went away from in person registration stations you removed a big part of Wisconsin’s deer hunt heritage and hunters hanging out showing off there trophies and just hanging out telling stories of the hunt.

I would like to address an issue that has not been brought up to my knowledge, that issue Is of hunters doing deer drives on public land. I have been in the woods several times when after sitting for hours have a deer drive coming towards me. That is very unsafe when the hunters don’t know that there are others in the woods and when you end up being in the middle of a drive especially when a deer jumps up and they start shooting. I have actually laid on the ground as bullets whizzed by. It is troubling that it is allowed to have deer drives on public land. Maybe we could adapt an every other year thing where one year it is allowed and one year it is not.

A longer gun season does not solve anything and is greatly opposed by everyone I have talked with. Most the hunters I know are bowhunters that also gun hunt and its my belief if the rut is taken away from bowhunters you will upset a large population of hunters and maybe loose hunters. Also the buck harvest would go way up making the quality of the bucks we have in WI go way down. Earn a buck worked really well to make trophy bucks bountiful and if there is gun hunting during the rut that would all be for not. Keep things as it is and maybe consider adding another buck tag for landowners or for shooting an antlerless deer similar to what Iowa does.

I believe there, There are increased numbers of Ag damage claims in 2019 compared to 2018. This indicates an increased population. The consensus is to maintain the herd, if never reaching the antlerless goal year after year, isn’t the herd growing? Please utilize all tools, holiday hunt, extended bow season( or don’t to satisfy snowmobile enthusiasts) yo limit our herd. We have CWD on our doorsteps, let’s limit the spread before it’s everywhere. Our forests, farmers, and our younger hunters are relying on you to make the tough decisions, which may not be the most popular ones at this time. Thank you for your considerations.

I would like to see a couple of changes to the structure. I would like to see a simpler harvest structure. Go back to applying for 1 antlerless permit and dont make it a given. I would like to see the permits for private or public eliminate. Now a days the laws are way to complex and confusing! Go back to the structure that was in place back in the 90’s such as registration stations and back tags . I would like to see higher out of state costs such as how iowa does it. The out of state hunters can be helping out way more ! This way maybe we can justify more wardens so the ones we have are not spread so thin .
Rules and seasons from last year are ok. I prefer gun season to be week earlier. A lot more fun when I see more bucks. But do realize it depends on when thanksgiving is. Which is ok. But I am definitely against extending bow season for the month of January. Reason is January is an important month for snowmobiling in Wisconsin. Being involved with marking and maintaining snowmobile trails ,there is a conflict with land owners when we try to open trails during hunting season. Plus it is not safe. For the few additional deer harvested during the month of January ,it would really cause problems for the snowmobile industry.

Unfortunately, many hunters do not think or care about the herd quality and health. Most only think about filling their tags. Also forest management has declined over the years on private lands. Few are worried about habitat for wildlife. Those of us sportsman that are concerned cant do anything on our own to help it. I know that i dont have the land volume to make an impact on herd quality or numbers. I've hunted since i was able to, i only recently harvested a buck because i finally gave up on waiting for the "big one". I believe one doe tag per license is more than enough to help build herd quality in dunn county.

More needs to be done about violators, an repeat violators. Stiffer punishment....it is rampant. Even if they get caught, loose hunting priveledges, fined and loose weapon, they are right back in the same stands shooting the same amount of deer every year. Excessive food plots, baiting, and violators are ruining the sport I love, and they are harvesting a ton of wildlife, and try to leave none for their neighbors. The extended seasons and liberal tags just gives them more and more time and opportunity. I think the game wardens are doing a very good job though....just too much for them to handle.

Hello, where there is an overabundance of deer is private property. Hunt in the Chippewa, Dunn and Cariville bottoms, where on opening day we can sit for an Hr. 1-1/2 without hearing a shot, even the first 1 or 2 Hrs of opening, the large groups that come shoot maybe 3 deer as to a few yrs ago, 25. Tyrone the shooting never used to stop, now it is hard to hear a shot [ hunters every where. ] They shoot every fawn, doe they see. Maybe news to you- deer come from their mothers, dead mothers, no deer. Does not matter if the deer live on public or not. Doe hunting on public land ?????? Thank You

Like to take kids to introduce to the sport and see deer or use it as a zone to get venison if unsuccessful to only take what I need for food. Current structure for 2 antlerless tags make this difficult sometimes as it limits tags and flexibility in zones closer to home preventing Harvest due to lack of tag and lack of tag available through dnr. This is even with hunting metro zone. Also if the goal is to harvest animals from those zones why not give hunters 2-3 metro zones so if they do have the ability to hunt multiple the possibility to harvest the deer in those areas are greater.

Every year my sons and I hunt in five or six different counties, not in the same DMU. In order to legally take an Antlerless deer in each county we need to buy an Antlerless tag for each county. Just wondering, if the DNR would ever issue an Antlerless only tag, One per person, for a certain DMU? Or maybe even one per person state wide? I know that it helps the DNR to make people pay extra money for extra tags in this time of decreasing hunters, but for those of us who are retired and on fixed incomes it can mount up rather fast.

I started hunting 30 years ago in the same spot I hunt now. 30 years ago everyone who hunted around me shot everything and anything, no matter how big the deer was. We had group's of hunters with 35+ people in them and they would drive every property they could shooting all the deer that were in that patch of woods!! Now I see hunters being more conservative and hunt more for the sport than just to kill something!! In the past 10 years I've been seeing deer when hunting. I live in hay river township and believe that we still have to few deer, thanks for listening to me.

<td>Please outlaw baiting for deer Permanently! Also please enforce deer baiting and feeding bans in back yards year-round. I would also appreciate it if hunters could report illegal motor vehicles driving on private land open to public hunting (MFL) if the hunter reporting the illegal activity is not the landowner. Some landowners are living in other states and do not want to be bothered with making the call, or are hard to reach on short notice. I do appreciate the work you all do to support our outdoor interests! Thank you.</td>
</tr>
<tr>
<td>3089</td>
<td>DO NOT extend the bow season. To extend and yes i know you are not going to do it this year. However it is something that is on the table. That would be a JOKE can there be a POORER way to control deer numbers than using a bow. Look at how much time they have to hunt now. EX: they start their season in September and go to the end of December four months minus a couple of days for the t-zone and rifle season, wait I forgot they can hunt those season can't they. So again it is 4 months to shoot deer and they want more please.</td>
</tr>
<tr>
<td>3090</td>
<td>I understand that deer population fluctuates greatly in Dunn County from section to section. However, I've hunted the same private property for the past 20 seasons and have seen a decline in the number of deer in the past 5+ years. In the section that I live/hunt there are too many deer taken each season. 1 mile to the north there are large herds of deer visible. Small tracts of owned land where I hunt, larger tracts of private land just north of me. I would like to see more deer in my section and less harvest.</td>
</tr>
<tr>
<td>3091</td>
<td>I wish to commend the presentation by the Dunn county liason, it is well organized and provided key information to make data driven decisions. Unfortunately, I don't hold the same opinion of the latest proposed bear management zone modifications and the interpretation of data from that study. I see a connection between the proposed intrusion of hunting with dogs into Dunn county and deer season management in that this change will likely negatively affect early season archery deer hunting on public lands.</td>
</tr>
<tr>
<td>3092</td>
<td>Private lands should increase in deer tags as there are more deer and most roads with deer-vehicle accidents occur on roads around private lands and not public. Bonus tags purchase should increase for these private areas. Public land should decrease deer tags as there is much too many traffic so everyone gets a chance to hunt. Extra bonus tags sale should decrease as well for public hunt for the same reason for this county. Deer in public land I notice has significantly decrease due to over hunting.</td>
</tr>
<tr>
<td>3093</td>
<td>I think having an early primitive muzzleloader only season in October would be nice. When hunting with a musket, especially a matchlock one is arguably at a greater disadvantage than the modern bow and crossbow hunters. Having a week long flintlock, or more primitive, season in October would help renew an interest in the arms that fist settled Wisconsin and provide a better opportunity as the deer are terrified during the current black powder season due to the regular hunting season preceding it.</td>
</tr>
<tr>
<td>3094</td>
<td>I think registration numbers are influenced (negatively) by not requiring a deer to be tagged in the field. Once a hunter gets a deer home there is no incentive to register if they plan to process themselves and could lead to illegal hunting. I strongly recommend returning to the practice of requiring a deer to be tagged once they are recovered. Harvest tags should be part of the process when purchasing hunting license. A deer that is tagged would reduce poaching and encourage registering.</td>
</tr>
<tr>
<td>3095</td>
<td>If 2 free tags are too many and not generating revenue, 1 tag and purchasing a 2nd bonus tag isn't out of the question. We had standing corn for gun season, colder temps and a major snow storm coupled with a later opening day all factored in. Another odd noticeable item would be the lack of rutting activity in early November must've just been something out of the normal. I sat many sits in stand bowhunting and didn't see the usual chasing and rutting activity. It all depends on many factors.</td>

<tr>
<td>3096</td>
<td>The deer herd is up in areas where you cannot hunt and down where you can. When you see herds of 30 plus deer in city limits that strongly shows herds are up there. Another example is seeing over 100 deer in the field by 3m. On an average hunt, you typically see 2-3 deer on a 10 hour sit. this has been reported all over the county. The herd needs to be controlled in areas where hunting is not allowed so the overall herd is maintained and the hunted areas do not continue to be destroyed.</td>
</tr>
</tbody>
</table>
3098 Hunter population on opening weekend on public land is excessive. I don’t hunt public land on opening weekend in the Dunnville bottoms for safety concerns. Amount of forested land has been greatly reduced by DNR policies. Nobody wants to hunt the Sarengeti areas. I am sure the deer use these areas but it is not safe to hunt there (nothing to stop bullets). All hunters have then been forced to hunt on the vastly smaller area that still has trees. This has caused the overcrowding.

3097 I would just like to voice my deep concern for the spread of CWD. My hope is that the DNR (which I’m sure they are) is taking the threat of the disease very seriously. All measures should be taken to control the spread of the disease which obviously comes from regulation, educating the public (especially hunters), and controlling herds to the best of our ability. There should be stronger regulations on how deer are farmed and transported because that is responsible for the spread of CWD.

3099 I would support longer or extra seasons if the amount of antler-less tags was less. That would give everyone more opportunities to harvest a deer but not over do it. I see so many deer hanging for a long time after season that go to waste. I have not seen an increase in the deer population over the last couple of years. I believe we have a lower count than we should in the northern Dunn area. I’ve had conversations with my neighbors and most agree on this. Thank You.

3100 We live between Elk Mound and Colfax and I think the doe population is very high, we usually shoot deer to check their pop. from year to year as well as using cameras, we saw one night 50 deer within a 5 mile radius of our house but only counted 2-3 bucks, but on camera we are seeing 10-15 different bucks each week and lower # of deer/car kills on Hwy 40, because of this "pandemic" I am expecting lower car kills so an even higher population of deer this year!

3101 I think the deer seasons are in a good place right now, although I think the deer population is vulnerable. I feel like the population in the last couple years has made a comeback from prior years. I’ve started to expect to see deer when I hunt instead of hoping I see deer, and I haven’t felt that way in many years. I think we need to be careful on giving out too many farmland and bonus tags so the population at least maintains or possibly grows. Thank you.

3102 We need more young hunters and we need to provide the chance for them to shoot a deer with antlers. I oppose anything that comes close to "earn a buck" especially in the northernmost part of our state where the majority of the public land is located. Less does to be shot on public I agree with. Let’s get back to the old northern deer camp but to do that they need to shoot fewer does and replenish the northern herd. People need public land "with deer".

3103 Crossbow season is too long and they kill most of the big bucks. I’m getting to the point of quitting hunting along with the rest of the family. Then there is talk of a longer season, kills the tradition of the hunt. The worst thing the DNR ever did was hire that deer czar. Doing away with back tags was also a bad move. Use to be able to tell who was a nonresident, now I just assume everyone is nonresident and don’t let anyone hunt our property.

3104 I think when us hunters buy deer hunting license that there only needs to be one dough tag when purchasing a buck tag. Between me and my son we could have shot 10 deer with a bow and gun license if I remember correctly I feel that no family could eat all that venison in a year I think I did get an extra dough tag just Incase there was a bad decision made during the hunting season than you for your hard work on this matter we truly appreciate it.

3105 Our family hunts in the township of Wilson. We see so many deer. We sometime refer to them as rats because we see so many - 20 - 50 in half a day. As a former ag teacher/forestry/wildlife instructor, I'm concerned about the numbers. I shot 2 does and let the bucks go. I donated one to the food pantry. Had them tested for CWD which I am very concerned about, along with Forestry .regeneration. Thanks for sharing and for all your hard work.
Wisconsin needs to keep the crossbow ability to all ages. If we want more young people and women to join the hunting community we need to make it easier and more enjoyable for them to get introduced into hunting. If you take away the current crossbow use for all ages it will have a great negative effect on the people deer hunting. Therefore which means more deer which means more chances for CWD and vehicle accidents.

I think with kids of all ages being able to shoot a deer while hunting with a guardian we no longer need the youth hunt. In our area it just seems like the youth hunt is just opportunity for the parent to shoot a nice buck out of season. Make this a doe only season if you think we need it. This hunt interrupts our bow season. I have 10 grand children (ages 4-16) and we don't need the youth hunt any more.

I hope that the crossbows can continue to be used for the entire season. I do not fit the legal description of disabled but, I can no longer pull back a compound bow. Being able to use a crossbow keeps me hunting. If some people are worried that too many bucks are taken, especially during the rut, antlerless hunting only during the rut could be utilized. Taking a doe is a great hunt for me! 

Tell the police to pick up speeders, less deer will be in car deer crashes. If there is a 19 day deer hunt the tradition will die. We most likely will quit deer hunting then. The worst thing that ever happened to deer hunting is the “deer czar” that was hired. The amount of hunters has dropped every year after his hiring. Ruin the traditional 9 day season and you will see a big drop in hunters.

I am very happy with my experience deer hunting in Dunn County. I have taken a buck and doe with my crossbow in each of the last two years. That is my goal, and I think deer managers in Wisconsin are doing a very good job managing the hunting and the herd. I think things are working very well and don't need to be changed. I think maintaining the current herd is a great idea, and I support it!

You mentioned CWD testing Deer Road kills. If you test them they should be removed from the roadside. If you do not test them we will know which were tested and which were not. What I saw in Dunn County all of 2019 and into 2020 were a lot of dead deer carcasses on the sides of the roads. I would like to see the statistic on the number of deer road kills that tested positive for CWD.

The way the deer seasons are currently held is fine. Numbers are expected to drop due to hunting becoming less and less popular. I feel changing the gun season appeals only to "weekend warriors" and out of staters. To appease Wisconsin hunters focus on the hunters that spend the most time in the woods, bow hunters. Keep the bow seasons the same, as well as the 9 day gun hunt.

With tax payers money. Not only should the roads be better. But they all should have a walk way under and or over every road. If you don't know what that is. Look it up. Europe has been doing it for 100s of years. Doesn't stop all of the deer from being hit. But it definitely helps. Thank you for everything you do for us hunters, fisherman and anyone who enjoys the wildlife.

Need more accurate data points on deer - vehicle mortality. CWD to much of a deciding factor in over all deer metrics. No data points on mortality caused by CWD? Deer found dead in wild. As stated in video - no data point on deer mortality caused by preditoration or disease. Allow baiting and in person registration to increase harvest numbers and stimulate local economy.

I feel that alot of years, I have to work and as many others. Deer hunting is a time of year that it's hard to take vacation. I like the extra hints. I think we could open up the antlerless hunt for the month of December. That would work for the people working in the factory and weekend. The timing is my biggest problem. I can't be alone. Thanks for reading.

There are to many different types of deer harvest seasons. It looses the excitement and value for middle aged people like myself and for my 2 daughters. Also having 2 daughters ages 12 and 10 that have fell in love with hunting would be devastated if you change the crossbow season to not include the rut. I know you would have 2 less outdoors women if it changes!!!
Deer population is not a problem county wide only in certain areas would b nice to limit the amount of doe tags in certain parts of the county see very few deer where I hunt neighboring farmer has 30 plus kill tags every yr then hunting season and predators and car kills on to of that real hurts in that area go a mile south them guys see all the day they want!!

In other counties south, southwest of Dunn, the extended holiday season to hunt deer interferes with snowmobile trails opening up on land. I would dislike having snowmobile trails not opening up because of extended seasons of deer hunting. If there is enough snow, trail system helps local economy with many on them, as opposed to a few hunting for another doe.

You really need to get in the woods and observe the past 30 year trend of the reduced deer population. For decades there were no doe tags, then "hunters choice", now almost unlimited tags. It has made the deer hunting tradition die especially for kids that can not enjoy seeing deer while in the woods. Please stop the over harvest of the herd in Dunn County.

I would like to see the DNR impose a point or spread restriction on bucks (excludes youth hunters) to enable a higher percentage of bucks to live past 2.5 years and obtain larger racks. Myself and friends spend thousands of dollars annually on deer hunting. Iowa, Illinois, N. Missouri, offer better trophy opportunity, despite WI having better habitat.

Deer numbers are good at this time. I believe responsible deer hunting will maintain deer heard as well as predator control. I do not believe that we need to promote certain Individuals to kill mass quantities of deer to help maintain deer heard. I believe this hurts the heard in certain areas and pushes deer to heard up in "safe/non hunted" areas.

The only comment I will make is in that 2019 Deer Hunting DMU you state one deer was found to have CWD. I would like to know the person that turned in the deer for testing that came out positive for this CWD. No baiting because of 1 deer that tested positive and you may not know if it was really from our Dunn County area. Joke is all I say.

I own private property and lease land for deer hunting. I let 3 hunters on my private and 2 on my lease. I already explained to them that if there are any extended seasons at all, that I would be locking up my land and that its just not just me. Other Land owners and friends have been talking and said they were going to do the same thing.

I'm concerned with the low harvest last year and the mild winter, along with a reduction in car killed deer due to Covid-19, that deer numbers will be markedly higher in 2020. I saw a lot of deer and deer sign even on well hunted public lands and anticipate more this year. Thanks for the work you do to improve deer hunting!

Biggest problem I have seen in probably the last 5-10 years is access. Seem to be plenty of deer but too much private land that is not being hunted the same. Land owners use to be more cooperative about hunting. A lot of deer are hiding out on private land that is no longer driven, and some peoples illegal baiting.

I would like the county to focus on public land habitat and opening up more private land for public hunting. Season dates are very good and should not be changed. Simple and long season dates are good they provide people lots of opportunities. I would like to maybe see muzzle loader and late archery extended.

The county of Dunn had its first CWD positive show up north of I94 corridor. This is the most serious deer threat. More important than deer tag numbers on public or private lands. Get as many mature deer tested as you can. How prevalent is cwd in our herd. Thanh you and good luck to the committee!!!

In my opinion, there are three factors that contribute in our area of Dunn County is the lack of hunters in the woods. Access to land to hunt (large areas of no hunting) posted land. Hunting itself and processing of the animal has become very pricey. Has been hard to get the younger generation out to hunt.
I hunt along Highway 12 just East of Knapp (right by the train crash). There are probably about 10 deer killed there every year from cars and there is still not even any deer signs up or anything. I know it’s a very local issue but it drastically hurts the deer population right around there.

Please consider having tags for hunting.... we have big problems of multi shooting of animals and not tagging them.... also i believe many hunters do not go home and register their deer... so we get an inaccurate count... please help out our wardens by bringing back deer tagging.... thanks

There are plenty of deer so nice job getting a quota. However, there is no way enough deer will be harvested under the existing season framework. They need to bring back the October hunt and Earn-A-Buck. With CWD the population needs to be reeled in if you want to control the disease.

I hunt some prime deer habitat in Dunn County. The past 10 years sightings have dropped and trails that used be worn in, get minimal use even with habitat improvements such as small clear cuts, select cuts, and some food plots. I believe we have been overharvesting the antlerless herd.

The only other addition I would like to make, which is not related to a specific DMU, is I would like to see the back tag criteria come back. Without back tags, the only way to know who is on your land is by approaching them, which is uncomfortable at best, dangerous at worst.

If there is a plan to have more does harvested I sure could see earn a buck brought back! Some hunters are big buck only hunters, should harvest a doe first and donate it to someone or food pantry if they don't want them. The herd is in my view is over populated.

The deer population is getting to the extremely low quantity and keeps being reduced every year I go. I see less and less deer. This year I was luckily to bag a small buck which I only took because if I didn't I wouldn't of gotten anything had I not shot it.

For the first time in decades, hunting in the same woods, no member of our three man party saw a deer during the nine day firearms season. I only saw three deer during the archery season before the firearms season and saw no deer during the muzzleloader season.

The amount of antler-less bonus tags allowed needs to be reduced or limited. In the area we hunt, too many people shoot a large amount of deer during rifle season which negatively impacts future year's hunts, while other areas may not be pressured as much.

I still believe that there are pockets of deer with very high numbers and other places where there are fewer deer in areas that I hunt. I would like to see the archery season remain the same as it has been including using a cross bow for the whole season.

I do not agree with going to a 19 day gun season. This is too long. Crossbow and regular bow can run same season don't see any reason why they need to be different. Our deer get harassed too much with shining. This would be one thing to eliminate.

Have a shorter and later gun deer season. Also have extra DNR officers watching for illegal hunting. Gun season is commonly a free for all with a groups of people drinking more beer then sitting in the woods. It is a huge safety risk for everyone.

Making the gun season longer is a terrible idea. People already are frustrated with the deer numbers in the area, any by making the season longer you will not increase the amount of time the typical gun hunter spends in the woods.

I do not think there is any reason that multiple anterless tags be supplied with each license. I can understand 1 anterless tag per license, but 2 is completely unnecessary. I also see zero need for bonus tags.

Seems to have high doe numbers in my area and lower amounts of 4.5 yr old and older mature bucks. Personally I have been trying to reduce the numbers of does on my land and pass up more bucks to have an older age class.
My area does a good job on our own of quality managing the deer herd. I don't think making rules about shooting only antlerless or earn a buck are needed. Also allowing the use of mineral helps keep the herd healthy.

I would like to see the harvest authorizations be valid in both public and private lands again. I feel the current harvest authorizations overly limit hunting opportunity and reduce the predictability of deer harvests.

We are going to have to reduce the herd to slow the spread of CWD. I would like to see the public/private land antlerless tags system eliminated. It does nothing to reduce pressure on public land.

To maintain numbers in many areas of Dunn co is insane—the health of the deer herd and the health of the habitat cannot sustain the numbers of deer we have now! This is most certainly true!

Archery season (archery includes all string-projectile instruments) has always started too early! Give the bucks a chance to loose velvet and the fawns more maturity. October is soon enough.

No more holiday hunts—too much of a chance to shoot a buck unintentionally. Also, I am both a bow and gun hunter and believe the current seasons should continue to stay the same.

Please change the rule to require landowners to allow a hunter to recover a wounded or dead deer from their premise, sometimes we do not know or have access to the landowner.

I would like to see a longer gun deer season. Like November 15 through the end of November. Also an idea is an early muzzle loader season, possibly the first of October.

Last years plan worked out well. I wouldn't change anything done, in Dunn County. The extra tag was nice. Thank you for all you do to make hunting in Wisconsin enjoyable.

I'd like to see changes that limit xbow hunting during the rut to persons with disabilities only. If an extension of gun season happens go after reg rifle season.

Holiday and anterless only seasons provide the opportunity for extended camaraderie with friends and family while enjoying what our great state provides naturally.

Keep crossbow and archery season the same as the past 5 years. Maybe under the same license. Then when registering the kill just check what was used.

If A youth hunt is held it should only be after the normal gun season. Youth hunts prior to gun season screw up the bow season for everyone else.

Non residents should pay more for licenses and bonus tags. In general, bonus tags should be higher in cost for both residents and non-residents.

I feel that the crossbow season should not be reduced and that being allowed to use crossbows doesn't have any negative effect on deer hunting.

I have heard rumors about declaring Dunn county or Wisconsin a lead free ammunition hunting area. I would be TOTALLY AGAINST THAT DECISION.

I would support a holiday hunt, if it were either sex. With cwd presence we should be able to reduce the whole herd. Not just the does.

I would be in favor of an antlerless only gun season and allowing buck harvest every third year and during primitive weapon seasons.

Too many bonus tags available for the public hunting grounds. At least in the Eastern and South Eastern part of Dunn County.

Would make a healthier deer herd if we harvested more antlerless and less bucks. Would also help the white oak regeneration.

Report Generated: Friday, May 01, 2020  Dunn, Central Farmland
The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

217 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 143
   - I visit this unit for non-hunting purposes: 43
   - I hunt in this unit: 194
   - General interest in this unit: 41

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 184
   - Bow: 103
   - Crossbow: 83
   - Muzzleloader: 75

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 23.95
   - Maximum: 60

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 116
   - Mostly Private Land: 39
   - Public and Private Land About Equally: 27
   - Mostly Public Land: 3
   - Exclusively Public Land: 7
   - I did not hunt in this unit last year: 2

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 4
   - Not too crowded: 28
   - Neither crowded nor un-crowded: 16
   - Somewhat crowded: 10
   - Very crowded: 11
   - Not applicable: 7

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 34
   - Fewer: 62
   - Same: 86
   - More: 24
   - Many More: 6
   - Unsure: 5

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>

I would suggest that in zones where more deer must be harvested that veterans, elderly (over 70) and first time hunters only would be granted these permits at a much reduced price or even free including any extended or "Holiday Hunts" Furthermore, I would like to see a more in depth study done on predator numbers. Each year we see bear and wolf numbers increasing and their ranges being dispersed further out into new areas where they have not been before. I do not see any studies tracking the expansive range of these predators and the damage they are doing to especially our fawn population. I have been bow & gun hunting for 42 years and each year see less & less fawns and more & more predators on my cameras. This has GOT to be taking a toll. Perhaps the DNR should take as strong a look into studying this factor and making it easier to attain bear and wolf tags as they have looking into our deer herd numbers. A longer deer gun season would only take away the lifetime tradition of the deer hunting camp and remove the "Special" anticipation of the hunt. We need to remember that other people (other than us devoted hunters) want to use the woods and if there are always hunters in the woods with rifles they may not feel safe trail riding 4 wheelers, horses or biking through wooded areas. Yes, even walking the roads in the country for fear of mistakenly being shot. I think no one wants to see a full on slaughter of deer. If we could bank on everyone respecting game and taking ethical shots only we would all be happy but that just isn't the case. If I could recommend anything it would be, in addition to giving tags to seniors over 70, kids and first time hunters (all with mentors) it would be to allow bowhunters an additional antlerless tag after they have filled a buck and doe tag. That would prove they can successfully harvest deer consistently and maybe reduce the number of wounded deer. Also, it would still allow for the wounded deer that may get through bow season to gun season to be happened upon then and harvested by a gun hunter. Thus, not to be "left on the landscape" Although, I doubt if that would be for long since I believe our number of predators just about out number our deer herd as it is. That is my 2 cents worth! Thank you for letting me have a voice! A very passionate instructor and bow hunter of 42 years.

I understand the concerns over the possible overpopulation of deer in certain farmland areas. However, I feel that there are more "reasonable" options than adding additional seasons or extending seasons. At some point, weather in late fall/early winter deteriorates enough that few hunters take to the woods. Further, deer have been hunted for months at that point and are largely nocturnal, unless attracted by "bait" in the form of farm crops. Thus, extending seasons will have very minor effects on the number of deer killed or in tourism dollars brought to the region. My own feeling is that many areas with excessive deer populations suffer from a lack of hunting access, which extensions on seasons and similar measures do nothing to address. Maybe it is time to bring back "earn a buck" for these areas. As a snowmobiler and snowmobile club member, I have significant concern that extending hunting seasons will eliminate snowmobiling in these areas until the hunting seasons have concluded. Our club already experience conflicts with the existing hunting seasons and have some trails that we cannot perform maintenance on or put up signs until the hunting seasons are over. My county periodically experiences situations where sections of the county cannot be opened for snowmobiling due to these situations and it only takes one landowner in the wrong place to cause it. Extending hunting seasons will only make conflicts more frequent and more contentious.
I wonder why the crop damage applicant's have gone up? Isn't the deers natural instinct to eat at the edge of the field? So farmers sound know/expect to lose crops close to the tree lines. With my late grandfather farming the land for 70 plus years, and my dad also farming still i have never heard them complain about feeding the deer a portion of their crops. In the specific area i hunt i have seen less and less deer during gun season every year for the past 5 years. I hunt just east of fairchild. Last year i started planting plots in hopes of attracting more deer. Obviously this is a sport that i share with my 4 children, 1 does hunt with me, the others just love being in the stand and experiencing nature. Last year 7 of us hunters did not see one deer for the first 5 days of opener. It is very disheartening because ever since i could remember deer have been abundant and i could always count on seeing 15 plus deer, most times many more. Now i don't know exactly if farmers around us get crop damage tags, that's why i am writing this. So i maybe educated on if there is a correlation between the decline from crop damage tags or something else. If it could get a response with some facts on crop damage tags that would be awesome. Thank You

The Metro Zone is serving no purpose. There is currently no way to adequately track the number of deer harvested in this zone when it comes to metro vs non metro. There’s no way to determine if an individual used the metro tags over their antlerless bonus tags and vice versa. The metro zone is so large, that if hunters choose to utilize the metro tags, more often than not, those are being used OUTSIDE of city limits. The concerns of abundance if city deer is a city issue, not a county issue. Therefore a metro zone should only exist in city limits, or areas where there is a close rural to urban interface. No additional hunting access has been made available for hunters in areas where the abundance of deer exists. Why are we promoting a decrease in deer population with the size of the metro zone when the Central Farmland’s objective is to ‘maintain’. Majority of the metro zone encompasses true rural farmland areas where hunting is prominent and hunters want to see higher numbers of deer. Shooting deer outside of city limits, through the use of metro tags and size of metro zone, doesn't eliminate the true metro deer abundance issue. It’s only promoting more deer to be shot where there currently is no problem.

Not impressed with the numbers of deer in this DMU. Its being over harvested by families who believe they need to feed their family every day with venison. Buck to do numbers were 6 bucks to every doe on our land. Its terrible. The Amish community is shooting deer year round. Hunters in this day and age are not afraid to shoot does. We need to increase the deer per square mile to sustain a healthy population for hunters to take more does. Please adjust the numbers to a higher level so we can shoot the does. Hunted all week during gun season on private land. We saw our first deer on Wednesday. This is the reason people are no longer buying deer license. You have to start listening to the hunters and the decline in numbers in your surveys. Not impressed with the guy telling us he doesnt believe what we are reporting. Thats disgusting!!! My folks and their parents would be disgusted with the way the deer heard has been desimated. Glad they dont have to see what is happening. Bring back back tags and registration stations. Too many dishonest people. The majority of the state does not want you to alter the season lengths either! And get rid of the holiday hunt and The bait ban.

I have hunted this area for many years, and have seen the deer population go from probably too high (which is nice for hunters) , to the population being nearly wiped out by giving out doe tags like candy. I bought a chunk of land next to county land, and for years never saw a deer during bow season, and certainly not during gun season. I was ok with not killing a deer during either season, and now have to risk a fine by the DNR for feeding the deer. I don't feed the deer to kill one during a season, but just to see them when I am out in the woods. I don't care if you hand out doe tags like candy, but I won't shoot a doe until the herd gets back to what my area can support. If I can at least see a deer when I am out hunting, I call myself successful. The thing I don't like about giving tags out is the woods fills up with jokers that shoot the first brown thing that runs by, and if it doesn't drop, they figure they missed. If you want to try something, why not give doe tags to kids under 18, and over 18 all hunters must shoot a buck over 8 points or a 12" spread.
I have hunted this unit for 57 years and seen the deer population decline every year. I have no doubt that a lot of deer are not registered with the new system as the Amish do not have phones and there current recording system they have with the DNR is lacking in registration time and enforcement, so how accurate is the information in your video. Just sit out in your blind and count the number of shots you hear each day tells you there are not the deer there used to be as you cannot count deer. I stay out most days and do not see a deer. They are more nocturnal and with the many more seasons that the DNR have is totally ridiculous. 8 to 10 different seasons, when we used to have Gun and Bow, and bear were hunted with your deer license. Its the same with your fishing regulations, many lakes have different regulations for state and county, what a mess.

First and foremost, leave the 9 day deer gun season alone. Secondly, leave those who hunt with crossbows alone and let them hunt. Don't limit the on/off/on/off season/days they can and can't hunt. In other words the mid-September date opener would continue to open deer hunting as usual for long bows, recurve bows, compound bow, and crossbows. Let it run continuously like we always have with obvious orange clothing for archers during the gun season. Shut the archery season down on December 31st unless there is a valid reason to keep it open longer. Now, that is my opinion for all 72 counties. Regarding antlerless permits, I have no problem with the way it is set up. And I have no problem with one buck per bow / crossbow license and one buck with gun license. Thank you for time in reading my opinions. A 71 year old long time deer hunter

I believe it's important to recognize all the work that all of you put into the calculations to maintain the appropriate herd #s, Thank You. I also think it is very important to get a true handle on the CWD expansion. Therefore I suggest that between 2-3 antlerless tags be given with each license purchased. Provided that after each kill, CWD testing would have to be done until the DNR received the proper #per DMI needed to provide the mapping they need to show how its spreading. The hunter would not be able to receive additional tags until the CWD testing ID # was entered. Also I believe that extending the Holiday antlerless would be a wise move. Submetro tags should be extended 2-3 per license. Thanks again for all the attention and hard work you do for all of us hunters.

Reasons for less deer are influenced by the wolf population being high. Historically, I've seen less deer and more wolves year by year over the last 5-10 years. I feel as though the wolves are taking over where the deer used to be. In our area there is actual data of attacks on other animals via the wolf population. There needs to be consideration for the deer population not only from a harvesting standpoint but a growth perspective and to whom is actually decreasing that growth. I'm not certain the factors other than human harvest are being considered in a manner which is relative to actual condition. The deer population in my area has seen a rapid decline. I do understand it may not affect everyone, however we all need to get to the root of the problem.

It appears that when the deer population study is done that, it does not reflect on what is actually seen in the woods. Some areas of private land have an over abundance of deer while other private and public land does not. Over the last 25 years hunting the same areas I have seen only a few deer each year. The buck population appears to be low. Most of the deer I see are a couple of does with their young. If you shoot all the bucks than what can breed the does. I am lucky to see a buck. Maybe 1 every other year. Lets reduce the buck tags and try to get that population back. Only be able to register (1) Buck per person per year. Just like Minnesota does. Also reduce the amount of doe tags to (2) per person per year. Thank you

The issue I find most important is the conversation surrounding crossbow hunting. I switched to a crossbow when it was opened to all hunters and have read reports that the DNR fears crossbow hunters have been too successful. I hunt public land almost exclusively and even with a crossbow I have gone several years without harvesting a deer. I would propose that before the DNR reverses it's stance on crossbows it would consider tracking individual hunters' harvest. I haven't filled a buck tag in several years so I don't think it's fair to tell me I can no longer hunt with a crossbow because there are too many deer being shot.
My concern is for my grandchildren being able to bag those big bucks with the amount of archery time. We live by DNR land that is hunted pretty good. By the time the gun season starts the big bucks are taken, wounded, or very learey by the time they get a chance to get out in gun season. I think since the archery has a much longer season after gun, that a shorter before gun archery might be nice. I mean if you can hunt from early Sept till Jan. How much is fair. I crossbow hunt and would be willing to start in Oct. instead of Sept. Bow hunts all through the rut and beyond. Just my thoughts.

There is a significant number of antlerless deer on private lands, and in my opinion these numbers continues to increase. I have seen upwards of 60 deer in a single field. The reason is because landowners do not allow access/hunting, prefer to only hunt large bucks, or are against hunting in general. These large numbers of deer damage the ecosystems and agriculture, but reducing the numbers will not be addressed by any of the measures/ideas put forth in this questionnaire. They must be addressed at some point, of that there is no doubt, perhaps by paying landowners to allow public access.

Common and Glossy Buckthorn is rapidly overtaking the woodlands and decreasing the amount of quality browse. It seem so be an insurmountable problem for the private landowner. It takes a huge amount of time, labor, and money to try to control, and there isn't enough of any to make a serious decrease in the density. Regrowth is almost instantaneous with seed sources now so plentiful and widespread. Having failed to effectively control the growth or spread on my land, I, regrettably, don't have any solution to offer. I only seem to know what doesn't work.

I do believe if you wanna fix what we use to call deer hunting is get rid of the wolves take it easy on the deer kill, last year was the worst deer hunting experience I have ever had, but yet we continue to kill off all are does, then farmers renting out there land for such a high dollar that they don't even have to clam on there income cause it's all cash hunting has just gone to poopypoopooy I know alot of people who have quit and others who want to but it's a family thing so they don't please be considerate when killing off so many deer.

I am very concerned about the Holiday and extended archery seasons affecting the opening of snowmobile trails. I hunt from early Sept. to Mid Dec. which should be plenty of time to harvest animals. With the late season hunts, we can have good snow for snowmobiling but yet may not be able to open trails because of hunting seasons remaining open, or landowners requesting re-routes because they want to hunt late.

I think there are WAY to many deer. It is ridiculous to be afraid to drive anywhere with the risk of hitting these road torpedoes and getting your vehicle damaged or personaly injured or killed. Plus the millions of dollars they have cost farmers, just so the DNR can make money. I would like to see an open season on deer year around and the entire population eliminated. White tail deer have killed more people than Covid 19, but no one does any thing to stop that ! They are the DNR's cash cow and it is insane.

Increase slightly the deer density in the county. Was more deer years ago and more harvested then by REAL hunters. We do have a predator problem especialy with coyotes and will be more fawn mortalities due to an increasing bear population. Should stay with current season structure but eliminate the youth hunt, have no holiday hunts and no extensions into january. If need a hunt to help harvest antlerless have a 4 day hunt in October which can also be used as a youth hunt.

I collect deer hides as a part of my business. This allows me to talk to dozens of hunters each year. Many hunters do not register their deer using your new system. Many hunters fill multiple tags for family and friends. Especially archer tags. Many groups especially from out of state are buying less tags than the number of hunters in the group. Without having to display a back tag and if they shoot a deer someone in the group has a tag to use.

Far too many does are being harvested which causes the population to drop radically. I used to see 80 deer in a season and now am lucky to see 3. The DNR always does a poor job of playing Mother Nature and is accepting too much from insurance companies trying to reduce deer accidents. Turkey populations have gone insane. From 13 to 51 to 78 to 151 on opening morning of gun season and has now finally started to drop due to over population.
I live and hunt Eau Claire metro sub-unit. I see many, many deer. Regardless of the time of year I can expect 10-12 deer in an evening sit, early season, late season during the rut we need traffic signals. New growth trees do not stand a chance and that is the most worrying, winter kill as well. Last winter was very mild but food sources are very limited I would like to see archery/crossbow season from September 1st through January 31st.

Please, please help us get our deer herd back and do something about these wolves. As a hunter what we used to have compared to know is a slap in the face all because of the wolves. And to know that they are STILL protected because liberal judge in Madison doesn't have a clue on what's going on in the hunting world is an embarrassment to all the hunters. You're our voice and I hope and pray you can help us....

My observation is that some landowners who say they support some type of quality deer management in fact hunt mostly bucks and take too few antler less deer. The ratio of buck to antler less seems to verify this. I own land but feel that there needs to be at least some increase in antler less deer harvest and maybe that just takes letting hunters know that it’s ok to shoot something other than a buck!

If you want a better success rate I think you need to open the county up to baiting in some way. Since the DNR started restricting baiting, hunter satisfaction is in decline and so is hunter participation. I know CWD is a concern, but using it as an excuse to ban baiting in a larger area is wrong. Keep your restrictions to a more concentrated area. Not the whole county.

I hunt in Eau Claire county in the town of Brunswick we have private land between two public areas. The public lands get hunted heavy do to the closeness of the city of Eau Claire and I continually see less and less deer. Yet the deer eat off our farm land but getting less and less all the time.

Make a program through the DNR to get more property owners in the City of Eau Claire to open their land to hunting. WAY WAY WAY too many deer in town, but without landowner permission can't hunt them and people don't understand that there will be more and more deer if we can't hunt them.

I think overall the DNR do a good job out there, but its my opinion that over the last 30 years the deer population in my area has gone down. 3 years ago I saw 10 deer the whole season, last year I saw 3 deer the whole season. I do hunt just about everyday. Thanks for listening.

There is still way less deer around my property than there was back in the 90's. I think a holiday hunt is overreaching and will put too much stress on the deer herd. Also, too high a percentage of the kill are nubbin bucks where this has taken place.

I generally feel a good balance in season layout but have become frustrated with amount of antlerless seasons that are held or projected to be held. I would recommend more marketing to hunters to encourage doe harvest providing sound basis for doing so.

Would like to see a break between gun and muzzle loader seasons. Would be better to hold mid December. Give hunters and deer a rest. I also believe odds would be better of harvest due to second rut normally around that timeframe.

Access to private land in the EC County Metro Sub-unit is a continuing problem. The townships in the Metro sub-unit need to step up their efforts to encourage a greater antlerless harvest on both public and private land.

What are the numbers of unregistered deer from hunters without licenses. By not making it mandatory to have a back tag and having to register at a station you have opened it up to anyone in an orange jacket to poach deer.

Although I saw fewer deer during deer season last year than in any of the previous 20-30 years I still think, based on what I am seeing daily on my property this spring, the numbers are comparable to previous years.

I would be strongly in favor of reestablishing the tradition of a limited October season prior to the usual season in November. Such a season would make it much easier for seniors (such as myself) to participate.

</table>
Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 48
   - I visit this unit for non-hunting purposes: 52
   - I hunt in this unit: 148
   - General interest in this unit: 35

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 141
   - Bow: 86
   - Crossbow: 57
   - Muzzleloader: 47

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 25.72
   - Maximum: 66

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 28
   - Mostly Private Land: 18
   - Public and Private Land About Equally: 31
   - Mostly Public Land: 21
   - Exclusively Public Land: 48
   - I did not hunt in this unit last year: 2

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 3
   - Not too crowded: 25
   - Neither crowded nor un-crowded: 30
   - Somewhat crowded: 25
   - Very crowded: 35
   - Not applicable: 0

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 31
   - Fewer: 44
   - Same: 55
   - More: 27
   - Many More: 3
   - Unsure: 2

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

Report Generated: Friday, May 01, 2020

Eau Claire, Central Forest
I have hunted and recreated in Eau Claire County Central Forest for 40 years. The presentation given by the DNR was a joke, biased, and had an agenda to influence the CDAC to issue 2300 doe tags when none are needed. DNR please take your deer population and deer density estimates that were calculated in Madison using a highly flawed SAK population estimate model and throw these numbers in the garbage. The use of SAK data was supposed to be phased out a couple years ago yet the DNR is still using it. A formula that audits have shown to have an accuracy plus or minus 121% of the deer population. This formula states that on average that there are 30-41 deer per square mile in the Eau Claire County Central Forest, this is laughable. Ask anyone who hunts, lives or spends time in the woods here if they think that number is accurate. You would be lucky if there are 10-12 deer per square mile. From the flawed SAK population model the DNR says the population decreased from 5400 in 2018 to 4500 in 2019 a decrease of 17 % yet they are recommending to issue 2300(550 doe kill quota) antlerless tags in 2020 which is 3-4 times the number issued in 2018 which was 675. The CDAC was told last year with 675 does tags and killing a quota of 200 does that the population would increase by 10 %. That didn’t happen as you can see by the population estimate and by the buck kill numbers all weapons. The total buck kill all weapons in 2019 was 433 the LOWEST IN HISTORY FOR THE EAU CLAIRE COUNTY CENTRAL FOREST. In 2018 total buck kill all weapons was 535. So buck kill all weapons was down 19% from 2018 to 2019. Yet the DNR is recommending 2300 doe tags with a doe kill quota of 550 and claiming the population will sill increase 6 %. Give me a break go sell that garbage somewhere else. Obviously predation, winter kill, and poor fawn recruitment are not allowing the population to grow. The only reasons the DNR is trying to influence the CDAC is to sell tags for revenue and to keep the population at all time lows considering this the new normal. They do not care about hunter satisfaction or a quality hunting experience. This is the only state I have hunted in that the DNR feels this way. The CDAC’s goal for the Eau Claire county for several years is to INCREASE the deer population and you have not been successful even with few or no doe tags. Kill numbers are at all time lows and have not increased yet the DNR wants to issue 3-4 times more doe tags. CDAC and hunters we do not have to listen to the DNR and accept all time low deer populations as the new normal. The DNR recommending 2300 does tags when the population is at an all time lows is wildlife management malpractice. Mr. DNR biologist you should be ashamed of yourself. Stop trying to influence the CDAC to kill more does that aren't in the woods to further crash the deer population of the Eau Claire County Central Forest. Get out of the CDAC's way and let them do their job. CDAC members please do what is right to reach your objective to increase the deer herd. CDAC I believe your 550 doe tags in private land and 125 doe tags on public land is still too high to increase the population. Buck only on public and private land is the only way to reach your increase objective. The data shows it plain and simple. Last year you had 550 doe tags and the total buck kill all weapons still decreased by 19 % when it was supposed to increase by 10 %. To increase the buck kill and population buck only is the logical answer.
I recommend no doe tags issued. We had four trail cameras out in the central forest. Predominately in the Northwest section by Luddington. (two by Hay Creak and two by North Fork of the Eau Claire River) The overall number of deer on camera last year was substantially less than previous years. About 50% less on cameras than previous years. We primarily bow hunt near previous cuts and ultimately the deer numbers seen where very low between both my Dad and me. In addition the amount of sign was alarmingly low. I hunt in areas most do not hunt as I wade creeks to get to areas that most cannot access. This allows me to always hunt with the wind in my favor and to hunt un-pressured deer. Without question, this last season in the central forest was the worst we've had in many years. Two years ago both my Dad and me both shot 8 pointers. This past season I saw 3 deer bow hunting the entire year (7 hunts). The previous year I saw over 20. My Dad didn't see a deer the entire bow season when the previous year he saw over 20 as well. Being retired he hunted much more than me and to not see a deer was depressing. Being that we have relatives in Ladysmith we hunted Gun Season up there in the State Forest by Hervas Landing along the Flambeau. We didn't hear a gun shot until 7:30 on opening morning.

I hunt on private land in the far northern portion of the Central Forest Zone. Since the horrendous winter of 2013-14 I've watched deer numbers rise consistently. The herd density is now at levels too high for the landscape and forest health (no oak regeneration occurring where I am). This spring I've heard reports of 70 - 120 deer out grazing new growth in single fields. I support the wildlife biologist's recommendation to offer many more antlerless tags, especially in the private land. If deer densities are that much lower on private land in the southern private land portions of the Central Forest Zone, then those private land hunters don't have to buy them....However, we NEED to harvest more deer in the northern portions. CWD is on our doorstep, and the best way to prevent the spread is to get deer densities lower. Please make many more bonus antlerless tags available to private land hunters that want to manage the deer herd responsibly....Those that just want to see as many deer as possible, or are convinced there aren't many deer in their areas don't have to buy them....We don't need to increase the herd any more in the northern private land portion of the zone, so please stop trying. Thank you.

We farm in the North East corner of Eau Claire County between County H and County G on Hamilton Falls Road. This area is classified as Central Forest Zone 1. I (Richard Selzler) have lived here since I was 7 years old and am now 70 and I have never seen the amount of does that I have seen in the last few years. The deer are over 95% does. I feel that you need to adjust the boundry so that the Northern Tier of Farmland between Hwy 27 and the Clark County Line (Adjacent to the Chippewa County Line) be changed to Central Farmland Zone 2. Or we should be given an antlerless tag. I have not been able to harvest a deer since those boundaries were changed. All of the Farmland Owners should be given priority over the non landowners. One hunter had 10 tags for this area last year and we had zero--(0). We are the ones feeding the deer alfalfa and corn and beans on a daily basis and we get nothing.

The wolves, bobcats and bears are relentless in this central forest. We must protect the does in order to have any chance at a solid deer herd in the future in this area. Wolves have been the worst on the deer herd, just terrible. The quality of mature bucks has slid to a point that I never dreamed possible. If you would have told me in 2010 that wolves will destroy your deer herd, I would not have believed it. Today, I am a believer. They have decimated the deer herds of the northern half of the state and because of it less youth are able to get into deer hunting because there are no deer. Take a youth hunting, that youth needs action to stay interested. No deer sightings for a few days and they are done hunting and probably done for life!! Someone needs to fix this problem !! The DNR needs to help get these wolves under state management and lets get the youth back into deer hunting!
Predators on deer have increased over one thousand percent in the last 45 years, (I have owned 80 acres adjoining public land for over 45 years with a cabin on it). Bear numbers continue to increase, bobcats continue to increase and Wolf numbers have EXPLODED. This year I shot a six point buck directly in front of two wolves, had I not shot the buck, he would have fallen prey to the wolves, (one black, one silver). I am 75 years old, I spend about one thousand dollars a year for food plots and practice sound forest management for deer and grouse (almost no grouse) and declining deer. I am questioning if I am just a feeding program for predators. WE NEED TO DECREASE WOLF NUMBERS AND BEAR NUMBERS. I may not have very many years left to hunt deer on this earth.

The eastern portion of the EC county public/state land still remains at mid/lower end of deer population based on 40 years of hunting this area. I believe it is still recovering from several large deer hunting groups doing deer drives during the days of high doe tag availability. Many hunters (some that own private farmland) go out to areas by Kelly Road, Coon Fork, County G north and east of Augusta to shoot deer, especially does. I witnessed it for many years. It is getting slightly better but if a slew of doe tags are provided, many of these areas quickly become depleted of deer. I am also concerned about the red oak depletion and the amount of oak taken in these aforementioned areas. There was mentioned of this in the material but unclear as to why so much oak is being harvested each year.

Until a control can be established on an actual deer population for central farm and forest in eau claire county other than the outdated and inaccurate sak formula I am for growing the population until we see a five year increase in harvest. No antlerless harvest except juniors. Biologists need to get out of papers and powerpoint presentations and get out into field. Interview deer hunters, bird hunters, farmers, loggers, mail carriers, utility workers, and Dpw workers to count deer. Biologists go afield investigate habitat and assure farming and logging practices are beneficial to deer population increases. Physically go into the public county and state land counting deer. Quit wasting money on cwd. It’s been here longer than all of us and it will be here long after us.

As a non-resident hunter that grew up and continues to hunt in this unit, I find the cost outweighing the benefit of hunting more so each year. I’ve had years in to the late ‘90’s and early ‘00’s where it was common to see dozens of deer each day on public land. The last 3-4 seasons I have seen more wolves than deer. I know this is anecdotal but feel free to drive any of the forest roads in the eastern part of the county when there’s snow...the tracks will tell the story. I’ve struggled to keep my kids interested. Would much rather see deer that we can’t shoot than to not see deer at all. I forget what the trend is in registrations, or if registration demographics were even noted...but keep that in mind when wondering where all the hunters went.

I have hunted public land off of Channey Road my entire adult life. The new rules on not using the 4 wheeler trails/logging roads has significantly impacted the deer hunt in the entire area. Open up the 4 wheeler trails/logging roads just for deer season, PLEASE!!!! We do absolutely ZERO damage to the property, but with the new rules, thousands of acres have been taken away from us taxpayers! We can no longer hunt the areas where everyone in my group and their children shot their first deer. Please take this seriously. It was an absurd rule change and many many families have been affected. So now everyone has to park on Channey road and walk to a spot. No fun anymore and kids don’t even want to go anymore because of this!!!!

The bordering areas between Forest and Farmland do have more deer. The interior of the central forest still seems low in population. Not sure how to address other than the food sources are located on bordering areas and predators typically prefer the deeper forest. A deer will move on if predator presence is too much. This likely will always be a factor to deal with. Overall there are less hunters. I believe if deer numbers are good and hunters can validate they are seeing deer, the hunters will come to the public forest lands. I mostly hear that hunters are not seeing as many deer in the core public land. Private land is likely different.
You have too long of an archery season 105 days at the longest season of any state in the Union and then you don’t close archery season before deer season years ago that you wouldn’t let nobody in the wood for a week or two before you guys got the deer so stirred up as why you don’t see him there in gun season but I know the younger generation thinks they know more I’ve been hunting for 63-64 years you could have muzzleloading before gun instead of giving the archery hunters the cream of the crop they’re a bunch of spoiled brats you let them have everything it’s all about who contributes the money to the DNR right.

My biggest concern is people on private land have access to extra tags, and receive deer crop damage payments, and can still regulate hunting on their land. If they opened their land to others to hunt, this could eliminate damage to their property and give others an opportunity to harvest a deer. As more and more people purchase land, public land is becoming scarce for hunting. We own a cabin in Eau Claire County and enjoy our time there during hunting season, being able to support the local economy while hunting is a boost for a county we don’t live in year round. Thank you!

Very high predator ratio in the EC county forest. I see a high mount of bear, wolf, coyote and bobcat when hunting. Predators are controlling the population not the hunters bc hunters are not seeing the animals bc of the low numbers. Also I hope the long gun season does not pass. That wont solve a thing. Nobody hunts beyond the first wknd anyway. The people who complain aren't real hunters anyway. Manage the herd for the bow hunters. Finally, for the love of god...change the muzzleloader season. Change it to the week of Christmas. Everyone will stop whining about unused rifle tags.

Hunting public land in EC County has become a waste of time. I know of at least three groups of people with guns—they are not hunters, but shooters. Groups range from 25 to 40 persons (and yes I did count them). They hit an area, shooting everything with deer hair and swoop of to the next area to depopulate of deer. The only analogy I can come up with is bring to mind is locusts! Two to four persons stand no chance. They do not respect others at all. The saddest part is that many of them are teen aged; they are not learning to hunt, only to kill.

Limited areas for deer drives during the traditional 9 day hunt on open public lands. Certain open public land areas in EC county that I have hunted in the pass, now has none to very little deer activity. I would see multiple drives groups in small/large open public areas that would just wipe out the deer population. And most of these groups(75%) are from Mn. I'm not completely sure on how to fix the deer population, but something needs to be done. I should not have to drive 2.5 hrs else where to hunt and feed my family!

It is my belief that the deer numbers in the public land of Eau Claire county forest land are way down. I think you see more on the edges of public land feeding in private land. It is also my belief that some of the tags for private land are actually being used on public land for antlerless deer. I believe that the antlerless tags should be cut down for the area to grow a decent sized herd and get the hunting to what it used to be. This would bring more hunters back in the long run, in my opinion. Thanks.

The last few years I have seen very few hunting parties moving deer in the county forest. I have gone out with a group of 7 and we have all had the opportunity to shoot multiple deer a day, while hardly seeing another hunter or hunting party. Hunters don’t push deer like they used to. They sit in their tree stand waiting for a their buck that they’ve had on camera. More hunters in the woods (more antlerless tags), there will be more deer movement, and hunters will see more deer.

Our group has hunted in the same area for over 40 years. The deer population last 5 -7 years been greatly reduced. We have had long time hunters that have decided not to hunt anymore because “there are no more deer”. I am sure it is a multitude of reasons but the #1 priority of the DNR must increase the deer population in the next few years. If not more people especially the next generation will have no interest in hunter.
Online registration is allowing people to harvest deer and not register them. This is causing the population of deer to drop even faster. Along with having youth hunts and doe harvest in December which now give people the opportunity to be hunting even more. With the number of DNR officers lower than previously hunters don’t feel the pressure like before. I am a former law enforcement offer myself and understand.

Please consider raising the antlerless quota. The deer are very hard on oak seedling and new pine plantation regeneration. I’m a forester and see this in the field across the county land. The county and Dnr spend many resources trying to establish solid regeneration only to have deer ruin it. I love deer hunting and wildlife in general but there is just getting to be too many deer.

Please stop cutting down all the public woods. After you clear cut it they don’t clean it up and it’s a mess no one goes in there putting all the hunters in the little woods we have left crowding everybody. You’ve cut enough over the past five years go to a different county and wreck it. Clean up the area when your done. The deer aren’t over browsing your cutting all the woods down.

A lot of antlerless tags go to waste, I think it would be fair to do a use it or lose it on the antlerless especially for very popular areas like zone 1. That way it will give early tag buyers a chance to bag the antlerless as well as the ones who couldn’t get a tag before they sold out. It will bring in extra revenue and hunters can have a chance at getting a deer.

I have hunted public land near Augusta Wisconsin all 48 years that I hunted in this management unit. Most of my hunting is during the rifle season on the public land. The last two years I have seen the absolute fewest number of deer in that entire time. I do believe that the forestry efforts in the public land has helped the antler growth for the buck population.

Do not increase bonus tags. I’ve been hunting forest road 5&4 for 18+ years the hunting was horrible for 12+ years we are just beginning to see some deer. And as in some deer I mean a couple each day if you’re really lucky. Don’t make the mistake you did in the past when you destroyed the heads with unlimited doe tags. Please don’t destroy our deer population.

The public land proposed antler less quota of 125 is too low, only 50 deer were harvested in 2019 with the same 125 antler less quota, that is not enough to get reliable CWD samples. There are more deer present in the County Forest which is about 45,000 acres, that is a harvest of 1 antler less deer for about 1,000 acres.

The number of deer seen on public forest land is still quite low. They should be allowed to recover from present levels. Less antlerless permits will help achieve this. Crossbow harvest numbers should be monitored and compared to overall archery harvest and season lengths and antlerless tags adjusted accordingly.

For the period 2015-2017 CDAC objective is increase, and again 2018-2020 increase 2015 post harvest deer number 3400* (adjusted for acres lost from moving some of Central Forest to Farmland) 2019 estimated population post harvest 4500 That is 30% increase. Seems it is time to slow down the increase for 2020.

The quota of 125 antler less deer in the County Forest is too low. I listened to the entire meeting, and the Warden, State Forester, and Agriculture and Forestry folks all said that there were more deer in the County forest and that quota should be more. These comments were made at the end of meeting review.

If you think deer are concentrated on private and want number minimized in private land make private landowners or those who hunt private who purchase tags earn a buck for a year. That would prevent them from hoarding deer numbers which they likely don’t provide adequate browse for the entire year.

The objective for this unit was to increase deer populations, That objective is being met. Some folks would like to see greater increases, I am not one of them, with an estimated population of 30-40 deer per sq. mile it is not a good idea to keep increasing the population in the Forest.
I would like to see the land size in the metro unit of Eau Claire be decreased to qualify. Not many people except a few can qualify currently. The deer population is overly large in this area and would like to see more people participate in maintaining the population.

There are less deer and they are smaller which has been a continuing pattern for the last 20 years. We are only harvesting larger buck's which are fewer and fewer each year. The total deer population appears to have decreased significantly.

I would recommend that no holiday hunt be allowed in Eau Claire Central Forest zone, with a doe harvest quota so low if the doe was lucky enough to make it through rifle season it should be given a chance to survive. Thank you.

This is a highly pressured unit and I agree the doe tags should be limited especially on public land. Also this unit has a high population of predators which needs to be taken into account along with the high hunter numbers.

Please begin immediately disallowing under age hunters from purchasing licenses and antler less permits! This is often abused by families purchasing tags for infants and is not the purpose of the youth hunting privileges!

I think there should be no bonus antlerless tag for youth hunters going forward as well as no holiday hunt. Especially when there's only going to potentially 125 bonus tags issued for Eau Claire-Central Forest Public.

living in a zone with a large amish population, I don't believe we are getting a accurate kill count with the current registration process as I know that a lot of them are not reporting their kill! My own opinion only

Antlerless deer numbers are too high on the private land as well as neighboring public lands on which I hunt. Please continue to offer private land antlerless tags so that we can continue to manage anterless deer.

I feel the youth hunt should be the first hunt of the season (like turkey), then bow season can start. I also think crossbows should only be used by disabled people or people over age 65.

I'll probably not deer hunt this year because of the cost of the out of state license for a Wisconsin Veteran, probability of actually seeing a deer and age.

I think in general the deer population is much lower than say 15yrs ago, i would like to see the population double so we actually see deer out there.

Too many not registering deer so numbers killed are not accurate

Saw more wolves than deer. That is a problem.

Not enough deer and way to many wolves

eliminate all the extra hunts

9 day gun season is enough.
The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 460
   - Bow: 241
   - Crossbow: 190
   - Muzzleloader: 139

3. How many years have you hunted deer in this unit?
   - Minimum: 0
   - Average: 27.51
   - Maximum: 70

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 92
   - Mostly Private Land: 53
   - Public and Private Land About Equally: 85
   - Mostly Public Land: 97
   - Exclusively Public Land: 154
   - I did not hunt in this unit last year: 6

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 14
   - Not too crowded: 65
   - Neither crowded nor un-crowded: 77
   - Somewhat crowded: 109
   - Very crowded: 121
   - Not applicable: 3

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 157
   - Fewer: 169
   - Same: 118
   - More: 38
   - Many More: 21
   - Unsure: 10

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th>The Antlerless Quota is...</th>
<th>Much Too Low</th>
<th>Too Low</th>
<th>About Right</th>
<th>Too High</th>
<th>Much Too High</th>
<th>Unsure</th>

Report Generated:  
Friday, May 01, 2020  
Florence, Northern Forest
Would like to thank the WI DNR for all the work and efforts that are put into making each and every Wisconsin deer hunting season a fun, and safe time in the woods. Also would like to send thanks for all the efforts put into maintaining the well-being of the Wisconsin deer heard. With that being said, I've hunted in Florence County for over 25 years now. The glaring problems that exist with the CDAC recommendations as proposed for 2020 WI deer hunting season are the number of hunters who are illegally killing and processing deer. Through word of mouth and stories heard in the Florence county Taverns and Restaurants, the glaring theme is that people find it easier not only to kill and process deer without registering their harvest these days, but also some take the risk of hunting, but never legally purchasing a valid WI deer hunting license. Doing away with requiring a WI deer hunter to legally wear a valid backtag opened the door to many of these problems. To take it one step further, it has also made it extremely hard for ethical and legal hunters like myself to self report violations that you encounter while out in the woods hunting. In the past couple years I have contacted the DNR on 2 occasions to report violations while hunting, and without having a valid backtag number to report, makes the time sensitive nature of a Warden apprehending poachers extremely difficult, especially during opening weekend of the gun deer hunt. The unfortunate Rice Lake incident where multiple hunters lost their lives years ago should be proof of this. It was the backtag number that lead to the apprehension of the guilty person in those senseless murders. The rate of violations has increased since WI did away with backtags. I firmly believe that the decrease in license sales is more a result of people continuing to hunt, just not continuing to buy a valid deer hunting license. I tend to believe that the deer kill numbers being lower then in the past are a result of both people hunting without a license and also mainly because people find the risk of not registering a kill and continuing to illegally hunt a risk that they are willing to take which wasn’t the case with backtags in the past. Also the number of hunters processing their own kills has dramatically increased over the last 10 years. Without having to register the deer in person, is another step skipped to eliminate poaching. This is evidence on the extremely low number of harvested deer on vehicles driving back home after opening weekend. My last recommendation would also be to do away with the youth Fall deer hunts. I would recommend that if the youth hunts continue that they should be antlerless only hunts state-wide. I have witnessed multiple times during youth hunts where the adults in the hunting party are also carrying guns in the woods. Witnessed on one occasion where an adult harvested a large adult Buck while his young Son was sitting in the car and warming up with his Uncle. I would have wished that the DNR would have had a public review a year or two after eliminating the backtags to discuss these issues. Honestly when fellow hunters gather in person and on the net to discuss the hunting season, there is more talk about violators, then deer hunting success stories these days. Thank You, for your time and consideration. If you would like to discuss further over the phone, my phone number is in the WI DNR system. Thank You, Michael Lee Hegerty
I personally believe the overall population numbers are drastically inaccurate. I spent a lot of time in the woods this year in search of deer and there were the fewest numbers of deer and even tracks in recent history, this was confirmed by several hunters and woodsman alike. This county has drastically different deer population totals by area such as high populations near farmland and developed areas and low populations in most of the hardwood-timber (public) areas. This was very evident this year if took the time to drive through a winter timber cut where the deer congregate to survive the long winters where food is easily available and deer are usually found in these areas in high numbers, but not this year. We are again wasting our efforts of population control by concentrating solely on the doe herd, what this county needs and has needed is an antler restriction or (APR) this type of management works and Florence county greatly needs this implemented to enhance our buck and deer population overall, our buck to doe ratio is way off here, if these numbers were closer to even you would see greater deer movement during the rut, better kill numbers and larger (mature) bucks taken instead of mostly adolescent ones. I feel that there are a number of hunters that agree on this issue and I know that this has been brought up before and we were told here in this county that we would only have a chance at this happening if three adjoining counties agreed on this policy. I believe that the ball has been dropped on this issue and it needs to be pursued again. What do we have to lose? the deer hunting in this county is dismal at best, this would surely boost a hunter’s chances of bagging a decent mature deer, after just a few years of being implemented. You would see hunter interests improve if they’ve seen large bucks on there cameras, who gets excited to head out to the stand with only pictures of spike horns and maybe a small 6 pointer or no bucks at all?? but only one pic of a mature buck by your post will heighten interest, tell me I’m wrong!, if this were to get implemented you would see more hunters in the woods, more licenses purchased, more tourism dollars being spent by motivated hunters that will stay at camp and in the woods longer than opening weekend "like most due now" and overall hunter enthusiasm increase for both bow and rifle, also you would encourage younger new hunters to venture out into the woods with hopes of a trophy whitetail like the one they saw the neighbor get! please take this into consideration, things here can only get better if we had an APR restriction, I will guarantee it! Thank You!
The deer hunting in Florence country over the past 14 years has not been great by any means. I have had a few years of harvesting nice bucks but they were few and far between. This past year was really bad in terms of deer seen per hunt with many nights of not seeing anything. I honestly would not be hunting in this unit if it wasn't for having a cabin in the northwoods. It seems that the DNR is more interested in money than increasing the deer herd numbers. I have seen plenty of bear, coyotes and wolves on my deer cameras which is quite concerning with the winters in Florence country. I am all for having a balanced eco system but not to the point where the whitetail deer have such a hard time of surviving due to weather and then predator threat. It would be nice if initiatives were taken to harvest more coyotes and possibly more bear. Although the bear numbers seem to be going down. I know that the wolf is still a protected species but they seem to be multiplying year by year which is very concerning. I think the state of Wisconsin should push the federal government to have a logical and reasonable way of relocating or harvesting a small number of wolves per year. Particulary in Florence county. I have seen too many videos of wolves taking down a deer in good weather conditions. I can only imagine what they do during the winters in the northern counties. Two years ago in Wabeno I was doing some scouting and the sight was sad to see. The wolves had a field day that winter and I could easily see it by the sights I witnessed. As stated I am all for a balanced eco system and wolves may be apart of that but we have to be sensible in the way we manage it. I want to have kids someday and will love to introduce them to hunting where I learned the sport, however it is hard to think they would enjoy with the hunting I have experienced in recent years. There are plenty of guys who love trapping and go to Canada to harvest wolves. Why not make some sensible harvest restrictions to take out a few wolves year by year? It will help out the deer hunters who love the sport and well as provide money to the DNR and state of Wisconsin. I hope ten years from now I can look back and say hey the DNR really must value hunter input by the changes they put into place but at this point I dont have that confidence. I will never stop hunting but I also would like to see the sport grow and I dont see that happening in Florence county if the DNR doesn't try to make changes to the deer herd numbers. I would love to hear some feedback on this.

nhennes21@gmail.com

We have only seen CWD cases come from deer farms, yet the average hunter now has to suffer from the baiting ban that was imposed as a result of their reckless actions. Their only concern is the almighty dollar and has nothing to do with conserving the sport. I can drive through the many private farms on the way to my totally wooded and bordered by public land hunting grounds and count at times over a hundred deer eating corn, alfalfa, rye, radishes, wheat, beans etc. nose to nose yet heaven forbid I put out 2 gallons of corn to see 4 deer. We all don't have thousands of acres to draw all the deer from miles around, yet you treat the farmers and public land big woods stump sitters as the same. Let's use your heads and allow baiting again. Your basis for comparison borders on lunacy. Walk a mile off hwy 70 into the Nicolet Forest and sit dark to dark with a 10 yr (who your trying to expose the tradition and sport to) and see how excited they are with seeing nothing. Your stats alone tells the story that 61% of the county is public land yet only 30% of the deer are killed here. Why? Because private land owners either have crops, food plots or bait illegally not worrying about someone stumbling across the bait and turning them in. Stop discriminating against public land hunters or small tract wooded private property owners and allow the limited baiting again. It keeps interest in the sport by not only the seasoned but new hunters alike, provides opportunities for ethical shots and probably gives a few deer the needed calories to make it through a harsh winter. And let's not forget, it will increase license sales which ultimately pays your salary! Also, limit buck tags. Why two? It should be one. Be it by bow, rifle, or muzzleloader. I suggest allowing hunters through age 18 to be allowed to shot any size buck along with first time hunters, but then limit it to 3 on one side etc. We'll never have quality bucks with the "I need to kill a buck to be successful attitude.". We hunt in Florence county, not Buffalo where it's all private by the way and people are passing up bucks for a chance at bigger ones. We are hunting with all the people from Buffalo county and every other county that don't own land and must seek out large tracts of public, state or National forest which Florence has plenty of. Stop comparing the state as being equal because it's obviously not. You asked for input and you got it like it or not. But don't think for one minute that I am alone in my thought process.
"MAINTAIN' is the CDAC goal? You have got to be kidding me. Where do these committee members live that they want to "maintain" the deer herd? Where I live, hunt and recreate, we don't have deer numbers. We don't need to maintain, we need to "GROW" the Florence County deer numbers. Take a walk anywhere out in the public woods and tell me what you think. I bet the people making these recommendations have spent ZERO time walking in the public woods. The "amount of damage to backyard plants" is laughable. Put up a deer fence if you wish to protect your petunias and respect the fact you live in the northwoods of Wisconsin. We didn't have any farm land being used within 15 miles of my cabin. What type of deer herd to you expect to maintain when public lands aren't being taken care of. The deer herd doesn't need to be maintained, the public lands need to be maintained!! Somebody needs to stick their necks out for the future of the Florence County deer hunters, and all-around lovers of the outdoors. Hunters will continue to be idiots and break the rules if the DNR isn't willing to put the adjust the numbers of tags available. I don't think your wardens deserve the extra work and stress because of poor management. Kelly Crotty knows his stuff and he can tell you the public lands of Florence County is hurting for deer. Quit caring so much about the land owners opinion and protect the general public who hunt land shared by others. Your recommendations from the CDAC are shocking. Something needs to be done. I hope you are getting plenty of feedback from this internet form, but I doubt it because of the lack of knowledge from the overall population that lives in Florence County. Talk to the old man who lives off Lauterman Lake Rd, and has lived there off the land for his entire life...he certainly won't be logging into your fancy website to provide his feedback. I'm sure your private land owners have the ability to share their opinions freely however. You don't have an easy job, but sometimes the right decisions aren't easy. Us hunters and families who want to continue residing in Florence County would appreciate somebody giving some thought to the public hunting areas. An old avid outdoorsman appreciates you, even if you don't believe it. Thank you.

My observations over 30 years of hunting deer in Florence is as follows. In the years of 1991 and 95 and 96 we had watched deer numbers plummet after the winter kills of those years. However, they rebounded. I primarily hunt by Lake 17. There are no Oaks, primarily maples, hemlocks and cedars, with willows, and the nutritional intake doesn't support large antlers unless the animal can live a long time. The fact of deer rebounding used to be safe to assume every couple years after a winter kill. They just have not rebounded since the early 2000s. Numbers remain low, and the added predation has increased in the last 20 years as well. The logging may help open the canopy but the saplings of the millions of maples seem to take a long time to grow in that soil. Because of the lack of deer, the browse lines are missing. In my observations there is a lack of the dessimation of the foliage in the big forest due to the lack of deer. Many years the deer yards were loaded with 100s of deer in cedar swamps. It isn't that case anymore. Loggers watch wolves take deer in the cold of winter. Very sad. I enjoy the beauty of Florence and love how wild the habitat is. I gun hunt there. I bowhunt in big buck county in Sauk and Richland. But tradition beings me to Florence, and the hope to see a true northwoods giant. I would be in agreement to a fork minimum on one side, or at least 2 points on one side if that would help increase buck survival. There are many spikes shot every year and I am guilty as well. I have seen one true giant once in all the years hunting Florence. The deer populations in Florence truly need help. That county needs money and tourism helps. I would also contemplate a complete deer hunting shutdown for a year or even 2 so the numbers could rise in Florence. I think the antlerless only seasons are unnecessary, at least on public. There just aren't as many deer and many factors are not allowing them to rebound. I believe hunting pressure has lightened in the past 15 years and still the population is suffering. Very sad. Thank you for listening!
I FOUND YOUR SURVEY KIND OF INTERESTING... I LIVE IN DOOR CTY., TO MANY DEER AND NO WAYS TO CONTROL WITHOUT SHOOTING OR HARVESTING FLORENCE CTY ON THE OTHER HAND,,, IS IN TROUBLE,,, DEER HAVE WORKED SOUTH WHERE THE FOOD IS... WINTERS ARE HARD ON THE DEER POPULATION,,, FORESTS AND BIG COUNTRY, LOTS OF ACORN TREES ARE GONE....FARMS ARE FEW AND FARM BETWEEN... ALL THE DEER I FIND IN THE COUNTY ARE SO CALLED POCKETS.. ;NOT IN THE BIG WOODS... I SPEND A LOT OF TIME AT MY CABIN IN THE CTY.. I SEE MORE BEAR ,, COYOTES, WOLVES,, .. IN THE SPRING FEW DOES THAT MAKE IT THREW THE WINTER,, FAWNS ARE EATED BY BEAR, COYOTES OR WOLVES.. TOUGH WINTERS FOR THEM AND THE BEARS COME OUT OF HIBERNATION AND ARE HUNGRY AS WELL AS THE OTHER PREDATORS .. HUNTERS DONT NEED TO CONTROL THE POPULATION OF DEER IN FLORENCE CTY MOTHER NATURE DOES ITS THING... IF PEOPLE WANT TO SHOOT AND HARVEST DOES THEY CAN GO TO BROWN CTY AND DOOR AND SHOOT ALL THEY WANT,, 5 EXTRA TAGS FOR EACH LICENSES. FOR MY PART I DID NOT SEE A DEER LAST YR.. FIRST TIME EVER.. DONT NEED TO SHOOT FOR SMALL BUCK OR FOR THAT MATTER A DOE......... JUST NICE TO GO TO THE WOODS AND SEE SOME DEER.... A COUPLE OF MORE ITEMS  ONE FOR SOME REASON THE PEOPLE THAT SET THE DATES FOR GUN DEER SEASONS ARE OFTEN LATE OF RUT,, BUCKS ARE LAYING THE SWAMPS AND THE DEER ARE DONE MOVING!!!!!!! CONSERVING FOR THE WINTER... FLORENCE CTY HAD AT LEAST 4 MAYBE 5 MONTHS OF HARD TIMES FOR THE DEER,,,,, LET ALONE SHOOT MORE TO CONTROL HARVEST... IF ANY BODY DID A ROAD KILL SURVEY,, FROM ALONE LOGGING TRUCKS,, THEY WOULD BE SURPRISED THE WILD LIFE THAT IS KILLED ON THE RD... I AM NOT BLAMING THEM--------- THAT IS THEIR WAY OF MAKING A LIVING HAULING LOGS.. THEY ARE NOT GOING TO KILL THEMSELVES TO ACCIDENT WITH A DEER OR TURKEY IN THE ROAD.. ANOTHER WAY TO CONTROL THE HERD,, BESIDES SHOOTING.. THIS IS MY OPINION AND WHEN I GO FOR A RIDE DURING SEASON AND SEE FAWNS AND DOES HANGING I AM SAD... PEOPLE ARE IN THE WRONG CTY FOR MEAT.......... 

Can not accept the 2019 late season start excuse for the lack of deer sighted. Not to the EXTENT 1 or others experienced. Listening to wolves howl thru the night opening weekend was a concern. Bad weather came on day 5. I have hunted for 48 years and by day 4 hunting pressure of any amount puts deer on alert and changes their willingness to move by day. Now the WSI must have been severe because snow depths were over 18 inches for all of Jan and Feb. and I believe 25 days below zero. I believe we are lucky to have 10 deer PSM well below the carrying capacity WITH OUT ANY ANTLERLESS PERMITS not to mention an increase in the quota from the 2019. With the current crisis I believe you need to GIVE 600 antlerless tags to residents for free to help supplement their food supplies. If not you need to factor how many deer will be taken by locals for food. Its been a way of life up here years ago and I believe considering the crisis it will return and I do not have a problem with that if factored in. Not a lot of deer where we hunt, We have good habitat with logging taking place all around us with many different stages of growth, highland and lowland and bordering river. Our camp in our family over 70 years and never seen it this bad. With management as proposed I wish I didn't own land in Florence cty. Forest cty Zero antlerless for 2020 ? Last season a 67% decrease in antlerless harvest ? Very disappointed Don't know what you are all thinking. Really believe my opinion is shared by many others and recruitment of new hunters will not happen. Thank you for destroying a tradition that I looked forward to more that Christmas !!!!!! Seems like hunters have no say at all. Forestry wants all the deer killed. Tourism could care less as ATV and snowmobiling dollars are more important. The deck is stacked in someone else's favor If you want a letter grade its a F for failed. Sincerely Richard Kornely 15911 cty r Maribel WI 54227
Regarding Mr. Carlson's preso: 1) The WSI index provided on page 18 is outdated & therefore understated. Through March, the western part of the county reached a number that exceeded 80, and thus became "severe"; 2) I spend a large portion of my free time in the NW part of the county, and the fawn:doe ratio shown on page 14 at 0.88 is not accurate for the NW part of the county, my actual observations in 2019 were about 0.50 following the severe winter of 2018-2019. I did listen to the Apr. 7 CDAC meeting, and I disagree with the logic presented by Mr. Carlson & the foresters to increase antlerless permits for 2020."Maintain" does not equate to an attempt to increase the antlerless permits in 2020 when the post hunt population estimates show a 3-year decline. Furthermore, now after 2-consecutive severe winters in the western portion of the county, allocating 600 permits on public land is too much. I recommend a 1600 total permit amount, and then allocate 75% to private land or 1200 permits and 25% to public land or 400 permits. 400 public land permits would "maintain" the same amount of public land permits as 2019, plus the larger quantity of private land permits get additional help in the eastern ag areas argue that they need to remove more deer from that area of the county. Finally, I want to voice my strong support to CDAC chair Dale Ebert for his efforts to attempt to find a workable solution for all interests involved in making the CDAC recommendation and not just appeasing the wishes of the special interests spoken during the Apr. 7th meeting. I do sincerely appreciate every CDAC member that has volunteered to serve, and I empathize with the tough decisions the CDAC must make in a county with very different resources & needs, east vs west. That said, I encourage all CDAC members to keep an open mind and represent the entire county as you make your final 2020 recommendation for Florence County.

We have a major problem with the Western part of Florence County deer numbers. I understand your video depicts certain numbers for the entire county, but those numbers are very misleading. The Eastern part of the county is full of private land hunters and land owners, but the portion of the county in the National Forest needs to be given its respect. Our numbers are clearly down for both harvested deer AND hunters. The county tourism businesses deserve more and the CDAC meeting (which I listened to on the phone for 2 hours, while at home in Green Bay) was a complete mess of 6 members showing zero willingness to budge on their opinions. 2 women members actually voiced concern for over-population of the Florence County deer herd because there isn’t enough food available and the deer will die anyway. More pressure needs to be put on the National Forest to clear cut and provide the deer population with the food it needs, instead of leaving excuses as to why the deer tags needs to be increased. There are plenty of options available besides increasing tags to appease the land management folks and the ladies concerns with the deer eating their flowers in their yard. We don’t have too many deer on the Northwestern part of the county. Please give thought to finding a way of better managing the entire county and not just the areas where the members exist. More tags is not the answer. Lets bring hunters back to Florence County by bringing back a healthy deer herd by giving them food to eat and CDAC members who are open to embrace other’s ideas and traditions. Florence County deserves better than the CDAC members are treating it. Our gas stations, restaurants, bars and stores deserve the business and this CDAC committee is too worried about forest crop damage instead of the greater whole.
Please look at the trends in deer populations. They are on a steady decline and not just the claimed one year drop that is because of the season being late. Yes there are ups and downs but overall the population is declining. I have been hunting the same area for 27 years and have never in my wildest dreams thought it could get this bad. I saw 3 total deer in 2018 and 1 deer in 2019. You can absolutely not endorse a larger kill in 2020 than you did in 2019. What is wrong with taking a more conservative approach to the amount of tags issued? If after this year things show growth fine but please do not go into this thinking we have the deer population that is being claimed, it is just not the case. If the DNR wants to claim that our deer kill is down because of the late season, look at the reported car kills. There should be no decrease in car kills or one as large if the population is as high as they say, poor weather or a late opener just don’t affect this like it does to hunting. Please do the right thing and reduce the quota and number of issued tags. And don’t just do a small reduction so you can claim it was reduced. Reduce the quota to 200 or split the dam unit so the eastern farm land is not skewing the population estimates. Besides they are the ones getting the crop damage permits anyway. If you are truly listening to the hunting public, you can not tell me the majority of hunters are saying "we want more tags". This use to be a good unit to hunt in with a good amount of activity but it is going in a very poor direction. The good years are not even as close to the past good years and the bad years are falling further down every time one comes around. DO THE RIGHT THING AND TURN THE POPULATION AROUND.

2019 was influenced certainly by a late season , but .......the first 4-5 days of rifle season had near perfect weather . Hunting all fall bow and gun I saw a total of a single deer on private land in the eastern portion of Florence county. Your deer count numbers are extremely inflated as our extremely poor buck kill proved along with almost every metric in the video which was extremely well presented . Stop shooting does especially after a terrible winter, it’s that easy to have good hunting here. We didn’t need a WSI chart to see how bad last winter was all you had to do was look at the deer in June and they still looked to be in terrible shape. You turned out antlerless quotas last year before the winter was even over and that’s a huge problem. My prediction is we will have another rough deer season as it seems you cannot seem to give our Florence county antlerless deer herd a break to be able to recover. It will be proven with another bad buck kill that you will attempt to spin as a rising population when it jumps ten percent or so from last years terrible numbers. I will along with other family members be exploring hunting in other states that seem to want deer and deer hunters spending their hard earned cash in. Spending 1-2 thousand dollars hunting in a state that actively manages for great hunting is a much much better value than buying maintaining and paying taxes on barren Florence county property. Hunting an entire fall to see a single deer will not happen to me again. I’ll go fishing or hunt a new state . It will be amazing if you have any hunters left in a few more years , sitting in the woods watching birds is not deer hunting.

I crossbow hunt limited amount in Florence County. I do more Muzzleloader hunting in the zone. I know the deeper than the average snow for that time of year prevented me from getting to some of the more remote areas I hunt. But even in the areas where there were recent or active timber cutting taking place, the amount of deer sign was minimal compared to the wolf sign. I did enjoy some success putting meat in the freezer, though I did not see a legal buck. If there is going to be clear cutting, it has to work hand in hand with the food that is going to be available. You can not have a large thriving deer herd, and clear cut thousands of acres then call it all good expecting the numbers not to change. I see very little select cutting taking place (only on private owned land), the happy medium to everything.Taking some of the trees yet leaving a habitat that game would still utilize. Nut bearing trees still producing food and cover for the animals, etc. What I see are hundreds of acres in a block getting clear cut that resembles a nuclear bomb going off. There isn’t a living plant standing for a mile in any direction a person looks. Then the only thing that grows back in any number is popple and that take many years to amount to anything. Wolves are not dumb. You rid the forest of timber, the places deer can hide, and finding food disappears too. The herd congregates, and the wolves follow them to those spots. A forest can only support a herd that has enough food available. You cut the trees, the herd is cut too. You can’t have both. A large deer herd, and dwindling forests too.
Thanks for taking the time to read this message. I understand that we are on a 3 year maintain but I have a hard time understanding why we give out so many antlerless tags when every year after the “no antlerless” period was lifted the deer numbers have dropped. What are you maintaining? You’re not, that’s the answer to my own question. Hunted the west side of Florence county for all 25 years and I have been absolutely disappointed in this counties deer management. It gets harder and harder every year to come and hunt this area. I watched every minute of the 27 minute video and it kept covering the deer population and every graph that came up shows this county going down on deer population but want to recommend more doe kill. I’m so confused by that. I come up to Florence county a lot because my dad lives up in the area, I have witnessed doe/fawn ratio in spring and every year we talk like “hey maybe this will be a good year, we are seeing fawns” to coming into fall and that’s all we see along side the roads are does with no fawns if we even see the does. I have so much more to say but you got the point of my message I hope. Also if you look at giving x amount of tags to public and x amount of tags to private, what distinguishes the two? If you don’t think these private owners are hunting public deer and registering these deer as private you’re joking yourself. Come on guys, try to help make this county good again. Would love to try to get my kids to hunt up here someday. I can understand why the youth aren’t interested in hunting up here anymore, it sucks!

I visit Florence County, and I contribute to the (shrinking) tourism numbers. When I heard the number of tags was increasing, I was shocked and astonished the CDAC came to that conclusion. How does the CDAC come up with the recommendation for increasing tags when I spend time riding the trails and hiking through the public areas and see very little deer numbers compared to the neighboring counties! Are the deer hiding in areas I’m not aware of? We spend time in Florence County during all 4 seasons and our time is valuable to us. We are traveling to Florence County less and less because of the lack of attention to the National Forest. Very little amounts of cutting being noticed, which I’m sure is a pretty good reason as to why the amount of wildlife is lower. I know this is a government thing and I’m sure these surveys aren’t even viewed, but I think this committee got the numbers very wrong!! Tags should not be increased, they should be ZERO. If the committee sees deer numbers too high, maybe they should open their private land areas up to the hunters who would appreciate the opportunity to harvest a deer. I’ll drive right through your county in a couple years if this trend continues. Michigan sounds like a pretty good place to visit and there won’t be any reason to stop in Florence County if the bars and gas stations and stores are all closed because the DNR isn’t managing the number 1 reason people visit!!! Try harder to listen to the general public, because I’m hoping others are filling out these surveys!

Since the harvest models and my personal observation frequency while hunting showed significant decline year of year I feel your population model is flawed. It shows the last few years as the highest post hunt populations but some of the lower actual harvests. I also believe the agricultural damage permits are not an indication of the herd, I believe these permits are abused by some to gain access to harvesting additional deer. How many actual farmers are there in the county that rely upon agriculture as their sole source of income compared to history. Not that many. I find it interesting that you only discuss bears and bobcats when you discuss predation. Take a look at population models and draw a line on when the wolf was re-introduced to the state. They don’t only predate fawns, they can kill almost any deer they desire. Not enough population impact is being attributed to these animals either. I personally think the target population can be slightly higher. The hunting is more challenging for many reasons one of which is less hunters to help move the deer as well. I only harvest a 2-1/2 year old buck or older and my goal is one per year. Last year was the first year in many that I didn’t have any opportunities to harvest and I hunted both archery and gun seasons. I think the population wasn’t as high as DNR estimates which aligns with others I know who also hunt in this management unit. We need less antler-less permits for 2020. I’d suggest a target harvest of 300.
I’ve never killed anything in Florence County. I sit in a tree with my bow and have never even had a chance at drawing back at something with antlers. I represent your average guy who loves spending time up north. I love seeing wildlife, kayaking down the river or around the lake, going for a ride to see the beauty of nature and going for a run early in the morning to see the sunrise. The deer population in Florence County is terrible. Driving north to our cabin, you see deer all over and the closer you get out our cabin in Tipler- the less deer you see. It should be that you see more deer the further away you get from Green Bay, but that’s not the case. I see deer in Forest County and I see some deer south of Fence, but when I get onto highway 70 its scary how few deer are seen. The Chequamegon-Nicolet Forest should be an amazing place with tons of wildlife (deer included) but it just seems something isn’t allowing that to happen. We should stop hunting all-together for a year before we increase tags!! How crazy is the CDAC that the recommend providing even more tags when the deer population is as low as I’ve ever seen it. Please help out the average guy who just likes going up north and might want to shoot a buck (not a monster) once every 5 years. I’d be willing to sacrifice not hunting a year or two, since I’m unlikely to see a buck anyhow! Its hard enough to see a doe for goodness sake. I’m hoping you will consider. Much appreciated.

I have seen the video and participated in the on-line meeting. Tom presented the average Winter Severity Index as 66. I use the Florence NOAA site for my work and the WSI for the Florence, WI site as reported by NOAA is 93 which is 41% greater than Tom reports. I believe the Florence NOAA site is in Commonwealth, WI which is not on the western side of the county. Tom indicated western county data was higher than eastern county data. I believe Tom indicated the doe/fawn ratio is an average of the Northern Forest area. Why do we feel this large area is representative of Florence County? My observations were more like 0.5 fawn per doe. Many does did not have fawns last fall. I would surely like to see this data (ie. date and location). I believe the statistics of this data would add to the inaccuracy of our population estimate. Tom indicated the three biggest contributors to the population estimate are buck kill, WSI, and doe/fawn ratio. I believe two of three of his numbers are inaccurate. In addition, the population has decreased the last two years (17,200, 15,600, 12,400). The CDAC voted in the spring of 2018 to 'maintain' it's population which at that time was 17,200. We have not maintained. On the contrary, we have decreased the population 28% from the level the CDAC voted to maintain! With these factors, I urge the CDAC to reconsider and trim the proposed level of doe harvest.

We need more deer in Florence County, period. The harsh winters and natural predators are bad enough...now we need to issue more tags to kill even more?? How about we actually increase the herds around the ENTIRE county before we start issuing more tags? I don’t care about Betty’s plants being eaten by deer down in the southern part of the county. We don’t have any deer up in the northern part so why punish the entire population just because some old post on the committee is complaining about too many deer by her house. I saw the same amount of deer the last 2 years, and that’s not a good thing. We need to increase. We need to protect. We need to provide adequate resources to the deer herd in all areas of the county...not just some. Our national forest needs more attention. It’s one of the biggest reasons people visit Florence county...start protecting it and everything around it. Our CDAC representatives are fools for not being more open to other ideas. Put aside your personal investment and think about the hunters you represent instead of looking out for yourselves. Compare Florence county to comparable and you will see glaring data pop out....and not in a good way. Listen to your hunters. Listen to the people who are out in the woods regularly. Listen to the people that hunt public land...they are the ones who are looking out for everybody, because they have the most at risk!
I have hunted the northern forests (north of highway 8) for the last 55 years so yes I know a thing or two about the woods. The quality of the hunt has not been affected by the number of hunters but buy the introduction of apex predator wolf and the bear population is way over what it should be. When I see 7 bear in one day that is way too many. We used to be able to shoot a bear during the deer gun season. Why should it take 8 to 12 years to get a bear hunting permit? Bear eat deer and in particular fawn plain and simple. Unlike most dnr personnel I live in the woods and am out and about everyday. I can count on one hand the number of doe with fawns I saw the last few years. If you want a more accurate count on the herd look at the yarding areas and do your count. The bottom line is if you really care about the deer herd you will not worry about crop damage in an area where there is very little farming. You will not concern yourself with how many auto claim for deer. Plain and simple we must stop killing the doe north of highway 64, but definitely north of highway 8. Do this for 3 years and watch the herd rebound. The question is how much do you really care about the deer herd? Also lets open a realistic hunt for wolf with realistic goals and quotas. Thanks for your time but I do not have any expectations for things to change as there is more money involved than true concern.

Your video contradicts itself in a major area. The numbers used for doe to fawn ratios drop throughout the year, but you still blame the low kill number last year on the late gun season. To me, you cant blame that on the late gun season at all and its the predators and overall vegetation available for the fawns. This council should not be recommending an increase to tags!!! Where do these people live that they see a healthy deer heard that needs to be maintained? I hope the DNR sees things through their own unbiased set of eyes and doesn't listen to this recommendation from the CDAC members. Our older generations have stories from the 80s and 90s when hunting was good and deer numbers were actually healthy. I used to drive every night to look for deer (still have the log book showing how many we saw) and it was common on a 30 minute drive, to see 30-40 deer. Now my family actually has bets on who ever sees the first (and only deer) gets to pick the evening TV show. Please do a service to the older generations and the younger generations to build the Florence County deer herd and reduce the tags available. It might not be popular amongst the CDAC committee, but its what they need to hear to make them aware of what public land hunters see. Next time maybe check your video and make sure it makes sense to dummies who are a little slower. HA!

First off, thank you for the CDAC presentation. My major concern with deer hunting in Florence County (which I have done for 48 years) is the one size fits all recommendations. I hunt in the very western edge of the county in dense forest areas. I also have friends that hunt in the eastern edge of the county (which I turkey hunt in ) and realize the vast difference of deer habitat. I think, like is done with trout regulations changing at certain roads and bridges, that the same concept could be used for deer hunting. I wish you would consider a split at Hwy 101 and use separate metrics and quotas based on change of habitat and considerable disparity of deer densities. While I realize the farmland/more open terrain of the counties eastern half needs a higher harvest to maintain habitat, I also realize that lumping the western half of the county into those same harvest quotas is not a good recipe for an extended period of a quality hunts. We personally have not shot a doe in our area since 1997 (first bow kill for a friend), and yet we have experienced a trend of less deer sightings for well over a decade, despite the fact we spend an extraordinarily greater amount of time in the woods over that span. It would be greatly appreciated if you could Please consider my proposal. Sincerely A Dedicated Hunter
There are no deer left to hunt but we continue to pass out antlerless tags like candy in a parade. I grew up hunting Florence County and have hunted here every year since I was 12 (all but 1 of those years on public land). It has never been so bad. My son will be old enough in a few years to come sit with me and I will be honest, I’m not sure I want to take him because of the lack of deer sightings make me fearful he will never want to hunt when he comes of age. Family Traditions of hunting the Northwoods of Wisconsin are dying because of the poor management of the herd. Don’t even get me started on the online registration now as well. All that did was kill the local businesses who survived off tourism dollars during hunting season (another great decision made in Madison without any consideration for majority.) Lastly, the wolf population is getting out of control. Trail cam pics full of wolves, sightings everywhere. I have seen more wolves hunting than I have deer during the 2019 season - 1 wolf, 0 deer during opening weekend. I packed up and went home after that. I will just add that my message above probably makes me sound like a 60 year old, but I’m only 35 and technically "labeled" a millennial.

My cabin is in Iron Country Mi, just across the border. Unlike Wis, they are on the radio all the time, talking deer hunting. They (the managers) do not believe, or have any intention of stopping baiting. I do not bait, (I am 70 years old), but if some old guy wants to throw out 10 apples, he is not hurting, anything. With an extensive 40 year career in law enforcement, I can not believe the waste of time, our wardens work on some guy using bait.... Now that it is illegal, yes they should not violate. If I was in charge, I would put together a task force. I would have one UC in the local bars etc. I would get on the poachers and violators, who inhabit, Long Lake area, Fence etc..... there is serious local poaching, cabin shooting, etc, going on, that would be my focus.... Its an absolute joke, that private food plots are allowed, and some old guy, gets a tag, for an open apple, while hunting.. Do you honestly believe, that deer crossing back and forth the Brule River, are going to contract CWD, from some guys bait. I believe in Wildlife Science, not Social or Political Science. Show me the science, and maybe I will believe it, but MI does not.

Please no doe tags for public land . I hunt western Florence Co the deer population in the area I hunt is down considerably. One thing nice about very few deer is we do not have many hunters at all in this area any more. I would much rather have deer and deal with the people.About 6 or so years ago I went to the meeting in Florence and it was brought up by one of the board members that sit up front that we notice that most people only hunt a couple days and go home and that is a trend we are seeing and don’t know why. Well I’m here to tell you why VERY FEW DEER.Last few years I’m getting more trail cam pics of Wolves.I see a few fawns early in summer then after a couple months go by not many left.Its getting real disgusting. I also have talk to board members and they admit that they are just a pawn in the game of the management of this system also disgusting.One last thing, this may be out of the hands of the Florence Co forest service but let’s manage the forest for game animals. The select cutting that is being done is not going to help the grouse or deer hunting.Lets try to get it back to where it’s not a waste of time.

Over the years the deer population in Florence county has greatly diminished! We have hunted the same area for years and it was noting years back to see 50 deer a day! Yes that’s correct, we haven’t seen 50 deer in the last 10 years combined with four hunters in camp. Predators are a big issue and it did not help one bit the antler less tags you put out and the bad winters we have had up here, over the last several years! People do not come up to Florence to hunt like they once did because the deer population is so low. When you go out into the woods you want to see deer of some kind, not sit for 8-10 hours and see nothing. Private property may hold some deer but we all know Florence county is not made up of large quantities of private land that is. Killing does is not helping the deer heard issue at all, we all have a great steak in our deer heard and at one time Florence county was know for good deer hunting and it’s sadly not the case any longer. This small community thrives off tourism people who have camps have them up here for a reason, but they won’t keep them if there are no deer to see or hunt.
My major concern is deer populations are down. No matter what formulas or numbers are used a true hunter can see that. My family has hunted Florence county for almost 100 years. We sit all day, hunt multiple stands and are avid outdoorsman. Last year 2 out of 3 people did not see a deer until the 6th and 7th day of the season. This means it took 55 to 65 hours of sitting before seeing a deer. That is incredibly bad. We have hunted the same stands over the 100 years and even on the worst seasons we would see a deer every couple of days. This is so disheartening to us. I have young kids that I cannot get into the sport of hunting due to the low population. How do you tell a 10 year old "sit for 55 hours and you might see a deer". I'm afraid if the numbers stay the same my family may not continue gun hunting. I'm more and more concerned with more antlerless tags being given as well as crop damage tags. It is remarkable that we, as a state, would rather reduce the heard to such low numbers than risk losing a few trees to browsing. If this mentality continues your hunting numbers will exponentially decrease.

Hunting public land in Florence county is nothing short of a joke. Your deer biologist is nothing more than a DNR propagandist. My dad built a hunting cabin in 1970. Now myself brother and 2 sisters have year round homes in the county. Most of my nieces nephews son and daughter in laws ect won’t even hunt in the county. As for me and my siblings we have been done spending even a dime up there for 4 or 5 years. Due too what you’ve done to the deer herd up there we refuse to go to your grocery stores bars hardware stores diners ect. So go ahead and give out 10000 doe tags. I really don’t give a shit anymore. As for the CDAC the DNR just came up with that idea so hunters think they have a voice. That’s another pile of BS. Claiming to maintain the deer herd in Florence county would lead one to believe there actually was a deer herd. Take it from a guy who actually goes out in the woods and hunts you and your deer biologist are delusional. You people have no idea how angry hunters up there are but I’m not so delusional as to actually think you people care as do all hunters in the county.

I’ve been hunting that unit since 12 years old I am now 62 there were no deer in the 70s they started coming back and from about 85 to 95 hunting was fabulous you could let little buck go and shoot a nice buck then you came out all your bonus tags and all your permits and you ruined it by shooting every deer every young little knob buck in the buck kill was up because people are just shooting deer and finding out they were Spike horns and deer bucks so don’t tell me about all the damage in this not up there cause I’m sick of hearing it there’s no deer because you ruined it and there won’t be any less you let them alone and let them come back and now you’re planted wolves up there they got cougars up there. The deer have no chance of coming back keep putting out your permits you wonder why people aren’t buying licenses you should do what they did after the 60 slaughter 64 and 68 they slaughtered everything up there there was no permits available at all for 10 years and then deer started to come back that’s when you had a good hunting in the early 80s to the mid 90s

Been hunting Florence Co for many years on public land. Ever since the mid 1990s the deer hunting is steadily going down hill. The last few years gun hunting has been a waste of time. If you don’t believe me come over to the western part of the Co and sit outside of your car and listen for gun shots on opening morning. You wouldn’t know it’s opening day by what your hearing. Just drive around the Co and look at the hunting cabins that no one is using for deer hunting compared to years ago. It’s a dam shame. Bow hunting is not much better. If the forest management does not change in 30 years Public Land in Florence Co will be like one big park no mix of young growth nothing for deer or grouse to eat. Also I have gone to these meetings and I get the impression I’m wasting my time. I spend more time than most scouting looking for hunting spots and for some time I ask why do I still hunt here. No-No doe tags for public land in Florence Co. And if they do issue doe tags out I am done trying to work with you people.
We need to get control of all predators impacting the deer herd under state control, not federal, in order to efficiently control the deer herd population. Why are all predators...human, bear, coyote, bobcat, etc. managed by the state, yet you can’t manage wolves. There has to be developed a way to control wolf depredation on deer. I keep hearing that an adult wolf only needs 20 deer a year to survive, but nobody has told the wolves that. They do what is natural to them and kill every deer, every day they see them, because they don't know if it's the last deer or animal they'll see. I have come upon mass killings of deer, with all their throats ripped open, and only the ravens and eagles are feeding on them. None were consumed by the wolves that killed them. When I see more fresh wolf tracks than fresh deer tracks, you can't tell me there isn't a problem. More petitions from state to the federal level has to start happening before the population reaches critical mass...if it hasn't already.

Thank you for the opportunity to provide feedback for Florence County and deer management. I love Florence and I love the opportunity I get to hunt there. I have been hunting in Florence for a very long time. I have seen the ebb and flow of deer numbers. But, 2019 overall was about as disappointing as I can remember. And this includes the 1996 and 1997 seasons. The low deer sightings during gun aren’t simply due to the late opener of 11/23. Something else is responsible and I truly believe the numbers are not what the CDAC team members said on the call a few weeks ago. If you want the balance between a sustainable deer herd and hunter numbers to remain at a good level, then people will want to see deer, especially the younger generation. Right now there aren’t enough deer to make that happen. We should have a few years of zero antlerless tags, with only jr tags, military, and disabled being allowed to take an antlerless deer. Thanks for the opportunity to voice my opinion.

I don’t think we need to reinvent the wheel. Many western states have the framework to provide units with abundant over the counter tags and also restricted permit applications for trophy units. How are we managing our buck to doe ratio? This is one of the biggest challenges to managing private land trophy opportunities. Two years ago I hunted a general unit in eastern Montana I saw 11 different bucks opening day 75% were 2 1/2 years or older. The buck to doe ratio was about 3-1 by my limited observations. This is what I would like my children to experience on our 120 acres in Florence county. At home I’m lucky to have more than one buck That’s 2 1/2 years old on the trail cameras pre rut. When my trail camera surveys are suggesting 10 to 15 does per buck I am concerned that we have major problems. I would like to see a shift from managing the deer kill to managing to allow bucks to reach maturity on both public and private lands.

Our camp has hunted in Florence county for 4 generations (soon to be a 5th). We have noted a significant drop in deer population starting in the late 80s due to some extreme winter’s, with a gradual increase back to the mid 2000s with a gradual decrease since then. The peak mid 2000 numbers did not come close to the early 80s and the gradual decline in deer numbers have corresponded with an increase in wolf activity/sign and decrease in coyote activity/sign. For the past 8 years we have witnessed wolf kills, seen tracks, or heard howling during hunting hours and very rarely see coyote tracks or hear them find gut piles at night. We hunt in the forest land managed areas and do not see nearly as many deer as we do along the highways and farmland. If an antlerless season were to be proposed it may be best to split the county appropriately potentially highway 101 as a divider.

The places We hunt in the National Forest do not need antlerless harvest. The bear population is way too high and fawns don't survive. I have 5 cameras in the forest from May thru October and in the last 5 years the fawn rate had dropped every year. Does appear in early June with 2-3 fawns and by July there are none. It is crazy that it takes 11 years to get a bear permit for this zone. Of the 5 cameras I only see maybe 2-3 different does and maybe 6 different bucks in an area of about 10 square miles. This is not an acceptable number of deer compared to 10-20 years ago when we had many more hunters in the area. Last year for the whole bow and gun season I saw 0 deer while hunting 25-30 days. That's a lot of hours staring at trees. Don't kill anymore does on public land for at least 4 years. Let the east side of the county private land owners have at it.
I watched the video from Tom Carlson and found it very informative. I also read the minutes of the April 7 Florence CDAC meeting. I agree with the recommendation of Mr. Carlson, and the comments from Mr. Wood, that the quota for Florence County should be 950; 900 public, and 1800 private anterless permits should be made available for purchase. My basis for recommending a higher quota is because I believe the opinions of DNR experts like Mr. Carlson and Mr. Wood should carry far more weight in the evaluation process. These folks do this for a living. They are good at it. I also believe that later deer seasons like the one coming up in 2020 have a significant negative impact on hunter success, because the rut is over and the weather is usually worse. My own observations of hunting in Florence County for the last 30 years supports this. Thank you.

Where does a guy start. My overall hunting experience the last 15 to 20 years on a scale of 1 to 10 meaning good I would judge it at a 2. The western part of Florence Co has turned into a Four wheeler Bird watching shit show. Four wheelers all over the place and then the Forest Service is gating off logging roads so we can’t get back in to hunt a lot of places. I’m not getting younger. Predators are killing plenty of deer thru the year. I see very few fawns as the summer goes by. I think it’s time to stop selling Doe tags on National Forest land in Florence Co and time to Increase the number of deer. Compare gun hunting from the 1990s to these past few years with the amount of gun shots tells you everything you need to know. A guy may as well stay in bed. If things don’t change I will spend my money elsewhere.

I have more crop damage on our land from the bears and turkeys than the deer. The bear population in our area is getting out of hand. The turkeys are trashing the crops in our food plots. Then there is the coyotes and the wolves are killing to many animals. This is the reasons in my opinion that there our no deer in the north woods. Has any one thought of the season becoming 11 day instead of 9 day. It could be the weekend before and then the 9 days during Thanksgiving. More people would hunt the northern areas. People do not hunt for the whole season because of vacation time. That would make people more interested having 3 weekends available. I also feel that a deer farm that has CWD can affect our whole area and still be open. How come they aloud to have deer that are spreading the disease that are possibly affecting the north woods?

600 antlerless permits for public land is too high for Florence County. All that hunted on public land in Florence County in 2019 agree that they saw fewer deer when compared to 2018, and this reduction was not a surprise following the severe winter of 2018-2019. I don’t believe there is any “magic” nor science behind the previous history of private/public land permit split of 67%/33% from this CDAC. For 2020, a 75%/25% split seems more appropriate because some on the CDAC and Tom Carlson seem to be of the opinion that we need to increase the quantity of permits on the private land/mostly east side of the county. I would much prefer to see the public land permits frozen at the 400 quantity (same as 2019), and then the private land permit quantity to increase to 1200; 1600 permits total, and a 75% private land, 25% public land split.

I run a free hunting program for people with disabilities called Wheelchair Whitetails (see wheelchairwhitetails.org) on my 529 private acres in southeast Florence Co. I am registered with DMAP and have had Tom Carlson, Tyler Wood, and Liz Wood on the property from the DNR. Our hunts are crossbow only and draws disabled hunters from around the country and Canada. Very few participants can draw a bow back. Using crossbows allows us to spread our hunts out over the entire archery/crossbow season from September to November (until the snow makes it difficult to access the property for our disabled hunters.). There was discussion about minimizing the length of the crossbow season. This would be devastating and virtually end our program.
As a year round permanent resident of Florence County, I was disappointed to find that the antlerless harvest authorizations are sold to non-residents at the same time, thus not giving locals the first chance to get antlerless harvest authorizations in their own county. I, and many locals, believe year round permanent residents should give first pick. Allowing those that are not full time year round residents equal access to harvests means less for our citizens and a majority of citizens use their harvest to supplement their food wares to thrive in this economy. Our priority should be 1st to our citizens, 2nd to others. And just to be nit-picky, Harvest authorization is a ridiculously long phrase. Can we just say tag like the good ol' days? :-)

Thank you for all your hard work in ensuring our deer population thrives!

I used to enjoy being in the Northwoods and be proud to own land in Florence County. Now I receive snickers and laughs at the poor quality of deer hunting in my county. Florence County has become a joke. And the CDAC is ridiculous for recommending more tags be available. What part of the county do they live in? I’d love to know how many surveys are filled out from Florence County and I hope the numbers of surveys are posted for the public to see. The age of people living in this county will hurt the internet survey numbers but I still hope the public takes the time to explain their thoughts— even if they don’t share my same thought. Please bring Florence County back into the picture of good deer hunting, before its too far gone and the responsibility of the next generations.

I’ve been hunting all over the US and Canada for over 37 years and Florence county right now is the worst hunting I have ever experienced. Years of doe seasons, crop damage tags, youth antlerless tags and presumably predators have destroyed the hunting. I remember deer season used to be a big deal here, always a big draw for hunters. Now there is nothing for hunters because the hunting is not worth it. Many hunters have and will continue to drop out until their experiences are taken seriously. If things don't improve this year I will be forced to move on. I put too much effort, time and money into my hunting to hunt for days or even weeks without seeing a deer. Its a shame, living in northern Wisconsin and I have to leave my back yard to find adequate deer numbers. Sad. Thank you.

Our group of hunters are very disappointed with the run away wolf population, In two areas we hunt we see more signs of wolves than deer. I don't think Wisconsin puts enough pressure on the federal government to remove wolves from the endangered species list. The DNR should be able to see the level of frustration people have. Look at news reports, Some people have gone to work trying to poison wolves and end up killing dogs, birds and other animals, pretty sad. Hunter numbers are down, This may be the last year I and some of our crew hunt deer. You can jockey all the deer numbers around all you want. The wolf predation is out of control, We are experienced hunters and know what we see in the woods. The DNR should expect hunting numbers to decline every year, sad, but true.

I have hunted in Florence County for over 50 years. This past gun deer season my boys and I saw 1 deer in four days of hard hunting. That’s over 100 hours of hard hunting in the field with only one deer sighted. The herd numbers in MOST of Florence County are below average and the number of anterless tags needs to be reduced in 2020 not increased. My experienced recommendation would be to limit anterless tags to a total of 500 combined (private and public land). Until the DNR brings the northern herd back to huntable numbers Florence County will continue to lose hunters to either not hunt or go elsewhere to hunt. I know of about a dozen hunters who are going out of state for their deer hunts in 2020 or 2021. They are getting fed up with hunting hared and not seeing any deer.
I have always felt Florence County has two regions within itself, the forest region in the southern 3rd of the county, and the agricultural region in the northern 2/3rds of the county. The northern 2/3rds has farm land and agriculture which promotes larger numbers of deer. The Lower southern 3rd of the county is national forest without agriculture. I feel the lower 3rd is over hunted due to the availability of public land, for this reason and due to wolf predation the deer population is significantly lower in the southern 3rd of Florence county where I hunt. I would like the committee to consider dividing the county in half when issuing antlerless only tags. Perhaps none in the southern forest and a quota amount in the northern agricultural region of the county.

In the late 80s and 90s we saw many more deer in the fall and along the roadsides. I have not seen that in the last 10 plus years. Car crashes to deer are more prevalent because there are many more cars on the road driving much faster than they should be. The roads are in better shape so everyone is driving much faster. It is much harder to miss deer when driving 65 to 70 mph as I see many drive that fast. In the 80s and 90s there were only hunter’s choice tags, allowing 1 deer per hunter buck or doe. Usually I would receive a hunter’s choice every other year. We would see deer. 3 to 5 years after the bonus tag system started, the deer herd significantly declined. Several years back it was buck only and now too many tags are being handed out.

Deer sightings on public land in southern Florence Co over the last several years has been pathetic. I stand sit an average of 25 hrs during the 1st 4 days of the season and would be lucky to see 6 deer. The last 3 years I have not seen more than 2 deer total. There are many days that I dont see a deer. I have had 2 seasons out of the last 10 that I did not see a deer at all. There are many other hunters that I know or have talked to that have had the same results. I believe there should be no antlerless hunting for at least one season. I wouldnt mind having no hunting at all for one season just to get the numbers up. I plan to hunt some other states in the future if it doesnt improve. I hunt the Spur Lake Rd just east of the Tower/Shrine Rd.

Where I hunt we normally see plenty of deer tracks in the snow/mud. Last year (2019) there was an inch of snow on the ground and we counted 2 sets of deer tracks crossing the logging road over a 1/2 mile. That was over 2 days the deer had to make tracks. That told me the deer numbers were way down in that section. There were wolves on camera which may have caused the shift in the numbers. I know the wolves didn't eat them all, but may have caused them to move their home range. Out of 5 hunters, no one saw a fawn. We saw 2 does, and 2 bucks over 2 full days of hunting. The buck I harvested was in rut and came in to doe in heat scent. This is why I think the doe tags should be limited at least in the northern forest Zone. Thank You.

In my opinion you should do away with the public and private anterless tags and just have one tag. What's to stop people that didn't get a public land tag form using a more abundant public tag. Just have a happy medium of tags between the two. As far as the low harvest numbers from gun season. That's hunting! Some years you get em some you dont. I dont agree with totally overhauling the season structure. And leave the archery season and crossbow season alone. The people that complain about crossbows will some day have bad shoulders too. Everyone deserves the same opportunity to hunt no matter what legal weapon they use. Look a t muzzleloader 20 years ago they weren't nearly as accurate or have the range as they do today.

I would like to see specific WOLF data in the metrics such as their YEARLY numbers in Florence Co. Hunting crossbow in 2018 on public land near the Michigan border, my wife and I saw several bucks and many doe. I was able to harvest a buck. Hunting the same area at the same time period in 2019 we saw ZERO deer! We did however see wolf tracks representing at least 4 wolves in a pack. You're now witnessing the senseless poisoning extremes that people are taking to deal with the wolves. While I absolutely denounce this indiscriminate poisoning, ESPECIALLY on public land-I understand the people’s frustration with wolves. If you don’t address the wolf problem on our game animals-you’re not serious about managing our game.
I've been a hunter in Florence county for 40 years and a property owner for 20. Your goal to maintain the deer herd in Florence county is ludicrous as there is nothing to maintain in the public portion of the county. My 2 adult sons and my son in law won't even hunt up there anymore and have purchased hunting land in Shiocton. My place up there will be going up for sale in spring and I know I'll be taking a loss but at my age I don't care at least we will have a reasonable chance to see some deer. There's a few reasons Florence county is one of the most depressed areas of the state and the DNR and CDAC are part of the problem. This guy for one and I know a lot more are done with you people. Good luck.

Extending the gun season is a bad idea. Why change things instead of letting things play themselves out and look at the trends and data before reacting to last season. Your deer hunter numbers are getting smaller because the generations are changing and because the forests aren't being managed as well as they should be. The Florence county CDAC recommended ideas of increasing tags is also a bad idea. There are not enough deer to increase the antlerless tags. I cannot stress this enough that tags should not be increased, they should be ZERO!!! The Florence County hunting situation is getting scary and your $$ from hunters is going to keep getting smaller when less hunters buy bow or gun tags.

The deer hunting in western Florence county the last 10 years has been horrible. Issuing antlerless tags is a slap in the face to those who hunt on public land in the county. There isn't half the hunters we had even 7 or 8 years ago. Guess why? This also means there's far less people that spend money in the county so think about what such a reduction in the deer herd has done to the economy in the county. Predators have also contributed to the decimation of the herd. As a property owner who pays 1800 dollars a year in property taxes I'm very mad about the quality of our deer hunting in Florence as are 10 other family members and friends who own property in the county.

in the last 2 years we just are not seeing as many deer on trail cams as well as during the season. Hard to get the grandkids interested in hunting when they sit for 16 to 20 hours opening weekend and only see 1 or 2 deer and no bucks. My 1 grandson didn't even hunt in 2019. His quote, "Let me know when you start seeing dear then I'll come hunting". We see a good number of does with fawns early and then very few during the seasons. There are a lot of bears and the Spread Eagle wolf pack. We have been finding what is left of dead fawns in the woods this past couple of years. I personally got a buck last year but it was 1 of 4 deer that I saw in 4 days of hunting.

I am an older individual and do not perform activities on the Internet. I am a forest land owner of a (40) acre parcel. I do not feel that the present method of selling the antlerless permits is fair, based on my above comment. I would rather be able to call in or use the preference point system. When all the permits are sold in a few hours, I feel it is unfair that individuals w/o private property are able to apply at the same time as land owners - who has the greater investment is a question, I would ask? As a property owner of oak, maple and aspen trees, I see tree damage on a regular basis. Please consider my concerns and make appropriate changes. Thank you.

Florence county is very different east to west. Roughly using Hwy 101 as the dividing line, the eastern half of the county seems to hold more deer than the western half. This may be due to more timberland in the western half. I am a western half hunter and I have seen year after year of declining deer sightings. I think there is some component of that due to wolf, bear and coyote predation. I think that it is also true that over-harvest of antlerless deer has contributed. I know this Council has recommended splitting Florence county into two management units. This should be a continuing recommendation and it is time for the DNR to approve this recommendation.
I've deer hunted in Florence county for 50 years and been a tax paying property owner for 20 years and I'm done deer hunting in Florence county. This fall my brother and three friends are taking ours adult sons and going to Missouri to deer hunt and taking our money with us. What the DNR and you have done to deer hunting in the northern forest is a travesty. There isn't half the hunters that were in Florence even 5 years ago. I bet u know why but don't seem to care. The county is probably losing over a million dollars in lost revenue from deer hunters compared to 10 years ago. Keep following the DNR and see what happens in your county.

I have hunted Florence county for 16 years. When I began hunting we could bait and you would actually see deer a good number of deer, the past few years we haven't been able to bait and the deer numbers are not what they once were. Florence county isn't a big agricultural county with crop fields, so baiting was essential in success. I have also seen the deer numbers decline while the wolf population grew. I have personally seen more wolves in the 2018 season than I did deer, which really made me consider not buying a Wisconsin deer tag at all the following year. The deer population and baiting regulations need to be looked into for Florence County. Thank you.

In my nearly 40 years of hunting this county, never have I had the experience of not seeing 1 deer after sitting dawn to dusk for opening weekend. I heard 2 shots all weekend, when I used to hear hundreds. I did not see 1 deer on a vehicle or hanging in a camp. Not 1. I have have probably taken over 50 deer in Florence county, most of them bucks. I know what I am doing. My family has land there, but I prefer to hunt the quality public ground that I historically hunted. It is very good deer range, with plenty of mast and preferred browse this year. The deer are simply not there. I have no explanation, just these simple and accurate observations.

We continue to have moderately severe winters with lots of snow, should not be taking additional does at this time. Certainly are seeing less deer during the season, especially if you go back 10 or 15 years, DNR should be working on bringing the overall population back up instead of shooting does at this time. (Or like you are proposing maintain the population). I see more tracks of wolves than 4 or 5 years ago, that includes hunting in Nicolet Nat. forest and eastern Florence county where the last two years have been seeing wolf tracks, that I never saw before their. I spend approx a month hunting deer as it is my favorite sport especially archery.

I have been hunting the western part of Florence co for 48 years. With the gating off of some of the back roads, the amount of bears/wolves/coyote and for the most part it’s all the forest management is select cut the hunting sucks. I spent a good sum of money to build a cottage, build hunting memory’s and my children go other places to hunt. I have not seen a deer the past three years on opening day gun hunting. This year I’m going to a different state to bow hunt not real happy about that but I what to experience what I had in the 1990s. Im sure things will not change but what has happened to the hunting in the western part of Florence co is a shame.

The number of encounters of wolves with our hunting was extremely discouraging. Our camp hunts all week and each day we reported more wolf activity than deer activity. We found multiple deer carcasses prior to and during the season that were clearly a result of wolves. We have young hunters that are rather intimidated by the proximity and amount of wolf sightings and howling that occurred. The last 4-5 years the wolve pack sizes and numbers continue to increase as evidence on our trail cameras and observations from howling each evening. While the wolves have increased unchecked in numbers our deer hunting success and enjoyment has decreased.

I have been hunting the same general area of NW Florence county for 36 years. Deer numbers were just starting to come back a little prior to the last couple years. I spent all summer Bear baiting the area and saw very few deer. I can only speak to about a 10 square mile area but the 40% drop in buck kill was a lot bigger than just a late gun season. I would like to see zero antlerless tags except for juniors. Number of hunters way down and few hunt after opening weekend due to low deer sightings. I had a goal to hunt here every opener for the rest of my life but will likely opt for going to another state if things don’t improve drastically.
Department should require email addresses from all license holders, inform license holders of CDAC meetings, offering participation via the web for all CDAC meetings, request input via email of all license holders for their respective hunting area as a majority or at least a strong minority of hunters hunt in areas other than where their domicile is. DNR needs to do MUCH MORE in seeking hunter input. If you can't do it electronically, then you need to use snail mail which will require a lot more lead time if you really want public input. Just putting something on the web and depending on unpaid public media announcements doesn't cut it.

From a hunter that focuses most his time on public land in Florence county the deer herd is far below par. As a young active hunter not scare to put miles on his boots rather than his truck it's hard to believe that an antler less season is even a consideration. I understand the means for a balanced herd but the reality of it is that the DNRs populations can't even be somewhat realistic. Florence co is 498 square miles and the estimates are approximately 12000 deer (give or take 5000 based on charts provided) that’s roughly 24 deer per square mile. The best farm in the co is lucky to have 10 deer on an alpha field on an August night.

I hunt in the most northern part of the Nicolet National Forest. At the intersection of 2050 and the Brule river. The deer population has dropped off significantly over the past 4 years. We have seen a significant drop off, more than want your numbers are showing in our area. The wolf scat has increased to the point that you can’t walk down a trail without running into it nearly every 30 yards in some areas and it is full of deer hair. What are you going to do to reduce the wolf population, it is completely unchecked from what I can see? I believe the wolf population is doing more much more harm than what I saw in your report.

This past weekend I've gotten together with my hunting group in Florence County that includes 4 property owners and a total of 13 guys that bow hunt and gun hunt in the National forest. Getting too the point we are done hunting in Florence county. Hunting there the last 5 or 6 years is a joke.Between the predators and bonus tags there's nothing left.8 of us booked a hunt through Tombstone Outfitters in Missouri and the other 5 decided to lease hunting land in Central Wisconsin. Good luck partnering with the DNR but we aren't the only hunters leaving the county and taking our money with us.

You've won.... period. I'm 45 years old and have been hunting in Florence/ Marinette northern zone for 32 years with my father and family. I own land but still choose to hunt public land because of the past traditions. I've never harvested a doe and have multiple 135+ class bucks hanging in my office. But again you have won. My archery and most likely my deer gun season will take place out of state moving forward. It's absolutely ridiculous how you can still see the need to issue antlerless permits for these northern zones. I support issuing antlerless permits for youth hunts but that's it. Enough is enough.

If one were to split Florence County in half east to west the management of antlerless deer should be completely different. In the West half of the county there should be zero harvest of antlerless deer. In the East half of the county there should be more than 1100 antlerless deer harvested. It was difficult to answer this survey because of this very important reason. Just because it's easy and convenient to manage the county for deer as the entire county doesn't mean its the correct or right way of doing it. The deer populations have historically shown the county needs to be managed in 2 sub-units!

If I read the minutes correctly, public land represents over 60% of the total land in Florence County; however, only 35% of the antlerless permits are allocated to public land versus 65% to private land. I also saw comments about changing this to 25% public land vs 75% private land. I find this to be inappropriate allocation of the antlerless permits between public vs private land as the allocation should be more closely related to the percentage of land. I also believe that wolves are impacting the deer herd more than what is estimated based on seeing more wolves than deer during the 2019 season.

<td>I am not a fan of the new anterless permit system. With limited tags, it is pure luck of the draw if you get one. If you are working, forget it. Why can't there be preference points assigned again? I hunt my private and public. The number of deer we see on public does not come close to the number on private. They need to managed very differently. I've hunted here for 35 years. 2019 was our worst year ever. The only other year close was 2018. Deer hunting is no where near what it used to be. Baiting is a major factor and violators need to have stiffer penalties. Baiting is the biggest issue I see.</td>
</tr>
<tr>
<td>3366</td>
<td>Very informative presentation and thank you for doing this for the public. You do not get enough credit for the work that you do on preserving the hunting tradition and conservation of the deer. It would be nice to see a more favorable approach to the hunt authorizations geared towards Florence County residents. Within minutes of getting authorizations for the hunting area we could not get anterless authorizations in 2019. I know its more limited than antlered, but it would be nice to give local hunters favor for a couple of days before opening to others who do not live year round in the county.</td>
</tr>
<tr>
<td>3367</td>
<td>Our local buck contest had smaller entries, fewer entries, and the winning entries were shot closer to town than ever. On public land, further from people and further from Ag, deer were much harder to find. I wish law enforcement would enforce baiting laws. Truck loads of bait go down County Highway N from August-February. The few deer around are so well fed in November that they don't have to spend much time on their feet in the daylight. I know its a lot of ground to cover for one officer, but there are way too many baiters ruining hunting for honest hunters that follow the rules.</td>
</tr>
<tr>
<td>3368</td>
<td>Having grown up hunting, I was sorely disappointed in how few deer I saw in the area. Even driving down the road, all the deer I saw are young and antler less. In an effort to increase the quality of the deer herd, and to allow for better management practices on small tracts of private land, I respectfully suggest that the buck harvest be managed with at least a fork horn antler restriction. This change would be hard the first season, but would ultimately lead to more and better buck harvests. The better tdd deer will result in an increase in hunting revenue in Florence county.</td>
</tr>
<tr>
<td>3369</td>
<td>My comments do not necessarily pertain to the quotas set forth, but the limitations being proposed for years to come and the views of using crossbows statewide. Limiting the crossbow hunt or extending the gun season is not a good idea to help maintain hear control or to recruit and maintain hunters. I know quite a few older hunters who put down the vertical bow and only hunted gun for years before the crossbow was made so that anyone could use it. In my opinion those hunters have been recruited once again meaning more tags sold and more opportunities to help maintain a heard.</td>
</tr>
<tr>
<td>3370</td>
<td>Extension of Rifle Season would help manage the herd better, especially if you have a storm or two over a 9 day hunt that can completely throw you off on your target quotas. Because then it sets you up with the urge to do almost an over harvest on antlerless the following year. I think those anterless hunts slightly throws off having a good consistent sampling of bucks of different maturities/generations. As a sportsman you like to see a consistent mature buck population and not years where it is hard to find a 3.5Y+ buck because years ago you had to take a wack at antlerless.</td>
</tr>
<tr>
<td>3371</td>
<td>I would like to see the numbers increase in the northern forest, Florence county area. I sat 8 out of 9 days this last year. I saw 3 does opening morning and not another deer after that. I have young children interested in hunting and I would like for them to have an opportunity to enjoy it before all the antlerless tags and predators wipe out the population. I run trail cameras, I scout, I start in spring and go all year till hunting season planning and preparing for my hunt. The deer population is much lower than you assume it is. I can say that from personal experience.</td>
</tr>

</table>
in my opinion the dnr has ruined hunting in the last too many years , the arrogance of wardens and the so called educated that work for the state is mostly to blame, we didn't have these issues years ago 1960s 1970s when there half the wardens. now they think they are swat team members and fines pay their salaries you do half the work with twice the manpower. hire local wardens that know the residents. many that i know are fed up with the powers that be in the mighty dnr and power hungry wardens. hire ted nugent to run the agency at least he knows what he is talking about.

Hunting between forest and Florence cty off of hwy 139 has been terrible for years now with very few deer sightings. Hunting nine days without a deer sighting is has become the norm. In my opinion counties need to be broken down into smaller units/fractions to better control deer populations based upon their environment i.e. woods or farm lands. The deer are always plentiful in farm land versus straight woodland. To hand out doe permits county wide will not help the woodland population because they are so few now that they cannot rebound to build the herd back up.

I gun hunt in Florence County. I think it is wrong that baiting was taken away. It is very difficult to find deer on public land in Northern Florence County without bait. We saw 3 deer with 11 hunters this year and shot all 3. I bring my boys up North opening weekend and they did not see a deer in the past year. Pretty difficult to get them to like hunting up North. I believe their are deer around but without baiting in a National forest it is very difficult. The CWD case that occurred up there was in a deer farm not sure why we should all be affected.

To many private doe tags taken in public land. Its way out of hand by me, groups from out of state come here for gun season and public tags are gone first so they pick up private tags. They sit around cabins that are feeding on the edge of public. One of these hunters shot a doe between the cabin and garage. Makes my heart sick 45 years and every year it's it seems to be getting worse. U have to back up to 1981 to find the totals equaling last year that's 38 years. We are going backwards Very Unhappy with the way things ate being handled!!

In the area where I hunt, I have seen a declining buck population as well as increasing signs of predators. In my opinion, the baiting of deer should be legal in this area. There are so few deer to begin with, the chance that a few random deer coming together to spread CWD is little or none in this area. The natural patterns of deer usually have several or more travelling together anyway. Due to the predators and lack of deer in this area, you have a better chance of seeing the easter bunny than a deer if you don't bait!

There was a problem that we heard last year with so few antlerless tags that people who hunt public land were just buying private land tags because there were still some available after the public tags sold out. No one on our 640 acres of private land got a doe tag last year, yet someone we work with who hunts on public land had a private land antlerless tag, it was disappointing to say the least, especially because we see so many more does than bucks all year on our trail cameras as if there is an over population.

The changing of the baiting rules has greatly affected the sighting of deer in the big woods of Florence County. While it is claimed that the deer population is significantly higher today than 50 years ago, I can guarantee that the number of deer being seen in the woods today is much less. Why? I don't know but baiting does help provide for more deer sightings’ Also, the number of hunters has decreased substantially as a result of lack of satisfaction with the deer hunting experience in Florence County.

This country NEEDS an antler point restriction of at least three on one side, to sustain proper buck to doe ratios, and to improve overall hunting and Hunter satisfaction in this County! We have size limits on trout for this same reason, am I wrong?? Smaller bucks need to be overlooked and left for potential mature bucks to be harvested in the future, and I would like to thank you kindly for posting real world deer kill numbers for our County! But please consider an APR for Florence County!! Thank you!!
Hunted western Florence for a long time and I am very disappointed with hunting for a while. Hunting isn’t worth a squat. The no baiting is hurting the deer as well with the limited cutting going on in the area. That’s all you guys are doing is creating one big wasteland. CDAC is only worried about their precious flowers in on private property on east side of the county. Maybe bring some people on board that have a valid opinion on the situation rather than your buddies worried about their tulips.

We have hunted Whisker Lake Wilderness since 1930s. Prior to wilderness, great hunting. Since wilderness it’s been a constant decline. Our party has dwindled from 15 hunters to 4 now due to no population. One of our group comes from Oklahoma for past 7 years. He has seen one live deer in 7 years. Pathetic. 2019 no sightings from anyone. Wolf track everywhere. Area is in a drastic decline, and predation is rampant. We often wonder why we even spend time here any longer. Extremely mis managed.

The number of predators for deer are much larger and need to be managed better in the Northern Zone that experiences longer and more snow in winters. The amount of bears, wolves, coyotes are growing out of proportion to have a manageable deer herd to harvest a decent buck. I have trail cameras year round and noticed many increases in predators over the years while deer numbers continue to decline. Having to wait 12 years to harvest a bear is unbelievable considering the number of bears.

I as well as many other hunters walk a mile to a few miles to the area we sit and hunt. We are forced to walk due to the road closed or trails that used to be there blocked by large rocks. Some of us have injuries from the military to just being old. It is becoming more difficult do to terrain age and injuries to drag a deer for a mile or miles. It would be nice to be able to be allowed to have a way to drive a four wheeler in or vehicle to pick the deer up and drive right back out.

Gun season in Florence was very difficult with the amount of snowfall and cold temperatures. Add to that the limited number of tags available for does. I spent approximately 1/2 to 2/3 of the hunting season in the woods. I couldn't believe how many deer I passed up. The population model for 2019 cannot be based on the low number of kills. I've been watching my cameras all winter, and have plenty of deer coming through that look healthy even with all the snow and cold temps.

Enough Enough with the selling of the doe tags. Hunting the last 25 years has gone down to where it is and it sucks. I hunt the North West corner of Florence Co no need to sell doe tags on public land we have very few deer. All the guys that use to hunt with me have gone elsewhere. Hunting in the north is not even close to back in the early 2000s. The deer management in this co is atrocious and it’s time this changes. Please and Thank you. Tired of not seeing deer when hunting.

The herd is beginning to recover after years of excess harvesting but based on our groups sightings remains below reasonable levels. Prior harvest levels and predators decimated the herd and the targeted harvest numbers proposed in the above questionnaire are foolish and very misguided. It may be time to revisit the model and process you are using before over kill practices are repeated. Review of your models and the assumptions you are using are recommended. Thank you!

I am saddened by the sharp increase in the deer kill by bow since crossbows were made legal by all. I think it should have been left to senior citizens and the disabled to use crossbows. If crossbows are going to be available to all, why not allow muzzleloaders to be used during the archery season since they seem to have a minimum impact on the deer herd and in most cases are only accurate to the same distances as crossbows, which shoot in excess of 100 yards anyway.

I typically hunt in the Goodman paper company land north of 70. The hunting has been terrible in this area the last 6 years. It went from being great to almost nothing. The winters have had a hard impact on the herd in this area for sure. Wolves are horrible and we can hear them howling all night long near our camp. In addition to this the antlerless harvests have devastated this area. This is why I am advocating that the antlerless quota should be lowered.
When talking about predators you mentioned bear, coyotes and bobcats, but never mentioned wolves? The people that live here know what is killing most of our deer, but until you people sitting in your offices want to address the wolf problem you are wasting our time and tax money. Until you address the wolf problem you will continue to see declining numbers and also declining hunters. It is your fault the numbers are low and we are losing hunters every year.

I for one am sick and tired of seeing no deer in this county. It is very frustrating when myself as a hunter see people go and shoot does in a northern forest unit where there are already hardly any deer left to survive the winter. Put an antler restriction on the bucks and go three years with buck only and see what happens. People will see nicer bucks and a lot more deer. Then after three years, issue bonus tags at a reasonable number to manage the herd.

I have been hunting in Florence county for 12 years and hunt in a group of guys that have well over 150 years experience in that county between them. They (and I) have never seen the deer numbers this low. I personally believe it is due to greatly overinflated predator population (wolves and bears primarily) as well as mismanaged forests. It is a shame to see the way Northern Wisconsin deer hunting is going. I hope we can change things for the better.

In my opinion predation is the biggest contributor to the lack of deer in this area. We hunt in the Pine River Wild Rivers area, and another contributor is that the forest is not managed for wildlife purposes. A combination of sound forestry management practices and a decrease in predation through removing wolves from the endanger list with the result being a wolf season to manage the population would benefit the deer population in this area greatly.

I see deer coming back slow but as soon as i do i also see sines of wolfs and also wolf kills i do spend pretty much time in the woods i have not shot a buck with my gun in over 10 years or more.I do believe there are more wolfs around then we think i break up all the poop and alot has bones in it in the woods i under stand we need trees to grow for the future but i also say there should be more tags to harvest wolfs.Thank u for reading my feed back

You should go back to the hunters choice permit where you have to apply... I would pay the $3 it is to apply for the the doe tag and then I would pay the $12 for the tag if i was drawn.... it would make it more easier for every one that works to maybe get that doe tag and it should bring in more money if you make people apply again and not get the tag... also you you could get a tag / application for multiply countys if you hunt them...

I’m a property owner a mile east of tipler and an avid deer hunter. Deer hunting in Florence is terrible and selling doe tags is a joke. My neighbor is in his late 70s and from Oconto Falls. Every year his hunting party consisted of about 10 people of whom 6 or 7 hunted hard the first 5 or 6 days of gun hunting. The last two years his 150000 dollar year round cabin has been empty and I’m not kidding. You guys figure out the whys.

Let's beat a dead horse. Forest land and private land in florance county should be two units. The complete lack of deer all season last year in the national forest was so bad trail cams didn't catch many deer sign of deer was days old when you could find them. Well hope is the only reason I will buy a licence and if I can get a doe permit I will let her live. Time for change in Florence co was years ago and to fix will take 10 years

We spend alot of time hunting all winter in the western side of Florence cty. We have seen considerably more deer sign. I apply and enjoy hunting in Montana for deer because there isn’t any baiting and a more optimistic attitude. More logging is really having a positive effect on deer. Mother nature will take care of the deer predators, winter kill. Allow anyone to harvest what they want too many seasons, stipulations, ban baiting forever

Our group has been hunting near Lake Edith for 35 years. We have experienced the worst season ever this past year. We may not return. the management of this area has eroded so much I doubt that it can be improved in my lifetime. Whoever is doing this "managing" has no clue of what is really happening in the woods. I do not have strong enough words to communicate our opinions. Whatever you are doing now-do the opposite.
I've been hunting in Florence County for the past 5 years. Every year, my hunting experience has gotten progressively worse. The number of deer I see casually throughout the year and while on the stand has lowered every year. I hunt in a group of 10 guys and the experience has been the same for everyone. The deer population in our opinion is extremely low and we should be looking to increase the population.

Have hunted the county for over 35 years. The deer hunting over the last 8-10 years has been terrible. Then the baiting ban, which isn’t enforced, so us legal hunters sit and see nothing as others pile bait. It’s unlikely I’ll hunt Florence Co in 2020. I may not buy a deer license at all. I haven’t bought a small game license since the wolves made it unsafe to run my bird dog. Come on folks. We gotta do better.

Been hunting this Co for many many years, and it is terrible how Florence Co has managed the deer heard in the last 25 years. No doe tags on public land for five or so years the predators are killing more than people think. Another thing that bothers me is the CDAC committee recommends to maintain. Really, maintain 5 deer per square mile that’s a joke. How about increase. PLEASE let us have something to hunt.

This last gun season was by far the least amount of shots i heard in over 10 years. Saw tons of deer preseason and post. Talking to other hunters around the farm... saw numerous does no one saw any bucks outside of nubbies. So either those buck numbers are skewed or people are not registering what they truly shot. I miss taking my deer in to be inspected. Made the hunters more truthful and honest.

I had wolves move into our hunting area in Florence County on opening day 2019. Listened to them howling when I was out hunting. Therefore we saw no deer. So predators are a big problem in our area and they definitely affect the hunt. I would like to see the DNR control the wolf population, but I realize they do not have that power. I think they should be able to control that in our state.

Overall, I feel as though antlerless seasons are hurting our deer populations and wolves are far too great in number around here. Without baiting in this unit it is very difficult to harvest a quality buck. We should introduce better management for both antlerless harvest and the taking of mature bucks. Practice of QDM would increase hunter satisfaction as well as economy to this area.

Last year personally does were way down from the previous year which had the most does on private land I have ever seen. I hunted public land for 46 years and have never seen as few deer except in the seventies. Hunt private land only now after seeing 6 does in 8 opening weekends after spending 20 hours on stand. 3 years I saw nothing. 2 wolf packs are in this area and I didn’t bait.

since the majority of antler-less harvest occurs on private lands yet private lands are a third of the area of public lands, I believe antler-less tags for public lands can be increased more than what you propose. I am not a fan of the public / private antler-less tags. We hunt our own land and the public land adjacent to it so, need 2 different tags if we want to shoot a doe.

Deer numbers west of Hwy 101 of Fence seem to be struggling the last 10 years, few deer seen and appears to be the norm. Would like to see more active logging to create browse lines and cover for a variety of wildlife as well as access to more secluded areas. Note - the decline of hunters as well attributes to the deer not being pushed around and made visibly to other hunters.

Having two units(40&50) allowed for better management of deer numbers and hunter satisfaction. I.e: tags sold. The lack of 3+ year old bucks in Florence is a common complaint as you know. Until this addressed, the ability to sell tags resident and especially nonresident will lag. If we need license revenue, 3+ bucks will do that. Control the herd with doe permits. Good luck 👍

I think that the presentation from the wildlife biologist was a good educational tool for people to understand how some of the decision making is done. The graphs give a visual to the understand the suggested tag numbers for the coming season. I'm quite surprised with the number of deer I have seen since the snow melted and it appears that they look quite healthy.
I am a landowner in Florence County and been hunting public land for 41 years by Tipler and this was the worst bow and gun season ever!! We need to improve habitat, cut the forests, and increase the herd numbers. Please split Florence Cty West to East like the old days so you stop lumping us in with all the much larger numbers of deer from 2nd Crossing Road East.

Why is Florence County pushing for thousands of antlerless permits while neighboring Forest county has a zero antlerless harvest recommendation? There should be zero or extremely limited antlerless harvest to recover the Florence county deer herd. The hunting was terrible last fall and there is no excuse to harvest any does here, the same as Forest County.

There are not enough deer in this unit to have that many antlerless permits. The wolves are the main issue and we seem to just try and make other excuses as to why the population has gone down dramatically. It is a shame to see how dramatically the true deer numbers have gone down in the last 25 years. We know the answer, but refuse to address the situation.

I have personally seen the numbers significantly improve over the last three years on my land. My doe to buck ratio is to high and the number of does only seems to improve each year even after allowing for doe permits. To encourage hunting and harvesting doe permits should be allowed to prevent over population and damage to surrounding crops and the forest.

The amount of deer has been dropping for years. And it’s being ignored. The time for more aggressive predator control is now. The deer population in the northern half of the state is drastically different compared to the south. A uniform hunting season to two vastly different climates (for the most part) has long since past its usefulness.

I think that if we were to extend the gun deer season by opening it up 2 weeks earlier, that would solve a lot of problems. Gun hunters that have to be home for Thanksgiving hurt our economy. This way they come hunt either week before Thanksgiving. Also the deep snow has an affect on people going further in the woods. Keep up the good work!

This county cannot support unbridled season harvest as in the past. Years of overharvest and seemingly unlimited special seasons along with predation and winter kill. Listen to the people who live up here and see things on a daily basis. Seems as though we are the last ones who's opinion matters... Everyone else's opinion bears more weight.

Instead of offering bonus antlerless harvest authorizations, I would like to see hunter’s choice permits return. This would still result in some doe harvest, but would give a better opportunity for hunters who live or recreate up here to be successful. In the last several years the amount of bucks that I’ve seen has been next to nothing.

Point restrictions 3 on one side more predator tags no baiting Statewide and restrict when Bear hunters can put out bait with all the baiting going on the bear go into the den and have multiple cubs instead of only 1 or 2 they have more. Also that goes with the baiting for Deer the Bear feeds on ALL the baiting going on for Deer hunting.

I'm sure the wolf population is a major reason for the decline in the deer population in the area I hunt. I have seen the wolf tracks, I have seen the wolves making the tracks, what I didn't see is deer the last two years, or a very limited amount. What is more disheartening is hearing foresters are given tags to lower the herd.

I hunted 7 out of the 9 days and saw two deer. Our deer camp [ 5 people ] did not harvest a no deer, many did not see a tail. We did however see a lot of wolf sign along with wolf howling in the early morning hours. Wolves need to be delisted and hunted. I'm afraid the deer hunting tradition in Wisconsin is fading which is sad.

There are way to many predators killing off deer especially in western side of county. The western side of county needs to be managed differently than eastern side. There is hardly any farming on western side and predation is out of control. You need to leave antlerless deer alone. There is no need for doe tags of any kind!
Resumption of baiting in the unit. I don't believe there have been any cases of CWD in the unit or that baiting causes the spread of CWD with the small home range of deer. If there is the potential for the spread of the disease why has the state Natural Resource board not recommended the shutting down of these deer farms?

The past winter was especially easy for the deer heard. The goal of the deer committee to maintain the deer herd numbers, not increase the herd. The low number of anterless tags will lead to higher deer numbers. The committee should not be able to recommend fewer tags that results in going against the 3 year goal.

Deer population is way down from previous great hunting causing smaller Bucks and less Deer seen. Mostly volition from coyotes and wolves and bear. Limited Hunting pressure because of this which Really brings down the annual harvest. Should be Buck only and the anterless permits should only go to juvenile hunters.

I have a cabin in Florence county. I am there very often. I see lots of deer east of Hwy 101. I am concerned that over-browsing is an issue. My opinion is that the quota should have been higher. Next year it should go up. Thanks for all the time and effort that the committee puts in on this very important topic.

I think you should stop offering crop damage tags to the logging companies and also allowing them to hunt with a rifle to fill the tags all season bow or gun seasons. It's dangerous when all they do is road hunt and makes it very challenging for the late season bow hunters to be able to harvest there own doe.

Deer habitat, actually all species of wildlife is poor on national forest lands. Wi. dnr should work with the forest service to promote more logging. Deer can sustain predators, winter and legal hunting if they have good habitat. Also you really need to enforce atv/orv rules on forest roads!!!!!!

I strongly support eliminating baiting (use of food) of animals as part of a hunting experience. In fact, the use of baiting turns the sport into a "killing" experience rather than a "hunting" experience. Baiting should be banned and strongly enforced through fines and the loss of a future license.

Legalizing crossbows was the worst decision ever made. Why should I buy a gun lic. when Most of the bucks have been harvested with these sissy bows? By the way, I'm 76 years old and haven't missed a season since I was 12. But I'm very much thinking giving all up because that bad decision.

I believe you should go back to allow 2 gallons of bait per 40 on private land only. There of been no wild CWD cases in Florence County. Minimal baiting allows hunters more opportunity to see deer and harvest deer. I don't believe that it increases the probability of disease spreading.

Section 50 should not be a no baiting section in 2020. The likelihood of seeing deer (of any type) is significantly reduced without the baiting and this will lead to reduced license sales which provide the funding for much of the efforts needed to keep hunting viable in Wisconsin.

Please go back to a bucks only in this county. There is not enough deer on public land and the winters are unpredictable. 2016 when it was a buck only county the deer population was coming back and the county overall had a good year for hunting. We need more deer in this county.

There are too many deer. Everyone that has interest in harvesting a doe, should always be issued a doe tag. The Forest Products industry holds higher importance than the recreational hunting industry, and should take priority when considering the management of the deer herd.

Please do not increase the rifle season length in Florence County, leave all season dates the same. Don’t overreact. I would probably stop bow hunting if DNR changes season dates for Deer. I only bow hunt for challenge during rut. Rifle is too easy to harvest a buck during rut.

Being from Illinois and owning a cottage in Florence and paying property taxes, not sure if I will be welcome in Wisconsin. Have not been permitted to enter Wisconsin to check on my cottage on West Bass Lake so I am not sure if I will purchase a non resident hunting license.
Overall deer population down, down more year after year, based on sightings while driving near my camp and by number of deer seen during gun season. Not only sightings but also lack of tracks, scrapes, rubs, etc. Predator count has drastically increased, wolves and bear.

I think the decision to legalize crossbows was very bad. Why should I buy a gun lic. when most of the bucks have killed already with these sissy bows. I'm 76 years old and haven't missed a season since I was 12, but i'm thinking about giving it all up. Don Pritzl

Too long for a person to get a bear permit get rid of baiting statewide if the governor can shut down the state the DNR should be able to shut down baiting Go to a point system (3points) on one side and get rid of the way we have to register deer go back to the old way

Just continue to have antlerless deer as options for the harvest. Having the lack of options & being forced to take yearling bucks as your only option for meat destroyed the buck population in our area over the last several years. Buck only is never a good option!

The wildlife biologist for Florence county stated that population is almost certainly down from 2019, and his model suggests it's down even more than he believes, so why is CDAC's recommendation to increase the anterless permits for the county from 1100 to 1700?

Way too many wolves. Also not allowing hunters to bait. I would like someone from the DNR to explain to me why I cannot date because they're worried about transferring CWD but every family of deer has licking branches that they all use what is the difference.

I would really hate to see the youth antlerless tags to be made not valid if Florence were to become a non quota unit. I truly believe the antlerless youth tags help keep young hunters interested by increasing their chances of harvesting their first deer.

Jack up prices on nonresident hunters, 9 day Gun season 7 day muzzle season NO Youth Hunting No Special seasons shooting deer shorten artery season go back to baiting deer like the state of Michigan did and the Kelly the Game Warden shouldn't be a BIG DICK

Do not allow antlerless deer hunting of any kind in this county------deer population is at the lowest pint I have seen it in the 40 years I have hunted this area. Let it also be known I own a cabin and property in this county for the past 30 years.

50yrs hunting in this area, with family and close freinds. Was very bad timing with late season, and the rut being over, but that is just how things fell. Do not fool around with changing any start or stop dates, for any type of weapon. thank you

Way to many deer being lost to predators. Seeing more wolves than ever before. Also the western side of county should be managed way differently than eastern side. I believe that there should be no doe permits of any kind in western part of county.

My only concern is how anterless permits are distributed. I feel it need to go to a preference lottery system. By having it at 10 am on a week days eliminates many of us able to apply due to the fact they we are working and can’t be online.

thanks for your hardwork in preparing this. In just going off of what I saw during this past fall, i understand the needs for some anterless permits. I would just suggest keeping them the same from 2019. Thanks for your time. Paul

Do away with muzzle loader hunt ,youth hunt,holiday hunt. A combined bow and cross bow hunt no longer than one month. One buck per year your choice of weapon. Return the back tags,and maker required registration in person manditory
What a waste of time the DNR is, let us bait, take away the doe tags, let the deer heard recover, and do more to control predator populations. I own private land I should be allowed to bait since I’m allowed to pay property taxes.

Hunting has been the worst since I started hunting up there. Also need more cutting on the west side of the county. Doe/fawn ratio is terrible when it comes to fall due to predation. I understand why the youth show no interest.

Our group of 6-8 hunts a wide area in Florence county. We have seen less and less deer and more and more predation. Everyone we talked to says the same. Please consider lower antlerless permits, and add some wolf harvest tags.

Based on the number of deer I saw during bow and gun seasons last year, I think 600 antlerless tags is a reasonable amount. Clearly there is a low percentage of hunters who actually fill any of those tags that are issued.

The doe to buck ratio seems much higher here by observation. Possibly bucks are less likely to be seen due to their behavior. I would like to see baiting banned statewide and more timber cutting/active forest management.

There are too many deer in Florence County. Take a spin down Fintown Lane, drive past Roach's Fields and Steber's fields. If you don't count over 100 deer, you should loose your drivers license because you can't see.

The deer population in Florence County is so fragile because of the following ... - Predators (bears, wolves, coyotes) - Weather temps and snow - Violating - Failure to report harvest kills with new reporting system.

My number one concern is the effect deer have on the landscape by over browsing. Our forests can’t support a deer herd population that exceeds capacity. Please consider an allowable harvest with this in mind.

I am very interested in a statewide on doe or one buck tages for deer hunting that is bow or cross bow, rifle and muzzle loader season. That give people a chance to harvest 3 deer and may help with doe tags.

Permits have been way too high the last few seasons. My kids and gran kids are not interested in coming to Florence County. Very disappointing, very little shooting, not many hunters after the first weekend.

I still feel that the deer that I see are almost all young deer with very few mature deer. I would feel more confident in the health of the herd if I were seeing more healthy old deer and less wolf sign.

The last 5 years I have not harvested a buck, I have been unable to obtain a doe tag they sell out to fast , so in order to shoot a deer I have to crossbow hunt and muzzle load to increase my opportunity.

manage deer at the grass roots level,, immediately close all cwd factories(ie) deer farms, we are all intruders in the deers home,, uninvited!! we need to manage , we also need to care ,,with logic ,,.

We keep seeing a growing number of wolves in all areas of the county. Also the number of deer seems to be going down over the past few years on public land. A lot more deer in town for some reason!

I am seeing way to many deer along hwy 101, the forest has little to no regeneration and the high number of deer will wipe out all that is left. please reconsider following the DNR suggestions.

The eastern half of the county has far more deer than the western half and this should be taken into consideration when issuing antlerless permits using factors other than public / private land.

Numbers are too low. I put a lot of time in the woods and I can pretty much name each deer in the areas that I hunt. See the same few deer, that is when I do see one or two a day if I’m lucky.

I would like to see that 'land-owner preference' be given and reinstated for any antlerless deer permit quotas. It once was and could again be 50 or greater contiguous acres within the DMU.

I believe wolves have had a significant impact on the deer population in the part of the county where I've been hunting for 43 years. I would be in favor of reducing the wolf population.

</table>
The number of predators is underestimated in zone 40 for bear and wolves.

2018-2019 was a record number of deer seen by our whole party.

Allow Baiting for deer again so hunters can see more deer.

Winter was much more difficult then your WSI numbers show!

Allow baiting again so hunters actually see deer again.

I think it should be buck only except for young hunters

Bring back baiting ... no baiting don’t see deer

Way too many wolves and coyotes in this area

allow baiting again. shut down game farms.

You have a wolf problem in this county!

I seen more wolf sign then game animals.

There should be anterless taken at all

There are too many deer in this area.

Keep up the good work!

Bring back baiting!
Public Input on CDAC Preliminary Recommendations - Spring 2020

Fond du Lac, Central Farmland

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

435 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 295
   - I visit this unit for non-hunting purposes: 51
   - I hunt in this unit: 393
   - General interest in this unit: 61

   The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 361
   - Bow: 222
   - Crossbow: 170
   - Muzzleloader: 168

3. How many years have you hunted deer in this unit?
   - Minimum: 0
   - Average: 24.23
   - Maximum: 60

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 194
   - Mostly Private Land: 78
   - Public and Private Land About Equally: 42
   - Mostly Public Land: 22
   - Exclusively Public Land: 57
   - I did not hunt in this unit last year: 0

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 25
   - Not too crowded: 72
   - Neither crowded nor un-crowded: 47
   - Somewhat crowded: 29
   - Very crowded: 19
   - Not applicable: 7

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 65
   - Fewer: 155
   - Same: 170
   - More: 30
   - Many More: 10
   - Unsure: 5

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

   If a DMU is in a Farmland Zone...
   Implement an ANTLERLESS HOLIDAY HUNT: 105 Support 302 Oppose 28 Unsure

   If a Holiday Hunt is held in a Farmland unit...
   EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: 203 194 38

   If the Population Objective is not "Increase"...
   Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 47 365 23

   If a Zero Quota (buck only season) is adopted...
   ...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? VALID NOT VALID Unsure Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?

   Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

---

**3510** I'm glad to see Fond du Lac Cty. CDAC committee reduce bonus tags. With every license holder getting a free tag I think the bonus tags are window dressing with no real effect on deer harvests except raise more money for DNR which I know they need. The reason is I have hunted the N/E Cty. of Fond du Lac and N/W Cty. of Sheboygan for over 50 years. The biggest change I see is the woods and swamps that provided a good browse food source are now flooded with excess water. Yes it has been very wet years but the real issue is all these so called conservation Crop and Dairy farmers are tiling more and more fields to drain into more private land that was never intended to handle the excess amount of water. Our 60 acres land included, which I know there are laws that you can't legally flood other property owners land. I know that the DNR is suppose to issue permits for the tiling but I know from talking to the farmer themselves they are just doing it and said if caught the fine is minimal compared to permits and benefits. When I went to DNR deer meetings in past they had some of these now flooded areas as deer habitat which all natural cover, browse & food sources are dead from drowning out. This is an issues that the DNR and CDAC committees have to address or we will lose all our good deer habitat. I know deer hunting is an emotional topic but I hunt hard and spend a lot of time in the afield but it is so disappointing to see less deer and deer sign every fall and then the DNR says we are over populated to kill more. I think DNR is finally realizing that with all past years extended hunting periods and rule changes trying to providing more opportunities is backfiring and with the new question proposals on this 2020 spring meeting for deer hunting they are heading in the right directions. Thanks for reading this (I hope) and it provides some input on what frustrations a old deer hunter has.

---

**3511** We currently have a very good healthy deer herd in the private land area of Fond Du Lac county. There is plenty of deer and they are very healthy. There is a ton of landowners that are leaving crops up through the winter months to help the deer during the winter months. Also I see and talk to more landowners now planting more food sources, planting trees and trying to help out the deer herd/wildlife. I believe we have a very strong healthy deer herd and the landowners are taking care of them. You need to keep the season structure the same as it always has been. We do not need a 16 day gun season and we do not need a Holiday hunt. I'm not for crossbows but the crossbow hunters are taking a fair amount of deer. The gun hunter has a 9 day gun season, followed upon a 12 day muzzleloader season, then a 4 day doe hunt. I do not like the 4 day doe hunt but will give the hunter that takes off 9 nine days looking for a buck, and 12 days during the muzzleloader season for a buck. If the hunter does not harvest a buck during the two seasons he has the option for the 4 day doe hunt. I believe the 9 day gun season needs to stay along with the starting date with the Saturday before Thanksgiving. I believe we need to give the bucks a chance to breed the does and not push to a completely buck slaughter fest if you would move the season date or extend the seasons in anyways. I push you to keep the same season structure as the last couple seasons and we will very good deer herd, along with some very good hunting. I have a feeling the hunters that are complaining about the current deer hunting, do not put the time and effort and still wouldn't be able to harvest a deer if you gave them the 16 day season and the Holiday hunt and lucky if you would even find them in the woods at all.

---

Report Generated: Friday, May 01, 2020
We hunt in the Rosendale area. In the past 15 to 20 years there has been hundreds of acres purchased around us by the state and is now public hunting. That has reduced the deer numbers dramatically. We are now seeing that it is very hard to keep young hunters excited about the sport. We have private land that borders public land. Sometimes we like to go for a walk on the public but we can only shoot a buck because we have to specify public or private. What is the difference if someone has private land next to public and wants to harvest an antler-less deer. Last year we saw one buck during the 9 day gun season and not many does either. This year my 13 year old daughter said she doesn’t want to hunt anymore because it is too boring. 30 years ago I admit there was a deer problem in this area. Now there is a deer shortage. Some of the land owners took it upon themselves not to shoot antler-less because the public lands take care them. Not saying that is right either. I feel that in our area if you archery and gun hunt you should only get to harvest one antler-less deer between the two. Just for a little while until the numbers can come back to spark interest in the young hunters. 

In regards to the public land, now that there are no back tags it is a lot harder not to confront trespassers. We have a lot of issues with this. It would be really nice to have back tags and deer registration again.

Allowing hunters young and old to buy and use crossbows was a great way to get average hunters into the woods and allow younger and weaker hunters to harvest a deer in a clean way. Taking this away would be a huge setback in our area and should be avoided at all costs. I know of several kids that could not draw a 40 lb bow but were able to harvest a deer with a crossbow and parent. Getting the younger generation into hunting is the MOST important thing for our state’s conservation of whitetail deer. Also, countless hunters are not able to practice and use regular bows with the amount of time they spend at work, with their families, and with other hobbies. Using a crossbow gives the majority of hunters another option to successfully and cleanly harvest an animal. Please keep these factors along with the fact that crossbow owners have spent $250-$2,500 on crossbow setups. Taking this away after allowing it will surely cause issues and will drive hunters away from the hunt. Gun and bow hunters that are complaining are not considering all factors. I encourage the DNR to consider the younger and busy hunter demographics before making any changes to the crossbow rules. If you have to change something then move up or extend the gun season to overlap with the rut or pre-rut when large mature buck are active. Please be very careful with what changes you make.

Over the past few years the deer population and health has been improving in my area. I think that is accredited to better regulations on population management and hunters being better educated to properly manage their own properties. As an avid bow hunter, I feel there are too many hunts that interrupt the bows season such as youth hunts, antlerless hunts, and holiday hunts. Specifically the timing of those hunts is what makes it tough. I would rather see an extended gun season of consecutive days vs. random specialty hunts throughout the bow season. This would help increase harvest numbers without interrupting the bow season. Another thing that would help me manage the herd on my property would be to extend the archery season to the end of January. I primarily hunt for mature bucks throughout the season and then during the late season (Dec. & Jan) I evaluate the herd for proper doe to buck ratio, and if needed, that's when I attempt to harvest a doe. I feel that waiting until late season gives me the proper amount of time to evaluate the herd’s health and population throughout all phases of the hunting season. By extending the archery season to the end of January it would give me more time to properly manage the herd on my property if needed.
Hello! Let me begin by stating that I have hunted the same property for over 50 years, this included every day of waterfowl and deer up to early December in the past 3 years. One thing that needs to be addressed is the issue of continuous seasons within the single hunting year. I would like to see gaps from a closure to another opener. We need to let these animals settle down. The quality of the hunt overshadows the number of animals for me. Secondly, an element of the archery season needs to be adjusted. Specifically, the use of crossbows up to and during the rut. Today's crossbows are simply a powderless rifle, very much different from those even a few years ago. The thrill of archery is getting close and lethal, not launching an arrow 60 yards at the trophy buck, only to wound them. Also, as noted earlier, the pressure during the rut season has accelerated dramatically. I see the vehicle count increase from my cabin window, every morning and afternoon. Weekends has become a side show with camo heading by. Let's give these animals chance and make better hunters out of us. It's not just for the meat and the horns. Close crossbows after October 25th. Let's get this hunt back on track, contrary to popular belief, there is not a deer behind every bush. Thanks for listening!

My 16 year old son and myself bust our but hunting during the fall 80 hours a piece in the woods and lucky to see 3 deer in shooting range the whole time. Deer by us a very nocturnal the neighbors provide no hunting pressure to move deer, or other parcels no hunting activity. So seeing deer, poor, number of deer poor, if not for love of nature very depressing rate of success opportunities. Should have no antlerless harvest by us for 5 years. When I hear coworkers in other parts of the state say they saw 50 to 70 deer over their weekend hunt, I am amazed and upset. Why can't we have that here. When you drive by the old dump along HWY 41 in Winnebago CTY, and count 30 deer, how cool would that be. We also seem to have a coyote problem, every once in a while we find a healthy looking, fresh kill. The last one was the Saturday of Easter weekend. Last years fawn, survive the winter, started growing horns and freshly killed, another opportunity gone. As for FDL CTY, deer seem to be segregated in pockets, some places have many, and ours have less than 10 for a whole country block. So how can you regulate different sections of the county? Frustrated!!!

I think the deer numbers are going down statewide especially in fond du lac county. Every year I see fewer and fewer deer especially mature bucks. Last year’s data was a lot lower for deer harvest because of less hunters and less deer. I think extending the gun season would really hurt the deer population. From my observations opening weekend is when I see the most hunters. Extending the gun season will not increase interest in hunting in fact it may due more of the opposite. The rut with a bow is one of the most exciting weeks of the year. Taking this away from people for extra gun hunting does not sit well with many hunters I talked with. I oppose the earn a buck as well because the one time a nice buck comes walking buy the hunter can't shoot it unless he has harvested a doe. Again, taking away hunting opportunities of harvest. In addition, the harvest authorization system that wisconsin uses needs some changes. It is solely based on the honor system. I think a lot of deer get shot and not reported which really affects the numbers.

I would like to see both gun and bow deer hunting season moved up 1 week. Starting off with bow/crossbow. This would allow gun hunters a chance to hunt the rut. Also starting off with the bow season still keeps the woods calm before the storm of guns. I also feel that during gun deer hunting season bows/ and crossbows should be allowed. Continue with blaze orange and let it be the hunters choice for weapon. All deer hunting should end by January 1st. Deer have been bred and are looking to heard up for safety. The longer the woods are disturbed the more chances of the deer succumbing to predators. Another personal opinion is do not take crossbows away during bow season. I rely on using a crossbow and without it I would not be physically able to pull back a regular bow and that would limit me to only be able to gun hunt in which would take away a tag for the freezer. I rely on hunting to provide for my family. Another great idea is too allow gun season throughout all zones to have at least 1 bonus antlerless tag included.
I realize/understand that the 2019 deer season was very unique. We had a lot for rain, a lot of bad weather preventing farmers from harvesting corn. A lot of areas underwater or to wet to access as in previous years. But the fact of the matter is, the 2018 season also saw less deer, both bucks and does. Please stop handing out Authorization Tags like its candy on Halloween. There are way to many tags being authorized which allows the hunters to think they need to fill every single one they can get there hands on. The hunters also need to be educated on this situation as well, just because tags are readily available doesn't mean you need to overkill the population. One last thing, fees for out-of-state hunters needs to be raised to match surrounding states. There is absolutely no reason that you cannot raise these fees. Compare Illinois, Minnesota and Michigan license fees for out-of-state hunters to their in-state hunters and then look at Wisconsin. Those fees need to be put more inline like theirs are.

Everyone is complaining about seeing less deer this last year. It was not because of late season or snowy weather. It was all the rain in spring had lots of areas flooded that deer use for cover. Its been getting wetter the last 3 years. This changes deer patterns to move and home range. I think deer count is down some but having a 16 day deer season, and earlier start will destroy what deer herd is left. Gun hunters drive every piece of woods over and over. And their attitude is if its brown its down. How many deer would be left if they hunted the main rut. That said the rut was still on during gun hunt this last year. I saw bucks still chasing. I think the drive groups are getting so large, lots of people give up worrying they will get shot. Would you feel safe with your child with slug slingers out there shooting at everything that moves. Stop giving out more then one antlers tag per license.

When it comes to crop damage the raccoons do 90 percent of the damage and the deer take the blame and the farmers don’t care they want the money so blame it on the deer and get more money. I’m a bow and gun hunter I’m a good hunter and when I don’t see very little to no deer bow hunting I feel the population is to low near devastation in the public hunting grounds. I feel the dnr has made a grave mistake by getting rid of in person registering deer and back tags I feel violating has gone way up giving false info on deer kill as the low numbers show on registration I feel the youth and handicap hunts put more pressure on deer to put them in a nocturnal state so deer don’t move until very late hours too many hunts. So in conclusion I’m a very dissatisfied hunter that is seriously thinking about quitting hunting in the state it’s becoming not enjoyable not seeing’s deer do to the very low numbers.

My answers to some of the questions may be different if bow vs. crossbow hunting were broken apart. I understand that those questions were posed in a different DNR survey, though it did influence some of my thoughts. I also think that amendments to the current crossbow regulations would directly impact the population. Many hunters use the crossbow option to "extend the length of their gun hunt." This is based on the ease of function as well as the distance they are able to shoot. Please note that I did NOT say effectively shoot. I have heard of several hunters who have taken crossbow shots in excess of 50-75 yards. At least one local cited a ±100 yard shot. This is propagated by misleading marketing campaigns that illustrate tight patterns at long distances. We can agree that stationary targets under perfect conditions are dramatically different than those existent in the field.

I am a very avid hunter who grew up hunting public land. Now that I have 2 sons and a wife that hunt we choose to lease private land since we like to harvest 5 deer amongst all of us for meat. I feel this would never be possible on public land since the number of deer aren't there. My public land hunting decreased after the crossbow use was allowed since the amount of bow hunters there increased greatly. When woods are filled with less skilled hunters deer get educated much faster therefore deer turn nocturnal so they can't be killed then. Holiday hunts ruined my family's interest in spending school vacation hunting. With multiple opportunities to harvest does already it takes away chance for us to fill unused buck tags. We since go to upper Michigan during this time. Public lands are so pressured during rest of seasons anyways deer don't move during light anyways.
I am a landowner in Fond du Lac county. The last two years I have seen an increase in does and deer browse among my fields and woods. As I have planted many trees, the deer seem to eat them as fast as I put them in. It is not within my means to fence the areas of planting so I just continue on. I would not want to see the population expand over what it is now. We see anywhere from twenty doe a day to 150. I am sure of some repeated sightings. I am in the process of entering crep to help water quality and wildlife cover after the tornado of 2018. We had a lot of damage in one of our woods and it will take a few years to clean up and replace some trees. Also, ash, elm, and oak trees need to be replaced as I do not want to lose the woods for habitat. The numbers of deer we hold are fine as long as they do not explode.

I saw less deer this year and I hunt pretty good private land. I am not worried about it because of multiple factors. 1. Standing corn 2. VERY wet year(I hunt a swamp so the deer weren’t in there because walking was easier elsewhere) 3. Late gun season 4. The DNR has been promoting people to do QDM for years and I’ve noticed that becoming a big trend. I am included in that category. I see some deer every time I go out and I like it that way. People are holding back on the trigger to promote good deer hunting for years to come. I do not believe this raises concern for deer harvest. I don’t believe that making more doe seasons will help anything. There is 9 days to harvest a doe if you please, let alone the archery season. I don’t support any of the antlerless only seasons. I want Wisconsin to be that big buck, QDM state. It takes time but is well worth it.

Increasing the amount of public tags is a poor decision. The only reason they sell out is because the bonus permits are typically bought by the private land owners so they don’t have to shoot does on their own property. This is not an over reaction. I know a lot of private lands owners in the county and about 80% I know do this. Then on top of that you can see the large difference between harvest number between private and public and you want to try to increase the harvest on public?????? Issuing more tags to properties that have fewer deer is backwards. The quality of hunting on public land in Fond du lac continues to decrease year after year and still nothing is ever done to help improve it. Lets continue to cater to the private land owners and let us blue collar group who cant purchase our own land continue to suffer.

my personal opinion shut antlerless seasons down statewide over all forms of hunting seasons keeping it buck only for few years, till bring back the deer herds like it used to be! get rid of youth hunts cause the fathers shoot the deer anyways, then after few years introduce hunters choice like it used to be, kids under 18 automatically get hunters choice and a limited drawing. we dont need all these seasons all we are doing is thinning the herd with all these ridiculous tags and seasons, ive hunted the same woods since i was a young boy, was never hard to see 20+ deer any given day, now im lucky if i see a deer at all, Wisconsin deer management is very poor in my opinion hunters dont need 4+ deer a year, thats why we are in the situation we are in

There was a recommendation to shorten the archery season to October only and open to gun season earlier to allow gun hunters more time during the rut. I think this is a very bad idea. from the info on the video, twice as many deer were taken during the gun season then the archery season. I hunt with a crossbow and though there bows that can reach out to 100 yards, most are maxed at 40 - 50 yards. Granted the deer kill was down for the gun season last year for many obvious reasons. Lots of standing corn, latest season possible, bad weather, and lots of water in the marches, but that is no reason to revamp the total season. Granted, the gun season brings in a lot of money for the state and local economy, but so does the archery season. Thank you.

Due to very limited public areas to hunt in Fond du Lac County the majority of the herd control has to be done on private property. I feel that there is a reluctance of property owners to harvest antlerless deer on their property. A lot of pressure on public properties. Might have to consider an antlerless only/earn a buck season to control the herd in the near future. Need more of the public involved with CDAC to under stand process and herd control efforts. Not many people even know what CDAC s do as a required task. A longer gun season starting on the weekend nearest November 15th. would also be an asset to hunters in the field. I do not see an issue with the use of crossbows in the state by everyone.
Hi well i like the dnr take in consideration in the crossbow season. There r alot of people using crossbows now and I know the percentage went through the roof and the dnr can't deny that. That shows that there r more hunters in the woods now. I like to see elementate the 4 day antlerless hunt and holiday hunt and bring back the registration process back its only fair for hunters. I don't mind if the dnr extend gun season for a full 2wks and eliminate muzzle loading season or let the gun season pick their own weapon. But allow crossbow hunters must issue a gun license for gun season only. Well i thank you for letting me give my input. I pray that the dnr really takes people's input into consideration.

I like the Holiday Hunt, (go to a neighboring county) and also the January season, which is a great time, weather related to take a nice buck with the bow. Bucks in this area, drop horns much later, but even so, if they did, they are easy to distinguish. Only hard core hunts in January, but man I have shot some great bucks than, in neighboring county. I would rather hunt, than ice fish. Please have some explain to me, what is wrong with the January hunt? I get on property, I normally can not get on, during the rut, but the landowners are very receptive to January hunting...... Thanks for all the work you do

I understand how important maintaining a healthy deer herd is to this area as I have hunted here all my life. There were two major impacts on the local deer herd... First was the implementation of earn a buck, increasing the herd with larger bucks, definitely a plus ! Second was the logging that took place on public land, that practice moved the deer out, reduced their habitat and in many cases made the area inaccessible, it was the waste that was left behind and the lac of cover from logging that makes these areas less desirable to the deer and almost impossible to hunt, not to mention removing a deer that might be harvested from those areas.

After 40 years of deer hunting in Fond du Lac county, I've seen a lot of transformation to the habitat. The tornadoes that cut through our hunting property 2 years ago was the most significant transformation, but the loss of mature ash trees has also been significant. Thankfully, the surrounding habitat has been maintained or even improved so the deer herd remains strong & healthy in our area. The greatest concern I have is the spread of CWD & I don't think I'm alone. Although Fond du Lac county remains free of CWD, the number of CWD cases statewide continues to increase and the CWD area continues to grow ever closer to Fond du Lac county.

if the focus from what I'm understanding is to manage the deer heard properly why is there never a consideration of the antlered deer? Going to a 4 points on one side or in general getting some age structure to the deer heard. In the last ten years I have seen the average deer age go down and pressure go up especially with the new cross bow season. I understand that some areas have over population but that is normally because of private land owners deciding not to shoot antlerless deer. but over all I beleive the deer heard could use more age structure and that could help create a healthier and more diverse heard like everyone wants.

I disagree with the decision made several years ago to allow rifles for hunting in this unit. Ever since that has happened I've noticed a major decline in the number of deer and the quality of the bucks. I practice quality deer management where I hunt, but have still noticed a decline in the size and age class of bucks. I would like to see this go back to shotgun only or see an age class/antler restriction placed on the bucks being harvested in an effort to allow more bucks to reach a mature age and develop their full potential in body and antler size. Thank you for taking my comments into consideration.

I believe the backtags need to bring back backtags. Legal. legal. i think and I know of licenses not being bought. Not really having an opinion on whether felons can hunt. This really opens the door. I know every year in the past felons were caught hunting or purchasing licenses. i being an individual that hunted deer and bear in the past was shocked by the fact the don't register deer....I think we need to bring back tags to attach.. I really believe it would raise the registration numbers.

<tr>
<td>3537</td>
<td>When I first started hunting I would see deer every time I went out this was 20 years ago and that what got me so interested in deer hunting, now when I go out I’m lucky if I see deer for every 5 times that I go I tried taking my nephew hunting a few years ago never even seen one so now he doesn’t go anymore and now I have kids of my own that I would love to get into hunting when there old enough but the only way to keep any kid interested is to see them and that not happening so my point is we need to get the deer herd back up to what it used to be so that are youth hunters will keep going.</td>
</tr>
<tr>
<td>3538</td>
<td>In my opinion one of the biggest hurdles we as a deer hunting community face is stopping the hunter vs hunter mentality. Crossbow banned or allowed, what does it matter, we are all deer hunters. Use whatever legal weapon you want. Trophy deer hunting is the only way to go. Says who? Why can’t we let someone be happy and celebrate their 6 pointer if that is what makes them happy. There are plenty of deer in the area I hunt to keep everyone happy. We hunters need to pull together, not against one another. Thank you for allowing me an opportunity to express my opinion.</td>
</tr>
<tr>
<td>3539</td>
<td>I think the area has done pretty good with deer. I see more deer now it seems even though that might be because I’m a better hunter now. One thing I am slightly concerned for is that I see very many does but very few bucks. I’d like to see the youth hunt in October done away with personally. I am happy that I see the warden checking more on people. Would be nice to get some more property open to hunting but I suppose everyone does. Not sure if it ever comes up but I wouldn’t mind seeing one buck tag per person regardless of weapon to get the buck population up.</td>
</tr>
<tr>
<td>3540</td>
<td>Your question in regards to being crowed or how busy were the woods, did not ask about bow hunting or gun season. Bow hunting was not nearly as crowed as gun season. And gun season was VERY VERY crowed on opening weekend and slowed down greatly after that. I logged 19 days either bow or gun hunting last year. Some sits were only 2 hours most were about 6 hours and 4 of them were ALL day sits. I have several stands on the FDL/ Sheboygan county line. I am very particular about my sent and wind directions. I did not see very many deer the last several years!</td>
</tr>
<tr>
<td>3541</td>
<td>go back to getting a doe tag every other year .. seen more deer when this was the case was fun and good hunting than on public land maily the kettle moraine forest.. hunted evey year there mostly and hardly see any deer nowadays.. you only see them crossing the roads at nite.. the deer scatter to private lands not being hunted or very little and it goes to say theres too many deer.. what happened to seeing 6 to 10 deer in groups?? during hunting season now if you see a deer its a miracle let alone be able to harvest one.. see more people than I see deer</td>
</tr>
<tr>
<td>3542</td>
<td>Leave the crossbow season alone. The only way my daughter hunts deer is with a crossbow. She does not like firearms and will not hunt with them. If the season gets changed or altered my daughter and I will not hunt at all. I also believe that by not allowing baiting affects the amount of deer seen or harvested. My daughter, wife or I did not harvest a deer for that reason I truly believe. I feel you have the right to ban batting on public land but with a set limit it should be allowed on private. You will see a increased harvest like in the past.</td>
</tr>
<tr>
<td>3543</td>
<td>I would just like to inform you that u have no data on the number of fawns that the farmers put through their hay bines in spring. They take the first crop just when the does r dropping their fawns. Those new machines go so fast u almost have to run to keep up. No match 4 a fawn. My neighbor who is a feed harvester says u don’t even notice when they go through the machine. He thinks they get about 3 a year. That's only one farmer. I have 46 acres with some food plots and I really felt bad when I put a little fawn threw my brush hog last year.</td>
</tr>
<tr>
<td>3544</td>
<td>Bring back earn a buck. We have way too many antlerless deer in my specific block that I own 35 acres in. While I try to do my part in harvesting enough does on my land, a majority of the landowners in my block are old school and uneducated on the importance of harvesting doe’s and refuse to do so. We seen the biggest and most bucks in our area when it used to be earn a buck. Their problem is that they think more doe’s equals more bucks but the effect is actually opposite of that which has definitely been the case the last handful of years.</td>
</tr>

</table>
I would like to see a 3 or 4 point rule on 1 antler for bucks. I heard some states did this and their buck quality went up, while doe numbers went down. As a hunter, seeing bigger bucks and more of them would make hunting more exciting. If deer numbers get too high, have more doe tags. I talked with hunters from Arkansas and this worked well for them. At first, some guys didn't like it, but the 2nd year, the bucks were bigger and the doe to buck ratio was better. After adjusting to this new rule, the hunters seemed very happy.

Wisconsin needs to consider 1 buck a year any method of take. if a person shoots a buck before the long time traditional 9 day gun hunt with a bow or crossbow in any unit that person should not be able to harvest another buck. LEAVE THE 9 DAY SEASON ALONE!!!!!!!!!!!!!!!!!!!! ALSO LEARN FROM YOUR MISTAKES YEARS BACK YOU THE DNR RUINED COUNTIES AND DEER CAMPS BY GIVING OUT WAY TO MANY ANTLERLESS TAGS JUNEAU CO.ADAMS CO.THE LIST GOES ON AND ON. Thank you for allowing me to express my opinion as my passion is the outdoors.

The real problem with the deer herd in Fond du Lac county is you have hot spots on private land where over browsing is a problem, due to the amount of deer on this certain property. The only way to get a crack at these deer is when they travel to a food source, or breeding. Solve this problem and you will be able to manage the deer herd in the county. I live in Oakfield, and know two places within 3 miles of Oakfield, that are just such places. Too many deer in one area, and very little in areas surrounding.

I feel last year deer hunting was the worst I ever had in 42 years of hunting. Number of hunters was down and deer were not seen. I saw deer prior to gun season but saw only 1 deer in 9 full days of hunting. I feel that if this continues I will not deer hunt anymore, I can buy beef much cheaper. The Hurd numbers and hunters are both on the decline. Too much regulation and lack of interest by people. Lower the price of the licenses the Dnr is ruining our families tradition. I am very disappointed!!!!!

I do not think the deer gun season should be extended. I think the holiday season is putting too much pressure on the deer population and extending the crossbow and bow season to Jan.31 is not a good idea. I think there are already too many deer seasons now. They interfere with other hunting pheasant, Duck, Turkey, and other upland bird hunting. I can only hunt public land and I try not to interfere with other hunters. With the seasons running the way they run now it has become more difficult.

With the high ratio of antlerless deer shot on private land and the few shot on public land doesn’t that indicate there is a imbalance with the number of deer available on public land I feel the antlerless deer harvest should be lowered on public land and harvest raised on private. I understand that carrying capacity on private land pushes some deer on public, from looking at the stats it is a three to one ratio public versus private, what is the ratio of hunter on private land versus public? Thanks

We over work the hunting season year after year. Farmer with crop damage can do something about that. DNR land has a certain amount of people that over hunt everything. They also do not stay on the DNR land. Very unfortunate. If you are a land owner next door. Keep the rules simple so everyone can be on the same page. The game we hunt are the first losers in all this. Next it is the hunters and land owners giving up interest and finally the DNR will be out of money. Keep it simple.

I live in FDL county and there is a lot of does running around I mean a lot. If you want to make the gun deer hunters happy you should not open the archery season up for bucks till the gun season let them bow hunters shoot all the does they want then then the gun hunters will have more of a chance to shoot a nice buck the bow hunters are running it for the gun hunters. I guarantee if you do that you will sell a million more gun deer licence.

It seems to me that managing the deer population must be pretty difficult. There are so many large blocks of land privately owned today. I know on many of these large blocks there are only a couple people hunting and they take extra precaution not to move deer. So when pressure starts deer know where to go and be safe. With the price of hunting land today I don’t blame land owners for doing this. There just isn’t pressure to move deer today.
I believe it would be beneficial to extend the archery season through the end of January in this unit due to the fact that most of the ideal late season hunting conditions do not occur until the month of January, and gives bow hunters more of a chance after gun season. By the time firearm season ends, there is little to no time for archery hunters to have any kind of late season hunting with the holidays affecting this time period as well.

I feel the CDAC of Fond du Lac county is doing a good job. In listening to their meeting I felt they covered the major concerns in our county and I agree with their recommendations. Also the DNR is doing a good job with involving the hunters. I do not favor a longer gun season, I would like to see all deer hunting stopped the 5 days before gun, like it used to be. I feel this would improve the beginning of the gun season.

I would like to be able to put out some type of feed again. My wife and me miss watching the deer travel through our back yard. Also I have permission to hunt the field in my back yard also. This would give me a opportunity to do this and wouldn't necessarily need to hunt the public down the road. I also feel we shouldn't haft to choose between public or private land for the opportunity to harvest a antler less deer.

I did not see a single deer while hunting in this unit in 2019, including take my first time hunters safety regulated son with me deer hunting. The deer population needs to grow, the antlerless population needs to be protected. The next generation of hunter loses interest quickly the way it is, if they don’t see any deer, and have zero chance at a harvest, there will be no future generation of hunters.

I am concerned we are destroying our deer herd. Why are we cutting and clear cutting public hunting grounds? Why do we not increase non-resident license fees? If we are going to continue to offer bonus tags, why don't we increase the cost to $20? Why do we offer so many extra tags with original purchase? Have people buy them. This will provide your salary every year.

Recommend longer and earlier gun deer season. Possibly 3 weeks long during the earlier parts of November to allow gun hunters increased opportunity to harvest mature bucks and increased opportunity for more enjoyable hunt. Recommend data be collected to age bucks by harvest weapon type. This data will determine probability of mature buck harvest by weapon type.

I think the population in this area is doing very well. I can drive right down the road from my house and see dozens and dozens of deer in the fields. I believe what you guys are doing is very good. I do believe earn a buck would be a great program for awhile. Then I believe we would have a very healthy herd of bucks in our state. Thanks for all you do!

Crossbow hunting should be limited to the people that can not otherwise get out and hunt during the bow season. For example disabled people should be the only ones that are allowed to have crossbows. No more late season gun hunts or a reflex hunting after the 9 day gun hunt just leave it as late season bow hunting (vertical bow only) and that’s all.

The deer population is declined over the years, if we back off on the anterless permits & let the numbers increase we the hunters that pay license fees would benifit & see more opportunity to shoot something rather then a tail flash once or twice in the 9 day season. We could also cut back on dangers of so many deer drives

I would really like to see the holiday hunt and extended archery season held for increased harvest and recreational opportunity. I would also like to see the October antlerless season returned as a management tool and for additional recreational opportunity. Please increase the number of free antlerless tags too.

I feel that 2019 gun season was very late this year and due to that, the number of bucks that were killed and sightings of bucks were down. The people who think it was due to cross bows are completely off base. The Rut was 90 % over and this was the main reason for the lower numbers. Thank you for your time!

At one time I heard some discussion around extending the length of the 9-day gun season. I am not in favor of an extension if this turns into an option for consideration. Between the Bow, Gun and Muzzleloader seasons, we have plenty of opportunities to harvest deer under the current season structures.
I don't see a thing during gun hunt season, season should start earlier by 2 weeks and go to end of current gun season, tag should be limited to one trophy and one doe or buck, this would give DNR the numbers and better turn out for hunting then it should stop to provide accessability for snowmobile clubs.

Would like to see the crossbow season extended. I would like the crossbow season to follow both bow and gun including muzzle loader because while generally more accurate than a recurve and about as accurate as a compound bow the crossbow takes much more time to load than a recurve or compound.

I would like to see Fond du Lac County removed from a Rifle gun season. Go back to shotgun and then the antlerless quotas would be fine. The amount of quality deer has gone down because of the use of a rifle and I feel it has changed the entire landscape of hunting in my area.

I primarily crossbow hunt public land, and absolutely love it. I hope the season is left alone. I also believe our out of state licensing price be raised. I have not noticed a drop or gain in the population in my area, which I believe is a good thing.

Hunting private can be good in FDL co, public is way over harvested ..zero antleress tags for all public!! People want to see deer... you the DNR want more hunters it's pretty simple put a better product out there.

I'm overall unhappy with the number of deer compared to 15 years ago. We had a great deer population and I'm not sure why so many tags have been given out since. Even after the deer numbers were down the tag numbers were still up.

I have a problem with having the antler less tags being private and public. If the DNR wants to get rid of the deer the antlerless tags should be used for public and private lands. Not a separate tag for each. Like they used to be.

I don't support extending the season until January 31, or a holiday hunt. Why do we keep wanting to extent gun seasons / By extending the seasons and making it harder on deer what kind of effects does this have on pregnant doe ?

have the DNR get rid of the county tags and go back to zone tags also get rid of the private and public tags the hunter can fill in when the register this gets expensive when you live on bordering county's and zones

Xbow season needs to be adjusted, it is just too long. I would lie to see in person registration, and traditional tags brought back for the 9 day gun season, I feel this might help get more accurate kill numbers.

leaves the seasons as they have been for years.dont start fooling with the crossbow season.it is fine just as it is. you guys do a fine job dont screw it up because of special interests or politicians.thank-you.

Quit playing the game of bonus tags, if you want the deer to get taken give away the tags. We are not losing hunters due to interest, we are losing them to the DNR playing games with our wildlife to make money.

Still having issues with to many deer browsing the trees in my plantation. Unable to get them above 3 feet. This issue will need to be addressed, as the browsing is also heavy in the wooded land.

Need to find a way to reduce deer numbers in “havens” near suburban areas be they public or private. These are the areas that seem to cause the most problems with nuisance deer and car/deer incidents.

I opposed the 19 day gun season, unless only one buck permit is issued per person to use for archery OR gun. I have hunted in other states with the 19 day gun season and they are draw only buck tags.

Return to the DNR deer sticker/carcass tag With on site registration areas TOO much illegal taking/poaching of deer Online registration promotes illegal over harvest and its to easy to get away with

Do not extend the normal 9 day gun season to 19 days. Leave the gun season to how it has been set up in years past. Also, we do not need "rest days" for deer the few days leading up to gun season.

Should also take into consideration with fawn mortality farming equipment. I myself run at least 4 through the haybine a year.Just think how many others get killed by haybines from other farmers.
Go back to registering deer in person, and possibly back tags. Too many problems with the registering now. Stay with the traditional 9 day gun season, and eliminate youth hunts, holiday hunts.

I saw just as many bucks as doe this past year if not more buck than doe. To me it seems like doe numbers and deer numbers in general are low for the area I hunt in Fond du Lac County.

Just too many rude people in the northern kettle moraine state forest....2019 is going to be the last time I hunt there during gun season. Used to be a joy to be there.... not anymore.

Although I did not see many deer during the gun deer season, I know they plenty around. The amount of crops still on the landscape was a big contributor to not seeing those deer.

The seasons are long enough anyone who wants a deer has plenty of time to get out. the population is down allot from what they were at a few years ago so let’s not over harvest.

Over the past few years there has been a noticeable increase in the amount of coyotes / wolves. Would like to a closer look at numbers and plans on how to address them.

Go back to a 4 person party permit for the does and make Wisconsin deer hunting great again!! Hasn’t been great for many years now, way to many does being killed!

The practice of allowing hunters to drive deer from public land onto private land where they are shot should be outlawed.

Ever since they went to using rifles in this unit the deer population went down allot poor things dont stand a chance.

I support the present by county system and the work done by the DNR and thank both for the ability to supply input.

The public private choice is great it keeps private land owners from over hunting public land.

Should just keep it like it was for the last year except for holiday hunts do away with them.

Fond du Lac County is being managed well with the current hunting structure. Thanks!

Go back to only buck with a hunters choice permit. Deer population is way down.

To early for youth hunt and muzzle loaders should have to more for deer hunting.

Keep the seasons the same as last year. The new proposal is an abosolute joke

to damn many coyotes recomend bounty on the coyotes to thin them down

Overall satisfied with the structure, would oppose longer gun seasons

Concerns on ag tags issued in area where there are cafo operations

A few more bonus tags and/or 2 antlerless tags with each license!

Also strongly oppose any changes to the 9-day gun deer season

I would like to see minimum antler size/width requirements.

Return Crossbow hunting to the disabled and over 65 only!

Keep the hunting season like you did for 2019.

Need to push youth hunts to end of seasons.

Opposed to extending the 9 day gun season

I feel like the dnr does a great job!

1 deer per youth hunter limit
3612  Shut the deer farms down
3613  Keep up the good work
Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 145
   - I visit this unit for non-hunting purposes: 213
   - I hunt in this unit: 559
   - General interest in this unit: 104

   The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 539
   - Bow: 244
   - Crossbow: 181
   - Muzzleloader: 127

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 25.83
   - Maximum: 73

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 102
   - Mostly Private Land: 48
   - Public and Private Land About Equally: 125
   - Mostly Public Land: 93
   - Exclusively Public Land: 183
   - I did not hunt in this unit last year: 8

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 18
   - Not too crowded: 73
   - Neither crowded nor un-crowded: 74
   - Somewhat crowded: 116
   - Very crowded: 162
   - Not applicable: 6

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 187
   - Fewer: 207
   - Same: 130
   - More: 55
   - Many More: 13
   - Unsure: 9

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...  
Implement an ANTLERLESS HOLIDAY HUNT:  
Not applicable in this DMU

If a Holiday Hunt is held in a Farmland unit...  
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021:  
Not applicable in this DMU

If the Population Objective is not "Increase"...  
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons:  
Not applicable in this DMU

If a Zero Quota (buck only season) is adopted...  
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?  
VALID 318 NOT VALID 43  
Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?  
Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

First of all I'd like to start out saying, I scout whitetails 8 months out of the year, I run a good amount of trail cams throughout the county and I hunt about 3 months out of the year very hard. It's hard to have success here if you are looking for a decent buck. But being out there all the time I am able to see what's going on. I hunt all public land, county, state and federal. Historically this area has been one of the worst areas in the state to harvest a mature buck sporting some decent head gear. This is due to lack of nutrition, severe winters, predation and just overall stress. I think we should be the first county in this state to set the bar and pass a 3 pt on one side antler restriction. Not to grow trophy bucks but to protect spikes and forks so they have a chance to go through the cycles of life and maybe they will have a chance to mature more. Seems like non resident hunters and hunters from southern WI come here and harvest the spikes and forks way to often. We do not have a quality herd because of this. People like seeing a nice buck, it brings business to the area, and when one is harvested the business continues onto the taxidermists, maybe the butcher shops. If muskie fisherman can get a 50" size limit why can't we get something to help deer in the whitetail capitol of the world? We should try it, what's it going to hurt? People will have more success and they will be happy. This should be an option and many of us would like to see this. Otherwise we would like to see one buck per hunter a year. We are losing hunters not because they aren't seeing deer, because they aren't seeing any decent bucks. I also would like to mention that my trail cameras do show the wolf population increasing every year. I also pay attention to the winter severity and this winter we are at a very severe number already for stations in Forest county. So there should be no antler less tags issued for public land after any severe winters. I believe it should be lowered for private land as well after severe winters but there are areas near cities and towns where the doe numbers could be maintained. The extended rifle season will hurt our fragile deer herd, and the continuation of crossbows for anyone all archery season is really having an impact on the buck population, I do not agree with either. We need to have a crossbow season and stay with the traditional rifle and muzzleloader season. If people are in the woods with rifles at the tail end of the rut it will be devastating to our buck population, they are like sitting ducks. One way we could make things a lot easier is change the way the seasons begin. This is a suggestion for the whole state. There are years we hear how the season started to late like 2019 so that lowers the harvest of bucks. There is a simple fix, make rifle season open on the same date every year like MI. This is my idea on season structure and I believe it would improve our state and simplify everything; Archery Season - Sep. 15th-Jan. 15th statewide continues Crossbow Season - Nov. 15th-Dec. 15th statewide continues Rifle Season - Nov. 20th-Nov. 30th statewide, weapon of choice Muzzleloader Season - Dec. 1st-Dec. 10th statewide No extended archery hunts, no holiday hunts, no youth hunts, let the counties control their herds as needed. Let's make this the greatest state to hunt whitetails because right now we are falling off the map, losing business and losing hunters.
Forest County (County) has always been mainly impacted by the WSI, bear predation & hunting. In the half century I've hunted in the County the WSI I believe to have had the greatest impact on deer populations and which we can do nothing about except manage accordingly. The bear population in the County has always been high and game managers could easily and should reduce the bear populations to increase the deer population. My greatest concern is the efficiency of the archery/crossbow equipment and the length and timing of the archery/crossbow seasons and associated registration regulations. Because of the efficiency of the equipment, the seasons are far too long and when coupled with archery losses (wounding mortality) the harvest does not accurately depict a complete deer mortality picture. Shorten these seasons. Furthermore consideration must be given to harvest registrations & tagging. We need to go back to a system which requires immediate tagging and in person registration. The seasons are too long for human nature to not be tempted to violate. Paper tags are ridiculous. A one time use clip on tag is the best. Another issue that absolutely should be addressed is the firearm season opening date. Any reasonably rational person that is familiar with the County climate understands that the gun season should start on November 15th no matter the day of the week that it falls on and end on December 1st. Michigan does this and Minnesota opens even earlier. This would still include the Thanksgiving week. Finally deer baiting should be banned state wide permanently and at a minimum all existing and new game farms should be required to double fence and if cwd is found on site the farm should be closed permanently and all animals disposed of at the owners cost. CWD is coming to the County deer herd and if some drastic measures aren't implemented our children will be the last generation to hunt as we all have. Thank you for allowing me this opportunity to comment and I thank you all for your hard work in addressing the difficult decision ahead that will protect this great natural resource. Please forward these comments on to all appropriate parties that have the authority to address my concerns.

The deer herd hang and gang around towns and villages, highway right-of-ways (grass in ditches in spring) and lakes where people have bird feeders all winter and spread out somewhat in spring to fawn.. they don’t venture to far out in forest due to predators and bring there fawns close in to human populations (ASAP) for protection where there are few to no predators to raise fawns and teach them the deer trails to follow to survive in the Northwoods.. I know if there is open cropland, populated town or area (plants floral landscape in yards)lake with cabins (birdfeeders etc.) there will be a family group or small-herd of deer on private property, zilch to zero on public forestland.. its sad and at one time it was reversed. 1980’s thru 1995 was AWESOME! pass young bucks til the big buck came in sight, Than 2 T-zones, 94 and 96.. after that slaughter, the predators and “brown is down hunters” who had to shoot a deer and tigh it on the trailer or car to take back south kept up with fawn recruitment and our northern forest deer herd has been suffering ever sense.. there are islands of deer out there in the forest around some natural food sources. Oaks for one but are struggling to hold on. A lot of yearling bucks I call freezer bucks are shot by us to fill freezers because a doe in the Northwoods is priceless right now.. so we have a ratio of 1-1 doe/buck and some areas fewer deer Period.. the trophy hunting is tough up here but I still try to shoot spikes and let the branced antlered yearlings walk over the ridge and hope they all don’t get shot..maybe I’ll get a Rack buck next season because of that practice, between all four seasons I still find one freezer buck and that’s what my hunting season and buck hunting Heritage has evolved too.. still, my children and family all enjoy and can’t wait for fall and autumn hunting season to arrive!! (we look for all wildlife sign all year.. the way of the woodsman) Partridge are suffering as well... to many (Wolf/coyote/bear/cars that kill deer) bears and bobcats, cars kill a lot of fawns every year... and fishers /coon/ skunks kill our ground nesting song birds/woodcock/grouse.. there you have the truth!! Way to many Predators period.. and a loss of hunting participants because of that and other cultural reasons..
**3617** Forest County in my opinion could be divided into two halves. The southern half and the northern half. I see incredible numbers of deer in the "southern" half compared to the heavily wooded, unpopulated "northern" half. I truly believe predation is a large factor in this. In the the last 3 years, I have personally seen more wolves than deer during the 9 day gun deer season. This is an issue. I also understand that they are Federally protected and out of state control. I also believe the lack of logging contributes greatly to the diminished deer herd/sightings. I understand the Headwaters Wilderness falls in this area and that unfortunately cannot be logged, but the surrounding areas have been neglected for decades. Old logging roads are completely unrecognizable. The wind sheer/tornado in the summer of 2000 also reeked havoc in a lot of areas. A lot of the woods in our area is untraversable. This issue is more controllable by us at a state level and truly needs to be addressed. I'm not advocating for all clearcuts to be done, but also selective cuts for they are quite effective for new growth. Hunting is dying in this part of the state. The economy suffers from it. Restaurants, gas stations, motels, etc. It's also terrible for hunter recruitment. My children have already expressed a distain for deer hunting due to the lack of deer numbers. This saddens me knowing what deer hunting in Northern Forest County used to be like. The feeling of "Christmas Morning" on opening day is gone and I fear forever will be in the eyes of our youth. There's still hope and things can change, but something seriously needs to be done about it. We have a chance to fix this and I will always have hope. I love this area too much to stop caring. Please help.

**3618** Every single year there's always a reason that the deer kill is down, and it's never just because the deer plain aren't here like they should be! It's always bad weather, to warm, to cold, it rained, it snowed, hunters got drunk the night before and things were a little foggy in the morning! Come on this has been on a decline for nearly 20 years. Go back to before t-zone and antlerless hunts every year, and there was a steady buck kill most every year, and people saw deer in numbers!!! Now most people you talk to including my entire hunting party, see less than 15 deer in an entire season each. 20 years ago I remember seeing that in a single sit at times. Wake up and smell the coffee. The deer population in Forest, and surrounding counties has been decimated, we need buck only for at least 5 years. Unfortunately we cannot control all of the deer taken by native Americans, and violators! And those are also all unaccounted for in your numbers too. And there's a lot of them! I hope that someday in the next 10 years Forest county can be something like it used to be, what been getting done in the 10-15 years isn't working. Hard to keep hunters into it, especially children, when you can spend countless hours at times and maybe see a deer! This is why tag sales are down, hunters are down, people are going elsewhere to hunt. There are way better places. Gotta pay for the tag, but at least you can see deer, and on public land! I've been doing that myself too! Because if your a trophy Hunter, you might as well almost completely count out Forest county. There's a few, but you might see one every 20 years. Everybody shoots every spike they see..... I hope things get better in this northern region, but it's gotta start soon... Thanks for your time Thanks for your time!

**3619** i have been in forest county my entire life , there is nothing more satisfying than seeing a deer when hunting the big woods , hunting is more about seeing than killing , seeing deer is what will attract are youth to the sport. i spend a lot of time in the woods year around always with deer on my mind. i hunt an area where a large timber company received doe tags that could be bought at the local convienence store. i witnessed drives being made and bucks being shot in December in areas that were not on the map but butted up to those lands , i was told these tags came about because of over browsing , which is the main problem , who makes that decision. a couple weeks ago i walked an area i hunted over all fall of 2019. it is an area that had a "70 year regen cut" basically is a hardwoods that looks like a clear cut , every morning i sat i saw a doe and fawn browse back and forth basically covering all the area i could see. as i walked it a couple weeks ago all the young growth was browsed heavy. my point is if a deer decision maker looked at it they would say there is too many deer we need more tags and the reality is i never seen more than the doe and fawn at one time not to say they were the only 2 deer , but i am saying a doe and fawn eat a lot. gun season amounted to 3 deer seen for the season , predation is high in forest county , i have been there my entire life and will always hunt there , the majority of the people i know see few to no deer , i never could understand how any doe tags could be supported in forest county.
We live between 2 deer farms, One in Forest County and the other in Marinette County, both of which have tested for CWD. We have seen a couple deer in our area that appear to have CWD and are no longer seen. This was last summer, in the middle of summer a does should be filled out nice looking, not with her pelvic bones protruding, and you could could her ribs, that is not normal. These deer farms SHOULD BE REQUIRED TO HAVE A DOUBLE FENCE, or use some preventative measure so that the wild deer and those enclosed in a pen do not contact one another. What gets me mad, we have to pay for their destruction of their herd, when CWD is present, that I DISAGREE WITH. If you cannot take protective measures, for the safety of the wild deer, why are you in business? And the thing is, we don’t know how this will affect the other animals around here. We have a number of buffalo farms, cow herds, etc. And seeing that one cannot use the land once a herd has been destroyed, because of the lax attitude of the deer farm owners, I think it is we have to pay for their laziness and being cheap on protection the wildlife. They should have never been ALLOWED, AND SINCE THEY ARE HERE, PROTECTIVE MEASURES SHOULD BE MANDATED TO PROTECT OUR WILD HERD. Politicians should keep their nose out of the DNR AREA, they don’t have a degrees, just patronage from donors to keep their farms open, and fight the DNR on regulations. I would close them all, save the WILDLIFE.

Im very confused and concerned about this presentation. I dont understand how this is even a recommendation. Im sure everyone involved hunts, but thats why this is puzzling. It is no surprise all deer harvest was down statewide. Why limit the amount of tags available? I saw WAY more deer. In person and cameras. Harvest wasnt down due to lack of deer, it was due to lack of oppurtunity. i.e. timing, distance, weather, etc etc. Not ONE hunter that I have talked to thinks herd numbers are down. All agree they are up. I also dont understand why bowhunters are taking a hit on harvest. If you think numbers are down, dont limit the bowhunters oppurtunities. Limit the gun hunters. Allow bowhunters to have access to tags. I saw at least 30 does during my time out bow hunting. I saw ZERO bucks. I only caught 3 or 4 on the camera at night. This is all done on private land. If you are going to start pulling tags, there is going to be a massive loss of revenue and interest in this activity. You need to come up with different ways of limiting if you find that necessary (which I HIGHLY disagree with) Allow antlerless tags, but only for bow OR gun. Limit more gun tags. Its already hard enough for bow hunters. Regardless of all this, I dont understand how CDAC or the DNR think the deer population is down...its as if no one is out in the woods at all. Making this a buck only zone is an absolutely TERRIBLE idea.

This unit has been low on deer for many years now. They should and have been ‘trying’ to increase the numbers for some time now. Without success. In fact, you failed miserably. And this is coming from someone that agrees with ‘lower’ deer numbers. I’m far from being a hunter that feels they need a ton of deer around, to the detriment of other things. So the fact that I’m not happy with the numbers really says something. If done right this unit would have had no problem getting up to and staying at a ‘maintain’ status seasons ago already. One of the main reasons for your failure is allowing Junior Antlerless Authorizations to be valid. Those deer, and the deer they could have birthed, etc. really add up. So that you are putting more emphasis on a few shooting does each year, while significantly lowering the deer numbers quality for them, and so many more people, every year for way to many years now. And years to come.Stop allowing the JAA completely. Or any other 'special' group of people permits. I’m against them in any situation. But at least until this unit is back up to where it should be for the first time in over a decade. Which would happen much faster without all those extra does shot. And which would then quickly benefit everyone more. Stop screwing around with this unit. It’s gotten worse not better. Buck only is pitiful.
Okay let's just cut to the chase. Without aggressive state mgmt of predators, your efforts will always do poorly. Forest County is finally getting some logging but still, too much old growth, want to grow a deer herd? Get a younger forest..... But again, wolves are killing machines, with no control. I do not want them wiped out, I like wild things in wild country, but if there is no mgmt, whats the point...... For the record, there is not enough noise from all politicians and DNR personnel on this issue. With what you now have, you can not stock pile deer in the north. I have hunted Canada and always northern areas of the state, and the UP...... Sad truth, but its the truth, so either you feed predators, or let the hunters take some. I hunt almost every day, or I am in the woods. I see a lot of deer. You could easily issue 100 tags for public, which will also assist the local economy..... Want to grow a herd, not too hard, young forest, and predator control. Put a kiosk in Laona. I mean the local schools can build them. Get some college interns to man them, and work them for credit and experience. Forest County issue with a deer herd, just like trying to increase grouse is not that hard, its all about Habitat, and predator control. Keith McCaffarey and others had that figured out a long time ago.

I put our land in Managed trust program to open it up for use by more people, not only for hunting, but for other uses as well. Under the private land / public land system, I have been penalized by doing so because in the last few years I have been unable to get an antlerless permit, while people who exclude the public from their land, or make it available only to close friends were able to get them. Meanwhile, in the course of the first 3 days of the season, I had 17 antlerless deer sightings (some of them may have been the same deer seen more than once over the course of those days). Not one deer with antlers. Meanwhile, Private land hunters are harvesting hundreds of deer. My land is less than a mile from the Brule River (as the crow files) in northern forest county. There is not enough traffic up there on those roads to make using car/deer information an accurate metric of the deer population. Why do you favor landowners who restrict who can use their property over those of us who allow the public access to it? Regarding predators, the number of wolves is alarmingly high. Stepped out of cabin at night to relieve myself and had two wolves in front of me attracted to the light from our cabin. What plans are there to eliminate these dangerous creatures so that the woods are safe again?

As a former DNR employee and someone who worked out of the Peshtigo office for several years, I’ve hunted the same public land for over 45 years so I think I have a good perspective on what has or hasn't happened in the area where I hunt. It has become like a desert for deer! I didn’t see a single hair for the last two seasons and am close to giving up deer hunting because of it. I believe the DNR has done a HORRIBLE job of deer management and predator management in this area (Forest Co.) There are too many wolves and bears and there are too many "specialty" hunts (for youth for example). Cross bows are now able to shoot almost as accurately as a rifle so to include them in the bow hunt season is a joke. Another mismanagement situation for DNR. DNR used to manage by science. Not so since Walker got the governorship. The DNR seems to blow in the wind when it comes to making good scientific decisions about wildlife management. It manages by who's got the most political power. The sooner DNR gets back to being an independent agency, the better the deer management situation will be. I'm aware that my response here will fall on deaf ears (usual inside politically correct responses only), but there are MANY ex-DNR staff that feel the same.

I fully support the preliminary recommendation to make Forest County bucks only for the 2020 hunting season. I’ve been gun hunting since 2002 and bow hunting since 2013 on public land in Armstrong Creek and it sure seems like I don’t see more deer year over year, it's always been less than or about the same number of deer, year over year, I see while hunting. My understanding is that the three main causes of deer mortality are hunters, winter severity and predation. Until the Federal government removes protections for wolves there will continue to be too many of them. In addition the, “typical”, winter in the Northern Forest Zone is nothing short of severe. When I come up north to snowmobile or ice fish in the winter I look around at the snow depth and sometimes wonder just how in the world the deer are able to survive winters in the area. For these reasons it is my opinion that Forest County should be bucks only every year. I do agree with Tom’s (DNR Biologist) opinion that the latest possible start to the gun season played a major role in the lackluster harvest numbers this past year, but for the reasons I stated earlier it is my opinion that Forest County be a bucks only unit indefinitely.
I was a Wisconsin resident for my first 50 yrs. and grew up roaming the woods in S. Forest County. Although I presently don’t live in Wisconsin (job requirements), I still return to visit family and to experience deer camp and the deer gun hunt every Nov. I hunt in the Western portion of what use to be game management area 45. In the past we told by DNR deer managers that area 45 was usually an DNR ideal management zone, 15 deer per sq. mi. My family and friends had issues with this deer density because where we hunted, West of the Pestigo River, is heavily forested we probably had a deer density of less than 15 deer per sq. mi. Based upon my observation of deer and deer sign the past several years I think that the deer density in the area's we hunt are about the same, <15 deer per sq mile. However, if one goes West of hwy. 32 in the farm area of Southern Forest County and at night shines the farm fields you will find an entirely different situation, maybe upward of 30-40 deer in a field. How can you manage a county deer population with such extremes in deer population densities? In one area of the county you need antler-less hunts and another you don’t!

There are to many dead zones through out the region. Old mature forest with no regrowth, so not enough cutting. To many predators....not just wolves. Bears eat a lot of helpless fawns every spring! Baiting has currently been illegal due to CWD at an Oneida game farm. This only affects the law abiding citizens. Majority of the hunters are still baiting in some fashion, so the handful of guys that don't struggle to see a squirrel let a lone a deer. Try introducing a new young hunter to the sport in this region....not every child is good a sitting still for hours to not even see a flash of a tail. When lucky they may see a red squirrel. Obviously I have the right to hunt else where, but my tradition has been the Northern Forest & that's where I will stay. The demise was record antlerless tags in 1996 & 1996 following two horrible winters! Every public land, antlerless hunter packed their campers and headed to the Nicolet those couple years to assist the DNR & Mother Nature in wiping out the herd. This area has never recovered since! That goes for deer and small businesses! This area should not see another antlerless deer harvested for many years to come.

As a hunter who has hunted the same tract of land since 1990 and has harvested buck and doe in the area I find it interesting that your doe tag quota is at zero. The number of does that I see is surprisingly large. In the last 5 years over and over I see multiple does day after day and very few bucks. I think granting doe tags in the lottery would be the way to go. If a hunter drew a tag the year before let another hunter get a tag that missed out the prior year. I think the current call in lottery for antlerless tags is flawed. I have followed the rules and phoned only to find zero tags available. I have waited in que to get in line only to have friends call in and get to the front of the line and be able to get a antlerless tag in a few minutes? Go back to a mail in form with paper return tag to even the playing field. The lottery is held on a week day. People work on week days. How can a average guy get a tag if he needs to take off work to do it? I apologize for rambling but the current tag system is flawed. I also believe your doe count for Forest County is flawed at least in the southern portion where I hunt. Thanks for the open forum.

There are a few deer around cabins and around a few of the farms in the County but in the National Forest every year there seems there are fewer deer. Areas where I used to find many scrapes and rubs we can hardly find a track anymore. I really believe wolves are killing a lot more deer then the DNR tells us. We see more and more wolf sign and kills every year and something should be done about the wolf population. I firmly believe what one of your DNR employees told me a few years ago. " After a bad winter there are probably only 10 deer left per sq mile in the National Forest, an average wolf pack has 5 wolves in it and each wolf kills a minimum of 20 deer per year. So do the math, that is why there are not many deer left in Northern Wisconsin" There should not be any antlerless permits in Forest County at all not even the youth permits. I think there is a flaw in the DNR guess of our deer population, last opening weekend was PERFECT weather and hardly a shot was heard so don't blame on the late season. I remember years with terrible weather opening weekend and we shot lots of deer, there just are not many deer in the National Forest right now.
My comment to the DNR is why are you issuing Hunting Permits to Logging Companies for Deer doing CROP DAMAGE. What a bunch of bunk. Deer have been browsing for years in the forest. What about the loggers that go in with their Processors, have you checked out the damage they do with their machinery. That is who should be given a fine. They do more tree damage on 40 acres, than 20 deer on 40 acres. I think that this should stop, the deer don’t spend that much time browsing, as in the winter months they head for the swamps, if they are there, it is when the loggers are in the woods cutting and they come to east on the branches that are laying there. The DNR is not what it once was. SAD. Do what is best for nature and the environment, not what BIG BUSINESS or Legislatures want. You have the degree not them. Thanks for reading. You should only have disabled hunters using the crossbow, forget the rest. They are able to hunt with a gun or regular bow and arrow. Permits on the youth hunt, I think people are taking advantage of this, signing up a year old for a permit, give me a break. It is getting out of hand already.

There just seems to be less shooting every year. I hear way less shooting than a few years ago. See way less deer while on the stand. See less deer sign than I used to see while walking around in the woods in October, November. I know there are things beyond our control that affect the herd population. Be it severe winter cold and snow depths or wolves killing so many deer! All those does that were shot in the 1990's was over kill and now our hunters are seeing the long term effects of those thousands of doe permits that were issued in those years. It is gonna take a long time to get the herd numbers back up if we keep shooting does every year! The big racked bucks that we used to see hanging at other cabins along the roads by my cabin are a thing of the past. Every body shots all these small racked bucks, so that year class is wiped out somewhat that could grow a few more years. I JUST WISH THE HERD WOULD GROW TO WHERE IT WAS A FEW DECADES AGO. Was nice to see deer on a regular basis and even harvest one once in a while with a large rack and body. Thank you.

I’m not sure why you do these. It’s a great idea but you never seem to listen to the committee or the people’s comments. There is rarely a trophy size buck killed in this county and prior to wolves and years of t zones we had lots of deer and a good number of trophy bucks. I don’t think you consider the amount of deer that the Native American tribes kill. I have hunted the same areas for my entire life. I know what it looks like when we have deer around and these past few years have been horrible. I’m trying to get two young kids involved in hunting and it is very hard when they sit there day after day and see nothing. We go to Montana now and they have a ton of deer because they limit the tags they give out. Maybe that is something you should consider but it will never happen because they care to much about the money. A 4 points on one side antler restriction would help with the trophy buck problem also. Hopefully you hear these comments from people and consider some of these things. If something doesn’t change you will continue to lose hunters and license sales.

There remains a significant difference in herd sizes on private versus public lands in Forest County. I own and hunt on private land that is below the DMAP acreage criteria for obtaining antlerless tags so my only option is through bonus tags. I have a significant deer browsing problem and have a growing herd (saw 12 antlerless deer at one time on the opening day last year) but no permits to harvest any (ran out before I could get one). Two does I shot in 2017 and 2018 were determined by a biologist to be 11 and 7 years old, showing that we are stockpiling older and older does that probably does little to grow the population as desired by county CDAC. Any young trees on the property are heavily browsed. If antlerless tags are not available thru CDACs, DMAP program needs to be adjusted to drop acreage limits to allow a private land owner with documented deer problems to have some course of action. Please allow at least a limited number of private land tags though I question if all of the harvesting done in 2019 was done on private land.

<td>3635</td>
<td>Is there any current information or studies being taken into consideration of the wolf population north of county Hwy. 8, (Forest County), indicating the affects that the wolves also put on the deer herd numbers? I believe the harsh winter and wolf population combined are putting the number of deer in this area at a low level as well. In the past five years I've seen fresh wolf tracks near and around my winter hunting grounds sometimes less than a day old. I've also had the experience of seeing wolves run past my deer blind while hunting. If I happen to see wolf tracks prior to the rifle season, I end up relocating or just not hunting at all. It takes at least a week or so for the deer to come back to the area once their driven away. The deer simply lay low until the pressure is off them. It's discouraging as an outdoorsman to sit for days on end just to see red squirrels. Until the wolf population is put into check, I'll be spending my future rifle season at home with family and friends.</td>

<tr>
<td>3636</td>
<td>I am a fanatical Whitetail Hunter with many Pope &amp; Young bucks. Even though I know I'm not going to see any deer, I still try almost every night to get out during the hunt especially during the rut. I have seen more timberwolves and black bears then I have seen whitetail deer. I cannot engage my teenagers to hunt because there are no deer to be seen. This is true for the tourists that come up from the south. They're not coming any longer because there are no deer to be seen. Are bars, our gas stations our grocery stores are lumber yards, our hardware stores are all getting ready to close if not have closed (Connor's Hardware and the grocery store in Laona). What needs to be done is for the DNR to allow more bear hunting permits and to allow us to kill the stinking timberwolves. We are now even starting to have cougars show up. I don't want to get started on the lazy idiot millennials with the crossbows! What wizzbang thought that was a good idea??</td>
</tr>
<tr>
<td>3637</td>
<td>This past weekend I took a slow 40 mile ride on my UTV thru the National Forest South of Armstrong Creek to see how many deer tracks I could see crossing the road 6 days after the Easter snow. Well sadly its very obvious what our problem is. I crossed maybe 25 sets of deer tracks but the big problem is I had to have seen well over 100 sets of wolf tracks crossing the roads. The freshest set of deer tracks I seen had about 5 sets of wolf tracks hot on its trail so I have a bad feeling about that poor deer. I spend a lot of time in the woods and have shot many many deer in the National Forest of Forest County over the past 50 years but I have not seen a buck gun hunting in Forest County for 5 years. Yes there are a few deer around the few farms in the county and around cabins but I strongly disagree with the DNR guess of the total deer population in Forest County. NO DOES PERMITS not even the youth hunters!!</td>

<td>3638</td>
<td>Wisconsin DNR Because the deer biologists in Northern Wi. have miss managed our deer resources for years. To me this is really sad. I started hunting deer up north in 1962 and it was fun and I enjoyed every minute I was up north but because of your poor management of the herd I must go to other states and hunt the Sheboygan area. As I remember the forest service and the Auto insurance lobbyists have tainted the deer biologists starting in about the 70’s. I would like to recommend that when the Biologists take courses in college they take a course in Agriculture under herd management. It’s not hard to figure out why the deer herd is terrible in northern Wisconsin, thanks to you to many DOE's are killed. Youth hunts, wolves, bears, bobcats and cars. A good Biologist would adjust to the conditions and stop shooting Doe's. Thanks for ruining the northern deer herd and our family tradition. Jim Schomberg</td>

<tr>
<td>3639</td>
<td>reduce the wolf population. I have been tracking this adult pair for 3 seasons now, and now has a young one. How many will populate from that? Tribal people using rifles in September and October has just got to stop. I have hunted the same 3 square mile area for 45 years. I have watched the changes and not for the good. as the predators increase in head count the deer population falls and these last 2 years the hunters are also gone now. Logging roads are not taken care of so the access to these areas are limited in places and no access in most places. The walk trails you put in decades ago have no maintenance to them at all so that alone damages all wild life habitat in this area. I understand that i am talking about one area but i spent my life hunting and fishing there. I believe me and my hunting partner could educate farther that charts and graphs. We are the boots on the ground.. Good luck.</td>

Recommendation of zero antlerless is perfect. Opinion based on personal observations of deer sign on public land in good deer habitat in the Blackwell area (east of Laona/Wabeno). 97 miles walked/scouted in fall 2019. Very little deer sign observed, rubs, scrapes, tracks, droppings, wolf kills (2), and very few physical deer seen. Then 19 miles walked/scouted end of March 2020 including Wolf kills (1). Zero dead deer from winter severity or other. Zero deer sheds recovered. Little to no deer sign. 4 deer jumped in 19 miles of scouting very good deer habitat. Highly concerned with the deer population in this area. National Forest in this area is heavily hunted. Many illegally bait sites observed, recorded, and provided to DNR. The deer herd in this area must be afforded every opportunity to recover. Another bad winter will be another set back. Predation in this area ever increasing. Thank you.

I have lived in Forest County all my life and after watching the presentation from the biologist I have to laugh. Where all these deer are is a mystery to me, yes there are a few around the few farms in the county but in the National Forest the deer are few and far between. I do a lot of snowmobiling around the county and areas where years ago during bad winters like the last couple we used to see deer trails like a cow path. Now there is hardly any tracks at all in these areas, and the only places there are quite a few tracks is close to towns and cabins. Logging jobs used to have lots of deer hanging around but now some winter logging areas there are hardly any deer. I see lots more wolf sign then ever before and between the wolves and the bad winters I think that is the reason there are very few deer in most of the National Forest. I don't think there should be any doe permits at all!!

I think the junior anterless tags should stay valid in order to keep the next generation of hunters growing. With this being said, we are teaching the youth how to violate with it being okay to do so. Your wardens are not doing thier jobs they were hired to do. They do not even bother with illegal baiting. This is your biggest problem. The public land and private land hunters use baiting to keep deer concetrated in their area. The hunters that do it the right way (legal Way) have little chance to see any numbers of deer. With all the anterless tags going to private land last year, it made it pretty frustrating, especially when I am showing my grandaughter how to do it the lawful way. Who cares about CWD, you guys do not enforce anything anyway, look at the gas stations selling corn, apples and carrots. I am tired of it, we will spend our money out west where they care about conservation.

There is a significant and long time decline in the deer population in forest county. I have grown up here, and have spent over 20 years hunting in this area, for deer as well as other wildlife. Wolf management is a MAJOR problem in this county, and many other northern counties. They are doing severe damage to the deer population, and without any management for them this continues to get worse each year. This has to be looked at and considered, or there will not be a deer population left. Not only is this discouraging to sportsman, but a lot of the local business owners who used to rely on deer season to attract visitors to their small town and keep their communities going. There is nowhere near the travel, or excitement about deer hunting in this area, and many people are fearful to go in the woods without protection, to walk around with their dogs, or to do anything recreational.

The number of wolves in the Town of Wabeno area has exploded. We had what appeared to be 4 different wolves on our property last year (game cameras). We found 3 deer carcasses that appeared to be killed by wolves on our private property. Wolves are becoming a safety issue, we no longer allow children to walk trails unsupervised...or let pets run free. My son and I hunted 6 of the 9 day gun season last year and combined saw 1 anterless deer. My main issues of concern going forward are high number of wolves that are becoming a danger to humans and Deer. Late opening dates for gun season need to go away...I believe it should open on the 3rd Saturday of November every year. Baiting should be allowed as it aids deer sightings...there are now many people who are baiting illegally in Forest County...baiting needs to be legalized or vilolaters prosecuted. Lack of logging also a issue!
2019 Public land received 0 antlerless tags, yet it makes up 70 percent of the county. The decline in the number of gun hunters shouldn't be shocking to anyone who has hunted the area for the past 10 years. They should be shocked that it took this long for something like this to happen. I've been an advocate for our gun hunting party (typically 6 guys and 3 trucks) to leave Forest county for the past several years and take our $$$ with us because of the low/no doe permits issued to public land. The deer are there, we've seen them while on bow hunting trips and during gun season around the Hiles area. I have almost become a vehicle vs. deer statistic a couple of times while traveling the roads of Forest county. I agree with trying to grow the herd plan, but I think there's room for more than 0 or 100 or even 300 doe permits that are issued to public land.

As a hunter that is NOT a “hunting land owner” but hunts with friends in several counties on their private land, it is an annual frustration that we have to be so specific in our antlerless tag designations. This is especially true for Bow Hunting. Would an either gender option for any county make that large of an impact? I can't imagine it would. Flexibility versus rigidity, would encourage both compliance and flexibility for people like me who enjoy hunting in different parts of the state. I currently could hunt in Waupaca, Vilas, Oneida, Florence, Buffalo, Oconto, and Forest- all on private land, but never know from year to year where I will be able to link up during my hunting date opportunities. Some years I never had the opportunity to hunt where I thought I would when designating the antlerless tag. It is frustratingly and unnecessarily rigid.

I would like to know the buck to doe ratio in this unit. I would also like to know when a wolf season is to be re-instituted and when dry land trapping will again be allowed in so called wilderness areas. I would like for bear to be taken as part of the deer authorization without the need to garner preference points and likewise wolf. Archery permits should not include shoulder fired weapons, these weapons should be included in the gun season, likewise muzzle loaders. All baiting and feeding of wildlife should be banned and all captive cervid facilities closed and treated with copper ions and polysulfonic acid. All wilderness and experimental forests should be clear cut and forest fires allowed to cleanse the land.

I have spring, summer and fall, beaver trapped in this area for 27 years. The deer herd has not really been great any of those years. Up until and including 2017 it was just OK. Since 2017 the herd has decreased each year. This year is the worst I have ever seen. The migration trails coming back from Kimbal Creek and south had the lowest amount of deer I have ever seen. Allen creek area always had a good amount of deer by hwy 70 and up Gaspardo road to the Brule River. This year with the snow on the ground I have seen 3 deer tracks all with wolves following them. The wolves stay above the snow. The deer sink in. It is already a waste of time hunting here and if something is not done about the wolves very soon they will wipe the deer out. The good thing about that is the wolves will then move out and keep moving south to cause problems.

I have owned 30 acres of land just outside of Crandon for 12 years. When we first started hunting it we were able to take a doe or a buck for about the first three years. Each year hunting gets harder and harder there. We see more wolf and bear sign than anything else. When my son, grandson and I are early bow hunting we hear random rifle shots all around us. We see deer with the back end cut off and dumped in ditches around us when seasons are even open. We feel that most deer are taken up there before the season begins due to poaching. At one point we had four deer dead in a ditch partly butchered and parts of other dead deer scattered down Sipple Road. One of those four was a buck and the top of the head had been cut off and no meat taken. This area needs a higher amount of DNR patrolling to stop this poaching.
Public Input on CDAC Preliminary Recommendations - Spring 2020

3650 This unit is supposed to be trying to increase the deer herd and how do we do that if we keep shooting does? The members of the cdac committee that are voting to shoot more does are not doing what the hunters want. Their supposed to be representing the hunters. If that's the case and were trying to increase the deer herd why are they voting to shoot more does? I also think that the dnr is waaaay off on their numbers! What do they base this on? They don't even hunt in this area and have no idea what's going on in our county. I have no faith in them whatsoever! As far as im concerned you should bring back the in person deer registration! They have given an easy way to poach with this system. The dnr took away a lot of tradition when they eliminated this. Their agency has been their own undoing of deer hunting!!!

3651 The first thing that needs to be done in all are northern counties is the wolf delisted and a season put back on so numbers can be brought down to a manageable level. Furthermore the rights that the Native American tribes have on the number of deer each tribal member can harvest and the way in which they can fill tags is unsustainable for the deer herd in combination with the current wolf population up here it’s literally destroying what is left of the deer herd up here. I have watched in the last 20 years are deer populations drop completely off the chart and all I ever here the Dnr say is a rough winter has had a serious effect on the herd. Start saying wolves are part of the problem with declining deer numbers. Nobody is fooled up here with the same reasons you give every year. Thank you.

3652 I have owned land in Forest County for 16 years and honestly, if that were not the case, I would not hunt the area due to lack of deer population. I have seen swings in the location and type of predators. Coyotes are back in full force and in the last year, I would say the highest I have seen. The bear population is also high with numbers of larger bear. A few timber wolves roamed the area a few years back, but as the wolves receded, the Coyotes flourished. I saw more coyote tracks last season that ever. Last winter was real bad, and out of the 3 fawns I saw regularly, Now I see one. The deer seem more timid, which I attribute to being chased... That on top of the hard winter does not give me a lot of hope for the population in 2020.

3653 Forest County has a major Wolf problem that needs to be addressed. The Wolf population needs to be managed like every other species. With the wolf population and the severe winters in northern Wisconsin we should NOT harvest does. Northern Wisconsin hunting property prices continue to drop and less hunters every year. We are losing our next generation of hunters because they are not seeing a lot of deer and losing interest. I also feel Northern Wisconsin should only allow one Buck tag per year per hunter. If you use it during the archery season then you can't shoot one during rife or muzzle-loader season. Or do like Michigan where you charge for the double buck tag and the second buck has to have a four point minimum on one side.

3654 I am disappointed in the lack of acknowledging we have a very large problem with the native American harvest numbers. Knowing that some natives are harvesting 30 to 100 deer of all age and sex. FACT. Why can we not have a county of resident preference for doe tags including youth and disabled hunters. I am tired of having people(youth tags) come up from southern units to harvest does because they don't want to harvest them on their private property for "deer management" I would like to harvest a doe now and then but never will be able to due to these factors. Shut down crossbow except for disabled or retired. Close spotlight hunting for natives(yes they do it off res) I personally know because they brag every day.

3655 First off- I am very pleased to be a part of this topic. Thanks for lending an ear. Two points I wish to make here; first: As continuing the hunting tradition in our state and the country as a whole is top priority, I would be in favor of a Junior antlerless harvest across Forest Co. so as to give the next generation of hunters here a better chance of continuing the tradition. Second: Natural predation on deer remains a top concern for the health and future of the deer herd, an opinion shared by many. Relentless reminders of wolves' impact on deer herds and livestock, etc is all most of us can do to contribute to a change that sees a brighter future for the deer population. Again, much appreciated.
Hunting in the Armstrong Creek/Black Creek area in the national forest. I personally witnessed 6 does, 1 yearling buck that was subsequently harvested by another hunter. Time out was all day over the course of 4 days from the Saturday opener until Tuesday night prior to blizzard. An average of 3 deer drives and morning/evening sits occurred the Monday and Tuesday of season were done. I would say my group of 5 has been seeing an increase in does over last 3 years. Also after a long hiatus (10ish years) of low hunting pressure, there has been an increase in hunting pressure by 60% with groups of 10+ showing up again starting last year. Looking forward to Deer Season 2020 overall.

In units that invalidate youth antlerless tags in an effort to rebuild herd numbers we must also consider invalidating other forms of antlerless tags too. Specifically disabled hunters continue to fill their antlerless tags, many traveling into zones with no other antlerless hunting pressure. If units are truly trying to increase the herd numbers these tags being used are counterproductive to our goals and there is little reason ALL hunters can’t support the effort of herd growth, disabled hunters too! At the very least disabled hunter should be required to reside in said zone if being allowed to exercise an antlerless kill in a zone designated for rebuilding of herd numbers.

I own 80 acres of land in Forest Co. I manage a food plot for wildlife. Never saw so few deer in 50 years. Didn’t even buy a gun license last year. Traffic, coyote, bear predators are all about the same in numbers. The only difference I can see is the increase in wolf population. They were supposed to be kept to a state wide population of under 400. That was a joke and their numbers far exceed that. Get rid of the absolutely useless wolves and I suspect the deer numbers will return. Until then I see no reason to waste money on a license or waste time hunting. The deer have a hard enough time surviving up there and you folks only make it worse. Get rid of the wolves!!

For the past two years we have seen wolves with our own eyes while in the woods. We hunt on private land near Crandon. This past year an entire pack of wolves made a deer kill within 100 yards of a hunter in our party and multiple wolves consumed the deer. Our entire party of 5 hunters have just decided to no longer deer hunt at all. The population has obviously decreased as none of the 5 hunters saw any deer over two full days of hunting and then to have a pack of wolves that close has made us all too nervous to reenter the woods in this area. Such a shame as a wonderful tradition has come to an end (as well as the money we spent at the local restaurants, etc.

I have hunted the nic national forest for 45 years in a row. When you talked about predadation I noticed you didn’t mention wolves. When you can’t see any deer, anywhere, and almost no tracks except for wolf tracks why would you hunt more than 3 days? We have had no problem with cold or snow in the past. I can’t understand why you think the population is more than your numbers tell you. You’ve allowed too many antlerless permits for too long, you deny the high population of wolves and you and the forest service have done a terrible job at managing the woods. If you think I’m pissed your right! I’m afraid we’ll never have what we once had again  John

The predator numbers in the Northern forest land are far too great for a healthy deer herd. Years ago the northwoods was known for it's excellent hunting of quality deer which helped support the local economy. That was before the DNR reintroduced wolves and hunters automatically received a bear kill tag with a deer license. Now we need to wait around 11 years to harvest a bear and the northwoods is full of predators, therefore less deer and very few quality bucks. Wisconsin's deer herd in northwoods It is a complete disaster thanks to poor decisions made by educated people who know nothing about what is really happening in the wild.

There is a significantly lower amount of hunters in the woods by me. There needs to be incentive to hunt the north woods instead of the farms down south. The timing of the hunt is also important. Maybe adding more days to the northern areas would help? Allowing us to bait since no real data has linked bait to CWD? The way we are reporting a harvest is BROKEN and does not accurately show how many deer were actually shot. I can guarantee that people are shooting deer and not reporting it. Just changing the number of doe tags in our area will not fix the problems. Better leadership in the WI DNR with fresh ideas is needed!!!!!!!!!!
First I am ticked off with the doe permits from last year! We have 71% public land in Forest county & yet we had no doe permits for public land. People with private land bait & draw the deer from public land! People that sell deer corn, there sales have risen since the baiting ban! Now the wolf population is on the rise & we have yet to see a wolf hunt. We had at least 6 wolves working our area last deer season! Also you let people buy licenses during season & you wonder why sales have dropped off! People wait to buy a license until they get a deer. Without a back tag there is no way of telling if somebody has a license or not!

I hunt in southern Forest county and feel that the antlerless population is sufficient enough to allow a similar harvest quota as in 2019, maybe even slightly higher. I like to have meat in the freezer and I feel a buck only season greatly reduces the chance of that. I had 4 gun hunters on my property last year and only one buck was seen among all the hunters. We passed on it because it was a young buck. I really think hunters will harvest 1.5 year old bucks in order to have venison in the freezer if they can’t harvest antlerless deer. It would be nice to start to see an older age structure in the bucks in Forest county.

Our group have been hunting in the north central area of Forest County for over 60 years We have hunted thru early and late openers and good and bad weather. We hunt up to 8 days of the season. In the last 5 year we continue to see less deer. This includes in our stands and on trail cams. The 30 minute presentation was okay but doesn’t really give a clear picture on predication numbers. Not once does it mention the wolf effect on the herd. Not for 2018 or earlier years. Every year we see more wolves and nobody talks about their effect on the deer population. They have to eat and deer are probably their choice on the menu.

I am concerned that the DNR is considering limiting Crossbow hunting or dramatically reducing the time allowed to hunt with a crossbow. Do they believe a compound bow to any less lethal and deadly? The newer compounds are every bit as accurate and deadly as a crossbow and to single the crossbow out and reduce the time in the field during archery season is unreasonable and if they do this may drive myself and other hunters I know away from the sport. Please pass on my concerns Also, consider going back to allowing a gallon or two of bait to be used for gun/deer season. Our camp didn't shoot a buck the entire season.

I would like to see the adoption of an “every other year approach to antleless tags in this unit. In almost no circumstance should ANY antlerless tags be given out in back to back years. I’d also like to propose a trial year in which no bucks without multiple points are harvested with firearms. I believe the results on overall deer population, deer sitings and deer quality in just one year of this practice would be astounding. For years age studies on harvested bucks have shown the vast majority to be 1.5 year olds. If we could get one year where those all made it through, I think it would really open peoples eyes.

I deer hunt more than most hunters out there and have seen the decline of deer in Forest county. I feel that the predation from wolves, coyotes and bear are destroying the heard. There is also a large amount of deer shot at night by the tribe. I feel that no matter what I say, nothing will change!!! This is a multi million dollar business for the state of Wisconsin that is being wasted by not managing it correctly!!! It's hard to get your kids interested in deer hunting when they sit for days in the cold and see nothing!! Northern Wisconsin used to be a great place to deer hunt but not anymore.

Your recommendations for this unit suck! when you hunt by farm fields there are penty of does (which is usually private) but with no doe tags and the amount of bucks that get shot leaves no bucks to breed all the does! Then you have a small number of bucks to breed all the does and they run themselves in to the ground and die if we have a bad winter! If this goes on for to many years you will have no deer!So lets give out a few doe tags and put a minimum size limit on bucks to six points or greater! Give back the RIGHTS to feed the deer for bad winters and in a few years you will see numbers increase! thanks
The deer herd in Forest Co is very dependent on winter severity and food sources. It is good to see some harvesting of the forest especially in areas with over mature pine plantations which are little benefit to wildlife. Illegal baiting remains a huge problem in the whole north region and seem to contribute to nocturnal deer movement as seen on my trail cams. Predators are often overstated and blamed for lack of hunter success. Keep the youth season as the kill is very minimal and gets kids in the woods. I still miss the registration stations. Deer hunting in the big woods is always a challenge.

At what point does the DNR do what’s right for the deer population? Most people realize just like most everything in life, it is money driven. Where does it end? You just about wiped out the herd in the northern region and your working on the rest of state, The wolf population has exploded to the point you’ve lost control, you give out 5 times the amount of tags to deer ratio, it’s not the whitetails fault people drive with tunnel vision or for crop damage, what threat does CWD pose to humans? ... none. Cleaver way to knock down the herd even more, stop native spearing already it’s 2020 not 1820.

To my mind we simply have to have very strict penalties for violations and blatant recidivism. As I read publications that report violations of deer hunters it becomes very apparent that a great many people have little or no regard for the rules. Stiff fines and possible long incarnation seems to be the only thing that might curb this scoff law mentality. We have to stop this colliding....If we all play by the rules we return to a state where deer hunting is and will always be an honorable event. If you can’t or won’t play by the rules then you must suffer the consequences. Thank You.

I am 77 yrs old and have hunted the same general area since I was 12yrs old and since 1996 I have seen a large decrease in the deer population and have not seen any increases. My wife and I usually spend approximately 10 weeks a year in the Laona area and when we travel during hours of darkness we are lucky if we see any. The lack of deer almost wants me to give up my favorite sport, I am past where I have to harvest one, but sure would be nice to see some. My grandchildren would like to go hunting with me but I won’t take them along because they would lose interest by not seeing any deer.

One of my opinions that I would like to address is forest management in this area. I believe we need to do more clear cuts in the national forest. We need to have new growth for the deer. Old forests do nothing to help the deer for food. I believe we would see a big improvement. I hunted the national forest between Armstrong Creek & Argonne WI. and The only place you see new growth is on private or County land. I still visit the area because I have Family But I quit hunting because you don’t see deer. No Food and wolves and antlerless permits over the years have devastated this area.

On the private land I hunt, deer numbers have been great. We manage the 160 acres we own and have portions logged every 8-10 years, which has definitely proved beneficial to all wildlife. The deer and grouse population on the land is great. We are surrounded by nicolet forest which is old woods so we have the food and cover. Its not uncommon to see 10 deer a day. The only thing that should be considered is maybe a size limit per buck. Since there are no doe permits the young bucks are taking the hit. I know Michigan has a limit on size so maybe Wisconsin could incorporate something.

I am a Michigan resident and buy a out of state tag to hunt with my friends and have done so for 20 years since i move back to Michigan. In that time i have taken 3 deer as i am very picky and get my deer in michigan bow hunting every year. I have noticed that the deer numbers continue to go down due to not and much logging on state land and predators increasing. It is not a very good sitution as our group has gone from 26 guys down to 14 and it is the guys that dont want to buy the out of state ticket to hunt. I will continue because i am the one that started our camp in Michigan.
I don’t understand what is being done to control predators. I know only 25% to 35% of deer deaths result from predators but what is being done to reduce predators in forest county? I look at bear preference points required to hunt them and it takes me at least 9-10 years maybe a permit to hunt them. Would reducing the points required not help to reduce for example bear populations to allow more deer to survive? I think reducing predators would help bring deer populations to numbers you are trying to achieve and not impact concerns there are not enough predators in the county.

Support some antlerless tags for the general hunting public, especially for private lands. When a hunter has only a buck tag in their pocket they will shoot the first buck they see, even if it is a spike. With an antlerless tag in their pocket they may pass up a spike since they will also have a chance at a doe. I hunt for meat, not horns . . . as probably most hunters do. I hear rumors of antler restrictions which I oppose. Could have the state allow purchase of a second buck tag with antler restrictions, something to look into. I support 100% allowing youth to take any deer.

Forest county should be divided into 2 zones. North and South of Hwy 8. There are a lot of deer south of Hw 8. This spring on one evening I counted 130 deer in fields in Freedom and heard similar story SW of Laona. You could issue 200 permits on public and private land both to harvest a couple hundred antlerless deer south of Hwy 8 without adversely affecting the population there. Most of these field areas are surrounded by National Forest so you need to have public land permits because that is where the deer spend their days. Thanks for being members of the committee!

In Forest county, Native Americans can shoot unlimited deer to feed the elders. Could this be looked into so much as to have them at least report the amount of deer taken and shown to the public and making sure the deer are actually taken off of reservation property. Please consider not taking away the youth tags for antlerless deer. This gets kids hooked on hunting and spending time in the woods. Can you consider people harvesting does in the county of residence. For example, people coming to forest county from Milwaukee county and harvesting deer in this unit.

Been hunting in Forest County for 40 years and I have never seen the deer numbers this low. There have been bad winters in the past and we always had bear, yotes, and bobcats but it all changed when the wolves moved in. I know we have to wait until they come off of the endangered list (again) to control them but until we have that no does should be shot for any reason. I have a hunting camp and my gang it just about to the point to either leave the area or stop hunting all together. It is a shame what the wolves have done to us hunters and the economy up north.

I agree with zero antlerless. Even though I saw more deer in 2019 than prior years, it is still nowhere close to where it once was. I believe that part of that has to do with predators, but lack of timber harvesting - especially in regards to Popple clear-cuts, has a tremendous impact. I am also concerned with the effect of CWD, both with a reduction in the herd but also more hunters that will become disillusioned with hunting. Hand in hand with that is the reduction of future hunters as the hunters who quit will no longer mentor new hunters. Thanks.

I spent over 60 hours in the woods during the nine day gun hunt and saw one deer yet I checked my cameras and had hundreds of pictures of deer all night long And only 3 different buck on camera. I have many cameras out year-round and have a lot of doe on camera but not a lot of buck. I do believe there should be doe tags for private land owners only not the people who just come up there to hunt. only for the people who have a residence and or land in this area I did see a lot of doe during shooting hours during early season nothing in the late season.

I have hunted in Forest county off and on for 40 years. I have watched the deer herd drop to almost nothing. I don’t know if it is a management issue, the wolves, or hard winters. I do know that there are less deer now than there have ever been in my lifetime. I don’t bow hunt anymore only because there are so few deer. I gun hunt only because my son likes to go up to the cabin for the deer hunt. If he shoots a deer that's all we take, one. Hopefully, things get better.
I see there is no antlerless hunting this year. I just wonder why it took so long to notice the deer population.

There needs to be antler restrictions for all the northern forest DMU of 3 points greater than an inch per side, let them go, let them mature to become something nicer to harvest, but nobody understands this point of view, NOBODY! If you let the buck grow up to at least 3+ yrs old you will have happier hunters, and you should have one tag, either it be a doe, or a 3 point or bigger on 1 side buck! No exceptions! You people will never understand this management, so I'm just preaching to the wrong people in charge of our natural resources.

I would propose an end to the ban on baiting on public lands. If done in moderation, I believe the risk of further spread of CWD would be minimal. Additionally this would allow for greater success in both the bow and gun seasons. With greater success will come greater interest resulting in greater revenue for the DNR as well as local economies. Although it is currently illegal to bait animals in Forest County, The success of private landowners in the previous year’s hunt suggest that baiting is occurring on those lands regardless.

I bought land in forest county 3 years ago. I hunt with my son and neither of us have ever had a shot at a buck. But we always see doe and many doe. Prior to hunting Wisconsin we lived in and hunted Illinois for a number of years with great success. I realize there’s a difference of populations and strains from Illinois to Wisconsin. So it’s disappointing to not be able to take at least 1 doe on your own private land. I understand the reasoning behind the management program but it’s just my opinion of disappointment as a land owner.

I hunt county land and the amount of hunters has dropped dramatically since going to Anterless only for the most part. I am able to wonder around public land and see very few hunters. There is also little evidence of people harvesting deer. I am seeing more deer though and think the hunting numbers are down due to the lack of opportunity to harvest doe, in past if you had a doe tag there was a chance you could harvest something. Its a challenge to hunt where I hunt but I am happy that there are little or no doe tags issued.

The deer know where they are safe and food is readily available. Private Farmland. That a family or close friend might hunt one time a year. The public land in the KMNU, especially in September and October, is flooded with groups of people Hiking, Biking, Walking Dogs and Riding Horses. All around influxing the wildlife to leave the noisy public land to find calmer and safer private land. With the State Parks being closed right now, I would like to see them be closed again from Sept. 1st until Dec. 11th Thank you

I own hunting land in the northern part of the county, and this is the worst year I have seen in my 36 years of hunting up there. Predators are everywhere and the habitat has not improved. This is the 5th year for my son gun hunting there and he has not seen a deer. This area used to be excellent but will never be the same again. The tradition to go there is great, but the hunting is non-existent. Please work with partner agencies to have predator management and for habitat improvement (logging). Thank you!

I understand that gun season was very late for 2019 season and we did get some significant snow. However while our entire group of 7 guys who were scouting like we always do the week prior to the gun opener, we all noticed a HUGE decline in deer tracks in the couple of inches of snow that was on the ground. All of our normal runways were lacking tracks. Those same areas remained track less all of gun season. No night time movement whatsoever. As we expected between 7 guys we saw 2 does over a 4day period.

The widnr years ago adopted a extermination policy of the deer heard here fueled by the deer czar from texas they hired. along with wolf predation the widnr has reduced the deer herd to miniscule levels. the widnr nor the state of wisconsin realizes the economic impact this has upon the northern counties. I doubt this area will ever see good deer numbers again,unless wolf numbers are decreased. the widnr has done this and the state of wisconsin does not care and has let the widnr get away with this.
OK I THINK THAT SINCE THE STATE STOPPED BAITING I PERSONALLY HAVEN'T SEEN HARDLY ANY DEER AND ZERO BUCKS IN MY STAND WHICH I HAVE HUNTED FOR YEARS. IN A LARGE FOREST THAT HAS HARDLY ANY HUNTING PRESSURE THE DEER HAVE NO INCENTIVE TO MOVE SHORT OF THE RUT. IT’S JUST GETTING A LITTLE FRUSTRATING SETTING UP A BLIND AND SPENDING A LOT OF MONEY AND NOT HAVING A CHANCE TO SHOOT A BUCK [I DON'T SHOOT DOE], NO LEAST SEE ONE. HECK I DON'T EVEN HEAR AS MANY GUN SHOTS I USED TO HEAR IN YEARS PAST. THANK YOU

Forest county should be a deer paradise. But instead it’s more of a nightmare not because of the winters, bugs, wolves, bears, coyotes, bobcats, and cars. It’s because of the four months of relentless hunting. a county as large as forest with 71 percent public land to only harvest a shade above four hundred bucks(on public) is well saddening and maddening at the same time. It’s time for a change we call our selves as hunters, conservationists so sometimes instead of killing we need to not kill.

I don't think the people should be denied baiting because of a deer farm finding a deer with the virus. These deer are all in cages and maintained by the farms. They should have a double fence built. After all they make HUGE amounts of money on these deer where the regular hunter has only a set amount of time to tag a deer. WE STILL HAVE TO WORK AND THAT CUTS INTO OUR TIME IN THE WOODS. I know they say you will see more deer without baiting but I have seen the opposite. Thanks for listening.

Your presentation was very helpful. Our family has has property in Forest county for 70 seventy plus years. The information you provided seems to be accurate to what I have witnessed. I would agree it is not time to issue any anterless harvest permits. Many of the young hunters have been so discouraged about the amount of deer they see hunting, they stopped coming to camp. 2010-2011 seemed to be goods years. I would like to see a similar presentation next year also, keep up the good work.

While this survey did not address the issue of the crossbow season I would like to voice my opinion. I am 69 years old. I have hunted with a compound bow for about 30 years. Last year I was forced to used a crossbow. I love the September through November hunting time. But nothing can beat the December season. Don’t change the crossbow season. You are messing it up for those of us who have given decades to bow hunting. I started gun hunting as soon as I was legally able to. Thank you

I've hunted the county for over 35 years. The last 8-10 have been terrible and 2019 was the worst. Then the baiting ban that isn’t enforced. Legal hunters sit and see nothing while others pile bait and shoot the few deer that are left. I likely will not hunt Forest Co in 2020 and may but buy a deer license at all. First time since I was 14, I’ll be 60 this year. I haven’t bought a small game license since the wolves made it unsafe for my bird dog. Come on folks, we gotta do better.

There were hunters who hunted on public land with no legal access to private land with doe tags in 2019. You should have to own land of 5 acres or more in the county to be considered for a doe tag on private land. In 2019 there was no mechanism to ensure hunters putting in for private land tags could legally fill these tags. Land owners who pay property taxes, support the local economy by buying local, and putting sweat equity into their land should have first shot at these tags.

Predators are really taking a toll and will definitely continue to effect hunter participation in the future. The loss of hunters in the woods during the gun hunt in our area greatly fell off fifteen years ago as predators and severe winters took a major toll on deer numbers. Can the forest even carry more deer? The attractive browse for deer seems to have also declined. in our area, little thought was given to the planting of poplar was executed where mixed forest was cut.
I do not agree with giving all the doe tags to private land holders. That is not fair to hunters on public land. If there were 100 permits, you could have split 60/40. You will absolutely destroy and public hunting with this thinking-every one but landowners will move/hunt in another county! I am tired of not having a chance to harvest any deer. I will probably give it one more year and then do what everyone else does, hunt somewhere there are better chances to harvest a deer!

This county unit like most of the northern forest units needs more bear permits, more timber harvesting and of course wolf kill permits should that become a option. I have never seen over browsing. Doe permits should never be available until the predator problem is solved. I don’t buy the argument that young or first time hunters need some extra incentives to get them interested in hunting. I started hunting deer at age 14 over 60 years ago and still enjoy it immensely.

There are way more does in this unit than bucks and you want to make a buck only harvest. That isn’t going to help the population. If we shoot all the bucks, how are they supposed to reproduce. We haven’t been able to shoot does in forest county for many years and it isn’t changing anything. Let’s try giving out antlerless tags for public land. Maybe hunters quit coming here because we can’t shoot does. The number of hunters is drastically lower than it was 10 years ago.

When we shine the fields at night, the past two years is the most deer I’ve ever seen in my 30 years of shining or hunting. I have seen more road kill in the past two years in areas that I have never seen deer hit. I believe that the deer units are to large because the southern part of our county has more ag land and I would guess more deer. I do hear many my fellow hunters say that there still isn't enough deer but I don’t think they would be please ever with the DNR.

I would rather see 0 bonus tags for adults. I feel if you take the chance of shooting a antler less deer for a youth hunter they may loose interest in hunting which is what we don’t want. We have a lot of younger hunters in our group who all bow hunt, waiting to shoot their first deer with a bow. We have seen way more antler less deer bow hunting then we see bucks. Was very disappointed when you took the antler less opportunity away from the youth a couple years ago.

I have a 1/2 acre food plot, in 2018 there were what I consider 5 does that could be bred consistently on food plot through gun deer season. In 2019 there was 1, so whether the decrease was from winter kill, predators or combination, there was a 80% drop in my area. I normally save my vacation days for November, I hunted now and gun 22 days in November of 2019, I saw a total of 3 different deer. The lack of deer sightings cannot be attributed to the late gun season.

I hunt in unit 39 most of my life and in 2019 have seen wolf, coyote, bear, and even cat/Cougar tracks. In 2019, I have seen Wolf, coyote, and bear sightings in our area and makes me feel that the predators are over harvesting the deer population. There has been limited timber harvesting that will improve habitat for the deer and other animals. I feel that eliminating antlerless tags for several more years is a good idea. Thank you for your continued oversight.

Most areas in the northern part of the county where I hunt support very little deer due to predation. We no longer need antlerless seasons in these areas because of predation from bears and wolves. If we ever want to return this county to where it was, when a hunter could harvest a small amount of does and count on seeing a buck or two though out the season, we need to push to delist and remove the wolf. We lose hunters every year in this area and this is why.
We see more wolves than deer, if you manage that heard, then white tail will bounce back. DNR caves to tree hugging Libs that don’t want a single wolf harmed, wolves need to be managed in our norther units, ie killed. Hunting in Wisconsin has become pathetic due to politics. I travel to other states where management is done in a practical manner and harvesting an animal is actually a possibility. Forget about hunting in Wisconsin northern woods, it’s a joke.

The last few years I have observed more Timber Wolf sign than Deer sign and have stumbled across carcasses and witnessed Wolf drives in swamps. When 10 to 15 years ago you may have cut a bear print or two. I have hunted the same area near the northern border of Vilas and Forest Counties for 21 years and am questioning going hunting this year as our party of 6 average .6 deer per year over the last 10 years with NEVER shooting more than 1 deer in a season.

High numbers of wolves continue to deplete deer numbers. High numbers of coyotes and bears continue to deplete spring fawn numbers. I have 40 acres in Favour, over 80% of the does this season did not have fawns. 5 different bears captured on cameras, over a dozen coyotes, a bobcat, and a pack of 5-6 wolves. Too many predators....all under protection, bad for the deer population. Had pics of both bobcats and coyotes chasing fawns this past year.

We need to get our youth involved in hunting. When our youth sit all day and see zero deer it’s hard to keep them interested. If we could bait we could at least see deer to keep our future hunters interested. Youth doe hunts I strongly encourage as well. I am strongly against bonus tags for public land. There is too much public land up here to hunt. All the people from larger populated areas come here and slaughter our deer herd and leave.

Again I see little change or improvement in the Forest County herd. Given the lack of noticable improvement in the herd I can only think that Wolves are keeping deer numbers firmly in check. It’s beyond time to have a wolf season that will balance the eco system. I’ve seen about equal wolf sign to deer sign when it comes to tracks especially in the snow. This is in the area between deer and otter lake in the Nicolet national Forest

I don’t know why we continue to let deer farms operate when they have had positive CWD results. Even with all the precautions, sooner or later it gets out. Allowing this to continue just increases the risk to the overall population. It is a lot of risk to the general deer population so a few people can pay big money to hunt big deer. It seems like nature is telling us that these farms are un natural and this is not sustainable.

I was pleased to see more logging in the form of clearcuts to provide food and protection for the deer herd. Please keep the logging going. Myself and my 2 teenage sons hunt from a camp established in 1941, it is a great tradition I would love to keep going. I strongly believe that consistent logging will continue to improve the deer numbers and that will also help sustain other animal populations. Stay home and Stay safe.

Get rid of the darn wolves! All of them. They were exterminated many years ago for a dang good reason. Do we have to wait for an innocent child be taken by a wolf before anything is ever done about them? Another benefit to the deer herd would be permitting controlled/select logging in our National Forests! This would also lessen the opportunities for forest fires! It would also increase feeding areas for the deer herd.

I feel that at least part of the reason we have seen less deer in the past few years is that fewer hunters are hunting in the area I hunt. Many hunters have given up, so less deer moving. I also feel that wolves have either killed off many deer or made our hunting harder. Deer moving at night. Hunters kill less deer now (no antlerless tags), but that just makes the wolf packs larger! It’s just a bad cycle.

Way to much tribal night hunting taking place off of tribal lands where deer are being spot lighted and shot. On private folks land and along public roads. A very lot of deer. It’s sickening to see videos on social media platforms bragging about shooting another one. Does, fawns, and many trophy bucks. Poaching is poaching no matter who you are. Need more enforcement and no more wrist slapping.
16 years worth of deer hunting and every year we think it can’t get worse and it does. More beat tags need to be given out and a wolf season opened again. Less deer seasons with less complications trying to figure out regulations. Back to onsite registration I believe would help on the violating. Quit adding more seasons and more ways to take the Sportsmans money because of lost license sales.

Please offer antlerless permits. Weather conditions and the late start to the gun season have showed less of a harvest. I have seen more deer from 2018 to 2019. 2018 I stopped counting at 50 deer all in 1 field. 2019 in the same field, I stopped counting at close to 100. And yet, do to weather conditions...snow... I could not get to my stand as much and did not fill my antlerless tag.

Hunting is getting better in the Northern Forest Units. At least we are seeing deer again. Because of the increase of the Predators(bear and wolves) you need to have NO or Very few anterless tag issued. I am OK with that. I am in favor of youth hunters being issued anterless tags. They are the future to Deer hunting. We need to get them to be successful at deer hunting.

I believe if you want the future of hunt to exist the youth have to be interested and excited, and by taking away there chance to take a doe is discouraging to them. I as a seasoned life long hunter have no problem not shooting a doe in this county. I enjoy mentoring youth and first time hunt hunters almost more than hunting myself. Please dont take this opportunity from our youth.

My brother and I have hunted forest co over 40 years and we hunt every day of the gun season. We hunt from light to dark and I have not seen a deer in the last 7 years. We see no other hunters but see plenty of predators. No logging in the area does not create a lot of food for the deer. 4 of us hunt the indian camp lake are and in the past 7 years I think we have gotten 3 deer.

We have way too many Wolves in the state of Wisconsin thanks to the bright idea of bureaucrats and The DNR, i’m not sure if anyone locals or visitors really believe introducing these animals to the wild was a good idea. we find dead deer caucuses throughout the forest land which is disheartening. More voter input should be allowed on these decisions. concerned Tax payer!!!!

I haven’t seen a deer on my land for 7 months no tracks nothing! I have cameras in the woods all the time. Wolf’s are a very big problem, they have taken over and without any control it will only get worse. I don’t want to see them all gone but they need to be controlled. Until then your deer hunting will continue to decline. And so will the revenue that hunting brings in.

I’ve hunted forest county for the majority of my hunting career. It’s sad the quality of hunting has deteriorated from when I started to now. I often see wolves along the hwy 8 region. I hunt here for the love of the north woods. Unfortunately, to harvest animals I’ve had to go elsewhere in the last 5 years. Best of luck getting the north woods back to where it belongs.

During the gun hunt of 2018 we hunted the entire gun season the the 2019 hunt was shortened by weather (snow).... both yrs if we heard a dozen shots that were with a mile or to of us we were lucky... There is very little hunter pressure so the chances of seeing a buck are not very good... We have seen groups of does of 4, 5, 6 but no bucks their nocturnal...

If the goal is to increase the population we should be doing all possible to make that happen. Therefore a zero anterless quota is appropriate. There should even be consideration given to restrictions on antler size for bucks. This would create greater interest in hunting in future years as well as balance the deer population in a more natural ratio.
You need to start controlling the predators that are killing the deer! The Wolf population is getting out of control. Wolves are a burden on both the wildlife population and the northern economy. I spend a lot of money on a one week chance to get a deer. Every county around Forest has public bonus doe tags...not Forest! Might be time for another sport.

I didn't know that over-browsing of forests is a concern for Deer. Much of the national forest in northern Wisconsin is overgrown and dying. If this is in any way factored into any type of harvest numbers/quota setting, my opinion is that this one is not relevant in any way in the Northern Forest. Thank you for the opportunity to express my opinion.

I've observed evidence of significant amounts of poaching in and around the area of Forest County where I and family members hunt compared to other areas in which I've hunted. We've reported some of these observations on more than one occasion with no apparent follow up by authorities. Are poaching loses included in predator data or considered at all?

Accessibility for senior hunters is terrible in northern state and federal properties No atv utv access during gun Deer season The gating and burning all the old logging roads and trails that are atv utv usable is sending a message KEEP OUT I have seen the decline of hunters, as we continue to age the accessibility has to be made more user friendly

While I understand that weather may have contributed to a lower gun season kill in 2019, our overall hunting experience has been decaying over many years. I'm glad you have these meetings and the data presented is very interesting to see. I hope to see the number of deer rebound to the point where my kids would like to take it up as a sport again.

It seems the effect of predation may be under valued. The wolves are getting bolder and more in numbers all the time. Even if they don't catch the deer, the deer are constantly having to stay on the run and being stressed out. The deer move into town just for safety now. The wolves in turn are coming closer to populations and are becoming dangerous.

I believe the deer population won't increase till either a federal judge reinstates wolf hunting and allow the state to have a season or that us congress gives the state the options. I know the DNR gets blame, but the numbers won't increase with out thus ability. Also logging needs to increase especially in the hard woods of the federal forests.

If we’re trying to increase the deer herd why does the dnr still wanting to shoot more does? I don’t believe anything they say on how many deer there are because they have no way to monitor it. Bring back physical deer registration and backtags.the current way allows for shooting multiple deer! They’ve taken to much tradition away from hunting!!

I think inaccuracy in wolf counting played a bigger role in decline of deer numbers. I hunt all over the county and have seen notable increase in wolf sign in areas they were not in years prior. I also have never found as many predator killed deer as I have this year. I also have increased numbers of pictures on game cameras.

The wolf population is extremely high!!! I realize that the decision to place them back on the endangered list came from a huge she in washington, but what is the DNR actually trying to do about this topic? And how can you honestly tell the people that the wolf numbers have remained the same for the last 5-6yrs? Come on guys.

I think the deer herd is slowly growing but there are too many predators. We need to allow more bear hunters and open up wolf hunting. If I remember correctly wolves killed more deer than hunters in forest county. I think we are in the bottom 5 counties for deer per square mile. I would like to see those numbers go up.

I have been deer hunting in the same area for over 50 years I have seen the population of deer change a few times over the years. I gun hunt 8 out of the 9 day season I am in the woods from morning light until dark, last year I saw 7 deer the whole season. I saw more turkeys than deer. And one wolf..
I believe having 0 anterless tags will push people away from hunting. I personally do not ever have an anterless tag so it will not affect me but I know other hunters who almost exclusively shoot anterless deer. I believe this will benefit the deer population though which may increase hunter activity in future years.

I like the idea of opening the season the Saturday nearest November 15th because it would include some of the rut. I would be very against closing the season before the gun hunting season as it would stop hunters from bow hunting during the very important rut. The time of the year all hunters live for. Thank you.

Winter severity needs to be low (pray to mother nature) - Increase timber sales north of Highway 8 - Predator control, Wolves delisted, bear permit's increased, local hound hunter's still doing their part on cat's and coyotes (Thank you dog guy's) Support the County CDAC decision's on zero antlerless quota.

The problem with this unit and the system the DNR has implemented for registering deer has allowed people to take deer illegally and opened the door for violating. I know of people who have taken 3-4 deer and did not register one. I have hunted this area for over 40 years and have yet to run into a warden.

It's seemingly impossible to get a doe tag through the virtual line - online purchase system. With seeing so few buck and so many doe, I'd like to see some arrangements available to a land owner to be able to get a doe tag through the simple fact of land ownership as apposed to the online/virtual line.

I have hunted the area that I am in for 40 years. I have watched the deer herd go from being what was probably an overpopulation to almost nothing. I won't make personal comments but it is completely obvious that your personal have no clue as to how to manage anything. Keep up the great work!!!!!!

I have been hunting forest and vilas counties for more than 34 years and because of the abundance of public land to me it is an enjoyable experience. It would be nice to see the deer herd be stable and abundant enough to offer antlerless permits in future years, especially for youthful hunters.

Until the predator problem is solved, deer hunting will never return to normal levels. When you have more trail cam pics of wolves/bear than deer, the outlook is pretty grim. Something has to be done to deal with predation or the population will never return. The deer don't stand a chance.

The deer population does not have a chance to grow when there is to many predators. I also think we allowing to many deer seasons to happen with also giving out to many antlerless tags. If we kill all the does there is nothing to repopulate for the next year and sooner gets less and less deer.

We own 200 acres of land we bought 15 years ago and will be living there soon. We would like the deer herd, grouse, and all animals to increase dramatically. We do not see much for wildlife and were in the woods every day were there. Logged about seven years ago hoping new forest would help. Nope.

I bow hunted just about every weekend October until gun. In the ten plus years that I have hunted in Forrest County I have never seen so many deer in the fields. Both in the morning and evening when it was dark but also during the middle of the day. I am talking 30 and 40 at a time.

If you extend the 9 day gun deer season it will be the biggest mistake you have ever made. It will brake tradition and you'll loose a lot of people that still hunt only for that reason.....once people are gone, they won't come back and you not going to be able to unwind the damage done.

After hunting most of my life in wisconsin and many states in the west the deer hunting was ok sum time great but after the wolf was put in the states all the hunting got worse or just got bad I don't go out west because of this [wolfs] now its wisconsin time no DEER left.

Wolves and bear populations are way to high in northern Forest and west side of northern Florence counties, for the deer herd to bounce back, the population of both needs to be lowered considerably. We also need more logging to provide more food sources for all wildlife in the area.
The overall deer numbers I believe have increased within the last 2 to 3 years. Antlerless harvest limitations have been effective. I do believe predation has an impact in this unit, from bears and wolves. And I also believe poaching has a huge impact, both tribal and non-tribal.

I still feel that folks are baiting deer before the season and throughout the winter with the goal of providing them food. I believe this practice creates an artificial dependence by the deer herd. However, I recognize that enforcement is very difficult for such a large area.

Over the past decade or more I have seen our local deer here reduced thru many different avenues including predation, over hunting, tribal hunting, car kills, violating, etc. I would like to see a complete ban of antlerless tags until our deer population significantly increases.

If Forest County becomes a 0 antlerless quota area, I do not support the issuance of nuisance antlerless tags and/or timber damage antlerless tags. If any antlerless tags are awarded, it should be to the youth hunters regardless if the property they hunt is public or private.

Since I started hunting every year has shown less and less deer. From certain acts like few antlerless tags and no baiting, me and my group started seeing some improvement of the local deer population that peaked in 2018. The 2019 season felt like a huge step backwards again.

Deer population in the Northern forest is very low compared to many Southern counties. I do not see a problem with deer baiting during hunting season. I would like to see the gun season in the Northern forest be similar to Michigan and start the season on November 15th.

I still believe there are too many large wolf packs in the northern section of this county. Over the past 15 years there are less and less hunters in the northern forest. Tourism in this area has taken a beating do to the lack of deer. Hunters are going elsewhere.

I do believe that Forest Cty should be divided North/South when it comes to evaluating our deer herd. The demographics prove this. It is a long county and private/public land varies greatly north to south as does cropland making very different deer habitat.

I would like to be able to hunt for antler or antlerless deer with a bow. Bring that back. How many deer does one person need to take a year? I hear about multiple deer taken by one hunter all the time. Make crossbow a separate season like muzzleloader.

Our buck to doe ratio is way off. I am seeing 20 to 25 does per buck I hunted gun and muzzle loader season last year and never saw a buck but saw an average of 15 to 20 deer during each season. In my opinion the buck to doe ratio needs to be addressed.

A longer season, starting on November 15th each year to benefit the rut, weather, and success would be a great benefit to the hunter, economy, and the success of the hunters. More logging would benefit all wildlife and the economy with better habitat.

Forest county and all of northern forest should go to a 1 buck per year harvest. With the increase in archery harvest and a return of alot of hunters to the northwoods it isn't sustainable to have multiple bucks per year harvested by a single person.

I believe the deer population is too low, the reason we are not seeing deer. No doe permits should be let out until populations increase. One exception for youth hunts. An effort should be made to help keep the youths interested in deer hunting.

I would like to see the bear quota increased. They take too many fawns. There are too many wolves! A hunt needs to be opened for wolf hunting! It takes 1 deer per wolf a week to feed them. Thank you for taking my opinion into consideration.
After many years seeing the decline in the deer population in Forest County, it is good to start seeing a rebound. I think we have a ways to go though to get the deer herd back up. That is why I support a zero harvest on antlerless deer. Thanks

I strongly urge to keep the 0 antler-less permits for Forest County. The number of deer on public land is just not there, and we need to get the numbers up if we are going to have a decent chance to harvest a deer and attract tourists.

As a property owner I feel that I should have a priority in the lottery selection, instead I have not received any permits since this has been implemented and hunters from other areas always seem to get the request that they apply for.

I didn’t see any deer while on my deer stand for three days. I walked the area and saw very few tracks. Need to do whatever is possible to increase deer population. That should include increasing food sources and predator reduction.

In past years, I've seen a number of people harvest an antlerless deer without a doe tag. It would be nice to see a heavier warden presence during the 9-day gun season....we rarely see wardens (where we hunt anyway (Blackwell))

My biggest concern is that the 5 youth that bow hunt in our hunting camp have opportunity to shoot a antlerless deer during the archery season. I am also concerned with high wolf population in the Forest County area as well.

Don't extend deer season Wolves are a major problem especially north of crandon and need to be destroyed. Saw many of them while scouting and hunting.

Logging activity in N. Forest county aka Nicollet NF needs to increase in order to provide enough forage for a larger deer population that can out pace predation. Good for surrounding communities and for herd growth.

Your CDAC presentations should include predator POPULATION counts for wolf and coyote. Not just estimates of mortality by predation Based on local reports may be higher than your "fawn" observation numbers suggest.

We are seeing healthy numbers of deer on our property and want the ability to take a few does if needed for deer management and for youth hunts. These are primary reasons for wanting to maintain a small doe harvest.

Limited agricultural areas and large wooded tracts in Forest County (mostly federal and state land) are obviously very different. There appears to be a recent increase in logging, which should help the population.

I believe if anyone is able to harvest antlerless deer, it should be the youth. The youth hunters are the future of the sport. To keep them interested please allow them the option of taking an antlerless deer.

After sitting for 7 days hunting and never seeing a deer, very disappointed. In past years at least someone in our camp had at least had a chance of taking a buck per day. Now we have 7 guys that never seen a deer.

Hello, thanks for presentation, well spoken. My only other comment is it’s very concerning to come across wolf sign. Also a FYI, a young moose was photographed near and around Ross Lake in Florence county, 3/2020.

There should be at least 200 antlerless tags for the gun season in forest county, there are so many antlerless deer roaming around our property that we see multiple times a day without any baiting or feeding.

I would support youth being able to take an antlerless deer if we went back to taging deer at the time of kill. I feel this way because it may deter some adults from illegally harvesting an antlerless deer.

In the past 5 years, I've seen an increase in the number of Black Bear in the area I hunt. Recommend to increase the number of bear tags offered for Forest Co to help maintain a nominal bear population.

get real numbers on predators. get serious about controlling cwd on game farms. eliminate paying for cwd positive captive deer.make game farm owners pay for clean up & monitoring of affected property
Consider antler restrictions for protection of age classes. Only should able to shoot six point or higher for a couple years. This will boost future buck opportunity and quality in future years.

I would like to see a reduced cost for senior citizen hunters like their is for fishing. They are on a fixed income and if you'd like more hunters, a reduced rate would go a long way in my opinion.

I would like to see bear tags increased in Forest County. I saw more bear last deer season than I saw deer. There are too many bear in my area and waiting 11 years for a tag is ridiculous.

Along with the other factors mentioned for the low deer population, I imagine the fact that we saw a pack of five wolves in the area we hunt (Stillhouse Road north of Hwy 8) was a factor.

Tribe members being allowed to bait and hunt at night out of their trucks Seeing more and more wolves while hunting and a lot less deer on trail cams past 5 years showing a decline in deer

Too many WOLVES!! Nothing more needs to be said. Each year I see more and more wolves and fewer and fewer to NO deer at all. The hunting tradition and north woods deer camp is dying away.

I have seen a difference in deer numbers in Forest County since you started buck only. I am hoping that the program is continued for a coup more years to bring the heard back.

Deer herd is (None) No sign of deer or signs of deer at all. Walked for miles checking deer sign and nothing. Will not hunt deer this year for first time in 50 years.

Between years of harsh winters, too many antlerless permits and very high numbers of wolves killing all the deer there’s hardly any deer left in northern Forest county.

This unit doesn't seem to be making any progress as far as slightly increasing or maintaining it's herd numbers. Hunters are getting frustrated and just hanging it up.

I agree with zero antlerless tags this season except for the youth hunt. I support allowing our youth hunters harvest an antlerless animal during the 2 day youth hunt.

get rid of the wolf. allow public food plots. hear or see wolf way to often when in the forest. you are loosing the youth interest in outdoors because of fear of wolf.

Charge more for out of state hunting no special season go back to baiting like Michigan did 9 day Gun season 7day muzzle season kill all the Wolf’s No Youth hunting

We are trying to bring the deer herd up but your trying to kill all the doe off won’t help. Bring back personal registration back that will bring the poaching down

Compared to the late 80s and early 90s the buck kill is down about 260% .The deer herd will never be the same. The wolf's are exterminating the deer herd...

300 tags were for "ALL" of northern forest not just for forest county and it was for private land only and it also was for central forest, that was a joke!

I saw 1 deer gun hunting last year and 0 bow hunting. I will save my money in 2020 on a gun tag will try 1 more bow season. but will try Langlade county.

The DNR should be thoroughly embarrassed to have the worst hunting in the last 20 years in the largest national forest in Wisconsin. It is a real shame

The number of wolves in forest county have a big influence on the deer numbers. I saw 2 deer the entire deer gun season but saw a pack of 5 wolves

KILL ALL WOLVES !!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!! I FOUND 23 WOLF KILLS JAN. TO APRIL 2020
0 quota is perfect, the herd is hurting up here. There should be no youth doe tags either. Give the herd at least one more year to rebound.

Keep antlerless tags to 0 until deer population increases. Most nights you can hear wolves chasing and killing deer, along with some coyote.

I see hundreds of does daily in the two fields but 0 doe permits proposed. Doesn’t seem right. I see tons of does each day on the road.

Does the extreme snowfall in northern portion of county affect the results of the committee? Over 110 inches the last 2 (or 3?) yrs.

I support zero antlerless tags for the 2020 season in Forest county. But I would prefer to allow antlerless tags for the youth hunt.

Our dear numbers on public land are very disappointing, and you see baiting all over our area like they never put a ban on baiting.

Just not very many deer in this area to many antlerless deer tags given over years past no chance to rebound after tough winters.

That DNR allows any doe harvest has outraged me. There has never been a deer population in Wabeno area to warrant a doe harvest.

Got a tough job, and you can’t please everyone. Remember the traditional deer camp folks, we want a reasonable chance to get a deer.

Until predator numbers are managed appropriately, deer numbers in the public areas of Forest County will never recuperate.

To many wolves. Had 3 circle me in my ground blind at 30 yards one morning. Open a season on them so the deer can regenerate.

Gotta get the deer number up. Way to low for to many years now. Don’t give out any unnecessary tags like junior tags, etc.

To damn many wolves. They followed me back to my cabin twice. I don’t believe there has to be as many wolves that there is.

I saw 20-30 hunters on opening weekend of gun deer and many more cars. I walked for 4-6 hours on Sunday and cut 1 track.

Too many Wolves.

If you want increase the herd you need to reduce the predators, the deer are depleting faster than you know.

Please keep the Archery / Crossbow and gun seasons as they were in 2019. Do not extend the 9 day gun season.

Predators need to be considered in this unit. Over the 33 years I’ve seen the balance change dramatically.

I feel Forest County CDAC is right on, Buck only don’t harvest Does until the herd can handle it, Good job!

To many predators on the deer population, bear, wolves, tribal harvest and constant pressure on the deer.

Drastic reduction of sightings in 2019 season compared to 2017. Very concerning. Hope there is a solution.

2019 fall hunting observations Observed fewer fawns with does. Both while hunting and on game cameras.

My concern is that I have personally seen people shoot antlerless deer without a tag during the season.

Units 38 & 39 Total lack of deer! Still to many wolf/coyote/bear! Lack of deer = lack of hunters!

Should not have to go online and wait to try and get an antlerless tag. Working folk have no chance!!
The only thing I would like to say is the wolf population in northern Forest is out of control!

Split the unit into 3 separate zones. West of 139 North of 8, south of 8, and East of 139...

There are more deer in Forest County than you are giving credit for in your management plan.

We do notice an increase in the wolf population along with a definite decrease in deer.

You give very little info about wolves and the impact they have on deer populations.

You will not have a forest for future generations unless you lower the population.

Harvest wolf’s, it is completely out of control. Please bring back the wolf hunt.

We do not want a hunting season without doe tags. (we have an abundance of doe)

Too many wolves in our area. More wolf tracks than deer tracks the last 4 years.

Juniors age should be limited to age of 16 and under for antlerless deer harvest.

Remove deer farms in and around units to combat spread of CDC. Allow baiting.

There are plenty of deer and no antlerless permits... makes no sense...

Suggest buck only for Forest County. 0 for antlerless quota. Thank you.

Stop all Baiting statewide!! Decrease wolf population. Increase bear tags.

Doe harvest should be a least as high as 2019 level or slightly higher.

Please... put the antlerless deer back on the hunting list..................

I thought the video was very informative. Thank you much for your time.

There is a over population problem with the timber wolves in this unit.

I no longer hunt due to the baiting ban in our counties. 2 years now.

If there is to be no baiting how about some enforcement of the rule.

Wish to see no doe permits. Wish to see baiting back again.

I am concerned about the low deer population and much more!

Property owners should have priority in drawing for tags.

0 antlerless quota for Forest County is a good call.

Open a wolf season and make it easier to hunt coyotes.

What we mostly saw last hunting season were turkeys.

Let’s do what we can to get the population back up!

Thank you for listening to feedback from hunters.

More antlers less tags for private land owners.

Continue with no does and more Predator tags.

I support first year youth taking antlerless.

We need to control the wolf population!!!!!

Stop introducing predators into Wisconsin.

Wolves and predators need to be controlled.

I am heavily against a 0 antlerless county!
NEED TO GET THE PREDATOR NUMBER DOWN
To many wolf. They eat a lot of fawn.
Ban baiting state wide
too many wolves !!!
Too many wolves
More permits
Good work
Public Input on CDAC Preliminary Recommendations - Spring 2020

Grant, Southern Farmland

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

591 forms were submitted for this unit.

### Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 296
   - I visit this unit for non-hunting purposes: 114
   - I hunt in this unit: 560
   - General interest in this unit: 107

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 539
   - Bow: 328
   - Crossbow: 177
   - Muzzleloader: 160

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 23.22
   - Maximum: 65

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 420
   - Mostly Private Land: 86
   - Public and Private Land About Equally: 23
   - Mostly Public Land: 10
   - Exclusively Public Land: 15
   - I did not hunt in this unit last year: 6

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 13
   - Not too crowded: 42
   - Neither crowded nor un-crowded: 23
   - Somewhat crowded: 23
   - Very crowded: 16
   - Not applicable: 17

### Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 82
   - Fewer: 176
   - Same: 222
   - More: 62
   - Many More: 36
   - Unsure: 13

### Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
- Implement an ANTLERLESS HOLIDAY HUNT: Support 255, Oppose 300, Unsure 36

If a Holiday Hunt is held in a Farmland unit...
- EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: Support 272, Oppose 269, Unsure 50

If the Population Objective is not "Increase"...
- Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: Support 70, Oppose 489, Unsure 32

If a Zero Quota (buck only season) is adopted...
- ...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? VALID, NOT VALID, Unsure 36

11. How important were each of the following concerns in forming your opinion about the CDAC's recommendations for this unit? (Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very)

<table>

Comments for Grant, Southern Farmland

Note: the comments presented in this report are the unfiltered opinions of individuals who responded to an online public input form. The viewpoints expressed do not represent the views of the state of Wisconsin, the Department of Natural Resources, or its employees.
The Wisconsin DNR and CDAC recommendations have raised a lot of speculations about the deer population in the county and what should be done during the 2020 deer season. After carefully viewing the video given I had noticed that a few factors to certain subjects were not put in to the research or at least not stated, some being difficult or impossible to add into research and obtain data for. More specifically for the 2019 deer season. The largest factor that was left out (granted very difficult to put into data) was the weather during the 9-day gun deer hunt. The temperature was warm for an opening weekend compared to the weeks prior to it. During bow season i had seen plenty of deer while sitting in a stand and plenty of rut activity following up to opening weekend. But opening weekend had fallen on a warm spell and the deer movement was very much less than usual. That is something that cannot be controlled whether it is the rut or not. When it is warm, the deer movement drops. Comparing it to previous years can help with that as well. 2016 and 2018 had good numbers of deer harvest in recent years. Both years had good weather opening weekend. 2016 had the large snow storm the night before and 2018 had snow and cold weather opening weekend as well. I recall the 2016 season because opening morning following the snow storm i could recall seeing the most deer ever seen in one single hunt in my 14 years of hunting (accompanying my dad when i was too young to hunt and hunting independently). Although the numbers weren’t nearly as drastic for 2018 as 2016, they were still above the numbers i had seen personally in 2017 and 2019 opening day. A change in the tags given out and change in the length in deer season cannot change how many deer a hunter will see when the weather for an extended period of time is not favorable for deer hunting. Another factor that cannot be written down for data is the increase in popularity of buck management among hunters. With the increase in technology, the strive to shoot bigger bucks and create better genetics for deer herds has driven hunters to be more selective about the deer they shoot. Some of hunter's philosophies may not always be the right answer for buck management but may help clear up some of the reasoning for less deer harvests overall. One piece of data that stood out to me was the permits issued to the number of harvest in Grant County since 2016. 2016 was the last year that 2 extra antlerless tags were given out for one license purchased. The success rate had dropped on private land from 12.6% to 8.8% in 2017. The number of issued tags had increased yet the number of harvest had stayed the same roughly around 3,500. While the following 2 years had roughly stayed the same in success rate as the previous years. I believe the reason for this is in part of hunters being more selective with their harvests for the sake of deer quality (bigger bucks). Going from this the change in success rate was correlated to more tags being issued while people still harvesting the same amount of deer roughly every year (no real drastic change in harvest +/- 500+). I feel as if though ethical hunters will always try to maintain the quota they set for themselves and not attempt to kill more deer than what they need to sustain themselves. Although i feel as if giving 3 bonus antlerless tags per year is not always a bad thing for my family needs about 4-5 deer to last us an entire year, i think that hunters will not fill all four (including buck) tags. My next thought is on the idea of extending the gun season and creating up to a 5-day grace period between bow season and opening weekend. I strongly oppose this idea for the sake it will have a direct impact on the archery hunters and I think create other problems for hunters who are not accustomed to hunting past opening weekend like many do in this state. Usually opening weekend lands either on the 2nd week of the peak of the rut or a week after the rut during the post rut. Bow hunters may have the privilege of having a longer season, but the level of difficulty for archers outweighs that of gun hunters. So why would giving a grace period longer than what it is now be right for bow hunters? They are the ones that really have the true passion for deer hunting and by doing this i feel as if though it would be stripping them of that passion. The muzzleload is a similar concept. There is an added level of difficult that only people who are passionate about conservation and hunting are willing to accept. All in all I feel as if though there should not be an extension to the 9-day gun season at any time as well as the method of earn-a-buck or a grace period linger than the 1-day period it is now. I think that it would be violating the values and traditions that had made the Wisconsin deer season what it is now, practically a holiday across the state. Although the increase in doe tags would not be a bad thing to try and keep the buck to doe ratio as close to one as possible, these other things are senseless and have a negative impact on not only the deer heard but also the hunters across the state. I feel as though the way it has been for years now is what ignited the passion in so many people in the state and people from out of state and made hunting in Wisconsin so desirable. Please take what i
Hello, I am writing in to offer a few opinions and input on ideas or adjustments that I feel could help hunting overall in my county and WI as a whole. I reside in grant county have lived and hunted here my whole life as well as being an avid hunter here i also farm several hundred acres of crop ground and pasture so i get to see alot of what goes on out in the fields and woods. So a farmer i know there were alot of crops left in the field last season and that probably has far more to do with low deer kill than anything more places to hide, farmers harvesting crops not hunting excetera. The main topic i wanted to touch on is the differing deer seasons, from holiday hunts, to the youth hunt, and i have read about the thought of extending the gun deer season. To me not one of those things should even be necessary, in my opinion there should be one gun deer season and it lasts 4-9 days at most somehow the DNR has managed to make the gun season meaningless so nobody hunts it and if they do they dont care when they go, opening day doesnt carry the meaning it once did and you know as well as i do the majority of harvest comes from that one day if you really care about deer harvest put everyone in the field at once. Opening day is boring i dont hear half the amount of shots or see half the deer i did a few years ago because noone is out there to bump them and if they are hunting strictly for the venison they have 10 different worthless doe seasons or youth seasons they can go try to shoot a doe in so theres no pressure on anyone to go opening weekend. So extending the gun deer season any longer than it is would be absurd and ruin the sport altogether your adding 10 more meaningless, useless days. Crop damage- I don't see a large amount of damage from deer in my fields while some may see it as deer damage, corn being knocked down and getting damaged i feel in large part is due to the growing raccoon population since fur prices have dropped and trapping is no longer profitable it is not hard to see a dozen coon in one night out in the field and anyone who has spent enough time watching deer know they dont need to knock corn down to eat it so i really dont see a need for AG tags maybe more of a need for fur buyers. Just a couple observations I could go on forever as i am passionate about hunting, bottom line to me is you add seasons, add more ways and times to hunt the deer you just spread everyone out and it all ends up watered down and is boring. I can remember15 years ago when i was in my needs opening weekend was like a holiday everyone did it, i didnt need my own youth hunt everyone went and hunted together and we wore our back tags to town and looked in each others trucks. If you want to grow the hunting population quit ruining traditions with extra seasons and things. 4-9 days of gun and mid sept through december bow is idea in my opinion. If you took the time to read this all. Thank you for your time have a good day.
It is basic ecology that maintaining a population requires control of the number of females of the target species. Since the 13-14 regulation changes, the Grant Co deer population has steadily increased. Regarding the chart used to determine quotas to maintain/decrease populations, the quota (6,500) to maintain where the current Grant Co population sits post-harvest (~27,000, which is ~4,000 more than the goal pop size) is nearly double what the annual antlerless harvest for the previous 9 years has been. This explains the noted population growth, as the number of females continues to increase and the quota is never met. With 40,000 authorizations issued in the 2019 season, there were roughly 13,000 licenses sold. Limiting to 2 tags per license puts issued authorizations back to 26,000 just like 2016 season. While harvest numbers were similar between 2016 and 2019, this strains those who do manage to fill their tags and yet want to keep hunting. While only 1/5 of the bonus tags were bought in 2019, the potential for more hunters filling their tags issued with 2 authorizations will likely cause the number of bonus tags purchased to skyrocket and potentially approach or surpass the 2,500 that have been suggested for private land. As discussed in the previous CDAC meeting, if the assumption that issuing three authorizations will instill fear of over-harvesting in hunters, then more resources, literature, and a direct statement with the purchase of a license that population is being maintained with the use of these tags needs to be communicated. The positive trend in deer population size in Grant Co continues to grow with current regulations. This is why the Holiday Hunt with extended bow season needs to be considered. Adding this will increase the odds of approaching the quota. If, in the event the quota was surpassed and there was a noticeable decline in the county's deer population, the herd would still be saved due to the quota being established with the goal of maintaining and not decreasing the population and that it is still ~4,000 above the goal population size. The hunt could then be removed from future seasons if this was the case. I am unsure what the imposition of adding more days to the hunting season is for landowners as discussed in the previous CDAC meeting. They have the right and power to hunt or let anyone hunt their land during any hunting season. Any restriction of harvest opposes the goal of the county to maintain the population. To help maintain population more successfully than the previous seasons the following should be considered: - add the HH and extended bow season - keep the issued authorizations at 3 per license with more literature encouraging the hunter to not be fearful of over-harvesting - increase the amount of bonus authorizations available if only 2 are issued per license

Overall, I agree with proposed season structure and harvest authorization recommendations. I do, however, feel that much of the data and observations are pointing to a need for higher antlerless harvest. Simply giving out more antlerless tags or making more bonus tags available is not the fix. The option of an antlerless only season for all seasons seems too extreme in this part of the state. I think a happy medium does need to be implemented. Going back to the data, it clearly shows that “earn-a-buck” was an extremely effective management tool for antlerless harvest. I know this type of season structure was met with some opposition at the time, including myself. But the more I educate myself and think about what needs to be done for a sustainable resource into the future, the more apparent it becomes that earn-a-buck should be reinstated. I hunt many different properties in northern Grant County and all of them are severely overpopulated with antlerless deer. I do my part and shoot does but it doesn’t help when other people don’t because he majority people shoot one maybe 2 deer a season and if given a choice it will likely be a buck. The herd seems unbalanced, especially in northern Grant County. I think the only effective tool for a more balanced herd, closer to carrying capacity is reinstating earn-a-buck. Not only do I think earn-a-buck needs to come back because it is the most effective herd management tool for herd structure, I also think it is one of the best ways we can try to buy more time with CWD. CWD isn’t going away and is a great concern of mine, especially for the next generation’s sake. If this trend continues, I do not see a bright future for the resource, not only in Grant County but statewide. I know some of my response gets anecdotal, but I try to base my opinions and thoughts in science and research and not just try to push a biased, opinionated and politically based personal agenda. I truly hope my thoughts reach out to many people and they take an unbiased look at things and consider what is the best for the long term sustainability of our resource.
I agree with the goal to maintain the herd and I feel that issuing 2 antlerless tags is much more appropriate than the last few years where 3 per license were issued. Grant county is very diverse county from north to south and deer density definitely varies. 2019 proved to be an interesting fall with lots of moisture and crops still standing during gun season which definitely took its toll on harvest figures I believe. I agree with not having a holiday hunt or extended archery season as I feel hunter participation would be low and overall harvest would be extremely low. Based on current season structure there is more than enough opportunities to harvest a deer and adding more days only leads to highly pressured herds and lower harvest numbers. Also when setting these antlerless quotas I sometimes struggle with seeing who actually will put an effort forward to harvest antlerless deer. The dynamic of hunting has definitely changed over the course of time and a large shift has been made toward the QDM effort. I say this as much of the hunting population now looks to only harvest large mature bucks and doe harvest is sometimes an after thought. I will only kill what I know myself and my family will eat which brings me to my final point. We need more options for deer donations in the county. I believe only a few lockers in in the northern part of the county participate? Not sure this helps overall antlerless harvest but would definitely help spur people to harvest more if they knew viable options were available to share the resource (venison) with those who truly need it. Thanks!

There will always be pockets of deer that have more than others due to the landowner's personal initiatives. On top of that, people are only going to kill what they want - furthermore intensifying the pockets of large deer numbers. Deer are survivors and know where to go when they get pressured. Deer activity in daylight hours diminishes 10 fold when people who don't smart, or push deer, are in the woods. Increasing the number of tags per person isn't going to increase the number of deer killed. Hunting tactics have changed drastically over the past 15 years (and I'm only 28) to where people set up a blind, plant a food plot, and expect to kill a big buck and doesn't shoot does. Here's my recommendations: 1) If hunters have the option go shoot a doe during the holiday hunt, or antlerless only season that follows muzzleloader season, they put off shooting does because "they have a lot of time." Then time runs out and no deer are killed. Force hunters to fill their quotas by shortening the extra deer seasons, or getting rid of them completely for firearms seasons. 2) Push back the rifle season opener to the weekend after Thanksgiving into December. Incredibly taboo for WI, I get it, but you accomplish two things. The first being that hunters can hunt both weekends without likely being tied to family obligations so more opportunity within the 9 days of season. Secondly, everything a deer does, outside of the two week window in November, revolves around it's stomach. Deer get on heavy feeding patterns after the rut allowing better chances to increase killings.

My opinions are based on hunting private land and the population was influenced by some illegal harvesting of deer the week before gun season around the area I hunt. Herd health looks to be good, we and the neighbors try to let them grow to have good adult does and obviously try to harvest really nice bucks. But also let the younger kids shoot a little one to get them engaged in the sport. I also believe that it doesn't matter if you hunt with a bow or crossbow during archery season. I am saving up for a crossbow. You still have to beat there nose and ears. That's the challenge. I just shot my 1st buck (9pt) last year with a bow. 23 yrs later. Also note I haven’t shot a buck in probably 5 to 6 yrs. I take off work for all 9 days of gun season, 2019 seemed like after the opening weekend movement went down significantly for the rest of the season, and I did not tag a deer. I kept pursuing through muzzleloader for a weekend and was able to shoot another 9pt. Deer hunting in general in really enjoyable to me. I like the early youth hunt to get the younger generations out there. My 11 yr daughter will usually go seat with me a couple days and like to check the trail cams. We are planning on getting her into hunter safety and see how or if she would like the actual hunting aspect.
I would just like the DNR to take in to consideration the amount of deer that were found dead due to EHD. We found them all over our farm. We called you guys when we found some that were still alive but suffering. The response was for us to shoot them. We were told that if there were other cases within 10 miles they would not even come to examine. This tells me that there were several in grant county. After talking with neighbors, and having them say they found several dead, it’s no wonder why number of harvests are down. We had a hard time seeing deer during 2019 bow and gun season. You say not focus on one year, but how can you not when something like this happens. I oppose giving out extra tags when you guys have no clue on how many deer died from this. None of this is mentioned in your graphs or any of the video. You are only concerned about the steady incline in the population that is clearly false. I have hunted every year for the last 25 years. I spend weeks in the woods in the fall and I’m here to tell you the numbers are DOWN! I have talked with several people in Crawford county that had the same issues with EHD. Please take it in to consideration before you go extending seasons because the kill numbers are down. Thank you

1. Return to the use of backtags. Some people that hunt private land don't buy a tag unless they get a "nice" buck. These people obviously don't report any of the deer they shoot which lowers the overall number of deer reported harvested and skews the final numbers. I'm sure the number of purchased licenses would rise dramatically if people had to wear a backtag again. It is also easier to report trespassers if you have a backtag number to report.  

2. Return to the practice of physically registering your deer. I’ve heard way to many stories of people forgetting to register via phone or email. These deer go uncounted. People didn’t “forget” when they had to register in person and have a metal registration tag attached to their harvest before they could butcher.  

3. Try a 3 day gun deer season. Everyone will be in the woods at once which should get more deer up and moving. People will be more likely to shoot what they see instead of waiting for "the big one". Increased urgency with only 3 days to hunt as opposed to 9 could lead to higher harvest numbers. If one 3 day weekend isn’t enough have two 3 day weekends. One could run the Friday after Thanksgiving through Sunday. Two-three weeks later you could have another 3 day gun hunt in December.

It appears that it would be necessary to increase the deer harvest in order to meet the population goal. Therefore it makes no sense to reduce the number of antlerless tags issued with each license. Even with 3 per license last year, the goal was not met, so keep it at 3. (I used all of mine.) I recommend that Grant County be split into two sections for deciding about a Holiday Hunt. Hwy 18 is a logical dividing line between north and south, which are two substantially different habitat zones. Hold a Holiday Hunt in the northern portion of the county, north of Hwy 18. Also, for a late season, in addition to allowing archery and crossbow, also allow a second muzzleloader hunt. The present muzzleloader hunt is useless as a means of helping to achieve population objectives, because the deer are much too traumatized from the 9-day season that just ended. They are very nocturnal and difficult to encounter in daylight. In the past 28 seasons, I've gotten 42 deer in Grant County, but ZERO while hunting in numerous muzzleloader seasons. If we're serious about achieving the population goal, then it makes sense to allow and encourage muzzleloader hunters to help out.

I favor keeping the antlerless harvest authorization at 3. A large part of the decision to decrease antlerless authorizations to 2 had to do with the decreased hunter success rate compared to other years (this notion did not make it into the minutes). The committee seemed to miss the key point here, which Eddie pointed out later on: the success rate will always go down if more authorizations are given because not everyone will use their extra tag- the important piece to look at is the total deer harvested. Kathy's point about folks needing extra food this year was spot on, too. We should not try to play pop psychology that hunters are shooting fewer deer because they have more tags. That logic doesn't work out. We are not meeting our harvest goals, so we need to encourage every opportunity to take what they want and need. I also believe we should have a holiday hunt and extend archery season. Herd numbers are rising, (2019 gun harvest was down due to weather and late timing, and this past winter was very mild) and CWD is entering the county. We need to keep the herd healthy.
It seems to me for hunting on our private property for almost 30 years that the population is the same if not less than 20 years ago but still a high population. I feel the more private owners are there the more educated the area is becoming. Goverment control is the biggest fear for most in the County and the DNR is goverment, I feel if the land owners and farmers had more control, the deer population would be controlled better. The collars and the cameras the DNR are trying to study with seem to be foolish, DNR should be asking the people that live out here and hunt out here and spend their days out here about any information. I feel most hunters and farmers can tell you which deer are where, how many fawns they had and how much crop damage there is was for the deer and turkey on their crops. The people out here that are paying the taxes on their livly hood are the ones that know more about the land and the wildlife here than any biologist or DNR affiliated group. Im not stating this as hateful more just thinking the DNR is and has been using the wrong approach to the study.

Two years ago we saw a high number of deer on our properties. To the point of knowing we needed to harvest some does. We were unable to harvest very many does that year because of time commitments. Last year for some reason our deer numbers were way down. It was mostly the does that were missing. We talked to several neighbors and this was also the case with them. In all about 2,000 acres were hunted and the same issue was throughout these acres. It was not do to over harvest the year before. Possible blue tongue but it was not well noted in our area and I would expect to see less bucks and that was not the case. This is the reason why I marked less deer tags and less season. 2 years ago I would have agreed the numbers were way to high. Now this is only 2,000 acres of southern grant county and other areas may not have seen the decline. I sure hope other hunters from the county explain what they saw last season incase is was more of a county issue so we do not over harvest this year thinking the deer are still there. Thanks for asking the hunters opinion.

Numbers were skewed for the 2019 season deer harvest since it was too wet for crops to be harvested on time so the deer had more places to hide and didn’t have to forage for food on top of it being a very mild winter. And placing quota on harvesting doe is obscured. In order for hunters to be able to enjoy the sport of hunting any game there has to be game available that they want to take. As for deer, every hunter dreams of getting a big buck and the only way for there to be bucks is to have the doe to produce more bucks. The farm I hunt I was told back in the early 80s there were deer running all over the hills and everyone always tagged out, these days is not the case due to the structures set in place that has diminished the success rates of hunters. Which is no wonder why so many have given up hunting and when that’s given up on the tradition is no longer being passed on to the younger generations. Look at the whole picture not just the projected guesstimates and skewed numbers with a closed mind that that’s all there is.

My #1 objective in hunting is to see and interact with wildlife. In the last 5-7 years I have seen a steady decline of numbers of animals. I hear it from all hunters. The harvest is a bonus but not a necessity. I also have a game recovery k9. Ever since crossbows became legal to anyone, I have seen a drastic increase in wounded animals and non-recovery as people do not respect the animals enough. Deer harvests are down due to lack of hunters and lack of deer. No other reason. Increasing kill quotas for this year due to 2019 drops does not make sense. There are multiple variables to look at when looking at harvest numbers. Weather, # of hunters, experience of hunters to name a few. The last few years has been rough on anyone in the woods. I hope this message lands home and gets taken into consideration as I am a young adult and hope to continue to hunt in the future. At the kill rates suggested, I do not see a feasible reason to sit in the woods and not see animals.
I've been deer hunting since I was 12 years old and have seen the 3 day deer season and having to send in for a doe permit. It was enjoyable to take and register your deer so you could see everyone else who had one to register and listen to their stories. If the DNR wants to know the real deer kill numbers go back to registering them at a station. I know some hunting parties that haven't registered a deer since electronic registering started and the more people in the woods at the same time the more deer will be shot. extending the season will NOT help.

Taking muzzleloader season away from us will not help it's taking away from the way we used to hunt. There will be several people who won't purchase license if muzzleloader season is taken away. Having an earn a buck hunt will reduce the sales of license as alot of us older hunters won't buy a license. If I see a big buck right away I want to be able to shoot it.

The Grant County CDAC again missed the mark on what is required to sufficiently manage the ever-increasing population of deer in the county. Having an antlerless hunt around the holidays will certainly not burden the landowners (see your minutes)... c'mon really? It provides families a chance to put some extra venison in the freezer and have fun together while reducing the real burden which is crop damage, CWD threat and vehicle collisions. Reducing the number of free farmland tags from 3 to 2 won't cause people to worry about overharvest (again, see your own words in the minutes)...it just shifts the burden for paying for tags to the hunter (in the form of $12 bonus tags). I recommend you read the comments from your CDAC staffers (you know, the professional game managers) and start heeding their advice. Increase the farmland tags to three (or higher) and institute a Holiday Hunt!

With last year's low numbers of registered deer I really don't want much changed. First off it was a terrible year due to to much standing corn if which was out if every ones hands. Our group agreed to harvesting a few more doe this fall to make up the slack of last year's hunt. I'm also not convinced every deer is being registered by many like in the old days. Yes it's nice to just go online and do this but also I feel it would keep numbers more accurate by going to register stations. I'm also not fond of all these extra doe seasons after the 9 day. At that point let the bow hunting get back to business without having the gun hunters running around and a bow hunter having to wear orange. It's a waste of time. Don't see many out hunting after the 9 day and muzzle loader season anyhow. The straight 9 days used to make guys get out more n stay at it without those extra seasons.

Why has there been no offerings to have a longer bow season and push gun season out to the week of thanksgiving? Most people don’t have to take a FRIDAY off before gun for traveling purposes, setting up camp, etc. Why don’t we discuss the option of going back to shotgun only? Parts of the state are too flat and with 600,000 people in the woods all at one time is very dangerous. Why haven’t we discussed breaking up the gun season like an Iowa frame work to help reduce the amount of people in the woods at once. Later in season = better conditions for gun hunters, better overall hunting and safer hunting with reducing the amount of hunters in the woods at one time. Would allow successful hunting for bow and cross-gun hunters as well as keeping in mind the gun hunters of wisconsin and their rich tradition. Why does the state offer an abundance of tags by excess of 2,000?

Doe tags on public are way too high. Not many should be handed out. The percentage of people hunting on public vs amount of land available is the reason why. Public land Gets alot of deer shot on it consistently and number of deer are low on public. Private i view differently but if you have 40 or even 80 acres with a family of 4 that bow and gun hunt. That is 2 doe tags for each license 4 a piece. 16 doe tags and 4 buck tags. So 20 Deer tags???? No family is going to shoot that many. If you hand out 3 doe tags even worse 28 deer tags. Now imagine 5 or 6 people hunting on 80 acres even 120 which is common. Getting deer shot on these small parcels and public land is not a problem. These large tracts of private land with very little hunter access is most of your problems with higher deer numbers. 90% of the hunters have 2 or 3 times more tags then they can use.
The deer on Public land seem to be less populated, and over hunted. This has a tendency to cause public land hunters to cross private land fences more often and trespass and poaching problems arise more often. Out of state hunters come to Wisconsin to fill tags. They are not worried about quality of deer. Restrict the out of state hunters by raising the out of state license fees which will decrease public land pressure, which makes for a more enjoyable public land hunt, and decrease deer over harvest on that public land. Hunter safety and conservation is my motto. Please bring back the registration stations. The percentages of unregistered deer may be influencing your findings and graphs. Stations open up hunters to other hunters which makes for more opportunities for hunters sharing information and enthusiasm about the hunt.

I would like to see the holiday hunt for doe only and extend the archery hunt. Holiday hunt is the perfect time to get kids involved in hunting as they are off from school, gives more opportunities to harvest deer. The deer numbers I feel are getting out of control and CWD and EHD are becoming more common. We need to get the deer numbers down to have a healthy herd and enough food for the deer. I am a member of the CDAC committee from a different county but I spend the majority of my hunting in this county and the deer herd in this county is getting to big in my opinion. If you listen to the biologist and the forester I am sure they would agree with my statement. It is hard to have a quality deer herd and a huge deer herd and right now I believe we have too many doe to every buck.

Just leave deer hunting and the seasons alone. I know it was proposed to extend the gun deer season to 19 days I think that is a bad idea. I would be 100% in support in moving the muzzle loader season in front of the normal gun season. I would also make the Muzzle loader tag separate from the normal gun deer tag. I don't know what price to put on this additional tag but to be afforded the opportunity to hunt deer prior to the normal gun deer season should come at a price. Depending on the dates you could be hunting during the rut with a muzzle loader. I believe this would increase the interest in the muzzle loader season and would raise more money for conservation through the extra tag fees. I know I would not hesitate to buy an extra tag for that season. Thanks for your time.

Why is the Nelson Dewy State Park still open for deer hunting? One year to thin them out a little was fine. Close the park again. Areas where I hunt and other people have seen the deer heard go down every year since it was left open for hunting. And another thing, allow baiting, in Grant County Sothern Farm land the food plots is what is causing the CDW. Baiting may have a few deer using it but a food plot has "many deer at once" using them. The people that has the money to maintain a food plot has the advantage again. All they have to do is feed the deer and set and kill one! And cause the spread of CDW with the many deer on the plot. But I can't put out a salt block or whatever just to get a shot at one deer! Something is wrong!!

The challenge Grant County Faces is there are two diverse deer habitats within the county. The Northern Hill Country (N of Hwy 18) seems to have an abundance of deer and the "flat" farmlands in the south have less of a whitetail population. Given the county system we are being challenged to manage two areas as one. This is no small task. Is there any way we can do that better? It is possible to have Grant County Zone "A" and then a Zone "B". While this may seem like a step back - towards the old Zone System - I think it is best for the deer and our county. I would like to close by Thanking all of the CDAC Volunteers. I listened to the call and know this is a 365 Day effort. Best to all and stay healthy.

Keep it about the same. Stop extending and creating new seasons. Make hard dates so people go out and harvest. Extending seasons puts in the mind of the hunter that they have all the time in the world to harvest deer. Then the weather gets bad. People get busy with holidays and other life events and don’t go back out. Grant County is very fortunate to have a whitetail abundance. That is why deer hunting remains strong in that county. Don’t go and change a bunch of things. It frustrates hunters and also confuses them. Make it simple and keep in mind keeping a strong deer herd and people of Wisconsin will continue the tradition that all hunters look for to every year.
Limit deer harvest to one antlerless and one buck for whatever weapon the hunter is using (i.e. bow, gun, muzzleloader). Previous management, particularly several years of earn-a-buck have led to poorly distributed deer populations and poor distributions of age classes (i.e. too many hunters were killing fawns and young does for the buck tag that would have produced fawns the proceeding year). We essentially had too many older does and bucks in ratio to younger deer. Now that EHD has passed thru and the older deer are either dead or non-producing, the deer numbers are very low and concentrated throughout much of the region, especially the northeast from Boscobel to Muscoda.

I live in McHenry County Illinois but own a hundred acres up in Grant County between Cassville and b-town it is very enjoyable for me and my young boys to go up there and see deer coming from McHenry County where they CWD shot every deer throughout the winter it is not fun hunting down here and hard to keep the boys interest but when we go up there they see deer they enjoy it and my 11 year old killed his first deer last year with a crossbow this is what I would like to see continued by opening more seasons more deer harvest more antlerless tags only it's just going to decrease the amount of deer and the chances of my boys and me and my father seeing deer and enjoying hunts.

go back to "earn a buck". That is our personal policy for allowing anyone to hunt on our land. We have too many doe and they produce multiple fawns every year because they are so well fed on our crops. We are tired of feeding the DNR's deer and then having the DNR do nothing to control the population. Deer are the under the control of the DNR until you hit one with your car and then it's YOUR problem..... if someone hit one of my cows on the road, I would have to pay for the damage to the vehicle... does the DNR pay my deductible when I hit one of their over populated deer? there are way more deer out there because of the mild winters and abundance of food...

I personally only saw 4 deer during the gun 2019 gun season and my son did not see one at all. I think the population of deer is about right. There are less hunters in the woods and fields so the deer are not being pushed. The weather had a big factor in the amount of deer moving, because the hunters were not moving. The younger generation don't hunt like they use to and the older generation are getting to old. Less farmers means less hunters. We need to get the kids out from behind the computer games and in to the woods. How do we do that? We do that by supporting youth programs such as Boy Scouts, FFA and 4-H. Teach the kids about hunting and the environment.

In regards to extending the gun deer season I believe it would be wiser for the management of the deer herd and especially the quality of the buck population to have the season start the weekend before Thanksgiving as usual and put the extension on the end. That will keep rifle season from being during the rut which would devastate the buck population. It would still be good hunting during during post rut/2nd rut. Eliminate the holiday hunt/ doe only hunts and youth hunt which falls during pre rut typically. Youth can hunt with during the regular/extended gun season. Keep archery and crossbow season the same start-finish with no stop before the gun opener.

I think that the issue of having a separate crossbow season should be let go. With the problems had in harvesting enough deer to meet herd number and deer health objectives theres should be no discussion that would limit any kind of harvest ability. The so-called buck harvest advantage is I my opinion the VERY reason the crossbow season is just fine.It is the old bucks travelling during the rut that is spreading CWD! In my thinking with the decreased hunter numbers and problem getting youth to huntwe should NOT restrict any means of legal harvest! The hunter objectives of haresting only trophy bucks is extremely harmful to the health of the ecosystem!

I believe that Grant County Deer numbers are excellent if not a little on the high side. I haven’t personally heard of any landowners who were opposed to the holiday hunt, on the contrary I know several who took advantage of it as additional quality time in the field with family and friends. I am concerned with the increased prevalence of CWD in the Grant County deer herd. The DNR should have been more aggressive in controlling the spread early on and not caved in to pressure from the legislature that wasn’t science-based. Illinois was more aggressive at the time the disease was found there and doesn’t have near the infection rate that we do.
We have purchased many dollars worth of trees for our yard and pastures only to have the deer kill or ruin them. I have asked many times for help with this with absolutely no help. We have tried motion lights, we have spent many dollars spraying repellent on our trees. We have fired shots in the air and many other things but the deer are continuing to come and destroy property. We are hunters and only hunt our land. Have to see the deer during season in order to thin them out. But when you don't see them during season there isn't much we can do. Just so tired of having the deer eating up our trees that we pay good money to plant.

I would love to see Grant County extend the bow/crossbow season to the end of January. I feel this would allow for a better success rate with the holidays out of the way and also may pull some more people back in to hunting. Also, I feel it would be good to change the gun season structure to (3) 4 day seasons starting on the Thursday the week prior to Thanksgiving through that Sunday, again the week of thanksgiving, and the week after. I normally take vacation from work the whole gun season and I have noticed far fewer people out hunting on the week days which may also be a reason in the downward trend in sales and harvest.

It may be necessary to implement Earn a Buck again to force hunters to harvest does. I am opposed to adding extra seasons and days. While it seems adding more seasons and days would be better for the hunters, it is in fact just the opposite. More days results it putting off hunting because you can always go another day. Most people go a couple days and then they are done. A better solution is to shorten the gun season to force hunters to harvest a deer when they get the chance. It is spread out over so many days the intensity of the hunt is very weak and hunters have the mentality of "I will shoot one later" and never do.

I was wonder if we can separate the small game hunting from the archery and crossbow because if we were to hunt at the same time it would be too dangerous to the archery and crossbow hunters withe small games. I experience last year. Too many small game hunters shooting around and no deers for archery and crossbow as soon they started to shoot rifle for small games then the deers all stop moving. It's like a war zone at Grant County when I went hunting for deers last year. Maybe have the small games hunt a month after opening season...that way its safe for the archery and crossbow hunters.

I think you should consider a controlled feeding program for deer. I know the concern is CWD but I really don't think that is a big concern.......deer eat standing corn and another deer will also eat from the same ear of corn.......saliva, etc. is transferred just the same as any feeding program. A controlled feed and nutritional program will not only benefit the deer herd but also hunters, in all seasons will see and harvest more deer. Also, young hunters, which is the future of our sport, will also see and harvest more deer and it will not be so boring to them when they have deer active.

I am a landowner and a dairy farmer. Depending on the weather and farm workloads, there are seasons where I am not able to harvest a deer on my own farm within the limits of the 9 day season. I would like to propose a rule that allows a landowner to legally harvest and fill a gun tag anytime during the fall. If I happen to have a break in farm work, I would like to be able to hunt in the window available. No one else hunts on my land, it wouldn't bother anyone else. Plus, as I get older, hunting in warmer weather is appreciated! Thanks for your consideration.

Reinstate earn-a-buck with in person registration (helps prevent cheating). Free deer license and bonus antlerless tags for landowners that make 50 percent of more of their livelihood from farming. Make All depro tags antlerless. Support restrictions on crossbow harvest from Spring Hearings so now and archery success rate realign to where they were before crossbows were allowed for all. Keep disabled and 65 yr and older provision. Implement a law that prohibits "shining" from marked roadways. Must be on land that you are spotlighting. This law works in all the counties in effect.
Grant County still has excessive deer numbers. Based on the 2019 data, increasing the antlerless or bonus permits will not significantly increase AL harvest. Supply of deer and permits already appears greater than hunter demand. This is unfortunate as harvest, especially on yearling bucks, needs to increase to meet the "maintain" objective and slow down or stabilize the rate of CWD infection in the DMU. CWD positives have been increasing and something needs to be done before it is out of control and reaches infection rates similar to Iowa and western Dane Counties.

I am all for the current deer hunting regulations. I am largely in support of a holiday hunt. I am very against the possibility of an extended gun season. I also believe that the current system of registering deer is very flawed. I feel you should have to take deer in and register them. I feel people are really playing the system and not registering deer. I feel there is a lot more people killing multiple deer and just registering them if they have to. I have heard of people doing this and if i had solid evidence i would turn them in at once.

Thank you for the opportunity to provide our input. I think our deer season in Grant county is pretty darn good. Last season is the fewest deer I've seen here since 2005. Of course, I'd like to see more deer, but with ag and CWD concerns, I think we're in a pretty good place. And just fyi, our entire statewide structure is good. Leave the archery and gun seasons as they are. And archery includes both bow and crossbow. Please just call it archery season and end the bickering....science agrees. Thanks again, Avid hunter since 1968.

It would be nice to have a staffed CWD sampling sites that is easily accessible within the county. Even if only staffed part time etc. Paid bonus tags did not sell, sell out. I think additional tags with license is better to enable the 20% who shoot 80% of the deer an additional opportunity. Maybe make them free but need to be requested so people that the people who will shoot deer get them. I do the Patrons every year to send additional money to the DNR. What is the point of having to send another 12 bucks to get an additional tag?

It is irrelevant to discuss the concept of increasing or maintaining the number of BONUS tags when they were vastly under-purchased in the past. We didn't meet the antlerless goal with giving away 3 free tags last year, why would we think we can meet goals by giving away fewer this year, and selling more? This unit needs the Holiday Hunt. Not an extension to the 9-day season, a NEW separate season that gives hunters a chance to regroup and get excited again to go out and use the tags they were already issued to use.

Pretty sure you could get the population back under control and stop the CWD spread if you would get back to state wide or even zone wide. This county specific, public or private preference is terrible! Turning away a lot of hunters, I know I have land in both Grant and Crawford county that I love to hunt but now have to choose between the tow or buy more tags that won't get filled. Seems like you guys are more out to earn a dollar then control the herd. Or get hunter numbers back up.

The county continues to be well above it's goal. Every tool available should be used to control the population. If a landowner does not want someone hunting the holiday hunt they can just not let people hunt their land. Although some parts of the county may not have high deer numbers, other parts are very high. Driving is much more danger with these high numbers of deer. In practicing sustainable forestry it is a real challenge getting regeneration. Deer are damaging my ag crops.

Archery Season 1Oct - 31Jan No more holiday or youth hunts. Rifle Season Keep it the same 9 day hunt it has always been. Extending it will only lower the deer kill and discourage more hunters with the lack of deer movement due to the fact there will not be the sudden influx of hunters in the woods pushing them. It is of my opinion and others in my area that rifle season is usually over with by noon on the second day. Muzzle Loader Day after Rifle Season - 31Jan
Hunting in the county has been very good over the past couple of years. With that being said, I would ask the council to consider recommending the holiday hunt during their final recommendation. This is a great opportunity to allow those who wish to continue hunting or want to harvest more deer to do so. Please consider giving the holiday hunt a try this coming fall. Thanks for the opportunity to comment and thank you for your dedication to deer hunting in Wisconsin.

One option for deer management never mentioned is opening gun deer season earlier. Bow & crossbow hunters have MORE than adequate amount of time to harvest. A suggestion would be an every other year for gun hunters to have first chance. Similar to what bear hunting options are(were). Bow & crossbows have evolved to where a bull elk can be killed at 60 yards!!! The antiquated rules need to be reviewed. Gun hunters are getting leftover much spookier deer. Thank you!

Things seem about right. Trend on graphs of young red oak trees is concerning; need a push across the state not just Grant county for action on this. CWD is of course the other big one, but the science is going to take a long time (learn to prevent or cure or otherwise manage). Lastly need more young hunters. Access in Grant County may be a limiting factor there. I would like to see an antlerless holiday hunt but not extension for any deer archery. Thanks!

Doe population high, weather, private land that will not shoot doe’s, need to bring back batting and feeding to help lower the doe population and get them does from larger private land. I have about 3000 anchorage that will not shoot doe’s. We need help to get them out of those large plots of land, the feeding band makes no sense, works great for other places, has no effect on CWD, no difference from a food plot from deer density and interaction, just think about it.

Grant County continues to have higher than desirable deer numbers, but it’s obvious from the 2019 results that increasing the number of antler less and bonus permits will not significantly increase the harvest. The supply of deer and permits is already higher than hunter demand. We need to encourage greater harvest, especially yearling bucks, to either stabilize or reduce the spread of CWD in the DMU before it reaches levels in Iowa and western Dane DMU’s

I’ve support more aggressive measure to control the deer population with collectively with other resources i.e. forest/wildlife. I feel that without fairly aggressive antlerless harvest, the population quickly gets out of hand. For this reason, I support earn-a-buck season structures as a means to effectively manage the population. I also support the holiday hunt. In particular, this is a great way to provide opportunities for young hunters.

Why not have the extra antlerless hunt in October? This was done some years ago and was a very pleasant hunt. It seems like the hunting rules and procedures have been getting very complicated over the last few years compared to changing little in prior decades. Last comment: the heavily bureaucratic process to get a license, especially requiring formal hunter “safety “ courses, is an impediment that will (is?) kill hunting in the future.

Keep seasons simple, keep tags available. I think the use of the holiday antlerless would help a lot b/c many people don’t want to risk pushing bucks out of the area shooting does but the does DO need to be harvested. So, the holiday hunt affords a dedicated time for us who own land here to organize a hunt w/ a few people so we can take does w/out the practical concerns of pushing bucks out of the area and or in harms way (other hunters).

With covid and all the other stuff going on we should consider limiting the number of out of state tags. Maybe not entirely but limit number per zone per county or in total of the state to keep the numbers up for year. the impact of loss of business for the state is probably a lot but if it preserves our deer heard for the next 10 years or give it a better chance and producing good numbers; then it may be worth it every ten years anyway.

Do not lengthen the gun deer season. I had more access to private land when we had a three day gun season. Going to 9 day season reduced my access, and lengthening the gun season will reduce my access into the future. Also be very clear that crossbows are a superior weapon over a vertical bow. These season should not be the same length. Crossbow buck harvest are higher than vertical bows, which is not addressing the doe harvest goals.
It doesn't make sense that the CDAC did not vote to hold the holiday hunt and extended archery season AGAIN this year. Year after year the CDAC has failed to "maintain" the deer herd numbers at 2017 levels per their own objective, and yet they also fail to implement all options at their disposal to meet their own goal. This smells like small town politics. I fully support holding the holiday hunt and the extended archery season.

I heard there was a rumor of the possibility of extending the gun deer season state wide in WI, I firmly oppose that initiative. Instead I would look back at the length of hunting seasons from back in the 80s and 90s and 2000s compared to the total deer harvest and consider shortening the season to not only motivate hunters to get out there, but to also increase deer harvest numbers and overall deer herd size in Grant county.

I believe that holding both the antlerless or holiday hunt is very nice for families and younger hunters who can be mentored for a longer period of time to get excited about hunting. We need to improve their numbers and that gives them an additional chance to be successful! I have two teenagers that are very busy during the regular season with basketball and other sports activities that can only partake in the holiday hunt.

In the area where I hunt there was significantly less deer seen during hunting due to the EHD outbreak that occurred. our neighbors reported seeing upwards of 20+ deer dead due in each of their properties. I noticed dead deer as well. this year should be focused on growing the population back to where it was in 2018, which seemed to be a very good population density for the area, and good buck:doe ratio.

with the shelter-in-place that we are experiencing this year, what does this mean to the total number of deer out there? Is the number of vehicle/deer crashes going to be lower? I like seeing deer here on the farm, but also realize the damage they can cause. They seem to love our field corn, and they don't walk by my sweet corn either! just the same, I like to watch them play and bucks fight.

My feeling is that there are to many deer in most wide life areas,therefore in order to lower the female population & the diseases, hunters need to takeout as many female deer as possible. This will create a better buck to doe ratio, allow for healthier deer, allow our area to support some record class bucks ,which will motivate more young people to hunt, which will create more revenue for out state.

Shining deer should be made illegal in Wisconsin. With the use of trail camera there is no reason to shine deer. People that own homes in rural areas are getting their homes shined every night. And since atv use is legal on most roads and crossbows are legal it just makes it that much easier for people to poach. Missouri did away with shining I think Wisconsin should be next. It pure wildlife harassment.

Would like to see the gun season shortened to a 3 day hunt with 1 buck tag and three doe tags provided for each license. Would not recommend increasing the current gun season to any longer than 9 days. Keep the bow/cross bow season and muzzle loader season as is. Feel shortening the season will increase the number of hunters in the woods therefore increasing deer movement within shooting hours.

To whom it may concern. I own land in Iowa and Wisconsin. I have hunted WI for 24 years and Iowa for 8. I have harvested more respectable bucks and numerous does in Iowa over Wisconsin. I am a graduate of QDMA level 2 deer steward class, I wanted to mention that because I'm not just another guy blowing smoke. Most people are not educated in deer but deer is all I think about.

I hunt in the N/W corner of the county 1/2 mile from Iowa county. The numbers are a little low still. We do a lot of shining during the archery season. We really don't see as many deer as we did in the late 90's and early 2000's. I feel the DNR's numbers are inflated. Deer registrations are low because a lot of people don't register their deer. It was a mistake to go to self registrations.

I agree with most of the recommendations but find the logic of reducing the antlerless tags from 3 to 2 while increasing the target goal doesn't pass the 'common sense ' test!!!! There are a lot of reasons why people don't fill all their tags - a lot of it has to do with weather and the availability of their hunting buddies (who sometimes have to work) to join in. Leave it at 3...........
My concern is having such a long muzzleloader/gun season together. The deer become nocturnal and are hard to hunt after a couple of days of rifle hunting. I think more deer could be harvested if the seasons were split. Maybe make the muzzleloader season around the holiday season. This would allow both increase deer number harvests and a hunt around the holidays.

Like seeing the drop in free antlerless tags per license. Also support strongly NOT having a holiday hunt as it adds extended pressure on the deer herd as well as imposes on landowners with the constant pressure of granting hunting permission. Extending the archery season until late January is just a bad idea all around so would not support that option.

I hunt around the fennimore area and I am concerned about folks illegally shooting deer out of season all year round. Until the DNR does something to stop them the idea to propose more deer to be harvested is insane. I seen 9 deer all of the bow/gun 2019 season.

It is impossible to maintain the deer herd at current levels if you do not give us opportunities to harvest antlerless deer. The holiday hunt and extended seasons are great times to sit in a blind with a kid and give them an opportunity to harvest an antlerless deer. By not having these seasons we limit our opportunities to enjoy the hunting tradition.

Crops still standing through the gun deer season in 2019 surely contributed to a lower deer kill. And to fewer deer being seen. At the end of the 2018 four day antlerless season I saw 46 deer at once! That was on private land in northeastern Grant County and deer were feeding on various corn and soybean fields within my sight from an elevated stand.

Cut down the number of permits and let the population grow. the last few years we have been seeing fewer deer. I think cwd is taking more deer than we think. If we don’t let the population grow now in a few years it will be too late. When I drive around I don’t see the numbers like we used to. Either in the fields or dead along the roads.

Wisconsin needs to have a longer archery/crossbow season until the end of January. Make the 9 day gun hunt into shotgun/muzzleloader only. Get rid of the muzzleloader season and then have an holiday hunt that is rifle and open it to antler/antlerless. Or Wisconsin needs to bring back earn a buck to help lower antlerless numbers.

Consider adopting a minimum 4 points on one side rule like many other states. Need to keep deer numbers up otherwise people will lose interest in hunting, especially if they are first time hunters and aren’t seeing any deer. People don’t desire to hunt in a state where deer numbers are low compared to surrounding states. Thanks

I would like a landowner to have the preference to harvest a gun deer anytime in the fall. As a full time farmer having free time and good hunting weather at the same time is rare. I’d like to put some of the venison my farm feeds in the freezer, but often am unable because of time constraints. Thank you for your consideration.

Sure you have heard it before, my neighbor owns 1300 acres has about 1/4 crp plus farm bill payouts. Will not let anyone hunt on his land. You can issue tags till the cows come home but still us taxpayers that pay his bills have access to those acres, deer numbers will only increase. Thank you for your listening.

We have to many deer. We should go to a owe a doe program. If you harvest a buck, you must then harvest, X amount of does by the end of the season. This would entail personal registration and a computer program to keep track of entries. I’m sure a program can be easily implemented through GOWild.

CWD continues to play a heavy role in hunter interest and safety. The most simple and affordable testing available seems imperative to understand disease prevalence and guide control measures, as well as to educate the public and hunters specifically regarding CWD effects on both deer and human health.

The deer heard size is controlled by private land owners. There has to be a balance that people understand with the buck to doe ratio and education is one of the keys. You could have a 30 day gun season and without private property owners helping achieve the quota it’s not going to work.
I would strongly recommend that there not be any restrictions on when a crossbow can be used during the archery season. This weapon option has allowed me to introduce hunting to my children who otherwise wouldn't have the opportunity or interest to realistically participate.

It seems to me that there is an overwhelming number of hunters that refuse to harvest does and put an inordinate value in harvesting only a trophy buck. The amount of does and fawns that can be seen right after the season and especially in the spring is mind boggling.

I seriously think that your kill numbers are more than what is being electronically registered. Maybe you factor a certain percentage for that in your calculations, but people aren’t registering all of their deer since the registration locations aren’t open.

I saw far fewer deer in 2019 than I saw in both 2017 & 2018. That seemed to be the same thoughts from the neighboring hunters and landowners in the area I hunt. There had to be a die off from EHD or something else that drastically lowered the deer numbers.

do away with county pacific tags I live in a area that I have three counties with in walking distance and the same with public and private if I want to hunt them all I have to purchase additional tags for each area and end up eating the tags I don’t use.

I really appreciate what you are doing in processing all of the material, the hours spent and research that goes into all of this. I found the video to be extremely helpful and hope that similar evaluations can be made in the future. Grateful hunter.

I have seen little deer on my particular acreage. I am new to the area and am dealing with local dogs running the area. I am in full support of healthy numbers to what ever means necessary. I do not have a full concept of the area at this time.

A group of 5 of us came up from iowa 20 tqgs never seen a deer to even get a shot at 100 bucks for tags another couple hundred on hotels fuel and food. Wnt ever waste my time again in Wisconsin you dnt have the deer tr hat you think you do

I live in between fennimore and boscobel. I can take a five mile ride and see 150 deer. I recently viewed 24 deer in 1 field. I really feel that this zone needs a holiday hunt. Let the people that want to harvest does the opportunity.

I would recommend opening the gun season earlier than scheduled. Last year was too late and the rut was over and deer were not moving. Open the gun season this year on Saturday, November 14th and run it for two weeks. Thank you.

I think it needs to be taken into consideration that having private land to hunt can be difficult if not impossible anymore unless you are the landowner. This can affect the number of licenses purchased and overall deer numbers.

i would like to say when I buy a deer lic. I"m ask if I'm going to hunt D N R land or am i going to hunt private land..so then i can only hunt one of them. This doesn't make any sense to me. If i am going to hunt Grant Co. WHY??

A regular 9 day earn a buck with 3 doe tags with registration in person to validate doe harvest. 9 day only season produces more hunting pressure to provide more harvest and brings back the tradition, camaraderie, interest.

If a slight reduction in deer numbers is desireable, having an antlerless holiday hunt is my thought. Kids,teachers and many family members are off for the holidays. What better time to add a few deer to the kill number?

WE do not have the deer numbers in southern Grant county, compared to the northern half. You could go through a tank of gas driving around in the evening, to see 6 deer. Split the county up, then allocate the numbers.

I would support a framework where only one buck could be harvested per hunter per year, regardless of how many licenses they bought. This would increase the overall buck hunt quality. It would also increase doe kill.
Just drive around in Grant county an hour before dark. There are deer everywhere! Kill more Does. Quit dragging seasons on forever. Get back to a 3-5 day season when everyone used to hunt hard and then be done.

Having muzzle loading season after rifle season seems silly at best. It should be moved to early October before the rut. It worked in Kansas very well. And would increase the overall amount of people hunting.

I wish we could bring back the opportunity to harvest bucks during the holiday hunt. My son and I used to enjoy hunting during the holiday season when that was still an option, but don't anymore. Thank you

No extended archery season or holiday hunt. If Grant county has a holiday hunt I will be revoking access to all hunting on my properties for the entire season because don't like the constant pressure.

We do not shoot doe during the 9 day regular season. Shooting spooks deer into neighboring habitat that are then shot. We would like to see the antlerless only 3 day gun season as it was in 2019.

Keep with not having a holiday hunt. It puts a lot of pressure on landowners to keep opening up their property to hunting. If I get asked anymore I will be closing my property to all hunting.

Keep up the good work. You are doing a good job managing the herd. It's important that the herd stay healthy and hunting is appealing to young/new hunters as they are the future!

I would like to see an early season hunt for senior citizens. Cold weather is a challenge for older people. I think many older people would participate and Ann income o the state DNR and tourism.

The short gun seasons make it difficult to effectively harvest deer. The holiday hunt would provide myself and others more opportunity to help maintain a healthy deer population.

I would like to see all deer seasons close by the 1st of the year. I am also a predator hunter and it is hard to gain permission from landowners before deer season is closed.

I would like to be able to feed small amounts of food; apples, acorns max 5 gallon quantity. Spreading it over an area versus a feeder. Not for hunting or baiting purposes.

I would like to see the muzzle loading season come before the rifle season. After the rifle season is over there is slim chance of harvesting a deer with a muzzle loader.

I would like to see an early hunt in October in addition to the regular hunt. I would rather have an early hunt, instead of a late hunt in December, because of weather.

As a college student, it is very difficult to have time to hunt with the current gun seasons. An additional holiday gun season would make it much more accessible.

I think you should quit scaring everyone about cwd and other diseases what deer has that why people don't like to hunt i love to hunt and I outdoors

I hunted in this unit for six full days and never seen a single deer. Going to stop buying a license every year the deer population seems to be less and less.

Because of the large amount of cropland in this area, when there is a lot of standing corn during hunting season, like last year, hunters will see less deer.

Season needs to remain the same time and structure. Adjust antlerless tags or go back to earn a buck for same structure of one buck per method Gun/Archery.

Stop using private and public land tags. Some people hunt both and it complicates it when all you have to do is cross an imaginary boundary in the woods.
Was not able to bow hunt 2019 due to deployment. Saw far fewer deer during the 2019 gun season with no mature bucks. This was very unusual in my areas.

Not seeing the numbers I have in past years would love to see more deer. Too many tags are being issued. The deer need a chance to recover in numbers.

I believe the drop in deer hunting success (gun season) on our farm was due to the fact that we had standing corn for the first time in 20 years.

Please leave gun season as is. I think to the public land deer density is very low and parole should only be allowed one antlerless on public.

I would very much like to see a holiday hunt and extended archery only this year. I also like the two buck tags one firearm and one archery.

So you didn’t reach the goal of antlerless deer harvested, but don’t support an antlerless holiday hunt? I must be missing something here.

I highly value the science the DNR conducts to make decisions on habitat and wildlife management decisions above my own interests.

We saw many more bucks this year on trail cams on the property. I shot my best ever, on opening morning, a beautiful 10 pointer!

Deer just got back in the area and I’m actually starting to see some bucks that would score over 120, still nothing giant.

I think we should have a 19 gun season get rid of the 4 day hunt and keep the holiday hunt and include Grant County in it.

In my opinion I would like to see everything as far as seasons remain the same. If any change remove the holiday hunt.

Deer populations on public land has always been way lower in the past years in this unit than on private lands. We do not want an extended gun hunt in Grant County, but would approve of extended bow and mussel load seasons.

I wish you could split the extra tags between counties. I hunt Grant and Sauk. It forces hunter to one place.

If you want to meet the doe quota a holiday hunt would help me and many others would appreciate it greatly.

With the amount of deer that get hit on the highway where I reside I think the numbers are about correct.

Earn a buck for archery and gun seasons would be a more effective program to align deer populations.

No holiday hunt, it adds to much additional pressure to herd and makes them stay nocturnal.

Do not change the way it is now with the hunting seasons! You will ruin it for everyone!

Deer numbers in my hunting were very low lucky to even see one deer all day hunting.

Cdac doing a good job, I like this format for establishing the regulations.

Bring back earn a buck as a herd control option in the fight against CWD.

Stick to traditional seasons. No extended archery and no holiday hunt.

Just don’t let the gun season start any earlier than normal. Thanks!!

Too many deer are injuring people in vehicles and damaging our forests!

I am not in favor of any bonus hunts for deer. Regular seasons only.

Keep moving towards traditional seasons, no holiday hunt!
EHD decimated our area by Woodman. Dozens of dead deer

Leave bow, crossbow, and rifle seasons as is.

The deer hunting season needs to a bit longer.

Shorten crossbow season. Leave gun the same

Please do not extend the 9 day season.

Stay with tradition season structures

Please keep current season structure

I support earn a buck in this unit

Please no extended gun seasons.
Public Input on CDAC Preliminary Recommendations - Spring 2020

Green Lake, Central Farmland

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

314 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 145
   - I visit this unit for non-hunting purposes: 59
   - I hunt in this unit: 288
   - General interest in this unit: 40

   The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 274
   - Bow: 171
   - Crossbow: 115
   - Muzzleloader: 118

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 25.78
   - Maximum: 85

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 213
   - Mostly Private Land: 29
   - Public and Private Land About Equally: 15
   - Mostly Public Land: 2
   - Exclusively Public Land: 24
   - I did not hunt in this unit last year: 5

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 8
   - Not too crowded: 29
   - Neither crowded nor un-crowded: 18
   - Somewhat crowded: 6
   - Very crowded: 2
   - Not applicable: 7

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 55
   - Fewer: 93
   - Same: 127
   - More: 26
   - Many More: 9
   - Unsure: 4

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

Bonus Harv. Auth. - METRO Private: Not applicable in this DMU

9. In your opinion, how would you rate the number of FREE Antlerless Harv. Auth. recommended by the CDAC to be issued with each license for 2020 season in this unit?

Note: Farmland Zone and Metro Subunits only.

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
Implement an ANTLERLESS HOLIDAY HUNT:

Support | Oppose | Unsure
---------|--------|--------
124      | 175    | 15     

If a Holiday Hunt is held in a Farmland unit...
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021:

Support | Oppose | Unsure
---------|--------|--------
170      | 129    | 15     

If the Population Objective is not "Increase"...
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons:

Support | Oppose | Unsure
---------|--------|--------
39       | 259    | 16     

If a Zero Quota (buck only season) is adopted...
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?

Support | Oppose | Unsure
---------|--------|--------
VALID NOT VALID | 15     |

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit? Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

First, I would like to thank all the CDAC members for their service. I believe the antlerless quota, antlerless harvest authorizations, and bonus authorizations are at reasonable, sustainable levels. I encourage the CDAC members to support the holiday hunt. The holiday hunt is critical to meeting (or at least getting closer) our management goals and quotas, and not holding one would be a huge mistake. The data shows there is little to no impact to snowmobiles during the holiday hunt time period as a substantial snow pack enough to open trails is highly unlikely. The holiday hunt is necessary, makes sense, and is really fun to participate in. I also encourage the CDAC members to support the extended archery and crossbow season. We certainly have the deer numbers, both buck and doe to support it, not to mention the odds of success are not exactly in your favor so late in the season. Why limit opportunity to farmers who are busy harvesting in the fall but have more time to bow hunt when things quite down in January? Please remember the holiday hunt and extend archery and crossbow seasons are important tools for getting closer to quotas. These seasons decrease the detrimental deer browse to our native trees that is making it easier for the buckthorn and other invasive plants to take over. Consider the current COVID epidemic and realize that a disease like CWD could easily spread through an overpopulated whitetail herd right here in Green Lake County. Consider the waste of good venison and financial loss due to all the deer collisions in Green Lake county and give hunters one more opportunity to harvest the deer. Consider the decrease in agricultural damage to standing crops and baleage due to holding these additional seasons. Consider the opportunity for hunters to enjoy more time in the outdoors with a longer season. Use these limited and carefully measured additional seasons to reduce the deer population while increasing hunter success and satisfaction, not to mention the positive effect of the hunts on our local economy.

I attended a CDAC meeting and felt it was a waste of time. All the board discussed was how over populated was the deer herd. I’m sorry, I do not see this at all in Green Lake county where this meeting was held. I put in close to over 200 hours a year in the field either hunting or scouting for Whitetail deer. I know that the population census is way off what the DNR estimates. The population is much less. I own land and also hunt public in my county as well as adjoining counties. I do not see any over browse other than on dogwood which is the staple food source in many marshes in the winter. Harvest is down, that would support the theory of a lower population. Car deer crashes are not factored effectively as well. How many get hit and not reported? Drivers are not very responsible these days. Insurance companies I’m sure know this, but cry deer. I drive every morning 25 miles on state road 73. The ditches are full of carcasses. I do not see that many deer on the roads when I’m driving in the morning and evenings. Not like it used to be back in the 70’s & 80’s. In the 70’s we would drive in the winter and find picked corn fields and see sometimes a 100 deer feeding in Green Lake county. I haven’t seen this phenomenon in many years. Another scenario is opening day of gun season during this time frame, it was nothing to see or count 100 deer on opening weekend. Now on the same property, we’re lucky to see 5 opening weekend. It’s been this way for many years. Last season I didn’t see any opening day. The neighbors had the same situation. I realize there is hotspots but to say that a county is over populated is wrong. Deer are going to go where they feel safe and have a food source. Is the department concluding than deer are getting smarter and hunting is less effective? Is the hunter competing with insurance companies in funding the DNR? Thank you.
I appreciate this process, and want to thank the CDAC's for the efforts. The biologist video and accurate minutes (including how the individual members voted on proposals) from the preliminary meeting are most helpful to me. I see improvement in the supplied information each year as this process matures. I fully endorse the 2020 season framework as spot on, especially in regard to including a holiday hunt. We need the extended seasons to fill the extra antler-less tags. I also endorse staying away from the January extension and letting others have access to the landscape. A partnership agreement, even unwritten, is better for all users long term. I like what some of the other counties are doing to hammer out ways to coexist during these times. The T zone season and a gun deer holiday hunt are efficient ways to fill tags when necessary. 2019 was a good example for our group. We did not fill many of our buck tags (only 2 of 7), and used the extra seasons to fill doe tags. My son shot a doe during the T zone, and then had a couple buddies (who didn't have deer) come and fill two more tags during the holiday hunt. They also missed a couple shots that would have accounted for more had their aim been better. In other words, we really like those extra seasons when the goal is to fill more doe tags. Additionally, we don't let others on our land during the regular season, but welcome the extra guns during these later hunts. I cannot tell you how appreciative the other hunters (and their parents for that matter) were for the opportunity to harvest a deer. For one person, it was her first harvest. Lastly, we do our own butchering, and were able to submit 2 heads for CWD sampling. Thank goodness both came back negative.

I have hunted 33 years and will most likely quit hunting soon. I am 45 but no longer enjoy all the attempts leadership try's to make sure city hunters get to see large number of deer and harvest oversized bucks. I believe the deer herd figures to be correct and the herd to be reduced. I am not a fan of earn a buck but this is the only way to reduce the herd. I really dislike when heading to the woods having to google what season is today and what to hunt with. I do not understand why we continue to lengthen seasons and all the bs that goes with it etc... Some lands never get pressured and the deer do not move to areas where hunters are hunting for meat etc. I would like to see bow season open 3rd Sat in Sept close Sunday before gun season, 9 day gun season, bow hunt reopen until Dec 31st. I believe you will harvest the same# possible even more because hunters are not as selective with a shorter window (although this will not happen because to much money is generated by these seasons / money takes over and the deer herd quality takes back seat) the only way to control the herd is look for a solution that best fits the herd without taking all the money pressure from other source. I grow up on a farm where deer hunting was a tradition that has been taken over by how much $$$$ can be made. Thank you Joel Dugenske

Thanks for the opportunity to provide feedback. From my perspective, I would like to see the holiday hunt removed from the hunting calendar. I am a bow hunter, gun hunter and snowmobiler. There are more than ample opportunities to harvest deer over the course of 3.5 months (more if the bow season is extended. We have approximately 13 weeks of bow hunting and a little more than 3 weeks of some type of gun hunting (gun, muzzleloader and a 4 day antlerless hunt in December). Is it really necessary to add an additional 9 days of gun hunting during the holidays? Adding this season takes away potential opportunities to snowmobile for those who enjoy that activity due to trail closures during any gun season. We don't always have snow at this time, but the holidays are a time when families have time to spend together and enjoy a shared interest. I know the same can be said for the hunters, but remember, they have the entire Thanksgiving holiday to themselves and covers the most popular hunting season where the number of people enjoying it is at its greatest. Please reconsider holding the holiday hunt in Green Lake county. If the proposed quota can't be met with 110+ days of hunting, shame on us hunters. 9 days can't be the difference.
Im an out of state hunter with private land. I personally believe Wisconsin dnr is by far one of the best in the country. I make every attempt to be a good steward of the land by planting trees recommend by the county Forester making sure the deer population that roams my property and the neighbors has all the necessary food sources to stay healthy. I place out nesting houses for ducks in the fall and spring. I do 0 work in my home state and put all my efforts in to Wisconsin. My gripe is there is such a high cost to hunt compared to a Wisconsin resident. My other gripe as pertains to this dmu is the antlerless only hunt. I've only hunted a few seasons now and have been successful in every one with multiple deer in each season. I always aim to take an antlerless first to accomplish the deer reduction goals of the dmu. So often my antlerless are taken early season. Then I'm forced in late season to take only antlerless when id much rather be looking for antlered. If antlerless only seasons are decided upon I'd hope to have the bow season extended.

I really wish that DNR would adopt Quality deer management program because it accomplishes lowering the number of doe and increasing the number of mature buck. I will never understand why you allow people to kill everything and anything when hunters are seeing less and less deer every year. this is the lowest number of deer I have ever seen in my 48 years of hunting and I hunt a lot bow and gun. I really wish that DNR would look at how many deer people are seeing while hunting. Then maybe they would realize that the number of deer that they think are in an area aren't even close to what they project. I know several hunters that are ready to quit hunting due to the low number of deer that they see while hunting. I hope at some point you guys start to use science which is based in the quality deer management system. Handing out doe permits and extending seasons is not helping. Hunters want to see animals when they are in the woods. They don't want to just stare at an empty landscape.

In my opinion, there are too many tags out in the woods, with a limited number of hunters. The DNR could give 100 tags to someone, but it is not going to have a huge impact on the population of deer in an area. Landowners are only going to harvest a certain number of deer off the land and leave the rest for another time. For funding purposes (economics), the DNR would be better off to go back to a more limited number of tags and selling initial licenses to more people and then having the funds to provide more services to lakes, streams, wetlands, woods, etc. Now the deer antlerless tags are just going unfilled and shredded. We as sportsmen and stewards of the land need to encourage more individuals to come into the woods and fisheries, not limit how many need to be in the woods by giving a father, grandfather, mother or someone else so many they don't need to teach a younger generation the benefits of hunting.

I have concerns regarding the proposed crossbow restriction to only October and the 19 day gun season. As an older hunter I am uncomfortable standing on a platform along with the inability to draw a bow. I qualified for crossbow before the law was changed. It is unfair to penalize crossbow hunters. 19 days to gun hunt is too long. I also gun hunt but it is for family traditions. Adding days to the hunt will have no baring on those traditions. I know the idea of earn a buck has been floated. I would not be opposed to shooting one buck per year which could be taken by either gun or bow, but earn a buck puts a lot of pressure on hunters. I have shot my biggest bucks early and feel pressured to shoot a doe. They are still with young fawns. There is plenty of time to shoot doe later when to fawns have been pushed out. Thank you for the opportunity to voice my concerns.

Dodge county you are trying to increase the number, Fondulac county you are trying to maintain yet in Green Lake county you are trying to decrease. Areas that are on the eastern and southern portion of Green Lake county numbers are down due to the amount of Does being taken. Maybe if there is overabundance in some parts of Green Lake county you need to reduce in those areas by mapping those particular areas. Numbers are way down in the south east portion of Green Lake county, maybe use Hwy 44 as a boundary for where antlerless deer can be taken in future years, (south and east of 44, no does or limit to party permit again). Our hunting group has hunted same area along Grand River for over 30 years has seen a big decline over the last 5 years. It is getting so bad that many of the hunters are losing interest in going out. These bonus tags have hurt this area dramatically.
Don’t really care what you do for private, but to allow ONE HUNTER using myself for example I bow hunt and gun hunt I have the ability to shoot 8 DEER! 6 of which are antlerless which I would never do but some guys will. How long do you think there will be deer on the landscape of PUBLIC land, I can tell from sitting in the woods and walking in the woods it stinks and why would some young people want to spend time and money to hunt deer when they can hunt all week and not see a DEER this system is broke and public land at least in Green Lake county is a joke, I am 51 years old and been hunting since I was 12 and every year it seems to get worse this is part of why guys are done hunting, I may be next soon for me it’s not so much about killing them as much as I would just like to see some, I think 1 buck 1 doe on public would be great plenty, instead of wiping them out.

Green Lake county is like many rural counties in that human populations keep growing and like it or not, small areas in the county are becoming “suburbanized”. For example the southwest township of Brooklyn near Sugar Loaf. I see herds of deer in the area that just keep growing. Multiple groups/ herds of deer typically ranging from 8 to 12+ deer. Current hunting regulations and management practices have not been able to adequately reduce the deer population leading to severe damage to trees, bushes and other plants in these suburbanized areas. The only tree that is regenerating is buckthorn. I respectfully ask the committee and the DNR (statewide) to come up with solutions/ regulations for property owners to in some manner activity reduce the deer population in these suburbanized settings. Thank you for your consideration.

I have lived and hunted green lake county for over 30 years. The quality and quantity of the deer population has fallen significantly even with us and surrounding private land owners all trying to practice QDM. Car deer hits have increased because of the greater amount of drivers on our roads. Hopefully with the drop in traffic from covid we will have a couple of years of increased deer. I have sent in 4 deer who have died next to my house of unknown cause in the last 6 months fawns and adults and have never heard why they died either. So disease or cars have been the greatest impact in our county on our deer population so reducing the hunting pressure and harvest will help our deer heard. We have had a moderate coyote impact with 2 deer I have seen succumb to the local coyote population in the last 5 years personally.

I’m torn as a deer hunter and snowmobiler. I believe the hunting season is long enough, it doesn’t have to go into Dec or Jan. It’s hard to have trails going through private land when people are still trying to bow hunt. (The last thing they want is sled on their land while out hunting!) I own land that the trail goes through and would not want that, but if given the chance to snowmobile, I’d rather be doing that, seeing as the season is so short as it is and if we have snow between Christmas & New years, my family love to get out and ride, but can’t because the trails can’t open until rifle season is over...and by that time, my kids have had enough hunting with the youth hunt, bow season, rifle season, muzzle loader season and T-zone. The last thing we want is another week of chasing doe. Thank you

I was in the white river marsh area turkey hunting this past weekend and was really disappointed to see countless acres of mature hardwoods in there prime clear cut and the grounds left an absolute mess to the point if you tried to walk outside of the few clam bunk tracks it was prime to bust an ankle and has virtually left the area unusable to the public, I’ve been exclusively hunting public lands throughout the state the last several years and the high volume of clear cut public lands in numerous county’s has left me unable to harvest any deer or turkey and will be hard pressed to see in my lifetime usable lands again in these areas.

The best years of hunting that I’ve ever had and the biggest bucks I’ve ever seen were during the years we had earn a buck because for some reason in this state we choose to shoot young buck instead of shooting doe to fill the freezer and it’s exhausting. I would love to see earn a buck brought back we need to make people shoot doe because the select few like me that are shooting a lot of doe is not helping. We need the bucks to have to travel during the rut to spread their genetics and we need horn restrictions like other states have to let the bucks go so they can grow. We need to learn how to manage our deer herd.
I am a bow hunter. I hate bow hunting in blaze orange and am sick of losing my season to all these crazy seasons. Crossbows should be lumped in with firearms and Youth hunters should have to shoot an antlerless deer if they want a special season. I would restrict crossbows to under 16 and over 65. Too many people told me they could not get a doctor to sign disability even though it hurt to shoot their bow and other ones that didn't deserve it got a doctor to sign for their crossbow permit. Ag tags and hunting past early January makes it too hard to tell does from antler dropped bucks.

Holiday hunt is to late in the season. Not only does it affect the snowmobile riding but also some bucks have already dropped their horns. Have one bow season for any type of bow, long bow, crossbow, recurve or compound. Whatever you feel most comfortable shooting during the bow season. we do not tell someone they can’t shoot a 30 06 because it is to powerful. Allow baiting on all private land. Don’t tell people how they can and cannot hunt. Bring back a check point system where hunters must register deer. The system in place now does not give an accurate count of deer killed.

I am a farmer in danger of being put out of business from excessive deer damage to my crops...since the earn a buck system was ended, we have seen an explosion of the deer herd, most hunters now are waiting for a trophy buck and think the larger herd gives them more buck to chose from. Some people are scared to eat venison because of cwd, so they are not meat hunters anymore. Talk to any farmer in my area and they can tell you stories about huge herds everywhere. Something needs to change! (I farm in the Big Green Lake area)

Please leave the 9 day deer season alone, keep the muzzle loader season, do NOT restrict / limit the amount of time in the woods for those of us that have no choice but to use a crossbow, I prefer bow season over gun seasons. Please remove the Holiday hunt, we refuse to go out and shoot bred does. Last year from the middle of October until the end of bow season in January, I NEVER saw a deer to harvest. I believe it was due to all of the corn that couldn't be harvested last season, they had no need to leave feeding grounds.

Even though we are considered in the "farmland" unit, one would be amazed at the number of deer seen during the season. As a teenager hunting our land, we used to see 30 - 40 deer a day. Now days, lucky to see 5 - 10 deer. A few years back they slaughtered the does and to this day, they have not recovered, in my opinion. That may predator or mortality, but the numbers are not there. They keep issuing the extra bonus tags, but should instead go back to the old "party tag" system to rebuild the herd. Thank you

You can't possibly shoot too many does in G.L. county. The CDAC is providing plenty of opportunity. I hope that hunters will take an extra doe this year and KEEP CWD OUT OF THE COUNTY! So my message is to the hunters out there.........shoot a doe, and get all of your deer tested. let's keep CWD out for as long as we can. There are a ton of deer, and most of the does I have shot have been more than 4 years old. Lots of deer making it through to the next year, so we can shoot more! Do your part!!
I hunt public land. I believe that the hunter numbers are high per acre on opening weekend. Would deer numbers support that? What is the public land success per hunter. The deer numbers appear to be on private. Land owners refuse to take doe. I have hunt this area for 40 years. Our public areas are pushed for pheasant hunting. The edges of public lands are hunted hard. Deer movement is occurs late in the evening to private farm land. My concern is public lands are getting more and more pressure.

If you believe the population warrants a decrease, and if measures such as antlerless hunts are even considered, why on earth would you even suggest restricting crossbow hunting or not allowing an archery season extension to Jan 31? Sometimes proposals and assessments by the DNR seem at odds with each other. Also, every antlerless only hunts restrict archery hunting during the same time period. Legal archery buck harvest should be allowed. Wardens can tell how deer were taken.

why does the DNR always interfer with the regular archery season? Now talking about a 16 or 19 day gun season then a 5 day quiet period. It hardly would pay to go archery hunting. Before this you passed crossbows for everyone. Archery hunting was never supposed to be easy. facts and registration counts do not lie. put crossbows back in the hands of the handicapped only. But then the crossbow business wouldn't Pay off legislation any more.

I firmly believe that the youth hunt needs to be eliminated. It interferes with us die hard bow hunters. The same holds true with the other "special" hunts. Who goes bow hunting wearing blaze orange? I much prefer the solitude of bow hunting versus all the gun hunts. That coupled with all the extra duck/goose hunts now does nothing but make the deer skittish and will ultimately reduce the harvest on both public and private lands.

Hunters on private land land are only going to shoot so many deer, unless Ag tags are allowed, many hunters I know pass up a lot of bucks, and I mean a lot, private land owners will dictate # of deer killed, most private land is about how big, for most it is not about putting meat on the table, size of antlers is, they must control the doe numbers to keep the herd in balance, a lot of land owners do not, so many variables.

One thing I would like to see is getting rid of the zones. Buck is pretty much state wide. But for a doe I have to buy a tag for each zone I potentially might hunt just so I can harvest one. I get sales are lower than they have been in recent years, in my findings this is in partial to the zones being implemented. I, and a few of my hunting buddies would be able to shoot more deer if this wasn’t a factor any longer.

I like the idea of offering additional bonus permits for antlerless deer, but I, and my entire hunting party, are not in favor of the antlerless only season. During the year or 2 where it was earn-a-buck, I had to pass up a nice buck because I hadn’t yet shot a doe, and it was very frustrating. My son just started hunting a few years ago and would not have enjoyed his hunts as much if they were limited to doe only.

The Deer numbers have doubled the last three years in a row. There is now a herd of 14 to 30 Deer that comes through 2 or 3 time a month in back of our property. 3 years ago we were lucky to see 5. I think permits should be increased. We have had 6 close calls with the truck in the last 6 mo.’s (Deer running out in front of the truck) I would lean towards a longer youth hunt to encourage more youth to the sport.

Since the license/tags have changed to where it is not displayed on the hunters back and not having to go somewhere to tag your deer I feel this poses an issue. With not displaying your license on your back you are not aware who is even legally hunting. By tagging your deer online, a lot of individuals I believe don’t even register their deer which is causing an inaccurate number to deer shot during the season.

The Grand River Marsh hunting area is split between Green Lake County and Marquette County and separate deer management zones. When applying for antlerless permits on public land, why does DNR not allow one or 2 from each zone as long as the total is 3 or less. Both zones allow the same 3 permits. I would recommend hunters be allowed to get 2 from one and two from the other. Thanks for your consideration.
Just the right amount of deer where I hunt, but a few miles away are bad hotspots with loads of deer. Private land. Big bucks only. I drive 11 miles to work, it's nothing to see 20+ deer a one way trip. You can give out unlimited tags, but if people don't want to shoot a doe what good is it? My family does crop damage tags so the herd is thinner near us. Two miles away there are too many to be healthy.

In one of the question segments, you referenced concerns due to over population causing damage or over browsing. I feel that today's hunters are doing more food plots with supplemental food because of the invasive buckthorn. My woods is full of the stuff, so I don't feel deer get much, if any natural browse. I would like to see greater efforts by the state to help landowners get rid of this.

Why don't you start the muzzle loader season earlier say nov 1 this could be used to provide more opportunities for non bow hunters and help control herd size. Having it start after the gun hunt doesn't really provide for a quality hunt. The deer are so spooked and most hunters are hunted out few of us want to even go out. It could be a 15 day hunt and finish up well before gun season opens.

Some areas are way overpopulated due to landowners taking too few or no deer. In my particular hunting area it has been difficult to increase herd size due to the taking of too many antlerless deer. For example, on a good day I may see 15 deer. On a good day at some of my friends farms you may see 50 deer as they kill only large bucks and virtually no doe. Not sure how to solve this problem.

Make additional tags available for free if hunters want them. Why penalize those hunters that want to help achieve the goal? Is it a tax write off to donate a harvested deer in Wisconsin? If not, making it so and advertising this may make it worth the extra effort for some hunters. How about "earn a license"? Shoot 3 antlerless deer and get a discount on next years hunting license.

Instead of earn-a-buck could we add EARN-EXTRA-BUCK. If a hunter harvests 3 antlerless animals, taken to a registration station to confirm then they would receive an additional buck tag. Somehow we need to encourage more hunters to harvest due to get the population down. somehow have to confirm kill or people will say they are harvesting antlerless animals and not really doing it.

Implementing an "antlerless only" season for all out of state licenses. This way, tourists can still hunt in Wisconsin, but cannot harvest an antlered deer during the 2020 season. This will hopefully still generate local economic support, and improve the overall balance of the herds, without hindering landowners to harvest antlered deer.

Setting the framework will be challenging due to the fact that some properties hold more deer than others. I hunt in a very highly populated deer area and see anywhere from 15 to 30 deer everytime I sit i just choose not to shoot every deer. With that being said some parts of the county are lower and deer browse is an issue also.

Stop handing out agricultural deer tags and letting farmers shoot them in January, February. Bucks drop antlers and everything gets shot. And stop handing out all the free tags. Then people think they need to fill every tag you guys hand out. Mean while we dont see deer cuz the neighbors blast them all. Makes hunting no fun.

I would like to see more testing for CWD in Green Lake county since it is now I an adjacent county. Also is there any work being done to improve the testing time for CWD? It would great to have a harvested deer be tested and get results back immediately which would help you determine to have the deer processed or not.

We are drowning in antlerless deer where I hunt and the deer density is way too high. Our group harvests over 20 antlerless deer each year and we can't make a dent in the population. The CDACs and the department need to work together to create new tools to encourage others to harvest more antlerless deer.

It has taken a long time for the herd to come back after the multiple year earn a buck followed by the massive winter kill of 2007/ 2008 followed by near 100% coyote fawn mortality in 2009 and 2010. The age distribution of the herd is still not stabilized. Hunting pressure continues to increase every year.
Remove the holiday hunt due to the fact that it is limiting an already short snowmobile season. I'd personally would rather be riding than in the woods. The hunting season is already 2 and half month and if you can't get a deer during that time then what is another few days of gun hunt or a month of bow.

I think Extending the Gun Season would be a great thing for hunters. They would have a better chance at a Buck and it would also promote tourism in the area for a longer period of time. I am opposed to the Holiday hunt and it does impact other recreation during the same period like Snowmobiling.

Lack of physical DNR presence was noted. People violating illegal permanent stands don’t feel people register deer they shoot so numbers are skewed car hits people don’t pay attention and insurance companies are to involved. Reported issues to Whiteriver station saw no results.

I missed the input for April 16‐18 to vote on other high profile topics for the state & wanted share that I think extending the gun season will be detrimental to the states buck population. I also feel increasing the out of state price tag for an deer season is beneficial.

Our hunting party harvested less deer in 2019 than in 2018 because the only tool we had to bring deer in was baiting. Now we can't bait and we're seeing less deer. We don't have the land to food plot. In my opinion I would like to see baiting be legal in Green lake county.

I know it's not in the "tool box," but i would like to see only one buck tag issued per hunter per season for any weapon. Meaning that a hunter who hunts both archery and gun seasons could only harvest one buck per year, regardless of the weapon he harvests it with.

I don't completely oppose the holiday hunt. Selfishly, I believe it should be held at some point but not during that particular time frame. Between Christmas and New Years was always the last days I really had a chance to get out and punch that buck tag with a bow.

If THERE IS ANY KIND OF ANTLER LESS ONLY HUNT OR EARN A BUCK HUNT MY 400 PLUS ACRES WILL BE SHUT OFF TO DEER HUNTING AND MY FAMILY MEMBER AND FRIENDS WILL NOT PURCHASE LICENSES! AS FOR THE NORTHERN COUNTIES THE WOLF POPULATION MUST BE CONTROLLED!

Like to see a 16 day hunt ! I have not seen the deer like I used to when I started hunting my land years ago. I used to see 200 to 300 hundred deer Opening day! My family now hunts and have never see the deer like we used to when I was younger.

We are seeing a lot of deer this spring which leads us to believe that we had a healthy winter season. For CWD purposes I do believe more does have to be taken. Thank you for all the testing stations and work you’re doing! Please keep it up.

I believe the numbers of deer people were seeing last year from roads and high ground are skewed due to the major flooding in the wet lands. A lot of state acreage wasn't able to support deer due to the high water.

I really feel there's no need for a holiday hunt. 2 antlerless tags for archery and 2 for gun is plenty. I would like to see no holiday hunt and leave the late archery season the same dates or extended a week.

We saw the lowest number of deer in 2019, which has continued to drop in the last five years according to our records that we keep each year. We plant fields for deer and still see our numbers going down.

Please stop the Holiday hunt. It is dangerous especially in semi suburban areas. Families visiting for Holidays...kids playing outside enjoying snow... etc. We DO NOT need that season! Thank You!

Stop the Anterless only hunts.i have hunted my same land for 35 years and the last 10 years has been horrible . Not seeing many deer. Looking at just selling land and hunting southern Illinois.

There are far too many anterless kill tags allowed on the public land in this county. The QDM on private lands do not kill as many does. Decrease the amount of anterless tags on public.
Antlerless holiday hunt is a total joke. Bow hunters can’t shoot bucks and snowmobile trails can’t open. Not to mention who actually goes out during the holiday hunt. Hardly no one!

A big problem with deer harvest numbers down for our area was late harvest of corn. Deer numbers are still very high (by personal observation) in January and February, 2020.

There is talk about that they want to impose a Oct 1- Oct 31 Crossbow season. They should keep the framework for the season the way it is presently. Thank you,

I understand the logic in lowering numbers, certainly do not want to go to the “earn a buck years. Last year we took one buck, prior year two does.

Crossbow season should be limited to a week sometime prior to gun season (concurrent with vertical bows) and allowed for the late season hunts.

Heard very little shooting opening day for last 3 years. Seem to be less every year. From like 9 a.m. to 3 p.m. virtually no shooting at all

I would like to see the deer population go up. I see few deer and I do not shoot yearlings. Hunting is more enjoyable when I see more deer.

I hunt the Princeton area and only seen 5 deer the 6 days I hunted during the gun season, would have bow hunted but was working out of town.

Please get a Warden for Green Lake County. The complete disregard for duck/deer regulations by certain hunters is appalling. Thank you!

Thanks for the work and sending this out. I’m so thankful that all family members got to see a deer. Not everyone needs to kill one.

The number of deer I am seeing in the fields each evening this spring has increased from last year (2019).

leave well enough alone most people do not hunt past the first two days because they do not see any deer

We need a tool to entice hunters to shoot more does. Maybe an additional buck tag for harvesting two does?

I’ve always thought Earn-A-Buck was a good management tool and would hope that someday it will return.

People are not registering all the deer they shoot and that contributes to lower numbers harvested.

Hunted 9 days during the gun season, never saw 1 deer! Way over harvested in Green Lake County

I truly believe there are more deer being killed than are being called in and registered.

Please bring back restrictions on crossbow hunting. 60 years old or disabled restrictions.

Lower amount of anger less tags no holiday hunt and leave crossbow archery season as is

get rid of all the x-tra hunts and get back to true deer hunting not harvesting.

I am opposed to extending the gun deer hunt beyond the traditional 9 days.

You should restrict the crossbow season and get rid of the youth hunt.

Earlier gun season every year and 16 days long this will work

Please get crossbows out of the regular archery season.

I’m very opposed to any type of deer hunting extension

Open baiting up if want more deer harvested.

reinstate backtags to identify trespassers

Far to many crop tags issued in my area.

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 253
   - Bow: 175
   - Crossbow: 100
   - Muzzleloader: 77

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 21.74
   - Maximum: 67

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 197
   - Mostly Private Land: 49
   - Public and Private Land About Equally: 18
   - Mostly Public Land: 3
   - Exclusively Public Land: 4
   - I did not hunt in this unit last year: 2

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 9
   - Not too crowded: 22
   - Neither crowded nor un-crowded: 15
   - Somewhat crowded: 12
   - Very crowded: 10
   - Not applicable: 6

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 43
   - Fewer: 77
   - Same: 124
   - More: 38
   - Many More: 14
   - Unsure: 8

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th>The Antlerless Quota is...</th>

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 193
   - I visit this unit for non-hunting purposes: 51
   - I hunt in this unit: 273
   - General interest in this unit: 53

Section 2: Perceptions about the number of deer in the unit.

The Antlerless Quota is recommended...
Section 3 (continued): Feedback on the CDAC's 2020 preliminary recommendations

8. In your opinion, how would you rate the number of $12 Bonus Antlerless Harvest Authorizations recommended for this unit by the CDAC for the 2020 season?

<table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...

- Implement an ANTLERLESS HOLIDAY HUNT:
  - Support: 112
  - Oppose: 176
  - Unsure: 16

If a Holiday Hunt is held in a Farmland unit...

- EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021:
  - Support: 148
  - Oppose: 132
  - Unsure: 23

If the Population Objective is not "Increase"...

- Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons:
  - Support: 23
  - Oppose: 265
  - Unsure: 16

If a Zero Quota (buck only season) is adopted...

- Should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?
  - Support: VALID
  - Oppose: NOT VALID
  - Unsure: Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?  

<table>

</table>
I started hunting at the age of 12, which was a perfect age to start hunting, I was not given a special youth hunt and wasn't allowed to use a cross bow, I put in the time and was elated to harvest a spike as my first deer. The rules were straight and narrow and gave everyone the same chance to harvest a deer. One deer with a bow and one deer with a gun, either sex. You tagged your deer and registered your deer. I felt that I could hang with the men and that hard work paid off. Hunting today is too easy with youth rifle hunts in October, crossbow hunting open to anyone and extra gun hunts and extended seasons. I just don't think hunting is suppose to be easy and almost guaranteed to harvest a deer. No lessons are learned when you are basically being put into a no lose situation. I can personally admit that growing up with no advantages has made me a better hunter and a better person overall! Now owning property of our own, we have been able to trophy hunt and enjoy many memories. We have put in so much time and effort to wildlife and deer management, but over the last 10 years it has steadily gone down hill in which the deer numbers have been cut more than half on our property as multiple gun hunters surrounding our property shooting multiple deer every year has taken its toll. Also, the deer numbers have decreased with the amount of guys using crossbows around us, which is much easier to harvest deer by far and also takes the challenge of drawing your bow back and shooting a closer ranges out of the picture. I believe the crossbow restrictions that were in place before the changes was the correct policy, (people with disabilities and over the age of 62) so that those people that could not participate with bow hunting still could. In my opinion, people with no disabilities or people under the age of 60 should not be using crossbows. All in all, the deer numbers are down in our area, and the amount of mature deer are too. We would see multiple bucks, 4 1/2 years old or older during the year for years, but the last couple of years, you are lucky to see 1 or maybe 2 now a days,which makes it for some long sits for someone who puts so much into the sport and the land. Opening gun used to feel like Christmas morning, now its just a headache with all the shots around us, knowing that many people around us are shooting deer after deer as they have tag after tag. I totally disagree with extending the gun season to a longer season as well. The 9 day gun season is tradition and is the right length. This is the perfect example of, if its not broken, don't fix it!! I love hunting just as much as anybody, but sitting for 9 days straight, dark to dark, is work in itself in the cold, and also its already enough time to be away from our families. Things seemed to be going well and smoothly before all the special seasons and before the cwd scare. I would recommend going back to using back tags, tagging and registering deer, no crossbows,(unless disabled or over age 62), bow hunting 1 tag either sex, 9 day gun tag either sex, muzzleloader season following for any unused gun tag, and then open bow back until the last day of the year. Rules and seasons should be straight and narrow and get back to making Wisconsin the deer hunting tradition it used to be again. Thank You!
I've been hunting the same private land for 24 years and have seen a considerable amount of deer sightings DROP significantly. It's rare to even see one these days let alone harvest a deer for the purpose of meat... I also visit public land in green county and it's a very minimal amount of land and gets crowded quickly. I believe that the crossbows got many more people into hunting but it's for the sole purpose of killing horns/ NOT THE MEAT.. This alone ruined the sport of deer hunting in my opinion. The biggest difference I see isn't the crossbows or the many people hunting a small peice of public land----it's the simple fact that there is basically 0 private land available to hunt that has the deer on it.. These landowners focus all their attention on keeping the deer on their property(baiting) so they DO NOT leave. Either ALL should b able to bait deer or nobody at all... If some can and some can't well this results in the ones that can't see 0 deer because they do not leave the neighbors land. HOW IS THE GUY ON THE OTHER SIDE OF THE FENCE SUPPOSE TO HARVEST A DEER OUT OF THE NEIGHBORS HERD OF 50... IT'S JUST NOT RIGHT... AND THERE IS NO SUCH THING AS GETTING PERMISSION THESE DAYS TO HUNT PRIVATE.. 1-2 GUYS ON 300+ ACRES IS THE NEW NORMAL.. The way I see it these days is when u buy the land u also buy the deer literally. Their is minimal oppurtunity for the average Joe to hunt and actually see it pay.. 0 RULES THAT HAVE BEEN IMPLIED OVER THE YEARS DOES NOTHING TO HELP THE AVERAGE JOE GET SOME MEAT. IT'S HELPING THE HORN HUNTERS EGO TO BELIEVE THAT THE DEER R theirs. Simply put--- treat the meat hunters and put some restractons on the horn hunters.. They have ruined deer hunting as we now it/ and I believe the dnrs proposals r dying nothing but helping the horn craze.. I could keep ranting but whats the point I guess...

Chronic Wasting Disease: I believe your data on this subject to be almost totally meaningless and therefore the data used in determining deer management regarding this disease to be nonsensical. If you truly want good data on this it is imperative that provisions be made at local levels to incentivize the hunter to have his carcass tested. Just look at your harvest to testing ratio’s, it doesn’t take a rocket scientist to figure this one out. Hunters are not going to drive all the way to Timbuktu for testing. Antlerless Tag: If you truly are trying to “manage” the heard for each given area/county; why then does the hunter have to state whether the antlerless tag will be used on Private or Public land. What’s the difference whether it was harvested on one side of the fence vs. the other side of the fence as long as it is harvested in the same area/county?! Your method discourages the ability to achieve your projected goal outcome. Public Land hunting New Glarus Woods: Since the North side is excluded for hunting due to non-hunter safety use, why then is the South side not closed to non-hunters during the 9 day season for safety reasons? Makes no sense, allowing non hunters hiking through an area unprotected with improper attire when they have full access and use on the other side of the park. Metro Area: I realize this particular topic does not apply to Green County, but this sight tells us to only respond to “one” area. The rules have become so complicated in the Metro Area that hunters have quit hunting it altogether. There again if you truly intend on deer management, why make it so complicated to where you will get little if no participation from the hunter in assisting to deer management in that area?

Would really like to see air rifles added to tools that are allowed to be used for harvesting deer. Big bores air rifles are more powerful than crossbows and bows but are safer than a firearm as the dangerous range of an air rifle is in the hundreds of yard's versus the miles a bullet can travel from a firearm. Very good tools for hunting in shotgun only zones or closer to urban areas where a bullet from firearm travels too far. Maybe big bores air rifles could be included in the archery/ crossbow season or even a specific air rifle season for deer. Also by the way I know this relates to the deer season but smaller caliber air rifles from .177 Cal to .25 Cal are probably the perfect means to harvest Turkeys as well as gives people who don't hunt with either shotgun or by bow or crossbow another means to harvest turkey. Air rifles are very appealing to new hunters and those with little or no ( gun ) experience. No recoil and with no loud report like a firearm would give more hunters such as handicapped individuals who may be scared of heavy recoil or people who have aversions to firearms or the noise involved in firing one may like the option of an air rifle for means of hunting. For deer hunting a big bores air rifle . 35 Cal or above are effectively used for harvesting deer in quite a few different states now. Please get with the times WIS DNR and give us air gun hunters the opportunity to harvest deer and other game with our own tools!
Having participated in the WI CWD eradication and sampling in the past and recently participated in the MN CWD mandatory testing program, I have to say that the MN program was a much smoother operation. As big a pain as it was to have mandatory CWD testing where I hunt in MN, it was also convenient due to so many locations available for testing. I don't know if this was a collaboration with the WI DNR or an independent process but I hope you are working with and learning from each other. I would bring every deer my group shot in for testing in WI if it was as organized and as well staffed as the MN program. Also, I find it somewhat irresponsible that the zone I am in was part of the eradication/earn-a-buck program and now there is only one CWD sampling station in the entire county and it is by appointment only. There is also only one carcass disposal location listed. With prions able to transmit the disease many years later, it should be easier to properly dispose of a carcass. Luckily, the processor near us in New Glarus provided a dumpster and accepted donations of deer hides as payment for its use. I spend a great deal for an out of state license and I appreciate the conveniences of online licenses and registration. However, the CDC still states "If your animal tests positive for CWD, do not eat meat from that animal." Yet, we are not provided convenient testing facilities.

We have and will continue to support NOT allowing a Holiday Hunt in Green County. Living in a wooded area of 60 acres which we own 20 acres of. It is nightmare of traffic and every day policing of our property during these multiple seasons. We cannot host Thanksgiving at our home because we cannot let the children outside because of the risk of a stray bullet or arrow. You know when the kids are here they are going to find a way to get out to the woods. Christmas finally has become our time to bring the family together and enjoy our woods like we should be able to. We do not support an elongated 19 day gun season either. As it is now we cannot cut wood, walk the woods, we have to bring the horses in close to the barn in other words we are basically excluded from utilizing our property to the fullest even though we pay a high property tax. One last item...do your numbers take into account those deer that are not registered after the kill? We see less and less deer in this area every year. We know that one or two hunters sit in this area take as many as they can. Their comment is "The car insurance companies love me". Is that the kind of reputation you want?

The amount of bonus/antlerless tags the DNR gives out is ridiculous. Each year the hunting gets worse. The doe population is getting lower and lower. This past hunting season was the first season in a long time with a deer population that was finally starting to somewhat rebound. But with the way the dnr is handing out bonus tags and extra doe tags I dont see the population maintaining a healthy amount of deer. Crossbows are another issue, the crossbow use should only be allowed to be used by people under the age of 16 or 55+ or someone who has a physical or mental dissability. Or have a short crossbow season. People are treating crossbows like rifles and think they can shoot 70+ yards with them and wound deer and hurt deer populations. Each person should be limited to 1 buck and doe tag per person. Gub deer hunting is shrinking each year because of the small deer populations, it is a waste of time to people in certain areas. The DNR needs to listen to hunters comments. Wolf protection is also causing large populations of wolves and is killing deer populations in northern counties. Please listen to our comments and make some changes.

Baiting is illegal in Green County. Then why are Blains and Walmart in Monroe allowed to sell deer attractant/bait? That is encouraging an illegal behavior in this county. No one is going to buy deer bait in Monroe for use in another county. Selling of clearly marked products used for deer baiting should NOT be allowed in a county where the practice is illegal and subject to fines. Regarding the Holiday Hunt. Please do not bring back the Holiday Hunt in Green County. My wife wants the family here at Christmas but won't if there is hunting going on. We live in an area surrounded by woods which we own a large part of. But since there are no clearly marked boundaries and hunters are always in the woods adjacent to ours she feels it would be too risky to have everyone over. They are going to want to walk and explore not stay in the house. Please give us this holiday time.
Since a person does not have to physically register their deer harvest at an actual deer registration site in person anymore, a large amount of deer are getting killed and not registered which makes a totally flawed estimated deer herd number the DNR is trying to project. To get a more accurate number of the number of deer actually harvested, a physical on-site registration process needs to be used otherwise the DNR will always be working with flawed numbers to determine herd size and will never be able to accurately determine the deer herd size. Also, I find when I have spoken to one of the DNR specialists, I found him to be very biased and close-minded and didn't want to listen to other person's thoughts and opinions and he thought his opinions were the only ones that were correct and important. The DNR specialist needs to be more open to other opinions besides his.

I feel that the committee did the right thing and suggested no holiday hunt as I don't feel there is as many deer as the DNR said and that I saw hardly any roadkill in my area of the county north of Monroe compared to a few years ago, it's not like traffic was reduced. Also, as far as hunter opportunities how long do you need it starts mid-September and runs till the end of December which is a ton of opportunities for anyone with a few different gun seasons already in there. Seems like the state feels like they always have to cater to the few that are always asking for more. As a landowner, we have plenty of other recreational activities that family enjoys over the holidays and feel that it's nice to enjoy our property without concern of someone getting shot. Thanks again Green County CDAC for being a county that thinks of its citizens and has gotten rid of the holiday hunt.

The over-crowding on public hunting lands that I experienced were from non-hunters. Every single time I archery hunted which was on multiple occasions while hunting in the Brooklyn Wildlife Area, I had joggers, people walking their dogs, field trips with grade school kids, elderly taking walks, etc walk under me. I believe that it is important to share the public lands but the area has become a public playground and does not allow equal and/or fair opportunity for hunters to take advantage of those lands. I am certain to believe that the money used to purchase and maintain those lands were mostly from license sales and not from the general public who are taking advantage of something while taking away from others. It would be greatly appreciated if this could be addressed.

The population estimate for 2020 is 10,400 deer or 74.3 deer per sq. mile of deer habitat. The past winter found deer gathered in large number where there were standing corn and soybeans in the fields. I feel that the deer population estimate is grossly overstated! There are areas in the County where the population may even exceed the 74.3 per square mile of habitat, but the average per mile of habitat is definitely not 74.3 deer per square mile of habitat on the average. DNR needs to put more effort into opening up the areas of high deer density within the County. The landowners are prohibiting access to many of these high population areas for various reasons. These reasons need to be explored on an individual basis and solutions for access developed.

green county does not have the woods cover in most areas to support all the proposed seasons. I have woods on my land, and there is not even half the deer here there was 20 yrs ago, not even close, but u go down the rd about a good mile, and they r actually over run with them. Big woods, water not much hunting pressure, where I live, the landowners don't even hunt their kids, grandkids, nephews, friends, all come to hunt, and their mentality, is if it's brown its down, so for us landowners we would like the DNR sell those bonus tags instead of giving them to everyone, that might slow the slaughter down...

Why can't we just go back to the traditional season format. 9 day Gun and regular Archery season followed by Muzzloader season. The quality of deer hunting has been going backwards for about the last 5 years. Pretty soon we will be just like Rock County if we do not stop all the special seasons Youth-Holiday-Land owner combined with the use of crossbows are all wrecking deer hunting. Deer do not stand a chance to get over the age of 2.5 if you combine all the seasons on top of Auto and predator kills. If we don't stop now we will eliminate our most beloved hunting tradition in no time. Thank you for the time.
Increasing the number of antlerless permits is meaningless if people don't hunt antlerless deer. Your own data bears that out. Increasing the length of the season is counterproductive in that it will result in far more bucks than normal being taken with minimal increases in antlerless deer taken. (Not to mention it poses a danger to bow & crossbow hunters who strive for concealment) Having firearm seasons arbitrarily intermingled with bow season makes it difficult to keep track of appropriate attire (Blaze versus camo) and poses a very real threat to bow and crossbow hunters.

Everything looks pretty good and fair. The only reason I’m against the holiday hunt is because I’ve seen it in the other counties last year and ours before and just seems like less and less hunters go out. Seems like a waste for the slim few who do it, but that’s just my opinion. Also the only thing I’m against and this probably is nothing to do with what I just answered is the 19 day deer season. I mean the turkey population has record highs it seems like and we have a 1-7 season structure and a one bird limit. Does sound pretty crazy that we would consider 19 days for deer.

The deer population in the area of Green county I hunt has drastically declined over the past 10 years, starting with the herd reductions due to CWD. I don’t believe it has increased to the point where more antlerless should be harvested. Last gun deer season we had 5 hunters hunting a 250 acre farm bordering the pecatonica river and combined we saw 2 deer the entire opening weekend. I mentored a new 14 year old during bow hunting season and while seeing deer during the archery season it wasn’t to the extreme but was enough to keep the young man interested.

I truly believe that the way to really make a difference in deer taken is to do two things with our current season! First, the start date for the muzzleloader season should be before the gun season for reason of difficulty of one shot one kill scenario. Secondly, opening weekend for gun season should be "one" if not "two" weeks prior to Thanksgiving contrary to current of just the weekend before! Our trail camera data has definitely shown lack of deer movement preceding our current season start date for three years in a row!

Why do we always have to ask about the holiday hunt. Looks like over the years most people don't like it but will assume it's like this whole world anymore always have to ask for more. Problem being when you bow down to please a few you are actually turning more people against you on the other end. Please lets continue being a traditional hunt with no extended seasons and as a hunter I feel I am given plenty of opportunities to harvest any deer from bow and gun season and think 99.9% if being honest would have to agree.

My family has enjoyed hunting in Green County for generations. I now have the privilege that many of my children are hunting with me. I think that leaving the number of antlerless tags alone is a great idea. However, I would like to see the antlerless-only portion extended with the holiday hunt. Also when it comes to an antlerless-only season it would destroy the number of hunters that will even be out there so please do not do that with any units or the units that have buck hunting will get overrun.

It is my firm belief that deer kill numbers are down in Green/Rock Counties because of the high amount of precipitation that we have received. The high amount of precipitation has caused a late harvest of corn across much of the area. This has given much more shelter to the deer during the gun seasons. I believe the seasons should stay the same in Green County. If Mother Nature allows for an earlier harvest than the past two years, I believe kill numbers will go back up with the same season structure.

There used to be a greater difference in seeing deer when the county was split in two sections A and B. The density of deer varies greatly from say the Dayton area and the New Glarus area. It is normal to see a few (1 or 2) during a good day of hunting in the East in comparison to the herds of 15 to 20 further to the west. I am sure that some of the hunting styles of today have a big influence in deer movement. The number of hunters moving deer around are fewer and fewer every year or so it seems.
I have been happy with the management of deer in Green County the last few years. During the years when you had the earn a buck program where you had to shoot a doe before getting a buck tag was very disappointing. I was ready to stop hunting in Wisconsin. I have seen a much better hunting experience the last few years. I have increased the amount of time I am hunting in Monroe area now, I am enjoying myself and having a great hunting experience. keep up the good work.

let's stop all the extra seasons and go back to the basic seasons of the past that worked terrifically for Green County! This common sense approach seems to obvious! Let's not outsmart ourselves and ruin deer hunting for Generations or worse permanently. 1 deer either sex for gun and one deer either sex for archery. Any leftover tag use for Muzzle loader. Simple, Effective and Fair for hunters as well as our deer herd. Thanks for the platform!

Brian Williams

DON'T change the crossbow season. Don't mess with a highly effective way that helps feed my family. It's hard enough to get time off to hunt and the use of a crossbow allows me to better my odds of bringing meat home. If I really want to challenge myself I'll use my vertical bow. It's all about the easiest most effective way to fill the freezer. My family and I depend on my freezer being full of venison each year and crossbows help make that possible.

As I keep hearing talk about shortening the crossbow season, it makes no sense to me when we have hunter numbers dwindling, deer numbers increasing, it just doesn't make sense to limit any hunting season at this point. Personally I think greedy bowhunters that are worried that the neighbor might shoot "their" buck with a crossbow have taken this a little bit too far, and it's a bit sad that anyone is even entertaining the idea.

I feel season for both gun and bow/cross bow should be thru end of January 2021. I also feel strongly about eating off the land, if we are going to truly process a deer then us type hunters should be able to hunt throughout the fall/winter, both gun and bow/crossbow. I see too many deer and see the harvest goal was pretty low in my opinion. If we are going to eat it let us hunt, special licence maybe?

Because of the late harvest last year do to the weird weather the deer around us stayed in the crops and sheltered until well after hunting was over everyday. Did not harvest any deer this year because they were out after hunt every single day. Would be nice to have a longer season and holiday hunt so we can have a chance to harvest some in the southern area of Green county.

Too many seasons, Too many Tags, Too much change every year. Go back to bow hunting only, no crossbow. 9 day gun season, and muzzleloader after that. 1 tag bow, 1 tag gun/muzzleloader. Instead of youth hunt go to kids under 16 can use bow or crossbow during bow season but have to use compound bow after they turn 16, Bring back the deer numbers!

The deer herds of Green County have taken a serious drop over the last several years, I personally know of people that hunted very hard last year and didn't see any deer at all. I saw very few deer where I hunt, used to be able to go out and consistently see deer year after year, no chance of that in Green county anymore.

I have seen about the same deer numbers the last 2 or 3 years still not as many by any means as years ago. I don't feel there is any need for more hunting seasons so a big NO to holiday hunts and extended bow seasons. I love to hunt but have always been able to fill what tags I have wanted during or usual seasons.

I would recommend to open the deer gun season with muzzleloader before the regular deer gun season and also to start the regular season a week earlier than the Saturday before Thanksgiving!! Trail camera observations have shown higher activity prior to the regular start and would make success more achievable!!

I hunt just outside of Argyle. Deer numbers have exploded last few years. Doing fair amount of damage to our corn. Hunters don't seem motivated to shoot does anymore. Earn a buck was best way to get them to shoot does but I'm afraid with tagless registration now, more will be willing to cheat to get buck tag.
4019 The DNR needs to work with the landowners in areas of the County with extremely high deer concentrations. In most areas with high concentration the landowners will not allow hunting for various reasons and the DNR should make an effort to open these areas up to hunting by addressing the landowners reasons.

4020 With the number of properties in this area owned by people who do not live here and do not allow hunting on their property, and the number of people who only want to shoot one big buck, the number of deer in this area has skyrocketed. Deer damage to crops and vehicles has grown to unacceptable levels.

4021 I support traditional seasons, I feel with extra seasons people will actually harvest less antlers deer. People seem to focus on a big buck during the 9 day with the intentions of harvesting a doe in the later season, but when those seasons arrive hunters are less likely to get in the woods.

4022 More public access / public land would be great. I think there are plenty of opps to get more public land / public opportunity. I do NOT think the general firearm season SHOULD be extended. That would put the general firearm season into bow season and would create all kinds of chaos.

4023 DNR always comes out with high numbers actually higher every year and with all these tags kill really never goes up makes you wonder how accurate their numbers are which I assume are pretty highly inflated as we don't see more deer in our area and kudos to no holiday hunt.

4024 I prefer how the deer zones were a few years ago. Zone 76 covered parts of three counties. I hunted in more than Green Co. and the former zones were a totally better system. The new system may generate more revenue for the DNR, but was no improvement for land owners or hunters.

4025 No crossbows during the archery season except for disabled people and/or people over 60. I know many avid bow hunters in my area who feel the same way. If the deer population is too high support doe harvest and give 2 out to free tags with a license purchase.

4026 Antlerless only deer hunting for the season will only turn more hunter away! Deer hunting is nothing like it used to be with everyone hunting. Why would you turn more hunters into non hunters with a RIDICULOUS rule of antlerless only for the entire year?

4027 Stop the doe only seasons. One buck one doe for each season and option to buy more doe. Also the reason gun numbers are down is because all the gun hunters are using a cross bow and hunting during archery. Limit the cross bow season! Its common sense.

4028 There has been so many deer on Highway H stretching from Blanchardville all the way to Postville. More than I have seen in the 4 years I have lived there. They have destroyed many trees on my property and I just believe a lot more this year.

4029 While I have not hunted this area in the past, I have lived near it for many years. Anecdotally, it seemed like there were far fewer deer. However, it was a wet year, with alot of standing crops. Thanks for the opportunity to weigh in.

4030 Seems like the number of road strikes was pretty high this year through the winter and spring - with the warmer weather around thanksgiving I wonder if deer have more browse available and don't need to come out as much?

4031 Non resident land owners, who pay property tax in Wisconsin, should be given some discount on the non resident hunting and fishing license fees. Let's say a fee half way between the resident and non resident fees.

4032 I would like to see the county post bright colored signage where car/deer accidents typically happen throughout the county. Try and raise driver awareness to be looking for deer when driving through these areas.

4033 I’m very strongly opposed to extending the gun season beyond the traditional 9 day hunt. This would be a huge mistake! I’m also not supportive of limiting bow hunting dates as I’ve heard is on the table.

4034 I didn’t see any particular effort to gain participation in the youth hunt. I would like to see more youth involvement - I’m not sure what that would look like in the herd management discussion but........
I hunt for food unfortunately the majority of hunters hunt for horns. We do not shoot anything brown but do kill does, which many hunters do not. Any thought to bring earn a buck back?

I believe that the archery season should NOT be closed at all before the gun season opens. Once the archery season opens then keep it open until the end of the season in January.

I hate the crossbow season to many big bucks being harvested that would not if it was regular archery season. unfair advantage especially with all the crossbow tech. each year!

Why is green county one of the few county’s in southwest Wisconsin without the holiday hunt? Who are these CDAC members looking out for, their own interest or the public?

I do not believe the deer season should be extended. The current designated time appears to be more than enough since few hunters are seen after opening week-end.

I believe with the antlerless holiday hunt, it would control a bit more of the deer population. Quite a few deer in this area esp on cty H east of Blanchardville

I feel it would be a benefit to have an opportunity to rifle hunt bucks during the holiday hunt or have a late season when you can harvest a buck with a rifle.

There are less hunters in my township and large “herds” of deer still easily visible. Crop damage tree damage and garden damage continues to increase.

We would like to enjoy our land over the holidays without having to worry about gun hunters on neighboring properties chasing and shooting at deer.

I oppose proposed extended gun season. I also oppose proposed elimination of hunting with archery equipment during gun season.

Bring back earn a buck. I think it is the best tool for keeping a healthy population while still being fair to hunters.

I am very concerned about CWD and Lymes disease and the effect on humans.

Crossbows need to be limited back to an age or disability again.

Please try to manage the predator populations.

be able to shoot bucks during holiday hunt

Have the holiday hunt for bucks also

Bring back earn a buck.
The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

514 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 200
   - I visit this unit for non-hunting purposes: 101
   - I hunt in this unit: 484
   - General interest in this unit: 78

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 450
   - Bow: 290
   - Crossbow: 155
   - Muzzleloader: 134

3. How many years have you hunted deer in this unit?
   - Minimum: 0
   - Average: 21.12
   - Maximum: 60

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 367
   - Mostly Private Land: 60
   - Public and Private Land About Equally: 24
   - Mostly Public Land: 8
   - Exclusively Public Land: 22
   - I did not hunt in this unit last year: 3

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 15
   - Not too crowded: 31
   - Neither crowded nor un-crowded: 30
   - Somewhat crowded: 18
   - Very crowded: 17
   - Not applicable: 3

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 75
   - Fewer: 158
   - Same: 199
   - More: 52
   - Many More: 14
   - Unsure: 16

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th>The Antlerless Quota is...</th>
<th>Much Too Low</th>
<th>Too Low</th>
<th>About Right</th>
<th>Too High</th>
<th>Much Too High</th>

</table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
- Implement an ANTLERLESS HOLIDAY HUNT: Support 292, Oppose 183, Unsure 39
- EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: Support 295, Oppose 163, Unsure 54
- If the Population Objective is not "Increase"...
  - Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: Support 59, Oppose 426, Unsure 29

If a Zero Quota (buck only season) is adopted...
- ...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? Support VALID, Oppose NOT VALID, Unsure 8

11. How important were each of the following concerns in forming your opinion about the CDAC's recommendations for this unit? Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

<table>

</table>
Deer numbers appear to be up again. I'm seeing more and wider deer trails on my land than I've seen in 15 years, to the point that I'm getting some soil erosion, and we haven't been successful in reducing numbers. I generally support the Council's recommendations for 2020, although I would like to see more public land bonus available. Your 2020 recommendation of 3000 private land authorizations is over 5X the number sold last year, while your 2020 recommendation of 650 is only a bit over 2X the number sold in 2019. Yes you covered the spread, but why the disparity? If for some reason public land bonus demand would pick up, wouldn't you want to be sure to have the authorizations available to take maximum advantage of the increased willingness to decrease the public land herd, particularly as the public lands serve as an important opportunity to reduce deer numbers? I'm also in agreement with DNR liaison Anderson, in that I don't understand why the Council does not take advantage of the opportunity to extend the archery season through January. Yes harvest was modest at only 27 deer, but if you start to consider the offspring of those deer, and their offspring in turn, increasing at a 24% rate per year—pretty soon you have a pile. And though January 2020 wasn't the best hunting weather, what if we have weather like January 2019 again, when conditions for winter hunting were nearly ideal, but Iowa County hunters were not allowed to participate, so we missed the opportunity to increase deer harvest? But more importantly, what does it mean for the Council to say that holding the season was not worth the harvest? To who? The folks that harvested those 27 deer might have greatly enjoyed their hunts and greatly enjoyed the venison. Or like me, they might have received CWD+ deer results back on the deer they harvested earlier in the season, so they really wanted to go back out to get a healthy deer for the freezer (I failed, but I sure had fun trying). Finally, who or what am I hurting to want the same opportunity to go bowhunting in January on my own land that other similarly situated landowners in adjacent counties with the same Decrease objectives and very similar over-populated and CWD infected deer herds will apparently be able to enjoy next winter? Council members made comments that landowners and snowmobilers were not comfortable with the January season. Well this landowner disagrees, and I'm not hurting anyone by wanting to spend a bit more time hunting on my own land. No one is forced to participate in the January extended season if they don't want to. And what possible concern is it to a snowmobiler if a few folks are out bowhunting in January? I am virtually certain that in the 80 years that snowmobiling has been a part of the Wisconsin winter, we have never experienced a snowmobiler vs. bowhunter accident. This is a red herring, and the Council should acknowledge there is no good biological, social or safety reason to not recommend the extended season, particularly when you have unanimously adopted the population objective to Decrease the deer herd. Thank you for your consideration and thank you for your service.
2018 I saw a high number of deer though only 1 buck exceeding 3.5 years old. I hunted 3 to 4 days a week from the 1st week of Oct thru the 9 day gun hunt. This was the first year I thought we were close to what a hunter would call a good herd. It honestly felt like hunting Iowa where I could see 30 mature deer a morning and then again that afternoon. 2019 I hunted the same amount of days and saw a fraction of the deer from the prior year. My trail cameras were dried up and I saw the same 11 deer like clock work with no mature bucks. 2018 I was surrounded by corn and 2019 it was beans. I am sure this played a huge part in it. But then I spoke to others in the area and to my shock corn had nothing to do with it as others south of Barneveld were also not seeing the numbers they had in 2018. I like a strong herd. I want to see them in person and on camera and 2019 did not offer that. It felt like the herd went backwards from 2018. It also doesn't help that people are selling off land and more houses are being build. Pushing deer away or making them come out only at night. This sucks for a kid growing up learning to hunt with an AMAZING herd in the 90's to the no deer with the CWD slaughter and now a governing body who doesn't listen to the hunters. Please, leave the traditions alone. They were good at one point and people saw deer. You can think all day long the heard is good for the hunters. No, they are not. Statewide hunters are mad. My last note from a hunter. If you see a 100 acre field with 20 deer in it. That is sad. I remember growing up seeing 100 deer in a 100 acre field. This is how it should be. I am so tired of hearing about deer success and population in other states who also have CWD. Listen to the hunters. The hunters who hunt public and small acres lots. If you are getting your deer facts from someone who hunts 300 acres and they have an entire herd all to their own.. Well then, I see you clearly are looking at the wrong people for information. I have those friends, I have seen their deer herds and they are not the majority of people who hunt. Thank you.

I strongly disagree with the Iowa County CDAC's recommendation that there should be an ANTLERLESS ONLY Holiday Hunt WITHOUT ALSO INCLUDING the extended EITHER-SEX archery/crossbow season in this unit. I do not support the loss of the 9 days of either sex archery/crossbow hunting on top of the loss of 4 additional days of either-sex archery/crossbow deer hunting for the statewide antlerless-only season that follows the Muzzleloader season, UNLESS it is off set with the extended January either-sex archery/crossbow season. I am a private landowner that only hunts my own land. I harvest about 4 antlerless deer each year the end of December and in January with a bow or crossbow to make sure I harvest about 2 antlerless deer for each buck I harvest. The number of antlerless deer I harvest each year will likely be increasing because of the increase number of CWD positive antlered and antlerless deer I have been harvesting each year (2-3 past 2 yrs). I have been getting 1-2 replacement buck tags the past couple years because of the increase in CWD. I expect this trend will continue based on the increase in CWD positives being discovered. By limiting much of December to ANTLERLESS only, I am prevented from the opportunity to try to harvest a Non-CWD buck with my bow or crossbow while also out hunting for antlerless deer. In short, If there will not be an extended archery/crossbow season till the end of January, then there should NOT be a December Antlerless-only Holiday Hunt. If you sincerely want to do all you can to help control deer numbers in Iowa County, and want hunters who actually kill deer to try to help bring the population down and controlled, then PLEASE use the tools you have available an keep the January extended either-sex season in Iowa County like we had in 2019. It will also provide more consistency from one year to the next, and would be consistent with what is being recommended by many of the surrounding Deer Mgt. Units, such as Richland, Sauk, Dane and Layfatte Counties. Thanks for your consideration of my recommendation.
Why is it that our CDAC and the sportsman of Iowa county seem to have such vastly different opinions on the deer herd..? As someone who has been hunting for the last 25 years in Iowa county, the current deer population is but a fraction of what it once was. The mass slaughters that we all took part in early on with the “eradication zones” proved to us that there is no way to control a disease in a wild population. CWD has not affected our deer numbers. Excessive tag allocations, and extended seasons have all but destroyed what was once a destination county for deer hunting. Season structure should go back to how it used to be. Normal archery season with one buck tag and one doe tag and then a 9 day gun season with one buck and one doe tag. No “doe only” weekends, no holiday hunts. No one needs more than 4 deer in a season. I find it odd that back when deer populations were so strong we made people apply for an either/or tag otherwise it was buck only with only a single harvest tag. Now that numbers are meek we will give out 4 tags with each license purchase....oh, and don’t worry if that’s not enough, for $12 a piece you can buy an unlimited amount more! It sickens me that we are destroying such a beloved tradition. At the rate we are going our next generation won’t be hunting whitetail deer. We always talk about hunter recruitment as a reason for all of these “extra” opportunities. Do you know what hooks young people and makes them lifelong hunters??? SEEING DEER. We can’t kill everything and expect the deer to just somehow be around. Remember, us hunters are the most controllable factor when it comes to killing of any species. Vehicle collisions, predation (increasing coyote and bobcat populations), and disease all take their fair share every year before you or I enter the woods. Let’s work together to preserve this beautiful resource that God gave us so that our future generations can enjoy Wisconsin deer hunting the way we were able to.

I have hunted in Iowa county the entire time I have been legally allowed to hunt. I bow hunt every weekend during the archery season and participate the entire gun season. I hunt on private land primarily with one day set aside for doing deer drives on public land. If I can avoid it, I absolutely do not shoot any doe or any young bucks. If I do not see a deer that fits my standards throughout the season, then I simply go home empty handed and that’s my choice and I am happy with that. However, in the 16 years that I have hunted, hunting the same property, I have never seen the deer population seem so nonexistent. From a hunter who hardly shoots any deer, the math doesn’t add up. Over the past years I have steadily seen the deer sightings dwindle down to nothing and it is at no fault of my own. The property I hunt set up perfectly for deer. Food, water and cover. The deer do not have to go far to have all the comforts of home. But where are the deer?! I know for a fact the the neighbors and surrounding hunters have the mentality of "if it's brown, it's down!" and they come out of the woods on the first day of gun opener with legs sticking out in every direction in the back of their truck. Thats a terrible mentality to have and I believe the DNR just keeps adding wood to the fire by allowing so many tags per hunter. I understand that some people rely on deer meat as their main source but how many deer does one individual need? The 2019 gun season was absolutely terrible. I hunted every weekend during archery and all of gun season and only saw 1 yearling doe on the last day of gun season. The other 10 people in my party spread across 800 adjoining acres didn’t see anything. NOT ONE DEER.. We use to see 50 deer in a day where the hills would move due to the deer numbers. It is pathetic and I can't honestly say that I'm going to participate this 2020 season. I might just end up going out of state to hunt.
Thank you for the opportunity to comment. I've been hunting public land almost exclusively in Iowa County and many other SW Wisconsin Counties for multiple years now. During that time, I've experienced some of the best hunting that I ever have - even compared to hunting private land exclusively in other states. I continue to be impressed with the quality of deer that I'm able to find throughout the county. Although, I do enjoy seeing deer while hunting, I am concerned with number of deer that I see congregating in fields and that are dodging cars along just about every roadway. With that being said, CWD is a very real concern to me. Not only from a consumption stand point but also for my passion for this amazing resource that we're tasked with managing and responsible for protecting. I ask you to please take this disease seriously if not for yourselves but for future generations. I also want to thank you for once again offering the holiday hunt. This additional opportunity allows those weren't previously successful and those who want to harvest more deer the opportunity to do so. This county has a very high deer population and can undoubtedly support this season. Those who are not in favor of such a hunt don't have to participate but restricting such an opportunity is very single sided. I believe the CDAC should make all opportunities available to those who wish to partake in them, even the extended archery/crossbow season, especially considering the current decrease population objective. With that being said, I fully support and thank you for recommending the holiday hunt and would also like you to consider recommending the extended season during the final meeting.

CWD is a potential human health and ecological disaster. It is already a disaster for native whitetail. The deer population must be addressed accordingly with a months-long gun deer season from Oct. 1 to Jan. 1. Upright bow hunting has minimal impact on population management and the proportionally-high crossbow kill is a result of firearm hunter interest in a longer season. I’m tired of science-based deer management taking a backseat to tavern/hotel/tourism/business interests. I’m tired of herd health and it’s future taking a backseat to a management focus dedicated toward opening-weekenders seeing antlers one of the two days they hunt. The fact that crossbow season is under attack to promote the idea of more bucks during traditional gun deer season (or appeasing upright bow hunters) is missing the forest through the trees; the answer is more rifle hunt opportunities if we are serious about controlling CWD. Shut down deer farms. Completely. Reinstitute earn-a-buck with unlimited doe tags—and no initial buck license. Earn antlers by killing a doe. Had the DNR taken this seriously in the early 2000s and quarantined the disease area by eradicating the herd this would not be an issue now. Stop nibbling around the edges.

The Number of extra Bonus Harvest Authorization Tags sold over the Counter should be the Same as the Number as the Harvest Authorization Tags Per License Holder. * Hunters that give up Deer Hunting or Hang up their Coat for a long period of time see very little Deer in the area where they Hunt, while working at it Hard. The Number of Farm Tags should be Drastically Reduced for a Farmer because it has a Devastating impact on the Population of Deer in the Surrounding / Neighboring area and it takes a number of years for the Population to recover in the Neighboring area. Hunters Hunting in these surrounding areas see less Deer on the Ground they Hunt on and get Frustrated, and possibly Hanging up their Coat, or Hunt much less with little enthusiasm. What happens is that you will get these Pockets / Valleys where you will have a lot of Deer, and about a 1/2 mile away you have very little number of Deer and that can go on for a long Distance where there are Farm Tags are being used. Plus in those areas for the regular Hunting season, there are number of more Deer being Harvested.
My family and I would be strongly opposed to any proposed changes to the crossbow season, such as potentially limiting the use of crossbows to the month of October with the intention of somehow bolstering the gun hunting season. If more deer, or specifically antlered deer, are being taken with crossbows, it is occurring because hunters are motivated to use that method of hunting. Crossbows also provide for increased accessibility for youth and other hunters who may not feel comfortable using a vertical bow or firearm. If the goal is to increase the number of hunters in the field and the numbers of deer harvested, it seems like restricting the use of crossbows runs contrary to those achieving those goals. Also, limiting crossbows to a fairly restricted period of time will significantly alter the overall hunting experience, making it more easily disrupted by stretches of adverse weather. It also doesn’t feel reasonable to expect archery hunters to purchase, at significant expense, both a crossbow and vertical bow in order to hunt the full archery season. Thank you for your consideration.

During the crossbow season I saw very few deer, and especially very few does. In previous years while crossbow hunting on average I’d see 5-7 deer during a full day's hunt. It just made for a more enjoyable hunt to be able to watch the deer and study their behavior and have what seemed like a better chance at a harvest. I believe what played a major part was additional antlerless harvest tags, I believe especially in my area where I hunt that if people are able to harvest 3 does they are going to harvest 3 does, especially if they can get it for crossbow/bow and gun. I just think people will abuse the ability of being to harvest more than they need and not allow other hunters to have a chance to harvest. Also a side note I really appreciate having the late crossbow season, around the holidays is when it’s the busiest time at my work so I can only gun hunt usually one day out of the nine day gun season. So most of my time hunting is done with a crossbow and it gives me an extra chance if I’m unsuccessful in the regular season.

The longer the seasons and the more pressure hunting the deer in this DMU results in less harvesting on the average. I am not a wildlife biologist but hunting this area for the last 40 years and firsthand witnessing the effects of increased hunting and the "kill them all" CWD eradication we have created animals that are far more wary and most likely more intelligent in survival. They know what hunters are, what they smell like and change their habits for survival of their species. I can only verify this by the years I have hunted public land that ended up being heavily hunted and any deer residing on these properties exists only nocturnally with patterns to avoid any contact with hunters. The only other thing I can add is coyotes harvest far more deer, especially fawns in the spring of the year that are not accurately accounted for in deer statistics. Thus the vast difference in harvest goals and actual hunter harvest numbers. There are not the numbers of estimated deer available to meet anticipated harvest goals by hunters.

I think that we need to take a serious look at how we are wrecking WI deer hunting. Many of us hunters in Iowa county have been saying for years that there are far fewer deer than the DNR surveys and projections are saying. That being said, I understand that there are a few members of our CDAC board that want all of the deer dead. If we want to increase our harvests in any given season we can’t just hand out more tags or extend season dates. That doesn’t work. In fact both of those methods have been tried year after year and they just discourage hunters. The best way to kill deer is to get everyone in the woods at the same time. That means a regular bow season and a single 9-day rifle season. No doe only rifle weekends, no holiday hunts and no extended hunts. If there are limited seasons it forces people into the woods at the same time and it forces people to pull the trigger on that first antlerless deer they see instead of waiting for the “next” season to shoot a doe, which we all know never seems to work out how we plan.
State parks (particularly Governor Dodge State Park) need to open up more available hunting areas during the archery season. A good majority of the park is closed off to all hunting. That is unnecessary. It is forcing archery and small game hunters on top of one another creating VERY unsafe conditions and also it compromises the quality of hunting for both types of hunter. Opening up more areas of the park to archery hunters and small game hunters will help remedy these issues. Parks should also strongly consider opening up to archery hunting in Sept when all other archery around the state opens. Finally, state parks and public lands should allow hunters to put up and leave tree stands during the hunting months as long as they are not fastened into the tree (screws/nails/etc.). Not only does it dramatically improve a hunters chances, it also gives hunters a much BETTER field of view when taking a shot. This is very important on public lands and will have a significant impact on increasing safety. Thank you.

This has been a big topic in our area and I personally think that it is on the hunter if he /she can't harvest a deer in the normal traditional season frame work. I hunt the normal seasons and when that is done I switch to Predator hunting. I have to say that all the talk is on deer hunting and numbers but in Wisconsin people enjoy other sports too. Coyote hunting is a must to keep those numbers in balance and I don’t care to hunt them wearing orange. It becomes a safety issue when archery /Gun hunters are out hunting and predator hunting is also taking place. People don't take advantage of shooting that adult doe when it comes by as they are after the big buck. That's on the hunter and they need to realize that they aren't doing their part in controlling the numbers within the sport of deer hunting. No need to add all these special hunts becuase most people don't hunt those hunts anyways. A better idea needs to come up and let the people that hunt other animals have there traditions also. Thanks and good luck!!!!!

This wanting to change our seasons is just Stupid.. A late gun season with way more than average crops standing was the reason for less deer being killed.. You guys have college degrees and can't figure it out? Unbelievable... us hunters know why you are broke too. Stop making this political its not politics its should be wildlife management.. Charge people for tags if they spend 13 dollars for a tag they will try and fill it. Its simple stop making it more complicated. The way this state handled the cwd Ruined it for our out of state hunters. LOOK JUST TO YOUR WEST... OUR DNR NEIGHBORS FROM IOWA KNOW HOW TO MANAGE DEER.. INVITE THEM OVER AND LEARN HOW THEY MADE IT THE PREMIER DEER HUNTING STATE IN THE U.S.. Take a step back. Admit you screwed up and try to stop trying to justify your preceding actions and fix this.. Its not that hard.. Let hunters manage there own deer herd we know more about these areas than anyone sitting in an office.. Listen to us Hunters..

I have had the privilege to hunt 2 pieces of private property within Iowa Cty for 18 years. I have lived here all my life. In most areas, I am seeing decreasing numbers each year since the CWD earn a buck was implemented. The properties I hunt, I see very few deer. Our own property, we have been trying to manage to increase population over the past several years because there are days we don’t see any and we own cropland and timber capable of growing and holding deer. In my personal opinion, our deer numbers are lower or have maintained their population. We have 5-10 deer/vehicle collisions each year within a 1/2 mile of our property. When walking the property, we find remains of at least 1 deer every year. In our little area, I strongly believe the population is far lower than what is estimated. Not hard to see when its the middle of the winter and deer from the surrounding areas are herded up, and you see minimal groups in harsh weather conditions.
One comment I hear often from CDAC meetings is the amount of hunters in Wisconsin are declining and people are not hunting like they used to. A good portion of the younger generation, myself included 1) never learned to hunt as a youth or 2) we don’t always feel welcomed in the woods. Last year was my first year hunting. As an individual who doesn't have their own land or have private land to hunt on, hunting public during the 9-day gun season is a nerve racking experience for any new hunter. I personally don’t feel comfortable hunting public land not knowing how many people are out there, who is there or where they are. I did hunt public land during the statewide antlerless and holiday hunt, even though I wasn't successful in harvesting a deer the experience was still valuable. If we want to maintain interest in deer hunting in Wisconsin, we need to provide all the opportunity we can. With that said, I fully support the holiday hunt and extended bow season!

The top two issues facing deer hunting are not being considered. Hunter recruitment, and hunter access. Iowa County and other Southern Farmland units have an overabundance of deer, but with 5% public access, we will never harvest deer in effective numbers again. Changing season structure or arguing about which way an arrow is fired will only suppress efforts to successfully manage deer in this area. We seem to just keep recirculating the same old ideas for deer season structures instead of getting people to access hunting lands, and getting new hunters into the woods. How about farmland access incentives? How about a $20 junior conservation patron license for anyone under 18? Presently, you could open up der season from Sept. 1st to Dec. 31st with no other restrictions, and I doubt you will see much change in deer harvest. The people regularly harvesting deer have access, time, skill, and self-motivation. Who will take their place when they are gone?

The Holiday hunt is counter-productive. It is some of the best bow hunting time of the season to harvest a quality buck and it eliminates that possibility. My family harvests plenty of does in late season while hunting, but if one of us is trying to fill a buck tag yet this ruins the late season for them. All I hear about is how bucks are the predominant carrier of CWD and how we need to kill them, so the solution to that somehow means we have a season where you CANNOT kill bucks? It is absurd. All this season does is give people who haven't figured out how to kill a deer any other time another chance to get one, and almost none of them even go out much less get a deer. Meanwhile hunters who do know how to kill something that have their buck tag yet sit home ticked off. We harvest a lot of antlerless deer on our property every year and we do not need a gov't authority to dictate to us that we have to do so!

as long as you charge for the additional antlerless license you will never see the numbers or kills go up to 3000 or even near it. I constantly hear hunters complain about this and they say as long as they have to pay for the bonus they will not participate, if your really concerned about deer count, you would just issue without the charge. Just saying I am 71 years old and have hunted every year since 1986 in southwest Wisconsin very close to Gov Dodge. The last 5 to 7 years the deer, especially bucks that I have seen, much less shot have decreased annually. We don’t sit around waiting for a buck to committee suicide either. We move around and hunt hard. So much land around us that is posted that I am sure the deer are laying low on that land, but it’s frustrating to the point that the 8 of us have discussed just not hunting anymore. The age of our group is from 71 down to 14 and consists of fathers and sons

This is the second year in a row I hunted the rut.October 30/31 to November7/8th. The number of does appeared to be down significantly, as many days it was only bucks to be seen. I keep daily log and have a camera out on this property. We have also taken more than one CWD positive deer here, and also non-infected ones. The demise of the ag sector is changing the habitat as there is more fallow fields than years previous. Also the wetness of the year made hunting parts of the property impossible. I previously identified two trophy bucks on this place, and many bucks from yearlings to 2 year olds. My notes sow 21 bucks, Nov 6th began most action. Also snow in the time period. Habitat aging is concern on this property, as the invasive has taken over much of the formerly productive oak stands. There was about 2 sq miles of standing corn at the time. I have a B&C off this property from 2012.
My observations as a hunter, who has hunted the same small private parcel in Northern Iowa Co (Clyde Township) are not consistent with the numbers presented here. I am concerned the population numbers are lower than you estimate. After years of what I believe are over hunting in the old DEZ (disease eradication zone) has reduced numbers to that of pre CWD (roughly 2002). No its not that I'm lazy, or that I don't play the wind, or what other excuse is brought to my attention. The numbers are low. Period. Also a reduction in hunter participation is down as well. I heard 6 shots from first light to noon on opening morning last year. It used to be you would loose count at 50 before 9 AM, also less cars parked along roads. I strongly recommend 1 free antlerless tag, no holiday hunt, no expanded archery, and infract for 2021 I would support 1 season of buck only hunting. Thank you

Having a Doe only season would result in a huge loss in the number of Hunters and lack of interest. I am all in favor of going back to the earn a buck to help control the doe population and still allow hunters the opportunity and dream of still having a chance at harvesting a Buck or a Trophy buck. If you take away the Hunters Dream and Adventure in pursuing antlered deer that someone has been following over the years..... in my opinion you will do much more harm to the sport than good and will likely not accomplish what your trying to accomplish. I think most hunter will respond more positively if you require them to shoot a doe first if they want to earn a buck tag. I also think that private land owners should be given as many doe tags as they want for free if they can be allowed to manage there herd and take out doe when the population is to large in there area.

I noticed hardly any mature bucks during the archery or gun seasons this year. I never had anyone I knew get a mature buck. It seems like trying to kill off all the deer is having a negative effect on the amount of mature bucks. There were a lot of young 1.5 and 2.5 year old bucks but not many mature deer. I suppose this could also be due to being over run and the mature bucks not having enough space but I have always believed the mature bucks chase out the younger deer. And also with so many less doe the mature bucks may move to areas where the doe population is higher. I’m not a scientist so I can’t say for sure. That is just what I have noticed. 5 years ago or more it seemed like there were big mature bucks everywhere and now that seems to be going down. Could be just the land I hunt but it seems all my friends and family have noticed the same thing.

One of my main concerns is about the proposals to the crossbow season. As a crossbow hunter I would hope the decisions made about the hunting season aren’t being swayed by the other methods. Hunting is hunting, whether your Gun (which I also do), Compound Bow, Re-curve or Crossbow. It's about putting the time in the woods. Also, I mainly hunt in Governor Dodge State Park. The issue hunters already run into there is that the archery season opens on October 15th (a month after the normal season opener). And the entirety of the hunting portion doesn’t fully open up until November 15th. It would be nice to hunt the whole property (full hunt area) the full season. But needless to say, if crossbow season were shortened like some proposed talking points suggest that would seriously hamper the amount of time I could/would spend in the woods. Thanks.

Quality Deer Management should become mandatory... e.g. bucks only 6 points or 8 points or higher - or min of three or 4 points on a side perhaps. Exception for the youth season. The kids should be able to shoot anything... but maybe they get some sort of reward if they shoot 8 point or higher... like maybe a free license the following year ( to start to teach them the beneficial biology of allowing strong, healthy bucks to survive and mature.) Some sort of culling info and support for inferior deer bucks might be interesting as well. And lastly, I think a more comprehensive data and informational report on the progress and research related to the CWD situation would be nice. I’m just still not comfortable that I know as much about CWD as I should... even though it’s been around for a whole lot of years now.

WI DNR should consider putting a muzzle loader season PRIOR to the normal rifle season. This season would create more interest for hunters as well as giving an opportunity to harvest deer prior to the gun season. The buck limit would apply to both gun/muzzle loader so a hunter would not get an additional buck during gun deer. Hunters could also fill their antlerless quota during this season. Many states offer the muzzle loader season PRIOR to their regular gun season and it has brought many hunters to the woods who don't necessarily bow hunt. It would also be nice to have the youth season just a little later in October maybe just a week or so later.
You,(dnr) have gotten hunting in our area all screwed up. Wasn't even planning on turkey hunting this year because there are none on the property i hunt. My son wanted to go so I got us tags and found some other property to hunt. Last season me, my son, and daughter never even got close to shooting a turkey. Deer hunting is going along the same venture. Last season we had 5 people bowhunting and only shot one buck. Gun season followed the same, 5 of us and only tagged one buck. So to sum up my observations, your cats are doing the hunting for you. Numbers are way down. If it keeps going that way there won't be anything to hunt.

Hi, I'm concerned about the possibility crossbows starting later the longbows. It may only be a rumor... This is ridiculous to say the least. If I need to go to the dr for a permit, I guess I'll hv to. I would love to have my shoulder back to use a longbow. I'm unable to draw efficiently. Point 2; I know guys that wound deer with the longbow. Lots of them aren’t harvested. I’m not a fan of loosing or wounding any animal. It’s unethical and cruel. These “hunters” Can hit a target but the heartbeat is a completely different thing. Same guys hunt with a crossbow now and are efficient killers. Less wounded deer. Period. Thank you for your time.

I’m against the holiday hunt. After all of the other gun seasons, most of the deer are nocturnal. I want to use our property with the family for other activities around the holidays besides just seed hunting. All of our neighbors gun hunt, so this season affects me even if I don’t hunt it. I’m STRONGLY against the Jan archery and cross gun season. Once again, deer are nocturnal from over hunting. This effects all landowners for very few deer harvested. Jan should be for habitat improvement, coyote hunting, sled riding and snowmobiling. This hunt effects too many people that are not even deer hunters to even consider it!

I realize CWD has made deer management in our state an ominous task, I've hunted in Iowa county for 34 years on the same private land and have witnessed the herd decline first hand. I have followed the recommendations and have done my part in herd reduction. Back to feedback for you: I think 3 antlerless tags per license is too much, within my group of 4 to 5 hunters, we usually participate in reducing the herd by taking one doe along with (hopefully) a buck. Offering to sell additional tags at a price may be the way to go. 1) It would create some revenue. 2) If hunters want to shoot more deer, they can.
