Your harvest strategies on public land are very good. Deer numbers on public land are low enough to keep deer disease at bay and there are very good bucks hiding on the public land. Private land is a whole different story. You need to find a way to open them up for doe harvests. The entire country now has deer diseases that only exist because of high populations on private land. Most states now have at least two diseases in their herds. No competent Ph D will say they have been linked. Fire any that think they have. Counting nose to nose contact is counting nose to nose contact it isn’t linking disease to feeding. Reduce the herd size on private land by at least half and these deer diseases go away on their own. If feeding were the source of the problem these disease would first manifest in northern populations. That isn’t what happens. The disease always first emerge on high density private lands. Explain this to hunters so they understand your policies and your challenge. It will likely someday be established that these high deer numbers are the reason for the spread of ticks and tick borne illness. Warming is like feeding, its is a good punchline but worthless beyond that. This is resulting in human illness is threatening livestock. Solving this is your job. Working with other states to identify herd density as the problem nationwide is your responsibility. My advice is a bargain, it's free.

I have hunted dane and saulk counties for 12 years now. I am always hunting somewhere. 12 years ago up to 9 years ago we seen decent amounts of deer while hunting. But since that time the deer have proven to be way smarter than humans. They will come out right after dark every afternoon. The deer have been hunted so hard that they have taught the new baby deer to mostly move at night. It is very tough hunting in Wisconsin for me. I even hunted Walking Iron Park by lottery 2 times in the last 5 years. The deer are very timid to move much in the daylight hours. IDK how to fix this problem but I do know that there is plenty of deer moving at night. Maybe completely changing the season dates would be alot of help. My friends see tons of deer in the summer. And when the cold snaps come those deer are ghosts. IDK what to do but something needs to change. Only way we harvest most of the animals is by driving deer. If we did not do that the harvest numbers would be even lower. OR by chance deer driving is the main cause of nocturnal deer. Maybe deer drives should be outlawed. Just a few of my opinions. And also if you want your doe harvest numbers to come up to 11000 you need to make the doe tags easier to obtain. Heck you track the harvest area once a person calls in the animal harvest. why not make it easier on us to understand and to obtain doe tags. Thanks guys.

We live in one of the best counties in the State in one of the best States for wildlife and the outdoors. We all want to keep it that way. I believe their are plenty of deer in our county. The distribution is always disproportionate in some areas because of hunting pressure, habitat change, and crops planted. Having 3 or 4 free tags per license scares people into thinking everyone is going to shoot that many and no deer will be left. I think 1 free tag would be the best. It would put value on that tag and a belief that not every deer will be shot. So they would be more likely to shoot that deer. There are plenty of extra tags for purchase for only 12.00 each and 6.00 each if you are enrolled in DMAP if anyone wants to shoot more. Deer hunters are all about tradition and the seasons should be left the same for quite awhile so hunters can plan their time to hunt, vacations from work, ect. Please leave the antlerless holiday hunt. Hunters are finally getting used to it and planning for it. If you change it, it will only anger off more. CWD is here to stay for a long time. We need to test for it so hunters can decide if they want to eat it. Also the disposal dumpsters are an awesome thing as hunters who cut up their own meat do not have a proper disposal otherwise and may throw them in the wrong places.
Would the circus, aka CDAC, stop telling me I need to kill every deer in the woods! Take your 3 antlerless tags, take the bonus tags, take the holiday and extra hunts, and shove 'em. You recommend to decrease the deer herd? And you're hunters???? What drugs are you on, and where can I get some? I've never heard, in all my years one single hunter say...."i'd like to see less deer this year". Completely and utterly, delusional! Hunter's are seeing less and less deer in Sauk Co, I wonder why? We're being told to kill everything that moves, and there's a deer behind every tree. Such nonsense. CDAC's are suppose to be separate from the DNR, yet you go to a meeting and its all people who are in bed with the DNR, and your'e told your opinions mean nothing. Such a waste! Also, you can shove the earn a buck thought, the same place you can shove the other listed subjects in the first paragraph. What in the hell is wrong with you people? Hunters decided over a deccade ago that earn a buck is, was, and always will be, a disaster! Yet, its still on the plate. Shame on the DNR, shame on the Conservation Congress, and shame on the CDAC's. Each and every faction is an utter disgrace and a slap in the face to hunters across this state.

I'm an avid Bow & Gun hunter in Sauk County. I hunt several properties throughout the County and I'm in my tree stand several times throughout the week and every weekend. In watching the video, I have to 100% disagree with the findings that the deer heard is above par. Last year was by far the worst year I have experienced hunting with logging more days that I never seen a deer to the number of day I did. Make no mistake, the weather was phenomenal and the corn was in the fields the same amount of time it had been several years past. The only thing that has changed was the number of deer sightings. I thought this was just my bad luck, but when checking with several other hunters in and around the county, I was receiving the same report. If you want to do a real spot check, go on Facebook - Wisconsin Rut Report - You can ask your questions there as well. Think you will be actually surprised. I'm asking you to please talk to the actual people that put time in the stand, not a hunter that is a 1 - 3 time per year, weekend warrior. The deer heard is down around the Plain area and 20 miles surrounding the area in Sauk County. please regulate the number of additional tags given out. I've talked with several other Deer Hunters, (Archery and Gun), County wide. I als

In the Sauk County portion of the Southern Farmland unit. CWD continues to spread and this past summer/fall portions of the county had high numbers of EHD. These two diseases seemed to disproportionately affect/kill adult deer of the breeding age. This will decrease this year's fawn population as well as the number of adult deer that survive until fall. I have been hunting the same private property with the same hunters, same neighboring farm owners for over 35 years. At least in our area even though we are careful about how many deer we take, and using QDM techniques our numbers of mature bucks and doe have certainly fallen. I have noticed far more doe in the fall over the past 3 years that do not have fawns with them (early season archery) than I can ever remember. It is my opinion that the diseases are certainly taking a toll on the population and an increased number of tags in the area is NOT needed. I am most certainly not one of those hunters who complains if they don't see and/or have the opportunity to harvest a high number of deer. I realize that over population has it's own negative consequences to the flora/fauna of the area. That said, I believe our actual deer numbers in our area are down almost by 50% of what was even around just 10-15 years ago.

Ok now my opinion on this coming deer season should go as follow>>>>>>>>Everyone that has a deer license will have to shoot a antlerless deer before you can shoot a antlered deer. Once you have achieved this you can shoot antlered deer then. No matter what type of weapon used. If all you do is archery hunt then a antlerless deer must be shot first. I fully oppose having a only antlerless season. But a one antlerless per license holder would work better to lower the herd in general. Then do not offer any other antlerless tags then. And just for this year only until all the numbers come in. I said the same last year also. Remember when we had to shoot antlerless deer first with either license no matter what. So if you had both license, gun and archery, you had to shoot a antlerless first for a gun license and then one with the archery also. I am going to only shoot as many deer as I eat. Which is close to two a year for my wife and I. No matter how many antlerless deer tags you give me I will still only shoot as many deer we are going to eat. I like to hunt early in the season only because of the taste of the deer. Rut and cold weather change the taste of the deer.
Cdac is a joke and the spring hearing questionnaire is a bigger joke. You keep pushing for people to kill more deer, more doe seasons, extended seasons, bounty on deer and more doe tags. Face it 93% of Sauk county is private land. The more you try to push your agenda on us hunters the more we are going to push back and appose the changes you are trying to force on us hunters. We are sick of hearing all your malarkey. We want quality deer with mature bucks not less deer with a majority of bucks being 2 -1/2 years old or younger. We want 4-5 year old bucks with a healthy number of doe and fawns. We are tired of hearing about CWD also. You said it in the video. You are not testing sick deer because of money. That is all the Dnr is worried about is$$$$$. People are starting to really hate and not trust the dnr again because you don't listen. Case and point. CDAC voting a doe only season last year in Buffalo Co despite heavy opposition. Start taking our opinions seriously and being honest with us so we can work on trusting the DNR and CDAC. Until then you have and continue to create a us virus them mentality and we land owners will continue to oppose you.

Please do NOT back down on high quotas and aggressive antlerless harvest in Sauk County! We MUST reduce the population to control CWD. Anyone who argues otherwise is being completely shortsighted about our deer population and hunting traditions. Of the seven deer harvested this year on the property I hunt, four were positive. It was devastating to throw away that much hard‐earned, cleaned and wrapped meat, wasting that animal's life and our hard work. It was troubling, knowing we had to bleach all of our knives, cutting boards, work surfaces, and the tread of our boots in order to not contaminate our home or other areas of the state with prions. I applaud the Sauk CDAC for doing what they can to encourage antlerless harvest. I fully support the high quotas and extended seasons. While it is extreme, I would not be opposed to an antlerless-only season, since that is the only tool available for the CDAC to impose higher antlerless harvest. For my part, I will be out there hunting regardless, doing my best to reach these quotas. Please keep up the assertive measures and keep fighting for better tools to manage our disease-ridden deer herd.

I moved here to Sauk county from Iowa 2 years ago. I feel regulations and seasons in Sauk county at the moment are treading water. Neither great nor horrible. I feel that knee jerk reactions like changing regulations and seasons in response to declining hunter numbers is misguided and not in the best interests of Wisconsin’s deer herd. I understand that in the states eyes these decisions are based heavily on money and not always what’s best for the resource. In my opinion the truth of the matter is that the declining hunter numbers have much more to do with generational changes in us as humans and much less about the quality of our herd. Diehard hunters from the baby boomer generation are slowly being replaced by tech minded millennials that do not have the same patience, passion and interest for the outdoors. That is unfortunately the harsh reality of the direction we are headed as hunters. I feel spending time and money on programs to secure more public hunting land opportunities as well as mentor programs for youth and new hunters would be a much better use of resources to promote the growth of the sport.

As a land owner trying to reduce our numbers it is a challenge to get out group to shoot does. I think earn a buck is best. May do it for our group even if that is not decided. Ethical kill is also huge to us as we watch these deer all year long. Strongly disagree with shorter hunting season for crossbow and Vertical bow. Crossbow has been our best way to take adult does and get more involvement with our younger hunters. It is more difficult to get a clean shot at a doe after opening day of gun season. We have always limited our maximum shooting distance at 25 yards for any type of Bow. With tracking our group and other hunters we find the successful quick kill and recovery rate with a crossbow to be much more effective than vertical bow. We take very serious of doing our best of not wounding a deer that we can’t recover. I am concerned a longer gun season may hurt any of the few 9 day hunting traditions that may be left. We combine opening day and Thanksgiving week as a large gathering of family and friends. Not sure what the extended season will do to that? Thanks for reading my input.
These lies on deer populations in public lands have to stop and stop NOW!!!! I have been hunting the same area for 34 years and last year was unbelievable. During the 9 day regular hunt I seen 1 dang deer. I walked for miles did several deer drives and seen nothing and kicked up nothing. Now that the horrible dnr put wolves out around devils lake I’m sure we will never see deer again. We use to see 20 to 30 alone on opening weekend. Now if you see 2 or 3 it is a miracle. Also during the doe only hunt I seen zero deer and finally the last day of the holiday hunt I seen 2 deer. So out of about 15 days of hunting public land in sauk county I seen 3 deer. Deer hunting season must go back to a 9 day hunt only and 1 deer per tag. So many people have quit hunting because the numbers are lies. If this does not change you will continue to lose people hunting. THESE LIES MUST STOP !!! Let’s make hunting fun again. I know my opinion will not matter in your decision making but trust me, you will soon have zero people deer hunting if you do not stop lying about deer populations!!!!!!!!

I read in some of your input from members the importance of tradition in the Wisconsin deer hunt. I couldn’t agree more. In my opinion the single largest factor that has disrupted that tradition is the high level of hunting pressure during the archery season. When the crossbow season was first suggested the thought was to draw more hunters into the sport but if what I'm hearing is accurate just the opposite has occurred. Most of the new crossbow hunters are coming from the original traditional archery and rifle hunting ranks. With so many hunters having there freezers full of venison before the rifle season many of them are no longer hunting during the rifle season. The crossbow hunters have the highest success rate among all the deer hunting groups accounting for 42% of the buck kill. With that many buck taken prior to the gun season most of the remaining hunters are loosing interest. I can speak for myself by saying I no longer hunt with the rifle but choose to hunt the muzzleloader season when most of the dust has settled and the deer are not as nocturnal.

We hunt in White Mound County Park. Too much of the park is closed to hunting. This impacts hunter density and potential deer sightings and harvesting. Also, 2/7 deer harvested in last 3 years tested positive for CWD. We don’t eat meat form deer with CWD. Also feel public lands are becoming poorer and poorer habitat for all game animals. This is unfortunate and due to anti hunting/gun sentiment. Very disturbed I can’t get my son’s to see vary many deer and yet have so many killed and wasted by vehicles. VNA lands are a waste of money as they are poor hunting land. Would like to see more public land leased to farmers to plant on in order to provide better game habitat. Have been hunting this same park for 40 years. It has grown more restricted to hunting and become much less suitable habitat. I think the deer density studies and deer counts of public verses private land are drastically different with deer density much lower on public lands. I do not understand why you are having hunters deciding ahead of time for public or private land for antlerless tags.

Keep the seasons the way they r. Xbows do not hurt the hunting industry at all! Keep the week of Thanksgiving for gun season as usual. Get rid of all the extra seasons! If ppl r gonna hunt they hav plenty of time to kill a deer. Too many ppl "think" they know what is best for the industry!! CWD is here to stay. It will not b taken care of by humans. Mother nature rules for animals. Like i said, too many ppl "think" they know what is best for the animals! Ethical hunting is what matters. Ppl being scared to eat venison is what is hurting this industry! It has backfired on a group of ppl n not gonna change now! Nature takes care of its own, we r only here to help it by harvesting some. Leave xbow season alone. Cut back on all the extra hunts n tags. Raise non residential licenses/even a draw system would be nice to see! Ppl that quit gun season hav picked up a xbow. More enjoyable and nicer weather to hunt in! And this message goes for Richland county also! I hunt the border of the counties so it was pick one or the other!!
Over the past few years I’m concerned about the lack of participation in private land owners harvesting Antlerless Deer. This past seasons opening day I saw over 100 deer, of course mostly antler-less. Yet we have neighbors with much larger tracks of land that are still insistent on not harvesting anger-less deer. No matter how many tags are provided for free. I’m a huge supporter of earn a buck in Sauk county. When it was in place it seemed like the herd was in better check then now. But it never turns out to be an option. When we had earn a buck we saw a more stable population of deer in check and one of the by products was more mature bucks on the hoof. I certainly would limit the amount of buck tags be provided to a max. Of two per license. I strongly feel if you want to get the deer population in check this is the way to go vs. giving away free antler-less tags. There are still land owners I have heard of that have antlerless tag burning parties. Let’s get real and bring back earn a buck.

I would like to see a longer season whether it be the regular rifle season or an extended muzzleloader season. I have heard some talk about earn a buck and I strongly oppose that. My reason for this is I live for deer hunting and I do not feel the need to shoot two deer Just so I can shoot a buck. For this I think the idea of earn a buck is very useless to single families if the Hunter enjoys going out and hunting a big buck. I practice quality deer management and do not shoot anything other than respectable animals. Please take these recommendations too hard for both myself and fellow hunters that live for the Wisconsin deer hunter just so I can shoot a buck. For this I think the idea of earn a buck is very useless to single families if the Hunter enjoys going out and hunting a big buck. I practice quality deer management and do not shoot anything other than respectable animals. Please take these recommendations too hard for both myself and fellow hunters that live for the Wisconsin deer hunt.

I'm seeing a lot of deer daily during the 2020 youth, 1st, and 2nd spring turkey seasons. With that said we have more deer then I had suspected. However, history shows us that you can give out as many free antlerless permits as you want, but people, as well as me don’t have an interest in harvesting more deer then our families can eat. I target 3 deer per year for my wife and me. A buck during the bow/crossbow season and a buck during the rifle or muzzle loader season. If I choose not to take a doe during the bow season then I will during the gun/muzzle loader season. My opinion, keep the deer seasons as they are. Don’t get suckered into those complaining about people hunting during the rut timeframe with crossbows. Keep politics and private interest groups out of controlling the deer herd size. Let people continue to choose whatever weapon they feel most comfortable with to harvest a doe or buck. It's the arguing between hunters and your organization that's hurting our WI deer hunting.

Like many areas Sauk County is all about the haves and the have nots. It’s a lot like fishing 10% of the water holds 90% of the fish. The same can be applied to deer to some extent. There is no cookie cutter answer to how antlerless tags should be distributed. Some areas need unlimited tags while some areas it’s hard to fill one tag. It’s hard to complain about actually seeing deer it wasn’t always that way ask some of the older generations. There needs to be more motivation to harvest antlerless deer even then some still won’t do it. Possibly give people a extra buck tag for the following or current year if they harvest 10 anterless in one season bow/crossbow and or gun. Or a bounty on cwd positive deer. Make it easier to donate venison to food pantries, people in need, etc. Don’t pit hunter against hunter, each hunter should have equal opportunity and freedom to use their weapon of choice during each season(obviously no guns during bow/crossbow season). United we stand divided we fall.

Last year I saw half as many deer as I saw the year before. I am an avid bow and gun hunter. I totaled over 50 hours in a tree stand during the 9 day gun season. And 100s of hours during the bow season. I hunt privat land west of Baraboo in the bluffs. I still had a good season. I shot nice bucks with both gun and bow. And shot a doe in the holiday hunt. But most of the hunters I know said they had horrible years. So I was apparently an exception to the rule this year. I believe your estimates for the deer herd are high. And I believe your target numbers are unrealistic. Sauk county is a big area. Deer populations are different for different parts of the county. Deer population and management should be different in the hills of Baraboo vs the river bottoms of spring green. I believe the county should be further broke down into smaller geographical areas for better management of the land and the deer.
I think you really need to look at other states like Iowa. Please stop treating the deer like rats and more like sporting animals. I would even support a 1 buck 2 doe limit with any weapon. Things need to be simpler with less slaughter also consider a split gun season that’s 3-4 days each. Our gun season is a joke too long and hardly anyone hunts after opening weekend. Start like the 15th of Nov for 4 days and 3 or 4 day break then again for 4 days. Increase out of state license to at least $200. Make them jokers pay to play just like we do when we go there. 2010-12 was the best deer hunting I’ll ever see the path we’re going we might have one decent buck go hunt every year unlike the 10-20 we had back then. That was with earn a buck too which I’m not opposed to. Please consider changing the seasons a lot or your going to lose hunters and I’m not talking making gun season longer.

I have hunted deer in Wisconsin for 42 years with archery and firearms, I have hunted public and private land with the emphasis on public land. It has been my experience to witness that the early youth and doe only hunts have changed deer patterns to nocturnal feeding immensely, I can back this by anecdotal evidence of trail cam pics. I feel that we have fractured our hunting community with too many seasons and have diminished the other small game hunts during those seasons. If all hunters were to hunt deer during the 9 day general season, participation would be much higher and more deer would be moving because of the pressure and increase harvest as a result. To many seasons keep screwing up our archery and small game hunts and if it continues I will be ending my deer hunting altogether because of a lack of sightings and harvest, on average I hunt 45-60 days per year for all species.

Holiday hunt years ago allowed antlered and antlerless to be harvested. I sent a letter when that was changed, as this time gives a better opportunity for harvest success than the regular 9 day hunt for parents and their children over the Xmas school holiday. When it was changed to antlerless only, we along with all of my family in the area stopped hunting this time. I was told in a phone conversation with someone who called to answer my letter that the out of state hunter complaints were a main factor in changing the holiday hunt to antlerless. We would continue to archery hunt at this time if antlered harvest was allowed, as there are already enough antlerless only hunts that interfere with archery. With COVID-19 in the front of everyone’s thoughts I feel that the focus should shift away from catering to out of state license purchasers and more to the local hunters.

Setting harvest goals is very difficult given the diverse reasons for hunting and the type of deer and individual hunter prefers to harvest. Also, potential solutions for decreasing the herd size are difficult to implement because: 1) aging hunter population, 2) dressing a deer is a lot of work, 3) having sausage made is expensive, and 4) small game hunters don’t want the woods crawling with deer hunters. As a result, extending the gun season, offering more bonus permits even if free, earn a buck and other solutions are moot to the tradition bound older hunter who wants a hassle free hunting experience at a reasonable cost. In terms of questionnaire design, it would be beneficial if you would ask respondents WHY they gave a certain rating to a few of the most critical questions. Thanks for offering the public the opportunity to provide feedback.

If your goal is to take more deer, I have several suggestions. A. They seem to be moving towards the edge of town, and protected areas. 1. Allow controlled bow hunts in "edge of town" areas. The state and county parks should have areas open to bow hunters, maybe limited, maybe all season. B. The staggered seasons frustrate many hunters. 1. Sometimes the weather is terrible during the short hunts. Either extend the 9-day hunt, or have the whole month of December. C. CWD has scared off many hunters. 1. Since many do not hunt any more, you must allow those who hunt to hunt more, and take more deer. The earn a buck was a bad idea, and still is a bad idea. Yes, there are "buck hunters", so what! If you allow the choice, (as you have been) we are more likely to spend more time in the woods.

<td>I believe the &quot;earn a buck&quot; system would work rather well if applied to the bow/crossbow seasons. Most of the bow/crossbow hunters I know, myself included, are motivated during the bow season by getting that trophy buck. I know alot of hunters that put in countless hours pursuing the trophy buck and passing up many antlerless deer in the process. Keep the gun season the same because this seems to be the hunting tourist draw, as well as the family tradition we all enjoy and it would be best to avoid deterring these hunters. In addition to the earlier suggestion, maybe a &quot;bounty&quot; would also help drive higher harvest numbers. Harvested deer could provide a cash bounty or maybe credits to next year's hunting license. Finally, provide more outlets for donating a harvested animal, whether it be to individuals, food banks, or other purposes.</td>
</tr>
<tr>
<td>8481</td>
<td>I feel that the gun season is plenty long and should not be extended. I feel Non Resident license fees are way too low. They are One of the lowest in the county. I feel the later doe only seasons hurt herd numbers. Especially after the rut when the Doe have been breed. I could understand one doe only season but two of them in December is just too much. I think too many doe tags are given out but I also think during the gun season there are just TOO MANY HUNTERS... It starting to feel very crowded so #1 raise the non resident license!! 2, limit it to one doe only season.. The doe only season right after muzzleloader limits bow hunters who still have a buck tag and that can be a great time to be bow hunting.. I would understand a holiday hunt b it’s around the holidays and then you still have 1 of the 2 doe only seasons..</td>

<td>First off, thank you all for volunteering and doing a great job here in Sauk County. I think there was less deer this year. Although I felt it made the hunting (for bucks) better! I personally had much more exciting hunting season. It was the best hunting for nice bucks since we had the earn a buck. As much as hunters hate to admit it, those were some of the best hunting seasons I remember. I’d like to see us keeping simple, traditional looking seasons (including the antlerless only late hunts) and try to recruit more hunters to get afield. Rebuild the culture and holiday of deer season lost during the CWD pandemonium (the overreaction to the disease mixed with constantly changing laws/seasons). With more, willing hunters, we will have a better ability to manage the herd effectively. Keep up the good work!</td>
</tr>
<tr>

<td>Thank you for the opportunity to comment. With that being said, CWD is a very real concern to me. Not only from a consumption stand point but also for my passion for this amazing resource that we’re tasked with managing and responsible for protecting. I ask you to please take this disease seriously if not for yourselves but for future generations. I also want to thank you for once again offering the holiday hunt and the extended archery/crossbow season. I'm very appreciative of this season as its a great time to hunt with friends and family. This additional opportunity also allows those weren't previously successful and those who want to harvest more deer the opportunity to do so. With that being said, I fully support and thank you for preliminary recommending the holiday hunt and the extended archery season.</td>
</tr>
<tr>
<td>8484</td>
<td>Shouldn’t the dnr be acting more aggressively to curb the spread of CWD? I appreciate all he efforts on testing, but now that we see the numbers spiking, we need to act aggressively. Why shouldn’t we be issuing extra, free, out of season permits to landowners, especially Amish landowners? Has the DNR considered a larger DNR-led culling effort? We’re headed to a crisis where even less people want to hunt as the cwd scare impact is affecting people’s demand for venison... Last year you guys tried issuing tons of free permits but that didn’t do anything to control the population... why not a One-off warm season hunt to put a dent in the population. The holiday hunt is a good idea but it’s so close to the regular season that turnout will be weak...</td>
</tr>
<tr>
<td>8485</td>
<td>With a group of 10-16 Louisiana hunters we enjoyed public land bow hunting the great state of Wisconsin the past 5 years. For 4 years we had a 70-80% harvest rate amongst our group. Season 2018 it dropped to a 30% success rate amongst our group because the number of deer sightings and mature bucks seen per hunt dropped terribly! Last season we regrettably made our yearly hunt In Illinois. The reward was good but we have come to love Wisconsin and putting our money into the economy there but we also have a goal of harvesting mature whitetail in mind. I hope y’all can get the numbers back to where they need to be without the influence of politics affecting the herds. I would assume a loss in out of state hunters would affect the local economy.</td>

Decreasing the deer population involves heightening the interest of and number of hunters. The addition of crossbow has increased the number of hunters during bow season and the number of kills during the bow season. It gives hunters who cannot otherwise hunt with a regular bow the ability to hunt during the rut, thereby decreasing the population and increasing the interest in hunting. Hunting during the rut when deer activity is at a maximum not only spikes interest in hunting but also offers more chance of a successful hunt. Therefore, I believe it's in our best interest, if the objective is to decrease the herd, to allow crossbow hunting during October, through November and beyond, through the end of January.

Please provide graph identifying number of tags issues, E.g. -bow -crossbow -gun Be interesting to see how license sales are changing along with secondary comparisons between license sales and harvest numbers. Simplify seasons. -Combine Archery. Freedom for individual to choose. Don't differentiate. I use a compound, however why not let more people into the sport all season with their choice. -Gun. Leave at 9 day. Going early annually, as your graph indicates, increases antler harvest. Year over year this will further impact heath of herds sex ratio. Longer season will have minimal impact either as many only hunt opening weekend. Minimal hunt second weekend. How would a third weekend help? :)

I keep seeing less and less hunters in the woods, most are out by 11 am Saturday. Main reason, not seeing deer, not willing to shoot does for it might be tested with CWD and dont want to waste money on processing. If this area would go back to earn a buck most will not go out. It destroyed our hunting area. It went from a area where I saw maybe 15-20 deer opening weekend to 0 this year. I am ready to not hunt this area anymore. I rifle hunt this area mostly and that is because I still hunt with old timers. But when they are gone I will probably only hunt the Polk county. There are still some nice deer down here but private land, lack of hunters and deer make it tough.

Since I don't have statistics on the success of predators on the deer population, nor on the amount of crop of vegetative damage deer are causing... I made the suggestions I did. I support increasing the quantity of antler-less deer permits for Sauk County. The information you provided said the DNR's goal was 11,000 antler-less deer per season. The total amount you listed as available was about 4,700. That's a difference of over 6,000. I know we have fewer big game predators in Sauk County than up north. I assume this would partly account for the amount of crop and vegetation damage in the County? Thank you for asking for our input...

The CDAC for Sauk Co. has a challenge because the deer population around the county varies greatly. There are pockets of very high deer populations and then the rest of the county. I own and manage over 200 acres for deer hunting in Dellona township. I have many neighbors that I collaborate with. From monitoring trail cams, shining deer, and many hours bow hunting we believe that there is no way there are too many deer in Dellona Township. The doe population in our area still has not recovered from the earn a buck era. Until I start seeing more deer and especially more does than bucks we will refuse to shoot does. Thank you.

I sincerely believe eliminating the Holiday hunt will INCREASE the overall antlerless kill. To me, the holiday hunt is a "back up" option so guys will not shoot does during the 9 day season because they don't want to screw their hunt up for a buck. Then once the holiday hunt rolls around these people would rather spend time with their families or if the weather conditions are too cold or unfavorable they opt to not go hunting. The holiday hunt antlerless kill makes up a tiny portion of the overall antlerless kill. If you want more does shot then eliminate it and force people to harvest does during the 9 day...thank you.

The issue isn't to kill rate or people not applying to hunt, the main issue is people don't know how to hunt. Bow hunting is different in the sense scent and remaining quiet/still is imperative. I bow hunt on public land and see a lot of deer but gun hunting is a 180 because the hunters walk around, talk, smoke, gather in groups and stay in the woods for 3-4 hours and then go back to their vehicles. You can't kill deer or you're constantly making them aware you're their. That's the main issue and it's hard to portray that when it's hard for a collective group to abide by the common hunting practices.
There are too many seasons that extend for too many months. The deer wise up in a hurry and become nocturnal. Also, with hunters spreading out their time across nearly 5 months, there is no time when hunting pressure helps keep the deer moving anymore. This makes it an early or late proposition, rendering much of the day useless. Therefore, I do not support the extended seasons, even though I love to deer hunt and spend time in the woods. Also, you have seen the proof that hunters will only harvest so many deer. The number of tags per hunter that you issue will not increase the harvest.

Goals need to be adjusted or some other type of compensating measure needs to be put into place to account for deer that are harvested but not being registered thanks to the idiotic new system of no longer tagging or registering deer in person. It is my belief, as well as that of nearly everyone I’ve talked to that that alone accounts for the recent declines in annual deer harvest. If the CDACs and DNR were serious about actually managing the deer herd, they would reinstate these tagging and in person registration practices, which would also benefit the local economies.

I’ve heard lots about cutting crossbow season down shorter and people flipping out about crossbows but people don’t realize us people who gun hunt simply like to hunt earlier in the fall when it’s not freezing and we see more deer due to the rut. Not to mention it’s so much safer when you don’t have idiots shooting rounds all over trying to hit a deer. If I could chose to shoot during bow season vs gun 100% I would but if it closes crossbow season to people like me I have not just me and my wife that would quit but 10-15 of our friends would too.

I urge you to consider doing away with the Holiday Hunt. For a lot of people that do not fill a tag, this is their last remaining time off of work before the season ends. I, personally, have not participated in years past because I refused to shoot an extra antlerless deer. I would have gladly been in the field if a buck was an option, which would have helped your total harvest number. Either my daughter or myself have had unfilled buck tags each of the last two years with that entire week off of work and school and did not hunt 1 minute.

I would like to see there be an opportunity to earn more than one buck tag for archery. I have severely decreased my time spent hunting because I only have 1 buck tag available. My mindset is more so I don’t want to waste my one opportunity on a deer rather than I need to harvest 2 bucks. If I knew there was at least an option to get a second buck tag I would be much more open to using public land around my home or harvesting a buck in Sauk county. Since there is only one tag the stars have to align for me to use it.

The more different hunts offered seem to decrease the amount of deer hunters interested in participating in any hunts. I believe WIS DNR needs to promote the 9 day gun season to make it the most important season for all Wis. hunters. Adding all these other hunting seasons only muddy the waters for hunters and turns their interests off. I believe that the more structured time frames for deer hunts to increase the amount of people hunting. Archery, gun, and muzzle loader. Make it easy, instead of 10 different seasons.

longer seasons, start bow and muzzleloader earlier than 9 day gun season and run it later in the year after the gun season. the 9 day gun season is not the holy grail and the earth does not revolve around it. consider shotgun only, too many slob hunters with high powered rifles. Need to reduce the deer population drastically in order to avoid CWD. If CWD continues to spread an entire generation of hunter will be lost and the hunting enterprise and experience is dead. this is a matter of science, not politics
8501 This year I saw a lot of deer, it’s just unreal how many I can see in the fields at dusk...I can only imagine the accidents caused by the overwhelming population of deer. This is serious, and we need to help others, by bringing back Earn A Buck. We have many people privately raising deer without a fence. QDMA is part of the issue on private lands, raising trophy deer. Hence many have lost the path of the harvesting of does. Earn A Buck will force hunters to take that doe first approach, and they will...thanks.

8502 Thank you to the CDAC for taking all steps possible (all except going totally antlerless) to meet the goal to decrease the deer numbers in Sauk County. I agree that the deer population needs to be reduced through most of the county, and DRASTICALLY reduced in many specific areas (most the southwest portion of the county). The only change I would love to see is for the state to give CDAC's the option for reinstate the earn a buck option. I also voted for that change during the spring hearing comment period.

8503 In reading through the 3 year plan for my DMU I saw where you were trying to decrease deer population. Well congratulations because you are certainly achieving what you set out to do. I am seeing less deer every year in my area, and it’s getting to the point where I have to consider if it is even worth my while to buy a license anymore. I also saw where it was a consideration to go antlerless for the season. In my opinion this would be crippling to the already falling numbers, as well as the hunter morale.

8504 Against crossbows for everyone, it’s just as good as hunting with a rifle. I hear some hunters going just for the kill and not the meat, they just want to fill these tags. I saw 0 deer in 4 days of hunting. It’s been that way for the last 6-7 years. This area for hunting is in the Baraboo bluffs where I would see 20 to 25 deer in same amount of hunting time. Hunting has become very lousy! Considering not buying anymore licenses and quit hunting. I’ve heard other hunters thinking about doing the same.

8505 The problem with hunting and fishing is to many hunters are hunting/fishing for the wrong reasons. It should be about getting out and enjoying the outdoors. Using ethical standards for harvesting your game. Most hunters want to shoot the biggest animal or catch the record fish. It’s all about ego. It’s difficult to find land to hunt on because of trophy hunting. Who gives a crap about the size of the deer or fish, not I? Make hunting fun again and plan it like it use to be and leave the politics out.

8506 I believe there are way too many hunting seasons. I feel that most hunters get the idea there's no hurry about getting deer because there are so many seasons and don't get out and hunt like we use to. I get tired of going out so many different times and believe we would have a better chance of being successful if it would go back to the traditional 9 day hunt and then everyone gets out there. It's nothing to not hear many shots, even on the first day because the fun of getting together is gone.

8507 I have been hunting for over 40 years and we need to get hunters safety classes easier to find. Mentoring is great but still need proper safety. Saying any age can hunt is wrong. If they or old enough to pass hunters safety class they can hunt. I gun and crossbow hunt. My family does a lot of bow hunting. Holiday hunts mess with there hunting some years. Last year weather was bad. I was out in the cold and rain but did not see any deer. I am hopping the weather is better this year for me to hunt.

8508 The extended seasons, holiday hunts and over the top dnr’s plight against cwd has made most elderly hunters to quit. Keep lower the number and the younger generation will quit too. The traditional 9 day season has been ruined forever by early and late seasons. Those 9 days were always to most a holiday of outdoorsman to gather. It’s gone! As an avid outdoorsman of all winter sports following hunting season, it’s a joke to cut our snowmobile season shorter to extend a failed deer harvest.

8509 The land I hunt borders devils lake state park and I also hunt inside the park. I have been trying to get my wife and kids into hunting but when you go 3 or 4 days to see a deer gets to be frustrating. We see more coyotes than deer. A margin of 3 to 1. The deer population is so low that there are barely any hunters at the state park. Little to no out of state hunters. Burma’ rd and hwy DL used to be packed with hunters but like anything else the deer are gone and so is the hunter now.
I support your decision to hold a holiday hunt and to extend the bow season. We need to continue to provide opportunities to hunters. Myself as well as other people I know, do not enjoy hunting on public land due to overcrowding during the 9-day, its intimidating especially when you're a new hunter like myself and you are learning to hunt. Even though I might not harvest the best animal on the land, it still provides me an opportunity to learn without a bunch of people around.

I hunt with cross bow and rifle. I shoot antlerless deer with cross bow and rifle. I want to use my cross bow up to start of gun deer season at a minimum. If I don't kill enough deer by the end of traditional rifle season, I would hunt the holiday hunt with my rifle. I strongly oppose any rules that would limit my cross bow use. I am 61 years old. I know some hunters do not like to shoot antlerless deer. I have no problem at all shooting antlerless deer.

The number of deer seems to be increasing dramatically, I've been seeing a lot of twin fawns the last couple years and the winters have been mild. I see a lot of browsing on young pines that I planted that have been left alone in the past. It's not unusual driving in the afternoon to see ten to forty deer in single field. I would recommend an earlier start to the rifle season while the weather is nicer including the entire rut.

The deer I had seen were healthy, also with fawns. I disagree with the fact that others will shoot does with fawns. I believe the wasting problem is real but the cause not being from poyons but fawns starving from an underdeveloped digestive tract, solely from not being properly weaned. I also feel the digestive problems then are passed to the next generation of animals. Not being able to properly digest food just the same.

EHD hit regions of SW WI last summer/fall. The chances it does again are probably pretty good. EHD can and does hit a herd hard. There were numerous deer found dead in my area in late Sept/early Oct. With all of the other mortality factors, we need to keep the herd similar in numbers to its current state. A hard winter or another hit of EHD could dramatically decrease numbers. We don't need extra hunts or tags to do that.

We have a ton of deer in northern Sauk county. Way to many. Please consider leaving the 9 day gun season and offering an earn a buck to hunters after the initial buck authorization is filled. Let hunters harvest bucks in the holiday hunt off the earn a buck system. I believe this would keep more hunters in the woods and we could possibly get to the antlerless kill that is needed to maintain a healthy deer herd.

Get rid of the youth hunts, I didn't need a special hunt to get interested in the outdoors when I was growing up. Get rid of your muzzle loading season, Get rid of all your extra hunting seasons like holiday hunts And so On. There's too much hunting pressure all the time. Just bow Hunt, gun hunt and get out of the woods. You'll get higher harvests in the long run. One buck, one doe for each season, Period!!!!

I would also like to see a bounty for harvesting a CWD deer (have it similar to the license cost) rather than getting a license refund for next year. I believe that this will improve testing participation and public awareness of how prevalent it is in their backyard as it will be a "cash" incentive. Getting everyone to participate with CWD and understand what it is doing to our herd should be a priority.
Rifle season should be only the youth season and a 9 day traditional. I feel all these seasons are making people lazy thinking they have lot of chances to get a deer. They end up not hunting and not getting a deer. All the extra seasons make it difficult to pursue other game animals and trap the predators. In my area of Sauk County we don’t have the deer population that central and southern Sauk County does.

There is a very significant decrease in the number of deer that we see during hunting and non-hunting season. Wisconsin had been known for its very good white tailed deer hunting but this changed. The change occurred when hunting opened up on state parks and conservancy land. This policy should be reconsidered and I feel strongly should be discontinued. Several of my neighbors feel the same way.

I think we have over hunted the deer for years and we don’t see the number of deer that we used to when I was growing up. Maybe we should increase the out of state license to what neighboring states charge us. As you increase the fees for local hunters we are saying why do it. Increase park fees also. Hunters and fisherman have been paying the load for everyone for to long. Thanks for your time.

The holiday hunt should allow hunters to shoot bucks. This would increase participation and number of deer shot. Crossbow hunting should be permanently adopted it expands participation to keep our hunting traditions strong. Gone are the days of large hunting camps for deer hunting - let’s stop retrying to recreate the past and create a future that meets how people want to live and hunt today.

Please remove the holiday hunt and any additional antlerless only hunts. Maintain the traditional 9 day gun hunt. Holiday hunt in my opinion does not have that much participation. Most serious hunters at that time are bow hunters. Between the 9 day and muzzleloader season I feel that time is sufficient. Also I would not be opposed to a earn a buck season again but should be voted on yearly.

It seems that the unharvested farm fields (due to flooding) in Southwest Sauk (and likely much of the region, had a great affect on deer harvest. It would be good to know if this is statistically true. Anecdotally, it seemed like with corn up until December, deer where not in the woods. This might lead to less hunting deer kills, as well as higher winter survival. Just a thought.

I bow hunt and saw three deer one buck and two does. Rifle season I saw nothing. I hunt every day during rifle season and take a week off during the rut. Ten years ago I saw twenty one deer and the last three years I average seeing three deer. You need to stop the doe only hunts. Leave the nine day hunting season alone. Let archery and crossbow alone for us disabled veterans.

I believe with the COVID-19 related grocery store issues hunters will fill more antlerless permits issued compared to prior years. That is why I would recommend lowering the number of antlerless permits per license to 1 or 2 per license. In the past many hunters didn’t try to fill all their antlerless permits. This year I believe hunters will try to fill all permits issued.

I hunted the driftless area between Plain and Spring Green and saw greatly reduced numbers of deer while at the same time I observed healthier deer populations than I have seen in some time on the Baraboo bluffs. Your questions don’t allow you to specify which areas of the county when asking about the number of deer observed. Thought consider for future questionnaires.

Over the past 4 years have seen drastic reduction in does and no bucks past year. seen in woods. Where we stay 15 other hunters hunting in the area all within 30 miles of each only 1 buck 1 doe taken. 90% reduction in deer seen your plan and numbers dont match what is seen in the woods by avid experienced hunters. You are destroying this county like others before.

I commend the CDAC members for their comprehensive work to structure our deer hunting seasons for maximum enjoyment for hunters and maximum benefit to the deer. If the number of deer that you would like to see harvested in Sauk County continue to end up below your target, I would support earn-a-buck in the future. Thanks again for your work and dedication.
Hunting in this county for many years is has become clear that regulations need to be different for public land vs private land. Your goal was to decrease deer population and all that did was decimate the public land herd and still allow the private lands to manage their large parcels of land. You can have the same regulations on public vs private.

I think Sauk county has a good stable population even with increasing cwd issues. Certainly there are pockets with fewer deer but that's always been the case. If cwd prevalence gets much higher we will certainly see a decrease in the overall population and will have to make adjustments to what we harvest to keep the herd at a sustainable population.

Go back to one buck, one doe per seasonal tag. That’s it. Adding extra hunts and messing with the days and traditions is impacting the enjoyment for everyone. To include youth hunts. Eliminate the youth hunts!! Seasons should be: Sept-Dec31/Arcery November/ traditional 9 day season followed by the traditional muzzle loading season. KEEP IT SIMPLE!

Youth hunt should be abolished - hunters grew up hunting the nine day - should sugar coat hunting for the young. If they can't handle the cold - stay home. I have 3 Grandkids all hunt the 9 day and not one wimpers about it. All that season does is screw up bow hunting and disrupts the deer habits. Holiday hunt have it both sexes or don't have it.

Go back to the way it was 20 years ago. Have a nine day season where everyone is in the woods for the same week. You can have a youth hunt earlier in the fall and I would be in favor of having the muzzle loader season prior to the gun season. Other than that make the season like it used to be, nine days and no antlerless seasons before or after.

I think the rifle hunt was more of tradition more peopole were out and pushed to get a deer and the bars would register them and gas stations people would be proud to show of there trophies I think most of the good times and traditions are gone seasons way to long to many seasons getting to were it’s like a chore and not so much fun anymore

We are attempting to regenerate an oak-dominated forest stand on our land near Plain. We planted 2,000 red oak young trees two years ago. We are seeing very few of our planted trees that are escaping the browsing pressure. We also regularly harvest CWD+ deer on our land. We do not wish to see the increasing prevalence rates continue.

I was told by a DNR warden that the Sauk County deer herd is "property of DNR". Having heard him say that, I wonder why the CDAC is considering input from the general population on the matter of Wisconsin's deer herd? Last I checked and the way my believes lead me, the deer herd is Mother Nature. The human race does not own Mother nature.

The % increase of CWD since 2002 has been disturbing, and simply limiting the population only would slow the inevitable. We need to start looking at alternative solutions. Attached is a below article that looks at some interesting ideas for solving the issue. https://www.mossyoak.com/our-obsession/blogs/deer/a-cure-for-cwd

Changes are being asked for due to the reduced harvest last year and what appeared to be a lower deer population. Get outdoors and take a look. I am seeing more deer this year than I have ever seen. I am willing to bet the deer population is close to an all time high for this county and several other countries I travel in.

Propose doing a antlerless only weekend hunt in October along with a earn a buck for the regular gun deer season. Also propose opening the nine day gun season earlier, so that the cold weather does not play a part in the harvest numbers. alsoo, suggest not restricting the crossbow season due to the popularity of the weopon.

If there is a holiday hunt, I believe hunters should be able to harvest bucks with unused tags. I think having the extended late archery season is good, but don't think it should go until the end of January. The deer need a break from hunters, with all the predators. Maybe consider closing somewhere around January 20th.
We have seen a huge growth in sick and dead deer. There is also a huge uptick in hunters deciding not to harvest deer due to the CWD issue. There needs to be a program for 100% testing and payment to hunters who harvest CWD infected deer in order to decrease the population. Otherwise the hunting tradition in WI will die.

Too many deer being taken. Didn't see a deer for the first time in 11 yrs and hunted 5 days. GAVE up. Too many hikers walking and talking, yelling etc. This used to be a lot of fun and have lost family support in wanting to continue to keep hunting in Devils Lake state park area. IT's a joke now for hunting.

In my opinion most ethical hunters will not harvest more deer than what they can consume. If you want more deer harvested you need to create a demand for the meat such as a food pantry and pay for the processing of the meat. If hunters know that they can help feed hungry people they will harvest another deer or 2.

I'm 60 years old, I’m concerned you will limit the crossbow season. Due to my job, I can no longer hold a bow at full draw for any extended time. I would also like to go back to in person registration, I believe the online system is a invitation to poach. Plus, spotty internet service is a concern in some areas.

The additional CWD kiosks and deer dumpster availability is a benefit, helping us quickly get a deer sent if for testing. And, once we find out if a deer was CWD positive, have a safe solution for disposing the deer. Very much appreciate the DNR and the groups or individuals that sponsor the kiosks and dumpsters.

Keep messing with the hunting season and you will see a decline in hunting. More opportunity to hunt does not mean more pressure of moving dear it will actually decrease the movement because now you have people spread over a larger time. Dear went knock ternal last year from the excessive pressure from hunting.

If holiday hunt is implemented which supports the majority want more deer harvested consider allowing unused gun buck tags to be utilized during the holiday hunt, the added opportunity to harvest a buck will most certainly draw more hunters into the woods which in turn will result in greater harvest numbers.

I think earn a buck would be great to have again. when that was implemented i saw a lot more bucks and also bigger bucks. it seems like no one is shooting doe’s and only killing bucks (me included). the buck to doe population seems way out of wack and this strategy seemed to work back when it was implemented.

Bring back Earn a buck for RIFLE only. RIFLE ONLY. Archery hunting is not a means to control population. And then on top of this, if you want more deer shot let the hunters know that to get a 2021 archery buck tag that you need to harvest a doe in 2020 or 2021 before you get a 2021 buck tag for archery.

We need to get rid of all these special seasons. There should be the archery season and the nine day rifle season. Antarless tags are no good until Thanksgiving day. We need to keep more hunters in the woods which will keep the deer moving, which in turn will increase the success rate. No pressure = no deer.

Re-establish the earn-a-buck framework and your population problems will be less...require two antlerless deer to get a buck tag in year one and then one antlerless deer in year two; and then analyze population and goals. My friend shot a doe in late January and it had two fetuses in it. That we don't want.

Should offer free hunter safety courses to encourage more young people to hunt and learn how to do so, safely. Need to advertise the public hunting areas more extensively. Many times, people do not know the boundaries between public and private because they are not well marked or made known.

The deer population has been taking a hit for several years in this unit, increased hunter tags, predators on the increase (especially bobcats), and this last year certain areas of the unit took a significant hit with Blue tongue. The season doesn’t need to be extended or bonus tags issued.

I don’t think there are enough hunters pushing deer during the season. Because of the private lands surrounding our private land we only tend to see deer on opening morning, then they don’t come back through during daylight the rest of the season, they lay low on Unoccupied property.
Stop bow hunting from the second week in Oct to the end of gun season. No early hunt or holiday hunt. Get rid of 3yr olds to have licenses for extra tags for the bow and gun hunter. Allow disabled hunters to hunt in Oct gun only in any area for 9 days. Not isolate it to just farm.

Deer numbers in this unit have been way to high for many many years!! You can give all the free doe tags you want. Filling those tags is the real problem. The only change I saw in deer populations was during the earn a buck years. This is only way to decrease the population.

I would like to see the Public/Private division of hunting removed. We should not have to make that decision within the county. As opportunity presents itself, we should not be limited. I also support earn a buck. It reduces herd, and gets folks out working the woods.

Over harvest or low deer numbers in my area are creating less opportunities for hunters, especially young hunters. The local economy is hurt through no in person registration and the traditional gun season that is suffering from low deer numbers, which is less hunters.

Keep the crossbow and bow seasons in conjunction with one another as in the past. Leave the deer gun season as is. And, if the deer harvest objective is not met, hold a 4 day antler less hunt in early December for all legal weapons. Thanks for this input opportunity.

The coyote population in my area is out of control. My land is in Sauk County between Baraboo and Reedsburg. The deer fawn population is taking a major hit by these predator's; Furthermore, my neighbors fear for the lives of their pet's and livestock.

The 24 hour window to register deer was difficult when you're hunting in quartzite valleys with no cell signal. Please define "Recover Deer Harvest" as leaving the woods or field and allow us to stay at camp with tagged deer hanging until camp is over.

Farm land owners need more time to gun harvest a buck, without purchasing a muzzleloader gun, crossbow etc. maybe use slugs instead of muzzleloader. Don't make it to hard to find time in a narrow window to hunt. Land owners do care about the future!

Our family farm is a prime 230 acre piece in the heart of deer country. I have no idea where you think all these deer are. We are really close to the lowest amount of deer we have ever had on our farm. Thanks for your consideration.

There are more deer than the county should have and the committee members do a good job of recognizing the abundant herd and providing abundant opportunity. Thanks you for your dedication and for doing a job that few people want to do.

I don't see as many deer as many years ago. Would like to see more out it's harder to hunt year after year. People shoot from babies to adults they don't care. They just want to fill all tags. For all parties in the group its rediculas.

I am a patron license holder. If this went to an antlerless hunt or had any idea it was I would not have bought the license. I think if it goes to a more antlerless format less private land will be available to hunt by non owners.

There are too many deer in this area, and the state in general. There should be an open season on them to significantly decrease the size of the herds. The young trees and the forests are threatened by persistent browsing.

Sauk county deer habitat varies greatly and is managed the same. This is wrong! Hunting the northern portion of the county is vastly different than the more heavily framed southern areas. PLEASE go back to 54,54b, etc....

I would like to see a change allowing hunters the option to use a gun buck tag during bow season if they tag a buck with their bow. This will help keep hunters hunting during bow season. Also, shorten the crossbow season.

in the past 10 years I have heard less and less shooting opening morning - might it be that so much land has been bought by people that do not allow hunting on their properties or might it be just less hunters period...
Stop trying to kill all the deer in Sauk county. I saw very few deer last year. You need to have a normal bow/crossbow season and a normal 9 day rifle hunt and don't have a holiday hunt or antlerless hunt in October.

Please secure funding for and implement better tracking, containment and elimination of CWD in southern WI. This is the most serious ecological issue facing the state and I don't see much urgency or action around it.

Please consider earn a buck as an option instead of a complete antlerless only season. Much more affective to maintain the heard. Many hunters will shoot more does to get a chance to hunt bucks after shooting a doe!! We need to go back to the mid September bow opening and the traditional 9 day gun season followed by the muzzle loader season. Low harvest numbers for 2019 were due to the late season start and weather conditions.

get rid of all anterless seasons we used to be one of the best deer hunting states in the us state dnr is a joke - get someone in power at dnr who is a hunter and fisherman who is not a political friend

Stop this crap. The herd is fine, test for cwd after the kill, nobody needs more than 2 deer a year. There would be less deer vehicle accidents if people would put there phones down and watch for deer.

I tested my deer kills for CWD. It takes too long to get results on those samples. I would like to get the turn around time for results reduced so that the meat can be processed more quickly.

we need a place to give information on land owners hoarding OUR deer. I know of some that heavily feed the deer to keep them on their land. Also to report land owners charging to hunt their deer

would recommend a 4-day antlerless only hunt in mid-October rather than the Holiday hunt. Also would recommend earn a buck along with opening the gun season earlier and running for two weeks.

I would NOT like to see the gun season extended. Bow hunters have already lost enough time from enjoying their sport with so many extra seasons. Please DO NOT EXTEND THE RIFLE SEASON!!!!

please dont shut crossbow season down in November. we didnt pay the money for these bows to sit on the couch. You made them legal and u want to put restriction on them doesnt seem right.

2019 was the first time we had a harvested deer test positive for CDW in the area. Need to reduce the spread so that the area has low incidence numbers and we can continue hunting there.

There should be NO CDACS, the state should go back to management units as before, and reinstate in person registration to get a more accurate count of deer harvested!! Wake up people!!!

I would hope that we never go back to the "Earn a Buck" solution that was implemented over a decade ago. We lost several potential lifetime hunters those years, my son is among them.

I think you are doing a great job. I have harvested 85 deer in 35 years in Wisconsin. Therefore I am very please with the way you manage the deer herd. Thank you for a job well done

I think the holiday hunt should allow the harvest of either sex. I have talked to many hunters that do not participate in this hunt because we can’t use unused firearm buck tags.

I am a private landowner and intend to reduce the number of deer on my land to alleviate overbrowsing while I try to reforest logged areas and areas I’m clearing of invasives.

You guys have given way to many antlerless tags out. It is nonsense for people to be able to shoot 8 antlerless deer between bow and gun hunting. NOBODY NEEDS THAT MUCH DEER.

Wish it was back to 9 day rifle and you actually had to take it in to the small bars or gas stations to register bring back some tradition to it it really kinda sucks now!

All state parks should be opened a week sooner for Bow Harvest opportunities. At the very least have a two week minimum state park opening period prior to gun deer season.

<td>Thank you for providing reasonable pricing and access to tags for non-resident deer hunters. You are one of the last to provide this opportunity in the mid-west.</td>
</tr>
<tr>
<td>8598</td>
<td>I’m not a big fan of the holiday hunt. A lot of young bucks end up being shot and it shortens the late bow season especially in counties were it isn’t extended.</td>
</tr>
<tr>
<td>8599</td>
<td>Increase the carcass dump boxes and provide more info on the deer donation program. For example, if a hunter donates a deer does he have to test it first?</td>
</tr>
<tr>
<td>8600</td>
<td>So I’m very concerned that now season keeps being encroached by all these special hunts. I believe all the rifle hunting should be done in the same season</td>
</tr>
<tr>
<td>8601</td>
<td>Please consider bringing back CWD testing facilities for CWD zones like SAUK County. College interns or volunteers could be utilized again like before.</td>
</tr>
<tr>
<td>8602</td>
<td>We need to harvest more deer. BRING BACK EARN-A-BUCK please, it was the most effective tool. Don’t take any crossbow hunting opportunities away please.</td>
</tr>
<tr>
<td>8603</td>
<td>The DNR has already depleted the deer population substantially! There used to be herds of deer, now we are lucky to see one. Bring back the herds!</td>
</tr>
<tr>
<td>8604</td>
<td>For the holiday hunt only would earn a buck be an option. Currently holiday hunt is antler less only. It may get more hunters out for holiday hunt.</td>
</tr>
<tr>
<td>8605</td>
<td>Doe population is decreasing in our area. Do not believe 2 bonus tags are necessary, 1 antlerless tag is enough. Let hunters decide what to shoot.</td>
</tr>
<tr>
<td>8606</td>
<td>I would also like to see it go up to a 2 (bag limit) antlered buck for archery, crossbow and gun in addition to the free antlerless tags. Thanx</td>
</tr>
<tr>
<td>8607</td>
<td>We really need to find a way to bring back earn a buck, or one buck per hunter a year by all means. (bow-crossbow-rifle-muzzle loader combined )</td>
</tr>
<tr>
<td>8608</td>
<td>Go to a 1 buck per year limit per hunter. Move muzzle loader season back 1 week. Increase non-resident licenses to help fund CWD testing</td>
</tr>
<tr>
<td>8609</td>
<td>Lost a lot of animals to the blue tongue last summer Nobody is accounting for this Definitely some problems with the herd count methods</td>
</tr>
<tr>
<td>8610</td>
<td>State lands and conservancy land should not be a unlimited number of hunters in one area. It is only a matter of when we have fatalities.</td>
</tr>
<tr>
<td>8611</td>
<td>One buck per hunter per year. Allow 2 antlerless per hunter per year. Shut down archery season 1 week before gun season to 1 week after</td>
</tr>
<tr>
<td>8612</td>
<td>I have found 5 deer carcasses on my property this winter and wonder how these are counted in herd numbers. I don’t know cause of death.</td>
</tr>
<tr>
<td>Number</td>
<td>Comment</td>

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 191
   - I visit this unit for non-hunting purposes: 181
   - I hunt in this unit: 543
   - General interest in this unit: 113

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 517
   - Bow: 264
   - Crossbow: 189
   - Muzzleloader: 165

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 25.49
   - Maximum: 65

4. Which statement best describes where you deer hunted in this last season?
   - Exclusively Private Land: 118
   - Mostly Private Land: 82
   - Public and Private Land About Equally: 121
   - Mostly Public Land: 70
   - Exclusively Public Land: 148
   - I did not hunt in this unit last year: 4

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 20
   - Not too crowded: 61
   - Neither crowded nor un-crowded: 78
   - Somewhat crowded: 99
   - Very crowded: 154
   - Not applicable: 9

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 150
   - Fewer: 182
   - Same: 159
   - More: 70
   - Many More: 14
   - Unsure: 9

Section 3: Feedback on the CDAC's 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
Implement an ANTLERLESS HOLIDAY HUNT:
Not applicable in this DMU

If a Holiday Hunt is held in a Farmland unit...
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021:
Not applicable in this DMU

If the Population Objective is not "Increase"...
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons:
47 492 45

If a Zero Quota (buck only season) is adopted...
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?
VALID NOT VALID Unsure
273 246 65

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?

Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

I feel like the number of predators in this unit is very high. Between wolves, bears, bobcats, coyotes, and the harshness of winter's in this unit along with the "brown is down" mentality of the majority of the non-local and local population alike the task of managing the herd for health and numbers is truly a challenging task. I commonly see bears and coyotes and occasionally wolves on my own land and while driving throughout my local are, yet I can't hunt wolves, I will probably only see 2-3 bear authorizations in my huntable lifetime, and a similar wait for bobcat authorization, yet the only thing we discuss when it comes to managing the deer herd is the number we are allowed to shoot. This unit used to have significant deer numbers and was a "must hunt" destination for sportsman. That reputation has dramatically changed in the last decade almost exclusively due to lack of deer numbers and poor age structure of the existing herd. A 3 1/2 year old buck is often considered a trophy deer in this unit, not because it is an impressive specimen, but because it is uncommon. The herd has gradually grown to tolerable numbers, but the ongoing theme seems to be issue more licenses, make gun season longer, create antlerless only hunts after all seasons are over (which will include buck fawns and adults who have already dropped their antlers - I found 3 different sheds on my land by Christmas in 2019). I feel like this unit needs a few years to build numbers and maybe go back to one deer per person per season like it used to be. Gun tag was buck only unless you were awarded a Hunter's Choice permit and archery was one deer either sex. This allows the "brown is down crowd" to still shoot whatever deer they like and encourages those who trophy hunt to be more selective with their harvest which should allow for a great hunt while building numbers, and improving the herd age structure. More license sales does not correlate to more healthy deer, it just correlates to more money (I understand that license sales do contribute to habitat and hunting). We need to manage the resources without the effects of political pressure. The impression I got from the 2020 public input survey is that the concern is money/revenue and not necessarily the best interest of the deer herd or natural resources we exploit.

I live, work, and travel throughout this area on a daily basis year-round. I think predators play a bigger role on not only the amount of deer that survive until hunting season, but the location of where those deer "feel safe". There has been a mass migration over the last decade from the National Forest to people's back yards. I think this is caused by the predators pushing them into these locations as well as the draw of backyard/private land feeding of deer and birds. I recognize that wolves play a much bigger role in the loss of deer year round than anyone wants to admit (in the name of being "politically correct" rather than stating the truth!). On my daily travels, I see less bears than I did 10 years ago. I average seeing probably 2-3 bears a month during their "active" season. Comparatively, I see roughly 2-3 wolves EACH WEEK year round. I have traveled extensively on hunting trips in my lifetime to northern and western Canada and Alaska. I can honestly say that I will see more wolves this month while driving in Sawyer County than I have in 32 hunting trips in my lifetime. This does not make sense when utilizing the DNR website population estimates of an estimated 24,000 black bears and 978 wolves. According to those numbers, there are approximately 24 1/2 times more bears than wolves in Wisconsin. Common sense tells me that actual sightings do not reflect such a huge discrepancy in numbers! I realize there have historically always been predators other than wolves preying on our deer herd, and there has been a drastic change to the landscape/habitat and the influx of people in this area, but I think it is time to admit that the protection of wolves in Wisconsin is a major cause of the dis-satisfaction of the Wisconsin deer hunting enthusiasts!
Cross bows were for the elderly and disabled. Why did we take this only advantage away from them by allowing everyone else use them. There is enough technology out there already to the hunters favor. I’m 30 years old and hunt my butt off with a compound bow. I have sucess so I’m not complaining. I'm putting in this comment to protect the wild life. All the wild life has left I’s quality hunters that respect them. I understand people are lazy and want instant gratification. But hard work and how bad you want it is what makes it worth the while. Support our elderly and disabled they made it possible for us to hunt these lands. Why destroy it again. I hunt deep timber walk in only there is a major wolf problem in this county also jeopardizing our safety of our children playing in our back yards. If you dont believe me I'm willing to take you on a walk.quality buck population is down big time thanks to buck only. Trophy deer 130 class and higher are scarce now. We are loosing hunters to hunt better states in chance of mature whitetails. Let's face it what kid doesn't dream of shooting a big buck it's what drives them to make it happen.we should reside our whitetail age class by better management 6 points or better. Increase our doe herds which makes more bucks to hunt. More does means easier rut so the bucks dont wear down as hard looking for does causing them to starve in hard winters. We need to decrease forest crop damage tags for eating under brush when a processor driving over them kills them any way. This county Is thick as heck so that is a bunch off bull. We as quality hunters neer to protect this before it gets to bad. Stand up against all the bull and make this great state and county thrive.

I'm going to make this short and sweet. My family and I and friends roughly a group size of 20 to 25 people have hunted the flambeau river state forest since the 1950s. Our group has a log book dating back to the 1970s. The biggest changes are. BAITING IS A HUGE ONE. It affects our hunting immensely. The opening of roads so people can access locations easier, which in turn, most people do NOT show respect to other hunters. They crowd areas and will hunt right next to you and surround your hunting location with other hunters to cut you off. It has happened many times. Wolves. They are out of control  and make large population dent in the northern deer herd. Anterless tags. Why are there so many given out? Our group saw 2 or 3 deer last year over a combined 160 hours of sitting up north. We scout and go deep into the wilderness to escape people. The anterless tags as well as deer populations being big are based on deer being around agricultural fields and feeding stations or bait piles. Back in the 1980s 1990s and early 2000s BEFORE WOLVES AND BAITING EERE A HUGE THING. and BEFORE ANTERLESS TAGS WERE A HUGE THING, the hunting was great and our logbook as well as many other peoples show the same. The managament by the dnr and cdac and loa officials for there benefit is crippling the deer herd. The northwoods is on the verge of losing alot if money in taxes...hunting revenue....and cabin rentals and food as well as many other things up north very shortly. I wish my daughter could experience what I did growing up and actually seeing deer and shooting them. The way its heading ...she will not be be able to. Time for a change or you will reap what you sow.

Do not agree with allowing all hunters to use crossbow (should only be elderly and handicap). They are basically a rifle, so we have extended the rifle season from Sept. to November. The deer are too jumpy by the time gun season comes around the hunting has greatly diminished, and your average hunter who only hunts deer gun season loses hope of a reasonable chance at harvesting buck, so they don’t buy license anymore. Allowing baiting has made deer hunting in WI a pursuit for those wealthy enough to afford bait and private land. Deer know where food supply is, so you don’t see many on public land anymore. Hunters finally quit buying licenses due to lack of hope for a reasonable chance of getting a deer on public land. Baiting is also a reason the CWD has become an issue. By not limiting the number of buck tags in Sawyer County, the buck population is decimated to the point you really don’t see any nice size bucks harvested anymore, especially by the time deer gun season arrives. I would be curious on the average life span of a buck, but guessing very short. This also causes hunters not to buy licences anymore, as not a reasonable chance of harvesting an older, nice size buck. Also, you need more DNR game warden patrol of Sawyer County. Don't recall in the past 6 years even seeing one DNR pickup. There seems to be significant poaching or illegal activities such that your honest, average hunter doesn’t have a reasonable chance at success. The dis honest need to know a game warden is a likely possibility. Right now it is rare to see one, so illegal activities increase, and also reduce the herd.
I sit in the woods all Fall and house is located in middle of the woods. I see my fair share of Bear and have plenty of Coyotes howling at night. Luckily I have not had too many wolf issues but the predators that go after yearling deer all spring and summer concerns me. They take a huge chuck out of the population. When it comes to Bear it take years to get a tag. Way more people Deer Hunt Vs Bear hunt yet we are very limited on Bear tags. The bear feed off the newborn deer each year and hurts our deer population and there is nothing we can do but wait years to harvest a bear to help the deer population grow. I have been hunting in Sawyer since I've been a child and looking back at picture of the buck pole, we consistently have less and less success due to the fact we see way less deer. Online Registration is easy and nice but does take away from helping the local businesses and the deer stores that go along with it. It was part of the deer hunt to see all the deer driving around in back of trucks and hearing the stories, that is now gone with everything done online/by phone. These businesses really could use a busy 9 day deer season like they used to have where hunters had to go to town to register a deer and support local businesses. People "Go Up North" for the experience and stories, please bring that experience back. You wont lose hunters because you have to go to town to register, you will have less people lying about it when you simply call a number and don't need to physically put a tag on. You can really help the tourism dollars grow.

I think the Wisconsin Gun season for deer is far too late to experience any deer rut at all, since it was really late in the rut like this November 2019 season and previous years. Wisconsin and out of state gun season hunters do not have a chance to see much of rut when the deer season for gun only is so late in November. Archery/Crossbow Season is much longer than gun season for deer hunting, for example this past 2019 Archery/Crossbow season statewide ran from September 14, 2019 to December 16, 2019 with December 12 to 15, 2019 Antlerless-only for all weapon types and a holiday hunt December 24, 2019 to January 1, 2020 Antlerless-only for all weapon types. Gun Season has the Traditional 9-Day hunt from November 23, 2019 to December 1, 2019 for statewide hunting of deer with the December 12 to 15, 2019 Antlerless-only for all weapon types and a holiday hunt running from December 24, 2019 to January 1, 2020 for Antlerless-only for all weapon types. I have not and do not hunt deer in Wisconsin during the Muzzleloader Season or on the December 12 to 15, 2019 Antlerless-only for all weapon types or for the December 24, 2019 to January 1, 2020 Holiday Hunt Antlerless-only for all weapon types. I only do the gun season Traditional 9-Day hunt in late November. Maybe one consideration is alternating years for gun season in Wisconsin would be having gun season in early November or late October to split the deer season up between Archery/Crossbow season and gun season better than it is now. Archery/Crossbow season is pretty long with about a 13 week season.

I am very concerned with the rapid decline in whitetail across many areas of Wisconsin. I have been hunting this area for 30+ years and the amount of deer present, and the quality/size of antlered deer is declining at a rate that will be hard to recover from. We need to manage the deer herd better. There is an overpopulation of bears that are hunting fawns. There is an overpopulation of other predators. When I see more wolves and bear during gun season that I see deer, something is not balanced. Myself and many others in the area would be in favor of no antlerless tags, and a 6-point minimum on antlered deer for the foreseeable future. We need to build back the hunting heritage of Wisconsin. If we want to generate revenue from hunting, $3 antlerless tags are not the vehicle. We need quality hunts, with trophy management units. Let’s work together to make this happen by limiting hunts and harvests to bring back the herd and make it possible to have a quality harvest along with a quality hunting experience with family and friends. This will have also have a positive impact on the small businesses, restaurants, bars, resorts, gas stations, etc., throughout the state. Please stop the slaughter that seems to be happening with the antlerless tags.
I completed this form with entirely "No Opinion" responses because I do not believe that I, as a deer watcher and hunter, have a worthwhile opinion regarding HOW our deer herd should be managed. I may have my experiential preferences, but this process goes WAY beyond merely asking me about those things by asking me to indicate preferences for many specific management tactics. This whole CDAC process is a wrong-headed slap in the face to professional wildlife managers who should be trusted to combine wildlife SCIENCE with user preference surveys in order to arrive at the best possible vision -- combining what stakeholders are passionate about getting with what trained professionals are passionate about giving, within the capability of ecosystems to sustain such harvest. Wildlife management biologists should possess the scientific training, experience, and social acumen to arrive at sound management decisions without turning everyone and their dog into wildlife managers. It's an insult, and it should stop. Let these people (DNR wildlife managers) do their jobs by asking amateur stakeholders what they WANT, not what they want the DNR to DO. If you do not understand the distinction, please consider taking some courses in executive leadership.

I've been hunting Sawyer county for 40 years. Our property is 14 miles northwest of Winter. 2019 is the worst season I've ever had. I seen 4 deer in 9 days. 5 people in our deer camp and we seen a total of 8 deer combined. I spend a lot of time in the woods. Very little deer sign no matter where I went whether it was on our property or in the national forest across the road. Sawyer county should have 2 zones. Farm country and forest. I did see plenty of elk sign. DNR accessed our property to trap and collar elk a few years ago. I did see moderate wolf and bear sign as well. Get rid of public/private option. In my opinion zero doe tags except for 1st time youth should be given out in 2020. Eliminate any special hunts in Sawyer county for 2020 and revisit that in 2021. Just stick to the 9 day deer season. Don't extend it another 10 days. Many resorts dont open up their cabins any longer due to lack of hunters. The rural bars and restaurants only have locals in them whereas 10 years ago they were packed with out of town hunters. Not so much the case any more. I dont blame it on the late season but rather lack of deer. Not as many scrapes and rubs where I had seen them heavily almost every year. Thank you

I respectfully request that you OPEN THE GATES!! There is no public land accessible for hunting anymore. Most traditional public land hunters are getting old, like me, and cannot walk a mile back into the woods. And if we could, there would be a zero probability of dragging a deer out from that far back. Open the gates like it used to be years ago. This is PUBLIC land and we all should have access to it. In addition, you have locked the public out from viewing some of the most beautiful land in the midwest.....why?? At least if there are no deer we can enjoy the wilderness. As it stands currently we have to hunt on or very near highways. And for the future of deer hunting: it is doomed if the gates are not open. Our party of 11 hunters is down to only 5 now. No young person is interested in a sport that is so passive. If they cannot harvest a deer within 5 years, they won't continue and that is the case with our hunting party, only 1 of the 5 grandchildren are continuing to hunt. We have hunted the Flambeau River State Forest for the past 50+ years and have many really good memories. We want that to continue for our kids and grandkids. Open the gates so they may make good hunting memories. Thank you

I saw a decrease in deer around my area. At time just simply going 10 miles from home I would see very strong deer herds. I usually have trail cams out most of fall. The dawn population seemed down and seemed like there was a lack of fawns in my area. Wolf tracks seem to be showing up more and bear population seems extremely high. Putting corn out once and awhile I would get my 3 local does and one fawn in a week and I believe I counted 11-14 different bears. The sows seem smaller and they are have 3-4 cubs with them. I also noticed a decline in small bucks that come through while rut is starting to set in. Also seems like old bucks are getting a little more scarce. Now that could be the snow accumulations and longer cold into spring or just my lack of accuracy on reading pics. I think this year was the first in awhile I've had a bigger buck return to the food plot the following year and actually have the bent back and droopy belly. Was wondering if lymes disease if starting to take a year or 2 off our old deer. These were just things I observe and express about. Now I've also spent less time in the deer woods last couple years then what I use to. Thanks for you time
I agree with what I stated, and I respect what the organization is trying to accomplish as a whole. Most hunter in Wisconsin have an issue with taking away, restricting or limiting baiting as much as it has been done and for as long as it has been done for. Many other states have not restricted baiting with the same concerns and/or have lifted the limits of how much they can bait. With the internet and the YouTube videos younger hunter are asking the question of why? I truly hate to see that the Wisconsin DNR and attached organizations are starting to lose the respect of the younger generations as they watch how other states are allowing 10 gallon, 50-80 gallon barrel feeders and other states that are unlimited feed. These are states with and without CWD. It is just so sad to see these organizations that I grew up and was taught to respect shrink in size, be put on shoe string budgets and than have some laws that don’t match other states. I don’t know why young people “don’t get it” or feel like it’s “hypocritical”? They have more information now then ever before. I think some things need to come back around OR be explained better to the public.

In general, I agree with comments from the CDAC. I am seeing large numbers of doe family groups who appear to have survived the mild winter in good shape and in large numbers. I’m concerned about concentrated numbers overbrowsing as does raise new fawns this year. I’d like to see a slightly elevated number of antlerless permits issued for private land. I’m also strongly in favor of giving the deer - and the woods - a rest and starting to scale back the duration and the numerous types of specialty hunts. Let’s not have a near-constant state and parade of various hunts stretching from opening bow to sometime in January. Also, I’m hearing from all hunter age groups the desire to return to old-style registration. The new way, via computer, may be convenient for the DNR but it assumes honesty on the part of all hunters (not likely) and takes away the cultural aspect of gatherings and of the process at registration stations. There was nothing wrong with the old way - although not perfect - but also gave businesses a chance to make sales, and for DNR field reps to check and age deer while keeping a look-out for questionable activities.

I would like to hear more about the subject of baiting for deer on recommendations by CDAC. It’s my opinion that in the public lands of northern Wisconsin, it detracts from hard work that bow hunters put into scouting. I cannot tell you how many times I figure out deer movement, core areas, bedding, rub lines etc. and have it disrupted by another hunter dumping corn. It displaces deer that I’ve keyed on with the attitude of fair chase. It is unnatural for DNR to warrant this and should concentrate on forestry practices to improve hunting opportunities. It also invites congregating of deer and transmission of CWD. I think it’s gotten out of hand with some baiters abusing the rules regarding baiting. It brings in the attitude that if you excessively bait “You Win”. Honestly, I don’t want to see the health of the herd falter with artificial tactics (baiting) supported by the state. Please practice silvicultural management to improve deer health and hunter success. Thanks for this survey.....it elevates my public trust in your management strategies and makes me feel integral to helping as a hunter.

My family and I have hunted the Flambeau River State Forest near Big Bear Supper Club since 1976. My Grandfather, father, brothers, nephews, friends, and sons have all taken part in our hunts from year to year. The past few years a plan was put into place to gate off many of the old roads in this area. Extensions off of West Lane, Tepaske and others have been gated off. My brothers and I are 55 to 62 years old. We can not walk the 1 to 2 miles down these gated roads to get into the forested areas we have had access to our entire lifetime. This is public land. This is simply not fair to restrict access to these areas. There is an entire culture of hunters in this area where people have been able to drive back into these areas. It used to feel like an adventure every year - we loved it. Today we see younger hunters parked at the gates and walking back in and setting up tree stands. This is something we simply cannot do. This is a shame for me and my family. The traditions of our hunting camps have been washed away. Open the gates. Give hunter access to the public lands that we want to hunt.
I heard from one of your biologists that there are about 900 wolves in the Northern Forest Zone....or perhaps the state in general....that's out of control! And there is a proposal to add an additional week of gun deer season? Are we trying to get rid of all the deer around here? There needs to be a hunting season on the wolves to control the population. Beautiful animals no doubt but that's just way too many. I did not see a lot of deer this year as compared to last, weather played a part I agree. Walking through the woods and creek bottoms there were SEVERAL deer carcasses from wolf kill. More than I've seen in years prior. Really need to look into that! Also the online registration for harvesting deer I believe was a bad idea. You’re just encouraging people not to buy a tag. Why buy a tag? There’s no reason to if you don’t physically have to register it. You’re not checked when it’s processed either! Also, too many bears around as well, they’re doing major damage on the fawn population. Probably should balance the bear out as well. Thanks for listening and for all you do on a daily basis!!!

I hunt a combination of private and public land south of the Chippewa Flowage. The owner of the land open to the public was given a number of Doe tags to distribute calling it crop damage. (It is ludicrous that the DNR gives them these tags.) The doe/deer numbers are low due to a number of reasons. (Starting back from the earn a buck fiasco). Includes increases in predators, some bad winters, reduced clear cutting, etc. I saw 1 legal buck on some very prime properties. It was a fork horn that I let walk. 2018 was the same. Nine guys that are actual hunters have shot two bucks in the last two years. Recommendations: Stop Baiting, reduce predators, stop shooting does or move to a party tag for a few years until the numbers rebound. Don’t let the Bow hunters (I am one) control the buck hunting and take away the cross bow opportunities. We need to stick together. The bow hunters association is just a bunch of selfish bastards. If this continues to be an issue, institute one buck tag per hunter and let hunters take a buck with whatever hunting tool they desire. Problem solved.

Hard to answer the question of whether I’ve seen more or less deer in the field, when the total number seen has been negligible for quite a few years now!! I’ve hunted the area for 51 years, and the past......8? have been terrible to the point of giving up. I no longer invite nephews to join the hunt. I hunt all 9 days, sunup to sundown. I hunt serious, and I hunt hard. I hunt public land. Where I used to see several dozen deer over the course of a season, I now see ONLY SEVERAL lone deer total. Ever since the dnr sold unlimited $3-4 bonus tags, the herd has NOT recovered. I was very surprised listening to DNR Derek Johnson even question that issue. I can't believe you are planning to increase doe tags. I buy them just to burn them, and it's not right. I can't afford it, but I do it. You sure have nice new unmanned office buildings though! Do I sound bitter??? Like I said- I grew up in the area, and it has never been worse. I’ve reached put in the past, and not once have I received a reply.

Predator numbers are getting out of control(coyote, wolf, bear, bobcat). Last year was the worst deer season(box and gun) I have experienced in 25+ years of hunting. I bowhunted for most of November leading up to the gun season and saw the fewest number of deer I have ever seen during that time. On opening of gun weekend, I saw 3 bears and no deer, which is a first to not see a single deer on opening weekend of gun season. This was all on private land that is managed for hunting. Deer numbers need to be increased and doe harvest needs to be limited or eliminated for at least another year or two. Trailcam photos and first hand experience don't lie. The same sentiments were shared by neighboring property owners. The land can support high deer numbers that what we currently have. I’m also trying to get my young kids interested in hunting, but if they can’t see deer, they lose interest. If the state wants to recruit more hunters, we need more deer for them to hunt in this part of the state.
I personally spend 200 plus days a year in the woods across all Sawyer county, I personally spend a lot of time with herd control, numbers, and overall herd health and trying to make the best hunt for me and my family that I can! In the last three years we are starting to see a difference in deer numbers going up in the right direction and regaining a herd! Our age class was impacted hard by the bucks only license years and showed progress this last fall of getting back on track too! One thing that could/should be considered is bring back a hunters choice tag system where it’s one tag but ultimately the hunter that applies and is granted the tag can make the choice for meat or horns and would afford a lot more people the opportunity to harvest a deer without having to have a quota of doe tags! It would be a lot more Beneficial for deer numbers, age class of bucks and overall herd health while also giving hunters the opportunity to hunt for a buck or have the option to fill the freezer!

The family has hunted this area for 83 years, my first year in the woods was 1959 when I sat with my mother, have not missed a year in camp since then, the camp is getting smaller my youngest daughter is the only one that hunts, son and oldest daughter were both in camp for 4-5 years and stopped coming up. hard to stay interested when you see no deer, getting that way for us old guys also. in 60s and 70s you could at least see deer. last year saw a doe and fawn opening morning, the total camp saw 9 deer before the season did see a few young bucks and that was encouraging, there was a total lack of does and fawns in our area. there are not even any bow hunters in the wood anymore also. use to be hunted quite heavily but no deer no hunters, do not understand how the department figures that less does will mean more deer, predation from bear and wolves also a problem also have a large population of coyotes do not need doe tags

I have hunted Sawyer County public land for 20 years, and lived and hunted it hard for 12 years. The current deer herd is a skeleton of what it used to be. After implementing T zones, introducing wolves, there was a definite decline in the herd and quality of age structure. After back to back hard winters in 2014/2015, the population really took a hit and with the predation is not able to bounce back. I'd recommend pushing for an INCREASE 3 year plan with no bonus antlerless permits, and I would even go as far as to say we could limit it to ONE buck per hunter per season in this area for a year or two. This may be extreme but in my experience the deer numbers were significantly higher a number of years ago, and the herd was healthy and not overpopulated. Deer hunting was fun. It would be difficult to get a new youth hunter interested in the sport with the current deer population we have now.

I have read the historical deer metrics report for the county. My personal opinion is that I feel the DNR estimates of total deer population are over estimating the actual number of animals on the ground. I am further concerned that the county objective of "maintain" is inconsistent with the increase in antlerless authorizations given the decline in 2019 total deer killed and especially total bucks killed. I think there is a real risk of our "eating our seed corn" if we increase the doe kill in 2020 and then face a cyclical return of a severe WSI score for the winter of 2020/21. I know that society can not stock pile the deer population. However in the face of generally negative harvest numbers for 2019, downward trending total population numbers, increasing predatory presence and a potential return to tougher winter conditions in 2020/21 I do not think increasing the antlerless numbers is warranted.

I believe that we should have the normal 9 day season and NEVER go to an earlier opener with a two week season for gun. Season should fall over Thanksgiving like it has forever. This is not only good for deer population it's tradition for families to get together. Predator issues are high in the north woods. Last year I saw more coyote and wolf tracks than deer in fresh snow. I saw 1 deer in 2019 (buck) with over 60 hours in the woods and 2 others in our group saw ZERO deer with 70 hours in the woods each. We have a PREDATOR problem. Our deer numbers have been down while wolf numbers rise. Not to hard to see the pattern. Some people in the government have a hard time seeing it. In central and southern farmland the population is better but nothing like it was in the 90's. Then again look at the wolf, not as many in the central and southern farmland and in the 90's there were very few wolves.
I spend about 40 days hunting on the snow and about 80 to 90 days from July to Oct. along with the 9 days of gun season in the Flambeau River state Forest and Sawyer County Forest in the south east side of Sawyer county.

Question Deer over-browsing of forest that prevent Re-growth of some forest tree species. I see most of the deer in the winter in the new logging areas. They have not been in the new grow trees much. I think for the main reason with the equipment moving around and people it provides the deer some protection from the wolfs.

Question Influence of Predators on deer numbers in the unit. The wolf population continues to grow at a very rapid rate, which in turn is hurting the deer and elk populations. When I am bobcat hunting in this area we come across a deer kill ever couple of days. Now a few of the kills are coyotes but most are wolf kills.

Wolfs are one of the main problems in my opinion. Also the black bear population appears to be higher. I have almost 500 acres and use many cameras on my land. I would say I get as many pictures of wolfs as I do deer. In my opinion a buck has a very difficult time surviving after the rut. I believe the wolfs target them as they are worn down from the rut. We have not harvested a buck on our land in over 10 years. The doe population appears to be improving. I do feel some of the does loose there fawns to predation. I have pictures of wolfs going past my cameras with fawns in the mouths. I know you probably get tired of hearing people bitch about the wolfs but I have been bow hunting in Sawyer county since 1974. We bought our land in 1990. Thank you for listening to the hunters!

I listened into the meeting a couple of weeks ago on my cell and felt everyone was well informed and sincere. But, of all who commented or made suggestions I didn't hear anyone talk about the size of Sawyer county. I hunt south of highway M and just south of Bayfield county and it’s almost all public land/county forest. Many comments talked about deer NOT being in the deep forest and I totally agree, but no one talked about dividing the county into TWO zones. There is much more farm land in the southern portion of the county and I imagine more deer. Why not stop the antlerless deer tags in the forested public northern portion of Sawyer to increase the head size? More predators also live in the deep public forest which puts pressure on the deer herd. I’ve owned 40 acres of land there for 45 years and we see less deer each year.

My only comment is that based on the lack of deer in the north woods recently I have given up deer hunting in Wisconsin. I have opted to hunt outside of Wisconsin. The lack of deer is killing the sport. Young people have no interest in sitting in the cold and watching trees grow. Wolves should have never been introduced. You have killed the sport in my opinion and I had hunted since I was 12 years old. I also sold my land up north. There was no sense in paying taxes and maintaining land with no chance of a reasonable success rate. Lost taxes, lost license sales, lost tourism sales - Wisconsin better wake up or the sport will complete die off. Kill the wolves, promote growth in deer populations by creating good habitat on public land and maybe the sport has a chance. My opinion and I am a tax paying consumer.

Many others and myself are losing the younger hunters due to over killing the does and the abundance of predators in Sawyer County and surrounding areas. You can make all kinds of recommendation on seasons, length of them and quota's. Until you start giving more bear tag and start letting people kill wolves you will have no younger generation to buy your much needed license fees to keep the money flowing to manage the deer heard and other natural resources funding. Trying to get your funds now, is and will cut your own throats in the future. I have been watching your department try to increase sales, and not look and listen to what is actually happening. Please step back and look and listen to the people that are actually experiencing and managing there lands and public lands. Thank you and good luck.
I have hunted in this unit for 28 years. When I was younger, I would see 5-8 deer per day which I feel was reasonable and enough to get a younger person interested in hunting. Flash forward to current times and I have not seen a deer in over 5 years from a tree stand. I hunt hard and the last several years have spent the entire opening day in the tree. My interest in deer hunting in Sawyer County is quickly waning. It is hard to get kids interested in hunting when they can spend all day in the woods and see nothing. I have a fair amount of bear and wolves on my trail camera and that probably contributes to a fair amount of mortality in the area. I long for the days of seeing a few deer a day during the season. Please do what we can to increase the herd in Sawyer County. Thank you!

The DNR has systematically destroyed a once proud Heritage in the state hunting up north now you see vacant cabins Frontera one family spent time together in the Northwoods mismanagement of the deer herd make me quit hunting deer for many years I started back again only to see if you were deer I hold the dnr's mismanagement at fault I work for the state of Wisconsin myself and I see the mismanagement in my field, on a daily basis I Now understand it with poor management comes poor practices with poor practices covers loss of Interest by the General Public now there are proposals to change the length of the season restrict crossbow hunting season after thousands of people invested and crossbows I expect nothing less than the DNR to do the right thing I am far from alone in my thoughts

The deer heard has been getting ravaged by the growing number of wolves the last few years, combine that with deep snow/harsher winters and you’re exactly where Sawyer County is at. Minimal deer population. As a private land hunter, I’ve seen the effect of what’s going on. You go from doe/decent buck population to next to nothing due to everyone shooting anything and everything they can because there’s nothing left out there. A new biologist needs to be brought in to really count the deer and see what the predator population has done. Depleted the herds to next to nothing, and then sit here and be told the deer are flourishing... This county needs help, and this 2020 proposal is an absolute joke. Get out and talk to the people in the county that actually live there, not the travelers.

the biggest issue is that antlerless tags are sold to everyone when they should be sold to residents only and also non resident licenses prices need to be increased dramatically. There are far too many non residents that buy antlerless tags and come here and stack deer up like cord wood because it is cheap for them to do so. Also the biggest reason for deer numbers being down all over the northern half of the state is because the wolf and bear population is getting far too high. we need to eliminate the point system for residents for bear tags and make only non residents apply for tags. and we need to get our wolf season back. I shouldn’t go out and see more wolf and bear sign than I do deer. and that is how it has been the last few years and its only getting worse.

Still concerned with the wolf population. No question, the wolf has been a factor in the deer population in Sawyer county. The deer are few and wolves have to eat, so I can’t blame the wolf for extremely poor wolf management. I also think baiting has been a factor. Most large bucks are harvested during the early bow season over a corn pile. Our hunting crew used to have 23 hunters, now we are down to two. No deer, so the others go elsewhere. When you walk a logging road for a 1/4 mile after it snowed two days before and you don’t see a track, something is wrong. I feel sorry for all the businesses that counted on hunters and now they are gone. I don’t dwell on killing a deer. I shot 1 deer in the last 10 years, but I would at least like to see some.

Not seeing very many deer at all. Seeing several wolf tracks and yes I know the difference from coyote. Seeing more wolves than ever before. Go to a buck only harvest and an application process for harvesting a doe. Get rid of "private" and "public" tags. Go back to deer unit designations like it was before. No antlerless tags free or bonus. While you are at it, go back to in person deer registration and back tags. Too much room for taking illegal bag of deer and expecting people to be honest and actually phone in registration. No youth hunts or holiday hunt. No antlerless tags until DNR can prove that there are enough deer left in the northern part of the state. Pay bounty for coyotes. You won’t do any of this probably so I should quit hunting.
Deer populations in Sawyer County on both private and public lands. Public lands surround our property and we get a good view of both. The deer populations are extremely low compared to previous years and seem to get lower every year. There is very little shooting (if any) anymore during season, and hunters do not flood the area as they use to do on opener. Local business's really feel it. We believe that this is due to antlerless harvest practices, extra deer seasons and also high wolf/bear populations. Our opinions on high wolf/bear populations and low deer populations have nothing to do with graph statistics, but all to do with what we see in the woods all year long. We believe the biggest reason is ALL wildlife management practices.

Great Survey! Thank you for letting me contribute my input. I live near Moose lake we have been seeing less bucks for the last three years as compared to the others. Very few trophies and the last two years not as many one and two year olds. I do work in the woods and do my field studies and I have not come across many predatory kills in the last three years. This past season in October before the cold snap I would see a healthy population of deer on my 16 cameras. After the cold snap it was the opposite very few deer on the cameras. What was more interesting different Elk were coming through the properties. I also had that grumpy bull Moose show up from time to time on the cameras. Thank you again.

Hi, have just a few items, (1) need to back to hunters choice for one reason, licenses go on sale at 10:00 am most people don’t have the opportunity to get a bonus for tag. I have tried the last couple of years to get one and there gone before I get done work. If you go back to the hunters choice everyone has the same chance to draw a tag. (2) I believe out of state Hunter are getting a gift by not having to pay the same amount as if I were to go to say il or la, if I have pay 411 in il than they should pay the same coming up here or 600 in la. They should pay 600 here. Last thing I believe the DNR should adopt a minimum point for bucks, you will see a healthier buck population in the long run.

In the Hayward area where I deer hunt is public land. We saw about the same amount of deer on our trail cameras prior to the start of the gun season (Oct‐Nov), as we did last year (2018); day and night. About a week before the opener the amount went down and only at night. After the season ended the few cameras we left out showed an increase of deer daytime movement. During the 2019 gun season, we saw significantly fewer deer and the trail cameras noted only nighttime movement. We did take two bucks (8pt and spike) and one doe. We attribute the lack of seeing deer and our success to the rut already being over, the snow events, and corn still standing in adjacent farm feeds; in that order.

The predator problem is great. There is very little control of the bear, wolf, or coyotes in our county. Ever since the Department opened up our county to many doe tags, and that followed by some of the most severe winters in the states history, our deer herd has never recovered. Fewer and fewer people are choosing to hunt now because some may go the entire season and not see one deer. It has happened in our camp and it has happened to many other groups also. Does produce fawns. Shot the does and decimate the deer herd. It’s really a pretty simple concept. Leave the does alone and your herd will increase and so will your license sales. No deer no license sales. Not exactly a special science.

All traditional WI deer hunting components need to be reinstated including back tags, registration of deer up to the Monday after the nine day deer season. Deer season needs to continue to start on the same nine day season as has happened. People want to continue the traditions that had made WI deer hunting a respected and cherished past time.

Awful. Just awful hunting. My two boys and I have decided that hunting in the Northwoods where we see more bear, coyotes, wolves and elk then we do deer is getting too tough on us. We will use the outdoors in another manner in which the DNR will not get our money. The DNR has not managed the deer population well. Too many predators feeding on the deer and yet they still allow antlerless tags, what a joke. Tough winter's, still more tags. Young hunter's, more tags and more seasons. I have an idea why don't you let me recycle my tag each year after I don’t shoot a deer that way I keep using my unfilled tag every year until I actually get an opportunity to shoot a deer.
CDAC only purports to value public input. The structure of the meetings does not allow question/answer format of any meaningful amount and it is painfully clear that the committee has it's agenda already planned and will not accept any suggestions from the floor. To have a goal of maintain is totally unrealistic when predators take almost as many deer as the hunters do. A suggestion to manage the forest areas of the unit differently from the ag areas (as it relates to antlerless quotas) was immediately discounted as impractical without any discussion allowed. These comments are meant to be constructive in nature in hope that the current system can be improved upon.

I own property inside the Flambeau Forest and hunted the area for 60 years. Normally I don’t see a lot of deer (typically 10 =/- in 8 days). This past season I didn't see a single deer. Activity on trail cameras was very low. No activity for two or three days at a time including nights. I did see 15 timber wolves. I know they are federally protected. However, I would like to know that the DNR is doing everything they can to get them de-listed. When the two hunting seasons were held several years ago, thinks seemed to be more in balance between the deer and the wolves. The wolf activity this past year was very high in my opinion, too many wolves for the area.

We have a hunting Camp on Moose Lake. We have harvested 2 Bucks in the last 9 years with 15-20 hunters each year. We have taken ZERO the last 2 seasons. We are not seeing deer at all even with organized drives like we used to. We do not harvest antlerless deer because the population is so low that we do not see deer period. We have a big beautiful hunting cabin called Whiskey Jack Camp that has turned into Camp No Deer. We feel this area should be a BUCKS ONLY UNIT for a few years to get the Whitetail population back. We see more ELK most days than we do deer. It is very demoralizing going deer hunting and not even seeing any deer period. NO DOE TAGS!!!!

Sawyer County is a mix of AG land and forest. The deer population is high in the AG areas compared to the forest areas. I’m sure you know that, just stating it is very prevalent here. I hunt paper company land primarily, but there are several areas a distance apart. Deer sign is light and has been since the winter of 2014. How to increase the population in the forest areas while thinning the heard in the AG areas is the problem. Neighbors and friends agree with my assessment. A few things to additionally consider is the logging which has occurred here at an increased rate the past few years and what the tribe members harvest. Yes, many hunt year round.

Deer are everywhere!!! They are healthy, fat, and it is green up all over the place!!! More permits for the public lands!!! Better access to all huntable lands, forest MFL gates need to be open!!! Early and longer season for the gun season!!! Hunt the rut not after they are done in late seasons!!!! Stop baiting and really go out and hunt not sit over a bait pile!!!! People just hunt bucks and wonder why there aren't any bucks and miss the big bucks as they are done before we start our late hunts!!! Get non hunting and not safe guns out of the woods, NO more than 3 shot clips, like duck hunting plugs!!! CDAC, its a good start!!!

I have hunted this unit consistently since I was a kid (active military service has since taken my away). I have only purchased one tag since I left, in which case I made a special trip home for gun season. The area was so desolate in places where we used to see large populations of deer, and nobody harvested a buck over 100 inches out of 3 different hunting groups. I decided I would not be coming back to WI to hunt anymore- it just wasn't worth the trip. Between predation and consistent over harvest, the herd has been dwindled down to dismal quantities. It would be nice to see buck tags limited to one per hunter per year.

Deer hunting over bait should banned in Sawyer County and throughout Wisconsin. Illegal baiting is wide spread where we hunt in south east Sawyer County. It is not uncommon to find while we are grouse hunting 200 pounds of corn in a single pile on public property. Often a mile or more from a public road. Allowing baiting to continue is not good for the hunting and is an invitation to spread CWD. Shooting deer over a bait pile is not hunting. What would Aldo Leopold say about baiting and shooting deer? END BAITING IN THE 2020 HUNTING SEASON. Baiting cannot end soon enough and never should have been allowed in Wisconsin.
8697 See a large discrepancy between the deer numbers in the Eastern and Western parts of the county (Ag area vs large forest). My hunting area is in the East and although the herd seems to be steady, it is fragile at best. Would like to see a better management system to deal with this situation. The old "Unit" plan failed as well as the unit extended south into agriculture land. Couple more comments.... although aggressive logging in the state and county forest areas we hunt has reshaped the forest it has given the deer some decent winter browse. Also, don't forget the deer herd in favor of the elk and wolves.

8698 There is a large public access property bordered by heilisng rd and pray road held by hedge fund. Each year the gates are locked since they purchased it which limits access. The DNR says you can walk in. This forces all to hunt the road edges an virtually leaves the middle untouched. The DNR should negotiate access and rd maintenance to allow hunting which will help disburse hunters. Additionally, the DNR provides Nuisance permits to the forest companies who log the property. If the companies get these tags, part of the condition for receipt of those tags should be that gates are left open for public access.

8699 This is my opinion as a avid bow hunter. Sawyer county has one of the worst buck age classes in the state.In the 2019 bow/gun season I did not see one buck over the age of 2 1/2. Yes our buck harvest was up but that is only because people are shooting all of the 1 and 2 year olds out of corn piles. I don’t know if CDAC has any control over this but I recommend the following: Point restrictions on antlered deer, no baiting, and one buck harvest per year total per person. License sales will continue to drop if we don’t protect the 1 and 2 year old bucks. 60% of DNR funds come from sales of tags not farmers.

8700 There are decent numbers of deer in the more agricultural part of the county but sparse numbers in the national forest area. what deer there are primarily found close to habitation where they get fed and dont have to worry as much about being eaten. I cover alot of miles in the national forest in spring and fall and the deer sign is pathetic. Decent sign close to cabin clusters and some of the more heavily timber managed public non national forest areas but the forest itself is in no position to support increased antlerless tags I urge the council recommend NO increase in antlerless tags for public land.

8701 We can not stockpile deer for the next year! Harvesting bucks every year for every license and not does, well what is left, does,does,does. Older bucks on my trail cam last year did not get harvested, a waste of a resource, we need a early season, closest to Dec. 15 weekend for 16 days every year which will level out harvest over the years and seasons, just a 4 days hunt this year with the weather, to short and late! Herd harvest is out of wack as it should be 50/50 buck to doe ratio, but you eliminate your bucks and keep your does. CDAC is doing a great job with all of its constraints

8702 I don’t believe the DNR is doing enough to manage the deer population in sawyer county and in the state of Wisconsin. The issue lies with the amount of antlerless tags given and the increasing predator population. That being said some ways to change this would be to increase the amount of bear tags given and up the amount of wolf tags given if not start a season for it. If I counted the times I’ve ran into wolves in the woods during the 9 day deer season I would run out of appendages. Overall the problem lays with the amount of antlerless tags given out and lack of bear and wolf tags.

8703 I see where red oak seedlings were a concern. The common practice of clear cutting forests should also be a concern. It is rare where select harvest is being done. I saw on several state owned lands all the red oak were removed and most of everything else just leaving an almost baron landscape. I think if you are going to allow clear cutting then eliminate the concern over the seedlings because the forest has already had the damage done to it. It will take a hundred or more years to have a mature forest with red oaks getting to the size they were before being clear cut.
For several years our trail cameras have shown many bucks in velvet and up until fall. Not very many does. A few years back we saw seven bucks in velvet at one time. None of them during deer season. When deer season comes around the bucks disappear and especially during the rut they seem to be gone. I think it’s because there aren’t a lot of does so they leave looking somewhere else. I think the number of seasons and licenses for those needs to decrease. And this would help this situation. And FYI, we have never seen nor heard wolves so I don’t blame them.

The main problem remains with deer hunting in Wisconsin and that is baiting and excessive baiting. The deer in much of Sawyer County have become nocturnal because they can wait until dark and go to bait piles and eat all the corn they need for their required food. There are deer, they are just very hard to hunt until bait is eliminated in the woods. I have never baited, but I have talked to hunters who have quit baiting, on their own, because the deer usually come well after dark and they are wasting their money on corn to feed them at night.

Started hunting Sawyer County 25 plus years ago because it had the highest percentage of trophy bucks in the books relative to open public lands. Try and find the last time a record book buck was harvested from Sawyer City. Good luck. Even in outdoor news paper no buck pictured north of hwy 8. Fewer and fewer deer equal fewer and fewer hunters equal less revenue for businesses and less young hunter recruitment. Wisconsin is killing the tradition. Need 3 years of grow the herd. Maybe even a rack size limit. Watch the hunters return after that!

Seasons are to long. Make it a one buck per person per season - any method of harvest. No special youth seasons. We have become a society of catching and killing instead of fishing and hunting. There is a difference! Antler size restrictions - ex. no buck can be harvested with 2-7 points. A spike buck or bucks with antlers 8 or more may be harvested. Shorten the season. September to Jan is, on called for. The deer body weight of today is much smaller than that of those harvested 20 years ago. What does your data tell you?

I believe what Sawyer County as well as Wisconsin needs is at least 3 points on one side for a buck to be harvested. Give the younger deer a chance to get to their potential. Also, Stop giving out so many doe tags for Sawyer County. I don’t think the Herd is as abundant as the CDAC believes. We also need to increase the non-resident price tags by 50% or possibly have some type of point system and only give out so many tags for the out of state hunters. I’d rather have my neighbor shoot a deer than someone from out of state.

I actually quit deer hunting and buying a license 3 years ago. The number of deer in the Sawyer County forest, has dropped to a level, that I felt it was irresponsible of me to harvest an animal. Every year I see more bear and wolf sign, than I do deer sign. I also believe that the DNR is irresponsible to have DMU set by county, instead of by land/vegetation type. Every farmer knows that different soils raise different amounts of crops, which is no different than forest vs. farm land raise different number of deer.

Thank you for giving me the opportunity to fill out this. The last page of questions was not worded well, as well as a other questions. For instance I seen 12 deer in the woods from September to end of November this year and last year I think I saw 20. 15 years ago I would see that many in a day! There is not much sign of deer, but man did I see some sandy size canine tracks in places. Since the Dnr started the “t zone hunts” in the 90’s the numbers of deer in the woods has dwindled each year!

Following the actions of Sawyer County’s CDAC for the past few years, it is clear that certain members have an agenda to reduce the herd due to crop damage or overbrowsing. These individuals have no business making decisions that impact the deer herd in Sawyer County. A quick read of the article in the Sawyer County Record regarding the first 2020 CDAC meeting will affirm this. I would like the CDAC committee to reconsider their initial 1400 quota and adopt last years quota of 1100. Thank you.

I would like to propose two changes to Wisconsin deer hunting. 1) major change - point restrictions. Pennsylvania put them in (at first it was met with resistance) but it has been accepted and has been very successful. 2) minor change - a flintlock only, late season (last deer season), buck or doe with any unused deer license purchased for that season. This allows hunters who did not have success in any other deer season (for whatever reason) one last chance to harvest a deer.
My area has dropped significantly in numbers, this includes bucks, does and new born. Definitely not like it was 7 or 8 years ago. I'd like to see buck only for 2 years. Give the deer populations a chance to grow. Last few years my family and friends won't even come up to hunt, they been going to southern Illinois and Missouri. That sucks because there not here to visit and hunt as a family. There main concern was very little deer sightings. I hope this helps. Thank you.

To me it seems like all the conservation that has been done for Sawyer county is worrying about the elk that were introduced in the area. I am an avid hunter and feel the deer herd has suffered since that introduction and will only get worse as more predators move into those areas. The biggest is theme wolf. We are just starting to see more sign of that predator moving back into our area. The elk may not suffer but the deer herd is going to suffer more than it already has.

If we keep giving out so many doe tags and keep making residents wait 7 years to get a beer tag when we have one of the top 5 highest black bear populations in the country. We have way too many wolves killing deer and the mountain lion population seems to be growing too and we do nothing to eliminate the high amount of predators we have. So I say back off on doe tags for that reason. And that isn’t easy for me to say as my family relies on eating several deer in a year.

I believe that deer baiting should go away. This would put the deer back into their normal state of activity like it was when I began to hunt the Northwoods many years ago. This would lead to true hunting and the ability to harvest deer in their natural state. I would also recommend that we stick to our normal annual 9-day gun season. This has been an annual tradition for many years and gives the true hunter plenty of time to harvest a deer if they are able.

I am strongly in support of all youth tags for anterless deer. This is the only way I can keep my children interested in coming up north. After 29 years of hunting in Sawyer, the anterless deer are all we see. I don’t care if I don't fill my tag, but the kids, enjoy the chance to maybe bag a doe or young buck. My brother has the same feelings as I do. We rent a house, support all the local bars and restaurants during the trips up scouting and during the hunt.

My thoughts. I placed a priority on someday having a piece of land in Sawyer county for hunting. Taxes on a piece of hunting property are considerable, especially after the initial cost of the property. Seeing a reasonable amount of deer over the course of a hunt is important for all hunters, but even more for our young hunters. We have seen wolves and believe they do have a significant impact on herd numbers. Open the wolf season and improve deer numbers.

In the areas of Sawyer County where we hunt, we had hunting groups around us who never saw a single deer the whole season. I know the weather was less than favorable for the season, but to not see a single deer? These are not Johnny come lately groups either, these are groups who have hunted in this area for decades and have always been quite successful. The number of deer sightings on trail cameras that were posted were significantly lower as well.

There are way to many Wolf for this area (ie) Log Creek. There are no deer to be had just check the registration numbers. Between the Wolf & Bear there are no deer to be had. I realize this type of comment carries little weight but the people reporting the numbers of said animals are not in the woods hunting & in my opinion have no concept of what has really been happening in the Log Creek Flambeau area herd wise for many years.

The amount of deer in the CNF has significantly dropped over the course of the last 5 years. Whether it be hunting pressure, or predation the numbers are lower than what is being estimated. I have personally seen the influx of gray wolves in this area, and deer kills from them. I do not believe there presence is being considered in the overall health/population of the deer heard in the northern part of Sawyer county.
This county is too big and has 2 different habitats to govern as 1. In the large forest portions, the deer herd needs to be increased. There is little to no browse pressure to warrant the increase of antlerless tags. Anyone who thinks the public-private separation of tags is working is not seeing the real picture. Until the large predator numbers are decreased, the herd numbers can not maintain in the large forest tracts.

I feel that with the high number of logging activity has affected deer population in many areas of Wisconsin. Also I feel that antlerless deer season should be no longer in effect. Also the irresponsible actions of the human population doesn't help matters either, with the use of pesticides and barbwire fencing etc. Dumping garbage and toxic materials in their environment is taking its toll also More patrolling!!!

There need to be tags available for the wolf. Deer numbers are so low lots of guys are going out of state to hunt. I am not impressed with the Wisconsin DNR. NO ANTLERLESS TAGS FOR THE NEXT 5 YEARS. The winters and predators have deer almost completely gone. We have been hunting the same area for generations... 1930s to be exact. We have seen the deer numbers over years... its honestly a joke now! Thank you.

I believe that the deer herd is in a decent place and would not like to see the Doe number of permits to go up. I would like to see all season dates stay consistent with the 2019 season. We are on the edge with deer numbers and any little change will cause large changes to the population. Its a delicate cycle and we are doing an OK job as it is. Please no permits or longer seasons

Ever since elk were introduced we are seeing less deer. And deforestation is extreme in this area. Really sad when you see more elk than deer. This used to be the go to place for people to come and hunt but not anymore. This area is the Flambeau river state forest. The DNR in this area is doing more for the elk than the deer. It’s a sin how they ruined such a beautiful place to hunt.

Our group has been gun hunting this area since 1974 and bow hunting since 1994. Last year was the 2nd time ever we didn’t shoot a deer. The last time was 1980. No Gun hunter in the group saw a buck. 6 of 12 gun hunters did not see a deer. 3 bow hunters hunted a total of 18 days during peak rut and saw 1 doe, and no bucks. You will NOT convince me that ANY does need to be harvested.

We need to ban baiting in order to get the deer herd healthy and moving naturally again. Time and again we see a lot of deer in the fall, until 2 weeks before gun season. At that point people are coming up here throwing out bait, rather than hunting in natural feeding areas. Also, more turkeys need to be hunted up here. They are competing quite heavily with deer for mast.

As primarily a bowhunter who spends a lot of time in the woods all year checking things out, scouting, working, hunting, etc, please ignore the yelling and whining of the short term 9day gun hunters. They have yelled so much in recent years, it's become a problem more than before and starting to influence potential decisions. Thank you for all the work you do.

I still see too many wolves in areas i hunt. Tracks in immediate area I hunted were evidence that not just one wolf was there. Finally, on the eve of my third day of gun hunting i saw a doe with her two fawns. Very, very skittish. I believe presence of wolves keep them on edge. This was the fewest number of deer tracks that I have seen for several years.

I strongly believe there should be a 1 deer harvest per hunter on public land. That includes bow and gun. There are not a lot deer in the Sawyer county forest. Our hunting group of 13 hunters recorded 100,000+ trail camera pictures last fall. So don't tell me i don't know what i'm talking about. Those pictures are all year around. cameras never come down.

Reduce the numbers of private and public antlerless tags. Please go back to in person registration of deer for bow and gun harvests. No Holiday antlerless hunts. End all bow season at Dec 31. Do not lengthen the gun season Do not employ earn a buck Leave all cross bow and reg bow seasons alone Please go back to having to display a back tag.
8733 In Sawyer County, not all the antler less tags are sold oftentimes. So why are so many offered? I don't think it's right that hunters can buy numerous permits if they are available. I know you have a formula so that the number of permits available will result in a harvest of 1400 but hunters should be limited to one antler less tag per season per unit.

8736 In my area the predation is significant to the fawn mortality. I would like to see an increase in bear harvest permits and the state bring back the wolf harvest population control permits each year. I have see many adult does with no fawns over the past 5 to 7 years and in turn I have not seen many adult bucks physically or on camera. Thank you

8735 I think about 500 antlerless deer tags is about the right number. I think their is to much pressure from wolfs,bears and humans. Wolf population is alot higher than you think up their. You also can see the wolf prints following the deer tracks in the snow and sand. Thank you for letting us help advise you with our hunting future on deer hunting.

8734 Too many wolves in Sawyer Co. last 4yrs! Our hunting party (7 hunters) in the last 3 years have seen more wolves than deer in the 9 day rifle seasons. This was in the have Winter area. Also bow hunting in the area around Stone Lake I have come across many wolf tracks than ever in the last 4 seasons. This has to be a problem that needs addressing!

8737 We - three of us - have been hunting in this DMU for over 40 years and we have been seeing fewer and fewer deer each of the last ten years. Last year we saw no deer during the nine day gun season and that has never happened before. It seems to us that this DMU has a seriously declining deer population, probably due to over harvesting.

8738 There needs to be a wolf season put in place I saw 5 separate wolf in all different locations! And I had a pack howling behind me after dark walking out of my stand its unbelievable why there isn't a season. And sooner or later people will be in danger also! I hope that you guys take this into consideration! Its getting ridiculous

8739 I believe whatever is done to manage the heard, should be based on the best info possible and if, as an example, something is banned or a quota is zero, that means zero for anyone’s hunt. Decisions related to revenue or increasing hunting participation, shouldn't play a role in it. It’s a part of the hunter learning process.

8740 You talked about predication issues but not specifically Wolves. There’s is an issue when you see more wolves than deer. Also you are worried about food sources for deer or damage of forests, but yet you bring back Elk? Too many elk in my opinion and not enough time dedicated to getting our deer back on public land

8741 Point restrictions on antlered deer is the only way to bring hunters back to the woods. This has worked very well in Pennsylvania and some parts of Michigan. The reason tag sales have dropped is due to a very young buck age structure in the northern half of the state. Protect the 1 and 2 year old bucks.

8742 I believe strongly that the DECREASE number of deer seen is due to the fact of the ever increasing wolf population! I have personally seen a steady decrease of deer after the introduction of the wolf. F.Y.I. back in the late 1980's one season I seen more wolves than I did deer! What does that say ???

8743 Deer population around Loretta, Wi growing, had several young deer thru winter. Deer looked healthy. Numbers need control with respect to winter severity and disease. This winter was mild but next may be rough. Road kill looks to be up and deer crossings frequented. The numbers could be above average.

8744 In my opinion I think there should be 2 bucks per hunter for bow and gun season with at least 3 points on one side with at least a 14.5” inside spread which is normally even with the ears. And 2 does per hunter for bow and gun season so a total of 8 deer per person for bow and gun season

8745 The deer population is much higher than you think! Stop playing guessing games with our deer population! We the hunters need more tags to control the herd! We the hunters shouldn’t have to be limited to one DMU to harvest our antlerless deer, our antlerless tag should be valid statewide!
Our deer numbers are low. Way too low. We need To do some thing around quality deer management. We also need to make sure that Hunter satisfaction is very high. I don’t think there’s a lot of damage to crops in backyard plants. As much as people think. Our deer numbers need to increase.

I believe catering to bow hunters is wrong, there is nothing wrong with crossbow hunters having the same season as now hunters. If anything the crossbow is more ethical than the now because of its speed. I believe there should be no doe tags given out so they can repopulate the herd.

In the last few seasons I’ve seen one small buck. Mainly doe’s on the private land I’ve had the opportunity to hunt. I know that’s not the experience of every hunter and that’s sometimes how a hunt goes. But I’ve predominantly seen doe’s in both the gun and muzzle loader seasons.

Go back to the old management system, trying to manage, by county makes no sense. But that's what you get when you let an "expert" from Texas decide what will work in Wisconsin. Scrap the whole thing and start over. Management units by land type/use, would be a better idea.

Allow shooting coyotes during the gun season CHANGE youth hunt dates. The deer go nocturnal and this affects the bow season thru the end of November More aggressive enforcement of baiting with corn. There are literally areas I find near the state forest I name Corn beach...

There are plenty of deer if you do a bit of scouting. Though there are always areas with few deer, the hunt should be successful with plenty of deer left for seed. If the weather is like last year, numbers will again be suppressed, both in kill and hunter hours in the woods.

The goal for this unit should be to increase the population not just maintain. Far too few deer on the public lands. Also, the number of elk are way too many! The elk are driving the deer out of their normal habitats. The goal for the elk population should be to REDUCE.

Since I’ve been hunting in this unit, there seems to be an excessive amount of baiting on adjacent private land to the public land that changes the normal deer behavior in these areas. I strongly believe baiting should not be allowed so the deer can behave normally.

I am in Sawyer county 40 % of the year and I travel through out the county for work. I personally seen way less deer in 2019 and many of my clients who are full time residents of the county said the same thing. Way less deer than before and less than they want.

the overall deer population in Northern WI has dramatically dropped in the last 10 years. Dating back to the late 90s, this was prime area, now its hard to find a mature buck. I support not only no doe harvest but also a 1 buck per hunter per year for 3 years.

My group of 3 hunters believes the late season likely contributed to our seeing so few deer. Trail cams showed more activity earlier. Also, we hunt near Radisson and believe we heard there was some very severe cold in late winter 2019 around Winter, WI.

I know CWD has not been found in Sawyer County, but I would like to see more CWD Testing sites in Sawyer County. I would also like to see more advertising in Sawyer County from the local DNR offices to encourage hunters to have their deer tested for CWD.

Consider deer licenses that are valid for either antlered or antlerless animals and not specifically one or the other. Many hunters will only take a trophy and others simply want to provide meat for the family. Let the hunter choose what they harvest.

No baiting should be allowed in this unit. Deer should move more naturally when looking for food sources. Baiting has made that a problem and more difficult for hunters in my opinion. Too much baiting is happening on public land in the Flambeau forest.
3 of us hunted for 63 hours total each. We did not see a single deer, buck or Doe, while hunting. There was sign, probably night activity of feeding and movement. This is the 1st time this has happened in over 35 years of hunting in the area.

Deer are very unevenly distributed in the county. Decent numbers in the farmland areas. The national forest areas have very poor numbers - most deer are found close to buildings where they are typically being fed and less pressure from wolves.

Dramatic decrease in deer on both our properties compared to 2018. Each property is approximately 20 miles apart and both were extremely poor this past season. One property had daily wolf sightings and the other had very little deer sign.

Keep deer numbers low enough so there is a strong healthy herd. Counties are not the correct units to gauge hunting in. Ecosystem ranges are a more correct unit until we find something better. Large monetary fines for any deer feeding.

Gun hunter should only have the 9 day hunt. Crossbows should go back to the disabled and elderly. There never should of been buck only in Sawyer co. Go back to the way hunting was years ago. Too many changes and no respect for the animal.

With all the t zone and earn a buck hunts in the past in Sawyer county it really ruined it. When I first started hunting it was nothing to see 20+ deer a day. Know your lucky to see 20 all season. I hunt public and private land.

I believe the deer numbers in this area are still very low from the many doe permits that were givin from from 90's to early to mid 2000's. Wolves and bears have also been a problem along with some bad winters in that area.

I would like to see baiting with corn outlawed. The corn starts showing up in the woods a week or two before season and the deer habits change significantly. Which I believe hurts the real Hunter not the corn pile sitters.

For the 2019 deer season I saw a lot of deer damage to hardwood tree seedling in the maple/oak stands. There wasn’t many seedling that were not crewed on. Also I saw a lot of acorn feeding (scrapes in snow) by the deer.

Ban Baiting! Now! And Forever! Deer hunting in the north woods will never be the same as it used to be until that happens. Unless baiting is banned soon, I will no longer be a deer hunter in Wisconsin. Thank You.

Lots of shooting heard on Private land about 15 to 45 minutes after shooting hours in the area around Winter. There must be a high % of deer harvested over bait piles after shooting hours. Very frustrating.

We have a summer home in Sawyer county and have deer hunted this county in the state for over 40 years we support protecting this resource for future generations to enjoy Thank you Concerned property owner.

Please do away with the crossbows or at least not let them hunt the rut...too many bucks getting shot with them. Always allow junior hunters antlerless tags in any county...we need the kids! Thank you.

There ARE hardly ANY deer where I hunt. Wolves, Bears, and even Cougars are killing them. Start killing more Bears and Wolves.

The info provided only addresses antlerless issues. There have been discussions regarding extending the gun season and limiting the crossbow season. Are these changes still being considered?

While I have seen a small improvement in the number of deer in this area the numbers are still very low in the forested areas. I see very little sign through the season and very few deer.

Cdw testing needs to be free and easier and more dispersed like in Colorado. Do a better study on it. Check with Dave Gustafson OSMP Ranger City of Boulder to learn about that study.

Way too many wolves. Also too many bear. Please issue more bear tags to reduce the fawn mortality rate so we can get the herd back up in line with where it should be.
The Bear population in the Exeland area needs to be addressed and factored into these recommendations. As well as the Blue Hills/ Meteor area as a possible sub unit.

Baiting on public land is my number one concern for the 2020 harvest. I watched people carry in bags of deer corn with ARs into public land and it's upsetting.

What needs to happen across the state is ban all baiting across the board including feeding that is what we should be talking about not the other stuff

I would like to see an option for hunting bear during gun deer season. Is permit is given hunter can wait to hunt during deer season where hides prime.

Still need to provide protection for the herd in the National Forest region. Too many predators. Eliminate baiting and feeding to disperse the herd.

Our hunting group still believes there are too many wolves and other predators out there killing the deer. Way to many antlerless permits given out.

Our deer population would be a lot different if the people in charge of the bear population and wolf population would just listen to deer hunters.

I'd like to see the gun season remain the same...as a traditional 9 day season with muzzle loader season immediately following the gun season.

I would like to see the crossbow season remain just the way it has been. No changes to the season length. Especially in the northern forest.

I am hanging it up. Not seen a deer either sex in 3 years. Going out west until it is managed better. Too accessible for out of staters.

Please advise me personally when the antlerless permits will be available. I'm old and I missed my chance last year. I need some meat...

We need a wolf season, see more wolf tracks and wolves than deer. Your population estimate for wolves is pathetic. Way under estimated.

Walking around this spring it concerns me the amount of wolf and coyote scat I felt are out of control and the few deer I actually saw.

Seeing a lot fewer deer over the years in Sawyer county both in season and out of season. Might this be due to quotas being too high?

I went for a ride yesterday and saw 103 deer in one hour. About what I would have expected. This was afternoon to near dark.

It seems the DNR is more concerned with the Elk and Wolf population and habitat in Sawyer Co than the deep population

The wolves, coyote, and bear population is putting to much pressure on the deer herd. How can the deer come back??

More predator control! De-list protection of wolves, more bear tags! ESPECIALLY KEEP DEER GUN SEASON ALONE!!!!!!

need more bear permits, more aggressive wolf controls, less doe permits, keep the nine day season in tack.

I have two fields down the road i quit counting deer when i hit 100. There are alot more does then bucks

I would hope that in the near future we would return to backtags and physical in person registration

Don’t know how many years I will be able to hunt yet but I do know I won’t bother on late openings
Sawyer and Ashland counties should be buck only on public lands to help population in those areas.

Would like to see a 2 -3 year buck only in Sawyer northern forest. Let the deer population grow!

Let us kill wolves and stop giving out so many doe tags. Let's build the population back up.

Make the wolves go away. There killing way to many deer. The hunting has sucked since 2008.

The deer herd in the area I hunt is greatly influenced by the abundant wolf population.

Ag tags in our area are avabile if youcan get hunters to shoot does not many will hunt

I feel deer numbers and deer hunting is slightly less than normal now in Sawyer county. 

I am not in favor of elongated hunting seasons. I favor the standard 9 day gun season.

I am very concerned with predator impart on the deer population in this area.

Not seeing any deer is frustrating. 4 hunters all experienced. Took 1 deer.

Hunting in northern Wisconsin (north of highway 8) is a joke now a days!

Saw less deer and more wolf tracks. Recommend opening season on wolves.

I'm in favour of a fork horn law which in turn will grow bigger bucks .

The increase in the number wolves in our are has reduced deer numbers.

Sawyer Co should be buck only. Except for youth. 3 years in a row.

Same old song. 3 hunters, 96hrs in the woods and 0 deer sightings.

I saw more wolves during the 2019 deer season then I did deer.

Season should be backed up one week to provide more field time.

I own a cabin cabin in this unit and hunt this county a lot

I would like to see baiting deer and bear eliminated.

The area I hunt had more Wolf tracks than deer tracks

We should have a 4-point minimum on one side 4 bucks

NEED TO OUTLAW ALL BAITING EXCEPT HEALTHY FOOD PLOTS

We need to ban baiting and go back to real hunting

Favor longer season for gun. No antlerless hunt

I would like to see a zero harvest for our elk .

Please stop harvesting does... your ruining it

Wolf and bear population needs to be addressed.

Thank you for your service to our county

I would like to see a ban on baiting.

Outlaw deer baiting and deer feeding.

I would like to see an early season

Few deer on public land.

STOP THE BAITING !!!!!!!!

Open up wolf seasons

Shoot more wolves.

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

908 forms were submitted for this unit.

**Section 1: Information about who provided the input.**

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 352
   - I visit this unit for non-hunting purposes: 181
   - I hunt in this unit: 868
   - General interest in this unit: 136

   The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 833
   - Bow: 493
   - Crossbow: 416
   - Muzzleloader: 373

3. How many years have you hunted deer in this unit?
   - Minimum: 0
   - Average: 25.28
   - Maximum: 67

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 669
   - Mostly Private Land: 100
   - Public and Private Land About Equally: 41
   - Mostly Public Land: 15
   - Exclusively Public Land: 38
   - I did not hunt in this unit last year: 5

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 27
   - Not too crowded: 68
   - Neither crowded nor un-crowded: 37
   - Somewhat crowded: 26
   - Very crowded: 17
   - Not applicable: 19

**Section 2: Perceptions about the number of deer in the unit.**

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 181
   - Fewer: 324
   - Same: 305
   - More: 59
   - Many More: 29
   - Unsure: 10

**Section 3: Feedback on the CDAC’s 2020 preliminary recommendations**

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th>The Antlerless Quota is...</th>
<th>Much Too Low</th>
<th>Too Low</th>
<th>About Right</th>

Shawano, Central Farmland
Section 3 (continued): Feedback on the CDAC’s 2020 preliminary recommendations

8. In your opinion, how would you rate the number of $12 Bonus Antlerless Harvest Authorizations recommended for this unit by the CDAC for the 2020 season?

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
- Implement an ANTLERLESS HOLIDAY HUNT: Support 358, Oppose 459, Unsure 91
- EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: Support 411, Oppose 402, Unsure 92
- Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: Support 96, Oppose 763, Unsure 49

If a Zero Quota (buck only season) is adopted...
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? VALID NOT VALID Unsure Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit? Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

</table>
Hello, To start, I'm a passionate whitetail hunter. I hunt roughly 75.0% of the whitetail season, to fill my freezer and to chase that trophy buck. All year round myself and roughly 20-30 other hunters communicate, talking about anything and everything hunting. As an outsider looking in, below is my thoughts and opinions. Personally I believe Shawano County is one of the few counties heading down the right path. I personally don't agree with the current deer per sq mile in Shawano County. 15 years ago, I'd see min of 10 deer a night. in 2019, I saw maybe 5 a night. Me and my family own 240 total acres in Shawano, this land is 100.0% focused around deer hunting. When it comes to providing additional antlerless deer tags, will you increase your antlerless deer kill, sure maybe. As an avid whitetail hunter, I try to harvest 2 deer a year, because that what me and my family consume in roughly one calendar year. If you gave me 1 - 2 tags, Ill try and fill them. If you give me 3 - 10 tags, I'll try to fill 1 - 2 of those tags. How do you kill more deer..... more deer hunters. How do you get more deer hunters. That's a tricky question. The younger generation enjoys, video games, computer time, sports, activities with there friends, etc. Along with that, the people that are not real serious about hunting but enjoy it, are backing off because everyone's lives are getting more congested with work/activities. Younger kids will NOT become interested in a sport, unless there's action. Less deer, equals less actions, less deer may also mean smaller/younger whitetails. The world of hunting is evolving, we need to evolve with it. Adults and kids watch hunting shows on TV, YouTube, Facebook, etc., people are killing big bucks. Everyone wants to kill bigger more mature deer. Example: if you're a golfer, are you content shooting a 50 in 9 holes, or do you continue to try and get better. Letting kids do this youth hunt from 0 - 15, is laziness on our side and false advertising. Hunting before to much pressure with a gun, during warmer weather. Then you expect that same kid to enjoy hunting mid-late November in the cold, where he/she may not even see a deer. I appreciate everything we have hear in Shawano County, but we should continue to make it better. I don't know everything that goes on and by no means do I have all the answers. My thoughts on the future: - Less tag sales equals less DNR funding and less deer harvested. - Increase in tag sales equals greater DNR funding along with more opportunity for deer harvest per year. - A more mature whitetail herd will increase license sales/hunter interest. How do you get that, maybe an antler restriction. That'd force your hunters to harvest antlerless deer, while they wait for that buck that has 4 points on one side, per say. - As the whitetails become more mature, WI will be more of a destination for out of state hunters. More out of state hunters equals more out of state money to our Wisconsin business's. - Increase out of state license fees - Predator control One final thought to consider. Crossbows/crossbow season, I firmly believe this season should be restricted excluding older individuals and individuals with disabilities. The amount a deer wounded and/or poorly hit, which will kill the deer, is going to increase significantly. By poorly hit, I'm considering that deer that are not recovered by a hunter. Crossbow manufacturer's are advertising these bows shooting out to 100 yards. People WILL be taking these shots. Majority of the crossbow hunters are people that were rarely successful with a compound bow. Meaning they switched to give them an advantage, and when manufacturer's say they can shoot accurate out to 100 yards. You'd be lying to yourself, if you didn't think people were doing to try this. Your ethical hunters will be ethical, no matter what. Unfortunately, the world isn't full of ethical people. I know lots a hunters that have taken ridiculous/unethical shots with a crossbow, if these few people I know are doing it, it's happening more than you think. I hope you appreciate my feedback, as this is a topic I live for.
I understand the management of deer is essential and a touchy subject and a hard one to control and hard to make everyone. I understand that there is multiple demographics of people with valued opinions and necessities. 1. Farmers worried about crops 2. Small business owners who depend on hunting tourism 3. Trophy hunters 4. Meat hunters 5. Meat/hobby hunters Either way people have a lot of money stock into this no matter what there position is so a happy compromise for everyone is a necessity. I believe the quota of 2 doe and one buck tag for bow/crossbow and 2 doe and one buck for rifle is a happy medium. There is no reason for one person to be able to shoot 8+ deer throughout the season is reasonable a family of four should not be able to legally shoot 30 some deer. That is not using a resource that is simply disrespecting a resource. That is just unnecessary. On the opposite end there is no way a land owner should be put in the predicament that they cannot shoot a deer or a buck on there land certain years when they have hundreds of thousands of dollars and tax money stuck into it every year. They should always be allowed the chance to shoot der on land they pay for and pay taxes on. I also agree for farmers that crop damage tags were a good thing, and a necessity. It also truly is a shame that the land in the northern half of the state is not what it once was. What is the reason for the significant decline in the deer population. I could be like everyone else and blame the "W" word but I will not jump to conclusions like everyone else. As far as the deer seasons go I think the lengths are perfect. 2 months of bow season 2 week of a firearm season followed by one month of a bow season. The talks of extending the gun season is not the way to go "in my opinion" I am not sure of the statistics but I know I have to be close so please excuse me if I’m a little off. 75% of the deer shot during the rifle season are shot during the first 2 days and I would say 75% of the hunters only sit during the first 3 days. after that everyone is done hunting and quite frankly I would be to if I went up to the northern counties and seen a flash of a deer the first two days. The 19 day gun season absolutely will not increase tourism as 90% of people only are able to set a week or so off to the side for hunting, and only a certain amount of money each year so they cant burn it up multiple weekends. Everyone still spends there allotted amount of time and money, and 90% of people will not go after the first two weekends. With all of this being said I think the biggest thing that needs to be done is the predator control in the Northwoods. (I do not live in the Northwoods so It is not a influenced opinion) The only thing they have up there is snowmobiling, hunting, fishing, and forestry. Something has obviously influenced the amount of deer up there, and I don’t believe it is to hared to realize what it is. The fact that there isn’t some sort of a predator season is each year is beyond me. I understand that they deserve to be here just as much as we do and they truly are an awesome creature that needs to stay in the area. But they do need to be managed. As our ancestors managed them on there own prior to all of these new laws, but I do think regulations and a form of law are a necessity to keep this under control. Hopefully some way a regulated action can be put in place.
In 2019, the amount of deer seen was less than the previous years. I feel fortunate to be able to hunt private land, even though our property is a small timbered area that is approx. 10 acres. It is bow hunted only, even during the 9 day gun season. We have seen enough deer to continue heading back into the woods each season. Our property is located just off the Menominee Indian reservation, so to have hunters with a pocket full of antlerless tags during both archery and gun seasons, along with folks hunting on the Reservation, it is becoming harder to harvest as well as seeing any amount of deer in our 10 acre plot. By putting a blanket amount of Antlerless tags in the county, I feel that there is a chance that you put even more hunting pressure (harvesting) in the areas that are maybe not as populated as other areas. Also, getting property access to hunt is becoming much harder to the hunter without deep money pockets. I haven’t hunted public property for many years in the county, so can’t say personally how pressured those public tracts are hunted. I think that to be better managed in the state, every county needs to be broken down into populated areas. Then you would be putting the antlerless tag pressure where it really needs to be. You would then take the pressure away from lower populated areas of the county. I grew up hunting in a group that chose not to shoot an antlerless deer. A trophy buck was a legal buck of a 3” horn or larger. I have many horn mounts that are scattered in my home that are of 1 1/2 year bucks. I still feel that way 48 years later, but do realize that some folks don’t mind shooting an antlerless deer. I just would like to see the antlerless permit pressure put in the areas of the county that are really considered overpopulated, not just have a blanket amount of tags for the county. 6 extra tags last year! I don’t know of any person that chose to fill those tags to fill all 6 antlerless. I feel that 4 extra tags are still to much, but remember, we only hunt on 10 acres. Thx for listening.

I hunt deer in Shawano County only and only on public lands, Navarino Wildlife Area and Wolf River Bottoms. Before they had the Earn-a-Buck seasons in the public lands I could definitely see the effects of too high of deer density with the undergrowth and tree regeneration. There were areas that would not grow in the logged off areas. That has turned around as the deer numbers dropped. There were years then that myself, my sons and my brother and his son would use all our free antlerless tags that were sparsely given out. There are many days now that I never see a deer and we hunt them hard. We are happy to each get at least one deer per person now and sometimes we’ll get a couple extra. Not last year. Out of 5 people we got 5 deer, my brother took a buck and a doe, both with a bow. I took a buck with the gun and only had one chance with the bow at a fawn and passed, my son never had a chance, but only hunted with the gun. My nephew took a buck with the gun and a doe with the bow, my buddy took nothing and only hunted with a bow. The tree regeneration is good on the public lands and most of the deer we see is on land close to the borders of private lands. I drive around Shawano County and see many private lands that have a definite browse height on trees along their farm fields. The private land owners are the ones that need to step it up on the doe harvest. I haven’t a clue on how to get the land owners to shoot more does, possibly an earn a buck on private lands only and making shooting a doe on public lands illegal. The only reason I say that is because during the Earn-a-Buck seasons I was told many times by land owners they were hunting public lands for does because they didn’t feel the need to shoot does on their lands. I found many bucks lying dead during the Earn-a-Buck seasons, some even gutted, so I really do not support a doe only season. Public and private lands need to be better managed separately, I am not sure how unless shorter public seasons are implemented. Thank you.
Leave the seasons alone they are working fine! If you take away the crossbow season and change it, it would mean less hunting Opportunities for my kids to hunt they are young and unable to use a compound due to the weight restrictions! Its bad enough that there is no baiting and its makes it harder for kids to get deer in range to get one so now to limit the season and make it shorter I could see my kids not going at all due to the frustration of not being able to get one in range and to have less opportunity would ruin them! As far as rifle season the 9 days is plenty of time to use a rifle to kill a deer and if that dont work you have 10 more days to use a muzzleloader! The problem is that people are only out there to hunt for horns and not meat so a longer season wont kill more deer its to make the “horn hunter” have more time to wait for their big buck! I hunt everyday all day and have no problem getting my doe tag filled and also shooting a nice buck and yes I do practice QDM most years I don’t shoot a buck with bow or gun but I would rather shoot doe’s help control the population! Longer season not the answer! Now for the holiday hunt. In my opinion I think that is ridiculous that were even considering it! I have seen buck shed antlers the first part of December and also seen bucks with antlers in February and to have a holiday hunt that late in the year could result in shooting a shed antler buck! If people cant kill deer in the designated seasons we have already then they maybe need to spend more time in the woods or think about not hunting just the trophy bucks! I sat in the phone conference in april and listened to the comments made some have valid points and some are just ridiculous! Instead of longer and more season maybe reintroduce the baiting again people would be able to kill more deer and help keep the heard down! I don’t see that the heard is overpopulated but the board does! Yes I own land and hunt in western shawano county that they are talking about!

In most parts of Shawano County, deer numbers are higher than the land can support. Over browsing is a major problem in most of this area. With that being said, the quality and age structure for deer (particularly antlered deer) is poor at best. I believe that most landowners are doing their part in harvesting more antlerless deer than ever before but there is still some room for improvement. Additionally, I believe that the DNR and CDAC should put more emphasis on creating an environment that is more conducive to improving buck age structure rather than harvesting antlerless deer. I would like to see some type of antler restrictions (i.e. 4 points on one side). This would protect most 1.5 year old bucks which would be a good starting point. Keep in mind, the better quality bucks that are in the area, the better the hunter participation will be and also new hunter recruitment. I would also like to see more public lands in this area. I understand that a lot of incentives already exist to make this happen (FCL/MFL Open, etc.) but more needs to be done in this regard. As someone who has their property enrolled in MFL Closed, it would be nice if more emphasis was put on improving wildlife habitat within the program rather than managing land for boards per foot. This would drastically help to support the higher deer numbers in the area due to the fact that the MFL program is so popular. It would also improve buck age structure as it would help create security cover so the deer don’t get harvested and can advance in age. Currently, MFL lands are typically wide open timber that doesn’t have enough browse (stems per acre) or cover for the high deer numbers. In other words, the MFL program contributes to poor herd health. Could there be a new tax advantaged program created that incentivizes herd health and manages the land for wildlife rather than boards per foot (other states have them including CRP programs)? Just a few things to think about.
I personally believe that the deer numbers are not correct. I have 280 acres that I hunt in western Shawano County that is supposed to be prime. We haven’t seen deer numbers in awhile. Also I talk to many people that are in the woods a lot and most people seem to agree the numbers aren’t there. You are always going to have select parcels with a lot of deer. When a farmer owns 500 acres or the guy in Tigerton with 700 acres trying to grow a 180 inch plus buck to shoot how are you supposed to control those numbers when they allow no hunters. The people that are suffering are the areas with small tracts of land and everyone is shooting does. Next thing you know those areas are running out of deer. It takes away the fun of the sport seeing nothing and I’m not one that needs to go out and kill everything but do like some meat in the freezer. I feel like the land that I mainly Hunt never recovered from the previous earn a bucks years ago. I am personally watching people that have hunted for 40 and 50 plus years that are totally losing everything for it with all the extra seasons. I think it’s time to just get back to the basics of normal seasons take the days off before gun season. If people want the extra chance at a deer I think the holiday hunt is perfect. If you struck out all year in general deer are pretty easy to pattern that time of the year. Also you can see just how many deer made it and have that last chance to manage the heard. One last thing I’ve put a lot of thought into. The youth hunt. I was always a fan but this past year I had a new view. After watching my lil cousin shoot a buck during gun hunting and the smile with everyone. A big part of the hunt the group you do it with. I think that almost meant as much as shooting the buck. The build up of opening night and waiting all those years means. Just seen a new perspective this year and might be something to think about.

A fundamental outside activity of WI residents is whitetail deer hunting. The number of WI hunters is sadly waning annually due to increasing costs, lack or outdoor enthusiasm, family tradition breakdown, etc. My family and I enjoy both bow/crossbow and rifle seasons year in and year out. I am not in favor of restricting the crossbow season to anything less than regular bow season (Sep-Nov and post gun season is great). I have gone plenty of years without bagging a deer during archery season so I don’t believe the deer herd is too low. The current/traditional coinciding bow/crossbow seasons allows for all 3 living generations to enjoy the hunting season and WI outdoors the way it was intended to be as an annual family event. Older hunters need to use crossbows and spend time with their children and grandchildren appreciating these outdoor traditions together. Once the family event is gone this sport will die! As is tradition, bow/crossbow seasons need to remain from September through the late November whitetail rut. If you restrict whitetail hunting during the rut you will cut hunters out of the most enjoyable and rewarding time of the season. The thrill is in the chase and observing the whitetail in its natural setting performing their natural breeding rituals. This is awesome to watch! Bagging a deer is just icing on the cake! Please don’t deprive hunters of this special WI annual experience. For those lucky enough to own private land, these proposed changes would drop the value of their land in my opinion. I am not a proud land owner yet but, I intend to be in the future me and my family. Just please leave a good thing alone!

My family has owned property in Southwest Shawano county for over 60 years. I’ve hunted on this same property the past 38 seasons. The land is about 50% cropland and that is rented for agricultural purposes. Over that time, the success rate for shooting a deer during the fall gun season in November has been spotty at best. Typically once the crops are harvested the deer movement patterns change drastically. However, we’ve seen the numbers of deer sighted in summer and early fall increase significantly over the past couple of years to where we have had to look for crop damage tags to help manage the population. Additionally, tree regeneration patterns for some of the wooded areas on our property has been almost non-existent due to severe damage by the deer. This year, the deer sightings on the open fields has been unbelievably high and we will need to once again look to do some harvesting of the deer using the crop tags before the damage is too costly. To help control the deer population in my area, I’m all for extended/additional gun and archery seasons, as I think the motivation to shoot the deer during the legal seasons in fall is much more popular with hunters than shooting for crop tags in 80 degree+ temps in July, August and September. I feel that if we are going to tell people we have a deer problem and need to do a better job managing that population - which is what you’re doing by offering the 4 antlerless tags with every license - we need to give the hunters incentive and extended legal shooting times to accomplish that.
I strongly oppose the chance that Shawano county be included in a Holiday hunt in 2020. I don't think deer numbers are strong enough to handle the amount of antlerless harvest permits that have been issued over the past few years. Even the decrease to 4 free tags is still too many in my opinion. I feel two free tags with each license sold would be sufficient. I see carcasses that have plenty of edible meat thrown away each year. With so many harvest authorizations, people take the choice or easier to remove cuts of meat and discard the rest and just go shoot another one or two, or SIX!!! I listened to the Shawano county CDAC meeting on the phone. One of the gentlemen on the committee stated he was in favor of the Holiday hunt and he brought the motion to recommend Shawano county be included in the holiday hunt in 2020. He stated that some people are concerned about bucks that have lost their antlers already, being killed during this hunt. He stated that was not a credible excuse as he'd seen bucks still carrying their antlers as late as March/April. I myself have seen that also but I've also seen (and have photos of) bucks that have already shed their antlers by Christmas, even the 19th or 20th of December, I live and hunt in western Shawano county where the committee talked a lot about "too many deer". I disagree with this opinion and would ask that the free authorizations be reduced to two per license and to NOT have a holiday hunt or extend the archery/crossbow season. Thank You.

The DNR wildlife biologist said that the deer herd is out of balance with the habitat and I agree. So why are we trying to maintain the current size of the herd? “Maintaining the herd” is irresponsible when it is out of balance with the habitat. I don’t care if you had previously set the “maintain” goal as a three year goal. The goal should be decrease. I think most hunters just want to shoot a buck and they don’t really care about the other 360 days of the year when the deer struggle to find enough to eat. So we suffer with smaller bucks and fewer fawns. Discussing how many tags to offer is silly when such a small percentage of the tags are actually purchased or filled. I thought six free tags was a step in the right direction. I suggest unlimited free tags and eliminate the bonus tags. I don’t think the herd will disappear and hunters will not shoot more deer just because there are more tags available. If the harvest approaches a reasonable herd size, then restricted tags might make sense again. Very few hunters will ever say that there are too many deer regardless of how many there are. They base their opinion on what they see from their stand, not very scientific. The sturgeon population is not measured by sitting on a dock and counting fish. Now is the time to begin managing the herd appropriately, before CWD causes more hunters to stay home.

This past deer gun season was probably the worst season on our land in 27 years of ownership. Myself sitting the first 3 days from dawn till dark didn’t see one deer, that’s a first. Weather for the rest of the season surely messed up the rest of the season, couldn’t even go up after Thanksgiving. Even through the bow season my sons and grandson didn’t see deer like we used to see. On our land around Bowler and Gresham area hunting hasn’t been the same since days of T-zones and EAB. For some years now no crop damage tags in Townships of Bartelme, Red Springs, Seneca, Herman, Richmond, Belleplaine, Pella, Almon, Hutchins, and Aniwa, none even in Navarino. Two in Grant, one in Morris, none in Fairbanks and Germania. We are not having that many crop damage complaints. We also have relatives in the Gresham area, all farmers with no problem with deer, so lets not get overboard with permits and holiday hunts. My main complaint is if you put in place a holiday hunt in end of December, which is still my prime bow, now crossbow hunting, open the season like other zones which extend the season to January 31, like Oconto county for one, farther north than Shawano Co, when the holiday season is implemented. Extending the season has nothing to do with snowmobile season, It’s only fair we get the same chance as other zones have. Thanks.
We own Property that borders Shawano county, and some that is in Shawano County. The fact that Langlade is closer to a reasonable doe harvest number. Versus Shawano County which has an unreal amount of doe tags is very frustrating to us. We have neighbors who feel that is necessary to kill every deer They see. Because of the fact that Shawano county has so many doe tags, and that some people are unscrupulous and will call in one shot in Langle County and register it as a shot in Shawano county is very much hurting the deer population in our area. I will leave the same message in the Langlade county page as I own property there too. But the astronomical number of tags given in Shawano county is very much hurting our deer herd. On top of this the cross bow hunters need to have a limited length of season. You have created an extra season for lazy hunters in our state. These people only do it because it is easy and not because they want to hunt seriously. We have had a large number of increased wounded deer by people who don’t take the time To track an animal that has been wounded. The mortality of deer wounded by crossbows is sickening in our area. It’s great that you are introducing more people to hunting, but the means by which it is done is hurting the normal hunters attitude.

Based on personal observation and several email conversations with a DNR wildlife biologist, It is my opinion one of our largest problems regarding deer numbers in the Central Farmland zone is due to the lack of Public land and the amount of private land owners that are unwilling to harvest does. Even though the count per square mile may be high in certain areas, in many others it is very low. Most of the hunters that I have discussed this with feel the same way I do and that we are being punished because of the private land owners that are unwilling to harvest does. While I understand the (6) deer per tag last year was to prove a point, in our opinion it only made matters worse. Areas that already struggle with deer numbers have many landowners that have no problem shooting all the deer they see and yet the numbers per square mile may still climb because of the land owners that will not shoot does. While I do understand this is a difficult problem and that crop damage and car/deer accidents in the areas with high deer numbers is a costly problem, giving out multiple antlerless tags is not the answer. Maybe earn a buck or some type of training/incentive program for those land owners unwilling to harvest does. Just a thought. Thanks

As always public land is hit much harder as far as hunting pressure/antlerless kill. This is esp true in Shawano County where there is limited public lands. I believe fawn mortality is due mainly to predators. Black bears are much more common than they used to be as well as a large coyote population. Wolves are also new on the scene but their numbers are relatively low in relation to the deer population in Shawano. The predator population has definitely increased since I started hunting. One reason is the reduction in trapping which has benefited coyotes and bobcats esp. Most areas of the county have plenty of forage for the deer over winter, standing corn etc. In the areas I hunt white cedar has and is pioneering out with little browse damage most years. I'm a Forester and cedar needs full sunlight and no hardwood competition in order to regenerate. There are areas of the county where this is not true, esp some western areas of the county. These are larger ownership’s with the result in reduced hunting pressure and extremely high deer numbers. There is also a higher wooded to ag land ratio. Not sure how your going to incentive these landowners to harvest more deer - and they need to, CWD is a major threat.

Last year was the first year where I hunt (South of Bonduel about 5 miles) that there were wolves in the area. Found dead, partially eaten fawns in spring. The neighbor and myself both had many wolves on camera through out the summer. He also found dead, partially eaten deer. Late in the early bow season, the week before gun season opened I had several wolves walk up on me while I was in my treestand. Most deer I seen through the bow season were more nervous than usual. My neighbor has food plots and told me that he had 16-18 deer on his plots every night. "Almost like clock work" through out the summer and early fall. I'm hunting 200-300 yards from his plots and don't usually see deer until the rut. He can concentrate deer on his plots but I am not allowed to throw out some apples. Shawano county is a no bait county but I wonder where all the corn and apples go that is piled at almost every gas station in the area. Certainly it doesn’t all go to areas where baiting is legal. Do away with baiting but also then do something about the food plots because the result is the same. It congregates the deer. Maybe social distancing could be implemented on food plots!! Thanks for the chance to give my views.
I've hunted my entire life in Shawano County. My family owns 120 acres in the central part of the county. My experience in recent years has shown the deer herd increasing. This is a good thing. It is just now beginning to recover from the decimation of antlerless deer that occurred during the 7 seasons of earn-a-buck you forced hunters to participate in. That was a horrible thing to endure as a hunter. Last year hunters in Shawano County were issued 6 antlerless permits with each license. I found that absolutely absurd!! I spend many, many hours each season in the field and the population is nowhere near that high! I understand the task of managing the herd is difficult, but killing all the antlerless deer is no solution. All the hours in the field I hunted last season I did not see 12 different antlerless deer total and I certainly had no desire to shoot them all! So, as a very concerned, veteran hunter and tax payer I ask you to go back to the drawing board and re-think the antlerless quotas.

Another suggestion is imposing an antler restriction for buck harvest. It will require hunters to make better decisions on harvesting and allow many younger bucks to live another year.

Predation from coyotes and wolves is hitting the fawn population hard. The wolf lovers don't get it. The DNR does nothing to keep the wolf population in check except to harass the coyote hunters, so they are beginning to give that process up. There are too many hunters, both on public and private land, that state that the DNR issues the free tags so why not fill them? The argument for "harvesters" who just want to kill a deer is that ... they gave me 6 antlerless tags so I am going to kill six doe. Going into winter the adult doe have been largely killed off and the fawns are left to survive the predators and learn how to survive the winter by themselves. Some hunters just cut off the back straps and hind legs and you can find the carcass alongside the road or thrown into the woods. Those hunters feel safe because they don't have to keep the animal intact and can register it "IF" they feel they need to. There are many deer being shot and NOT registered! The wardens are left dealing with the POLITICS of in-house DNR issues. The DNR has created another mess by overmanaging the deer herd and now overharvesting. The DNR has really screwed up the system, again.

The county management system is an extremely flawed management system. The northern boundary of Shawano county bordering Menominee county/reservation is big woods, whereas much of the county is farmland. Trust me, after hunting both, it makes no sense to apply a farmland management plan to a big woods environment. The two populations of deer are very different. Unfortunately, where we hunt gets lumped in with the farmland, and is extremely frustrating, and discouraging. We have lost, and our currently losing our younger hunters in our group because they simply don't like sitting all day and end up seeing very few to no deer. Personally I can't blame them. Seeing only one or two deer on opening weekend of gun season just isn't fun. You're not going get many younger kids to do something voluntary that isn't much fun. Youth hunts aren't the answer to hunter recruitment, a quality hunting experience is. A big part of a quality experience when you are young is the excitement of seeing deer. I can confidently say we currently don't have that.

I own 58 acres in north west shawano county. Between myself, my wife and my son, we could have shot 42 deer with the tags we had. Who ever is coming up with the number of tags available needs to be fired! Let's get real and have just a little common sense. No one considers the predators in our area that are taking out fawns and adult deer as well. Bears, coyotes, Bobcats and wolves. Why dont we give out more of these tags? How about how many fawns get chopped up cutting hay? Maybe ask some of these large farms in the area and find out how many fawns they are chopping up in the field. I do understand there are landowners who dont shoot does but others who I think are taking more then they have tags for... has anyone thought about people who dont even register deer anymore? Let's not be stupid! Hear is another two cents. Baiting is illegal in shawano county. Is a warden available when I start calling out many of my neighbors? Good luck!!
The deer population is a big concern for the public hunting lands. Public lands keep getting fewer and fewer. The highest harvest is in the western side of the county which is all private land. The public land in 2018 I was 1 deer and in the area I was hunting there were only 2 deer harvested during the entire gun season. During the 2019 gun season I did not see any deer. Talking to other hunters from around the state they all say the public lands for gun season are terrible for hunting. I believe that the reason for this is because private land owners are baiting and having food plots which has been attracting more deer away from the public lands. Even in the counties that baiting is illegal private land owners are still baiting, plus there is no regulation for food plots. The only place that anything is enforced is on public lands. The state needs to put an end to baiting and food plot across the entire state and enforce it on private lands not just public.

How accurate do you believe the total deer population is percentage wise. I believe it is high. Accurate #’s makes it easier to answer the questions on the survey. With this new tagging system and trying to figure the amount of dishonest people who dont register could throw off the d.n.r”s numbers. (or does the d.n.r. try to account for that?) Its hard for me to give accurate answers when i dont know if these are accurate #’s to base my answers on. I believe your #’s are high is what i’m trying to say. As far as weapons. I believe a hunter should have the right to use his weapon of choice. Hunting for me is getting the game in close enough to make a high percentage kill shot no matter what weapon im using. ( i cringe at the thought of wounded game suffering and deer dead on the roadside.) I prefer a crossbow because im getting old but i would gladly go back to a recurve or longbow if everybody else would give up their mechanical advantage.

Last year my daughter took part in the youth hunt for bow and gun. To do this I had to buy a license and together we were issued something like 34 tags together. We hunted and seen so few deer to years past and only harvested one doe the last day of season with the bow. For the youth gun season we never even set foot in the woods besides checking cameras because it was pointless to go because there’s NO deer and the few we had the wolves killed. Saturday morning of the youth hunt was a fresh kill of a spike buck the wolves had killed the night before. It’s sad to see the DNR wanting to decimate the deer populations to such a low level and what’s little left the wolves kill to the point I can’t even do a tradition like deer hunting with my 9 year old daughter in central Shawano county because it’s rare to see a deer with how poorly this resource has been managed! 34 tags that have to be taken to harvest one doe is beyond ridiculous!

I strongly believe all of the youth hunt and holiday hunts or whatever goes on is ineffective and counter productive to controlling the dear population. If Wisconsin would have a 30 day hunt the deer harvested would be much better. All the archery crossbow and “special” hunts put too much pressure on the deer, that’s why I believe a 30 Day season would be more effective and allow hunters to harvest and hunt when time allows and weather is more favorable. I know a lot of it is about generating money, but if harvesting and controlling the herd is the end game, let hunters hunt and harvest deer. Many other states have longer seasons, don’t understand why Wisconsin doesn’t adopt this instead of all the extra or special hunts. Hunter numbers are down, so let the hunters hunt longer without all the extra hunts. Archery season is rediculously long! Thanks for your consideration.

CDAC council, Western Shawano County is massively overpopulated with deer. In light of the fact that there are 3 active CWD positive captive deer operations in the Shawano County area, one in Oconto county that has reported 54 cases of CWD, one in Marathon county that has reported 104 cases of CWD, and one in southwestern Shawano County that has reported 31 cases of CWD it seems the writing is on the wall. We will be dealing with CWD in the wild population before long. Marathon County has had their first case in the wild this year. It was in the vicinity of the farm that had 104 cases. This is less than 10 miles from Shawano County. Given the disease concern, damage to agricultural crops and forest habitat, and lack of tree regeneration, please use all tools available to put as many tags as you can in the hands of people that will use them and give them as much time to use them as possible. Thank you.
The past ten years myself and most of the hunters I have spoken with in SW Shawano County have seen a measurable drop in the number of deer sited while hunting. Myself, and many of the hunters I speak with hunt no less than 40 hours during the rifle season and also participate in archery (with a compound or recurve, not the crossbow rifle). There is no doubt in my mind, and the hunters in my township that many more deer are actually harvested than are being reported/registered. The elimination of registration stations has given unethical hunters the ability to have no worry about registering their deer. It would not surprise me if no less than 20% of the deer harvested are no longer being registered. Most of the tradition of the Wisconsin gun season has been removed and along with it a sizable number of shooters who do not feel obligated to register their deer.

We need to leave the doe alone in this area. The neighbors get all the extra tags and plant food plots in there woods. Then gun hunting comes and they shoot the crap out of the herd. When they shoot 24 in a weekend do you think the herd will last no. I see less every year. And am about to sell my stuff. When I was 12 I could count 125 deer in a field and we would go down the road and see another 25 and so on. The land didn't change insurance companies just opened the wallet more and you guy's dont care. Not to mention the youth hunt. The dad takes the kid to the woods in October and the kid fills his tag or tags. Now dad and his kid are done. There not in the woods to help with the movement of deer. You again changed hunting for the worst. Thanks for missing with tradition. I'm glad I dont have a kid to witness your destruction of what was a great sport.

The deer herd is plentiful in Shawano County. We need the holiday hunt back to help down the population. While it was not asked in this survey, I want to again voice that I am NOT however in agreement with extending the gun season. There are too many city folks that come up for gun season. They never shoot the does anyway, and are always just waiting for big bucks. Regardless of how many days the season has, they aren't going to help control the population. Those of us that farm, and shoot to feed our families would still like the opportunity for a buck - but we are smart enough to take out the large does first. The farmers and people that live in this county year round know what it takes to control the population. We know the deer movement, so don't let the out of towners make the decisions for us!!

I have seen significantly less deer in recent years during the gun season. Since our recent winters have not been severe, causing high mortality rates, I attribute less deer to higher numbers of antlerless harvest tags being given out. There are less than half the hunters in the one and a half square miles that I am familiar with than there was ten or fifteen years ago, yet the deer numbers are much lower now. I have needed hipboots to hunt during that time period even though that same property could be hunted in leather boots long ago. Accessibility has become so difficult that most of us are just quitting. Maybe the deer are just staying on higher ground were I can not hunt. Thanks for your efforts. I know that you take a lot of criticism form all of the "experts" out there, but keep up the good work.

As a professional forester working in Shawano County I work with many private landowners that are unable to grow tree seedlings in their forest because of extreme deer browse. Deer are even eating things that are very low on their preference because everything else has been eaten. Many of our forests are getting older and will need to be replaced, but how will that happen with the current state of the deer herd. Many landowners must install deer exclusion fencing to establish any young tree seedlings in their forest. This is a costly and labor intensive project and can not be done on the scale needed. Current conditions are not healthy for the forests OR the deer. I strongly support adding the Holiday hunt. I support steps the CDAC has taken, but they need more tools to harvest more antlerless deer.
keep up the good work cdac! I would oppose any consideration of earn a buck and antlerless only season. this would directly effect license sales. according to dnr statistics gun license sales are flat or down slightly, but crossbow license sales are up 17%. this could be due to different factors. gun hunters switching to crossbows for nicer weather and longer seasons. youth joining in the hunt could be another. I would highly recommend "not" shortening the crossbow season as this would result in loss of license sales in my opinion. finally, I would support lengthening the gun deer season to start one week earlier. Michigan starts Nov 15- Nov 30. I hunted there season a number of times in past years and had gotten much more use out of my license. thank you for a job well done and stay safe!

Do not change the deer seasons, keep the traditional 9-day gun hunt the week of Thanksgiving and do not change any of the archery and crossbow seasons. The hunters in the majority of these areas of Shawano County Farmland do a outstanding job of keeping the deer population at responsible levels. This last year was a tough hunt because of the wet fall which restricted access to swamps and restricted corn harvests. So lets not get too radical with changes until the hunters in Shawano county have a chance to reduce populations to proposed goal levels. You may find that going forward with radical changes to seasons will have an opposite result, being the hunters will quit hunting due to rule changes. Hunters are creatures of habit, just like wildlife. Leave the season time periods alone please.

As an avid Hunter for 55+ years and a Hunter Safety instructor for 20+years I would strongly suggest and support a longer Deer/gun season as Michigan does from Mid November to Nov 30th to give more opportunity for Hunter/Harvest success during The Thanksgiving break where many folks go home and may not return to the woods again. This would serve as an encouragement for license sales and the goal of future herd control management. Many folks I encounter would appreciate this opportunity to engage their younger family members in the sport of Hunting and are now in competition with conflicting schedules with other sports activities which limit any time they may be able to enjoy Hunting...or the outdoors.. Thanks for your consideration.

I support the council’s recommendations for this year. If an enhanced antlerless harvest is needed in the future I’d support an antlerless only season. Because bucks would be protected you wouldn’t be able to use it more than a year or two without stopping as there would be a ton of bucks around. And I’ve never heard anyone complain about too many bucks, so that would be a good thing. I believe this is a far better option than earn a buck as earn a buck was abused here in the past and resulted in significant over harvest in some areas due to hunter density as people got stupid trying to validate their buck tag. Plus earn a buck wouldn’t work now anyways without in person registration as most people just go online and register does that don’t exist.

Deer predation by bears, wolves and coyotes has never been taken seriously. I am a 4th generation land owner, in the Town of Wescott, on 100 acres which is a mixture of oak and cedar with no significant croplands for several miles. About 5 years ago one of my trail cameras captured 5 bears in one photo. This same year we found several fawn skeletons where there was a lot of bear activity. We had two wolves on the property, bobcat and an ever increasing coyote population. The deer population was way down but management was based on croplands to the north and to the west of the city of shawano where undoubtedly the number of deer per square mile is much higher. Issuing numerous bonus tags for antlerless deer doesn't help in years of high predation.

I would love to see a longer muzzleloader season, preferably not proceeding immediately after the gun deer season when the deer have seen the most pressure they will see all year, later in December would be awesome. I understand the reason it hasn’t been later was because of the snowmobilers. I think I can count on one hand in the last ten years they’ve been able to snowmobile in December if that. I’d love to see the muzzleloader season December 24 or so through the end of the year or a week or so after the regular 9-day gun deer season. I was one of the very few public individuals that listened to the call in early April. I would agree with people not wanting to shoot does because they were fearing their neighbors would shoot a whole bunch.
Even though this unit is the 2nd. largest harvest in the state, over the past two years we have seen very few Deer. The problem is we hunt on a 40 acre partial, made up of hardwoods, cedar swamp and two 2 acre openings. We are surrounded by hardwoods on all 4 sides, which are all private property and then farmland on the exterior of 3 of those properties. It is very hard to compete with the farmland for one. There is very little movement of people anymore, nobody drives property as they used to. Also we can no longer bait the Deer with any kind of bait so it is very difficult to compete with the surrounding properties. When we were allowed to bait we were able to pull Deer into our property. I would like for the baiting to be allowed once again.

Thank you for providing so many "free" antlerless tags with each buck tag. This year, many more folks will be depending on venison to feed their families after losing money because of the virus and the extended stay-at-home orders. It is clear you are taking your duties to control the herd very seriously. I think you could offer the extended archery/crossbow season with very little effect on the harvest (even though we need to thin the herd more), but you would offer more hunting opportunities. January is normally a cold month and you would only give the die-hard hunters and more adventurous folks a few more opportunities, but there is no downside to this! Thanks again for your hard work.

The amount of deer harvested in 2019 was low but one of the biggest problems I and a lot of other people saw was how wet it was and warm. The swamps didn’t freeze and the amount of corn left up didn’t help in a lot of areas. On the 500 acres we hunted the amount of does was way down last year because of the wetness. I don’t think the holiday hunt is a good idea because all you will be doing is killing a lot of young deer. By Xmas is when we start to see mature bucks again during daylight hours. If you really wanted to control the population open muzzloader season up for 2 weeks starting on New Year’s Day or do what Michigan does and offer a chance to harvest a second buck but put limits on how big it has to be.

4 antlerless tags per hunt (archery, gun) is waay to high. I've been hunting this area every weekend during archery and gun and have never seen numbers this low. Antlerless tags should be 1 at most. Perhaps propose 1 buck per season total. Or if you are proposing increasing gun season length then have hunters apply for first week second week, etc to limit hunters in woods for better experience. Changes need to be made as hunting in WI is as bad as ever in 31 years of hunting. I hunt 11 other states and this is by far the worst managed state. Too much politics getting in the way with management. I.e baiting, cwd, etc. Baiting bans need to be state wide and enforced harsher...everyone seems to be baiting.

I don't believe our deer hunting seasons should be scrutinized EVERY year. As I drive down the highways I see quite a few deer laying along the side road. I believe these are deer that are not counted towards deer kill numbers but they are no longer alive. I also feel the same about predators, how many deer have they taken that don't get counted? I would really like to understand why the CDAC and DNR feel every year we should see change? I am concerned with one of the questions in regards to an antlerless only season. That scares me because once the question is floated out there it is not long after that it happens. In general I would prefer that the hunting seasons be left alone. Thank you!

I would like to suggest that not only Shawano county, but state wide, take a look at changing the detail of harvest tags. I think there should be a antler deer harvest size limit of at least 4 points on one side, and you should also have the choice of using both antler deer tags during archery season and/or if you do not fill you your antler deer tag during the gun season, you should be able to use that tag for late season archery. In my opinion, if you pay for a one time tag with all harvests on them you should be able to fill them during either archery or gun seasons. If both antler deer tags are filled during archery season then you would have only antler less for gun season.
Living where I hunt and can observe. We have seen far fewer fawns in the spring and early summer. There are 3 hunters here, who hunt all open seasons. Sometimes new youth hunters. Last 2 seasons we have seen more adult does without fawns then in the past 5 years. Also fewer does in general. We have wondered if rainy, icy winters have caused this or growing bear population. Spring predators?? We’ve seen as many as 5 bears in a group. (sow, 3 cubs, 2 yearlings,) a very large boar a couple times a summer. Whatever the case fewer deer last season. Bow season we saw a fair amount of young bucks, a few 2-3 yr olds. Hope these observations help your thought process for the season.

We use our judgement during the bow and gun seasons as to how many does we shoot based on our observations of the deer population in our area. We try to practice QDM so we normally shoot 3-4 times as many does per year as we do bucks. We also gauge how many does to shoot by the number of deer we will utilize during the year. We have multiple trail cameras out during the summer and fall in addition to spending time in the woods 12 months out of the year so we have a good idea of the number of deer in the area, not just what we see during the hunting season. With all of that said issuing more than one or two antlerless tags to me will not entice me to shoot more antlerless deer.

I did not see any information in the survey regarding the effects of predation or how the populations of predatory animals may or may not affect deer populations. It seems to me that the drop in the fawn population may be an indication of increased predation. Also, my personal experience seems to suggest that the early gun hunts (i.e. youth hunt) drive deer into hiding in advance of the gun hunt which has resulted in fewer deer seen by myself and the other hunters in my group. Also, I fail to understand why it is unlawful to hunt/shoot off public trails (i.e. Wiesaw trail) since this would tend to increase deer movement and serve to improve hunting conditions.

I wish you people would realize that your numbers are not even close to the right herd numbers. I’ve been hunt 30 years and my last 5 years of hunting has almost got me to just quit hunting due to there not being the deer you people keep trying to tell us there are. I use to be able to see at least one deer everytime I sat now I can go for days not seeing anything and I usually will sit the entire day. So your make believe stories about why license sales are down just stop lying and admit you are wrong. Just maybe get the herd back up where its suppose to be and people just might start hunting again otherwise people are not going to hunt to just sit in the woods.

No on the Holiday Hunt! You say opportunity, what about the opportunity you take away from people? A lot of people like to small game hunt at that time of year, now they can't. At that time of year, a lot of trappers are out there, now they can’t. The archery hunters that want to hunt bucks can't do it. Yes, some years the snowmobile trails will not be open, but what about all the clubs that go out to mark & clear the trails, they do it at that time after the crops are off the fields - now they can’t. All you are thinking about is deer, what about all these other things? The current deer season structure is just fine WITHOUT THE HOLIDAY HUNT!

Basically do not have time to go they all the information to make an educated guess. But in my experiences the number of deer I see or have heard that were harvested in our area are down considerably, I believe you can have all the numbers you want but will never have the real answer as to what's going on out in the wood if you do not listen to the fellow hunting enthusiast . Hunting in Wisconsin is no longer a FAMILY tradition like it was when I was young when it was hunters choice and you were lucky to get a doe tag every other year, then we had deer numbers that everyone was happy with. Thankyou I could say so much more but will not on these surveys.

We had roughly 20 tags for gun season...we saw two deer on our 40 acres of previously HIGHLY productive land. We shot two and let many go as they were just too small. We DID find 2 medium to large bucks dead on our property with very poorly placed arrow shots...no idea where the animals were shot...but they found places in our swamp area to suffer and die... MANY in our area experienced the same downward trend over the last several years.....We used to hear MANY gun shots now it is just a smattering. Mid-week we did not hear a single shot on a Tuesday. ZERO! There is talk of three from our party of five just giving up and not spending the money...
**Public Input on CDAC Preliminary Recommendations - Spring 2020**

<td>Please stop all the antlerless hunts. It has become ridiculous. Please stop handing out so many antlerless tags with each license sold. It’s way too many. Please focus on limiting the number of public land antlerless deer that can be harvested. ***Those of us that focus solely on hunting public lands do not see the numbers of deer those on private parcels see on a given day. Please stop the antlerless hunts. Please continue to ban baiting. It messes with the flow of deer movement. Thanks for listening to a die-hard, public land bow hunter who truly loves our public lands and our deer hunting opportunities in Wisconsin.</td>
</tr>
<tr>
<td>8889</td>
<td>I hunt Shawano County public. Navarino public hunting grounds in particular both with crossbow and rifle. Overcrowded hunting pressure, I have a honey hole that has produced 3-4 deer a season most of the last 10yrs. 2019 I saw zero deer during the bow and rifle season with reduced sign in my area. Fewer hoof prints, browse, poop, rubs and scrapes. I feel the deer numbers have dropped dramatically over the years. 4 deer harvested down to 3 down to two down to 1 and finally no deer sighted with less sign. I would like to see fewer doe tags issued for Shawano County for the next 3 yrs and make hunting fun again by seeing more deer.</td>
</tr>
<tr>
<td>8890</td>
<td>I no longer have access to private land and have bow and gun hunted public land in Shawano County, in particular the Navarino Wildlife Area, for the past 9 seasons. As we are all aware, this area is heavily hunted. Is there any way to improve the deer food sources and/or reduce doe harvest in the Navarino Wildlife Area to increase the deer population? I have 40 years of hunting experience, spend a great deal of time in the off season scouting this area and hunt on a typical year, 20-30 days. It is a beautiful woods, but seeing a deer has not been a frequent experience for me and my son. Thanks for your consideration.</td>
</tr>
<tr>
<td>8891</td>
<td>I own land in the section of Shawano County formerly designated zone 47. The other former zones in the county, which more aptly depict &quot;farmland&quot; have a huntable population of deer. Unfortunately the area I hunt no longer does as it's mostly big woods with many predators and harsher winters north of Hwy 29. Would like to see old zones return, back tags, inhouse registration. Also would love it if Madison respected the input from their field wardens. They're the folks that know what's going on out there. This is my first time giving input and it's just part of my bucketlist. Don't really expect anything to change.</td>
</tr>
<tr>
<td>8892</td>
<td>A holiday hunt would cut into other recreational tourism dollars like snowmobiling. The seasons are already way to short without having to wait until January or later to open trails. That's one reason why a lot of people object to a holiday hunt, why can't you have a longer season in November like other states do. It is hard for a working person to get a deer when they can only hunt weekends, that is four days for them. Extend it longer in November so they have more of a chance. There are also a lot of special hunts that go on and cut into the ability to get the trails ready we don't need any more.</td>
</tr>
<tr>
<td>8893</td>
<td>The only thing that ever seemed to affect deer numbers was earn a buck! If you have a doe only season nobody will hunt. The numbers taken in holiday hunt minimal cold and weather will keep most people out of woods. Most people have enough venison already by then. Won’t go out in bad weather to shoot more they don’t need. Also I am a snowmobiler member of a club most of our trails go through private land. We will not be able to open or even brush and mark trails to February. Try pounding stakes in frozen ground. All for a holiday hunt that won’t come close to the number of dear you need to harvest!!!</td>
</tr>
<tr>
<td>8894</td>
<td>Special interest groups are destroying our hunting heritage. The deer numbers are far lower than what our central farmland can support and I feel this is another added reason as to the decrease in our youth participation which is the future of hunting in a Wisconsin. We need to stop the over harvesting and allow for the population to grow so that there is more opportunities for all hunters in effort to slow down the yearly loss of licensed hunters. Leave the season timeframe as it is, lower the number of antlerless permits and help our state regain its hunting heritage. Lee Robenhagen</td>

**Report Generated: Friday, May 01, 2020**

**Shawano, Central Farmland**
We saw many deer on fields, in the evening, before season began. After bow season started, the deer mostly waited til after dark. Saw very few deer while bow hunting. The same during rifle season. I would propose a deer season where you could use any type weapon you choose, you get one buck tag and as many doe tags as deemed necessary. Start it at the beginning of October and end in mid December. This would allow the efficiency of a rifle for those with limited time to hunt. Would still let hunters use other weapons if they choose. The one buck per hunter would let more bucks get older.

I think maintaining the herd is appropriate. After heavy harvest for a few years, this past season was how I think it should be. I saw a few deer each sit with equal amounts of bucks and does. However, I disagree with the public vs private doe tags. My family hunts/owns 40 acres less than a mile away from 400 acres of public land but no longer hunt there because we cant. I used to hunt on the public land as much as I hunted on ours. It is a very disappointing we can no longer utilize a public resource for deer hunting that our licenses/taxes pay for.

I support having an Antlerless only Holiday hunt that would be the last hunt of the year and there would be no further hunting of Antlerless or Antlered deer after the Holiday hunt. I feel that there will be a greater level of participation by the private landowners in the Antlerless only Holiday hunt if it is known that bucks or Antlered deer cannot be harvested after the Holiday hunt. This will also allow snowmobilers and predator hunters to have more access to private lands immediately after January 1. The current deer season is too long already.

Zone 3 for the last several years has not been included in Antlerless-only Holiday Hunt. If this is because of snowmobile clubs than it needs to noted that the snowmobile trails have been unable to open during this holiday hunt anyways due to insufficient amount of snow fall for several years now. The clubs should not have control whether or not an antlerless-only hunt is granted. The facts listed is enough to include zone 3 to in the holiday hunt. If zone is is not include I will surely be disappointed in our DNR Deer management.

Quit changing things every year...you wonder why more and more people are leaving the sport. There is way to much bureaucracy going on here. Every year you think you need to "adjust" this or "adjust" that. Keep things the way they were years ago, before earn-a-buck. You license sales would go up, which is all you really want in the end anyways. Deer camps have went from talking about all the great memories, to what the DNR has changed this year and how we have to keep up with those changes.

I feel you are giving out to many doe tags. This happened years ago and depleted herd. Then no one was seeing deer like they were use to. You cut back and herd regrew so people saw deer again. It seems like you have forgotten this and are making same mistake all over. No deer means no hunters, no hunters means no license sales which have been going down. Give out maybe one tag per person or license and let herd grow. If people see more deer while hunting then maybe they will want to keep hunting.

I personally own and hunt farm land in this zone. It seems as though the amount of wolves in our area are constantly on the rise. The wolf issue, I believe is the main reason for lack of deer sign. We will have deer and when the wolves cove in, you cannot find them. Please work on helping us landowners get back the right to hunt and trap these animals. I believe there is room for both wolves and deer on our land. We do need to have the right to manage the predators as much as the deer.

I think you should look into predator numbers more. I know the DNR never wants to hear anything about this, but it does impact the numbers and the decline in hunters. I have seen more coyote and wolf tracks than deer tracks the last two winters and have seriously given thought to quitting deer hunting. There was a reason they had a bounty on wolves years ago. If you want the revenue from the deer licenses start putting the deer hunters first instead of the thrill of seeing a wolf.
8903 The hunts need to be spread out more. The reason for low numbers this past year was due to weather, the season pushed back a week later from the time rut started, as well as there being to much pressure put on the deer. This made deer sit all day and move around during the night. I can not recall a season where it has been so slow with deer movement in my years of hunting. This seriously needs to be considered not necessarily the amount of tags given out to individuals.

8904 I strongly oppose a Holiday Hunt for the following reason: My family members and myself are all bowhunters. Most of us have extra time off from work during the holidays and would like the opportunity to fill any unused buck archery tags during this time. If there is a Holiday Hunt our opportunity to tag an archery buck are eliminated. I live in Brown County and know a lot of other bowhunters that absolutely HATE the Holiday Hunt when they have it in Brown County.

8905 Regardless of how many antlerless tags you issue, hunters on private land are only going to take a certain amount of deer. Offering six tags as last year or four tags this year is ridiculous. Two tags should be ample and is plenty. Other issues are the bow season opens too early. Seems like bow hunters have the most influence on many of your decisions. Why can't you extend gun season on the front or rear of the current season? Many of us do not bow hunt.

8906 Please reduce the deer population in this area. It is impossible to grow trees and regenerate forests without fencing, and I am not a fan of building/maintaining fence. Unfortunately, no matter how many antlerless tags are available, some hunters refuse to harvest doe's and are unaware that the population is excessive in this area. I support crop damage tags for individual areas with excessive deer damage, please let these permits be available year round. Thanks.

8907 Private land owners need the holiday hunt as an opportunity to harvest antlerless deer. Many private land owners in the county do some sort of QDM and that usually to them means wait for a big buck, and in turn not shooting does at all. A later antlerless only season would bring those people back to the table and harvest some much needed does on private land. The snow mobile trail excuse is not a valid one as the trails are seldom open that early anyway.

8908 I do not understand the debate over the use of cross bows. I personally do not own a cross bow, I use a compound bow. However, I feel that cross bows are an efficient weapon to harvest a deer and the use of them should not be limited. The cross bow/archery season should run concurrently and should not be limited. After all, isn't one of the objectives to get more hunters involved in the sport? Limiting cross bows is only going to drive hunters away.

8909 I hunt navarino state land and spend 30-40 times in the woods each fall, north and east of townline rd, north end of lessor- navarino rd, south end of McDonald rd. Everywhere we hunt the deer numbers are very low. I have not talked to a hunter out there that is happy with the few deer if any that they see. It is great deer management if you don't want hunters to shoot deer. Very poor management if the goal is for hunters to harvest a deer.

8910 I would just suggest lowering any antlerless tags for the year 2020. Due to west of Shawano lake is a bit higher deer population than just east of Shawano itself. I would maybe recommend lowering it two antlerless tags per weapon of choice for Shawano county. If someone bow hunts and gun hunts, that's still four antlerless deer harvested. And I think more hunters would not be as opposed to it and not argue four tags per weapon of choice.

8911 Between archery and gun hunting in 2019 I could have harvested 14 deer. there is no way that most ethical deer hunters would do this. I know we have a small core family group of does and buck that would be devastated by this although other deer would potentially move in. This over harvest would impact the quality of our hunt for years to come. Sorry but I just do not see that amount of deer and damage they are so called doing.
I believe the Shawano CDAC and DNR staff are doing the best job possible with the tools they have available to work with. The State Legislator needs to bring back the option to hold a Earn a Buck program Hunt as well as bring back in person registration to facilitate the Earn a Buck process. All deer hunters need to get along and stop bickering over seasons, weapons, and what they think everyone should or shouldn't be shooting.

Leave the season alone. Give one buck tag per hunter. Stop party hunting for bucks. That would solve the problems. 90% of gun hunters dont know how to hunt. If you can't get your deer with how long the season is you suck. I pass loads of deer hunting. Gun hunters cry about not getting bucks. If you want less bucks killed one buck tag per hunter. People that want more meat would shoot more does. Also no on earn a buck.

Would love to see the number of tags reduced and/or an antlerless only season. We have a neighbor in the area who in the past 3 years has harvested 30+ deer on the smallest parcel in the area. Due to the number of tags available they are within their right however. Ideally a system allocating tags to a parcel based on size rather than an individual hunter would resolve this but that is probably out of the question.

Please consider a “bonus buck” type scenario like other states have where a gun buck tag could be used in bow season or possibly additional buck tags could be earned depending on the amount of antlerless deer one shoots. I believe this would be a huge motivator for keeping herd in check. Another idea would be additional land owner tags based on amount of acres owned. Thank you for your work and time on this.

SHAWANO COUNTY HAS A WIDE VARIETY DEER POPULATION. PRIVATE LAND IN THE PELLA & CAROLINE AREA HAS ALOT OF DEER, WITH NO PUBLIC LAND.WHERE HARVESTING DOES WOULD HELP. BUT AREAS LIKE NORTH OF GRESHAM OR BOWLER, THE NUMBERS ARE DOWN. THERES MORE PUBLIC AREA AROUND HERE BUT LESS DEER. I THINK MORE PRIVATE LAND DOE TAGS NEED TO BE GIVEN, THEN PUBLIC. OR YOU HAVE TO BREAK DOWN THE UNIT INTO SMALLER SECTIONS.

With so many tags available, I have spoken with a number of hunters that in my opinion are taking anything in order to fill their tags. The deer are not getting a chance to mature. My time in the woods this past year was higher than average, and I did not see a single deer during hunting hours. This is discouraging and hard to keep the next generation of hunters interested in continuing year after year.

I would be in favor of trying three things. 1. Private landowners would be able to fill their tags when they desire on their selected spots with any choice of weapon. 2. Have the gun deer season start on the 15th of Nov. each year and run for 20 days. 3. Crossbow hunts during the rut to be run as the bow seasons were years ago. No crossbows for anyone under a certain age, or with a disability.

Season structure is fine and has been working for years. Do NOT mess with whitetail season structure ESPECIALLY the 9 day rifle season. You WILL lose a lot of hunters (myself included) and this will become counter-productive because it will be very hard to get them back. Do not let one year of bad hunting conditions ruin the entire future of Wisconsin whitetail hunting because you overreacted.

It seems as though Shawano County has largely old growth woods with little regeneration. Deer numbers appear to be very high, higher than hunting is managing. The woods are heavily browsed, crops are damaged and even in the last few weeks it is not unusual to see 20-40 deer in a field. I think that all opportunities to harvest deer should be available in order to reach quota/population goals.

We used to have a deer population of 1 million in WI, now after spring births it will approach 2 million. The way to bring it down is with an early (late Oct) doe deer hunt and possibly an April doe gun hunt to adjust populations in counties that have too high a population and have a high amount of crop damage, and a high number of car/deer collisions and higher costs for insurance companies.
Extended late hunting seasons greatly affects and obstruct snowmobiling! A great source of tourism I enjoy. The more people you can get into the woods at the same time will in my opinion increase the harvest numbers. I have a limited amount of time to devote to the hunt and stretching out extended seasons makes for a sleeper opening weekend gun deer hunt! not nearly the activity of years ago.

Over the last 12 years my hunting party has only taken bucks. We are lucky to see 3 to 5 deer in the 9 day gun deer season. This has been this way for 12 plus years. We used to see 20 plus a day. Theres just to many tags being given out. It's hard to get the younger generation to get involved when therers nothing to shoot. They get bored and dont have interst in it. Thank you for your time.

The last 3 or more years my hunting land has been flooded. So the deer haven’t been using it as much. Even late season it didn’t freeze up until late. So there may be a lot of deer out there. They are not by my woods. And I haven’t seen them on my out to the woods or back home. I heard more shooting last year then the year before but still didn’t hear much good from the neighbors.

It is very sad that you keep asking for more doe permits and i have sat on my land the last 2 years for more hours than i want to remember. and seeing a total of 2 does in that time.i have tag alder swamp with river frontage and in years past seen many deer using the trials. but no more, everyone goes out and sits on THEIR land and do not want the deer to do any traveling.

If you wish to fill more tags in this unit you need to find a way to force farmers to removing crops in a timely manner. It is clear to me that the same fields every year are standing with corn through the season even though 90 percent within a 10 mile stretch have been removed. I do not know if these are anti hunter or farmers taking advantage of the crop damage money.

I feel we need to lower the levels of anterless deer in Shawano county. Due to the forestry within the county being ravage by high deer population levels. I also encourage the expansion of the crossbow season to Jan 31st because it provides more opportunity for hunters to hunt. I would also like to see an expansion of the rifle season within the state of Wisconsin.

Offer separate tags for bow, crossbow, gun and muzzleloader. More $ for dnr programs and more opportunities for a hunter to harvest a buck with multiple weapons in multiple seasons. To be honest, the doe population has been targeted for some time now and we really haven’t seen much effect. I say we offer more “buck opportunities”. Less males means less breeding.

Would like to see private land that is essentially dormant; (no residence or living structures) opened up to hunters by giving owners incentives (tax breaks, DNR incentives on licenses) to allow access to hunters. Especially for archery/crossbow hunters. These weapons are safer and no noise disturbance compared to firearms; if this is a concern to the land owner.

I hunt on 3 different properties in the central farmland zone and deer numbers have been steadily dropping over the last 4 years due to MORE predators. Everyone I talk to wants to see more deer not less! Hunting generates a lot of local revenue, and land sales. The DNR should start listening to the hunters or people will take their money and hunts to other states!

I believe the use of crop damage tags should only be allowed after gun deer season. Its pretty disappointing to find out you neighbors shot close to 40 does via crop damage tags in the summer time only to see fawns running around the woods all fall. Because of the ag tags are group did not shoot one doe last year. Saw very few adult does to begin with.

We hear from the foresters and then the land owners with the timber or are trying to grow trees harvest a few deer and complain about there numbers but don't let people hunt on there land were there are high density of deer but the rest of the county pays for these folks you will never get the deer pop down in them areas until they change their attitudes.
I would like to see Wisconsin adopt a management system in which a hunter would be issued 2 buck tags and anterless tags (per management quotas). The hunter could then harvest the animals during archery or firearms season. This would spread the number of hunters out during the year and allow hunters to harvest their deer with weapon of their choice.

No talk about the increase in bear and wolves in the unit and the affect it is having on the deer population. Bears number one food source in spring are fawns and the bear population is growing and they are moving further south every year. Seems like the DNR does not like to talk about the wolves that around also and the wildlife affect they have.

Late gun seasons when rut has been completed truly hurts the success of harvesting a deer. That’s what happened in 2019 and many hunters were discouraged. We will continue to lose hunters if you stay with the traditional 9 day hunt before Thanksgiving. Let hunters have a chance at a decent buck and they will stay engaged with deer hunting. Thanks

Reopen wolf hunting and trapping. Wolves are Spooking deer from my area while I am hunting. The deer are there, but are getting spooked daily. Please maintain crossbow hunting for all for the entire archery season. Crossbow hunters are the only group on the rise. We need to encourage new hunters and there are plenty of deer to go around.

I use the Disabled areas to drive out and hunt. There was excessive abuse on these lands from people that had fake papers on their windshields. This completely messed up opening day for the actual disabled hunters. I couldn’t even find a place to sit. Please put up signs with proper wording by the gates, so there is no confusion this year.

Very concerned about the high deer numbers and the ecological damage. Forest regeneration is extremely difficult and a farmer that I know has significant crop damage every year. We need to lower #’s in order to be sustainable into the future, otherwise mother nature will do it for us via disease or some other form of population control.

Need to get a handle on the predator problem in this state and county. Too many wolves and coyotes in and around our hunting lands. Also, get rid of the baiting and feeding bans. They have nothing to do with public or private lands, they all came from deer farms in and around our county. Punish the deer farms, not the every day hunters.

Many of us are worried about recruiting new hunters. One of the complaints we hear from younger people is that the hunting rules are overly complex - it makes them feel vulnerable to breaking the law. Please consider ways to simplify while still maintaining good game management practices - even if it means some level of compromise.

If you are even remotely concerned about stopping the spread of CWD it’s time to address the deer farms!!!! They are by far the leading cause of the spread of this disease in our state. Individual deer farms have had multiple cases of CWD on their farms and they can still sell and trade their animals. TIME TO ADDRESS THE ROOT CAUSE

The only recommendation I strongly oppose is in regards to the holiday hunt. If you are going to have the hunt then please extend the archery season. It’s my favorite time to be in the woods because of the low number of other people in the woods. I may participate in the holiday hunt if we are not successful in the regular season.

There are way too many violators in these areas. Many evenings bow hunting there are single shots right at dark. This has been going on for years. It seems like it is getting too difficult to manage private land areas. We have found multiple deer shot just before season on the property we hunt. Large bucks that were gut shot.

Please consider going to a shotgun only status in Shawano county. Population density is increasing and the ability to grow more mature bucks would be a benefit. Shooting a deer at 3 to 5 hundred yards is not necessary. Also, get rid of crossbow for all. Only for those that have a medical excuse or those over a certain age. Thanks!
Why have the 2 hunting zones, private and public. We should be able to hunt, and take deer on either. Your info already shows most deer are taken on private land. Some of us have public land bordering private, and the permit would allow the taking of that deer, as they go back and forth. Bring back the registration stations also.

I would like to see the Crossbow season during the November rut reserved to people with the rules of several years ago. I believe you had to be 65 or have a disability. The younger hunters should have to resort to the older rules. Bow only during the rut. This might bring in more passion for archery as it was intended to be.

First off the holiday hunt is ridiculous, being not able to shoot a buck with a bow when that’s one of the best times to shoot one is late season will madden many people. Then if you do that you might as well extend the bow season so we can hunt bucks longer seeing we lost a week instead of leaving us with a week, what a joke.

We have seen a drastic reduction in the number of deer seen and have been told by farmers that local farmers are killing large numbers of deer assumingly with special permits for crop damage. This is unacceptable, and should be stopped until the herd can recover. I’m talking 20 deer in a day to two deer over a 5-8 year period.

No Holiday Hunt or extended archery!!! This is going to take away and limit other outdoor opportunities such as coyote and bobcat hunting, Fisher and otter trapping, and snowmobiling. Landowners do not want anyone on their land when deer seasons are going on. Deer hunting is long enough and we don’t need to make it any longer.

Most archery hunters are only trophy hunters. They have a long season to hunt make them have earn a buck or move muzzle loader season infront of regular deer gun season. The Doe heard will be culled in high population areas. This will let areas with deer damage have a opportunity for more hunters to harvest a big buck in rut.

Some local areas are harvesting too many antlerless while other areas a short distance away tend to have really an overpopulation of deer not sure that is micro manageable without landowner support. Is there any thoughts on one buck per hunter for the year regardless of harvest method? Maybe would encourage antlerless harvest

Public land such as Navarino has the potential to hold more Deer. Public land without any research obviously has a higher number of hunters per square mile then private. There fore there should be much less Antlerless tags issued to public land which would provide better hunting opportunities on them year after year.

Eliminate the muzzle loader season extend the gun deer season to include the existing muzzle loader season. Have the cross bow and bow seasons start an finish at he same time. Allow baiting if product is spread to a larger area similar to a food plot, a food plot is a unnatural man made food source.

There are not enough deer in Shawano County to warrant the excessive antlerless tags that are being given out. Deer sightings are down, in both bow and gun seasons. Predators are everywhere (wolves, coyotes, and bear). Need to push for more predator control and relaxing the overharvest of antlerless deer.

Wolves and coyotes are a real concern. Wolves do not belong in our area. Coyotes are overpopulated and there are few cottontail rabbits, no snowshoe rabbits and literally no grouse. Want turkeys? BUY tags as they are all over the land and over-forage the woodland areas. Why are the turkeys over protected?

There is such a large deer herd in Shawano County that in 100 acres of hard woods there is not a single tree that can get above a foot before a deer has cropped it. Turkey hunting this spring I observed on average 50 deer per day. We do need to do something to protect our forest and agricultural land.

See fewer deer every year. Also, DNR stopped planting crops on Navarino area where they always planted crops. This helped the deer build up enough reserves to survive the winter. Now these fields are useless weed fields where you don’t see a deer or even a bird. What a waste of land and resources.

If there are antler gun deer permits given they should be on an earned basis in my unit Central farmland. Harvest an antlerless deer and then when registered online the antlered deer permit would generate. Two deer per Hunter unless a they are a land owner over 100 acres. Same rules for archery.
8959 You guys let the farmers kill too many deer last year. Farmers killed 17 dozen fawns off the field next to my land. That's disproportionate... I don't know if he got so many tags because he has so many fields around the area and he just used them all for that one field or what.

8960 Propose 1 buck a year limit. This will encourage hunters who have taken their buck to harvest more does and not hold out waiting for a second buck. This will increase the quality of bucks which is what a lot of hunters are concerned about and will lead to increased harvest numbers on does.

8962 Leave the crossbow, gun, muzzle loading seasons as they are. People plan their vacation times around this. Do not extend the gun season. Do not extend the archery season as this would keep the snowmobile trails closed and that brings more revenue to the area than hunting does.

8961 As a farmer trying to grow crops... it is essential to kill more antlerless deer. In our area, the ratio of does to bucks is proly 10:1 thanks. I also feel crossbow should be able to be used trough out the bow season. What difference does it make what weapon you use to kill a deer?? thanks

8963 I think crop damage tags are a joke, when you see herds of deer feeding on there silage bags. To me I consider that baiting as do many other people but the issue is never addressed. Dnr is more worried about a couple of apples or a gallon of corn vs silage bags which draw herds of deer.

8964 I do not favor the Holiday Hunt or extended season for archery. I am a snowmobiler and enjoy the outdoors this time of year so if you extend the season, many of our land owners would close their property to snowmobiling until the bow hunt is down. This would hurt our sport tremendously.

8965 During the 2019 eifle season I hunted 7 days. I saw 1 buck, that I shot opening morning, I then witnessed more than 40 antlerless deer the remainder of my time hunting. My family harvested 4 antlerless deer and 1 antlered. No one else in a group of 4 saw an antlered deer besides myself.

8966 The description of antler less deer should be changed. A buck fawn should not be classified as an antler less deer. To have a healthy deer heard the old dry does need to be culled. The buck fawns should be classified as bucks. This will deter people from shooting everything that moves.

8967 I am not seeing the number of deet that I did in previous years. When I started hunting all land was open. Now owners think they are the land owners deer and wont allow others on the land. Qualiry deer management to me is a crock. Ever harvest is a trophy bid, small, or whatever.

8968 The number of bonus tags to purchase should be increased because; a. they have filled the bonus tags given with each license purchase b. they hunt in multiple counties (my personal reason) c. would encourage hunters to travel from other counties d. increased revenue for DNR.

8969 I oppose starting the regular firearm season earlier than current. The majority of firearm hunters only hunt 2 or 3 days of the opener days anyway. There is also a firearm muzzleloader people can hunt or the crossbow season/archery..... Leave the archery/crossbow as is....

8970 I do not agree with Holiday hunts. I would go along with longer Gun season. Longer bow & Muzzleloaders. Also bring back baiting so I can see a deer. I am a bad hunter, & need to bait. CWD is of no threat to anyone. Just the DNR! They may loose their job! No CWD no JOB.

8971 I didn't get a chance to offer my thoughts on allowing crosbows only in October. I do not think I should be discriminated for using a crossbow. I also do not endorse closing the archery season before the rifle season. AND I DO NOT WANT A 19 DAY RIFLE SEASON. Thank You.

8972 I just retired and would like to try bow hunting with a cross bow but if the bow season is not going to run into November (including the rut) then I guess I'll just continue gun hunting. Meaning that I would only buy one license for gun and skip the bow license.
8973 I feel there is a problem with places to hunt. Most places that are privately owned are not accessible to other hunters, I know that there were attempts to open private land and I have not heard how successful that was but it is a major issue with hunting.

8974 Shawano county needs to just give two bonus tags with each license...predators need to be controlled as the unit borders low deer density units to the north...buck season with crossbows should be shorter, as it is hurting the quality of the gun season...

8975 Pretty much the same story as years past, private land numbers are very high, public land numbers are too low. If farmers are receiving crop damage payouts they should have to open up their land to public hunting. Baiting needs to end once and for all.

8976 I’d rather see a buck only year. Baiting should be legalized again. The large amount of seer stay in one spot because there is none or limited hunting pressure so it’s almost discouraging going hunting because the opportunity for so many is very poor.

8977 I think the public land should be managed separately. There may be an overabundance of deer on private land, but that is not the case on the public land, I am specifically referring to the Navarino Wildlife area, which I have been hunting since 1989.

8978 I wish it would go back to applying for a doe permit like in the 90’s we saw a lot more deer giving out way too many antlerless permits these days none of us private landowners are taking that many I hunt on 160 acres and we took 2 does last year.

8979 I believe we should go back to smaller management zones instead of doing it by county. That way we can manage each zone better. For example Shawano county is large, and the western half of the county has way more deer than the eastern half.

8980 Please just add earn a buck again. The quality of deer was better when more does were harvested back 10-15 yrs ago. Do not make an 2020 antlerless only season but instead require hunters to to earn the buck tag by assisting with herd control.

8981 Wolf numbers are increasing. Killing more fawns and adult deer every year all year long. Decreasing our deer populations which in return bring in money. Decrease wolf populations and that will increase our Deer populations. Easy and simple.

8982 If you want to reduce the number of deer in Shawano county, let people bait using the 2 gallon limit. As stated in the video, there has NEVER been a positive CWD test in a wild Shawano country deer. Close the deer farms... stop the spread.

8983 I don’t need more tags to help with population control, I need more opportunities. The gun season should be extended to give me more opportunities to harvest a buck or doe. More tags does not ensure I will see more deer when I do go out.

8984 If proposed dates are that late in season, you won’t get quota with holidays, early December is best as they are looking to replenish food after rut. I see more does early December then later as they seem to come out only after dark..

8985 1st there are too many antlerless seasons, bred does are getting killed off in January, 2nd you are giving too many antlerless tags per license where some hunters kill everything and the real hunters only shoot what they need.

8986 I recommend keeping the archery and crossbow seasons as is as well as the gun and muzzleloader seasons... Sometimes the rut does not hit the gun opener, ut often does. Most gun hunters only hunt the opening 2 or 3 days....

8987 I would really like to see a minimum size put on bucks which can be taken. Such as 4 points on one side. This would really increase the size of bucks taken and could even increase the amount of antlerless deer taken.
Anterless tags are hard to manage for those of us that hunt in more than one county AND hunt both private and public land. I’m not sure how to structure better but would be nice if there was a little more flexibility.

I appreciate all that you do for the environment. I personally feel that the numbers 1 to 2 miles west of highway 47 around Navarino and Nicholas area have dropped tremendously in the recent years. Thank you again.

I would like someone to explain the difference between a food plot and a bait pile. They both draw deer to spot for harvest. It is a big disadvantage to hunters that do not own large plots of land.

Reopen the wolf hunt and stop reintroducing them where they don’t belong. Quit wasting money on Elk. Stop insulting the average sportsman’s intelligence as they probably know more than your biologist’s ever will.

I would like to see a minimum 3 points on one side harvest threshold for antlered deer. I am in favor of a shortened cross bow season (no cross bow during the rut) I am not in favor of extending the gun season.

We use the anterless only tags for our land and the lands around ours because we practice QDMA and try to get our buck to doe ratios in check. We usually hunt a buck for 4-5 years to manage bigger bucks.

I’ve heard rumors that crossbow hunters would not be allowed to hunt with a crossbow during the rut, if these rumors are true I will not be hunting the 2020 season, or for that fact I will never hunt AGAIN.

Please restrict crossbow use during rut. New crossbows shoot as accurate as shotguns of the past. Please consider earn a buck tags again Pistol only season, muzzleloaders get their own season Thank you

I would like to see Wisconsin raise our non resident tag prices. How Iowa does there seasons splitting them up works very well especially on public land. Less people in the woods. Iowa is doing it right.

As a disabled individual (Wheelchair bound) and having to hunt from a ground blind I have not been able to harvest a deer since the baiting ban was put in effect. I think I will hang up my crossbow now.

Been hunting for 20 years and my chance to harvest a deer has declined each year. My hunting group has seriously considered and have already been a patron in out of state hunting due to WI hunting.

get rid of the wolves, leave the seasons alone, enforce the laws on the books already, as for baiting, open it up, if a farm can plant a crop or food plot, but cant hunt over alittle corn, makes no sense

I feel we need to find a way to encourage more hunting of coyotes since there is so minimal trapping. Coyotes are major predators that are completely uncontrolled in the central farmland.

If deer numbers can not be better controled in our area we will never have a forest regrowth. I seen 4 deer all of gun season. In Jan. the were 70 in the same area. That number is way too high.

I CROSSBOW HUNTED OVER HALF OF AVAILABLE DAYS AND GUN HUNTED ALL SEASON. I SAW 1 SPIKE BUCK AND 1 DOE. HUNTING THE SAME LAND. THIS IS THE LEAST AMOUNT OF DEER SINCE I HAVE SEEN SINCE 1954

No holiday hunt!! Found many sheds last year before Christmas. We could be shooting bucks that have lost their horns already. This would be defeating the intend of the hunt to begin with.

Thank you for all your hard work, it is appreciated! I think crossbows have been a positive addition for the enjoyment of our sport. I would be opposed to any restriction on their use.

I see many deer all year long--but see very few during gun season. I would prefer the gun season being held for two weeks--the week BEFORE Thanksgiving and the week of Thanksgiving.

I believe “earn a buck” is a very effective management tool and should be an available option. Management decisions should be made based on verifiable data, by trained professionals.
On our land in the town of Washington, we have cedar and white pine re‐generating, which tells me that we do not have too many deer (at least in our little piece of Shawano County)

fyi, I saw a marked increase from predators this winter. On last year fawns over any previous years. With pictures of bobcats and coyotes. I thought numbers were down last year.

Car kills in this unit are always higher because of late night traffic on two major highways. Also farms are less in numbers so deer tend to congregate on farms near highways.

I support antler point restrictions, 1 buck per hunter and/or some form of earn a buck to help lower the antlerless population and increase the age structure of the bucks

I believe that we all have to work together. I believe we need to try to incentivise grow bucks bigger. Only shoot bucks with a certain number of points as an example.

Bow season is too long. Back in 1957 if you shot a buck during bow season you couldn’t shoot a buck during gun season (too many big bucks are shot during the rut)

I enjoy having the crossbow season running simultaneously with the archery season. The crossbow season is not favorite. I have been hunting exclusively on private land.

Need more public lands. That average hunter that does not own land has a hard time harvesting deer. The deer avoid the public lands because over hunting in my opinion

Maybe some incentive for landowners to shot some Doe's. Where I live the deer ate all my shrubs this past winter. Two miles away where I can hunt I saw very few deer.

There are a lot of deer in my area, the problem is they are all on private land and the land owners will not allow people on there land to hunt. Solution? Unknown!

The biggest issue with this unit is the large amount of land being pulled out of forest crop and sold so the amount of public hunting land has dropped drastically

The herd in Shawano county seems to be healthy and abundant. The plan seems to be working with space for a holiday hunt to allow for extra antlerless harvests.

I feel the wolf's in my back yard has the deer numbers very low either kill wolf's or stop shooting does and if u can't see that maybe it's time for a new job.

Youth season is too early. Harvest has been very disappointing! Move it to the 3rd weekend in October. It won’t be 80 degrees and the deer will move more.

The last couple years we did not see as many deer and I believe it had to do with a lot of the farms took crop damage tags. Hopefully that trend changes.

We need to control the Bear population, they are killing a lot of fawns. Hopefully we will someday be able to eliminate a lot of the wolves in the county.

To increase deer harvest, allow up to 5 gallons of food to be used to bait deer. Otherwise the deer remain hidden until after dark thru much of the season.

Lots of deer damage on agricultural crops. Also no new regrowth in my woods. Any tree that sprouts is only a foot high because deer browse it off

I would like to maximize the population. I think it would help hunters to see the most number of deer for youth hunters to enjoy hunting more.

I believe leave all hunting seasons as is especially crossbow due to I have a class A disabled permit and can't always get out later season

</table>
Shawano county should be divided into smaller units as the area I hunt is very heavily hunted.

I think more antlerless deer need to be harvested to keep the bucks moving and chasing.

In person registration stations should be used to get a better count on the deer kill.

Would really like to see the quality of the white tail deer go up over the quantity.

I have noticed pockets of 40 to 50 deer per 80 acres what are you doing about this ?

Shawano has a lot of deer and every opportunity to harvest them should be available.

One buck per person per year, no party hunting, registration of game at stations.

Don't let anti bow or anti crossbow groups influence any decision making.

Wolf predation was terrible they killed half the herd south of Bonduel.

Bring back Earn a Buck as an management option. Seeing too many Does.

Add a doe only hunt in October. Increase gun season to 16 days.

Open the rifle season on November 15th and run it for 2 weeks!

Do not go to an extended gun deer season leave it how it is.

I like the idea of extending the gun deer season to 18 days!

There are too many deer in the southwest part of the county.

I oppose the lengthening of the 9 day gun season in any unit.

I don't believe the deer numbers are as high as they think.

Excessive amount of predators in area of wolf river basin.

Please continue the special 10 day muzzleloader season.

Raise the age of crossbow use. To 60 years and above.

Need state control of wolf population reduce numbers.

Only one public land doe tag per hunter per year.

Too many coyotes and now we have wolves to.

Thanks for the opportunity to have input.

I would like to see a longer gun season.

There is not a need for a holiday hunt.

Deer numbers are going down every year.

We need to shoot less antlerless deer.

Allow stands to be kept in the woods.

Don't mess with early bow season.

Allow for 2 bucks per license.

Make the gun season longer.

Way too many doe permits.

I like the season as is.

No 16 day gun season.

Open a wolf hunt.
Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 277
   - I visit this unit for non-hunting purposes: 58
   - I hunt in this unit: 354
   - General interest in this unit: 78

   The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 313
   - Bow: 212
   - Crossbow: 144
   - Muzzleloader: 123

3. How many years have you hunted deer in this unit?
   - Minimum: 0
   - Average: 22.16
   - Maximum: 60

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 137
   - Mostly Private Land: 76
   - Public and Private Land About Equally: 45
   - Mostly Public Land: 39
   - Exclusively Public Land: 52
   - I did not hunt in this unit last year: 5

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 36
   - Not too crowded: 83
   - Neither crowded nor un-crowded: 35
   - Somewhat crowded: 32
   - Very crowded: 16
   - Not applicable: 10

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 71
   - Fewer: 126
   - Same: 152
   - More: 25
   - Many More: 8
   - Unsure: 10

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

- If a DMU is in a Farmland Zone...
  - Implement an ANTLERLESS HOLIDAY HUNT: 153 Support, 208 Oppose, 31 Unsure
- If a Holiday Hunt is held in a Farmland unit...
  - EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: 231 Support, 130 Oppose, 31 Unsure
- If the Population Objective is not "Increase"...
  - Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 32 Support, 333 Oppose, 27 Unsure
- If a Zero Quota (buck only season) is adopted...
  - Should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? VALID 153 Support, NOT VALID 208 Oppose, Unsure 31

11. How important were each of the following concerns in forming your opinion about the CDAC's recommendations for this unit? **Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very**

Sheboygan, Central Farmland

The above statements and responses are invalid without allowing for an explanation for each. The responses can be interpreted for either ideology and that is why I answered "Not at all" for each statement. From a dedicated and serious hunter in Sheboygan county: First of all, I would like to take a moment to thank you for the time, mental energy, and commitment to our county and state’s deer population and overall health of our herd. Deer hunting in Wisconsin is not only my passion, but it also impacts me daily in my property management decisions, food plot designs, strategy scheming, and even my, nearly daily, food eaten with my family. I am 32 years old. This past season was my 21st year hunting in the state. I have killed a buck all but one year out of the last twelve years and for every one buck I’ve killed, I kill an average of 1.3 does. I say this to communicate that I am not just a trophy hunter. I have killed some very nice deer, does included, over the years but I can tell you with complete confidence, not one of the many deer I have killed were by accident. I work hard for and earn every deer I kill. Many opportunities are there for those who are willing to work for them! I have heard the whining and complaining from many fellow hunters about low deer numbers and not seeing deer. Personally, I don’t buy it and I don’t sympathize. Sure, they may be putting in the time during the season sitting in their stands but they aren’t putting in the time outside of the season. For those who own land or have access to private property, which is the vast majority, they aren’t doing the property management projects to improve habitat or food sources, they aren’t putting in the time for off-season scouting, contemplating new strategies or stand sites, or creating mental back-up plans and strategies. But, I will tell you, they are talking. They are exerting mental energy by complaining that their stale efforts aren’t producing impressive results. Do not sacrifice tradition to attempt to appease these lazy hunters. No one is entitled to a deer or a trophy, and true success only comes to those to work for it. At the conclusion of last season, I was mailed the end-of-season hunting survey. In the survey, I was asked the question to the effect of, “At the beginning of the season, how confident were you that you would successfully harvest a buck?”. I answered this question with the greatest confidence allowed. In fact, I can confidently say right now that I will kill a buck this coming fall. This confidence comes not in the properties I hunt but in my preparation. By the way, I killed a buck last year on public land. Let me get to the point. As a true deer manager in the state of Wisconsin here are my recommendations to my county and state decision makers: -Keep it simple, stick to tradition, be open and honest-informed hunters are happy hunters. -Don’t cater to the squeaky wheels by fundamentally changing what has worked. -Don’t be afraid to allow deer numbers to increase - hunters who see deer and experience success will keep coming back -Accurately and honestly communicate estimated deer numbers - these numbers must match what hunters experience in the field or skepticism will ensue -Be open and honest with the reasons and motivations behind management plans - this will build trust, buy-in, and compliance -Continue supporting hunter recruitment strategies such as discounted fees for first-time buyers, and continue with the youth hunt season - this will promote license sales and a new generation of hunters -Keep phone-in registration but require backtags with licenses visible - convenience with accountability (this is appreciated by those who operate honestly) -Do not change the 9-day hunting season structure - don’t change tradition, keep it special -Do not add a holiday hunt - at minimum a four-day doe hunt is acceptable but by this time serious hunters already have their freezer full -Do not extend the bow season through the month of January - again tradition, risk of killing shed bucks, added stress on deer during a crucial month, and finding a dead fetus inside does leaves a bad taste Thank you for your thoughtful consideration.
The alleged growth of the deer herd in Sheboygan County is laughable. There may be strong deer numbers on private land but for those of us hunting public land during bow season, the chance to harvest a deer is almost unbearably bad. I grew up in Sheboygan County. I began hunting it when there were decent opportunities in the late 90s, and now when I return as an adult nonresident hunter, no one has a good thing to say. My family still hunts public land there annually and my dad, who is an excellent and historically successful hunter and knows the public land there as well as anyone from 60 years of boots on the ground, struggles to get consistent deer sightings. Please stop hammering the deer and reduce the antlerless quotas and eliminate antlerless seasons. I've heard there is a proposal to lengthen the gun season and start it earlier in the season. You would destroy what's left of the deer population there and ruin public land opportunity completely, not to mention take away the only time bow hunters in Wisconsin have a fighting chance to shoot a deer and enjoy their time in the woods. Please don't do that. I know I would never return to hunt Wisconsin if that was the new season structure. Gun hunters don't need more help. Finally, please get rid of crossbows during the early archery season other than for those with disabilities or senior citizens. You're not recruiting new hunters with that and already crossbow kills have overtaken traditional bow harvests. Enough is enough. Push them into the gun seasons where they belong or at the very least don't start them until gun season begins and let them run through the end of the calendar year. They don't need to be outgunning everyone during the early bow season.

I feel that for too long we have had too big of an emphasis on eliminating our doe herd. We offer way too many "free" harvest authorizations and then add the opportunity for several bonus authorizations on top of it. Harvesting a doe earlier in the season was always one of my personal objectives which allowed me to be choosier while hunting mature bucks. As of the last 5 years I have not even had the opportunity to harvest a doe and was surprised when I did see one from the stand. While I agree that there are certain isolated pockets of large deer populations including does, many of these are "unhuntable". These pockets of deer reside on private tracts of land that if hunted at all, are only hunted by the landowner/family. Many of these circumstances also include ownership that have a no doe harvest mentality. In these circumstances it doesn't matter if we offer no doe tags or a million, the does will not and cannot be harvested there. With the ever growing troubles of over crowded public land opportunities I feel that doe harvest is still necessary, but may best be suited with the "old" hunters choice permit. With that a relatively equal balance of harvest would most likely be seen, while hopefully increasing public land populations slightly. As someone who has been hunting hard and smart here for so long, I can honestly say my seasons have been declining in quality each year, and I'm sure there are many others similar. Without wanting to lose any more hunters in the system, and in the sake of preserving our resources, I hope that you take my comments into consideration. Thank you

Last year I was able to harvest my very first deer. Years before I didn't see much In The way of deer. But I am now seeing a lot more yearlings and healthy does I feel taking away crossbow season is a major mistake if the dnr dose this. I feel with the crossbow hunters like myself have a better chance at harvesting a deer. It gives more experience. I even had a doe young one put her nose in my ground blind last year when I was out hunting for a buck. I am not sure who was more scared her or me cause I honestly dozed off. Lol. But last year was one for the record books. With early snow and also some thunderstorms one hunt turned into a storm chase for me also sith some great pictures and cool experiences. All in all I believe the deer population in and around city of sheboygan is great little high in some spots. I also feel if the dnr would engage more children into bow hunting they will learn something's also. The day I harvested my deer I was also lucky to find some chicken of the woods. Major score when I fried them up with tenderloins. The area I hunt and harvested my deer is full of wildlife. Even had a flock of turkeys scare me while tracking. Them young ones sure know how to fly. I can go on and on about my hunt. And how I feel about this next season. And I am praying I can have another awesome year like last. Thank you for the time to give my feed back and I think this is the best way to do that.
It's unfortunate that 8% of Sheboygan is public hunting. I've done o.k. while bow hunting however It's near impossible to find any gun hunting areas that are not over crowded. Sure, 10 minutes down the road is the kettle moraine northern unit which experiences extreme overcrowding during the nine day gun hunt and another tag to buy. It's becoming overly myopic from a tag stand point and land prices are surging well past the upper middle class level while Sheboygan is primarily a lower-middle, to middle class, blue collar culture. The real question is; how does a middle class resident of Sheboygan afford 40-80 acres at 8-10 grand an acre? With limited public hunting, Sheboygan's hunting is not conducive to the income of the culture or residents and I believe that is why many residents are moving or buying land elsewhere which as we know directly contributes to the deer harvest. I don't know the answer, but that's a prevailing issue that I did not see in the presentation. Lastly - a common assessment that is made from fellow public land hunters; from private to public lands percentages, land prices, proposed deer hunting changes, the appearance is that the DNR is catering to the affluent and inherited land owners where as the sub-culture of non-land owning residents make up a majority of Sheboygan's hunters are only in a position to stand by and obey the regulations that are put out.

I have hunted sheboygan county for 36years generally same area within a 1/2mile. I have seen the deer numbers dwindle. I can remember when I first start hunting opening weekend of gun season I would see 20 to 30 deer in a weekend. Last year i seen 1 all weekend. I hunt from first light to dark I sat in stand 22hrs and seen 1 deer. That's pathetic!!!! You people have the general public hoodwinked. There isnt as many deer as you say. I sit in the stand this past year and said to my self this isnt worth it! I sit here cold for what? Year in year out same thing very little amount of deer. Now for driving in vehicles looking for deer so pathetic I dont even do it anymore! I would do it almost every night. why waste the time or the gas? Also I drive 60 miles a day to and from work in the last year I seen 2 deer. My daughter and stepdaughter and stepson went hunting with me for the first cpl of years but they stopped because they seen NO DEER!!!! I know your sales are down and low numbers of new hunters. I said to myself if things aren't changed by the time I'm 55 I'm done and I know quit a few people feel the same.

I have noticed the number of deer on public land has been dropping throughout the last few years; but have also noticed a large increase in deer populations on private land. I believe this is due to the high hunting pressure on public lands, especially during the 9 day gun deer season. The deer simply get pushed into closed areas or private land with no access. They only come back to the public lands at night, and become nocturnal. The problems I see that have always been a problem: There are a lot private land owners that only give limited permission or none at all. There are also a few private land owners that do give permission but only allow you to shoot bucks or you will not get permission again. You would think the private land owners would take a bigger responsibility in herd management to prevent the spread of chronic wasting disease. Your own statistics shows that public land only comprises 8% of the land but yet is harvesting 24% of all the deer. The way the system works now is you wipe out pockets of deer population on public land only to be filled by the deer that disperse off the private land or closed areas when the seasons close.

In my opinion, Antlered deer harvest should be restricted to a minimum standard of outside the ears in order to harvest, it would help establish larger bucks and help the states tourism industry. Let them grow, should be the theme song. 2nd baiting should be allowed in every county regardless of CWD concerns, Most archers are weekend warriors, unskilled and unpracticed, baiting would allow the novices a better more humane harvest opportunity. We need a quick cost effective CWD testing solution. Finally I would suggest getting rid of the dangerous practice of driving deer, I know the statistics bear out much safer hunting over the past 25 years, but i believe its mainly due to elevated hunting and downward traveling bullets. I think over all the DNR does a remarkable job with the wildlife population in Wisconsin, I’ve seen the changes and a job well done over the past 40 years, but i think our greatest resource is the whitetail deer and I feel respectfully that this resource is woefully mismanaged. Thanks for the opportunity to reach out and stay safe!
Sheboygan County is where I hunt. The Sheboygan marsh specifically between Glenbeulah and St. Cloud. I used to see a lot of deer. I never shot or even shot at a lot but it was fun to see them. Since all the doe tags are handed out just left and right it’s amazing to see a couple opening weekend and then good luck after that. And most guys shoot the first thing they see no matter what sex it is. They don’t identify it at all. I was watching a fawn last season walk towards me. It was maybe 50-60 lbs. at 40 yard some idiot blew its shoulder out right in front of me. It ran off in the cat tails. The guy walked up to the edge of the cattails and then turned around and didn’t look or trail. My hunt was over right then because I yelled at him. He said he wasn’t getting wet. It’s sad how much this happens. Stop giving out doe tags like free candy and let us hunt again! Please. I want to see deer and so do my kids. They want to stay interested and also be safe. By knowing it’s a buck and identitying it I believe makes a hunter more honest and ethical.

For too many years, I believe there has been a steady decline in deer numbers. I believe this is due to a number of factors such as natural predators such as coyotes and wolves, but also an aggressive insurance company lobbying effort to reduce deer populations. From a number of hunters I’ve been in contact with, their are two types: those who selectively hunt and prefer a small hunter group atmosphere, and those who are weekend warriors who get together in drunken groups and try to kill as many deer possible. I don’t say the latter group wastes their harvests, but it is this mentality that over harvests an area and hurts deer populations the most. Lower numbers of deer sightings causes fewer licenses to be purchased and consequently fewer deer being harvested. Proper deer management would remedy this problem and in my opinion would require fewer antlerless tags, aggressive predator hunting and increased access to private lands for public use. This would appease both the hunter and landowner/insurance company concerns.

I realize that these comments are more Statewide than specific to the CDAC, but I hope that the CDAC will have more influence with the State than an individual might. Rather than increase the cost for Non-resident hunting licenses, consider lowering the cost to increase the numbers of out of state hunters. If the goal is to reduce herd numbers, it is counterintuitive to also (directly) reduce the number of hunters. Oversimplified, the State would be better off selling two Non-resident licenses at $100 than one at $160. This plan would increase the revenue while also increasing the chances of reducing the deer population. Additionally, for the purpose of hunting licenses, I would propose that owners of land greater than 120 acres be considered "Residents" even if their primary residence is out of state. These individuals still pay real estate taxes and would be more likely to help control herd sizes by being encouraged to hunt rather than potentially discouraged.

I have seen over the past few years the number of deer decrease dramatically. Too many tags are sold every year and there just aren’t any deer left. Public or private. Also, crossbows should absolutely NOT be available for use by all hunters!!! Only those who absolutely need it. The population has been decimated by people running around with crossbows during archery season. With modern crossbows they may as well use a gun. The crossbow season should also not run the full length of archery. Only a month or two at most! The deer hunting in this unit has been horribly mismanaged and it’s sad because I struggle to even see a deer. 2019 I hunted everyday for 6 or more hours and it took until the last evening of muzzleloader with 3 minutes left to see a deer. I didn’t want to shoot it because it was a small doe but I had to feed my family with something. This is the reality of deer hunting now.

I feel too many tags are given out with licences. Theres no reason to distribute multiple metro doe tags. Also I feel bonus doe tags shouldn't be offered. I want to see the deer herd number go up so us hunters who spend a lot of time and money on our sport have success in the field and can take pride in a healthy hers number. I am not a fan what so ever allowing any age to use crossbows I wish it would go back to the old way by needing a handicapped permit. Too many deer are being killed by cross bows. Also i feel with no registration stations and back tags now many deer are not even being registered. Archery season used to be so loved and now everyone does it because of crossbows taking the sport out of the game and increasing the kill rate and overpopulating the woods with hunters. Baiting should be banned state wide and I would hate for the gun season to be extended more than 9 days.
The presentation was very good, very informal. I enjoyed seeing all the data. I understand the recommendation is to maintain population in the county, however, I would like to still see Sheboygan "maintain" at a slightly higher level then 8-12k deer. Therefore I am not in favor of increasing antlerless harvest on public lands. I am fortunate enough to hunt some private land for gun season but have no viable stand option for bow on private. Therefore I hunt public primarily for bow season and would like to see higher number of deer on public lands. I also believe most hunters would prefer to see higher numbers of bucks to does and the holiday and bonus antlerless tags do not help that if yearling/fawn bucks are being taken during these hunts. I do not hunt the holiday antlerless hunt and would not purchase a tag if Sheboygan county ever went to an antlerless only gun deer season.

I'm glad there is an increase in bonus harvest authorizations. I hunt in multiple counties and could not obtain a bonus authorization for Sheboygan because they were sold out. That meant I couldn't help with your large quota last year, and watched does walk that I didn't have authorization to shoot, due to hunting in another county and getting my farm zone tags there. Please issue more bonus tags, so people like myself can purchase them and shoot the doe I see on public land that you want to help decrease the population. Now I have to decide what county has more bonus tags and guess which one I will have the best chance to harvest the most doe. Please keep the holiday hunt as well. I feel the woods has a chance to settle after the 4 day antlerless hunt before the holiday hunt. This allows the deer to move and a better chance for us hunters to harvest them.

Limiting our opportunities with the weapon of our choice during archery season is absolutely absurd. Long Bow, Re-curve, Compound or Crossbow - we are outdoors and enjoying God’s gifts. Harvesting and consuming a resource in the most efficient way possible for each person is IMPORTANT! Please do not limit our opportunities to use the weapon of our choice. "The QDMA gurus" that think crossbow hunters are shooting too many bucks are 100% upset that more people are actually in the woods when they previously had this time period to themselves. My family both crossbow and compound hunt along with a couple outings a year with a re-curve so I'm not just supporting the crossbow hunter. If an arrow/bolt leaves the weapon when fired then the archery season should be open for all string weapons - no restrictions or time period lulls. Thank you.

I feel that the antler harvest has been way too high for more than 10 years. The majority of our bucks are small with very limited growth of horns do to their young age and poor genetics. I would highly favor shutting down deer hunting in Sheboygan County completely for 2 years. Regard this of what our vehicle insurance companies say, or a deer numbers are nothing like they had been in the 1980s and nineties. I’m also out in the farm fields a lot in our dear do very little damage in comparison to Turkey damage and raccoon damage. In my opinion it's about time that we allow the deer herd in this part of the state to rebound and actually mature so that hunters have an opportunity to actually see a deer that may be 4 or 5 years old Rather than cow tell into the pressures of insurance companies.

The biggest issue with the 2019 Deer season in the Sheboygan unit was the rut was already past by opening day of gun season. There were no deer seen as they were not moving since rut was over. The season was simply too late. How many tags are available is meaningless if the deer are not moving because the season is too late. Second, I strongly oppose the open use of cross-bow hunting during the archery season. The data clearly shows buck harvest during gun season is way down and buck harvest during archery season by cross-bow is way up. Why bother hunting during gun season if you have little chance at a buck? Cross-bow use during archery season needs to go back to being for the elderly and those with disabilities.

This is on the topic of baiting. As I understand the thought of protecting the herd I don’t believe deer farms should count as affected county which I believe is a lot of the findings especially north. Further the thought of banning state wide I strongly oppose as well as many others. I gun hunt up north in price county people voting from southern county’s should not influence the north. Further, the idea of banning a two gallon baiting and allowing all these lan owners to put in food plots is absolutely ridiculous. The plots will bring in more deer than two gallons ever will. So don’t take that option away from hunters who can’t have plots. Thank you.
Many states offer a late season muzzleloader hunt. Could this be implemented as a "earn-a-buck" for the holiday season? For example, if I harvested an antlerless deer during the holiday hunt, I would earn an additional buck tag for a late December/January muzzleloader hunting season that is only valid for that season (the normal gun buck tag would not count). It could be done by first come first serve and there would be a limited amount of buck tags offered in the county. Just a thought to try and hype up the antlerless holiday hunt. This suggestion would be completely separate from the traditional nine day gun season.

Consider I do not want to be a biologist or a lawyer. I want to hunt see deer with my kids and have an opportunity to shoot them. I live on the border of several countries with public land. Choosing what kid what tag where to hunt private public. It all becomes a little much. I have a job and it is not a pro hunter. The more laws the more complex the rules the Less likely I will hunt wild game with my family. If I get invited to hunt in a different area I should be able to just go and have my 10 year old read and explained the rules to me. I may quit hunting and take my kids to high fence good opportunity on my time frame.

There were some pretty lean years with regards to the deer population in the area of sheboygan county that I hunt from about 2010 through 2016. We have recently started to see an increase and it is really nice to at least see some deer while on stand. The doe only and holiday hunts are the ones I dislike. I don't want the population to decrease again like it did when we were on earn a buck watch. I feel like when the populations get so low it is really hard to encourage new hunters to take up the sport because it is no fun to sit on stand only to see nothing or very few deer. Good luck with your decisions.

With 8% of the land in Sheboygan county being public and accounting for 24% of the total harvest, that tells me the public lands receive a great amount of hunting pressure. Deer sightings on public lands the past few years have been pretty low the past few years. I have been seeing .05-.0625 deer per hour in the stand the past 2-3 years while hunting public land. I still managed to harvest an adult deer in each of the past 2 years, but it takes a lot of time in the woods to accomplish that and you cant be selective if you want to put some meat in the freezer.

About the only large area in southeastern WI to have an opportunity to Hunt where you don't sit down and see a hunter 100 yards from you. Even in Sheboygan County hunting is over crowded in certain area and it really takes time to find a spot where someone isn't already there or stumbles through the area you hunt every day. It's frustrating but understandable when you don't own the property. Need more land availability. I see deer, rarely ever a mature buck. Bucks are typically 1-3 years maximum. Many hunters shoot the first thing they see.

Leave the crossbow season the same, running concurrent with archery season. Everyone should be able to hunt with there chosen device. If you want to recruit new hunters let them have their own choice. Stay with traditional 9 day gun season , that is more than enough time to harvest a deer. Lastly don't limit archery or crossbow hunting during the rut. You still have to hunt hard and put in your time to harvest an animal. This is a peak time for activity, what a better way to recruit new hunters and retain them for the future of our sport.

Depending on season changes I may choose to hunt in another state soon. Having to choose between public or private and which zones I can only hunt is ridiculous. I only need to shoot one deer now but other family members wish to hunt also but with these regs we no longer hunt together due to number of hunters in certain public areas and not enough deer in small private area we own. Way to many different seasons. Way too many permits given out has eliminated a lot of does. leave hunters choose their weapons and let then all shoot one deer.

Many people east of highway 57 argue there are very few deer and that we should limit our doe harvest. There isn't nearly as much suitable habitat compared to the western half of the county. Walking through the woods my father and I are seeing heavy browse lines and many more deer than in the past. Please consider keeping the holiday hunt and the 2 doe tags issued with each license. These tools are helping out some landowners who are trying to do the right thing to maintain a healthy forest and deer herd.
I enjoy my right to hunt and own firearms. I consider my rights under the Constitution as very important to my enjoyment of outdoor sports and I would like to see the Wis DNR provide support for supporting and defending the Constitution. Thank you for providing the opportunity to provide feedback on my deer hunting chances of success. I own private property in Sheboygan County and hunting on my own property is a fantastic way for me to provide my own success in deer hunting and small game hunting.

The numbers are just way too low and the amount of time and effort it takes to see deer these days is large. The fun is slowly fading from this sport. Stop killing so many does and let the population recover. Buck only in Sheboygan county for 2 years and the numbers and enjoyment will rebound. Guys with private will always have high numbers so they are not effected ever from more permits. Only the public land hunters where anything that moves is shot. It's sad.

In my opinion the reason we are not seeing as many deer is 1) The hunter population is getting older 2) The day of deer drives is almost gone, which moved deer all day long 3) A lot of hunters have nice little shacks they sit in all day, and by that they don't move around in the woods, only going to and from there stand. The deer are there, but we trained them to head to cover where maybe no one can one into, or the hunters are to lazy to go after them in these areas.

I, along with many other avid bow hunters, strongly oppose altering the gun season and any other actions that would negatively affect bow hunting opportunities, especially those during the peak of the rut. Wisconsin is one state that has the gun season set up the right way. There is plenty of opportunity for gun hunters to shoot deer during the 9-day season. There is no need to harm bow hunters by expanding the gun season or moving it to earlier in November.

Keep crossbow season completely concurrent with regular archery. Otherwise you will need to limit archery by levels of technical advantage, % let off, releases, sights, etc. The crossbow option has opened up warm season/ rut hunting for hundreds of people that wouldn’t spend the time or money on more traditional archery gear. Crossbow legalization has had a positive effect on hunter involvement and deer herd management. Please keep it as it has been. Thanks

I would like to see two changes. 1. Keep the youth hunt BUT the child is done after harvesting their first deer. They don’t need special privileges every year tell age 16. One and done period!!!! 2. Raise the price of the deer hunting license. One buck tag good in all archery, crossbow, rifle and black powder seasons. When you harvest your deer your done. No group hunting allowed at all. No person needs to harvest more than one buck!!!!

No holiday hunt or extended seasons. Where I hunt in the north west corner of Sheboygan county. Deer numbers have been going down for years. Also, no extended hunt into January. I am a snowmobiler. Many landowners will not allow snowmobiling until all hunting is over. Half the snowmobile season is over by Jan 31st. No 19 day gun hunt either....9 days of not seeing any deer is bad enough let alone 19 days. Don't mess with tradition.

My overall concern is the framework of the proposed deer seasons. Certain groups feel they should get preference of hunting times vs other weapons. This issue only pops up with deer hunting. Turkey seasons allows you to choose your choice of method to harvest a turkey: gun, bow or crossbow without this bickering. These split proposals divide an already declining group of outdoorsman which is not healthy for the sport overall.

I would like to keep gun season the way it always was. If you cut down the season for bow/crossbow that would be fine. I would bring back the back tags. There are people that trespass all the time. On land that they have no business on. I hear from others that people ain’t calling in their kill. To much stuff people getting away with. It’s comes down to baby sitting your hunting land. That’s no fun

I did not like the fact when the Holiday hunt was going on in 2019 you could not use your unused buck archery tag. I did not partake in the Holiday hunt because if I saw a buck I would not have been able to use it. People had a lot of time off over the Holidays and when you can’t even try to fill and unused buck archery tag it is disappointing. I do not believe in the Holiday hunt to begin with.
Please extend the Western edge of Sheboygan County metro sub-unit back to Hiway 32—as has been in past years. I hunt private land between Hiway 32 and Interstate 43 and I am disappointed the Western boundary of the sub-unit was moved East a couple years ago to Interstate 43—making the sub-unit narrower and thus cutting out my extra sub-unit hunting days.  Many thanks for considering!

There are too many hunters taking fawns during the gun hunt which in turn leave a lot of deer gone for the future hunt! Also with land in Michigan which opens on the 15 the if November I do not want seasons to start the same weekend!!! So keep the seasons the same!! Also the rut runs about the same time so to let by bucks get bigger we need to leave the season the same!! Thanks

Please maintain availability of CWD testing. Provide more insight about actual CWD instances, if any, for the unit in which I hunt. My opinion is that we need to reduce the deer herd (bucks and does), to reduce the chance of CWD spreading. If hunters are afraid to harvest deer due to CWD, the herd may get out of control. We do not want to waste this great resource.

Antlerless tag levels could be higher to encourage more harvest to reduce car-deer accidents, disease (CWD) transmission and tree seedling regeneration. Increase of public land bonus tags from last year is a good thing. Free metro zone tag is also good. Need to bring back October antlerless season for more herd management tool options and recreational opportunity.

I think the gun deer season should start on Nov 15 where ever it falls and stop following Thanksgiving. Maybe some tradition in Wisconsin but the rut is always over by the time gun deer season is open. This leads to bucks be bedded down and only kicked up if pressured by hunters. Other states do this type of season that does not follow the holiday. Thank you

The high wolf numbers and low deer numbers in much of northern Wisconsin has forced many people to hunt public land in Sheboygan County. Causing crowded hunting conditions on opening weekend of gun season and low deer numbers. Its also causing more hunters to hunt/harvest more deer during bow season in Sheboygan County instead of hunting Wisconsin northwoods.

I'm happy with last years season structure and hope it stays the same. The only thing I would support limiting is the crossbow season. I believe they should get a month to hunt with crossbow then open it back up after gun season. Too many crossbow hunters think they have a rifle in their hands and end up wounding deer in my personal experience with them.

Been seeing a downward trend in the number of deer being seen even though i have been improving habitat and planting food plots. Neighbors in my area are seeing similar trends. Thinking theres been to many does harvested in the last 5-10 years and now its really starting to show in the population in my area.

The issues with public land and hunter harassment is large in the county/zone. I have been approached as a female by private land owners who border public land and been interrupted during a hunt. This definitely affects my hunting and enjoyment of coming to Sheboygan County to (attempt) to harvest a deer.

Many fewer deer, driving an increase of people trespass and illegal stands issues. Baiting as well is prolific on state land, people hunting well before and after allowed times. I did not feel safe in several instances walking into and out of state land as people were actively hunting in the dark.

I've hunted this unit for 21 years and every year we see less and less deer. In my opinion they're handing out way too many antlerless tags. I would like to see it go back to 1 doe tag per license archery/ crossbow and firearm. There's no reason i should get 2 plus antlerless tags each year.

Too many times I've seen deer drives that drive deer from public hunting grounds onto private land. Once driven onto private land, the deer are shot by waiting "hunters". While this practice isn't illegal it is unethical. The object of my writing is to make this practice illegal.
Your deer count is very inaccurate it all starts there. That's why hunter numbers are down. Who wants to go hunting if you aren't going to see a deer. End your cwd talk. I hunt in three other states and don't here much about cwd. IM sorry haven't seen a deer with cwd yet.

The deer herd gets plenty of pressure with the 9 day plus muzzleloader season. Adding a holiday hunt puts unneeded pressure along with a higher chance of fawn and pregnant doe harvest. Hunters have more than enough opportunity with seasons open since mid September.

I think there are too many deer and the quality of bucks is low. I am concerned about cwd having negative impacts on the deer herd. From my backyard on multiple nights I saw herds of 30+ deer in the field behind my house. This can't be good for the spread of cwd.

We have less deer in 2019 seen, We also snowmoble late December in the northern state area sometimes in sheboygan country. I think it's to cold hunting late December for many people. If late hunting season many land owners don't allow snowmobiling the same time.

From personal observation and conversation with another hunter, in the specific area I hunt (western edge of Sheboygan county, just north of SS) zero fawns were observed last season. Adult deer population was about normal. I have no idea why fawns were absent.

A word of THANK YOU to all of you at the DNR and those who are working with the DNR to preserve our wildlife, our hunting and fishing habitats. From the smallest to the greatest work, the Sportsman and women thank you. have a great and safe summer.

I'm strongly against the holiday hunt. I love late season bow hunting people have enough opportunity to shoot a doe during the regular gun and 4 day antlerless season. I'm also an avid muzzleloader hunter so please do not extend the 9 day gun season either.

Killing more anterless deer doesn't solve the cwd problem. I've hunted in other states they also have cwd but not killing anterless to the extent that Wisconsin is. People want to see deer when they hunt. Maybe that's the reason the license sales have dropped.

I have noticed extremely large herds of deer concentrated in fields near me late this winter. (Only on a few occasions over a few days). I have never noticed herds this large/concentrated 60+ deer in 20 acre in the 30 years that I have lived here.

Stop changing what zones can harvest go back to one buck tag per bow one buck for gun and two antlerless any county. The private and public is making it difficult for hunters to dictate where we hunt especially if we hunt three to four counties.

Crossbow season should be its own separate season and not run with archery season. This is the worst decision the state ever made. Not sure when I will buy a tag again, if ever, and I definitely teach and preach to others every chance I get.

Last season the rain kept the corn on the field so the deer were in the corn which made seeing deer where I hunt almost impossible, I hunted everyday except Thanksgiving during the gun and I seen two deer with no shot opportunities.

The seasons should definitely not run out into January!! It is too detrimental to hunting in general!!! The long deer seasons and deer leases are ruining small game hunting!!! This is not opinion it is FACT!!

Thanks for having a holiday hunt! My daughter will be out of state for college this year. She has hunted six seasons in row, and the holiday hunt will be the only opportunity for her to hunt next season.

I believe it would be beneficial if the deer season was moved up earlier in the year. By the time gun season rolls around, the rut is pretty much over and the deer have settled back into a routine.
I wouldn’t like the Holiday hunt like this last year. Deer populations are way too low and your extending the season interferes with snowmobiling and the possibility of shooting bucks without antlers.

I feel the number of licenses issued is driven more by money gathered for the DNR/state versus the true number of deer in our state, and the need to regulate/depopulate them.

I would like to see the number of antlerless tags included with a license dropped to 1 while increasing the number of bonus tags available to help fund management efforts.

I enjoyed my hunts here last several seasons and continue to see plenty of antlerless deer and feel the cdac is on the right path to maintain or reduce the herd. Good job.

I don’t believe harvest numbers are accurate due to individuals not calling and registering their harvests. I strongly believe we should have registration stations.

Way too many antlerless tags are being given out. I buy as many as I can afford and don’t use them just to try and save the deer the dnr is trying to eradicate.

You need to do a better job of leasing land for hunting. Most of it is just bare fields with no hunting available the only benefit is to the landowner.

They should make specific rules on how hunters are able to hunt on property lines. For example they have to be 50 yards away from the property line.

It would be nice to see more youth (under 16 years of age) opportunities outside the existing youth hunt and regular gun deer season.

I am in favor of continuing to run the bow and crossbow seasons at the same time. I strongly oppose shortening the crossbow season.

Please extend the gun deer season and halt all hunting for a week prior to beginning of gun deer season to help with deer movement.

Get rid of all extended hunts like the holiday hunts, scrap the longer gun season idea, go to 1 buck one doe tag per license.

I saw very few deer if any while hunting northern Kettle Moraine unit. I always see them on the roadside after shooting time.

To many doe tags free so some people feel the need to fill them all cut back on that and keep the seasons the same.

9 day Gun season license higher for out of staters 7 day muzzle hunting No youth hunting and NO special seasons.

I feel more deer the better, to a point. I do not like the holiday hunts. I do like the extended bow hunts.

I enjoyed the holiday hunt - conditions were very good and few hunters. Please keep this hunt available.

Well done Research, Good Video, easy to listen to and very understandable. Keep up the good work.

I am opposed to an antlerless season, however I would like to see bucks harvested be a 6 pt or higher.

Need to stop handing out permits like candy. Will start losing the youth. Encourages Brown is down.

With all the different seasons, the deer are nocturnal you might as well have a night season also!

I feel the crossbow season should be part of the GUN season, NOT archery - because it’s not.

We pay good money for all this and could use instant on site cwd tests at multiple locations.

Go back to the old way of deer hunting party tags. Deer herd numbers were better in State.

So not think we should be changing the hunting seasons, or separating crossbow season.
Please keep the online voting in the future as a lot of us can’t make the meeting

I would like to bring back back tags and in person registration

Like all the deer hunting season to remain the same as 2019

Have the beginning of archery season start September 1st.

Do not extend the deer gun season. 9 days is long enough.

Eliminate the 4 day antlerless and holiday hunts

The crossbow season needs to be shortened.

Maintain current season length

Extend gun deer season
The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

933 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 750
   - I visit this unit for non-hunting purposes: 122
   - I hunt in this unit: 847
   - General interest in this unit: 173

   The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 752
   - Bow: 610
   - Crossbow: 291
   - Muzzleloader: 267

3. How many years have you hunted deer in this unit?
   - Minimum: 0
   - Average: 19.5
   - Maximum: 61

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 383
   - Mostly Private Land: 219
   - Public and Private Land About Equally: 138
   - Mostly Public Land: 53
   - Exclusively Public Land: 49
   - I did not hunt in this unit last year: 5

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 55
   - Not too crowded: 134
   - Neither crowded nor un-crowded: 109
   - Somewhat crowded: 75
   - Very crowded: 58
   - Not applicable: 28

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 82
   - Fewer: 219
   - Same: 446
   - More: 126
   - Many More: 48
   - Unsure: 12

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>

</table>
I am an experienced deer hunter. The 2020 season will be my 55th season. The last 18 years I deer hunted in St. Croix County. For 8 of those 18 years, I hunted private property during bow and gun season and I successfully harvested deer or I chose not to harvest a deer. The last 10 years I have exclusively hunted public land in and out of the Metro zone, and public access land only because I no longer own private property for hunting. The last 10 years I have not harvested a deer because I have not seen a deer on public land to shoot. I can no longer use a bow and I dont have a crossbow so I rely on rifle and muzzleloader season. Public land is so burnt out after the archery season. Interesting that if there is snow cover, there are very few deer tracks to find. I have seen two does during hunting hours while I was on public access lands. I was hunting along a fence line and the does were on private land next door. The deer population you want to reduce is not located on public land, if anything it is transient on public land. I could go out with twice the amount of free antlerless tags and still not harvest a deer on public land. You folks need to do a better job with the private land owners and encourage them to allow hunting on their lands. How many of the members get out and talk to the hunters that do not register a deer and ask them about the quality of their hunt? Coming to a conclusion by professionals that there is not the interest in harvesting antlerless deer is just wrong. Get out and talk to the people that are hunting. Relying on a "matrix" to provide information on which to make a decision on how to control a herd is the wrong thing to do. Use the matrix as a useful tool, not the determining factor. How about closing the Willow River State Park’s non hunting areas to visitors other than hunters during rifle season, including the south side field and wooded areas south of the paved road that goes to the dam? There are a lot of deer there. Every evening many deer leave the park to feed in the residential areas south of the park. You want to reduce the deer herd correct? This is a place to start. Oh, one more thing. If you choose to make St. Croix County an antlerless harvest only, I doubt it will impact hunters that already use the little public land that is available. They will still go there and hunt. The private land hunters may not like it but who is going to thwart the non ethical slob hunters from poaching a buck anyways. Nobody has to transport deer to a registration station anymore so a buck or doe for that matter possibly never leaves the property until after it is butchered. In my opinion that is the worst decision the DNR ever made. It skews the harvest count which......goes into the matrix! If you want to try "earn a buck" again, only use it on private property. The ethical hunters hunting private land may follow the law and comply with it. Lastly.....this whole "public land" "private land" designation may be good for the DNR matrix folks to get their harvest numbers accordingly but that can be done upon call in registration. I don't like it because when purchasing a license, it locks down a hunter to one or the other. What If hypothetically..... I buy a license and I get two free antlerless tags for public land. Then a neighbor or friend invites me or allows me to hunt on their private land. I cannot legally harvest a doe on that private land unless I BUY a bonus tag for private land. Or maybe a neighboring land owner next to a PAL invites me, while in the field, onto his land or the PAL land owner invites me onto his non PAL designated land. I cant legally harvest a doe there with my public land tag. Help me out here, you want to reduce the herd so allow me to get a free antlerless tag for public land AND a free tag for private land if I so request it when purchasing a license. This gives me more options. Right now it is one or the other when getting the free tags. You cant get one of each. That is ridiculous. My hope is that someone reads this and seriously takes this to heart to consider. I really doubt that anyone cares about what I said.
Thank you for the opportunity to learn with this online format and provide comment, the numbers in the presentation are really interesting. A couple passive comments on this approach, I would really enjoy some more commentary on the interpretation of the numbers from Jed, I can tell he likely knows a lot more than he is saying but is directed to keep it simple, I wouldn't mind some more judgment of the numbers/trend/data analysis verbally from our local professional. Second, if would be nice if the CDAC recommendation could be explained more verbally rather than just a yellow box with two paragraphs at the bottom of this page. Specific ideas support/explained with visuals and commentary would be more informative. Next, to the recommendation of the antlerless only hunt, I completely disagree in a constructive manner. I realize this recommendation is built off of a number of metrics and datasets. I use the same approach for many of the data analysis I do in my day to day career. What I can say to start is that metric/datasets typically are poor in taking into account the human behavior and actions. A antlerless only season would be greatly detrimental to a lot of hunters motivation to take part in deer hunting in general. I for one, would likely not carry a gun or bow in the woods of St. Croix county if I cannot harvest a buck when presented the opportunity. I know of many other hunters in this county that feel the exact same way. Why even take part if I cannot harvest a antler animal when presented the opportunity? I hunt for meat as much as I do for horns, I don't have a wall full of trophy animals, I have been hunting from the day I could and grew up in a St. Croix County hunting family. I have been through earn-a-buck, northern zone buck only hunts, and all the special hunts (zone T) etc etc. I have always trusted WIDNR throughout these special circumstances. The antlerless only I cannot support, and would completely stop hunting in St. Croix County in general. Again, you are telling the general hunting public that if they are presented a opportunity at a animal antlered animal that they have to pass? Taking away the harvest of antlered animals and trying to replace that with antlerless animal is not possible in my mind. Do you suspect that the motivation to harvest extra antlered animals in lieu of no antlered tags available to increase, I for one don't think so, and I think the result would be less harvested animals overall. I don't understand how out of all counties in WI St. Croix is the only proposed for antlerless only? Aren't there similar counties with the same metrics/datasets? A constructive approach to harvesting more animals would be hunters and game managers alike finding avenues to accessing the largely privately held hunt able lands of this county and acquiring new parcels to make open to public folks. I know of new parcels that are being bought, but I think more can be done as family farms are starting to go away and more parcels become available. More of our hunting tax dollars should go to land acquisitions so game managers can play a more significant role in the counties deer population. Or as I mentioned above an incentive to private landowners to provide public access to reasonable hunters to reach quota goals for the county, there has to be some type of approach to champion for the future of hunting. Please take into consideration the impact on the hunting families of St. Croix county when you tell them they are headed to the woods to only harvest antlerless animals. While tags sales will likely not plummet statewide, hunters enjoying the woods of St. Croix County will likely decrease, and I would be one of many that will not hunt the county if it is antlerless only and travel to other parts of the statewide. Again, I completely disagree with the antlerless only recommendation, and would be happy to talk to the CDAC, it is hard to provide all my thoughts in this comments field. Thank you again for the opportunity to provide input.
In the past 18 years of living in this county and 15 years of hunting this county, previously Pierce co., there has not been a considerable increase in overall deer numbers, let alone the doe numbers. In reality, it's been either consistent or lower than it was. I primarily hunt private land adjacent to public land - don't forget many of the public lands in this county are WPAs (federally owned), so hunters can't leave stands overnight. This leads to many areas off putting to hunters. Also, this county is very suburban, meaning there may be pockets of deer close to towns or on relatively small parcels off-limits to hunters. I've had seasons in the past where I saw 'zero' or only a few deer, including does, but this was back when I was hunting more public land. I work in MN and in my commutes along the 94 corridor, as well 65, I've seen very little difference in vehicle kills either. Fawning and rut do bring about a spike, but when comparing the numbers in almost the past two decades, I can honestly say there's very little difference. I'm an avid hunter - my friend and I have almost a dozen cameras setup throughout the year and we enjoy driving around to look for deer in a several square mile area in New Richmond and East of there. We don't shine at night, but go out during the last hour or so of light throughout the spring, summer and fall. My observations from those adventures mirror what I see in our hunting area and what I see around home or while driving/commuting, no significant increase in deer numbers, but either consistent or somewhat lower.

You're dealing with a hunting population, primarily of the older generation. I live alone, one deer a year is plenty for me and if I harvest a buck in archery season, I become more selective during gun season or I may target does, but they can be just as elusive as the bucks come gun season. I don't shoot deer, including does, for sake of just shooting them or to meet someone else's presumed quota numbers. It still takes time and work dealing with the animal, even if I were to donate it. A decision to allow only buck harvest in the county will have unintentional results - it's just a 'scare tactic' IMO. The DNR will lose credibility and hunters will either hunt neighboring counties or MN. I will not deer hunt in St. Croix co in 2020 if I can't target bucks. This mirrors a liberal agenda - more government involvement dictating what they 'feel' is best for everyone. You will take the enjoyment out of hunting for people if you don't allow them the freedom to make their own decisions while hunting - that is what hunting is all about. I would be very open to only allowing people to harvest/register one buck during the entire deer season, like MN, and not allowing party hunting - not just for St. Croix co., but even statewide. Everyone has a pocket full of doe tags anyways, and there's no reason someone should forego their buck tag so someone else in their party who already shot a buck can shoot another. There may be incentive for some archery hunters to take a doe instead of a smaller buck so they can keep their gun/buck tag open. Or, if they do want more than one deer for the freezer, they'll me more likely to target a doe, instead of another buck and potentially not filling it. The holiday hunt and extending season has very little effect IMO - people are typically burnt out by end of gun season and are focusing on family/holidays and/or ice fishing. The deer are pretty much nocturnal or are afraid to show themselves until mid-December anyways - they need a couple weeks to settle down after the gun/muzzle-loader barrage.
I feel an antlerless only season might be a bit much since I recorded a higher number of bucks last season without shooting one all year. I failed to see any antlerless while in position on public lands in St. Croix Co. The majority of doe seen were on private lands feeding on the high crop areas and staying together for the most part. I think a 1 buck 1 antlerless should be instated next year for the county throughout the entire season. From bow opener through gun with the exception of metro bonus tags and maybe 1 bonus or a lottery system for the later holiday hunt. The public lands were extremely difficult to hunt during the gun season as hunters just walk/drive around in search of any tiny area they cant see orange or other hunters vehicles. Not sure how to solve that issue but there isnt a lot of respect for being in a stand or blind and although being noticed still there is moderate traffic and noise without regard. There are deer getting struck by vehicles across the county and I actually hit one myself. It's difficult to issue these types of warnings or permits with such little decent public land to hunt, but with the private land owners party hunting next to the public lands I've seen places where there are 5, 6, 7 deer strung up at once. I can show you places where people dump carcasses for over extending their limits on private land, to make it look public. I shot a buck with bow last year and tracked it to private property but was unable to get permission to track any further. (I believe the landowner saw/found my deer and concealed it overnight then refused to let me track it the following morning) that's ok with me I just dont want anything to go to waste but with the tight quarters for public hunting within the farm zone and private lands the numbers harvested are being improperly reported by party hunting within the private community. Some kind of lottery system could work but it's difficult to say as I'm seeing more and more deer driving to and from work at night along the county roads. It seems like the population in my area is doing fairly well, but I believe an antlerless only season may bring on more traffic incidents and stronger hunter pressure from the public side of things. I believe private land owners wouldnt adhere to antlerless only atleast not willing to follow guidelines. Not all but there are some. It's a difficult task for any outdoor enthusiast to reconcile and find solutions, but I believe some form of lottery could be a better start before going completely antlerless. Maybe 1 deer either sex for archery tag and antlerless only for firearms with the exception of a lottery tag to some.

It seems as though the "management" of the herd is directly tied to being able to use the antlerless tags on deer that live on private land. Private land owners are managing "their" deer(or land) as they want to. With 2 or 3 antlerless tags being given with the license plus more available to those who want them, it seems that people are harvesting as many deer as they want for their freezer. It does seem that some people would shoot more if they had access to those animals that live on private lands. I did not like earn a buck but it worked as a management tool. I think the DNR should be doing what is best for the herd and not worry so much about the hunters. I do realize that is easier said than done. The antlerless only idea for St. Croix County is not a good one at all. Many people, myself included, like venison and will shoot a doe. But if you take away any chance of shooting a mature buck, many people will not hunt in St. Croix County at all. They will hunt elsewhere. Because they still will want to know, that if they see a big buck, they can still shoot it. By removing hunters from the woods that would shoot does, it is counterproductive to getting the deer numbers down. Try some form of earn a buck if you want antlerless deer removed. Regarding crossbows: I've never used one. I used to be a passionate bowhunter but gave it up because it became "competitive". It seems that people are more proficient with a crossbow. My brother in-law only wounds 2 or 3 deer every year now that he uses a crossbow. He used to wound 4 - 6. I'm not exaggerating. I've lost them too, but not nearly as many as he does. My point is, people are harvesting more animals with the crossbow because it is a more proficient weapon. I know the elitists hate that crossbows are allowed in the woods at the same time. But, people that hunt with a crossbow typically don't like to hunt when they are "uncomfortable". So the best time for them is October - November with all the other stick and string people. I hunt the regular gun season with my muzzleloader. It's my choice. If bow hunters want to use a vertical bow, that's their choice. I don't complain about the neighbor using a .300 Winchester mag. That's his choice.
When I first heard that St Croix County was considering an antlerless only season I thought it was a joke. Once one of my boys confirmed it was true we were all upset that something like this is even being considered! I own several properties in St Croix County and have spent thousands of hours managing these properties for Whitetail Deer. Two of the properties are in the metro unit and the other one is outside of the metro unit. We’ve invested hundreds of thousands of dollars in three different properties, equipment and gear. Habitat management and hunting is not just something we do for a couple of months each year. It’s a lifestyle and something we do year round as a family. We look forward to shed hunting in the spring, watching the does, fawns and bucks all summer, giving the bucks names and trying our best to harvest those trophy bucks each fall. As part of our overall habitat plan for each one of our properties we look to keep a balanced heard. When my sons heard your proposal of an antlerless only season they were upset and very disappointed. They immediately were not motivated to execute our habitat plans because the bucks they were looking to chase next season would be off limits. Now the kids are spending less time outdoors, not supporting their passion and not building that important thing called work ethic. Is this the type of reaction we’re looking for? Is this going to motivate more people to take up or continue with the sport they love and increase doe harvest numbers or push people to hunt elsewhere? Based on the doe harvest numbers that were reported in 2019 it appears we are approximately 1,000 short of our antlerless goal. The more logical solution to the problem is to implement earn a buck for the 2020 season. Since 1,732 bucks were taken this would be an easy way to harvest the additional antlerless deer needed to hit our county quota in 2020. Having said this the “earn a buck program” can be an effective tool when used appropriately but if overused can over time have a negative impact on doe numbers and hurt the overall deer population as many of us witnessed not too long ago in Wisconsin!

1. I primarily bowhunt the metro subunit. I see very few deer. I feel lucky if I see a deer per hunt during Sept and Oct. So if I see one, it’s unlikely I will shoot it - unless it’s a big buck. If I see a doe in Oct I generally will leave it alone in hopes of attracting a buck later. This is fine with me. But I’m not going to continue to shoot antlerless deer when already I see very few. I’m not opposed to shooting antlerless deer, but I go to Pierce or Dunn County to do it because I see far more deer in those counties. 2. Deer in the Hudson/RF area seem to be afraid to show themselves in the daylight. Might already be too much pressure on them. In other parts of the state I’m very surprised at the willingness of deer to show themselves in the field. Rarely happens around Hudson. Maybe this is why we don’t see deer during Sept/Oct like we do in November. 3. In the Hudson/RF area it’s just too difficult to get on land to hunt. Most landowners will not grant permission. Either their family hunts it during gun season so they don’t want bowhunters taking the deer, they already have a bowhunter, or they’re unhappy with the suburbs creeping into the countryside. 4. I participate occasionally in the Holiday Hunt. It’s nice to know it’s coming in case I need to to get one more deer for the year. 5. The January archery season is fine and I do get out in January but it’s very difficult to hunt due to the weather. It might be fine for guys who can sit in a heated blind and open a window to shoot a deer at a feeder, but that’s not me. 6. It’s hard to accept that deer browsing of red oaks is a concern. In most of the areas I hunt around here the proliferation of buckthorn appears to prohibit the growth of oak trees far before a deer might browse them off. But then again, I’m not a trained biologist... 7. I think there is a significant impact on the herd from people living in the suburbs and having corn piles in the back yard. This pulls a lot of deer from the hunting areas into the housing developments and takes them out of the hunt. Thanks for the opportunity to voice my opinion.
I think trying to decrease the antlerless herd is needed. If one buck either bow or gun would be allowed and requiring at least one antlerless being taken (I know earn a buck) would be be more palatable to me. I have property next to a large tract of state land and I observed more hunters hunting pheasants than deer during the deer gun season. They had dogs. A problem with our county is the housing developments are in prime habitat areas creating challenges for hunters to remove deer from these sanctuary areas. The last two bow seasons for me have had high deer sightings. Being the gun season has been late (end of November) deer sightings were very low. Once they have left my hunting land they no longer are able to be hunted by me. The deer are not being moved around like in years past because hunters that own a small huntable parcels of land build a stand and go to that spot and are not moving deer around. My observation over the last 15 years of hunting st Croix county is less hunters, less land privately owned that is hunt able and deer that adapt to hunting pressure very quickly. It is not that we don’t have enough hunting opportunity’s. I am retired and I start bow hunting about the end of September and hunt till the end of the gun season in November. I hunt almost every day during bow season and everyday during the 9 day gun season. By then I am hunted out. You have a real challenge to just plain get people to shoot more deer. Shooting them is the easy part. The work starts after that. (gut it, drag it, load it, haul it, process it.) for a lone hunter to do this with out help can get old fast and for hunters to loose interest. Has there been any thought to some sort of a lottery for buck tags in the county? At least it would be a different tool that wouldn’t look like earn a buck. I think keep the free bonus tags like it currently is but limit the county to one buck with either gun or bow not both and you have to take an antlerless deer to shoot a buck. Yup I said it, earn a buck. Thank you for your dedication and time.

I disagree with the current recommendation to only allow antlerless deer harvest for the upcoming season. This may very well reduce the overall harvest by causing people to travel outside the unit/state to hunt bucks which would not accomplish the goal of more antlerless harvest. It would also drastically reduce the amount of time people are willing to dedicate to hunting, and archery hunting specifically. Hunters would just wait until firearms season, shoot their antlerless deer, and then go hunt in MN or other parts of the state to shoot a buck. This would be a loss to the heritage of hunting and hunting recruitment in St. Croix county. I also disagree with the current recommendation to NOT participate in the holiday hunt. This is the perfect opportunity to harvest more antlerless deer. I personally had to miss most of the 9-day firearm season last year due to family commitments and holiday travel. If I would have had the opportunity to participate in the holiday hunt I definitely would have and I probably would have filled more of my bonus antlerless tags. I think this county could successfully participate in the holiday hunt with minimal conflict with snowmobile clubs and their members. The majority of participation is done on private land already, so the distribution with the snowmobile trail system should be minimal, especially if we have another very mild winter like we did this year. I am a WI snowmobile trail pass buyer also, and I would much rather be hunting in late December! Pierce County is able to accomplish this and they are very similar to us regarding climate and snowmobiling opportunity. I also think there is a huge opportunity to talk to more hunters about the options to donate deer in St. Croix County. I did not know about this until I brought a deer into my local processor. With a marketing campaign to talk about the need to harvest more antlerless deer and the damage they are doing to forest regeneration, I think there would be more participation and use of the available bonus tags.
Hello, thanks for hearing me out regarding this topic... I strongly disagree with the CDAC's recommendation of an antlerless only season in an effort to reduce the antlerless deer population in St Croix county. In fact, I do believe that this would be counterproductive in reaching the goal of deer reduction as it would dissuade hunters to actually go out in the woods to harvest deer. Not all hunters are meat hunters that can appreciate a fine doe/antlerless harvest; you would be pushing these types of hunters away from the sport all together if there was never the ability to set up for a buck during the season. With dwindling interest in the sport to begin with, this could be a very slippery slope. I have harvested a plethora of deer in my 35 years of hunting to appreciate every one big to small, however, taking away that potential chance of a "buck of a lifetime" or a personal best/trophy while out on any hunt, I have to admit, does make me less excited about going through all the costs and effort (Land, gear, licensing for myself and two boys). Perhaps an EAB (earn-a-buck) incentive program would be a more productive tool in achieving your overall goal of more antlerless deer harvested. Scientifically and statistically speaking, EAB has been the only management tool which effectively reduced deer numbers. Some other incentive or repeated communication about supporting the vitality of the local heard by harvesting more antlerless deer, and continued free antlerless tags, I feel would be a more successful approach than an antlerless only season. Also, maybe look at the most densely deer populated areas/area that is most impacted by high deer numbers (like a metro sub unit), and have a firm management tool in place specifically for that zone within the county. Thank you.

I have noticed a sharp decrease in the Doe/Fawn population on the Western side of St Croix county over the past few years (Somerset area and also Hudson metro sub unit). I believe this is the result of too liberal Doe bonus tags allotments to hunters the last few years (2+3sub). There is an insane over abundance of young bucks in the 1-2 year old range. With MANY cameras afield, it's been very common to see a 4 or 5-1 ratio during the last 2 years from August-December. On one 80 acre parcel in recent years it's been as high as 10 different bucks to a 2 doe 2-3 fawn ratios. Another 80 acre property I've seen much the same #'s (I mainly hunt on 3 different 80 acre private parcels in this area). I've hunted for well over 40 years and I've never seen a deer heard this unbalanced. I think your much wanted doe kill has yielded the results you desired already and needs to be limited for a while. I've viewed your statistics/goals and believe they are both way to high for my area. They should be reduced to say a 1 + 1sub unit # vs the 2 +3sub # they are now. I, being an non resident, would not hunt if it was an antlerless only season. Having worked in the archery industry for years I know an antlerless only season would be disastrous to the sport (even for just 1 year). Buck hunting is and always will be the hugest driver to most sportsman. In this day of dwindling hunter #'s it would actually drive the deer/doe #'s higher vs reducing doe populations. Low hunter #'s always yield a higher deer population. Side note......The coyote population from my area is extremely high. I have not seen any fawn mortality issues from that yet. Doe's from my area usually have twin fawns and it's actually rare to see a Doe with a single fawn.
A couple of things that I am concerned about is the doe only season that is going to upset many hunters and may drive people away from interest of deer hunting. Deer hunting has already revolved into a rich man's sport over the years and several people are already upset with the dnr with all of these changes in the seasons all the time.

Alot of deer problems such as eating back yard plants or bushes is people have moved into the deer’s habitat by building in woods and areas that deer have populated for many years. Car deer accidents could be cut down with smarter driving, I see it all the time people dont even slow down when there is deer on the side of the road better awareness would cut down accidents.

Over browsing is a result of less food sources is where I dont understand the ban of feeding deer especially minerals it would be beneficial for them as it would be just like humans taking vitamins to maintain a healthy body. I fed minerals back when we were allowed to and I could see the difference in the deer on our property. I also think that there should be some kind of restriction on how much a woods can be harvested, it shouldn’t be allowed to clear cut a whole woods. Doing so takes away habitat from all animals.

I dont believe that a doe only season will be the answer to this population control I would rather see a earn a buck versus a no buck. That has been a tradition of going deer hunting in wisconsin with chance to harvest a nice buck that is how it was when I started hunting 37 years ago you could only shoot a buck so dont take that away. I dont have a problem shooting a doe as I have harvested several over the years but I enjoy that opportunity to bag a nice buck if opportunity is presented. I say no to a doe only season.

I own and farm around 1300 acres I don’t know where the deer numbers come from in the area’s I hunt there’s not that many deer. In the last 20 years the amount of hunters has gone down private land that I previously hunted has been bought and divided up people now have there 5 to 20 acres some hunt some don’t the deer seem to know where they are safe and that’s where they stay. If my area changes to antler less only or the crossbow season changes I will not buy any deer hunting licenses nor will my buddies that hunt with me so what good is it to change the deer hunting regulations when no one will be allowed to hunt anything I have. We don’t hunt any public land because it gets a lot of pressure around my area and the traditional bow hunters who are crying about crossbow hunters can shut up because they are not going to hunt anything I own anyway so why does it matter what type of bow I use on my private land when myself and my friends are the only ones hunting it so either we harvest deer or they live in piece for another year.

In my best deer hunting spot the neighboring farmers all hunt and don’t allow anyone else on it either so the cry baby bow hunters loose again. It makes no sense to extend the 9 day gun season either because what we have seen in the last few years is that after the first weekend our deer sightings have dramatically decreased a little more every day after day 4 you could just as well put the guns away because the trail cameras show how fast they become nocturnal I would be in favor of moving the gun deer season a week earlier to maybe catch the end of the rut otherwise leave it alone on my land if it isn’t broke don’t try to fix it. Why are we always trying to reinvent the wheel?

If you go to a doe only season this year for bow and gun then I think you will see a lot less licenses being purchased. I probably wouldn't hunt. Then think of all the hunting sales that wouldn't be made at your local sports stores. If you were considering not having a buck season in order to grow bigger bucks, then that might be better received than trying to reduce the doe population only. Extending any season until Jan 31 makes no sense. As a hunter-when gun season is over-after hunting bow and rifle, there are very few days that I would go out hunting. We only have so much time and extending the season into Jan would not be for me. If I get my buck during bow season, I only go rifle hunting to keep the family tradition alive. There seems to be a lot of attention to the use of crossbows and the number of deer harvested. I hunt with crossbow, and have not killed deer every year. Doesn’t matter what you hunt with, you still have to put your time in the tree. I have hunted in Ohio with family members in the past and they have always been crossbow. What they do is issue you a buck tag once-so when you fill that tag, either with bow or gun, you don’t get another buck tag that year. One buck per year. They have some big bucks too. So maybe Wisconsin should stop trying to change the length of season for crossbow hunters and focus on deer management by issuing a one buck limit per year and still have all the doe tags available. You not only will have more does taken but you should have more mature bucks too. If I am successful in bow season and get my buck, and only have doe tags for rifle season, I will be shooting does.
I regard the St Croix antlerless, I strongly support a earn a buck in the county. I think its very silly that legislature has a say in the earn a buck decision. Should be something in place for an easy earn a buck process. I also strongly recommend if you are very serious to limit deer near the Hudson metro area, have an archery season/ muzzle loader in the Willow State park. About ten years ago Hudson had one and there was a harvest just in town of about 70-75 bucks and mostly does. The west side of the county just by my experience and talking with to my acquaintances are highly concentrated as apposed to the east side and always have been and in recent years as property gets cut up in small parasols, its very hard to hunt for various reasons we all know about. This is the very reason the west side has so many. I forsee a reduced license sales in St Croix and hunting activity for 2020 if you institute a doe only. I only live a few miles from a neighboring county. That I can hunt. We in St Croix County are not used to this and never happened in my time until now. Your previous questions are kind of hard to answer because we have no idea of the deer count in general. How am I supposed to answer a question on how many tags should be given out here an there. I feel some of those are in vain. What is good for an area does not mean its good for the other area. Blanket laws in general are rediculous to many variables. Example the Covid rules, people in infected areas should be more restarined than those in rural areas. Whats good for the goose is not always good. Thank You.

I oppose any extension of traditional seasons and an antlerless only season framework for St. Croix County. St. Croix County should be happy that there is plenty of opportunities for hunters to harvest several deer (buck or foe) across all seasons. Other counties like those in the northern part of the state that do not have even a fraction of deer that this county holds do do to dangerously high, unmanaged, and ever growing wolf population, would be ecstatic to see the numbers we do. Think about new hunters this year. Young kids to adults. Looking to shoot their first deer and you’re going to tell them they can’t shoot that nice 10 pointer that steps out broadside at 20 yards? Sounds discouraging to me. We’re trying to broaden and grow this way of life, not diminish it. Talking about the regrowth issue, I live by 900+ acres of public land and the DNR is consistently logging it out. Why? So bird hunters can get priority while the DNR doesn’t do anything else to boost pheasant numbers? The woods are now fields that grow 6ft tall. How’s a deer hunter supposed to see a deer in 6ft grass? Hard to hit quota when they can’t be seen, and no forest and vegetation regrowth can occur if you’re wiping it out. I’ve never seen deer chomping on dried out CRP field grass. Other factors you cannot accurately count on top of hunters deer harvest numbers are winter kills, car collisions, and predator kills. Please withdraw this silly proposal of an antlerless only season for St. Croix County, and keep all seasons at normal length.

If an antlerless only hunt is implemented, myself and others will simply not hunt in St. Croix County until a buck tag is once again available. I believe that implementing an antlerless only season will only make things worse with regards to population numbers by forcing hunters to go to other areas of the state to hunt. I also will not be hunting with my son in St. Croix County this upcoming season if the antlerless only season is implemented. I want to give my son the opportunity to shot his first buck and if I can’t do that in St. Croix county I will take him elsewhere. I know I am not alone in this opinion and hope that the CDAC will realize this is a mistake and look for other ways to achieve its population objectives. If the DNR and CDAC’s goal is to get more hunters and retain the hunters we already have, then limiting hunters options and making the hunting experience less pleasurable will only hurt their efforts. I would strongly support giving hunters more options to harvest deer and not limit them and create bad experiences that could drive hunter numbers lower resulting in lower harvest numbers. I also believe the biggest factor in the lower harvest numbers last year was the result of too much standing corn that allowed the deer to remain hidden from most hunters throughout the gun season. I believe this will result in greatly increased harvest this year without the need to alter the season this drastically. Let’s not overreact just because we had one bad season.
People need to stop blaming crossbows for the reason why the gun harvest was down. If you don't hunt private land you are basically screwed. Way too many people hunting every piece of public land. You keep wanting to add more antlerless hunts and are now trying to take away the crossbow hunters rights. Studies say hunting is in the decline, well opening up the youth hunting as was introduced in recent years is a good plan to grow the sport. Now stop trying to limit crossbows to October only and do not extend the gun season. We already have a 9 day gun season, followed by the muzzeloader season. Then we have antlerless only hunts. There is more then plenty gun hunting opportunity, the trouble is all the private land is where the deer are and only a few get to hunt private land. The DNR also cuts down all the trees and burns all the thick grass then somehow expects the deer to still use that land. Why would the deer use a piece of public land when there is no trees or grass to bed in. Either you want the deer, or you want the birds. You want all the deer shot but then plan on restricting crossbow hunters and the new idea of closing all hunting for up to 5 days before the 9 day gun season is pointless. Stop messing with regulations, give it a year or two more and see what the results are. There is ample opportunity for all types of hunters right now. Some years are just bad, don't take one down year for gun season and try to change all the regulations. Leave it alone.

I'll keep this response somewhat brief but overall I think the deer regulations in St Croix county are done quite well. However, not having a buck harvest ticket during any season, not even a "one and done" seems drastic and against the spirit of the hunt, it removes the magic of the "what if". If you're a hunter of great presence then you experience wonders everyday, every moment when you are afield, the woods and fields around are homes are a bounty if you simply stop and look around. I often take kids or my 66 year old father hunting, each of them, on each day that we get to go hunting ask me about any big bucks I've been seeing and what I think the chances are...it's like "The Night Before Christmas"...now we're totally content shooting does, we love it, they are beautiful and the meat is first class, but we all love dreaming about what might come down the trail next. If there's no buck harvest then so be it, well dream that much more for 2021, but I would recommend there is at least one per hunter. I watched the 20 minute video related to all of the deer statistics in St Croix county but failed to see any relationship as to why we would drop the buck harvest, everything, for the most part seemed stable. Thank you for your time, no matter the decision, if based on betterment of habitat and overall conservation, then you'll have my vote. Thank you for the opportunity to write my opinion.

1: Have meetings, and take an actual thought about the effects of party hunting, and deer drives. In my opinion, I know I'm not the only one, that deer drives, gravely affect hunts for others. Solo hunters like myself, adults apprenticing to teach, and help observe during a deer hunt. If being kept legal, time windows (10-2) or something,, or set dates during the season like the last weekend.(last effort to fill tags). 2: Certain counties and/or zones need a better buck population. People just don't see them. Too much buck harvest, just to fill a buck tag. Very few close to respectful. I'm a firm believer that in time, if the 3" rule goes away, and people are made to really focus what they are about to harvest, will bring better herds, safer hunting. My thought has been for a long time to start counting points. If I had my way, it would be 4 points on one side for a legal buck. My area has great potential, let it show. 3: Face to face deer registration. You and I both know people poach now more than ever, or shoot whatever on whatever tag they have, if they get registered. 4: Legal shooting hours. The legal hours have to be changed. When the time is over, I can still see through the woods, and across a bean, or corn field. I even hear shots 15 min past "legal light". I've walked up on deer MANY times in the evenings after legal light that I can see clearly.
Thank you all for your time and effort in trying to keep a healthy, balanced deer herd in St. Croix county. Below are some comments and feedback regarding the recommendations:

**Antlerless only for duration of hunting season:** This is a creative idea and certainly will get a lot of attention, would likely detract hunter interest if they are no allowed to harvest a buck in any season. Even if the antlerless harvest per hunter increased, there is a strong chance the overall participation drops to mitigate the antlerless harvest increase per hunter. (Earn a buck seems like a better way to increase antlerless harvest while allowing opportunities to kill a buck)

**Over browsing increase and increase in deer population.** Is there a way to provide more opportunities for hunters and increase harvest? A few key points that were noted in the presentation were the over browsing trend increase, trending deer population, and public land harvest being 9% of total harvest while on 5% of total land mass. Are there ways to encourage increased hunting opportunities on private land? (outside of VPAs, Ag Damage tags) Public land has notable pressure, but the deer population is increasing, while many hunters are seeking opportunities to harvest deer. Is there a way for the CDAC/St. Croix County to facilitate increased use of private land with deer density issues for public access?

I lived in Saint Croix county for over 30 years. I have watched the DNR cut log plow and burn the public land next to my house for nine years in a ROW! Recently they just started up again while the ground is still frozen you’re ruining the habitat for Deer. Oak Prairie Savannah’s Cater towards bird hunters and it just pushes the deer onto peoples private land. And I have seen a drastic decline in deer numbers. Why do you cut down anything that resembles any sort of cover? Why do you take whole creek bottoms And mow them flat like a putting green? Why do you ruin habitat to create oak prairie Savannas? I have even seen the Army Corps of Engineers back there building fire lines for the next year is burn... why? Doesn’t the public land belong to everybody and not one person’s personal agenda and love for oak Prairie savannas? How dare you complain about the lack of reforestation when you are the ones spending our tax dollars on our public land to slash and butcher and make sure you have a budget for the next year to do the same. The public land is for everybody please leave it alone. And to say that there’s more deer than what us hunters are seeing is a complete fabrication these deer don’t exist and never have! We all see more pheasants than deer because that’s The habitat you create. Third generation Life long ST.Croix county Resident.

Thank you for conducting this survey and your efforts to maintain a healthy deer population. I am strongly opposed to the creating an "antlerless only framework". Not only does this take away the rights of hunting and joy and excitement of taking a buck, it creates a situation where my 11 yr. old son would have to pass on a buck during his first every mentored hunt. I do not agree with this logic. Not to mention, St. Croix County would be the only county in the state to enforce an "antlerless only" framework. We all understand that there are are deer population concerns around the metro zone and Interstate 94, but there doesn’t seem to be overpopulation concerns in the general farmland zones. Instead of forcing hunters into an "antlerless only" framework, why don’t increase knowledge and expand our efforts into venison donation to local food banks. If we have learned anything from COVID-19, it is that there are many people in need of food in our county. Also, if there is a surplus of food, for example the dairy industry, when we put our heads together, we can come up with a solution to not waste it. I am sure there are hurdles in the donation program, but if there were clear guidelines and a quality program put forth, I believe our county would benefit from a "surplus" of venison. Thank you for your time and consideration.
I have been an active participant in conservation, including but not limited to deer and deer hunting. To propose an "antlerless only" season would not only add to problems of deer population in St.Croix.Co but it would greatly have an impact on the future population. The numbers we can't count yearly are winter kill off, predator kills, car related kills, and weather conditions during the traditional 9 day season when majority of hunters and harvest take course. I watched personally, the impact on the northern zones when zone t, youth hunts and an abundance of antlerless tags were given out. Year after year. That with addition to an out of control wolf population and harsh winters lowered the deer herd population to numbers almost in huntable. It took over 10 years to see deer again. To start implementing this system would be a direct preemptive blow to the current and future population as well as a personal blow to hunters like myself that DO there due diligence and harvest several antlerless deer within st croix co on both public and private lands. That being said the antlerless only season would be opposed from this life long sportsman, conservationist, woodsman, and deer hunter. As it would NOT be in the best interest of the herd, hunters, or our future success in the area.

I hunt exclusively private land in Metro sub unit. I have little interest in harvesting does. I believe I have gone approx. 4 seasons without harvesting a doe. Avid bow hunter. The long archery season (Mid September to end of January) is too long for just ONE buck tag. I would like to see an option for archery hunters to obtain 2 buck tags, in lieu of the 5 or so bonus antler-less tags we receive with our license. Hunting from early Fall to middle of winter almost affords the archery hunter 2 seasons in which to hunt. The late season can afford some great opportunities to be in the woods, but not if my tag is filled in October. Having the opportunity to possess that second tag means more time in woods, which equates to more $ being spent in the hunting industry, shared hunting experiences and extended family hunts. Would love to somehow see an option for this to be incorporated. OR, the opportunity for an archery hunter to fill the archery tag of a family member - for the sake of selling more hunting licenses - something that I would estimate is on a steady decline (license sales in general). So my recommendation: Metro Unit specific, Archery only - option for TWO buck tags in exchange for the 4 or 5 bonus tags given out now with each purchased license...

I own and hunt on roughly 40 acres of agricultural and woodland. I carefully observe deer numbers and behaviors year round. In 2012, I consistently observed a localized herd of about 30 deer. This past Fall of 2019, there were only about a dozen deer staying in the area at the start of the archery season. This winter of 2019-2020, the herd that I have observed on a daily basis now numbers just 4 yearling does. There is HEAVY and growing hunting pressure in my area. Hunters in my immediate area selectively harvested the larger/older does. I also have direct knowledge of hunters shooting multiple deer after not recovering their first doe(s). One of these deer was found by another hunter within 24 hours of it being shot. This large doe was left to go to waste. Given an average expected mortality from vehicles and predators, there may be but a handful of fawns of the year, and 1 or 2 yearlings/two year olds at the start of the 2020 season. If anything, my part of St. Croix county should revert to a buck only zone for a few years. Frankly, there is almost no deer herd to “maintain.” Frankly, $5200.00 is a lot of property tax to pay to hunt a “herd” of a small handful of fawns this Fall. Thanks for considering some direct field observation.

I oppose the antlerless/doe only hunting for all seasons in St. Croix County. I feel this will result in less hunters in the field in St. Croix County, as many will opt to hunt in other surrounding counties where they are allowed to shoot a buck and antlerless deer. I hunted both the archery and gun seasons in St. Croix County and only saw three does during the entire seasons. I did not shoot at the does, but I would now, knowing it is important to help control the antlerless heard. I would support a Holiday Hunt and additional advertising/news stories in St. Croix County on the need to harvest more antlerless/doe deer in St. Croix County. Lastly, I am a Crossbow hunter during archery season. I support the use of Crossbows in St. Croix County and throughout the state. Crossbows are much more accurate. I know many compound bow hunters who practice and are excellent shots, and wound bucks and does they do not find. I would rather have a successful kill each time I shoot. I have not lost a deer after a crossbow shot. Crossbow kills are slowly rising in St. Croix county. I would support their use if we want to control antlerless deer population in St. Croix county. Thank you.
Obviously the objective is to increase antlerless deer taken in St Croix County. I might be wrong, but I believe WI has currently seen a decreased number of hunters (primarily gun season) than in years past. I don't believe hunters should be penalized by not being allowed to take bucks. So with a decreased number of hunters, the question is how do you increase the antlerless kill rate? Has anyone thought about what incentives could be taken to increase the antlerless kills other than not taking bucks? I like the idea of currently being able to have deer taken to qualified processors for donations to the food shelf, but how about putting small bounties on antlerless deer, which can then be taken to food shelf processors if wanted. Continue to provide shirts, hats, hoodies, etc., as rewards to hunters who bring in antlerless deer to food shelf processors as well. Win-win situation- knock down antlerless numbers, feed the underprivileged, hunters earn $ or rewards for assisting. I don't have enough room in my freezer for more than one deer per year! Thanks for allowing us a voice and best of luck figuring this out- please don't take away our buck season!

Honestly I think an antlerless only deer season for the entire year is preposterous! I for one would not even buy a hunting license in Wisconsin if this were to happen. I would not purchase one for my son either. I know a lot of other hunters in my community that feel the same way. There are already fewer people hunting statewide and county wide so I don't understand the theory behind this. I thought the goal was to try and get more people in the woods, not push them away and hunt different states and areas. I would not have a problem having earn a buck implemented for archery and gun season and think that is a better way to achieve what you're trying to do. In my opinion, that would give hunters incentive to harvest does and still have the opportunity to harvest a buck which is the reason a lot of us live for the sport. I put a lot of time, effort, and money into managing the hunting land and deer herd that I enjoy round and hunt September through January. I guess I do not understand the drastic measures that are proposed in St. Croix county. I completely disagree with a year of antlerless only hunting. Thank you for letting me voice my opinion.

If St. Croix County is antlerless-only this year, I will not hunt in the area. Instead, I will go to neighboring counties (Pierce) in pursuit of both does and therefore, have the opportunity to harvest a buck. Imposing antlerless-only harvest can have the opposite effect of the results the committee wishes to achieve. Many hunters are in the woods hoping to harvest a buck. If they do not have that option, they may not go at all and/or hunt where it is legal to harvest a buck. Thus, the hopes of decreasing the deer population in St. Croix County may in-fact, increase the population. If the board really wanted to incentivize hunters to shoot more does, I would suggest providing some form of reward/benefit. This may be monetary, so much money for harvesting and registering a doe to help drive up numbers, or for each doe harvested, the hunter has their name put into a lottery for a chance to win a number of prizes. In conclusion, making the area antlerless-only will not only make me not hunt in the area, but it may derail other hunters and be counterintuitive to the board’s ultimate plan. The antlerless-only plan should not be adopted.

Get youth / women and older folks in the woods! I am a bow hunter, a gun hunter, a crossbow hunter and a muzzle loader hunter. I have heard rumors of limiting archery and crossbow season which is a terrible idea. We continue to loose hunter numbers and allowing people to hunt with crossbows especially will allow them to spend more time in the woods during the year when the weather is better. This will keep kids interested and allow older folks the opportunity to hunt a longer season. Not everyone has the time or the strength to accurately shoot a standard compound bow. The crossbow allows for people to make better and more lethal kill shots but you still have to get them into close range. I hear people compare a crossbow to a gun which is simply ridiculous! when "overall" deer harvest numbers start to exceed the goals then start looking at how to lower it, but from what my research has shown me we are not seeing that statically right now. On another note, putting the muzzle loader season 3 days after the rifle season is a very poor decision. very few people get out for this season which should be put into mid December.
The biggest problem is for people who want to harvest deer to find deer!!! Your demographic shows only 5% of the county is public hunting, and of that not all of it is even hunt able. So on the 5% of public land that is flooded with hunters opening morning and push all the deer out of the property. Maybe let some of the grass lands that there is so much of in the county grow into some timber instead of burning it off. And maybe the game and fish can plant some crops on the dnr land to hold more deer there for hunters instead of the deer all resorting to private lands only. Deer will go to food. Wisconsin dnr give deer zero food on public lands. Give the public places and land to kill deer on and they will!!!! There are so many different avenues that you can take rather then an antlerless only season. As you will are in these responses you will get less hunters with that route and more violations honestly. Furthermore with the current way to register deer by phone how can you even go off the numbers. It is such an inaccurate and flawed system. How many deer were killed that people just didn’t call in?!?!

I don't feel the antlerless season is a reasonable way to get people to shoot more antlerless deer. I spend a substantial amount of money on the hunting land I own, creating deer habitat that has increased the number of deer on the property substantially over the last ten years. This last season, the number of 1.5 to 2.5 year old bucks has exploded, which is the next step to having increased numbers of 4.5-6.5 year old mature bucks. I only hunt for trophy bucks and have worked hard to create a property, where they want to live. My family and the other hunters, I allow to hunt the property have been keep the doe ratio in line on the property. I am also confused why the DNR is considering this plan since the percentage of 1.5 year old bucks over the last 3 years averaged 60% and 1.5 year old does averaged 34.33%. Seems you should offer extra buck tags, using the old Earn a Buck system, for shooting bonus antlerless deer. If you implement the antlerless only season, I simply won't hunt!!! If it becomes a long term plan, then I will stop spending the time and money on deer habitat.

What was presented in the audio file from the biologist is opposite from what I see when I’m in the field. I run over 20 trail cameras on public land around st. Croix county spend well over 30 days in the field from september til December. I’d be more then willing to bring the film from my videod hunts on public land to show along with trail camera photos to prove what I have for herds on these plots of land. I was planning if anything we would have a buck only season. As on multiple properties I have 3 to 4 bucks to 1 doe. If you would not like video but rather see first hand. I’m willing to offer to bring you out to the woods of some of these places I hunt this fall n u can see for yourself. To be honest I’m kind of upset from what I have seen. I understand this illustrates public land and private land numbers. But some of the numbers are very upsetting and do not add up from what I’ve seen(Red oak, fawnrates, and % of harvest).

Maybe I missed it but what was the driving factor to make St. Croix County the only county in the state to have an Antlerless only for every season? If you’re looking to try to reduce population okay maybe an Earn-A-Buck might work. But I think you’ll drive hunters out of the county to surrounding counties, to have a chance to get a buck. Me personally I'll probably hunt private land 5 miles north of me in Polk county. Not to mention I thought we were in a Maintain status, so why would we try to over kill on doe's this year? As far as the Oak tree samplings reducing, have you guys considered Oak wilt into your models? Less full grown oaks dropping acorns would probably lead to less samplings. At least here around Somerset, Oak Wilt is devastating some areas. Overall going only Antlerless for the entire season seems ridiculous to me and a bit extreme. But like I mentioned before I don't know why these extreme measures are being taken because it wasn't really laid out that well.
Going to a does only season is not going to force people to shoot more does but find other ways to tag the bucks they shoot and skew the numbers for neighboring counties. The problem with the county is there are a lot of private land areas that do not get hunted and hunters sit in stands not moving deer around during gun seasons or hunt in other counties due to available land to hunt during gun seasons. With the change to doe tags being valid only in the county selected people now have to choose a county. My family of 3 had doe tags for 5 counties last year to better our odds of shooting a doe to put in the freezer but by no means would we ever fill every tag purchased because that is wasteful. I am fine spending a little bit of money on a tag to increase mine or my kids odds of shooting a doe but by no means do I want to teach them to fill all 5-8 tags each for the season and not be able to utilize the animal they harvested. To many tags equals low numbers of kill to tag ratios for the DNR.

If the DMU is not meeting antlerless harvest the next step should be a holiday hunt, not going to an antlerless only season. Because St Croix is the only county with this restriction it will likely lead to less antlerless harvest as the number of hunters will be reduced when they go elsewhere. In addition we have 3 out of state hunters from MN that come out every gun season and they shoot at least 1 doe each, but they won't hunt this fall unless they have a buck tag too (the cost of the license will discourage others too). They ask every year why we don't have a holiday hunt too, so they would shoot more antlerless deer if they had the opportunity. I'm guessing the snowmobile lobby is against a holiday hunt, when that becomes the reason why we have an antlerless only season I forsee trails being closed. What the CDACs and WCC need to do is lobby the legislature to get earn a buck authorization back. That's the only effective tool I've seen used to encourage more antlerless harvest.

I am technically not opposed to antlerless deer tags. I think we have fair population of deer in my unit but the public land is a joke. Might as well put up tickets lines cause it's wave after wave of groups doing deer drives. By the third day no deer really stay on the public land. I can't stand that you have not put an antler restriction on bucks. I'm not truly for trophy hunting but you could put 4 pts on one side rule that would accommodate the trophy hunters as well make people think before they shoot when we live in a world full of complete morons. You could also try limit the number of non resident hunters or at minimum limit the tags drastically given to them as well as raise the price. It's a slap in the face what our Dnr does with our deer tags and bear tags. Just line on up and give us your money, everyone is equal in this state even if they don't live here and pay taxes as well as give to the local economy 365 24/7.

As a life long resident of St Croix county, one who has seen the population growth and one who worked in the hunting industry for 14 years, I believe antlerless only would be a disaster. Those that choose to not shoot does will move to a different area, or shoot a buck and not report it. I believe earn a buck would stand a better chance of success, or make the entire county a metro unit giving extra tags to those willing to shoot does. For every home owner who complains about deer browsing problems there is a landowner who doesn't mind and like the deer and don’t allow hunting. They even feed the deer. The western area of the county is highly populated and this makes it difficult to find spots to hunt. Provide a list of home owners that want deer removed from their property that hunters would have access to. That way, hunters wouldn’t have doors slammed in their faces and get discouraged, which leads to not trying any more.

Having antlerless only hunting during the season is absolutely preposterous. We saw on the 2 separate public tracts we hunt on pretty close to 1:2 buck to doe ratio. We personally saw 23 different uniquely identifiable bucks with many many more on trail cameras. The heard is very healthy, even on public lands. Eliminating the opportunity to hunt antlered deer will drive most people to hunt in other counties. I also own land in Taylor County and would have to hunt exclusively there. The public lands we hunt on had plenty of young forest regeneration and had healthy deer populations. My son hunted for the first time last season and seeing deer and being able to harvest a deer is the most important thing to keep him interested. If you truly want hunter recruitment to increase moving to an antlerless only hunt in 2020 would be the worst thing you could possibly pass. I really hope you read this feedback and take it into consideration.
The biggest thing you NEED to consider is one we all speak about every year. There is a large number of private land owners that consider there land of example 200 acres to be for one person only hunted privately or another example is all the 5 to 40 acres privately owned that are deer havens during the hunting season. We as hunters are doing our part, but the fact is the more private land that is Posted and not hunted, that is where the deer spend the hunting season as we are trying to harvest them. Most hunters are true hunters and will shoot does and bucks, but if you eliminate the bucks, I believe strongly people will not hunt St Croix county due to the fact they cannot take a buck. Also, there will be poor judgement people that will still kill a buck and tag it a different county. You need to encourage more hunting seasons for antlerless in St Croix county but not punish those who still want to shoot bucks.

Hunting numbers are decreasing and fewer and fewer people are getting into hunting. Discontinuing Antlered Hunting will erode the quality and attractiveness of hunting. Fewer hunters, fewer fees, fewer supporters of wildlife and wildlife programs. Crossbows have brought more people into deer hunting and their enjoyment of the experience has increased with the ability to hunt more than a gun deer selective day season during winter/holiday season. Better deer management to accommodate this increase in interest would be a better solution. Require a doe first would help manage the population better than no buck. Deer populations in developed areas and cities are increasing and areas to hunt become more difficult. Your data is selective and suggests it gives you enough information to determine that one county which is right next to another county should not have antlered hunting. Stop micromanaging.

It is my opinion that if you take away a buck harvest permit you will diminish the amount of deer harvested. Due to people that are out to just try and fill a tag without worrying about the antlers. Also my kids are just getting involved in hunting and we hunt in st. croix county cause it's our home. This would definitely have an impact on our younger generations interest in hunting. I feel if we gave out more tags or made the whole county a metro sub unit you would have a larger deer harvest than if you were to take away the opportunity to get the buck or doe you were trying get just for the love of the hunt. Personally if we dont have that chance to hunt for bucks that we all dream of neither me or my family will be hunting in St. Croix county this year. Please reconsider what you are projecting and think about the future generations that are we are trying to get involved b4 it's too late.

I'm completely against the antlerless only option for St. Croix country. I would prefer to see an earn a buck program in place to get deer numbers back in line with the DNR's goals. I've got 2 youth hunters and it would be great to have a 9 day youth season to have a longer time period for harvesting. Or if the county decides for the doe only season allowing youth below 16 years old to harvest both bucks and does. And especially for younger hunters the thought of not being allowed to hunt bucks isn't an exciting option. We all at an early age dream of buck hunting. Both of my youth hunters commented that they might be ok with sitting out the year without having a buck tag as an option. And that doesn't help with anything that's trying to be accomplished. With the expansion of housing some kind of taxpayer break for homeowners allowing hunting on their property for allowing hunting.

I hunt both st croix and Dunn counties private and public land ever since the earn a buck seasons they implemented years back the deer herd has only gotten worse. I hunted many hours this year and rarely seen deer with the current seasons it is impossible to enjoy hunting like it used to be the youth hunt falls during the best time of the year so it completely ruins the rut and these kids get false hope of what deer hunting is when they kill with rifles before the normal season. Every one of the doe hunts can be thrown away also its time someone gets control of the state and gets us back to where hunting is fun and deer numbers are back up where they should be it is sad to see how bad the Dnr has ruined this state whitetail hunts. Why don't ya issue a ton of turkey kill tags there are way more of them that's an issue then whitetail are anymore. Thanks to your wolves.
The issue is not the number of deer living in St. Croix county, it’s the number of people living in St. Croix county. Plus the increasing number that don’t hunt. Unfortunately there is probably no fix for either. I understand that you are trying to raise awareness of the issue and it hopefully will succeed. I just hope this doesn’t occur because if it went to antlerless only that would make the situation even worse. Hunters will leave for areas where they can shoot does and a buck if it walks by. It’s not that many miles to another zone. Hopefully this stay at home order will make families cook more meals at home and carry the thought to shooting a doe for meat. Our lifestyle needed some correction and this could be just the change we needed. I suggest we try another year of the status quo. Maybe in the future, the entire St. Croix county could be a metro zone.

My honest opinion is that the total harvest of deer will go down by implementing an antlerless only hunt and there is very little chance of hitting the 3200 quota. Prior to watching the video I would have thought the opposite; however, it is clear that there were already many unused antlerless tags so I do not see additional demand for harvesting more does. I believe that total participation will drop and it would be significant during archery season for more serious hunters. I watched the video and did not see an option for potentially using the option to earn an additional buck tag for the harvest of an antlerless deer, I think that would have much more of the desired affect you are trying to achieve. Also it looked like youth are much more excited about harvesting antlerless deer and perhaps an extended youth season would be another option.

If you think having an all antlerless season is going to reduce deer population, you're wrong. Do you realize how many people you have irritated by even recommending this and how many people won't hunt this season, therefore reducing the number of deer taken. Who comes up with this stuff? Sure seems like a few individuals who want county wide big buck management rather than actual whole deer management. When are we going to get rid of online registration? All you’re doing is promoting poaching and falsification, but I suppose that you would rather have people out there illegally taking deer, that way the population is reduced somehow being the car insurance companies are paying you through the back door to reduce the herd. Remember, you are paid through the tax payer dollars and this is our county, not yours. Do something decent for once.

I oppose the antlerless only season as I don’t believe the number of deer in the metro area where I hunted last year are as robust as in the past. I saw 8 deer all season, none within range of bow gear. I hunted many days from sunrise to sunset and never saw a deer the entire day. During the gun season I saw no deer and heard very few shots in the area so I don’t believe I was the only one not seeing deer. 2018 was down in deer sightings from 2017 for me and 2019 was way down. I hunt private property close to public property which gets hunted heavily during the gun season, so again the lack of shots during the gun season I believe is indicative of fewer deer numbers. I am not opposed to shooting does and don’t trophy hunt. I like to eat venison! But the past few years have been hard in terms of deer sightings and opportunities.

Possibly stop letting insurance companies dictate the outcome of hunting in with the money they are giving you! You are ruining the Wisconsin hunting tradition for young kids and anyone that is coming into this sport. You want more license sales? Here’s an example how - stop trying to have every deer killed possibly if you didn’t and the deer numbers would be decent you would have young kids and new hunters coming into this sport seeing deer and actually wanting to be in the woods because they are actually seeing deer! It’s pretty bad when multiple people spend a weekend in the woods and don’t see a single deer! Antlerless only in ST. Croix county with fewer deer numbers than multiple neighboring counties? Wow you are really doing an amazing job with worrying about future license sales and the future of habitat and hunting!
I would look to have one streamlined season with no special hunts except for the youth hunts. I believe we can eliminate the holiday hunts and need to streaml ine the seasons statewide. We also don’t need 10 different tags, nobody needs to harvest 10 deer. I hunt in 60M, the deer population in my area has been declining over the last few years. I believe there is more poaching and there is less people registering their deer now with the convenience of online registration. It feels like a lot of tinkering every year, the North part of 60M is not the same as the East, West or South part of the 60M zone and that goes for the same about the county. In my opinion the deer population is lower than it should be and we don’t need all these different tags. I would like to see more deer like the good ole days. Thanks!

The first years I hunted this area it was amazing compared to where I hunted previously; many trophy bucks, many mature and immature does. The herd was very healthy. Once the DNR implemented the "Earn a Buck" stategy the situation changed dramatically, the trophy bucks all but disappeared and the doe and fawn numbers dropped very much. The hunting has not recovered from this. I feel the excess agricultural permits around the 210 acres I hunt have had a major impact along with poaching. What has happen is a shame! I doubt with the continuing over-harvest of the doe population that I will ever see the great hunting return. I also understand based on reading and observation that the DNR failed to take any advice from the consultant from Texas that was hired to try to improve the hunting experience in Wisconsin.

In St. Croix County instead of an antlerless only season, would it be possible to implement an earn-a-buck season? I believe an anterless only season will actually deter hunters from obtaining licenses. My personal experience bow hunting only on private land in St. Croix County for 2019 was seeing a large number of does to bucks and yet there were certainly enough buck sightings to have adequately harvested a buck. In addition, would it be possible to have a license issued so that it was for anterless and / or buck, you could harvest that deer at anytime; archery, gun, Holiday Hunt, etc. But once you harvested your alloted deer, you could not harvest another deer unless you had the additional tags for more deer? Thank you for your work on preserving deer / habitat for St. Croix County and Wisconsin.

Over the past 10 years, there has been a general decline in the quality/age in general of deer. It seems that in this area, the overall decline in deer numbers and opportunities for quality hunts have eliminated a lot of hunters. In my opinion, in order to maintain hunter numbers, there needs to be more focus but on habitat improvement incentives and other strategies to improve hunting opportunities for hunters. I think some sort of long term approach to improve the quality of the deer hunts is the best thing that could be done in order to maintain hunter numbers as necessary to control the herd. For example..IA...having 2 separate gun seasons, spreads out the numbers of hunters and seems to provide better hunting opportunities in both seasons as the hunting pressure isn’t as intense as in WI.

It makes zero sense as to why you would be proposing a antlerless only season for this DMU. We have been seeing declining numbers for years now due to the number of tags being given with license purchases. If anything it would make a lot more sense in my opinion to have a buck only season as it only takes one buck to service many does during rut while a doe can only have so many fawns. If we implement a doe only season the amount of fawns would drop immensely resulting in even less deer for the DMU. I’ve always wondered why we keep trying to change a system that isn’t broken. Don’t be surprised if you see a dramatic decrease in license sales for this DMU if you decide to go with an antlerless only season. In all though I’m just a hunter that’s in the woods almost every day so what would I know.
We just lost a whole year class of new Hunter Education Graduates. I am one of the Robert’s Hunter Ed instructors, and have been so for 25 years. This is going to be a significant factor in this fall for hunter participation and harvest numbers. If St. Croix Co. goes to antlerless hunts only, you will see a mass exodus of hunters to Polk, Burnett, Douglas, Bayfield and Washburn counties. Either that or hunters will stay home and not even bother to buy a license. Many hunters will give up hunting if the opportunity to shoot a buck is taken from them. Many of these hunters will quit even if a Earn-A-Buck is brought back. Declining numbers of hunters and effort by those that do buy a license has much to do with DNR not reaching quotas and a new dead deer every 1/2 mile on I-94 all summer.

thank you for all your efforts and conservation. I admit car deer kills is excess north of Somerset. I counted 8 carrkills in past 6 months within a mile of my home. Question? has there been a study on LED lights and car kills? Little of this land is accessible to hunt due to urban sprawl. Crossbows assists with efficient harvest due to small tracts or lots to hunt on. Deer move later due to human activity. Extending hunting hours 30 min. would yield in greater harvest. I would support a Earn a Buck Program but I realize hard to enforce and lead to non registered deer. Can organized hunts be conducted in Village limits similar to what they do in Hudson? feeding yields much greater harvest of deer in these high human population areas. Please do not prohibit. Thanks for listening

You will loose hunter numbers if no bucks for harvest and deer herd will double your numbers show it. No one will sit and or hunt and watch a buck (any size) walk by to shoot does only. How about extra buck tags issued for the county if there is this huge problem we as hunters don't see? I saw more bucks in 2018 than 2019 on camera and hunting. How would you like to tell a youth hunter, first time hunter or anyone you can't shoot that buck in front of you! I have a daughter that has 2 years of youth left and a daughter that just turned 16 and will have her first bowhunting experience this fall. Telling a youth hunter you can't shoot a specific deer is asinine. That is not a hunting experience. We had exceptional standing corn in fields and a late rut topped with weather in 2019.

If an antlerless only season framework is implemented in St. Croix county, I strongly feel as though the county will receive less hunters traveling to hunt it and even locals who typically hunt public lands will just hunt elsewhere. I personally will not spend my time hunting in a county where I don't even have the opportunity to shoot a buck. By decreasing the amount of hunters in St. Croix, I foresee issues meeting the antlerless harvest quota. Additionally, I feel as though creating an antlerless only season framework in St. Croix will increase the amount of illegal harvest and poaching of bucks, temptation is too much for some people when a nice buck walks under their stand and even if it wasn't their intention, I feel as though some of those bucks will end up being poached.

Speaking as a hunter who is willing to and typically does shoot antlerless deer on a yearly basis, I do not believe you should try to force people to shoot does. I also primarily hunt to help feed my family however the potential opportunity of getting a chance to harvest a trophy is ultimately what keeps me in the woods. If a doe only season is implemented I will not hunt in this county nor will I permit anyone to hunt on my property. I am all for increasing the number of antlerless tags offered as I personally would welcome the opportunity to harvest more antlerless deer myself. However I will not hunt in an area or during a time (including doe only hunts) that at which point I may have the opportunity of a lifetime to harvest a trophy and am unable to because of a law.

I find it ridiculous to go to a antler less only season. Stop attacking crossbows for killing some deer when that is exactly what the dnr wanted when making them legal. Cutting down all the trees on public land, burning the grass every year, eliminating any hiding spot for the deer to try and make every dnr property a pheasant habitat is also hurting the public land hunting experience. Between bad property management and all of the people that come to our area from out of state to shoot the deer and all the public pressure it's no wonder the deer leave the little bit of public woods that remains. The deer get chased out and hide on private land where no one allows anyone to hunt. No number of tags, no special seasons, no antlerless only seasons is going to fix that.
Please reconsider the registration of deer at registration stations. I think there is a lot of abuse and that people are not registering what they kill. The deer population gets harvested hard in my neighborhood but the DNR doesn't see the numbers because people don't register. Therefore, our numbers of deer are down from what the DNR says. This is why I am not in favor of any more than one antlerless permit. Too many get taken already. Whatever you do, do not move to an antlerless only season. You will lose your hunters! If you lose the hunters, you lose the revenue! I would be in favor of an extended gun or bow season but only if it allows antlered deer. No antlerless only seasons. They interfere with core hunting times and other recreational activities.

I disagree with the idea that an antlerless only season is needed. There are counties in the state with higher deer densities and a goal of decrease the population that did not go to the point of recommending antlerless only, instead these counties offer larger numbers of free antlerless tags with each license purchase. Only offering 2 per license and then expecting people to purchase additional tags does not seem like a way to promote the harvest of more deer. I believe that offering 3-4 free antlerless tags per license is a lot better option than going to an antlerless only season. I believe an antlerless only season will decrease hunter participation in the county as well as amount of effort put into harvesting deer this leading to an even lower deer harvest.

I have seen less and less deer around my home and business annually. With no deer seen last hunting season. But I do see countless dead along the Hwy 35 S corridor to River Falls every year. Its a shame that some of my children are becoming of age to hunt but would probably only last one outing due to the lack of deer seen. And with the proposal to only have antlerless deer as a shooting option does not sit well with me at all. Please do not limit our chances of taking a deer due to antlers on its head. I hunt for the chance to be outdoors and get some good food in the process. You will be causing hunters to go elsewhere with the proposal of antlerless hunts only. Not to mention taking the chance to get any deer with my children is unacceptable.

Last year I went out and never saw a deer. Of 30+ years first time not seeing anything. I'm just starting hunting with young kids. Property is private, but heavily hunted by family. All other farm and wood property are not allowing others to hunt or walk property. I've watched deer other years look at our property but turn back and bed down. No groups hunting like past or many people hunting area. Hope this year to show my sons a proper opportunity. They don't believe stories of seeing 20 deer in 4 hours in tree stand 5yrs ago. Now sit all day no sight of one. I also don't want to take a fawn just to get meat in freezer. Don't do doe only, this restricts to much, like earn a buck. Those years I saw bucks, not a doe closer then 100yards.
I see deer (both bucks and does) while hunting in St Croix county, I see no reason to change the way it is structured now other than maybe eliminating the holiday hunt. I have photos that show a number of bucks and does passing through...thou mostly at night do to human activity in the area. A proposal that caught my interest was one that said St Croix was looking to eliminate a altered hunt which I would disagree with though I didn’t see it during the video. I also would add ib think that restructuring crossbow seasons will be tough after it was opened fully to everyone, probably should have eased into the crossbow use to be able to study the number impact slowly, but will probably get strong resistance now to scale back, thanks.

In my opinion especially where I hunt in north western St Croix county, we had a lot of standing corn during the 9 day gun season, which gave deer a chance to hide, I do not believe extending the season, starting the gun season, or increasing the number of doe tags given will help improve the hunt of tall crops are not harvested. Don’t make all of these changes over one year with decreased harvest. Also consider bringing back game registration stations and the tagging of deer to keep all the people honest with registration. I feel like the new system of not needing to apply a tag to a harvest gives hunters the opportunity to be dishonest about registration and possibly holding on to their tags to harvest another deer.

I am confused as to why the extended archery season would not be considered unless a holiday hunt is offered. What is the difference if there is a holiday hunt or not and why not extend the archery season through Jan 31 regardless of a Holiday hunt being offered? Additionally - Extending the Muzzeloader season would create additional opportunities to harvest deer. When it comes to “free” antlerless tags, there is no motivation for those hunters to harvest additional deer. Instead - Charge a small fee and it changes the behavior of the individual. since they had to purchase the tag, it is an additional motivation to harvest and utilize the tag. This can also increase revenue in a declining industry.

You will never be able to force people to shoot does. Even with an antler less only season. People will just not buy a tag. We need to focus on hunter number recruitment. Hunting has turned into a political game. Leave the bow and crossbow seasons alone and have a traditional 9 day gun season. The people that are going to shoot does are going to shoot them. The people that don’t want to want. I know if things get too complicated or turn people away from the deep rooted traditions of hunting here, I will just spend my money elsewhere and buy tags in other states. Don’t mess with the hunting army in this state. I think CDACS are useless. Just people that get too political and introduce ridiculous suggestions.

I agree with more aggressive measures to reduce deer numbers. I support additional and extended special antlerless seasons. I would even consider resurrecting earn a buck seasons to combat the higher deer numbers. I DO NOT support blanket buck only seasons. I think this would actually have an adverse affect, I think less hunters would purchase licenses, and alot of hunters would just head north to hunt bucks. One other comment, since hunting has transformed into such a privatized endeavor, we really need collectively as a hunting community, to try and incentivize private landowners to let hunters on their properties. I think this is the number one issue facing hunters, therefore affecting harvest numbers.

Hello, thank you for taking our input. We have unique area with high numbers of deer/people while others have less deer/people. Can we add an incentive to allow landowners to open lands up to archery/crossbow? The MLF program cuts landowners a tax break for open/closed lands. Maybe we can offer a similar incentive. Can we bring back earn a buck and do a better job of regulating it so guys don’t use roadkills or register the same deer multiple times? Can we make our youth season a few days longer in the event of poor weather, etc? Let’s reach out to landowners and see what type of incentive they would like to see to open their land up. Any questions let me know at jcollins@cityofeagan.com. Thanks.
With license sales at a all time low for deer hunting how could a antlerless only season aid in Saint Croix county"s deer management. Their will be fewer people hunting the county because most deer hunters are buck hunting; with that being said not only will the dnr miss out on sales of licenses it will have fewer deer harvested for the county because their will be fewer hunters. In my opinion I believe if the goal in Saint Croix county is to reduce the herd size it should not only have antlerless holiday hunt it should also have another antlerless hunt like they use too. It would be a big mistake not to allow bucks being harvested people will simply go to a different county,fewer hunters fewer deer shot!

Couple of ideas I have is to lower the cost of non‐resident license for St Croix County only for antler‐less only. Even if this was bow or cross bow only. There is a lot of people in the Twin Cities that would like the opportunity to hunt antler‐less only if it didn't cost so much for a non‐resident license. Even if it meant having a 1 week gun season earlier in November Just for the non residents. This would take cooperation from the farmers who own most of the private land in St Croix county. A longer gun season for residents would possibly help. A lot of people like myself that like to gun hunt has a heard time being home for the gun hunt because it is only 1 week as I travel a lot for work.

I feel that adopting an antlerless only hunt will not only highly damage the already decling heard in St. Croix County, but it will also make new hunters not want to participate. If I'm not mistaken, isn't that what the DNR has been pushing for, and why there was a proposal to extend the gun season by 10 days? You can't keep saying one thing, and then propose an act that is completely contradicting to what you've been preaching within the next few breaths. This is, in my opinion, why you're seeing a decline in license sales. Hunters are getting fed up with constant non common sense rules, and license sales, that also are constantly changing, it gets down right frustrating to keep up sometimes.

I completely disagree with Antlerless only st Croix county. Trophy hunting in this county is a huge reason that the majority of hunters are there. Most hunters there are land owners as well trying to maintain good healthy deer numbers on their relatively small tracts of land. Antlerless only will only cause these hunters to hunt elsewhere causing less deer to bed killed over all! Supply the 5 or whatever bonus doe tags but make the until with an antler restriction instead of no deer at all. We who trophy hunt have no problem taking does while in pursuit of large bucks. 8 point or better or 4 on one side anything. You won't accomplish your goal by driving out the primary hunters in the unit.

If the 2020 season becomes an antler‐less only season I don't think I would even buy a license and just skip the season all together. I always try to take both a buck and a doe during the season to keep the deer herd even and have taken multiple antler‐less in a season when there seemed to be a large amount of them on my hunting grounds. I feel like most people want to only shoot bucks and taking away that opportunity would only decrease the number of hunters for the season and not increase the amount of antler‐less harvested. Maybe making it where an antler‐less deer would have to be shot first in order to get a buck tag but just removing buck tags all together seems like a bad idea.

DONT ALLOW DEER DRIVES OPENING MORNING ON PUBLIC LAND. Local hunters don’t have a chance with the constant flow of tourist hunters coming across the border from mn. Public land hunting has turned into an Iraqi Warfield. I’m 17 years old and there’s nothing more frustrating then getting out opening morning all excited and ready for the deer hunt I’ve been anticipating for months only to have a group of 8 hunters come tromping through the woods 10 minutes after shooting light opens. The least you could do is print up a public land etiquette pamphlet. Some people just seriously do not get it. Thank you for your time if anyone read this. Hopefully I see a change this year.

<td>8153</td>
<td>I will take more does this year if SC county allows antlered hunting. Had a chance just about every hunt last year. I recommend 4 point one side antler restriction this would prevent people from shooting yearling bucks and produce better quality hunting in county, also enforce taking does for meat and not small bucks. I would support sign in/sign out for public areas, with quota on number of hunters on public land this is implemented on military installations and is effective in providing better hunting experience. Could also be used for targeted data collection. Biggest 2 problems during 9 day gun last year was 2 blizzards/deep snow and hunters walking all over public.</td>
</tr>
<tr>
<td>8154</td>
<td>I find that the deer population in my hunting zone is so great that the deer are getting hit by traffic on the road on a daily basis, for the entire year. This presents a risk to people using the roads. I believe this is due to weather conditions that do not encourage the movement of deer during the deer gun season. I believe that the weather pattern of rather warm weather during the deer gun season will continue. I would recommend that the deer gun season is extended. That there is a separate hunt for muzzle loading only, before the regular deer gun season be tried. I recommend that the limit of deer that can be taken raised in my area to any hunter that is willing.</td>
</tr>
<tr>
<td>8155</td>
<td>I see the continued housing expansion in St Croix county as the biggest issue. There continues to be more homes going into past viable hunting areas. The does are not nearly as timid around housing developments, so they are living and breeding in and around the developments. In addition, it seems as though corn is getting picked later and later every year, and it is making easier for the deer to be on &quot;lock down&quot; during our gun season. Extend dates for gun season, allow holiday hunt, and let archers go till 1/31 and you will harvest more deer. If the county decides to implement antlerless only, I will not hunt in St Croix county for the first time in 35 years.</td>
</tr>
<tr>
<td>8156</td>
<td>I hunt in Mn, SD and WI. The current format for WI is about right. I would not recommend changing the current Format. I would add that getting our youth involved is the key to sustaining and maintaining hunting. Changing the amount of tags, extending seasons, eliminating and or adding choice of weapon used is not going to affect your overall deer quota. I would argue that you are making it worse by having rifle hunter, muzzloader, and or bowhunter competing against each other. Its all hunting. WI is unique were there are good herd numbers and good age numbers as well. Don't ruin it with potential changes to the season that in my opinion don't make any sense.</td>
</tr>
<tr>
<td>8157</td>
<td>It would be silly to impose an antlerless season in St. Croix County. Our deer population is healthy and growing. The community has a large population of hunters as well. The idea of seeing some antlers and potentially being able to harvest a healthy buck - maybe a record buck - is in part a reason people love the hunt. Taking that away would likely deter many from even going out this season. If there’s less hunters in the woods, less deer being harvested, I can’t help but suspect there would be more deer car accidents and more winter starvation. There are not many natural predators in the area. What we have been doing is still working, don’t change it.</td>
</tr>
<tr>
<td>8158</td>
<td>I think the main thing affecting this Unit is the lack of quality public land hunting opportunities. There is not a whole lot of public land available, and anything that holds deer gets hammered on. The good VPA’s get absolutely pounded even in bow season. It is what it is being so close to the metro. The VPA is a great program to open up private property to the public, but some of the leases are worthless for deer hunting. I don’t see why the DNR decides to lease a bean field that is mowed up to the property line that a rooster couldn’t even hide in. The only way to meet the antlerless harvest goal is to somehow increase harvest on private property.</td>
</tr>
<tr>
<td>8159</td>
<td>I think that a something needs to be done in the metro sub unit. The deer population in that area is out of control. The rest of st Croix county has low population numbers, but with all the deer in the sub unit it make the county population seem higher than it is!!! I have a buddy who lives over by houlton, he has 75-100 deer in his food plot every night. I live on the east side of the county and I'm lucky to see 3 per night. This kind of herd density is a problem. I have tried multiple times to hunt over there but no one gives permission. Until that problem is solved, doing a county wide doe hunt will just keep hurting the rest of the county.</td>
</tr>
</tbody>
</table>
I think the antlerless hunt only for St. Croix would not be a good idea. For me the deer heard has stayed the same in my area and I’m surrounded by both private and public lands. Leave it as you can buy an extra doe tag and take one if you would like. Extending the archery season would be useless. Hardly anyone hunts late season and January gets very cold. Not sure anyone would take advantage of it. Maybe adding a muzzleloader only doe hunt after the regular gun season would be a good idea. People can close off what’s left of their tags, get food for the family and take some does out if that’s what reports are saying needs to be done.

Thanks for asking for public input! I am a landowner and thus would not want to be restricted in hunting buck or doe on my property. Could you consider things like combining a hunters "full season" of hunting (bow, gun, etc) and/or that they need to follow the "dance of the harvest" for the season....of kill. - If buck is killed first, next must be a doe. - buck-doe-buck-doe..... - doe-doe-buck-doe.......... -doe-doe-doe-buck.... doe............. A doe must always follow a buck. But a doe can follow a doe. That would slow the buck harvest as you would pass on smaller bucks. So you must alternate, but multiple doe in a row is OK.

Why has the knowledge of the amount of crop that was up in 2019 not been considered in why the amount of deer harvests this past year were low? It was a rather late planting/harvesting season and in the area I hunt personally in St Croix, lots of corn was still standing which made it more harder to hunt. This is, (to my belief), the biggest reason as to why harvest of both antlered and antlerless deer were low. I’ve heard many friends and family complain about the crop being up late too. When crop (mostly corn) is up, it’s a big disadvantage to hunting which may be the reason as why not a lot of people had gone out in 2019.

A concern I have is that when I hunt I constantly hear AR guns go off like it’s a massacre. I hunt public land. This is dangerous, I fear I might accidentally get shot. I want to hunt with my children but fear for their safety. I recommend keeping the ARs onto private land only. I also just started using a crossbow this year. I have torn my rotator cuff before and cannot use a regular bow. I have heard that the crossbow season might be shortened and regular bow stay the same, this could be false but if it’s true I find it unfair. If you were to make bow/crossbow changes it needs to be the same for both. Thank you.

I’m curious who said St Croix cty needs to be doe only this year. This seems crazy to me and every other Hunter I’ve talked to about this. Which is a lot! It doesn’t make sense. The greatest state for hunting, and we have been doing things great for ever and now this year they want to change all kinds of stuff. Leave things the way they are! We have a great set up. Various factors have contributed to lower numbers. The biggest factor I see is that property that used to be great hunting are now developed! No more hunting. People can’t hunt where they use to. Which makes it harder for everyone. Love to say more!

To whom it may concern, I have been fortunate to hunt family-friend owned land since I can remember. The importance of proper mentoring, scouting, planning and hunting for deer was instilled into my upbringing. If this management zone were to become Anterless-only, my opinion is that many hunters, like myself, would choose to travel to other zones to fill their tags. The importance of venison meat is high, but chasing the elusive big buck has always will be exhilarating. Please take all viewpoints into consideration when making the decision on changing St. Croix County deer season. Thanks for your time.

The proposal of antlerless only will decrease license sales and take away from the sport of deer hunting. You will see much less antlerless deer harvested and many pissed off landowners in the unit who do their share harvesting antlerless deer. Why not implement earn-a-buck like in the past? That makes much more sense if the concern is antlerless population. What about getting youth involved in hunting? They can’t shoot a buck? This proposal is ridiculous and why only St. Croix County? Seems few individual opinions went into this proposal with buck management on the forefront. Good luck!

<td>I am strongly against an antler-less only framework, I fear doing so will lead to a misrepresentation of the total harvest as bucks will end up being poached and tagged as antler-less, if tagged at all. Not only that with the current pandemic underway, who is to say it will be safe or welcome to travel to a neighboring county to try to find land to deer hunt on. Its not all about horns when deer hunting, however removing any chance of getting a shot at that once in a lifetime deer, may have a hazardous effect on overall hunting pressure in the county itself, and a population explosion.</td>
</tr>
<tr>
<td>8167</td>
<td>I just started hunting this land last year but have been seeing a lot of deer and as a hunter who’s in it for the meat I feel this antlerless only thing is not a good idea because I harvest mainly does but at the same time if I see a really nice buck I’d like the opportunity to harvest it, with my two trail cams I have pictures of 10+ bucks some of which are very nice, I also see a lot of does. I feel if Herd management is an issue because we can’t harvest enough deer, then why would you take away the harvest of bucks? with the abundance of them, harvesting bucks help the herd management</td>
</tr>
<tr>
<td>8169</td>
<td>The way you are planning to go forward with St. Croix is completely unrealistic. It is time to start listening to the hunters that put in the man hour and are actually in the woods. Last season was the most I have hunted in my in my life, and the least amount of deer that I have seen. This proposal is not even close to being in the ball park. Please do all of us hunter a solid and get rid of ALL doe only hunts and restrict doe tag limits. 1 buck tag, and 1 doe tag per season per hunter is all that should be allowed. Doe only season is not a option!!!!! Please listen to the hunters!!!!!</td>
</tr>
<tr>
<td>8170</td>
<td>I feel like the metro sub unit deer population needs to be addressed, you can’t lump that section of st Croix county in with the rest of the county. I own 130 acres and have watched the deer population get smaller and smaller every year. Yet the total population go up. I have tried multiple times to hunt in the metro sub unit but can’t get permission. Until someone steps in and gets hunters permission to hunt those areas the deer population there will keep growing!!!! You can issue a million tags in the metro sub unit but if we can’t get permission to hunt there it’s a mute point!!</td>

<td>Please consider an earn a buck solution to increasing antlerless harvests instead of taking away my boys ability to hunt a buck. All of my boys passed on younger age class bucks last year because they love the feeling they get when the right one walks in. If they had let them walk, it would crush their passion. I would rather see more of a QDM approach with antler restrictions protecting young bucks so they can grow up. We saw a lot less deer this year which doesn’t make sense to me. If antlerless harvest needs to increase, make each hunter earn their buck tag...please!</td>
</tr>
<tr>
<td>8172</td>
<td>To turn this into an antlerless-only area what almost ensure that I have no opportunity to harvest a deer I had 5 waterless tags I think last year and was not able to fill one because I didn't see any to shoot at so to say that we have all these deer is one thing but they're not on public land they're staying on the private land and that's what's killing the Harvest numbers people aren't letting Hunters on private land anymore. If this was an antlerless-only area I may not have any chance to fill my tag and if that was the case I wouldn't even go hunting after 38 years.</td>
</tr>

<td>8173</td>
<td>A no buck season in St Croix County is unacceptable. The problem in this DmU is the existence of a heavily populated rural and residential properties that offer little opportunity for hunting access. The overpopulation is the problem of Hudson and New Richmond not the outlaying areas where deer populations are down from preceding years. I'm 72 years old and have a limited amount of opportunities left and don't want the chance to get a buck diminished. This proposal by the CDAC is seen as a penalty proposal. Penalizing hunters is a poor approach to finding a solution.</td>

</table>
Thanks for the forum to voice observations and opinion. I will be brief. I have owned land in north St. Croix county near the Apple River for 33 years. Most hunters in this area concentrate on killing a buck, many trophy hunters. There is an overpopulation of deer in this area, doe, fawns and bucks. I have extensive crop damage and have for years, it's a fact of farming in this area. Would it be prudent to have a earn a buck season in this area? By your statistics not enough doe are taken. Anyway my 2 cents worth,

By having an antlerless only for the entire season will bring the antlerless deer harvest way down compared to other years. I've talked to numerous people that said they will hunt a different county if they don't have the option of harvesting a buck. It will be counterproductive to try to get more youth into the sport if your limiting what they can harvest. I hunting St. Croix county almost 30 years and have access to good private land. The last few years the deer heard has been poor at best. I think there should be less antlerless permits allowed not more.

The last thing at croix county needs is to have buck tags with held from our hunters. We are at a large disadvantage to other surrounding counties due to our population and infrastructure. Our deer density is extremely high for the limited amount of woods we have. If we do not have buck tags, herd numbers will only continue to grow which leads to more roadkill, which we all know is plenty high as is. If you want to keep hunters happy, keep poaching low, and reduce roadkill numbers, we need to issue at least one buck tag each as well as multiple doe tags.

IT would be interesting to see the impact of all the special season hunts. Combine these with the bow hunting kill numbers, and by the time the traditional gun season rolls around, the deer heard has been thinned out, and all the decent bucks are gone. Sorry just do not see they deer numbers that we used to see in the 80's and 90's or anything close. I've hunted the same fields for 40 years, and used to see 15-30 deer on opening day in shooting range. I might see 3-6 for the last 10 years... Gut feeling is there are to many special seasons...

I feel like the number of deer seen during the hunting season has gone down leading me to believe that people are either poaching them or the amount of tags is too high. I have also noticed a steady decrease in hunters in the woods for the past several years. I feel like there are changes that need to be made, but extending/decreasing the season isn't the answer. I feel like getting rid of all the specialty hunts (holiday hunt, youth hunt, etc.) would do a great job at helping both the deer population and the number of hunters.

Given the metrics showing total deer harvest has remained fairly stable over the past 4 years it appears the current quotas are working as well as can be expected. I agree that antlerless tags availability vs number of deer harvested has diminishing returns. However if no buck tags are issued total deer harvest and antlerless harvest will likely decrease only causing more problems. I think communication campaigns are the only way to get hunters to help manage the herd in st. Croix county given the amount of private lands.

Managing a free-roaming wildlife resource on the basis of County boundaries, rather than habitat is absurd. Wildlife species are too important to be managed without data (age-sex-kill). Hunter opinions are important for human dimension discussion, but opinions and guesses (regarding age reporting) are no substitute for systematically collected biological data/statistics. I suggest returning to physical registration to obtain data, and management by habitat-based management units rather than artificial county boundaries.

Like the committee mentioned, I believe there needs to be additional tools available. I would not hunt if anterless only season was enacted. This would do the opposite of harvesting additional antlerless. If forest regeneration is truly a goal, devote resources to support eradication of buckthorn. I would like to clear out land for regeneration, but I worry the buckthorn would overtake any natural species. I would support earn a buck. Possibly nonresident earn a buck first, then to residents if quota isn't met.
It will make some people mad but it will be those that don’t understand deer management for a healthy herd and only shoot bucks. Some probably won’t buy a license but hopefully buck only hunters will realize they need to reduce the population in there area for the overall health of the whole herd. If they are in it for antlers only they should be happy every buck will grow another year unless they find a car or predator. Do what is best for the deer herd and not selfish and uneducated hunters. Keep up the good work.

Doe populations are much too high. I have noticed a lot of aggressive behavior between doe family group members hinting toward over population and lack of food in given times of the year. I enjoy trophy hunting but know that a healthy herd should be the #1 priority. A doe only hunt, although extreme, is something I would be in favor of. Give the bucks a chance to grown a year more bone and wipe out some of the doe that are on the edge of being nuisance. The herd needs some breathing room from over-crowding!

I wish all youth hunts, holiday hunts and 4 day antlerless hunts would all be abolished. We need more deer in the area. The wolf took care of most of the deer in the north. If you don’t take action now, the southern part of the state will be in as bad shape as the north. Besides the age old tradition of the 9 day gun hunt has vanished because of all the unnecessary hunts. Do you think it is sport for a kid to go out and get a nice buck when the season isn't open to everyone? Just my thoughts.

Myself and others in my hunting group harvest multiple antlerless deer every hunting season, last year we harvested 5 and no bucks. But we always hope for the opportunity of harvesting a mature buck. The people like myself who are non-residents would not pay the significant out of state license fee if it was an antlerless only season structure. In this manner it seems to have the adverse effect, and instead of harvesting more does it may lead to less hunters, and less antlerless harvest.

The proposal to suggest an antlerless only deer season is ridiculous. I know the CDAC committee did this to elicit public conversation but it’s not reasonable or sustainable. It will only create ill will and conflict. Yes, we need to harvest more antlerless deer but buck harvest drives hunter interest and economics. I absolutely do not support an antlerless only deer season. Oh, and tell thr NR board to leave the crossbow users alone. Let’s not alienate any of the deer hunting public.

My family survives soly on venison for our red meat and our private property has minimal adult does, maybe 2 or 3 a year at most, but supports 12 or more bucks of various ages. We have 4 hunters, all of whom purchase both archery and gun licenses. We harvest 6 deer a year on average, 4 or more of which are antlered bucks. If St Croix County goes to a doe only year our chances of harvesting any deer is minimal and we would seriously consider not purchasing any hunting licenses at all.

I like to hunt deer and hope to have an opportunity to harvest a mature buck. My family owns around 250 acres and hunting has been apart of our family activities for as long as my Dad can remember. We manage our land. We shoot our does. We also hunt Elk, geese,Ducks and chase Muskies. I believe that that's what we will be doing this fall if the opportunity to shoot mature bucks isn't there. Grow the sport by not allowing hunters to chase trophy deer? Makes little sense to me.

I am afraid if we adopt an antlerless only (all seasons) framework the total harvest in the county will decrease significantly. Many hunters will likely choose to hunt elsewhere so they can pursue bucks. I am a very avid deer hunter and would like to shoot a trophy as most of us would. I would probably still hunt my farm under a total antlerless only system, but I have friends with properties in other counties and I would likely be spending most of my hunting time there.

As a resident and land owner in Saint Croix County it is absurd to even consider taking ANY hunting rights away from the people that pay taxes, license fees and live in the county. In the midst of what is going on right now, the governing powers should get LESS power to make ANY decisions, not more. An ANTLERLESS ONLY SEASON IS STRONGLY OPPOSED BY EVERY HUNTER I KNOW ACROSS THE STATE OF WISCONSIN AND IN ST CROIX COUNTY. This is an absolutely ridiculous and absurd request.
I hunt in the metro zone that has had unlimited doe tags for years and years. The deer numbers in any areas that I hunt have been severely depleted. I strongly disagree with a antler less season that would further extinguish our deer population in my area. There are areas in this zone that are river bordered private land that are unhuntable that are having crop damage problems along with car kills which should not be a reason to kill off all the deer in actual huntable areas.

If anything happens to help control the doe population it should be an earn a buck or even a double earn a buck this is the only way to ensure Dow harvest increases in 2020. A doe only season is only going to decrease the does that are taken because more people will go else where’t to hunt so they have the chance to shoot bucks. The DNR NEEDS TO GO BACK TO REGULAR TAGS AN GAS STATION REGISTRATION THIS WOULD ALSO MAKE NUMBERS GO UP AN HELP SMALL BUSINESS!!!!!!!'

Going antler less only would be a mistake. Less people would hunt and private land owners/lease holders would not be happy at all (and I’m saying that being neither of those things). Why not adopt the one buck per year (across all weapons) like MN does and then give out a couple of doe tags? That would get people in the woods knowing they can shoot a buck still and may give an incentive to hunters to shoot more does. I feel that is a very simple and fair compromise.

A doe only season is the worst idea I have ever heard for St Croix cty. The problem here is development! So many great hunting areas can no longer be hunted because developers keep putting so many homes on that land. People have lost all their hunting land. Gun hunting groups hardly exist anymore cause they can’t get access to those lands me. To me it seems like hunters are limited and you’re talking about making it worse with a doe only season. This is crazy!

My concern is that having a antler‐less only season will not accomplish your expectations. I fear this will push hunters out of the county causing these numbers to raise next year. As a public land Hunter who has failed to fill his antler‐less tags in St Croix county the past two years I have found myself flirting with the idea of venturing to surrounding counties in order to fill my freezer. If this is to pass I will not be hunting St Croix county in 2020.

You guys don’t understand that the antlerless hunts don’t work!!!!! Hunters shoot more bucks than Does because of all the numbin bucks shot... you bury your heads in the sand and think that all antlerless deer shot are Does think about it and use some common sense. You also don’t keep track of all the car deer kills that happen that should go toward the total harvest. You want the hunter numbers to increase but the plans you have in place are crazy!!!!!

The only place I hunt is on my own land. I put in about 3 acres of food plots I own 150 acres The rest is rented cropland I enjoy sitting and watching the deer I am 63 years old so I hunt with a crossbow during archery season. I shot 2 deer last season,a small buck with the crossbow and a doe during gun season. If this is a doe only year in st croix county I probably won't hunt and no one else hunts my property. Results. No deer killed at all !!!!!

One piece of data the isn't reported is there number of injured deer during a season. I have found a number of decaying carcasses during or after a season of hunting, and I'm not proud to say I have shot and killed an animal, but due to rain, there blood trail was obliterated and I didn't find the deer till it was no longer salvageable. How do these numbers make it into the data? Is it possible that a hunter could be encouraged to report on these stats?

Thanks for the survey. I haven’t seen the increase in deer in my area. The public land that I’ve seen the last 10 years with trees on it has mostly been cut down and replaced with prairie grass. I don’t understand that, leaving not much left to deer hunt. Increase the price of non resident lic. to have them pay what there state charges non resident. Implement a size limit on bucks. I’ve seen a lot of people that shoot anything with an antler.

I hunt mainly public land in St Croix County. I feel as though it is anti-hunting to support an totally antlerless only season. I highly doubt that number of antlerless deer harvested would increase during this season as it would force even more people out of hunting. If it were not for COVID-19, I would have attended the CDAC meeting and would have strongly voiced an opinion over this subject as would many others that hunt in this county.
Rather than an antlerless only season in St. Croix county this season, I would like to see a party buck system similar to the old party doe system used years ago. This way license sales wouldn't fall as much and a group of hunters (probably family members) would still get a chance to harvest a buck. Most hunters use cameras and have a good idea what bucks are in their hunting area so they will have an idea of what one they want to harvest.

Having an antlerless-only season is very unfortunate to those who are just entering the sport and have never tagged a buck. While I hunt for food, the thought of seeing that big buck in my cross hairs still makes my adrenaline rush! Also, I believe there should be no youth hunt. Parents are utilizing this special rifle time in October to catch the big one. Put it back to what it was for years. Youth hunt during the normal season.

Having a doe only season would just cause less people to hunt in general and might even cause less deer to get harvested due to lack of sales. Myself many of my friends would not even hunt in St Croix county if we could not hunt a buck. I don't think that earn a buck is a good option but it's at least better than doe only.

Antlerless only is a very bad idea. The number of hunters will be down and will not help the way you want it to. This could also provoke more poaching and non registration of deer. This will make many hunters very upset not to be able to harvest a buck that they work very hard for. It's the only county I have to hunt in and this is why I purchased woodland. There is a reason St. Croix county is the only one thinking of this.

I feel that an antlerless only season would lower hunter participation in the county. Those that want to harvest antlerless deer already do. If you want to increase the number of antlerless taken, I feel that earn-a-buck would be more productive. Like it or not, many hunters are mainly motivated to shoot bucks. If there is zero opportunity to shoot a buck, I'm afraid that many will either hunt another county or not at all.

To get more people hunting for does might be achieved by making them open season like coyotes until their numbers are decreased. Still make hunters report the does harvested but make the tags free and open season until numbers reach a predefined threshold. If St. Croix changed to "Doe only" hunting.... I would not even buy a deer hunting license. I will plan to shoot a doe or two for the food shelf next season.

I would support an earn a buck system, but making an antlerless only season will only deter hunters from hunting and could also reduce the number of new hunters. This will not help reduce the number of antlerless deer in Saint Croix County. I would like to see a change to the Muzzleloader Season to being later to give the deer a chance to settle down from being hunted and then reopen the season at a later date.

There is to meny deer harvest hunts ( doe hunts, youth hunts, holiday hunts, doe only hunts,) I been hunting since 1984 it was good then, into the 90s and then you did all them different doe hunts then the deer population have been going down ever since. So i and my family have not been hunting for deer the last 10 years ( NO DEER) AND I know other families that don,t hunt deer that say the same thing.

My only chance to harvest an animal this past year was a buck. I have not seen the deer numbers nor the damage that people are seeing. The reason for more crop damage then normal was the fact that more crop were left standing through the winter. I feel that if this county goes to antler less only you will have fewer hunters going out then already are and you won't reduce the herd size the way you want.
If there is a antlerless only season my son bothers, cousins, nephews and myself will not buy a license and hunt. That’s 10 hunters. We shoot 8-9 does a year and harvest 1-2 bucks. If you decide to go antlerless only, fewer hunters will hunt and fewer does will be harvested. Making the problem worse. If there is a county that needs to be antlerless only it’s buffalo county.

It seems like crossbows are becoming more popular. I would classify them more as a gun. They take far less skill than a vertical bow and have the same range and accuracy as a shotgun/slug. I would not classify them as a bow. In my opinion it is pretty easy to sit in a deer blind on a chair and shoot deer with a crossbow. Have you considered moving them into gun season or adjusting their season.

The biggest issue I am having is I get all these tags for deer in the metro sub unit not but I don’t have enough time to use them. You could have issue me 100 tags but if I only have 1 or 2 week ends realistically to harvest something. Why not keep or lower the number of tags and increase the length of the season? I have a job and can only hunt 1-2 days in a 9 day period unless I use time off.

I think there should be buck harvest allowed on private land but not on public land. Moving public land to antlerless only might help. It’s just quite unfair to people with private land that want to shoot a buck. I would also highly support a points threshold for bucks, even on private land. Too many of my uncles have shot spikes over the years and anything under 8 points should be left to grow.

Shutting down a buck harvest you will have people quit hunting. It’s our tradition I don’t agree there is too many deer. I farm 3000ac hunt fish ECT. On the land all the time around the county. But if you really think there is find a different way. You will lose %25 of the deer hunters in this county they will quit!!!!! Your CDAC board is out of line and have no clue about what will work or not.

In the 2019 bow season I saw a smaller number of does and fawns the I had seen in previous years both on camera and in stand. But did seem to have a increased number of younger bucks (3 or 4 spikes on camera, handful of small 4pts and 6pts.). Usually I would see probably average 2 to 3 does to every buck this past year I saw 2 bucks to every doe with majority of bucks being 6pt or less.

The main problem you have in St Croix County is getting permission to hunt the deer on private ground. It doesn’t matter if you shoot does only if you can’t get on property to hunt you will never trim the herd down. Some individuals have enough money to lock up the land and only shoot a few deer off the property. You are not even smart enough to shut down baiting If you really cared about CWD.

If we hold an antlerless season only in St Croix, most hunters will leave the county. Less hunters - lowers the deer kill! I rent land to a hunter - non come for me as he will go elsewhere in state. Last year he got a buck and doe. No buck hunting will result in less visitors to our county I have other places to hunt and might skip the hunt in St Croix if it is antlerless only myself!

The St Croix Cty. deer herd is no more or no less than it has been for the last 30 years. I believe that this area can support the current deer herd numbers. The deer numbers I see during the winter during a coyote hunt with dogs are no where near an over population of deer. I who leave the deer seasons as they have been for years or you may see the hunter numbers decline even more.

The quickest way to bring down the number of hunters is to have antlerless only full seasons and antlerless only holiday seasons. I quit hunting over the holidays when you made it illegal to shoot bucks during that season. So, not only did I not shoot a buck, I didn’t shoot any does either. Get crossbows out of archery season for able bodied hunters. They aren’t archery equipment.

With the antlerless deer only season, there would be to many 1 and 2 year old deer taken which would alter the future harvest. There is no good way to manage what age deer is taken and there are many hunters who are not interested in management and would leave small deer lay and not tag them. I prefer the buck and doe tag as it is and an additional doe tag for the holiday harvest.
Hello. I am very concerned with the long gun season in the metro unit. Nine days plus the extra ten for muzzle which is really 19 days with rifle. all the pressure is taking a toll on the mature bucks. NOT NEAR AS MANY I see 1 1/2 year old bucks breeding more than ever. PLEASE STOP WITH A 19 DAY GUN SEASON in the metro unit go back to straight muzzle load season. Thank you

How would you even enforce an antlerless deer season only with the way we register deer online now? You could just say you shot the buck in another county and who would know the difference? This would be especially tough to enforce on private land which is most of St. Croix county. I propose you keep it simple and less confusing by not having an antlerless only season. Thanks!

If st croix county is an antlerless only unit I simply wont hunt in st croix county. I will drive to other countries were the option to take a buck is allowed or I will go out of state. This will cause a lack of interest in young hunters if their only option is to hunt in st croi and cannot take potentially their first buck if they see one. Fully disagree with this lay out.

If St. Croix county turns antlerless only I will not be hunting deer in the county. I will travel to other counties. I am a sportsman and understand that population needs to be controlled but I have seen a steady drop in deer sightings during my hunting, even though I have expanded my hunting area through gaining access to more private lands while still hunting public lands.

First, I feel an antlerless only season would decrease significantly the number of tags sold and in turn only decrease the number of antlerless deer harvested. If worst came to worst earn a buck could be implemented or a version of that. I also wouldn't mind seeing one buck per hunter per year, an either or tag where you have the chance to shoot it during gun or bow season.

Trust everything is being planned responsibly, with such a difficult year in all aspects of life. Eliminating buck harvest is a big concern for economic, participation, and overall pursuits of our passion. I would recommend a antler point restriction, and continue to encourage antlerless quota. Also earn a buck could be better than just pulling the antlered limitation

I don’t see a point to making it so you can’t shoot a buck, a adult buck is going to do the same amount of damage as a adult doe to plants, and agriculture. I also don’t understand as to why you would take a chance of a lifetime to harvest a adult buck from someone as that is one reason people in the area work so hard to get, and drives most people to hunt in the area.

The biggest thing that I noticed is last two years is the later start of the season, normally we were right after the MN deer season, but because of leap year it was back a week, I thought it was the 3rd weekend it started and I understand the low numbers. The last few years not being great. I am opposing the 19 day hunting season, as I really enjoy the 9 day myself.

So your psychology is to subtly threaten an all antlerless season and then lay up with more worthless earn a buck because it was so "effective." I'll be hunting in a neighboring county and so will the rest of my family, where we won't have to watch bucks walk. Now you are losing hunters. Time for a new metric I guess. Hunters who no longer hunt or left the county.

I will be senior next year and this will be my last chance to shoot a buck before I go to college and stop hunting Wisconsin for a minimum of 4 years. Making it a doe only zone is a terrible idea as many people will just go to other county’s to hunt. That will causes those county’s to become to crowded with hunters and too many hunters in a area is a safety concern.

Baiting spreads disease - ban it statewide like it had been for many decades. Deer numbers are much lower now than during the time period in and around the years 2007 and 2008. The population counts are believed by most hunters to be inaccurate. The current zones by county are simpler but not as conducive to good deer management as the old quota areas were.
I feel it is impossible to give an accurate deer heard calculation when land owners that post there land will not contribute to thinning the heard. I land owner that hunts his own 80 acres but will only shoot 1 deer. This is the same land owner that will not let other hunters hunt his land. Those deer know were there can go to be safe from hunting pressure.

We need EAB back. If we have a new system of having to shoot antlerless first, it needs to be done in-person or unscrupulous hunters will register phantom antlerless over phone registration. County-wide deer management units do not reflect all deer habitat. Again, we need to move to the original DMU to give biologists ability to manage deer populations.

The proposed antlerless only seasons for St. Croix county would push people away from hunting in that area. I personally own 80 acres in the county and if there was no option to harvest a buck I would not hunt at all in the county. Deer numbers also seem comparatively lower in the areas of St Croix that I have hunted than they are in other counties.

If an antlerless only season is put in order for the 2020 season I believe that the amount of harvest overall will drop. I would not buy a gun license at all if this was the case. I watch on average roughly 6 does and 1 buck per week during the archery season. I also choose to not shoot the does because they usually have a first year fawn with them.

In my area, I have seen the actual total numbers of deer diminish substantially. I am hard pressed to to take any of my grand children out for a hunt, either archery or rifle, and have them have a chance at a deer, but more often even difficult to see one! I use to see 15-20 per outing while bow hunting, where now, I feel lucky if I just "see one"!

There are different ways to approach the deer management. One buck per year- not one buck for bow and gun season? Earn a buck style? But based on 2020 hunt. You must shoot a buck and a doe in 2020, otherwise you are subject to earn a buck rule in 2021. That same rule would not apply for first time hunters or people who did not hunt the previous year.

I don’t believe that it is a smart idea to not let people hunt bucks in the St. Croix county area. If it is that important than I think there should be a earn a buck system at the LEAST. Since I have started hunting, in my opinion the deer population is doing very well in our area and there should be no need to not allow a hunter to harvest a buck.

Deer numbers appeared to be down to me in the area I was hunting. As a busy father hunting strictly for the freezer I appreciate the longer seasons and multiple tags. I will do my best to harvest more does this year. I always intend to but need to see them to shoot them. :) I would not support a doe only season framework. Thank you for doing this!

I believe we should go back to only being able to use a cross bow if you are disabled, and we should be able to shoot a buck with bow, if you are going to make it a doe only season for all of 2020 bow and gun I WILL NOT BE PURCHASING A PATRONS LICENSE At all, I have bought a sportsman’s license since I was 12 I will stop if that’s what it takes.

Couple things: 1. Offer unlimited bonus doe tags in the Metro zone, or simply don't charge the $12 for a bonus doe tags. 2. Crossbow season would be better coincided with muzzle load season, a crossbow uses a locking device and is discharged by a trigger...whereas a bow demands significant physical strength and stamina to pull, hold and aim.

I DO NOT agree with antlerless seasons in st croix county. I bow hunted from the last weekend of September, through close. I couldn’t get a doe for the freezer for the life of me. I was covered up in small bucks all season, some very nice ones as well. Again, i had more encounters with horned deer last fall than i did any antlerless deer.
I feel like there are so many predators already making the deer numbers go down in my area of the county. We hardly ever see fawns anymore due to the coyotes, bears and now wolves eating them after they’re born. I saw a third of the deer last fall while I bow hunted, than I saw my first year bowhunting. Our numbers are down significantly.

I have hunted here in St Croix County for 30+ years and the deer population is absolutely decimated! I always shot a deer growing up and now I can’t even ensure my kids and wife see a deer to shoot. Absolutely an embarrassment. We are looking to hunt other states because it’s not worth our time and money to struggle to get deer here.

I do not think an antlerless only hunt would be beneficial to the county. I am currently going to college for resource management, and I know that taking one gender away only leads to troubles in the future. This could end up potentially hurting the population with taking away too many does to not make as many offspring the next spring.

I cannot express enough my disgust with the actions of our dnr in regards to our deer herd. It is blatantly apparent that politics have taken over common sense. The fact that St Croix county is being considered for antlerless only regulations next year is ludicrous and unacceptable. Wanna sell more tags? This is NOT the answer. Wake up.

If I’m understanding this correctly, why would the CDAC propose an antlerless only season and NOT support a holiday hunt with an extended archery and crossbow season? Something doesn’t add up. My skepticism has now been aroused. Who has an agenda? Where’s the trust? Isn’t the objective to kill more deer, including antlerless deer?

If the deer population is to high it’s because you can’t hunt in the areas of high population. Western St. Croix Co. Residential areas, house developments, etc. Also, noted the decrease of gun harvest. Hunters are not doing the call online registration. Shoot deer, take home, don't register. Hey, I think I'll go again tomorrow.

If the dnr moves to go on with an antlerless only season in St. Croix County I will not purchase any tags for the year. I also believe this will create alot of hunting violations. The dnr does not pay the taxes or own the land that they are proposing ridiculous rules for. This is another overreach of a government entity.

Have you considered permits for hunting in towns. When hunting pressure or rut starts you can drive around towns and see 20 to 30 deer. Drive around the country before dusk or early morning and you might see 1 or 2. Management says that the numbers are going higher yet each year I see less and less deer in the field.

Before considering an antlerless hunt, I’d rather see the numbers after trying other methods to increase the Antlerless harvest. For example, Earn a Buck program specifically for crossbow users. Earn a Buck for the gun season. Taking away the ability to harvest a once in a lifetime Antlered deer is not the right answer.

I seen a huge decrease in the number of deer I seen hunting in 2019 compared to we 2018. I think you give out way to many antithesis tags. I also think your proposal of a arteries only season in 2020 is a joke. If this were to happen myself and many other hunters would simply not purchase a license and just stay home.

If you have an all antlerless deer season less people will come to this country to hunt because most people want to harvest a buck. In the end this will cause a decrease in antlerless harvest a huge rise in buck population creating a better buck to doe ratio which is great but you will see a rise in deer population.
All I know is I've had many many big bucks on my property which I live on as well. I do NOT support the antlerless only season. That's not fair to all the hunters that put in the work to shoot bigger bucks. Anybody could go out and shoot does, they will always stick around. Keep the season how it was like last year.

Extremely high vehicle collision rate and overbrowsing throughout the county. The antlerless population is extremely high. I would recommend opening more public access to hunting throughout the county including reviewing no firearms discharge ordinances in small towns for residents on larger tracts of land.

I have seen less deer year over year for the past 5 years. Also much less mature deer over the past 5 years. I have observed this with trail cameras and in stands. Forest and Ag has not changed, so trying to understand how the deer numbers reported by the DNR continues to rise? I hunt in the metro sub-unit.

Earn a buck doesn't work either last time we had earn a buck I heard of people shooting a doe and several people tagging it to get there sticker so that's a dumb system also how well does it work with all the online registration now days I miss going to register my deer and seeing other successful hunters.

The deer numbers are not what you claim. Going off last years registration is ridiculous. When you went to call in or online registration people are not doing it. You have made it to easy for people not to have any checks or balances. The constant changes are very significant for people leaving the sport!

There has been talk about making a crossbow season separate from the vertical bow. If it has to be; an antler less season with a window to shoot a buck would be better. I live the hudson metro subunit that is overrun by deer and the crossbow shouldn't be limited. At least not with the harvest of does.

My greatest concern is adopting an antlerless only hunt for St Croix county. What the end result will be, myself included, will be to hunt out of the county or not hunt at all. As the matriarch of hunting in my family, whatever I decide will most likely be The decision of 4 other members of our group.

Ensuring an increase in antlerless harvest can be accomplished by offering discounted/free tags. Also implementing a simple program for venison donation would be a great way to help increase the number of antlerless tags filled. Thanks for your hard work and consideration in balancing our system.

I live and own hunting land in Wisconsin. A key part of this is hunting my back yard for antlered deer with bow and firearm. If I cannot, I will no longer deer hunt in Wisconsin and unfortunately, I will no longer allow my neighbors to harvest deer, which many have been antlerless on my own property.

Forcing a NO buck season will only upset hunters and turn people off of hunting all together. Which will really increase the deer population and be counter productive. I would rather see an earn a buck situation. However, I think the earn a buck situation should only be for the 2nd buck harvest.

The more does them more deer we have if a private land owner thinks they have to many does they can thin the herd there own way but other small land owners that can’t compete need the does. Make baiting legal it’s no different than planting a food plot or a corn, bean field and hunting over it.

It is hard to know what it would take to get hunters in this county to harvest more does! Tags don't seem to make much difference towards reaching the goals of the CDAC. I wish earn-a-buck would be an option in this state. Maybe the threat of an antlerless only season would open some eyes.

I have 2 kids that hunt. Going antlerless only would decrease their desire to hunt. We are not seeing a large deer population that would warrant antlerless only. In fact, we have had a harder time the past 2 seasons harvesting antlerless deer compared to prior years. We hunt private land.

I drive An hour each way to work through St Croix County every day and have for over a decade. I’ve seen more deer (alive and dead) the past few years than I ever did in the past. I feel deer counts and harvest levels have more to do with standing corn and weather than actual herd sizes.
No comments. Just don't change our 9 day season. If anything. Make first 5 days of gun season residents only. Put muzzle loaders with the regular gun season. Stop dividing crossbow/bow difference on license. No hunting deer with a firearm beyond the sunday following Thanksgiving.

The disproportionate number of deer harvested on private to public is alarming. If that many deer/bucks are being harvested on private land if makes sense to force the issue to harvest enough antlerless deer to make the quota. Here management is more important than antler management.

The move to the US fish and wildlife and the “Oak Savannah” restoration has had a major negative impact to both deer and other wild species I have seen while hunting. It has rendered much of that land to low value for hunting deer and reduced the joy of bow hunting, especially.

If the dnr institutes an antlerless only deer season in st croix county, I absolutely will not be hunting & I’ll be putting away my gun & bow forever. This is ludicrous! You can kiss away the money I spend on my hunting licenses, on hunting clothing, ammo, gas, atv tags, etc.

An antlerless-only season would completely backfire. I, and many others, just wouldn't hunt in an area where I couldn't shoot a buck if I had the chance. It is also incredibly unfair to those who have purchased or leased land in the county specifically for deer hunting.

If you want more antlerless deer killed I’d suggest a system like earn a buck vs a antlerless season only. People will be upset with both but not giving someone a chance to harvest a buck in an entire county for an entire season isn’t fair and will upset people far more.

Understand the concerns but wouldn't understand taking the legacy out of the sport to have a antlerless hjj in not only. Seems foolish. I would like to see seasons or tags increase or extended. Maybe extend youth only hunts and make those antler-less. Or earn a buck.

Going to an all antlerless deer hunting for the whole season will only push hunters out of the county to hunt somewhere else. I know I would not be afraid to drive to another county that allows hunting for antlered deer. I’m sure many other hunters feel the same way.

I would like to see bigger buck, so taking a year off to let them grow might be nice. I am totally fine with earn a buck as well. With such modern technology why don’t you have to take a photo and send it in when you register your deer. If you have a Smart phone.

I think it’s so wrong too not let us hunt bucks in stcroix cty this yr. I let more small bucks go this last yr then I have in yrs. An seen less does. Then ever. I think its screwed up to make me go to another county to fill my tag. What gives you the right.

No buck tags, nobody will hunt. In my area there is no shortage of bucks or does. Most hunters I know hunt for food and recreation, not trophies. Too many cars for that. Also small lots to hunt. If you let a buck go, the neighbor will probably take it.

I was confused about the antlerless only season framework question. Would that be an extra season in addition to the regular buck season (that I would be for) or would it eliminate the opportunity to harvest a buck for the year (that I would oppose).

I actually saw more bucks than ever before. I would hate to loose the chance to harvest a nice buck after watching him mature over the past two years. I select harvest on the land I hunt and I would be very upset if I was not able to shoot a buck.

I just don’t think an antler less only season will not help with new hunter recruitment I think it would only hurt the future generations in the long run. I thought the earn-a-buck plan would be a good thing to bring back into consideration.
I put many hours in the stand this past hunting season and saw a very high buck to doe ratio. An antlerless only season would very much eliminate my hunting opportunities. If the antlerless number needs to be managed, I suggest earn-a-buck.

To simply put it, if I can't harvest a buck in St Croix county I won't be hunting there, and I don't believe I'm the only person that would feel that way, thus less deer being harvested because of less hunters. Seems a bit backwards to me.

I hunt on private land and wanted to harvest a doe in 2019 but did not see many around. I typically harvest a buck and a doe or 2 but in 2019 I had very few opportunities to shoot a doe. Bucks were scarce as well compared to past seasons

We should move away from the county deer management format and go to the regional format that wild turkey seasons follow. Micromanagement of the resource is too constrictive on the general public and is confusing to the average hunter.

I am a youth hunter who has hunting for 6 years and in those six years I have only ever shot a doe once because my property does not have many does. If it is changed to only antlerless I WILL NOT be purchasing a license this year.

I personally know 6 farmers that currently lease their land for hunting in St Croix County. By implementing an antlerless only season, these farmers are at risk of losing these funds which supplements their property tax payments.

The DNR screwed up the harvest numbers when they went to online registration. Such a joke. I believe more people registered when in person registration was mandatory over “yeah sure I’ll type it in on my phone”. Just my 2 cents.

When Earn A Buck was in place it didn't work. I think if Doe Only is put into place in St Croix county that bucks will still be harvested and just registered in other area’s. Earn A Buck failed so will Doe Only in my opinion.

Making St. Croix County Antlerless only is CRAZY! I DO NOT Support this initiative! If you want more antlerless harvest, why not institute a Holiday Hunt and extension of bow hunt through Jan 31st? Try these tools first!

Not allowing people to harvest a buck during 2020 seasons would be a terrible thing moving forward. Many adults and kids who deer hunt look forward to the chance of harvesting a buck, and still will harvest a doe for food.

I care most about the rifle season being extended. It's a bad idea with the use of crossbows now. In the archery season more deer are being shot because of that. Leave everything as is, except the holiday hunt. Remove that!

If an antlerless hunt were initiated, it would drive hunters away, including myself and entire hunting party. We would simply go somewhere else. You can't take the entire buck season away and keep the same level of interest.

The data charts are somewhat contradictory with each other when considering the far greater number of deer on and around the 2007-2008 period compared to the actual much lower population in recent years, including 2019.

No Bucks, all season would simply drive me to hunt in other counties and not hunt St. Croix county at all. Other creative measures need to be considered to increase antler-less harvest, such as earn a buck or others.

I understand that there is a proposal in St. Croix county no buck harvest for 2020 season. Hope that this is not the case. Your going to lose hunters. That would be a shame, especially with hunter numbers going down.

An antlerless only season for the county may actually reduce the number of total deer taken as people with hunt elsewhere. It Could also increase the amount of criminal activity and really upset the ethical hunters.

Don't limit St Croix county to antlerless only. If the goal is to shoot more doe open up Christmas holiday when some of us from out of state are back for Christmas. Or open up December to taking a doe with a gun.

</tbody>
</table>
Wouldn’t earn-a-buck be a better option instead of a completely antlerless only season? People won’t be buying tags for 2020 season if they don’t have a chance at an antlered deer.

I wish we could adopt a 8 pt or bigger buck harvest it would only take a couple years and we would have a lot more Trophy Bucks around year after year. Let them go and let them grow

I don’t support an antler-less only season I would support and earn a buck season for all seasons however, or a double doe to earn a buck tag as other options than antler-less only.

If I can not have the chance of taking a buck out this up coming season I will not go get a tag. I have a feeling many other hunters will have the same mindset for this 2020 season.

To many hunts going on the hunting pressure have the deer turning nocturnal that’s why hunters are not seeing deer too many early season doe hunts too many late season doe hunts

There are too many deer in this area and not enough hunters. The surrounding land owners do not allow hunting but feed the deer which might encourage the spread of CWD.

There’s not the deer there was other years we hunted, by having a doe only season you the DNR are really jeopardizing the deer population that is already at an all time low !!!!

I feel that the earn a buck was a very valuable tool which helped manage antlerless harvest. I think it should be brought back before going to an entirely antlerless season.

There should be no reason to have a doe only hunt. If anything there should be earn a buck. We should also be able to have credit from the previous year if we harvested a doe

Please do not do a antlerless only hunt. If this is the case I will simply hunt in a different county. I am in a constant search for a large buck. That is the reason I hunt.

Licensee should get 1 buck and 1 doe for gun and 1 buck and 1 doe for Archery. With limited bonus tags sold for at least $12.00 each for resident and $25 for non-resident.

car kills are significantly up, consider antlerless only, open both sides of willow river park for hunting - we have 9-14 deer in our yard on south side of park

I personally think the antlerless only idea is insane , you will lose a lot of hunters who pay your wages among a lot of other things payed for by us sportsmen and women

I do not support restricting crossbow season to october. I am a weekend hunter due to my job and would miss the best part of the season. Would likely not buy a license.

More public land needed! Hunters who are unable to afford to purchase land for hunting are slowly being forced out of the sport due to decreased hunting opportunities.

Bring back the earn-a-buck program, if wanting more does taken. Don't deprive the chance to take a quality buck that might build excitement for future hunts/hunters.

Antlerless season only will only drive more hunters out of the area and out of hunting. Without at least the chance to harvest a buck you will loose a lot of hunters.

Do not make this unit antlerless only. Enough antlerless tags are given out for farmland and metro unit that if hunters want to harvest antlerless, they can/will.

The objective of taking more antlerless deer might be achieved with increased awareness and availability of donation butchering locations with no cost to the hunter.

It does seem that the average age of the bucks seen in my recent view is that they are one to three years in age. I'm concerned of there ability to survive longer.
I oppose the antlerless only hunting!!! In the past there has been earn a buck. Shoot a doe then you can shoot a buck. I would approve this for at least one year.

There are too many miss informed hunters that do not practice management. They only want trophies. Not near enough public land available to bring down numbers.

I definitely think if you decide to go for antlerless season this year, that you really should consider the youth hunters still able to shoot an antlered Buck

Too many car deer accidents. Do not have a holiday hunt or extended archery - it infringes on other winter sports like skiing and snowmobile trail maintenance.

Please do not limit the choice of weapon or deer. I only hunt my own land and am very selective about harvesting. I also have most of my homestead in habitat.

I think it is a ridiculous idea to make it anterless only all season. NOBODY wants to go out hunting to spend there time in the tree just to shoot a doe!!!!

The holiday hunt, would enable hunters to spend additional time with family members. In particular young hunters would have an opportunity to harvest a deer.

I support an effort to better manage the doe population but an antlerless only season will deter hunters in county and be ineffective. Why not earn a buck?

Instead of antler less only, how about Earn-a-Buck for this DMU. I think if you have an antler less only season you will lose more hunters than you gain.

Please do not make St. Croix County an anterless only management zone! Very unreasonable. We do also do not need as many antlerless tags being given out.

Go back to the old laws on the crossbows. Cause the new crossbows are like shooting a gun and everyone that has one is make in Ethical shots with them

I feel we need to go back to backtags and registration stations to combat poaching. Also do away with shining, or limit it to land owned by shiners.

I do not believe an antler less only season would ever be a good idea. An earn a buck season would do a far better job to reduce antlerless numbers

maybe earn a buck. I believe there are high numbers of doe on some private lands because they refuse to shoot doe. only looking for the big buck.

add a 4 point to a side antler restriction in st croix county. similar to south east MN. limits buck harvest and increases buck size structure.

I oppose the antlerless season because it will not increase the number of antlerless kills because people will simply not hunt in st Croix county

Eliminating crossbow option in November would likely result in me not purchasing a license because I am able to hunt weekends due to my job.

Would be nice to see deer populations bounce back to what they used to be. Don't see very many anymore throughout the year. Too many seasons.

1). Earn-a-buck for all seasons rather than antler antlerless only. 2). Public land property lines in wooded areas could be marked better.

I would rather have an Earn A Buck scenario, or even 2 does for a buck than absolutely no chance at a buck in the county I live and hunt in.
if I couldn’t hunt bucks, I would have to find a new area to hunt. i’m not opposed to shooting does, but i’m not hunting does specifically

I propose earn-a-buck instead of antlerless-only. I have done my part to reduce the doe population while other Trophy Hunters have not.

There are very few large doe or bucks which tells me overhunting is occurring in St Croix county. You need to limit antlerless tags.

I don’t believe antlerless only is the answer. Possibly earn a buck or antler size restrictions would help reduce the doe population.

A Doe only hunt would cause me to hunt in another county and eliminate the chances of me shooting a doe (or any deer for that matter)

Antlerless season would be very negative to hunter numbers and satisfaction. Please stop proposing these extream options. Thank you.

I support the earn a buck method to get more hunters to harvest doe, would not be apposed to making all gun seasons doe only hunts

I do not support the antlerless only Hunt. I feel the best way to decrease doe populations is to have a holiday or Christmas hunt.

I believe many people will quit hunting here if there is no possibility of taking a quality buck if the opportunity presents itself

I oppose the antlerless only season and would much rather see an earn a buck if CDAC is so concerned about the antlerless harvest

St Croix is a large and diverse county. One set of rules..IE, antlerless only for the entire county seems to be way too extreme.

I strongly oppose an anterless only deer season for St. Croix county. There is no good reason to do it. It is an over reaction.

I support the limiting of crossbow season (essentially a seperate season from archery) to October only and after the Gun season

An Antlerless only season will only push the trophy or buck hunters to another unit to find the hunt they are looking for

Give a chance for the holiday hunt and the extended season to work two years in a row versus going to a doe only season.

Maybe it is time to bring back earn-a-buck, or copy Minnesota and have one Buck harvest per Hunter for the entire season.

Please do not make St Croix an antlerless only county. Maybe go back to earn a buck or something to promote doe harvest.

I think we should have earn a buck. That way the trophy only hunters have to do their part to help with herd management.

I would like to see the Muzzleloader season take place earlier i.e.: before firearm deer season as opposed to after it.

Antlerless only will have a negative impact on hunters and for sure the younger hunters. This is a bad recommendation
A antlerless only season would be a huge step in the wrong direction. That would be the end of me purchasing a license.

where I live there seems to be to many deer but the surrounding land owners don't allow hunting. they also feed them

You will the amount of hunters if you eliminate buck tags. This is not going to work well for population control!

Need more options to increase antlerless harvest Explore options to increase access to private lands for hunting

I propose one buck either gun or archery when licensing is purchased and go back to shotgun only gun hunts

Consider better options to compensate farmers for ag damage There are lots of deer in eastern part of county

I do not agree with the antlerless only hunt in st croix county!! I agree if they give out more doe tags !

I know of many people against antlerless only and are not on computers or whatnot to fill this out.

A doe only season is a terrible idea and will not be accepted by the hunting community at large.

Make it an earn a buck unit where you have to shoot 5 antlerless deer before you get a buck tag

Antlerless only season is a bad idea. It would cause for many deer to be harvested illegally.

Instead of Antlerless only I would support to bring back the Earn-a-buck program in the zone.

your anterless only recommendation is a joke!!!! I seen way fewer deer in 2019 than in 2018.

there would be no sense hunting st Croix cty if it were antlerless only. i'd hunt elsewhere

Extend archery and crossbow seasons. Extend gun seasons. Allow mentor hunting this year.

Withdraw this silly antlerless only season proposal. Stop DNR logging of public lands.

Go to earn a buck if needed but let us be able to kill a buck,,your wrecking the hunt.

The price of BONUS ANTLERLESS HARVEST AUTHORIZATIONS is too high. They are not selling!

There is small areas of too many deer, but a lot of areas with no deer hardly at all.

lots of coyotes and other predators . turkeys and deer are hunting from all of them .

Antlerless only season for the year will put the out of control population in check

Do not force anterless harvest on hunters. We choose to have higher deer numbers.

Taking away the buck tag will un-motivate hunters. Everyone’s goal is a big buck

Antlerless season will just force more people to hunt elsewhere not a good idea

All these changes because of a slow season last year is completely ridiculous

I believe fewer people would hunt given the opportunity to only harvest does!

Buck only for this county we have had to many doe hunts in the last 10 years

Have you looked at requiring that a Doe be shot first to " Earn" a Buck Tag ?

I did not see any questions to identify if earn a buck would be an option.

If St Croix County is antlerless only, I will not hunt in St Croix County

The anterless only seasons is ridiculous and I am completely against it.

If this county goes to antlerless only, will not be buyinG a license.

only have the traditional hunts for the 9 day gun and the bow season.

If this unit becomes antlerless only I will no longer buy a license

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

482 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 203
   - I visit this unit for non-hunting purposes: 110
   - I hunt in this unit: 445
   - General interest in this unit: 83

   The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 426
   - Bow: 203
   - Crossbow: 217
   - Muzzleloader: 153

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 25.96
   - Maximum: 65

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 169
   - Mostly Private Land: 95
   - Public and Private Land About Equally: 81
   - Mostly Public Land: 36
   - Exclusively Public Land: 60
   - I did not hunt in this unit last year: 4

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 4
   - Not too crowded: 65
   - Neither crowded nor un-crowded: 55
   - Somewhat crowded: 61
   - Very crowded: 80
   - Not applicable: 7

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 86
   - Fewer: 135
   - Same: 155
   - More: 61
   - Many More: 36
   - Unsure: 9

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
Implement an ANTLERLESS HOLIDAY HUNT:
Not applicable in this DMU

If a Holiday Hunt is held in a Farmland unit...
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021:
Not applicable in this DMU

If the Population Objective is not "Increase"
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons:
Not applicable in this DMU

If a Zero Quota (buck only season) is adopted...
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?
VALID 261 NOT VALID 145 Unsure 76

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit? Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

Report Generated: Friday, May 01, 2020
Legislative decisions over the past 6 years have placed an ever-increasing emphasis on social and political interests rather than contemporary research, established science and observations of natural resource management professionals. These decisions continue to pursue artificially high populations of whitetail deer and limit the ability of professional wildlife managers to control these populations. While adequate research and analysis is available through DNR it is largely not being incorporated into CDAC decision making. I believe it is important to clarify the role of CDAC’s across the state of Wisconsin. County Deer Advisory Councils do not set quotas, population objectives or season structures. They provide recommendations to DNR for these items. CDAC’s are advisory only. CDAC’s should place an emphasis on sound science first and then incorporate public opinion. The role of CDAC’s should be reduced to population objective setting every 3 years, a mechanism for public input, and advise DNR on the public feedback regarding DNR herd management recommendations. Quota setting should be left to the professional wildlife managers. Taylor County is the most productive DMU in the entire northern forest region but the most conservative in the recommendation of public antlerless quota. In 2019 public land antlerless tags sold out in just over an hour. A significant hunter demand exists for these tags. An increase in public land tag availability is justified based on the extremely mild winter of 2019-2020, overly conservative historic recommendations by CDAC, historic under harvest of public land quota and hunter demand for these tags. Taylor County has consistently been under harvesting their public land quota due to success rates being set too high. A success rate of 30% is not realistic for public land across the entire state of Wisconsin. As quotas are increased success rates decrease. For this reason, I think it would be prudent for CDAC to utilize a 25% success rate for public land. I thank the CDAC for growing the whitetail deer population from a low point in 2013. However, the population now is in great need of control. Please consider agricultural damage, car collisions, forest damage and population metrics such as buck harvest/sq mi, fawn:doe ratio, yearling buck harvest, etc to determine a reasonable and responsible quota and tag recommendation.
It seems like the harder you guys try to fix this the worse it gets. I don’t claim to have all or any of the answers but have decided to move on and quit this sport as it has become no more than a political exercise and another money making scheme in my eyes. You shouldn’t be selling permits for game that doesn’t exist or to someone whom may not have access to hunt. You’re taking advantage of a public unaware of the reality of the real situation especially when it comes to public lands. As you continue to bring the exotics back to the landscape ie(Fisher, Wolves, Turkeys ) in the Northern forest areas just be prepared for further lack of interest in hunting of the game that once filled those spaces now home to an overpopulation of predators. Yes I’m considering Turkey a predator as they will have an effect on the grouse numbers over time. I used to hunt grouse in south central Wisconsin and have only seen 2 in the last fifteen years in places I could chase them all day before Turkeys became a thing. Unfortunately I don’t think those in charge realize what is the real cause of why there is a decline of interest in hunting. Access?? Abundance of Game?? Years of permit application for hunting what’s left?? Thank goodness fish managers like fish. They seem to be open to protecting good numbers of all species for the public to enjoy. Oh,maybe the reason for that is that water is publicly accessible?? Not the same for land, in the hunting and trapping world. Sad. That’s all I can say. Sad. Instead of the state eradicating more deer because of car deer accidents maybe landowners who post their lands where overpopulation is a problem should pay a fine or open up to public or hunting after 3 car deer altercations? Just a thought. Good luck with the deer management. If you want new hunters make it easier to start and work on getting the numbers of all game back up. I didn’t start hunting deer. I started with small game and small game is still abundant where I live now but not so in the Northern Forests. But the same problem exists with small game hunting, lack of access?? Again I don’t claim to know anything so good luck.

The public land in Taylor County, especially the National Forest land should have zero anterless harvest to adult hunters. The youth hunters should be exempt and allowed to harvest their one deer. The amount of predators in the National Forest is VERY HIGH. Couple the high predator numbers with a tough winter, or two, or three in a row and it makes it very difficult to rebuild the herd when a die off occurs. Logging operations seem to be on the up tick in the area versus the past 10 years but no where near what could be cut or what was cut back in the 70’s, 80’s and early 90’s. In the 42 years I have hunted the National Forest, I can only remember one time I saw a cutting of any sort in a hardwood stand. Why not? Those hardwood stands are becoming the dominate terrain feature and they allow for the least amount of carrying capacity of animal species. When deer populations were high (maybe too high at that point) in the late 90’s there was ample logging, low predator numbers and most importantly a long string of mild winters, and limited anterless harvest. All these factors when combined allowed the herd to explode. I am not saying to let that happen again, but those are the main factors to building or reduction of the herd in that area. It only takes a couple bad winters to severely knock the herd down. When a die off happens, the high number of predators on the landscape do not allow for a 3-5 year rebuild. These are different times that in the 90’s, so currently taking any number of anterless deer out of the herd severely effects the ability to rebound when those bad winters periodically happen. Love the National Forest of Taylor County!!!! One of the few places in the state a hunter can roam without many boundaries.
I primarily hunt in the Chequamegon Nicolet national forest in NW Taylor county for rifle season, but hunt both public and private land for archery season. I consider myself to be a skilled outdoors-man / hunter and have a good understanding of biology and environmental science. In my hunting excursions throughout the county, I have observed the evidence of overbrowsing on private land and certain parcels of public land (primarily in areas near agriculture or near private land). However, I do not see this evidence in the large timber blocks of public land in the NF. There was a marked reduction of deer sign this past year (actually ever since the 2 consecutive bad winters 5 and 6 years ago) Our 14 member hunting group are spread out in approximately 1 1/2 sections of large forest block and only saw 1 doe and 1 wolf on opening day of rifle season. We did not harvest a single deer on public land the entire rifle season. I realize that there may be too many deer in some areas of public county forest land in NE Taylor county, but the scenario is totally different in the C-N NF in north central and NW Taylor county. In 51 years of hunting in this same area I have averaged harvesting a buck every other year but only one in the past 10 years. It is a bit discouraging to see only one deer in 8 hard days of hunting. I personally feel that the antlerless quota in the national forest of Taylor County should be 0. I also feel that there is a severe need to increase logging in these large forest blocks to improve carrying capacity for wildlife. There is also a significant need to increase predator control.

I have hunted in Taylor county for 38 years. Specifically the Perkinstown area. I hunted the full 9 day gun season as well as 14 days of crossbow hunting. Last year was the worst year for seeing deer in all my years of hunting there. My hunting partners (4 total) and I saw a total of two deer during the archery hunt and ZERO deer during the 9 day gun season. We were in the woods every day and every legal minute during the gun season. We hunted private lands as well as public lands. For years I have been saying that the antlerless harvest needs to be broken down more specific to be anterless bucks or anterless does. I think this would give you a more scientific outlook on the deer population and the number of anterless permits to be made available. In the CDAC video you stated that you want to increase the population of deer this year in Taylor county. If that is the case then why are you proposing to increase the 2020 antlerless quota from the previous year? I know that some of your numbers are driven by car kills and accidents and insurance companies dollars as well as the expected hunters spending money in each county. Talking with many hunters during the deer hunting seasons around the Perkinstown area I wasn't alone in not seeing any deer during the gun season. The Big buck contests in the taverns around the area also reflected the lack of deer in that area. I urge you to drastically lower the number of anterless permits if not eliminating them all together for the next several years. Good day and be safe in these troubling times.

I do not understand the mindset that we have so many deer and that our deer population is where we want it. Look at the harvest numbers over the past 15 years. down down down. Look at the car kills over the last 15 years. down down down. And the number of hunters, down. Successful hunters are happy hunters. young hunters have too many other distractions in this world to stick to hunting if they are not seeing deer like we USED to have. I disagree with extending seasons and adding seasons. If the deer numbers were up where they used to be, early 2000's say for argument, people would not need additional time to have a successful hunt. Managing a whole county is not an easy task. understood. But a small percentage of private land is loaded with deer. the rest is not. Antlerless tags will be filled by hunters that truly hunt and want the meat. But, are they really getting harvested in the areas they are supposed to. That can skew numbers even more in the wrong direction. I would personally like to see a couple years of no antlerless. Lets see what happens to the population and how deer disperse and migrate into the less populated areas. I would love to say we could manage by sections or townships. Because yes, farm country and some areas are ridiculously overpopulated. By adding general private land antlerless tags does not fix these areas. Thank you for considering my opinion. Medford area resident.
Public Input on CDAC Preliminary Recommendations - Spring 2020

There are too many doe permits and bonus permits in the northern forest. We rarely see deer and we make drives 80% of the time. We used to move deer most drives and we hunt with 16-20 people. In the last 10 years I can count usually on 1 hand how many deer I have seen in a 9 day season. Before that from early 80's-2000's I would see that many deer per day. We are losing hunters and license fees because of the lack of deer that leads directly to a lack of interest and frustration. I also do not think it is coincidence that over that same time period I have noticed a dramatic increase in predators in the northern forest. I have averaged 10-20 wolf sightings per year over the last 10 years. prior to that I may have seen a wolf every 2-3 years. There are definitely far fewer deer and I have trouble believing the DNR population assessment in the northern forest. I have lived here for 70+ years and it is just not plausible that we have as many deer in the northern forest population that you keep reporting. If that is the case then people are killing most of the deer before the gun hunt. Something needs to be done of my grand kids and their kids will have no interest in walking around the woods for a week to see less than a handful of deer. I hope we do something soon to improve the northern forest deer hunting experience before we lose an entire generation of potential hunters.

To whom it may concern, I get the idea of large management zones and then letting the counties determine harvest quotas. The problem is simply you just can not put a one size fits all model to an entire county. The deer density is entirely different in different parts of the county. For instance there are more deer west of Gilman then there are in the big timber north East of Rib Lake. Then antlerless public tags are allowed county wide and hunters harvest these antlerless deer north East of Rib Lake. This diminishes the deer herd there. Not to mention grossly under estimated wolf populations North East of Rib Lake. Another issue is the lucrative revenue stream the Wisconsin DNR has made out of Black Bear hunting in Wisconsin. Coyote, Wolf and Black Bear populations need to be reduced drastically. The last time I checked those three predatory animals do not bring in over a billion dollars in revenue to Wisconsin yearly, but a prized mature 4 1/2 year old whitetail indeed does. Here is a valid suggestion, I suggest we allow 1 buck tag per archery and 1 buck per rifle and a minimum to of 3 points to a side every even numbered year. and antlerless permits every odd numbered year and legal bucks for that year being what it presently is. This would drastically improve our deer herd across the state.

On the Taylor County Forest, the forestry practices now used are eliminating quality and for all piratical purposes all winter deer habitat. There is absolutely no consideration for not clear cutting winter yarding areas. They have been clear cut to maximize profit and promote even aged aspen regeneration. The County Forestry Committee prioritizes logging profits over tourism income to the local businesses catering to the hunting public. Local businesses benefit in no way from clear cut logging income as it is resulting in a reduction in the overall deer population on County Forest. Having hunted the County Forest for over three decades I have seen the quantity and quality of deer habitat change significantly. And a resulting lock step reduction in the deer heard. We hunt the County Forest every week from opening of archery till gun season and support local businesses by our presence. We are essentially tourists that use County Forest and support the local business community. When we and others like us stop coming it will have some impact on local retail establishments.

Think tag/tags should be offered to land owners that have to be used on the land owners land. Make a minimum land requirement (say 40 acres) and then that tag can be used any season by the land owner. Gives land owner more control of his land. Not related but think instead of lengthening rifle season might raise more money to have two seasons, then only able to hunt in one or the other. First season say 5 days sat through Wednesday, and then the second season, the next Saturday and make that one the traditional 9 day season for example. I also think crossbow season if there is one in October should require a separate tag in order to participate/hunt no matter if already have crossbow license or not. Another option may be an necessary early muzzle loader season but if draw that tag that takes your rifle tag as well so done hunting with a firearm. Think you could also make a late season muzzle loader season as well that would not require your unfilled rifle tag. Would have to access deer kill and availability of tags for this late season most likely.
We have hunted in the National Forest of Taylor County for 28 years. Our harvest numbers have been low, but we enjoy hunting in the more remote and large wooded areas. We typically only hunt 2-3 days out of the season and we have not applied for the anterless tags for the last 10 plus years. I also hunt grouse and this is when I do whatever limited scouting I do. There seems to be a slight increase in deer sign and summer sightings over the last 2-3 years but hunter participation in the area we hunt has gone from heavy in the 1990s to extremely limited the last few years. With fewer hunters there is less pushing or moving of deer as well. Getting a deer would be a great added plus to hunting in these large natural or forested areas but we enjoy the experience and we spend about the same amount of time and money. At age 72 I am planning on buying a crossbow and maybe doing some earlier season hunting when the weather is better.

For the last 10 years the number of deer seen during the 9 day hunt has dramatically reduced. In some years I have seen more wolves than deer during the gun deer season. I know it is a tough subject but there just aren’t many deer in the northern forest and we continue to provide doe tags and bonus tags like we were in the farmland. It is completely unsustainable and the reason there are so few deer in my opinion is over harvest, too many seasons (bow, crossbow, youth, ...) and too many predators. I like to see deer when I hunt. My son is no longer interested in deer hunting because we walk for miles and see nothing anymore. I believe the lack of deer in the traditional northern forest is a major reason that we are losing hunters and license sales. I hope we can begin to manage deer in the northern forest more effectively and take into account the actual number of predators and get better at determining the deer population.

I feel numbers proposed by the CDAC are solid and would be fine. I wouldn't complain about a slight reduction in public-land permits, just based on my own hunting experience on public land in 2019, which was quite disappointing compared to the previous two years when things really seemed to be rebounding. Maybe just my bad luck, maybe there was more pressure or maybe I was just in a spot where the previous late winter did kill a few. Who knows? But I'm OK with the reasoning as to why numbers were set where they are. Count me among those who view 2019 as a strange season where, as the DNR slide says, "something happened" mid-season. Seemed like as you’d drive around the county deer were all over the place from spring until mid- to late October. Then, just when you’d think activity would be at its highest, they kinda vanished. You'd have to think, especially after a mild winter, many of those deer are still on the landscape.

I feel that the herd in Taylor County is in good shape, and maybe even a little high in areas. Its easier to throttle up the herd numbers than it is to lower them under the current CDAC process. CDAC is a more controlled and less flashy management tool/process for managing population. Vs managing larger units or at the state level. Our herd has come back and is at a tipping point of explosion. We need to keep recruiting hunters and promoting harvesting adequate does to maintain our current healthy herd. Youth hunters who shoot does is not a problem and hasn't been a problem. So let that be an opportunity regardless. The problem with youth antlerless tags is when they are party filled during Gun Season. Browse on landscape ornamentals and also our natural forest is a problem. Excessive deer herd leads to excessive problems, which decreases the love for the critter. BALANCE!

Since i hunt equally between public and private i get to see some fairly large differences in the deer populations with public being quite low in comparison. Likely caused by 2 major factors in my opinion. First is a fairly heavy predator presence in all areas of public. Second which is mostly out of the states control is fairly poor habitat in general mostly due to the lack of logging in the national forests. I have property that is logged regularly with habitat in mind that abuts national forest. There is a distinct difference in the number of deer using mine as well as adjacent properties that are logged regularly as compared to public land only a mile away. So with all this in mind i am not convinced that even with no antlerless tags issued on public that you would see any significant increase in populations till if or when both of the above issues are addressed.
Our gang of 18 to 20 hunters have hunted the Perkinstown area since 1929. Last year was the least amount of
deer we saw making drives in our history. We do not stand just drive from opening day until the end. The national
forest area has no hunter representation just like years ago when the DNR kept increasing the doe permits
because not enough were shot but failed to realize the deer population was not there to shoot. Now I see you
increase the permits this year for public because not enough were shot last year—history repeats itself again. Our
gang has 70 years of deer kills history in our cabin if you would like to see the numbers and go back to doe
permits DNR history you will see as I said history will repeat. No deer again and years to bring them back. You guys
go hunt your private land but at some point let the National Forest have a rep!!!

During mid winter I traveled through much of the county national forest, visited logging jobs that normally would
have dozens of deer feeding in them and was shocked at the lack of deer and deer sign. This helped explain why
we did not move, see, or shoot many deer when making drives. The deer kill numbers don’t lie, they should stop
blaming it on weather, post rut, etc. the deer numbers on public land are as low as I’ve seen in my 40+ years
hunting. Instead of giving antlerless tags to reduce the remaining herd even more, we should try to manage an
unmanaged wolf population and continue logging to bring back a healthy herd. People are starting to lose a lot of
interest in hunting when they are unable to see and harvest animals. It’s not just the kill, people like to see deer
when they are hunting!

I was very pleased with how things seem to be in our area. There was a period were the deer seem to be hard to
come across. Not sure why this season seemed to be a bit off at that time. But in the end we were able to harvest
a few nice deer and found to have a nice young herd coming up in its place. I rather not see any changes in the
hunting seasons themselves. I feel leaving bow and cross bow season open the entire season in past years will get
more people involved. Im finding more people getting interest in it in my area. Leave the 9 day gun season as it is.
Typically by the ninth day it seems most have had there fill of this season. And alot are getting back to the late
season bow and cross bow hunt. We are seeing no signs of CWD in this area and the herds seem to be nice and
healthy.

I would like to see northern Taylor County where I hunt and the deer are less abundant be regulated differently
than the overpopulated areas. I hunt in northeast Taylor County and we don’t see that many deer. My family has
hunted here for many years. We’ve seen many changes over time. Overall it has gotten better. Between the
wolves and our own forester over harvesting the forest, and giving out reforestation tags, I’m afraid we are going
go to do the wrong way. If you didn’t cut so much, you wouldn’t have to worry about the saplings being eaten so
much. Just my opinion. I’ve been hunting there since 1969, when I was 12, and my father and grandfather way
before that. I hope and pray that good decisions are made so we can continue this wonderful Wisconsin tradition.
Thanks for your time & effort.

I’d much rather go back to the in person deer registration we used to have. This would assure people are
following the rules regarding purchase of and applying for doe permits on private land. This honesty would
validate the numbers in the charts presented. Registration over the phone does not, in my opinion give an
accurate representation of the true intention or harvest. I own my land and hunt it every year. The doe tags
available lately are given at a rate 10x over to property owners vs. hunters who hunt public land. This practice
encourages those who do not own property to apply for doe tags on private land. These same hunters are not
worried about hunting on public land without the correct permit as all they are required to do is phone in the
registration.
Thank you CDAC Committee for bringing back our public herd. It has been a long time coming but the herd is finally at the point where we can actually hunt public land again and be somewhat successful. For a few years hardly anyone hunted public land in Taylor Co. as it had a very poor population. There still is not an overabundance by any means and some areas are still hurting but overall we can enjoy the hunt on public again. Most private areas seem to have a good population of deer. Overall I think you guys are pretty close on your tag authorizations. Please do not overharvest our public lands again as the DNR has done in the past. One rough winter and we just don't have the numbers to repopulate for years and years. Private recovers much quicker. Thanks again!

It is time to end the practice of baiting and feeding. Deer management in WI has fallen so far behind other states in this area, it has become an object of ridicule. It has become what we are known for, despite the good work the DNR is doing in other areas of deer management that is worthy of special recognition. When I speak with hunters in other states it is embarrassing to talk about the baiting that is allowed - they just can't believe that it is given a pass, especially considering the emerging science related to CWD issues. I also have personal concerns about deer baiting for hunting, related to fair chase. Please do what is right and advocate for a baiting and feeding ban at the state level. Many of us have been advocating for a ban for many years.

I listened to the CDAC Committee meeting via telephone and thought the content, statistics, and discussion were thorough. I support the Committee's recommendation for the 2020 season. As a bow, rifle, and muzzleloader hunter on private land, I am out in the environment a fair amount of time. Some land I hunt on is south of HWY 64 and is in ag use. There seemed to be an ample amount of both does and bucks. The other land I hunt is next to the National Forest with some ag use nearby. That parcel had a fair amount of deer. I do not hunt public land and as such, cannot comment on populations there. Thanks to our CDAC Committee for their work!

I live in Westboro. I spend most of my time up until about October 25th chasing my to pointers after grouse and woodcock on public land. After that it's bow hunting and then rifle hunting. I also do some dry land trapping during the winter. In the last few years I've seen somewhat of a reduction in coyote numbers. Five years ago I saw a tremendous population. I also have seen less wolf sign in recent years. However in the last few years I've noticed much more bear sign. I spend 40 plus days afield west of Westboro in the national forest and east of Rib Lake in the county forest. I don't know if this helps at all but it's my opinion. Thank you

The northern forest zone is dead! I spent about four hours in Chequamegon the other day with my son. We went to check out the places we hunted last year, we took our time walking setting and listening, what we saw and heard was next to nothing. A few woodpeckers on a lot of dead trees, we counted nine drummings, that was it! This is the end of May we should have seen and heard song birds; ravens, squirrels, ducks and maybe seen a white flag or two, but nope that was it. If you want improve hunting and increase the deer heard you most improve the habitat, if you don't know how, I know a few loggers that can show you. Thank You.

Taylor county is a large county. Deer are plentiful, in the private lands, away from the public forest, hunting lands. But private lands near or lands in the public forest, deer aren't so plentiful. Unfortunately, giving out too many doe tags to the private property lands near or among the forest(public) lands, is having a huge negative effect on the deer population in the forest. There needs to be a better division of giving out tags near and in forest public lands, compared to out in the farmlands away from public lands, where land owners can pick and choose how many does they want to shoot, and the deer will still be plentiful.

If I buy a bow license, why Isn't the Doe Tag Good to use for gun Hunting? Years ago bow was automatic. no additional fee .. either sex. seems that has change .. back in 07. you had all those additional hunts .. then in 13/14 Two harsh winters in a row. Decimated the deer, then u hire a deer expert from texas and give him 1 million dollars. I would think with that $, You would have more conservation officers per Unit Working .. going forward .. The use of first come, first issued isn't right for doe permits. residents of the unit should get a first chance @ buying those permits ..
In my opinion in our area the deer population is low to extremely low this year was especially bad. I counted only 12 shots all day opening day and less Sunday and we have land right across the street from public land. In my opinion all other gun hunts should be eliminated Except except for the 9 day November hunt. To add I never saw a deer ether bow or gun season in the stand. Also talk to many other with almost same results. If I have to grade the dnr on the job their doing for deer population number it would be a D‐ their management sucks sorry to say. Nothing like when I was a kid.

I believe the CDAC in our region has done a great job managing the deer population and solicit inputs and suggestions like this survey from the Hunters and residents shows that the CDAC has the Hunters and residents' best interest in mind. This kind open communication and effort will only improve the deer population in the county, thus improving the hunting experience for new hunters. With us land owners and CDAC working together we can make a well informed decision on managing the deer population for future generations to continue to enjoy what we have today.

Amount of wolves have increased in the unit, Hunter numbers are down substantially, less hunter movement during the day, in this unit Deer numbers in the national forest in my opinion have increased greatly due to seeing them in fields and at night, but hunter movement here has decreased greatly during the hunting seasons, many Hunters choose to sit/stand during the day this area has and ageing hunter population with lower recruitment. These views are shared by a hunting party who have hunted and live in the area for 25 years and have made these observations.

I own private land and in the last two deer gun seasons have only seen a total of three deer after hunting 7 straight days in 2018 and 7 days in 2019. I agree about increasing the deer herd for the northern units. Without seeing the numbers, my opinion, I would cut short the bow hunting season. Crossbows have been a game changer for this type of hunting. Also if you restrict antlerless hunting this should go for the youth hunt and disabled hunts too. All the public needs to be treated fairly and consistently on this.

Taylor County CDAC has been more realistic than all other counties I frequent. However, public land antlerless tags are proposed at too high of a level. The forester in charge of the Taylor County Forest is spreading propaganda from Madison in my opinion. Anybody that hunts the County Forest surely realizes that deer populations are extremely low primarily due to predation. The Forester would never be satisfied with the number of deer in the Forest until the population was maintained at 0 deer per square mile.

You really need to start managing the deer herds, way to many wolves and way to long od seasons, and put a antler restrictions on the bucks, grown some trophies once. Stop killing all the does in the forestry, there no deer left in the north woods, north of 29 forget it. How can I get my kids into hunting on public land when u hunt 9 days and never see a deer!! Yes private guys do little better, but lot of land out there and no deer left, please please start doing something about it. Kill some wolves too.

Antler less deer tags numbers have to be managed especially the private la d owner tags. Private land owners are hunting on public land and using the private land owner tags. The deer numbers are coming back, but need to be continued with management practices. Also the number of predators need to be managed! If you want to continue the 9- day gun deer season that has been around for ever and is a part of the rich Wisconsin history, the DNR needs to allow people to manage the predators of the white tail.

Hunted public in 19 saw no deer. Too much baiting and no deer movement in daylight hours. Public land has no habitat for deer to survive due to lack of timber harvest. In the area I hunt people sit after hours over bait some in woods till 9:00 pm. No way to identify anyone with no backtag. Youth in woods with no supervision. Call in registration is a ok to violate deer I am frustrated and am done with deer hunting after 50 years even though I am more than physically able.
The current weapon specific season dates, length of weapon specific seasons, order of seasons, and overall structure of the seasons has made Wisconsin as a whole, well managed for a healthy Whitetail herd. I would not support any changes to the current structure to benefit those that may not be willing to spend the time or effort to harvest an animal. After all, hunting is all about properly managing the Whitetail herd first and what people want should always be second.

So the model is to increase the herd in the unit yet you want to give out additional doe tags in 2020? What are the wildlife biologists smoking? If a farmer wants to increase his number of livestock he doesn’t massacre them? Do members of the DNR even attempt to spend time in this unit looking at numbers? Do they realize how many predators are out there? This unit will be another fail of the DNR and there will be a limited herd in a few years do to mismanagement. Sad.

Having more years of hunting experience in Taylor County than most hunters, I can say that hunting pressure in the larger forest tracts is almost non existent. After opening weekend it is rare to see another hunter. There are few large groups hunting and most only hunt morning and evening. Most hunters are hunting farm areas that are much easier to hunt. Few hunters are interested in taking a deer unless it is a trophy. Makes deer management bumpy at best.

The difference in public vs private land tags is meaningless. I hunt mostly in 'open' forest crop land, immediately next to the National Forest, as well as private land where I have permission to hunt. I could literally hunt a few hundred yards from my usual spots and probably get an antlerless tag, but not on the 'public' land where I do hunt. Both spots are within a quarter mile of ag land and the deer move freely from public to private parcels.

I do not agree with banning baiting and feeding deer. I believe CWD originated on deer farms and that should be the first thing to go. I read a few years ago a CWD deer on a deer farm (caged) was CWD positive and that baiting and feeding (un caged deer) in that county was banned and so was the county next to it. Make no sense. I think hunting over a bait site is the safest for of hunting because the hunter picks the spot to insure a safe shot.

I still do not understand why the DNR considers Taylor county as one unit ?? I hunt private and public as my land is adjacent to the Pershing public hunting area. We have as many deer as I’ve ever seen. ( way to many) I’ve hunted this area for twenty years. Also hunted numerous public grounds accross the state. The big woods (nicolet)in Taylor county has very few deer because of lack of agriculture. The rest is overrun by deer !!!!!

Deep population has been going down every year for the last 15 years or more was seeing 15-20 deer a year during rifle season now I average 6 sightings a year for the last 5 years hunting 8 days need to get rid of baiting people are putting out way to much bait and way to many people doing it there are bait piles everywhere I try to hunt it seems like was told some people are putting out 500 lbs of corn on their private land

3 years ago, I saw over 50 deer on opening day, 2 years ago I saw 14, 2019 I saw 3. over that period, we harvested 2 bucks and 1 doe from that 200 acre property that is heavily wooded with over 20 acres of food plots. This is a disappointing trend to say the least. We have seen many wolves on camera on this property and they have taken their toll. Killing more deer is not the right direction to go.

The deer herd even on private property areas has been slowly decreasing and is way less than previous years. This is on very well managed low pressure private grounds. There is abundant regeneration and no sign of deer preventing reforestation. The population could definitely use a boost. We would love to see a very limited doe harvest or possibly even buck only outside of youth hunting and ag permits.

After hunting public and private land in Talyor county in 2019 with the mild winter I feel the quota numbers are good. Browsing from deer on my forty west of Medford and fencing in small trees or spraying them to protect them is proof of that also deer sign is good in National Forest. I feel CDAC is doing a good job of keeping public educated about quota numbers and updates on our deer population!
I realize this would be a statewide issue and not a county one but I would like to see the public/private land designation removed from youth antlerless harvest authorizations and allow them to shoot one antlerless deer no matter what type of land. Secondly I know this would require a legislative change but Hunter’s Choice was a very good deer management tool and we should go back to using it.

I think the agents in the DNR should spend more of their time out in the field observing the animals, you would get a better idea about the deer, their habits etc. All the farmers that complain about crop damage regardless what they claim don't understand what is causing the damage to their crops. It's not the deer!!!!!! A family of Racoons do more damage to crops than a herd of deer.

I believe we do have a predator problem in Taylor co. too many bear and too many wolves. found 2 wolf kills already this year and i have not been out much. deer do seem to be adapting but in a time when food could become more scarce for people it needs to be considered that people are more important than predators. After all antlers are nice but the true purpose of hunting is food.

Privet land owners should have The right to harvest ether or. as we Do get all the damage.And there is a lot. The numbers here needs to get thin down alot. To get a doe tag it is silly to have to try to get them 4 mouth earlier and that is if you were lucky. Land owners should get first chance at it. After gun season I still counted over 20 dear on my land. Your numbers are way off

Some areas are over hunted others have deer all over I see way to many dead on the side of the road it doesn’t pay to bow hunt public land if you don’t have a doe tag I only saw 3 deer while bow or gun hunting in Taylor co while in one day I saw 8 in marathon on public ground I have 2 kids that hunt and they get discouraged when they don’t see anything but people when hunting

I own a small parcel the butts up against national forest land. I seen the same 12 to 16 deer all year. 2 bucks that I seen personally were harvested. 3 fawns were killed by predators. Out of 7 fawns last year 3 remain after winter. I have Counted 11 through the winter on trail cameras. The predator population is out of control. Too many coyotes, wolves and bears.

Cross bow hunters have really changed the game in deer hunting. In order to maintain healthy numbers in the deer herd, a cross-bow hunter should only be able to bag a deer with a crossbow or gun. Crossbows have become so sophisticated they are as accurate as guns. It puts the hunters who do not hunt with a crossbow at a disadvantage and are killing too many deer.

I do not believe a antlerless quota is necessary let the individual land owner decide that is why we pay taxes quit punishing land owners by making them spend more money on a permit. This is nothing but a money maker for the DNR and not helping wildlife. The other issue is bear hunters with dogs trespassing all over private land that is posted and scaring deer.

I'm not sure if you have any influence in this matter, but will state it anyway. I would like to see a random draw for hard to get antlerless tags in certain area's. It's so difficult for myself or anyone that works first shift to have a fair chance at buying an antlerless tag. The system being what it is does work, but I just think it's a little unfair.

We normally notice a very distinct drop in deer sightings just after active breeding starts. Last year, that happened early and continued for a second breeding cycle causing very limited sightings during the first half of the gun deer season. Bucks were chasing much longer than normal but not as much during daylight hours. Very strange year!

When I started hunting taylor county in 2005 I could see 10 to 15 deer in a full day sit in the stand. Now I see 0 to maybe 5 on a good day. The wolves have moved in and we have found multiple dead carcasses on my property the last couple of years. It is tough to have a young person find an interest in hunting if they do not see any deer.
Sorry, I didn’t have time to watch the biologist’s video, but I will at a later date. I feel that baiting should be banned completely statewide, along with using supplements and mineral blocks. Also, scents coming from game farms for attractants should be regulated and certified that they are CWD-free. Thank you and keep up the great work.

With the current tagging/registration system we need to take into account the larger number of deer taken illegally. There are a number of people not buy licenses or using their tag multiple times. With the expanded use of xbows, many more people are shooting deer for others to tag. This has to be considered when estimating deer numbers.

A big concern is about the number of young bucks that are shot during the youth hunt. I know that many are killed during that hunt, but no one seems to talk about that. Also, the young or first time hunters get an antlerless tag that are very often used by they’re parents or older, experienced hunters which should be addressed.

I am grateful that deer baiting is still legal. Our hunting group is careful to follow the rules and regulations and certainly hope that others are as well so we can hang on to this privilege as long as possible. I understand there are mixed viewpoints on this. Taylor County is a great place to hunt and enjoy the outdoors!

One main concern I have with the overall deer numbers in this area is predation. I witnessed two large wolves chasing a buck this past fall on my property and worry the increase in antlerless tags may not be taking into account wolf kill. With that being said the deer herd does appear to be healthy otherwise but worth noting.

Our family owns 700 acres. Our deer sightings were down significantly. Crop damage was nonexistent. We rent to cash crop farmers and the poor yields were to late planting, wet year, Poor practices. Predators are a major issue. Bobcat numbers are way more than stated. Coyote, Bear, fisher etc. High numbers.

It says that the objective for Taylor county is to increase the population. Your antler less permits for 2019 was 2100. Your proposed antler less quota for 2020 is 2800. How is killing 700 more antler less deer going to increase the population. There should be a decrease in antler less permits for 2020.

I just do not believe the deer herd in public forests are healthy enough to give out that amount of doe tags. It has been slowly getting getting better over the past 5-6 years, but I believe is still fragile with so much that hinders it’s growth including predators and high hunting pressure.

Stop messing with my family's ability to hunt with crossbow. I have 2 young sons and a girlfriend who's only way to deer hunt is really the crossbow. I cant help that other guys don't work hard enough to get their deer. I work hard and it pays off crossbow or no crossbow.

Way to many doe tags for this unit. Not seeing the deer even close to many years past. Private land owners are given all these tags the population on public land will never return. I guess forget about management and shoot them up or the wolves will get them. Not happy with the efforts.

The deer population is acceptable on both private and public land there should not be a choice a person has to make to hunt one or the other by doing this there are less group hunting parties so fewer deer are being push so less deer are being harvested just my opinion thanks for time.

The last three years the amount of people in the forest hunting is almost non-existent. It is becoming very hard to actually see any deer let alone get a good shot at one. Having an antlerless tag is helpful so that you don’t have to worry so much about accidentally killing a doe.

Our federal forest in Taylor county is in very poor condition. We must improve the habitat for our deer, grouse, woodcock and all wildlife. I suggest, instead of increasing the quota to support the poor conditions, in Chequamegon, we improve the habitat to the wildlife.
Too many deer, but too many does and not enough mature bucks. Please don't let people tell you there's not enough deer because they had a tough year last year. Also, crossbows and shack hunting have completely changed the game, arguably ruining the sport of bow hunting.

I believe antlerless deer should only be allowed to be harvested by our youth pulling the triggers or letting one fly. This seems to be a solid idea (to me) to continue interest in deer hunting in Wisconsin. Our younger generations are the future of this sport.

By far the lowest deer populations in Taylor County Forests I have seen in 35 years of hunting there. If it continues on at the present level, I won't hunt anymore. Very very poor in 19 and it has been continuously getting worse over the last 5 years or so.

The new trapping regulations make it much more difficult to trap predators, which ultimately hurts the deer population. Trapping and hunting of predators should be encouraged and done at a higher rate, in order to preserve the hurting deer population.

I would like wisconsin to go to a managed buck hunt. It would be to hard for most people to know age of deer. So do like a buck must have 4 point on one side to harvest. This would get more people to see matre deer and better deer health

I believe deer management for Taylor County has been handled well over the past few years. They seem to take everyone's input and come up with a viable plan.

It's time to get larger bucks roaming the woods again. Baiting needs to end and a 4 point per side or bigger only. Out of state licenses are way to cheap. I feel Wisconsin is way behind on management of the whitetail deer.

With the low antlerless deer killed in 2019 I thought there might have been another late antlerless season or weekend called to reduce the herd. Maybe this would be something to consider if we have a repeat of last year?

Last years april snowstorm killed many fawns. This year we have zero loss. We need to be aggressive with antlerless harvest. There are many parts of the county with extremely high deer numbers especially on private land.

I believe the public land quota to be 50 percent too high. Another year is needed to rebound the number of deer on public land.. The numbers are coming back, slowly. Keep up the good work and thank you for what you do.

For the last 32 years I’ve seen all the locals with private land do deer drives through the public lands to harvest the animals that the DNR gives them tags for. Most private lands are off limits for hunting.

Taylor County south of Hy-way 64 should be combined with Clark County Farmland and Marathon County Farmland units because these areas are mostly farmland and have an abundance of deer causing Ag damage.

I believe the extended crossbow season has negatively effected the 9 day gun season. Eliminate the crossbow season 2 weeks before the 9 day gun season and have it resume after the muzzle loader season.

The number of predators needs to be reduced. There were more wolf and bobcat issues this year than I've ever seen before. Nobody wants these nuisance animals around! Also, WAY too many bears!

The new way of registration raises concern that deer are not being reported harvested in the national forest public land. The amount of party hunting of large groups seems to have increased.

In my area where my family hunts the buck to doe ratio is way out of line, would like to see the earn a buck program introduced simply because we see on average 10 to 15 does for every buck.

Quit worrying about the money you will receive from all the license and think about the NO deer population. Not sure how deer will effect tree growth when there is no dam deer.

We need to come up with a better plan for managing the bear numbers on private land. We have too many bear and not enough tags. This does have an effect on the deer herd.
There were a lot of deer found dead. We had corn field not harvested until this spring. I know we have a lot of coyotes so I don’t know if that was the problem or the corn.

What ever became of the archery option of harvesting a doe or buck state wide, one animal only, rather than having a antlerless permit to do so In the specific unit?

The 2019 anterless tags sold out for public land in approx 1 hour. The private land tags were available much longer and had a much higher quota. Something is not right!

The number of deer being harvested and being seen in general by us has declined drastically. Wolves have been reintroduced and the tick population is out of control.

I didn’t see alive deer. Only hunted opening weekend. Am I going to get my sportsman license money back since it seems I can’t fish. Maybe not even be able to hunt.

I see more antlerless dear than anything I haven’t seen the heard where I hunt this strong in over 5 years. All the Antlered deer I see are 3.5 and less in Age

Need to address illegal baiting and poaching in Taylor county. Also people are harvesting deer and not registering them properly with the new tagging system.

If we are serious about raising the deer population we need to cut down the number of antlerless permits. I would make an exception for junior/youth hunters.

Like to see antlerless permits available to non resident senior citizens. As seniors age, we become less mobile and it is more difficult to harvest a deer.

Deer numbers on public land still have not recovered and need a no quota this year. Also winter mortality was observed in the forest areas.

I have seen an increase in wolf population. I have seen fewer fawns as the previous years. It seems to become less and less by the years.

Need to get rid of more bears. They dominate my cameras. Also, too many wolves. When they come around, I might as well go hunt elsewhere.

How can you increase the herd and increase the anterless? Private land owners need to only harvest anterless from their private land !

there is a large diference of doe numbers between north and south taylor county. our council members are wrong on their estimates

We need to delist the wolves & reduce there #s there are 2 many black bears & bobcat in this unit please issue more tags

The wolf population is very strong in Taylor County. They followed my brother in-law into our stands on opening morning.

BRING BACK THE BACK TAGS AND THE INPERSON REGISTRATION, BY NOT HAVING IT IT HAS HURT A LOT OF SMALL OWNERSIN THAT AREA.

I hunted my property 4 weekends during the crossbow season on various stands...saw 2 deer all year. Wow. shocking

Available antlerless harvest tags should be increased. Some hunters never see any bucks during hunting season.

Do not prohibit baiting for bow hunting per current regulations unless CWD becomes prevalent in Taylor County.

Cut off rifle range 2-3 weeks before hunting season. We hunt near it and it spooks the deer population.

We need backtags/deer tags on deer when harvested. Too much outlawing and no backtag numbers to record.

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

470 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 214
   - I visit this unit for non-hunting purposes: 87
   - I hunt in this unit: 441
   - General interest in this unit: 75

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 413
   - Bow: 268
   - Crossbow: 164
   - Muzzleloader: 196

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 22.01
   - Maximum: 66

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 340
   - Mostly Private Land: 54
   - Public and Private Land About Equally: 24
   - Mostly Public Land: 10
   - Exclusively Public Land: 11
   - I did not hunt in this unit last year: 2

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 10
   - Not too crowded: 31
   - Neither crowded nor un-crowded: 17
   - Somewhat crowded: 16
   - Very crowded: 14
   - Not applicable: 11

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 60
   - Fewer: 128
   - Same: 202
   - More: 49
   - Many More: 22
   - Unsure: 9

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th>The Antlerless Quota is...</th>

Report Generated:  Friday, May 01, 2020  
Trempealeau, Central Farmland
Last year was very off for many people across the state including trempealeau co. We did see many deer during bow season, and gun the deer shut down as usual and you have to work harder for them. Last year was even more work. The state suggested we had record high numbers of deer and in turn we had a horrible number of deer killed during the season. We did okay, and as usual take more deer with the bow than with the gun, but the gun season was slower than normal. I get the crops being up and the late season and the weather but thats all besides the point if there are record numbers. Increasing the numbers of the kill quota i think would have to be in point for NEXT year not this upcoming 2020 season. This year i believe is the year to prove the so called "record number deer herd" if last season was the crops, weather and timing to blame. This year i believe if the crops are down and the weather is better and the earlier start to the rifle season, then something has to show that last year was just a fluke. We know that there are PLENTY of deer around our property and i believe our numbers are higher than the average showed in the video. Still, something about the 2019 season was different. If we the hunters want to raise numbers, get rid of the antlerless hunt and the holiday hunt. both of these are right after does are impregnated then killing potentially that doe and 1-2 could be fawns of the spring. Nothing has to be done to kill more deer, the numbers will rise again especially as i stated before, with the very very low numbers last year. In theory that means this year should be off the charts with the amount of deer seen and even killed. The biggest thing for most hunters is getting an opportunity to harvest one. This year needs to be seen as redemption of last year to prove that it was just a fluke with the low numbers. If the numbers trend to last years par, then maybe next year we look into some lower harvest numbers to let the herd rise. The answer right now i believe is to keep things the same as last year besides getting rid of the late antlerless seasons entirely.

I have been a bow, Gun, and muzzleloader hunter for 28 years. I love to go to the woods, and hunt/watch the deer. But to be blunt. The deer heard was severely in decline since the unlimited anterless tags from about 10 yrs ago,and the deer never recovered. I totally understand why the younger kids and older adults don’t want to hunt any more. First off is the cost, it’s no longer fun to sit in the woods and not see a deer all day. I drive around in the off seasons like January and February on back roads to look for deer in the fields. There not there. Insurance companies paid big money to decline the population. That’s a proven fact. The introduction of wolfs was a huge mistake if the DNR wants to make money from Deer hunters. No deer= no deer hunters as the DNR is well aware of by now. I’d personally like to see the wolf’s gone and deer seasons closed for 3yrs, then the hunters would come and buy tags. Last year I saw 5 deer all gun season may have been the same couple of deer over and over was out from sun up to dark all but 1 day. I don’t for a minute buy the “crop” damage claims it’s just a form of revenue for the farmers trying to make it. Which the farms are disappearing, houses are moving in and deer have declined. Furthermore CWD has been out west for more than 70 yrs. This whole deer herd #s by the computer is a joke. Get outa the office in Jan and February and drive around and let’s not say for every deer you see there 80 more. If it wasn’t for good conservation wi wouldn’t have deer or turkeys. Sportsman have paid for them to be stocked at on point in time. And now the DNR wants them dead, but also complains about loss of revenue. Sorta sad it’s all about the almighty dollar.
Overall, I think that having an antlerless only hunt for all seasons this year will not prove helpful. There are many people, that already have a problem harvesting good quality adult does and numbers will be down across the board on this issue if only doe season is enforced. While my family, harvest typically 2-3 deer a year to use for meat-eating purposes, we always strive to harvest mature deer. Not only does my family always harvest more does than bucks each year, but last year's numbers show that there has been an increase in doe harvest compared to bucks across the country. However, I do think a holiday hunt would prove beneficial to provide opportunities for solid doe harvest to occur. While this was not something that was addressed in this survey of information, I do think this next issue I bring up is worth bringing up. Since we have not had CWD positive tests from 2002 to present, with very decent testing numbers conducted, I think that baiting bans should be lessened. The restriction on no baiting as opposed to limiting the number of pounds and how one can bait should be changed. Allowing 2 gallons or less should be considered and obviously, using feeding devices (like self-feeders, etc) shouldn't be allowed, but allowing some baiting aside from any food provided by food plots and crops, should be back into play for a regulation. The baiting seemed to be a concern in relation to CWD (forgive me if this is a misconception), but with us not having this be a prevalent problem for well over a decade and still being heavily monitored, clearly the efforts being done are working. Baiting clearly is not the issue in relation to this topic.

I would like to see the archery season extended if the holiday hunt takes place. Late season archery hunting is a great way to harvest deer as they return to feeding patterns. Having the holiday hunt cuts into the time that the archery hunters have to harvest deer as they as they are in the feeding pattern. Yes, archery season is the longest season, however the first month of the season when the deer are on the initial heavy food pattern it can be hot and hard for hunters to process the deer once they harvest them so they don't do it then. Secondarily I feel that all of the county CDAC boards throughout the state need to come together and make a proposal to the WDNR to bring back Registration Stations. This tool will allow the CDAC Boards to have more options for heard management. For example, a new tag structure could be implemented where every hunter gets a buck tag and X number of doe tags. That buck tag could be used for Gun Hunting or Archery Hunting. The hunter would then have the option of shooting the designated number of does to earn a 2nd buck tag that could be used during either season. The biggest asset to this type of tag structure is that it promotes the harvest of does for hunters who want to get two bucks each season. That will help draw down the herd numbers. This also allows out of state hunters and hunters who hunt at outfitters the option to hunt that buck of a lifetime. This wouldn't have to be an every year deal but it would be a tool that the CDAC boards could use.

The way the hunter has to select if the are hunting public or private land at the time of purchase is not good. It needs to be put back to the old way. For which After the kill and During registration you tell if it was harvested on type of land. Your tag should be good for either. EXAMPLE A hunter has had permission to hunt the same property for 14 years now, they just sold it. The hunter has to find a different place to hunt now. They can't find any private owner that will give them permission so they go to some public. Little did they know that they can do that but only to harvest a buck not a doe. Those antlerless tags are only good for the private land they selected at the time of purchase. All the bonus tags have been purchased in that area. So now you have a resident of the state with a valid license but no way to really use it. The state probably doesn't care at the time cause they got the money for the license already but what about the years to come? This hunters probably not going to hunt or even purchase a license in this state next time. This should be fixed not fair to the person that doesn't or can't afford to own there own property. I went through it, luckily I didn't see a doe for I would have been in big trouble. Not knowing that I was in violation of any laws. Lots of people are unaware of this.
I strongly oppose the holiday hunt and urge the CDAC to reconsider. In general, the holiday hunt in other counties results in very few antlerless deer being harvested and is an ineffective tool if the goal of offering the hunt is to increase antlerless harvest. The vast majority of antlerless harvest occurs during the archery and 9-day gun season. Many of the complaints voiced regarding WI’s deer hunting pastime revolve around there being too many extra seasons and the lack of consistency from year to year. Thus, offering the holiday hunt as an extra hunting opportunity is only favored by a few select hunters, while most hunters likely oppose the season. Overall, there is very little value to the Holiday hunt. Offering 2 farmland zone tags and twice as many bonus tags than were sold in 2019 will result in the maximum possible antlerless harvest that this counties hunters and landowners are willing to see. The Holilday hunt does not effectively increase antlerless harvest in itself. However, if the holiday hunt is recommended, I would ask the CDAC also extend the late archery season to minimize conflict between archery and gun hunters and the CDAC members which the Holiday hunt proposal will do. Thank you for your time and effort on the CDAC.

I have hunted on private land in Trempealeau county for over 20 years and over the past decade have seen a steady decline in deer activity to the point where it has become a difficult choice to harvest a deer because the population seems so low. On 120 acres of quality land with 5-8 people hunting, there are many days where no deer are seen by any hunter, or combined we see 3-5 deer. The most alarming trend is that we see very few does...there not only seems to be a reduced overall population, but also a skewed population ratio. With there no longer being a requirement for in person registration, I’m concerned there are more deer being taken and not registered, thereby underestimating the total deer kill over the past few years. In my opinion, we need to have a population increase goal in the county vs a maintain goal and antlerless tags need to be reduced to one per hunter for the year. If a bow and gun tag are purchased, only one antlerless tag should be issued between the two. Hopefully a small benefit of COVID is that for these few months we see a smaller than average deer mortality through vehicular collisions than we would see in a normal year.

Though I checked the box stating I saw "far fewer deer" last season, that was specific to the 9-day gun season. Weather made deer movement very slow after opening weekend. As for the area I hunt, south-central Trempealeau County, I think the population is near where it should be. There are ample deer, and plenty of opportunities to harvest deer. I would prefer to see more antlerless deer harvested in the county to make sure the population stays in check, since current deer browse does have a negative impact on forest regeneration (try planting some hardwoods and see how many don't end up eaten). However, there needs to be a balance; if the population falls too much we will be back to having a large number of dissatisfied hunters who don't see enough deer. I also like the two antlerless tags with each license. Those who want to help control the deer population in their area have the opportunity to do so. I don't get the reluctance to offer additional tags for public land. Why not? If the belief is antlerless deer need to be harvested to keep the population in check, why make it harder for those who hunt public land?

I realize the deer numbers vary from location to location in Trempealeau County but I have not seen the numbers of deer in my area of Northern Trempealeau County. I would like to see only 1 antlerless tag issued per hunter and 1 buck tag hunter for a year or 2. I know that wont happen but it would be nice to see. I love bowhunting and gun hunting as much as ever and if I shot a buck with my bow I would still have an antlerless tag left and vice/versa, shoot a antlerless with the bow I still have a buck tag left. Just my thoughts, I would like to see more deer around like I did when I was a kid. I would also like to have the State statutes changed so that the gun deer season would start on November 15th and run through November 30th, a 16 day season so gun hunters get a chance to hunt the rut or a part of the rut. Right now only the bowhunters get to do that(and I bowhunt)Thanks for listening.
During the past 5 years of my bow hunts, I have seen slightly more bucks than does. I do NOT believe there is a valid reason to hold a holiday hunt. I see the buck:doe ratio to be excellent, and don’t see why things should be changed. I enjoy hunting late season if I do not fill my bow buck tag, and know many other Trempealeau County hunters which do the same. Not having the opportunity to late season bow hunt for a buck during this time frame would be quite ridiculous. I myself am a gun hunter, and we have ample opportunity to harvest a doe during the 9-day gun season and muzzleloader season. Holding a holiday hunt only hurts bow hunters, and provides no real advantage to gun hunters. The cons strongly outweigh any benefits. Additionally, I know how many deer get poached and numbers are not reflected in these antlerless, or antlered harvest numbers. Please do not hold a holiday hunt!!

We need to work with landowners to open up private lands for hunting maybe by paying the landowner. I see a lot of deer on private land but the owner may have harvested their deer on opening day, after that the deer know where to go that there is no hunting pressure. On opening day last year I had to leave because of a family emergency and got out on the road and counted over 50 deer on the east side of Hwy. W by the Taylor sand mine at 10 a.m. on opening day. They don’t allow any hunting so the deer know where there is no pressure. The same holds true as our neighbor has over 400 acres that he hunts by himself and he shot a deer opening day. He didn't hunt after that and we hardly saw any deer for the remainder of the gun season on our property but saw lots over on his. All the privatization of the land is hurting the hunt as no one makes drives anymore so no deer are moving!

This past year I put a trail camera out near the border between my land and public land the beginning of October, and left it out until all deer seasons were finished. I had numerous pictures of at least 12 different bucks, with a majority being after dark. The first picture of a doe didn't occur until about the middle of November, and only ended up with 3-4 doe pictures total. Other than a couple of the neighbors and myself, the public land was virtually not pressured at all. I saw 2 gun hunters one day. There was virtually no shooting even on opening day. For bowhunting I had 0 shot opportunities. Gun hunting I saw 2 deer, but not a quality shot, so I passed. I took an extensive walk on a fresh snow day, and a majority of the sign I saw was coyote. For reference, I own 100 acres, and between neighbors and public (Federal and State) there are 2000+ bottom land acres.

It’s vitally important that we continue to increase hunting opportunities for new generations! Proposals during this year’s Conservation Congress spring meetings which pit archery or crossbow hunters versus gun hunters serve no purpose other than to discourage new hunters from hunting. Especially when harvest numbers show that expanded seasons (i.e. crossbow or muzzleloader) have little effect on the total number of deer harvested per year. Crossbow wounding losses are much lower than archery otherwise a crossbow has little advantage over archery and little effect on buck harvest as most hunters now practice quality deer management on private land. On average Wisconsin deer hunters harvest 1.1 deer per season regardless of the weapon type or season length. Reduced opportunities only discourage participation which will lead to fewer hunter numbers.

I feel that deer registration numbers and licenses sold come down to the next generation way of thinking hunt should be. The true hunters in this state wont care how much the license cost or what the weather is like during the hunt. It’s in their blood to get the rush to wait for the perfect buck to harvest. I know several ex hunters that wont go hunting because they say they never see a deer. But that is because they are only sitting for a few hours during opening day. I’m a strong believer in you get what you put into the hunt. Time and effort goes along way. I feel that the out of state license cost in Wisconsin is very low compared to when I want to go out to another state and hunt. Our out of state license cost should be the same cost of that states for out of state license that the hunter is coming from. Fair is fair.
Public Input on CDAC Preliminary Recommendations - Spring 2020

Reduce the number of AG Tags that are passed out. Giving 20 tags (by example) to a crop farmer with only 25 acres of woods is senseless. Additionally, I find dead ANTLERED deer in my woods not from predation or starvation, but from bullet holes and I am not talking about during the normal gun/bow hunting seasons. Some of the farmers being issued these tags won't be happy till there are NO deer at all. They have no concern about wildlife, but are motivated only by greed. I work hard to foster a healthy forestland to provide the natural vegetation to support not only deer, but all wildlife. That's money that comes out of my pocket. If I can afford it, the farmers can too. It's time to tell some of them to "GET OVER IT" and face the reality that SOME crop damage is just the natural way of things and a part of doing business.

Deer numbers where I hunt in the southern portion of Trempealeau County seem about right. During the 2020 season, the biggest negative impact on harvest was the weather during the gun season. The deep heavy snow significantly reduced deer sightings. During bow season the deer numbers were good. I support a continuation of offering 2 additional tags with each license. Deer density in the county varies depending on where you happen to hunt. Those who feel more doe need to be harvested in their area will have the opportunity to do so. Those who feel deer numbers in their area are too low can choose to pass on additional doe harvests. It's far better to allow landowners to choose how to manage deer on their property than reimpose the nanny state "solution" of Earn a Buck.

I think the quota should be reduced for 2020. Also, I do not think a holiday season would bring value. Many farms are switching to CRP programs which will have a ripple effect on the deer herd. The number of deer have lessened considerably since the early 2000's. It would be nice if we are going to consider all of these programs it wouldn't hurt to consider eliminating the youth gun hunt and have a regular gun season. It would be nice to reduce the season of crossbows to just before gun season but not thereafter. Also, we could pose restrictions on shooting small bucks making the bucks harvested needing five points on one side or more. If a person were to fill their tag with archery then they would not be able to shoot a buck in gun season or visa versa to be selective.

I have no private land of my own. I hunt primarily public land. I love and enjoy hunting. It provides meat throughout the year for my family. I felt the reduction of bonus tags to zero on public land was unfair. I have seen deer where I hunt. I understand deer management. I practice deer management when I hunt. I do not take a: "if it's brown, it's down" approach to hunting. I would like to see an additional bonus tag available to public land. I known there were fewer number of deer harvested this past gun season and a relatively mild winter. This should allow the deer population to grow for the 2020 season. Please consider adding at least one bonus tag for public land. Maybe take one from private land and add it to public. See....it's all even now.....lol.

Although I agree with most of the recommendations, the DNR should consider better control of the deer damage permits that some farmers are using. Several contacts have been made to farmers that receive these permits and they are using for their own benefit. We were told from several farmers that they would let us make some drives for them, that they practiced quality deer management(limited the amount of does we could shoot, relayed to us that they were saving for their friends or relatives, and several other excuses for not letting us hunt. The DNR should have better control of issuing these permits and the exercising of others to assist in harvesting deer populations where farmers are obtaining damage permits. This has been going on for too many years.

I would oppose an antlerless only hunt for Trempealeau county as I believe it would reduce the number of hunters/licenses. Would an earn-a-buck season help toward increasing the number of antlerless deer harvested? As that is what it seems the antlerless only season is trying to accomplish but not quite as drastic as not allowing any bucks to be taken. Hunting the antlerless only late gun season in Trempealeau county, I personally witnessed excessive amounts of antlerless deer and could have easily filled several more tags with no noticeable harm to the deer population. Unfortunately, there are not a lot of hunters that I witnessed or knew of hunting this late season, therefore probably not a lot of antlerless deer were taken during this time period.
There are other hunting seasons during the course of the fall and winter that are being hurt by the extremely long deer seasons. All forms of hunting with dogs for example. If a dog hunters dog would get out to far from the hunter chances are his dog will be shot by a deer hunter, so during deer hunting seasons many dog hunters will not hunt, squirrel hunting, coon hunting, coyote hunting, bird hunting exedra. They have just as much right to hunt as the deer hunters. Lengthening the deer season just lets the deer hunters procrastinate longer to harvest their deer, go back to the same gun hunting format that was used for years, 9 days and that’s what you have to kill your deer. Hunters would see a significantly larger amount of deer movement.

I live and hunt on the southern edge of Trempealeau county. the deer population has been way down for the last 4 years or so. I live out in the country by the state park and down the road is the wildlife refuge. we use to see the every day. Now I am luck if I see any in a week time. I hunt on the neighbors land and we have a rule that does are not to be shot. The neighbors hunting party (around 6 people) use to get around four deer a year. last year they weren’t able to get any. Two years ago they shot one. My son and I have not shot a deer around our home in five years. The deer we have shot have all been up Buffalo county. I am sure that north of here there is plenty of deer, but not on the southern edge of Trempealeau county.

If individuals are worried about having a fair chance to harvest a mature buck, why do we still have the youth hunt in October and not eliminate that and go back to having our children hunt with us during the regular season? For years now, all the decent bucks that are on my property get taken out by youth hunters with a gun in October and after that everything goes nocturnal. I do believe that it is important to get kids involved in the sport just as I want to do with my daughter, but when you make it to easy for them to get a nice buck it takes the challenge out of what hunting is. That is the reason you are seeing many of the younger generations not sticking with the sport. We made it to easy and took the fun out of it.

I personally think the deer population has been maintained by the DNR great. I have issue with the amount of ag damage caused by deer in the past years. Last year was a thin year in this county due to standing corn and weather, both out of DNR control. This may not have the case county wide but was a significant factor in my area. I understand that nothing can be done about that but I do purpose that a more precise herd count be attempted to determine the limits needed to control growth in specific areas where farmland, topography, and environment are factors of growth. With the help of locals, that count could be narrowed to a more precise number therefore allowing for increased or decreased tag availability.

This unit has too many deer, especially does. Everything should be done to encourage the longest seasons with as many weapons as possible to try and reduce the deer herd, again especially the doe population. Large populations over browse and hurt forest lands and lead to an increase in CWD. I would also encourage the CDAC to do EVERYTHING you can to stop the spread of CWD. Wisconsin has done a horrible job of managing CWD in the last 10 years and it will not be long before 50% of the bucks in Tremp County have CWD - just like the counties of Iowa and Dane. If the DNR thinks hunting licenses are down now - see what happens when every other buck you shoot has CWD.

I would oppose an Antlerless Deer Season! I and my partners invest thousands of dollars each year to hunt our land. We invested thousands of dollars in our property to hunt Mature Antlered Bucks! We spend money with Hardware Stores, Grocer's, Implement Dealers, Excavators, Restaurants, Feed Mills etc. We manage the populations of our properties based on what we actually see through the use of Trailcams, Time Spent on the property and in the Woods Hunting. We harvest mature animals and set quotas for Antlerless Harvest. If you decide to do an Antlerless Season my partners our sons and daughters will NOT hunt this year! We will also consider the sale of our property!
I'm glad we have the holiday hunt. We've been failing to hit the quota for several years in this county. Deer numbers are way too high in my opinion. The only way to increase the harvest is to extend hunting opportunities for hunters to fill tags. Archery season is normally open throughout the month of December anyway, so I'm not buying the argument that “the deer need a break” from hunting pressure. If they really needed a break, we could eliminate archery hunting after the 4 day antlerless Hunt! Not everyone bow hunts and gun hunters should have plenty of opportunities to fill antlerless tags if they want. Lord knows the deer are out there to harvest.

I own 200 acres, and hunt on a total of 560 acres of private land near Arcadia. My area seems to have an over population of doe. My group has harvested a declining number of trophy bucks over the past 10 years or so. We practice QDM, and do harvest a number of doe each season. However, there are many people who own or hunt on private land that are not interested in taking anything less than a trophy buck. I believe this is leading to an over population of the herd. I personally would welcome an "earn a buck" type program. Especially if you could get credit from a previous year, or be able to use a bow harvested doe towards your gun buck.

My property is in the northern part of the county and our deer population is nowhere near as high as the southern part. Many of my neighbors along with myself have turned to harvesting 1 1/2 yr old bucks for eating purposes. We have done this because we have had very poor doe/fawn numbers for many years. We have built our population up slightly, buck age is actually increasing. Trempealeau county should seriously be managed in a north of HWY 121 and south of HWY 121. it's very frustrating having to go by the rules and reg for the old unit 61 and now the whole county when it is completely different deer densities. Thank you.

This winter was over-all much more mild than the previous year, which definitely seemed to help increase the deer population. We have also had a mild spring and I would guess will have a vast increase in the deer population for the 2020 hunting season. In addition, traffic is and will be down Significantly from what it usually is due to the Covid-19 "Safer at Home" orders, so deer being hit by cars will undoubtedly also be much lower than usual. To keep the population down and the deer healthy, we need to take many things into consideration when creating the rules and regulations for this year.

The only reason I truly enjoy hunting anymore is to go hunting with my soon to be 13 year old daughter. She sat with me since she was 8 years old, mostly bow hunting, but fell in love with it. She couldn't wait until she was 10 years of age to be able to do the mentor hunt. We've done the rifle and crossbow mentor hunts. She loves crossbow hunting. To hooch a youngster is the most important goal to keep the sport alive. Hoping nothing changes season for seasons. We are involved in extra curricular activities so we need a the time we can get to sit and enjoy the fall crossbow season.

I waited for years to make a hunting trip to the famous Buffalo/Treampuleau County area. I hunted the NWR which extends into Buffalo county. I contacted the biologist from the video to inquire about I was to see so few deer it should be a high deer density area, as this report indicated. On the public land I hunted it was sad. I saw on hunter harvest a tiny yearling. I suggest that no does be harvested on the NWR. Furthermore, antler restrictions are needed for this area as well. My buddies who traveled with me hunting the state park and report there observation and sugestions.

The deer population seemed much lower than it has in the past few years. I bow hunt and gun hunt, so I spent a great amount of time in the woods. Though I did see some deer while bow hunting, I saw very few during the gun season. During the gun season, I was in the woods 7 of the nine days, and this was by far the worst gun season I have ever experienced. I'm not sure if it was the weather or a great amount of standing corn around me, but I didn't see many deer and I'm not convinced that the deer population that is estimated is accurate.
I believe that if there was more land to hunt and more public land around the area more deer would get harvested. Letting these people into our county from other counties to buy land just to hunt on is hurting the population. They hunt one buck per 400 acres and go back home. The does know this and they stay there the rest of the season. I think there should be a survey that reflects this. Ask how many hunters hunt the land. What seasons, how much land they hunt and if they are from the area. Also leased land or private land.

Why have a holiday hunt that 95% of Trempealeau County hunters oppose? There’s already 23-25 days of firearm hunting without a holiday hunt, if people don’t fill doe tags in that amount of time it’s not for the lack of opportunity, it’s because they choose not to fill them. I also feel with the current situation in the economy and current meat shortages going on, many more tags will be filled this year than normal and that could make a drastic change on the population, especially considering we are supposed to ‘maintain’.

I have heard of and read about many discussions on extending the 9 day gun season in order to increase kill count. When I first started hunting we were only allowed to shoot antlerless deer on the first two days of the 9 day gun season or with a bonus tag. This created a sense of urgency and I believe many people filled tags when the first opportunity was presented. Lately it seems that there are so many extra seasons that the urgency to fill tags is no longer present. Just a personal observation that I wanted to share.

I’ve hunted the same piece of property my entire life. 2018 I seen 1 deer, 2019 I seen like 3. I remember many years in the past where it was nothing to see 5 or more a day. Our neighbors and us do not over hunt our property, we all for the most part just take one or two to eat. We only have 2-4 people hunt the 600 or so acres of our farm so we are for sure not seeing what we should be. I don’t know if it’s caused by over hunting, cars or predators but I hate that there may not be enough deer for future generations.

Regarding potential CWD testing, I believe testing compliance rates would increase if the DNR didn’t turn it into a data mining expedition for the hunter and the landowner info. Especially in light of the public records. Since deer are managed at the county level, it would seem kill locations wouldn’t be needed at an ultra fine scale requiring landowner ID. Hunter’s can be identified by tag number and all personal info related to kill or hunting area should be kept out of the open record.

All deer seasons should never go beyond Dec 25. And I would like to see all hunting seasons end even before that. Some bucks start shedding antlers in December and that makes a buck then "antler less". There is simply beyond ample time to get your deer without these extensions. Also the sport is diminished in late season as deer focus on food sources to survive in the grip of winter. The deer command a break from hunting pressure once winter sets its grips on them in December.

I’m sick of hunters only killing bucks and no does. Hunting is a sport to put meet in the freezer and not a pair of horns on the wall. I feel like there should be a earn a buck again. I saw fewer deer this whole entire 9 day hunt than I saw any single day in the last 4 years. Other members in my party never even saw a deer whether that’s my a-hole neighbors doings or not I’m not sure. I also believe you should not be able to shoot a fawn but that’s a whole other argument...

on 200 acres of land available (Private) only saw 8 deer from August 2019 to present April 2020 farm is row crops corn soybeans small grains alfalfa 32 acres woods spring fed creek runs thru property neighbors flying Drones affects herd gathering in fall / hunting season if one was to change hunting season go 12 day extra "work" days Monday-Wednesday so when others go back to work, I who work the weekends and holiday would get a chance when deer settle down.

Every year after I started hunting, deer numbers you see are less, every one knows this. It’s a very kid managed program, and you just want to keep adding more seasons, for more money. There are very few hunters that hunt after muzzle loader, but let’s add a longer season. It’s just getting to be a bigger waste to go out when young hunters don’t see a deer all day. Insurance companies have a large influence on the management of deer hunting.
The DNR should stop trying to limit crossbow use. They always have long, misleading, and biased questions trying to restrict their use. It is the only segment of deer hunting that is actually growing and the proposals every year attacking crossbow use needs to stop. We voted it down so the next year they come out with new proposals against them. They need to stop pitting one hunting segment against each other. We are much stronger united.

Having the Holliday hunt would be an awful idea. There are already numerous rifle opportunities. This would also take away from harvesting a buck with archery equipment late season. I hunt large acres of private farmland and rarely see does. If the goal is to maintain it also does not make any sense to add an additional season for harvest of does. It will also impact the snowmobile trails if we receive enough snow.

If you would prescribe fire you might see better white oak regeneration. In any of the managed forests, I'm aware of I've never seen this management technique implemented. However I do know this technique is rather taboo with some land owners. I would love to see you elaborate on this aspect of your presentation next year or provide a brief explanation as to your thinking on factors effecting regeneration.

Public land hunting in Trempealeau County should be done on a party permit basis. Four hunters apply for one permit. This would allow the taking of some does but hopefully would increase the herd which has been decimated. The way it stands now each hunter hunting public land gets multiple doe tags without having any bonus tags. Something needs to be done to address this problem.

I don't think you should be able to use a crossbow unless you are over 65 years old or disabled, I don't like the youth hunt dates, they should start the deer hunting season off (like turkey hunting) and be the first hunters in the woods in September. I also don't like that there is no age restriction to hunt, I don't feel kids are mature enough until they are at least 12 years old.

Public Input on CDAC Preliminary Recommendations - Spring 2020

Opposed to limiting the buck harvest to one per hunter. The individual hunter should be allowed to make the decision on whether or not to harvest a whitetail buck. The pressure in hunting circles to harvest record book animals is unfair to hunters, taking the satisfaction of the hunt away from those who do not have access to large tracts of hunting land.
I would like to see more doe harvested on private land. I think 2 doe tags with each license (archery and gun) is a good idea. However, the 2nd buck harvest ONLY should be an earn-a-buck situation. We should have a doe only season in December to encourage more doe harvests. Do Not shorten archery season. Keep gun season the same 9 days.

Earn a buck is bad news. Don’t really care what the dnr decides for seasons, etc but do not bring back earn a buck. You will lose me as a hunter. After several seasons of earn a buck in buffalo county on my uncles 200 acre farm it whipped out the deer. After earn a buck was canceled it took him and his 3 boys over 3 years before they saw a deer.

even a consideration of having a antlerless only hunt for the 2020 season is absurd. It will lessen hunter numbers, lessen license fees and lessen overall deer kill, lessen antlerless kill and people will simply hunt elsewhere (other states) or not deer in this zone. Which if this happens then more habitat and crops will be destroyed.

If this unit has a holiday hunt, is this along with the Dec. 4 day antlerless hunt or will it be one or the other? I would be against having both. With some units being over goal, why don’t we go back to earn a buck, this will get you back to goals. Hunters, business owners don’t like it, but it works to reduce antlerless populations.

In my opinion. I would leave everything the same. Maybe consider giving out more antlerless tags. The bottom line is no matter how many tags you have it doesn’t give you permission to hunt. There’s not enough land to hunt on. I also don’t think people are registering all of the deer they kill, because of the new call in registration.

Gun deer season will never ever be what it once was, people have changed, the Weather has changed, Landowners have changed. Bring back the time when we hunters had to bring are deer to town to register them, no more registering deer with a phone call, I guarantee that there are 1000’s of deer that are not getting registered.

During the winter time I am seeing about the same number of deer, for the last three years. For tourism, the holiday hunt would be nice. I bought two extra tags and did not get a chance to fill them. Every one is busy these days, more time to hunt would be nice, for us in Trempealeau county, happy holidays...

Need to cut the bow hunt season, to start Oct. 1, and end Oct. 30. Start the gun season when Minnesota does so everyone gets an equal chance at the mature bucks that remain. Do not allow just the bow hunters to hunt the rut. Crossbow hunters should have equal hunting rights as compound bow guys do. No extra seasons.

In Arcadia seeing the same neighbors that hunt hauling deer home unsure if they are registering them. The new system of registering is allowing hunters to easily take home deer WITHOUT registering. That is why the population of deer is so low where I hunt. Hardly see any deer on one hundred plus acres.

I would strongly support a one buck per year per hunter any weapon with the season dates staying the same. I also would like to see an end to party hunting. During the 2019 season I seen more bucks then I did does and fawns. And with what I have observed I would support an end to the antlerless only hunts.

This unit could hold twice as many deer with out causing any problems. What I would like to see is a quality deer management program and let those yearling buck go another year or two. In this unit we have the potential of producing world class bucks but you chose to shoot them when they are yearling.

I have not seen the numbers of deer that I used to see 10 years ago or even five years ago they were just too many seasons please do not add a longer gun deer season I have hunted the 9 deer hunting since I was 11 years old it’s been a big part of our lives please do not extend it. Nine days is long enough.

The land I hunt is about 2 miles east of Eleva. This spring there were wolves on this property I feel like this has an effect on the deer... Also these walls were only 50 feet from a residence someone should be able to protect themselves and their livestock and pets from these animals if need be.
Bring back back tags and deer registration stations. Not wearing a back tag while hunting deer should be illegal and treated as such. The current registration system leave poaching and illegal activity wide open. Has there been an uptick on illegal deer hunting? Check your records.

Antlerless only is not a practical alternative. Resident hunters will change locations. Non resident hunters will not participate w/o the opportunity to harvest a buck. One buck year alternative would preserve most non resident revenue and still increase antlerless harvest.

The holiday hunt if granted, should not be weapon specific. Gun, Muzzle loader, archery or crossbow should be able to be used during this HOLIDAY hunt. Please don't discriminate because of the type of weapon used, we are ALL hunters and should have our own choice of weapon.

While there are deer preserves around the county of many hundreds of acres owned by out of town rich people that only shoot wall mount bucks, the insurance industry really should not influence how you make your decisions, please let the local landowners and hunters do...

I think it is not fair that where I hunt you can not bait, but a cross the cty hwy next to me you can. I feel that you should be able to bait with the 2 gallon limit on your own property. I also disagree with having to choose public or private for the antlerless tag.

I enjoy deer hunting. But I enjoy other hunting activities as much or more. Specifically grouse hunting and pheasant hunting. I would oppose lengthening the deer hunting season where it would interfere or reduce the season for these other outdoor activities.

Hunters using a muzzle loader are getting screwed! If anything they should be getting a longer season and not served the leftovers. Crossbows and vertical bows are not equal, so maybe tie the crossbows, vertical bows and muzzle loaders together in one season.

STOP SHOOTING DOES. We need to build up the herd up, don't slaughtered them like you did with earn a buck. It's no wonder why we can't get youth to hunt, because of lack seeing deer. They lose interest, wake up and smell the coffee.

I do not believe more tags or additional antlerless hunting days are a viable approach. I do believe a one buck per year alternative would provide a good balance between hunter satisfaction, tourism and increased antlerless harvest.

Propose bringing back the registration stations. Small businesses prosper from them. Keeps the cash flow in the local economy where the registration station is located. I currently do not trust the current registration system.

i can live with the holiday hunt, but i'm glad the recommendation was to NOT extend the archery/crossgun season. a lot of mature bucks will have shed their antlers before the season ends and could be mistaken for a doe.

I support starting the gun season opener early much like Michigan. I also support the regeneration of earn a buck. This is a very useful tool in reducing populations much more than lengthening seasons will ever do.

Close archery down during rut, archery season is way too long, some hunters shoot deer look it over if not big leave it then shoot another. Registration by phone/internet Is not reliable for accuracy on kill.

More opportunities for "special" hunt seasons. Parent/child, new hunter - adult, returning hunter, special trophy season with higher cost license fee. Use some imagination to gain new hunters in Wisconsin.

Generally speaking I think there's plenty of deer I wouldn't support antlerless only however if they did earn a buck and you could earn a buck the year before I would be more encouraged to support that.

Generally speaking I think there's plenty of deer I wouldn't support antlerless only however if they did earn a buck and you could earn a buck the year before I would be more encouraged to support that.

Bring back back tags, non paper tags and require deer to be registered and banded. How many deer are shot and not registered with it being so easy to do so now? How badly are kill numbers skewered?
I have 93 Acres in the county and no way do I have 6-7 deer living on my land. I would say about half of that since I do not have any agriculture on my property besides some small clover food plots.

You can’t keep trimming a herd that is not there. Adding extra days just means that many more days for trespassing and will eventually obliterate the best natural resource we have in Wisconsin.

Keep the deer gun season at 9 day hunt and dont change the bow- crossbow season. Charge more for nonresident hunting like border states. Take 7 days of no deer hunting Pryor to the rifle season.

It’s been report that of the "does" shot during the holiday hunt that close to 50% were button or shed bucks, that is detrimental to the quality of future hunts and any doe population controls.

I think it would be beneficial to go back to earn a buck and only allow one buck whether it be bow or gun. Something needs to change Wisconsin heritage and hunting has become a joke!

I would like to have the opportunity to trade in my bowl crossbow buck tag for credit toward a second gun buck during gun deer season.....only if buck harvest would support it.

I own the land that I hunt on and have hunted it for more than 25 years. The deer population is average and I believe one antlerless tag per hunter is enough. Thank You!!

I hunt in both Trempealeau and Buffalo co. I wish I did not have to pick just one County for my antlerless tag. Thanks for the opportunity to have a say in this survey.

I like the rules and refs as they are. I’m opposed to continuing the deer baiting ban. I have never seen a sick deer on my property and my deer are very healthy.

Much of the unit is private land with very high deer numbers I feel more antlerless tags should be made available for those who want to use them on private land.

Eliminate hunters leasing hunting land. The ones in our area harvest bucks only. This causes a problem along with them trespassing on the adjoining land.

We need to harvest the antler less deer way to many people not shooting them. In the future we will see either disease or overpopulation as a problem.

If we’d have the normal seasons of a couple decades ago, along with people making drives and hunting together, a lot of the problems would go away.

Continue to manage for balanced doe harvest. Given Tremp is basically all private land, lets manage towards an older age structure of bucks. QDMA.

I’m concerned what happens if wolf population were to expand to our county and how this could affect deer population and hunter satisfaction.

more or less things are fine. Don’t hunt here now because i have to pick public private and what county. Cant’ visit and maybe take a doe.

I would like to see and extended Muzzleloader season. Maybe the Holiday Hunt could be another Muzzleloader season instead. Thank You!

We need to encourage additional antlerless harvest after the mild winter. Northern Trempealeau Co is over-run with deer... period.

Bring back the back tag for deer hunters and registration stations. No back tag makes it easier for trespassers and violators.

I like and am highly in favor of the one antlered deer per person, regardless of tag/weapon that has been suggested by some.
My concern is keeping the deer population down to prevent Cwd as well as the amount of crop damage sustained by our farmers.

I do not support lengthening gun hunting season. Do not wish to worry about guns for more than the current 9 day season.

I suggest only allowing one buck shot per year! The buck population was way down, during the season I only saw two bucks!

I'm a new resident. I like to bow hunt and gun hunt. I want what's best for the herd and hunting. Good luck!

Buck only for 2 years. Then in 2022 one buck and one doe tag per hunter with no added doe hunts period.

Support extending the gun deer season to 19 days or even longer....like the whole month if November!

Population appears much lower than years back. Don’t see as many adult does or mature bucks

Start the gun season earlier. How about the Saturday the closest to the 15th of November.

I am in favor of a antlerless hunt or a holiday hunt. I don’t think both are necessary.

Need to shoot more antler less deer Disease and car accidents are going to be a problem

Too many hunts in general...if youth hunt is going to exist it should be doe only

I would like to see Wisconsin manage deer for a better buck to die ratio.

Please shorten the Archery season and eliminate cross-bow hunting.

I would like to see only one buck harvested per person per year.

Please start providing bonus antlerless tags for public lands!

Keep allowing deer hunting with all weapons as it is today.

Would like to see more Black Powder hunting opportunities.

Keep the 9 day gun deer season as is.

Turkey population is really down.

More deer need to be harvested.

Limit the crossbow harvest!!!

Bring back hunter choice

Earn a buck!
Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 205
   - I visit this unit for non-hunting purposes: 126
   - I hunt in this unit: 470
   - General interest in this unit: 104

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 435
   - Bow: 262
   - Crossbow: 171
   - Muzzleloader: 159

3. How many years have you hunted deer in this unit?
   - Minimum: 0
   - Average: 20.38
   - Maximum: 65

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 333
   - Mostly Private Land: 68
   - Public and Private Land About Equally: 32
   - Mostly Public Land: 6
   - Exclusively Public Land: 27
   - I did not hunt in this unit last year: 4

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 12
   - Not too crowded: 48
   - Neither crowded nor un-crowded: 21
   - Somewhat crowded: 27
   - Very crowded: 16
   - Not applicable: 9

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 72
   - Fewer: 133
   - Same: 197
   - More: 61
   - Many More: 24
   - Unsure: 14

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th>Much Too Low</th>
<th>Too Low</th>
<th>About Right</th>
<th>Too High</th>
<th>Much Too High</th>
<th>Unsure</th>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
Implement an ANTLERLESS HOLIDAY HUNT: 268 186 47

If a Holiday Hunt is held in a Farmland unit...
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: 300 156 44

If the Population Objective is not "Increase"...
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 60 410 31

If a Zero Quota (buck only season) is adopted...
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? VALID NOT VALID Unsure, Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?  

<table>
<thead>
<tr>
<th>Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very</th>

Thank you for allowing input in the matter. The antlerless deer projections in the Vernon county farmland zone in the past many years seems to be higher than the actual count of total deer. Our own family has hunted the same tract of land for the past 30+ years and the number of deer is continually diminishing even though we practice management on our land as well as our neighboring lands doing the same. The sport of deer hunting has changed quite a bit over the years, and in my opinion, not for the better of the sport. Here are my opinions why:

1. Crossbows - these should only be allowed for disabled or medically unable hunters to use. We have hunters out in the field with crossbows with scopes on them from the beginning of September into January that are capable of killing deer 100 yards away. Crossbows simply make the bow season a "quiet" gun season in Wisconsin taking away from the true sport of bowhunting. Crossbows have a place in the woods, but ONLY for disabled hunters.

2. Way too many antlerless and overall deer seasons are taking place in WI. In talking with a respected and veteran hunting mentor, he states it correctly: "There is more to fall than deer seasons." We all love hunting deer no doubt, but we also enjoy roaming the woods in search of small game, such as squirrels, coon, coyotes, grouse, pheasants, etc. With all of the emphasis always on deer seasons, it takes away from the other sporting opportunities. In speaking as a WI licensed teacher for over 18 years, and also a landowner myself, small game hunting is what generates excitement for our youth and this is being taken away because deer seasons take up the majority of the fall. When it's constantly deer season, landowners are more protective of their lands, which in turn, limits opportunities for other game hunting.

3. The idea of having everything online for purchasing licenses, registering game, etc. has taken away the opportunity of the camaraderie and joy of our hunting sports for all age hunters. Hunting is not just about bagging game, more emphasis needs to be placed on the joy of the sport than focusing constantly on the kill numbers and management numbers. The days where people gather to talk about the hunt, share humorous stories, and generate an income for business owners that sold licenses and registered game is what we are missing. Quite honestly, I believe that the honest registration of game is lacking due to the online component and gives inaccurate numbers to you as DNR officials. It should be a priority of the WI DNR to bring back the true sport of hunting deer, small game, and just enjoying WI outdoor sports by revisiting past practices that made hunting what it was many years ago.

4. Let traditions be traditions. The 9 day gun deer season is tradition and should remain that way. Each hunter should get a buck tag and a doe tag...period. Giving a handful of tags teaches one thing, kill deer when you see them. This is the wrong message to send to hunters, especially young ones. It's not a numbers game and never should be. People who work to "fill" all of their tags are not true sportsmen. Ideas like that are what turn private land owners off on hunting on many of them close their lands because of this. I have seen and heard this first hand in conversing with landowners who own land, but don't hunt themselves, but are willing to let others recreate on their property, and they have stated that they simply dread deer hunting because of this tag practice. Now many of them have closed off their land because of these practices by unethical hunters who possess a handful of tags given to them by the WI DNR. In closing, let's focus on maintaining traditions, involving youth with small game opportunities and emphasizing to everyone who hunts in Wisconsin that we want to allow everyone great opportunities to hunt, be ethical about it, and enjoy all of what WI has to offer in the woods. I personally love deer hunting and wouldn't miss it each year whether with a bow or gun, but we need to keep it in check to allow all of the other activities to take place. Again, "there's more to fall than just deer hunting." I appreciate you reading this entire post and I hope you read it in a conversational positive tone, not as a direct hit to the DNR, as it is not meant that way. We just need to consider all outdoor sports WI has to offer. Thank you.
The county clearly has a need to increase antlerless harvest to achieve its population goals. Frustratingly, there are only two options presented to affect an increase in antlerless harvest: 1. Increase available antlerless tags through some combination of farmland tag, public tag, and private tag offerings. It is clear that antlerless harvest has plateaued under this incentive, and further increases will yield little, if any, additional antlerless harvest. 2. Impose an antlerless-only season framework. This would demolish hunter satisfaction and perhaps create a disincentive to hunting in the county. What is needed is a true incentive for antlerless harvest. The effectiveness of Earn-A-Buck at increasing antlerless harvest shows the strength of a true incentive-based structure. I don't advocate a return to Earn-A-Buck, but I think we could recognize from the Earn-A-Buck years that buck harvest opportunity is something that can be a strong incentive. Consider that presently an individual hunter that procures both an archery license and a gun license receives a buck harvest authorization tag for both weapon categories. Such an individual can harvest two bucks in a single year without any requirement to harvest even a single antlerless deer. There is a complete lack of incentive to harvest antlerless deer under this construct. As a suggestion to the CDAC, the DNR, or to whichever entity may have the power to enact such change, I suggest the following: Do not issue buck harvest authorizations by weapon category, but rather grant only a single buck harvest authorization per hunter regardless of the weapon permits they elect to purchase. Hunters who wish to acquire a second buck harvest authorization for use during the year must first earn that second authorization by harvesting a quantity of antlerless deer as specified by the CDAC. A biologist could provide better insight, but intuitively an antlerless quota of 2-4 animals would make sense depending on whether CDAC goals are to maintain or reduce population levels. To prevent archery hunters from overharvesting bucks during the rut, the second buck harvest authorization could have time constraints that make it effective for only the latter portion of the total season (suggest effective from the Saturday before Thanksgiving through last day of deer season). The construct described above is distinctly different from Earn-A-Buck in that all hunters would be authorized to harvest a single buck per year even without having harvested an antlerless deer. The construct described rewards hunters with a second buck harvest authorization upon prerequisite harvest of a specified quota of antlerless deer. This prerequisite quota would give the CDAC a great tool to increase or decrease the incentive for antlerless harvest to align with CDAC population goals. Respectfully submitted with great concern and passion for both deer and deer hunting.

Recruiting youth, female and new hunters is priority 1! So move date of Youth Hunt and disabled hunt to first weekend of NOV. If fact add a Friday (make it 3 days) to compensate for a day or weekend of bad weather. I know it is the start of the rut, so best time for everyone to see more deer moving during the day. Currently in OCT, deer only move to come out to feed in the evening, and in OCT there is abundant cover and crops to conceal the deer. However, most archery hunters believe the "rut" should be bow only. They can still bowhunt, or even better, they can help a disabled hunter or mentor a kid on their hunt! 2. Start the Gun season Mid NOV and run for 2 weeks. MN has the dates right. The WI traditional Thanksgiving week hunt season is nonsensical. Weather is very cold, often ice and deep snow, results with fewer hunters who don't hunt long, and the deer don't move. Do the gun season for 2 weeks (16 days) start a week earlier and people will have more options for taking vacation time, can still have a deer camp, more deer will be harvested and Holiday hunts and late archery hunts will not be needed. If you want women and kids to hunt, the weather needs to be pleasant for them. There's no enjoyment in being cold and miserable. 3. Establish a category of New or first time hunter, regardless of age, and allow them to be mentored (2 people with 1 gun) during the youth hunt period. They need a practice hunt to learn the many aspects of proper clothing, moving with a gun, target acquisition, shot followup, carcass handling, etc. so they are confident and willing to be part of the regular gun hunt.
I agree with the comments from the last meeting minutes. The members seem to have a good perspective on impacts of proposed changes to seasons. I appreciate this so thank you. In the age of decreasing license sales, pitting hunters against each other isn’t prudent. It would be interesting to see metrics on utilization of antlerless authorizations issued with license sales for both archery and firearm. If license issued authorizations are not being utilized or utilized at a low rate, increasing the number of antlerless authorizations with license sales will have little affect on deer populations. It becomes a matter of how to increase sales of bonus antlerless authorizations for private land. With roughly 40% being sold the opportunity for increased harvest numbers lies in the private authorizations. As a new land owner in Vernon DMU I see good buck numbers and quality. Personally I’d like to see a program similar to MFL but for wildlife habitat. My property in Richland DMU is MFL and I’m looking to pull sections out for wildlife improvements. I see good deer numbers but being exclusively closed canopy forest it’s hard to pattern deer and get shot opportunities. As I learn more about land management I’m learning the objectives of MFL contradict the objectives of quality wildlife habitat. There are only a few private companies that offer services for wildlife habitat improvement and they’re hard to contact. Implying there’s significant demand for the current supply of services.

This is a CWD hotspot. We have land outside of Hillsboro. You complain about CWD. Than give me another buck tag, because it’s the older bucks that are carriers of this problem. You complain about CWD, and deer numbers, but you want lower doe kills. Why? The problem is horn porn, etc. Listen at 70 years old, I am hard core. I shoot nice bucks. The issue is, there needs to be a higher buck kill, if you want to combat CWD. QDMA has their head in the sand when it comes to CWD. Its all about buck size,,,,,. Really...... I test all my deer, because the DNR needs data. I use the Kiosk, out of Rocton, by the KVR. However you need more. Heck the school shop classes can build them for you, for just about nothing. College interns etc, can work the program, for credits and experience. If you allowed private to run kiosk locations, they would be all over. the problem in this county is all the poaching. I hear shots after hours all the time. I would put together a task force, and get at them. I support our Wardens 100 percent they are overly micro managed to handle piddly stuff, compared to get after, after hour shooting. You have to be living on Mars, not to understand, the amount of late shooting in this county. If I was in charge of Vernon County, I would bring back EAB. I would also ask the DNR to make sure, deer have tags on them. Otherwise thank you to everyone on the CDAC. I believe in Wildlife Science. Not Political or Social Science.

Thank you for your interest and consideration of our (general hunter) input. I believe you are much better informed and fully capable of managing herd numbers. I greatly appreciate the extended archery season and being able to use my bow or crossbow in the winter. It allows me to hunt longer and I plant food plots for more seasons as a result. I have 2 opinions regarding the harvest. My group and our neighbors don’t harvest enough does (virtually none). Given the data options available, would you please consider a reward for harvest does? This is nothing like earn a buck but bonus buck. When a hunter kills a certain amount of does (say 3) any weapon, the hunter would be able to receive a bonus buck tag (any weapon) good for the remainder of the season and the next year. It would promote antlerless harvesting. I can see the concern of cheating but let’s face it, if hunters are going to cheat, they’re already doing it, hopefully someone turns them in. Second, please consider a separate muzzleloader buck tag. I have many friends who won’t harvest deer in the gun season unless it’s a monster, because they want a muzzleloader buck tag. Please sell us another buck tag. Lord knows we won’t run out of deer. Thanks again.
My property adjoins Vernon County and there are way too many Deer in the Kickapoo Valley. Not only is there a risk of more Car/Deer accidents but there has been a larger amount of crop damage on our farm. I commute into Vernon County daily and can count up to 10-20 deer within my 20 mile drive on any given day/night on and off the road and shoulders. There are herds of Deer in groups as many as 15-25 in one field. Please be aware that I am not suggesting inviting more out of state hunters but allowing land owners the ability hint more days or harvest more deer at no additional charge. If out of state hunters want to hunt in our area, I suggest charging them additions fees for additional tags, not land owners and residents of the state of Wisconsin. I would also suggest only allowing out of state hunters to purchase antlerless only tags as they are only coming here to shoot the big bucks. I have been a land owner for over 23 years and I for one have never been a fan of trespassing and out of area hunters are always those that come and do as they please. Thanks for allowing me to communicate my concerns and I look forward to some changes this next hunting season.

I was relocated out of state for work. I have kept my hunting land in Vernon County and continued to pay all property taxes for schools, roads, government ect. As such, I would think there should be consideration when it comes to hunting on my own property. Some sort of non Resident Landowner permit as opposed to having to pay all the non resident fees to hunt on my land. I understand the need for higher non resident fees, but the current structure is so high that I do not hunt my land for deer gun or spring turkey like I used to as a resident. Maybe once I pay the higher non resident fee for the year you could just add additional fees for each additional permit instead of complete seperate liscense. As it stands now, buying non resident deer bow, deer gun and spring turkey on top of paying my land taxes adds up to a crazy amount. As such, I only now make a single annual trip to the area that supports the hotels, resturants and businesses in the area. Note: I also still allow my Wisconsin friends to join me when I am there, so they get less opportunity to hunt and support the Vernon County area as well.

I think you can give out as many antlerless tags as you want but you can’t make people harvest does unless you implement the earn a buck system. I think earn a buck is the best way to maintain the herd population to combat EHD and chronic wasting disease. I know several people that own a couple hundred acres and have only a few people hunting that land, and they will never shoot any does. It seems that they aren’t happy unless they are seeing 20-30 deer per hunt and most of them are does. If that keeps up, it’s only a matter of time until disease sweeps through and ruins the population for everyone. But if you have to kill a doe before a buck, that would help maintain the population on those places. As for the extra antlerless only seasons, I think they’re a good tool, but you still can’t make people fill those tags unless it’s to earn their buck tag. I hunt small tracts of private land, less than 40 acres, and any pressure pushes deer off those places to the neighbors bigger tracts of land, 200+ acres, and the people hunting there refuse to shoot any does.

The coyote population is getting out of control and affecting bow hunting and turkey hunting over the last decade. I’ve shot more called in coyotes while trying to call turkeys than turkeys themselves. I also for the last decade and a half always hear that”one” shot with a rifle just before end of bow hunting hours. I believe the Amish do more destruction to the deer population poaching them on a daily basis in my area than coyotes. I blame the increase in two and four legged predators for the massive lack of deer seen in my area the last decade. The big issue we had this last year in my opinion is all the standing corn giving deer a place to hide and a great food source as well. I normally see 15 to fifty deer on opening day every year. I saw zero on Opening day this year from sun up to sun down and never left the woods the whole time. Sunday same thing. I guess there is a first for everything. I saw tons of deer the year before so I blame it on all the standing corn.
The deer population is too high. With plenty of deer the bow, crossbow, and gun hunters all focus on shooting bucks. In many cases multiple bucks. There is no incentive to reduce the the herd through doe only hunts or issuing multiple doe tags per hunter. The focus is on harvesting bucks. The idea of meat hunters does not hold true when the deer are plentiful and everyone wants to shoot bucks. They shoot a buck with the bow and gun -- they don't need anymore meat. You can plainly see this with the reduced number of hunters who participate in the doe hunts. I have NO trust in hunters in their ability to accurately identify what the is the size of the actual herd population. I do not know the exact metrics the DNR uses to determine herd size. But frankly go outside and look at the farm fields this spring in Vernon county there are hundreds of deer. Find a way to require hunters to harvest does.

I support the goal of harvesting 1/3 buck and 2/3 antlerless. I am willing to hunt under earn-a-buck to achieve that. I feel that the whole hunting tradition/economy could collapse in Vernon County if CWD reaches 30% of harvested deer. I fear the day when I have harvested and butchered a deer that comes back positive for CWD. I will toss those neat white packages of hard-earned meat into the trash, but I won’t be happy about it, and I may have trouble when it comes time to harvest the next deer. I also liked the October gun hunt when we could harvest bucks. I think it was during the earn a buck years, and I know the bow hunters had a hissy fit about gun hunters getting a chance, during rut, to shoot “their’ deer. The truth is, bow hunters have a small harvest impact and can’t control this population. They shouldn’t have any more influence on the process than gun hunters.

My family has a long history of bowhunting in WI using compound bows. My (2) sons are learning to bowhunt now using a compound bow (not a crossbow). Seems that most kids now are starting out with crossbows due to the fact it is much easier to harvest a deer. Knowing crossbows are being given the same season as a compound bow in the state of WI, our family has slowly been loosing interest in the archery season. My family of hunters consists of 3-4 farms with 10 bowhunters. The neighbors use there high powered cross bows to harvest deer that were once very challenging to harvest with a compound bow. We miss the old traditional Wisconsin November bowhunt with a recurve bow or compound bow in hand. We had a chance at being a part of something big with a very special group of people across the state. Crossbows have taken this very special time away. Thank You

The DNR has hurt our population and quality since the earn a buck season’s. Cwd has been around for long time and extending season, giving more tags having more antler less seasons is not helping with our population. If they want to do something go back to the old ways of either sex first day and buck rest of the season for the river block areas. The equation the DNR is using is wrong and cannot be used anymore, its outdated. they have never taken in consideration that hunters are harvesting more mature animals and letting the younger animals go. When we had the guy from texas look at our proposal for CWD, he was telling us we are doing it wrong you all you never listen to that either. So no offense open your eyes and listen to what the hunters have to say. They also need to stop giving out all these crop damage tags. Coon do more damage to crops than deer do.

I do like the idea of reinstating "earn-a-buck" to keep population levels lower. One of my concerns when hunting during an earn-a-buck, is the potential of a trophy deer presenting itself. Might I suggest offering the option to "buy a trophy", thus a hunter could harvest a trophy while during this season and not fret about a lost opportunity. I understand that there is discussion about lengthening the traditional 9 day season. It has been my observances, that deer adjust to the hunting pressure and change their habits, lowering the possibilities of a harvest. Rather than just lengthening the season, I would suggest giving deer the time to go back to their previous, regular habits-- a pause between seasons. This might give hunters a better success rate. Thank you for your hard work in attempting to maintain deer populations in Vernon County.
I think we need to address issues pertaining to CWD across the state. I am by no means any expert but I think more people need to take this more serious than they are especially deer farms. I understand it hasn't been transferred to humans yet, but it is concerning to me that virus' mutate and who knows how prevalent it will be in the future. I do think we did a better job in 2019 of having more testing stations. I don't think there was one in Viroqua in 2018 so that definitely made it more convenient for us to test our deer so we should definitely keep that up. I just hope more people will at least test their deer. I hope to help out more in the futures as part of the younger generation of conservationists.

A huge thing for me is that the only land I can hunt as I am young atleast that I’ll actually be able to harvest is private in Vernon county. I harvested my first buck last year and it gave me so much joy and it will for years to come but limiting the hunt to antlerless only isn’t the way to go in my opinion. There are significantly high numbers of little doe where I hunt and a decent population of bucks now I don’t say get like 3 buck tags but one per person is amazing and getting that one buck of the year can just mean so much. I believe the deer population and bucks in general are on the rise and I think that’s great. I see a great benefit for all antlerless but as it is I don’t see the necessity for Vernon county to be this way.

I’ve been hunting since I was 12 years old and looking back I remember always seeing deer. Over the past 10 years or so it has changed quite a bit. Last year I didn’t see a single deer while hunting opening weekend. I recently moved to Indiana a few years ago and have been buying the non-resident license to show my loyalty towards a state that I loved growing up hunting in. The numbers of deer have dropped in my area due to many "CWD" tags and the introduction of wolves up North I’m sure it is not any better. The predator population isn’t helping the deer herd and neither is all the extra hunts that happen during deer season. Bring it back to the old days so that future generations can enjoy what I had growing up. Thank you.

I concur with most recommendations set forth by the CDAC for this DMU, but I am wondering if the 2020 quota could be increased slightly from 5000. The objective for Vernon County is to maintain the population around 26,000. According to the "Quota Starting Points" slide in Biologist Dan Goltz's presentation, the predicted 2020 post-hunt population would be closer to the 26,000 objective if the quota were set at 6000-7000 deer for the 2020. I agree that the 5000 quota would probably keep the population within 20% of the population objective. Nevertheless, I am concerned about the prevalence of CWD and Epizootic Hemorrhagic Disease, and hope that a more aggressive quota might slow the spread of these diseases.

3 antlerless tags per license is too many. I had 6 antlerless tags between my bow and gun tag, as did 3 of the 4 other members of our hunting party. For us to even consider shooting 24 does on our 165 acres would be ludicrous and damaging to the herd. We try to shoot a doe for every buck we harvest. Last year we were successful in doing that with 2 bucks and 2 does killed between all of us in all seasons. I spend a fair amount of time on my hunting property and run 10-12 trail cameras year round. I speak yearly with the adjoining landowners, and collectively, we control over 450 acres. Between my camera surveys and my neighbors reports, we don’t see the amount of deer to warrant 3 antlerless tags per license.

I am very curious on any research that has been done on the possible problem of EHD in this unit and surrounding area last year? i am a smaller land owner and have found several deer carcasses this past season unlike any other. I also have neighbors with a couple dead deer early last year that i personally seen, with NO apparent reason for death lying in the woods and near streams. I am an avid outdoorsman and saw many less deer this past season compared to other years, not only on my property, but two other large property's near mine. It seems the area of vernon & crawford counties nearest the river had some serious reason for large drops in deer population.. Thank you for this opportunity to speak.
The bow and gun season is long enough. Last years 5 tags per hunter was ridiculous. I hunt both seasons and could have shot 10 deer. Too many hunters out there are going for the racks. The doe population if anything, should be maintained. But, don't overdo it with holiday hunts. Hunters have plenty if opportunities to get a deer. Wisconsin had something special with tradition. If you make season's too long, it's not special anymore. Have more input from hunters throughout the year, more then once. Sometimes I feel people are counting the same deer they see twice, which would make the numbers seem greater than they are. Over the last couple years, I have seen huge decline in the amount of deer I have seen.

I agree with most of the recommendations regarding private land, however the public land antlerless bonus tags are excessive. While the recommendation is to only allow 250 antlerless tags to be purchased as "bonus tags," with 3 tags per person being given out with the purchase of a buck tag, does on public land are still being overharvested, in turn creating insufficient population on public lands and adversely affecting private land that abuts public land. The options to solve this would be: 1.) Decrease the number of public land doe tags available as bonus tags or 2.) Decrease the number of antlerless tags that come with a buck tag while increasing the antlerless "bonus tags" available for private land.

I believe that the four antler-less permits that were issued out for 2019 were just too many, two is enough. Make more bonus tags available for a certain price, so if somebody were to want another tag they could purchase it if needed. The way it is set up now I believe some people are just out there to shoot deer because they believe there are too many or they have four tags so why not use them. A small family with a child or two to eat two to three adult deer in a single year is quite a bit. A lot of these deer are simply given away to people they know or processing plant, which is beneficial. I just believe a lot of deer are getting shot for the purpose of killing because of tag availability.

People will not slaughter deer just because you give them a ridiculous amount of tags. Most groups get what they want and stop. I say if your going to give all these damn tags out, make people pay for them! I dont care If it's only a damn dollar! Almost everybody I know that hunts in Vernon county doesn't use any of the extra tags! They rarely use there buck tag because we are hunting for big bucks or have awful neighbors that wound more deer than they find. Found 3 dead deer on my property during turkey season this year... all deer most likely wounded from my neighbors that unload on anything they see because of all these stupid tags. Enough is enough, make then pay for the extra tags!

From what I have been able to gather in the form of knowledge about CWD, we have dropped the ball as a State with deer management. I feel that it is now too late to stop the spread of CWD, which will eventually cause the elk herd in Wisconsin to be threatened. All the work that has been done to establish an elk herd could be at risk. The only way to possibly save the elk and the deer for future generations of hunters and wildlife enthusiasts would be to take the deer numbers down fast. I feel that this means we need doe only seasons and earn-a-buck. Do it now, or suffer the consequences of giving in to political and selfish reasons to keep the deer herd overpopulated.

I live in Juneau county less than a mile from the vernon county line. My property is in old unit 71. Now where I hunt a majority of the time is in old unit 72. In 71 we had earn a buck for years. What we saw as a result were larger bucks and less car kills. This last week coming back from Turkey hunting in the afternoon with my daughter we counted over 200 deer. That all being said I feel in Vernon county we should have another year of earn a buck and I would include southern Juneau county along with that. (Keep in mind I don't want that we have 4 hunters in our house) but it looks to me to make sense.
When I can count deer in the hundreds on the hillsides alongside highway 14 from the edge of Lacrosse to Coon Valley and beyond in the late afternoon in early March, there are far too many deer. When there are deer running through my backyard on the edge of Viroqua, there are far too many deer. When my car is run into by a deer in the City of Viroqua, there are far too many deer. When I have to stop to avoid hitting deer in the City of Viroqua, there are far too many deer. How about allowing an early fall antlerless gun season with the goal of donating the venison to local food banks?

The transportation rules to contain CWD influenced my decision not to harvest a deer. I prefer to butcher my own at home, but live beyond the transportation limit. For me it is not practical to transport quartered deer. I would have no problem disposing of a carcass properly if I could transport home. Because this wasn't allowed, I decided to only shoot if I saw a trophy buck - therefore I let many harvestable deer pass. I am a conservation patron, my license is already purchased - how will I get/know if antlerless tags are issued for free in 2020??????? I was not aware of it last year.

Limiting the deer season for archers to improve chances for gun hunters is a sure. Crossbow is totally a different thing. Crossbows are almost like gun hunting. They are extremely fast and accurate, along with being scoped from the factory. They shoot fundamentally the same as a rifle. For those 65 or with a verified doctors documentation showing that the person cannot shoot a compound bow they should be allowed the full archery season. For those who shoot a crossbow just because of the ease of shooting should have a shorter season. Maybe thru mid October and again after gun season.

I spend a lot of time in the woods in WI and in the area in Northern Vernon county has some deer but the number of deer I see on a regular basis has been far less than I saw 15-20 years ago. Now with the no registration stations I feel that many more deer are just being harvested and not reported. Go back to the party tag - 4 tags to be allowed to shoot one doe. You will have more hunters hunting (no hunting tags for anyone that has not passed hunter safety class) because of the party tag and back to registration stations so that accurate counts can be maintained!

There were miles of corn left up in the fields which I believe was a major factor of not seeing deer. Also I have witnessed and harvested several coyotes chasing deer during bow hunting seasons. The predator population is getting out of control. I lost a deer that I shot at the end of legal shooting hours to coyotes the next morning. I had this happen to two in a row. The season before last. I’ve have left deer overnight to track the next day in the woods for almost four decades with zero issues till the last couple of years.

There are areas where you can see 50 deer in a field and others nothing. Solving that problem will help you make the whole unit. The same for deer per mile. Some land owners don’t allow hunting or hunting near towns is limited and the deer know where they are safe and over populate an area. Giving out extra tags will never solve the hot spots. If We used our “extra” tags we would run the hunting in our area for a few years. We self manage despite what is given out for tags. I laugh when they give out so many.

FYI: This past season I had two deer on my property that were covered in open sores...My thought was tuberculosis. Later in the season I found them both dead. The local coyote population took care of their remains....I am hoping this was just isolated incidence. I have not seen anything since. I am monitoring the deer herds this year to see if the problem rears its ugly head again. If it does I will ask for your help and follow your lead toward rectifying the problem. Thank you for the good work you do.

way too much crossbow hunting, same effectiveness as hunting with a shotgun, should only be allowed for disabled, crossbow hunting extremely changes the metrics for bow hunting and gun hunting, if i had a crossbow i could shoot many deer each year but it is not really a sport or challenge, that being said from a 64 year old man with both shoulders dysfunctional. I still try my best with a regular bow despite not being able to pull the bow back on many days. ban crossbows except for severely disabled.
I personally found 13 dead deer on my property last fall from EHD. That said, we harvested only 4 deer on my property last seasons. Am encouraged by the numbers I'm seeing this spring that the surviving deer are doing well. The Chaseburg to Stoddard valley was hit hard by EHD last year, and I know it affected the harvest in this area. Hopefully, 2020 will be a disease free year. I count on the biologists to make the best decisions for the maintenance of our state deer herd. Thank you for your efforts.

In order to increase involvement in the act of hunting why not extend the traditional season as 'antlerless only' either pre-season or immediately following the traditional season so that weather would have a chance to be more favorable for hunting. I did not closely look at the harvest data for the holiday hunt but with the typical really cold weather and family events during that time it seems like harvest numbers and huntibility factors would be better if this could be held earlier in the season?

I think that the current framework is fine, I would put in one comment though. I would love to see the DNR go back to the framework from some years ago and close archery season for the week before the 9 day gun season. I think that if the deer were given that time to settle down, the numbers for gun deer would pick back up the way they used to be. I think that currently, the deer have soooooo much pressure from September until January that they are more skittish than they ever were before.

This last year, it was not required for hunters to where their tag/registration number on their back like in years past. Living near the KVR, I experienced several trespassing incidents despite that my property is posted for no trespassing. Even with trail cams, it is very difficult to identify, report and request assistance because of this and I am a single woman and so is my neighbor. I would like to petition that this identification requirement be reinstated for the community's safety.

2019 was the worst year of deer hunting I have ever had and we select hunt. My kids are getting bored and I am afraid they will lose interest if numbers and activity dont increase shortly. If things dont change to get numbers back I have and am considering giving up deer hunting myself. The old 9 day hunt without extensions or other seasons were much more interesting and fun. Also, now things are so restrictive that people can not get out and do drives as use to be done on other ground.

I believe that i have seen a significant decrease in deer population as well as other animals such as small game, reptiles, birds etc. since i first started hunting. Each year the human population increases and we are slowly killing the earth. I am in support of making sure that we preserve the deer population as well as other animals and create more natural preserves for animal refuge. I am an avid hunter but my concern is that in 20 years there may be nothing to harvest.

Maybe its me, but I am confused. You propose a antlerless quota of 5,000, but last year it was 12000?????????? I would think that you want does shot to control CWD.. am I missing something? Our land is outside of Hillsboro.... Can someone take the time to explain that to me. My email is as follows m4waves@yahoo.com.......... There also seems to be adequate numbers, when it comes to tags etc, its the quota I do not get. Hope to hear from someone. Thanks for the time

I feel that we should keep the same guidelines as now. 2 Doe tags, 1 buck tag. However if you fill all 3 tags I feel that should earn you a second paid for buck/doe. Purchase a tag that is contingent upon filling your 2 doe and 1 buck tags that allows you to hunt a 4th deer of either sex and this should apply to bow/crossbow season only. I feel that gun season should be two weeks and with gun opening the week before Thanksgiving and running until the normal end.

I’ve hunted vernon county for at least a decade now. In general, I would say there are fewer deer now than in years past. I generally oppose efforts to lengthen and modify the rifle season. Most deer hunters barely hunt the full opening weekend, let alone the nine day rifle season. Last season my family of three hunters had 20 deer tags. That’s insane! I could definitely fill them if I wanted or needed to, but why would we kill so many antlerless deer?
I am a 65 year old hunter who uses a crossbow. Originally from the state, I return every year around the end of October to deer hunt. This is my most enjoyable vacation of the year. I set aside about ten days for the hunt. My wish is that there was a way to buy a second buck license. If I shoot a buck early in my trip, I might as well go home. I would be more than willing to buy another license so that I could continue to hunt a little longer.

There was talk of having an earlier full gun season to help coincide with the rut. With exception of an October Youth Hunt, I AM OPPOSED to this early hunt if it's even up for consideration. Family traditions in hunting revolve around the week of Thanksgiving in Wisconsin, if Wisconsin holds an early Gun season other than the youth hunt, it will screw up the tradition and i believe you would see a rapid decline in participation.

I would like to more muzzleloader time in January, instead of added bow/crossbow season. Also lets consider a handgun season, it’s just like bow hunting just louder and more lethal. I honestly can't believe that the January bow season has help any, let's try something different. Let's stand together, instead of bow hunters attacking crossbow hunters. Let's use different ideas to get more people to harvest deer and join the sport.

The holiday hunt needs to stop. There are plenty of other opportunities to harvest a deer and this season makes other outdoor activities less safe and appealing. IE... small game hunting, hiking, trapping, cutting wood. It also gives poachers more time to road hunt and then register the deer as if it were taken legally. The 4 day antlerless season also needs to go. Deer hunting is less enjoyable with too many seasons. Thank you

I've heard rumors about extending and or revising gun and muzzleloader seasons. I really like this idea. I know quite a few hunters who simply don't go deer hunting anymore. Some work weekends. Some feel crossbows have been running the herd and have an unfair advantage.I also know of hunters who choose to hunt Minnesota and Michigan instead. I'll be looking forward to see what happens to the season in the near future.

Wish you would go back to what it used to be in the river block areas. Ever since you had the earn a buck in vernon county, you did nothing but hurt our deer herd for us and future hunters. And enough trying to kill more deer because of cwd. It has been around here way before media got a hold of it and you all are scaring people because of it. So let's get back to helping bring our population back not dwindle it.

I read that there was a consideration on extending the gun deer season to 16 days because of the low deer kill in 2019. One of the contributing factors of the reduced kill was that the gun season was so late in the month of November. How about establishing the 10 day gun season starting on the second Saturday of the month (similar to archery season in September) instead of always around the week of Thanksgiving?

Two things I would like to comment on. First of all, if it's a antlerless deer only deer season, I wont hunt and two is about crop damage. Poor farmers my butt. I was up turkey hunting in Liberty WI period one this year and farmers were still picking last years corn. Ruined my deer hunt having so much standing corn. They freaking act like they own the deer. So crop damage, who cares. It’s there own darn fault.

Out of state tags should cost more. Out of state people come up and shoot our deer and buy our land cause hunting is cheaper than all the other surrounding states. Hunting with a crossbow shouldn't have its own season the same argument people have with the crossbow hunting is the same argument people had when compound bows came into effect you want people hunting keep things the way they are now

It seems we cater much more to bow and crossbow hunters some of us hunters are just not interested in hunting with those weapons but would like to hunt with guns during some of those premier times when only archery hunting is allowed even if it was just with shot guns. With the accuracy and range of the newer bows and crossbows would it truly be much different than using a shotgun.

Moved to Vernon county 5 years ago and own hunting land Here as well. Deer hunting was a major reason for moving here and it continues to be a great place to hunt white tail deer. I like the option of holding off on doe harvest until I have taken my buck and having the ability to harvest does if needed during late season with rifle. Would continue course, job well done
Why would the committee put in jeopardy the tradition of the gun hunt around the Thanksgiving holiday! Talk about losing money. Why do they talk about making things more simple in the regulation of things & then there is constant change that never does any good & makes more problems. The deer are where people cant hunt. More seasons & changes don't do a thing for that.

Don't change anything with crossbows. I went about 20 years doing no bow hunting just strictly gun hunting. When crossbows became legal for the average person to use, I tried it out and got hooked. I love crossbow hunting now and almost enjoy it more than gun hunting. Please don't mess with it now as I'm sure there are several other people who feel the same as I.

Need to give archery hunters a few days before the squirrel gun guys start running around shooting up into the trees and chasing the deer into hard cover. Lost my scouted buck opening morning when a squirrel hunter walked up on me in a tree then started shooting squirrels 200yds away as my buck was approaching my tree setup...buck turned and walked away educated.

Please DO NOT support any extended 19 day gun seasons. Please eliminate the Holiday Hunt...what is the percentage of bucks shot during this time (accidental, buck fawns, bucks already dropping antlers). This is a great time period where it would be nice to be able to bow hunt for does and bucks but that possibility is eliminated with this bogus Holiday Hunt.

Please bring back Back Tags. Trespassing is less likely to occur with visible back tags. Without the back tag, the trespasser is virtually anonymous. This can lead to undesirable confrontations in the woods. With Back Tags, the land owner can contact authorities who with the use of the tag number, can locate the trespasser and take appropriate action.

2019 early bow season I saw deer every day in the woods. When gun season came around their were 4 hunters on my property and no one saw a deer. I personally hunted all 9 days and never saw a deer. Which is really unusual. The rut was well over with and the deer just were not moving. It is hard to fill the bonus tags when you don't see 1 deer all season.

what happened to backtags for hunter identification?how do you report a violator without id?What happened to registration stations to keep youth involved with other hunters success?Since crossbows are now used by all ages, poaching and vandalism have increased. There are too many deer seasons, the deer do not have time to calm and are always stressed.

I would like to see the state and the DNR do much more testing and give out more information and suggestions on helping to control and or combat CWD. If there is more money that is needed not just deer hunters but all Wisconsin outdoor sportsman couple and most would be willing to contribute a dollar or two (through license cost) to fight CWD.

this year turkey hunting on private lands, I notice alot of deer manly small deer than larger ones..on other news I heard that it was suggested to open season on badgers...That is very dumb.. get federal judge in this state to open up wolf hunting,they are getting carried away.. before badger season how about eagles,they are abundant

The only two things I'm against is the extended archery season,and the holiday hunt I believe to many deer are shot because people in my area have standing crops to hunt over the late seasons.all these free extra doe tags are ridiculous that is just to many per license,I could see 1 free and have to purchase the others. Thank you

Stop the public or private B.S. the info collected is never used anyway, it doesn't take 3 months for a computer to add numbers. If you want to know why interest in hunting is down, look at the regs there are a lot more it is illegal to -- than you may. The DNR needs read it's charter, help the sportsman not harrassed the sportsman.

DO NOT put gun season the first week of November. You will ruin the rut for bow hunters. It is fine where it is. The use of the crossbow needs to be toned down. We need to go back to the way it was where you needed a doctor’s note, have a disability or be retirement age. The use of the crossbow to hunt is getting out of hand.
Let's get back to a 9-day season for gun deer. It is my belief that if the time is shortened that gets more hunters in the woods during the hunting period, if they truly want to harvest a deer. I believe that people wait until the end then try to make push fill unfilled tags yet the weather in December will often restrict this.

Go back to earn a buck. I hated it then, but would support it now. I agree we need to get rid of some does. Having said that, if you implemented a doe only season I probably wouldn't hunt at all. I think you will lose hunters that way. If I don't hunt, then my wife and kid very likely don't either.

It always felt like the DNR did a much better job with population management when "earn-a-buck" could be implemented. Some of the comradery with the sport left when in-person registration was done away with. There has also been rumors of some folks not registering deer through the online/phone in system.

I just want to say is leave thing alone. Yes, it was a hard year to harvest deer you have consider the weather and the amount of corn that didn't get harvested during the hunting season. We have had bad years in the past that is part of hunting, so please leave things alone. Concerned avid hunter.

I do not hunt the holiday antlerless hunt. I would gladly do so, as would my grandsons, if I could harvest a buck. I intend to harvest several does this year, something I have not practiced in the past. 'earn a buck' taught me not to like being in the woods while mature bucks walked by...

I would like to recommend the elimination of man made watering holes to help prevent the spread of disease among the deer population. In our area the deer population is at a good number but when they congregate at these water holes it increases greatly the chance of spreading disease.

I would like to see an antler size restriction in this county. I think the potential for very large deer is here if we can let them grow a couple more years. I would like to suggest a 4-point per side rule. But still have the flexibility for kids to shoot a lesser buck.

I have continue to hunt due to the option to use a crossbow. If this was taken away or the season limited/shortened I would most likely not continue to purchase a license. Thank you for all that you do to provide us with a great opportunity to hunt and enjoy the outdoors.

I thought the video was very well explained and slow, which helped to understand a little better and put things in perspective on the way of thinking! I would like to say the extended Archery season was very pleasing... in that it helped with not getting the winter BLUES!

Neither I nor those in my group support the issuance of three doe tags per harvest permit. Although I like venison, I typically harvest only one buck or doe per year. In my opinion, the issuance of additional tags makes the gun deer hunt experience less attractive to me.

The antlerless deer seasons, and holiday season should be earn a buck, so you could utilize the buck tag already purchased. This would also increase the number of antlerless deer harvested. This would only be for those which still have their original buck tag to use.

Please bring back the back tag scenario. Last year we had one of our hunters that had a guy shooting at him and we had no way of distinguishing who was shooting at him. So we had someone running around committing attempted murder with no possibility of who it was.

Crossbows are ruining hunting as a whole! Crossbows should be limited to elderly and disabled. I don't believe there were fewer deer, just more pressure because 3-year-olds are shooting crossbows. So deer are getting smarter and injured and not retrieved.

Regulations should go back to the way they were pre CWD. Also add an option to be able to purchase an additional buck tag for residents of the state. Raise non resident hunting fees. Possibly go back to earn a buck if you have a way to regulate it good.
Overall, the amount of deer seen and harvested seemed low. Buck population seems high, while the population of doe seems lower than in past years. We’re surrounded by farmland that have more access to Agriculture tags than in past years.

I agree with the Holiday but I also think bucks should be included if we are trying to reduce deer numbers to a manageable level but I also disagree with the 4 day antler less hunt. Leave it up to the counties to manage the deer herd.

Your number was way off on how many deer died from Stoddard to Coon Valley this last summer/fall from EHD. It was somewhere between 150 to 200 that were found dead from the land owners I talked to. Those deer are gone.

I believe CWD testing compliance rates would increase if the DNR didn't collect so much info on the hunter and the landowner, which can then become public. Hunter and land owner information should be protected.

I feel that people in general are hunting for horns instead of harvesting for meat so by extending the season is foolish unless me could somehow someway give it to the food pantries or something along them lines.

I understand the 3Y goal is to maintain, but we are above the 2017 population. Why are we not targeting a higher doe:buck ratio to achieve the -7% impact in the presentation? (i.e. 3370 bucks and 6740 doe)

You need to bring back, the back tags as people are trespassing and no way to identify the trespassers and especially one group of people in the area know that and just run when you see them.

There are too many antlerless tags being issued. The deer numbers seem to be dropping quickly on public land. High number of predators and high hunting pressure have taken a toll.

Amish group hunters are not checked very often and have no regard for property lines, or ethical hunting practices. They often poach off season, and never investigated for it.

While bowhunting this year, I observed a high ratio of bucks to does, a higher number than in past observations. I do believe that what I saw last year was a healthy ratio.

Don't like how many doe tags you give with each license we buy. The deer population is way down if you ask me. I don't want the gun season to go longer than 9 day earlier.

The area around Wildcat and the public land near La Farge had very little sign of deer. Many people I talked to said it was the slowest opening day they have ever seen.

Give out more free antlerless tags. The DNR does not need to charge $12.00 for additional antlerless tags. Coyotes and wolves eat more deer than the humans do.

I would suggest eliminating the 4 day antlerless hunt. With bowhunting becoming more popular, it cuts into late season bow hunters opportunity to harvest bucks.

There is still large amounts of deer in this county. Keeping the antlerless hunt will keep the numbers down, but at the same time an overkill is not an option.

I’d love to kill the diseased creatures but I don’t want to eat them. Get rid of the wanton-waste rule for this species. Otherwise, I will not be hunting.

Open the regular gun season 1 weekend earlier...just for two days....close backup for 5 days...then re open for the next weekend for 9 days. Thank you.

Perhaps consider allowing landowners with 200 acres of farmland or at least 100 acres of woods some flexibility in purchasing doe permits.

I am concerned about the coyote population increasing. Also, keep archery going up until gun season, and let us bow hunt during gun season.
Hunters 65 and over should get a license at a lower rate to keep their interest in hunting. Just like fishing and small game.

If the NRB decides to extend the archery/crossbow season, I recommend that it should be antlerless only. Thank you.

I'm in favor of rolling back the crossbow hunting season to make it much shorter than the regular bow season.

Adopt a deer Management program like Minnesota and Michigan with only certain size bucks able to be harvested.

2019 I hunted first 4 days of gun hunt and didn’t see one deer. First time this has happened in 15 years.

I think the license fee should be reduced for anyone over 65 to keep them in the woods to enjoy hunting.

Thank you for allowing community input to be considered when the rules are being written each year.

I would like to see a 4 point on one side antler restriction to get to an older class of bucks.

You should make the holiday hunt you can hunt Antlered for a reward of shooting do Antler less.

We do not see a lot of deer movement Due to the lack of pressure from Deerhunters around us.

Give management authority back the biologists. Allow for t-zone October hunt again and EAB

Earn a Buck would help control deer population.......population is high in vernon county

Bring back printed tags! It's tradition and make everyone at deer camp feel involved.

Would like the gun season to not be early or late in the rut, rather in the middle.

Earlier season for gun. Too cold, out of rut, preference for bowhunters not fair.

Try and get more anterless deer harvested, earn a buck is an option.

I would like to thank you for including the public in your decision

I do not want to see any changes to the crossbow hunting season

Why no questions about EHD and how it affects decision making?

Found a lot of dead deer guessing from blue tongue

Incorporate shotgun with the muzzleloader season.

There is a lot of deer/vehicle collisions.

I think the recommendations are good.

Please leave the deer seasons as is!

would like to see earn-a-buck again

Make the season like Minnesota’s.

no holiday hunt!

leave it alone
The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

657 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 238
   - I visit this unit for non-hunting purposes: 205
   - I hunt in this unit: 600
   - General interest in this unit: 117

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 551
   - Bow: 250
   - Crossbow: 230
   - Muzzleloader: 132

3. How many years have you hunted deer in this unit?
   - Minimum: 0
   - Average: 25.59
   - Maximum: 70

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 152
   - Mostly Private Land: 56
   - Public and Private Land About Equally: 95
   - Mostly Public Land: 87
   - Exclusively Public Land: 201
   - I did not hunt in this unit last year: 9

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 11
   - Not too crowded: 65
   - Neither crowded nor un-crowded: 81
   - Somewhat crowded: 99
   - Very crowded: 174
   - Not applicable: 9

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 140
   - Fewer: 182
   - Same: 185
   - More: 96
   - Many More: 44
   - Unsure: 10

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th>Much Too Low</th>
<th>Too Low</th>
<th>About Right</th>
<th>Too High</th>
<th>Much Too High</th>
<th>Unsure</th>

First of all I'd like to start out saying, I scout whitetails 8 months out of the year, I run a good amount of trail cams throughout the county and I hunt about 3 months out of the year very hard. Its hard to have success here if you are looking for a decent buck. But being out there all the time I am able to see whats going on. I hunt all public land, county, state and federal. Historically Vilas county has been one of the worst areas in the state to harvest a mature buck sporting some decent head gear. This is due to lack of nutrition, severe winters, predation and just overall stress. I think we should be the first county in this state to set the bar and pass a 3 pt on one side antler restriction. Not to grow trophy bucks but to protect spikes and forks so they have a chance to go through the cycles of life and maybe they will have a chance to mature more. Seems like non resident hunters and hunters from southern WI come here and harvest the spikes and forks way to often. We do not have a quality herd because of this. People like seeing a nice buck, it brings business to the area, and when one is harvested the business continues onto the taxidermists, maybe the butcher shops. If muskie fisherman can get a 50" size limit why can’t we get something to help deer in the whitetail capitol of the world? We should try it, what's it going to hurt? People will have more success and they will be happy. This should be an option and many of us would like to see this. Otherwise we would like to see one buck per hunter a year. We are losing hunters not because they aren't seeing deer, because they aren't seeing any decent bucks. I also would like to mention that my trail cameras do show the wolf population increasing every year. I also pay attention to the winter severity and this winter we are at a very severe number already for stations in Vilas county. So there should be no antler less tags issued for public land after any severe winters. I believe it should be lowered for private land as well after severe winters but there are areas near cities and towns where the doe numbers could be maintained. The extended rifle season will hurt our fragile deer herd, and the continuation of crossbows for anyone all archery season is really having an impact on the buck population, I do not agree with either. We need to have a crossbow season and stay with the traditional rifle and muzzleloader season. If people are in the woods with rifles at the tail end of the rut it will be devastating to our buck population, they are like sitting ducks. One way we could make things a lot easier is change the way the seasons begin. This is a suggestion for the whole state. There are years we hear how the season started to late like 2019 so that lowers the harvest of bucks. There is a simple fix, make rifle season open on the same date every year like MI. This is my idea on season structure and I believe it would improve our state and simplify everything; Archery Season - Sep. 15th-Jan. 15th statewide continues Crossbow Season - Nov. 15th-Dec. 15th statewide continues Rifle Season - Nov. 20th-Nov. 30th statewide, weapon of choice Muzzleloader Season - Dec. 1st-Dec. 10th statewide No extended archery hunts, no holiday hunts, let the counties control their herds as needed. Lets make this the greatest state to hunt whitetails because right now we are falling off the map, losing business and losing hunters.
4 Reasons why The Northwoods Deer Hunt is failing, and may likely lead to its ultimate end - 1. Hard winters; 2. Lack of agricultural crops/food available in the area; 3. Overabundant predator populations given the land space; and 4. A lack of hunters in the Northwoods, primarily because of reasons 1, 2, and 3. There is no joy in hunting year after year in the Northwoods to freeze, and then in most cases of recent years, not even see a deer at the same time. Hunting should never be about the kill, there is no better way to enjoy the outdoors. Yet to essentially know each year when heading North, that you virtually have no chance to harvest a deer, purely from a statistical perspective given the conditions, has made many hunters leave the North in order to deer hunt, and others to leave the sport altogether, which is bad for everyone in this State, terrible for the future of the sport, and counter-productive for the future of managing wildlife in this area. There is a deer migration which has been occurring now for years; the animals from the Northern forests have been conditioned to leave this area, to go to areas where there is: 1. substantial food supply, and 2. milder winters. The 3rd reason or catalyst that has spurred on this migration of deer to the South, is that virtually all forms of predatory species in the North, have remained unchecked, all the while reasons # 1 an 2 are present. Wolves may not be harvested, bear are arguably under-harvested and are known to take their toll on the fawns each spring, which is particularly damaging to the herd. Coyotes and various cat species are equally unchecked, given the amount of land, and the limits surrounding taking these animals. If the deer can find no relief from the winter climate, and have no food, they will have been conditioned over time to take zero risk in living in these areas, when they have recognized that predator numbers are higher. There should be no question in anyone's mind as to why there are no deer in the Northwoods. There are few deer in the Northwoods because they have left over time for more manageable and survivable conditions elsewhere. Control the variables which could entice more folks back into the Northwoods to hunt - 1. Liberal rules for taking predators in the area, these species need to be dispersed more widely, and to areas where the deer herd can better handle predation. If they are hunted more frequently there, they will be conditioned to leave and the local deer populations will have a chance; 2. Revision changes to deer hunting rules, fees, & other in the Northern DMU’s versus other areas or DMU’s, in order to get more people back up there to deer hunt.
I spend a lot of time in southern and central Vilas county. I am on the back roads and in the woods most of the year. Deer are not equally distributed throughout Vilas county as there is not enough food or habitat in old growth forest. I have seen a large amount of logging this winter throughout Vilas county which should increase deer habitat throughout the county and allow the deer population to expand throughout the county. The predator population really needs to be addressed. Yes the wolf population is high but the coyotes are doing a lot more damage to the deer in the county due to their sheer numbers. 5 deer were killed in our subdivision within feet of homes this winter by coyote packs. Hunter pressure in the area I hunt which is mostly public land was non existent last season. While the 1st two days were ideal, the rest of the season was unhuntable due to the high snow totals. You could not even get off the main roads to park for the last 5 days and in our area deer went nocturnal due to the presence of a pack of coyotes. Every deer track I cut during the season was followed by a coyote. The feeding and baiting ban is ridiculous. Driven by the presence of CWD in a pen in Three Lakes everyone is penalized except for the Private deer farm. They are allowed to stay open and new cases arise each year. Many people feed deer because they love to see them. Sometimes this extra feeding provides calories for the local deer population to survive the harsh winters we have had the last 3 years. Deer interact with one another and family members lick each other constantly. Deer from other families will fight constantly driving off deer that are not in their family groups so the premise that feeding deer will increase the spread of CWD has little merit. If that were true, every deer in Vilas and Oneida county would be infected by CWD. With the poor soil and harsh winters, bucks in Vilas have not been getting the proper nutrition to produce even average antler growth. We had 17 different racked bucks on trail cams last year but they didn't have any mass or tine length. 3.5 year old bucks had 4 and 5 points. If an antler restriction were put on bucks in Vilas there would be very few bucks harvested at all because it takes 5-6 years for the bucks to achieve trophy proportions. Lastly I see people complain all the time about the lack of deer in Vilas county. There are plenty of deer here but you need to put forth the effort to find their food sources, read their sign and get a grasp of their movement patterns and get off the road. Most hunters are afraid to get off a road or trail on public land from what I have observed. I specifically want to respond about the considerations to ban baiting. I have hunted the Northern Forest for over 30 years. I have a small vacation home in Vilas Co. but no hunting land. So I hunt all public Forrest. I used to do a lot of hunting in this area but since the ban on baiting, I find it very hard to financially justify a 3 hour drive to and from home every weekend to hunt in an area where I can seldom if ever see a deer while hunting without bait. The territory is too large and deer are beyond challenging to pattern. I feel like the current DNR rules on baiting are driven by the large land owners who then with their food plots can control the deer movement. Is a food plot different from a spread out pile of corn? The deer are still eating in close proximity and feeding on the same plants, probably in larger numbers than I have ever seen on a bait pile. I fail to understand how this is not obviously the same. In addition, the bait pile is gone in a day and sits empty until the hunter has the opportunity to return. The food plot is always there. This practice reduces the opportunities for the average hunter that utilizes public land to hunt. The hard working "The little guys". In addition, to my knowledge, most if not all of the CWD found in the Northwood's has been related to deer farms. Rather than ban baiting to stop the spread of CWD why not address the real problem and ban the deer farms? What do they bring to the state? They are and have been the biggest problem with CWD in the north woods. Many other states, countries, have CWD and don't ban or restrict baiting. I personally believe just like VHS die offs, grouse cycles, poor spawning/nesting seasons, predator populations, weather etc.... it is mother natures way of controlling her own. I personally have never seen a sick deer in the woods and have hunted as well as spent an awful lot time in the wild, as I am a very avid outdoorsman. Lastly, I am a hard working blue collar guy and I can tell you me, many of my friends, and co-workers feel like the ban on baiting only values the rich guys with all the land. The ban on baiting in unnecessary and unfair. Thank you for listening, I hope this feedback is felt and heard.
It is obvious from the information presented that there is a deer population problem in Vilas County and as conservationist and deer hunting advocates something has to be done. I think the issues most affecting the herd are winter mortality, the number of predators, and the lack of habitat. We cannot control mother nature. We have very little control on the predators except for trapping permits and too few bear permits. We have no control on the number one predator the wolf. Hopefully more can be done regarding logging to provide better habitat. I find it difficult allowing antlerless permits of any type except possibly crop damage and only if there is sufficient proof. The population is too fragile. I love hunting in northern Vilas county and have been doing it for 62 years. Thank you dad. I know there have been good years and not so good. But what worries me the most is the predator numbers. That combined with the bad winters are taking their toll and tilt the scale in the favor of the predators. For the past 10 years I have been maintaining five personal trail cameras on public land. For the past two years I have maintained one DNR camera. This has always been more of a hobby than anything else. If placed in the right spot you will be amazed at what shows up. My DNR camera is a good indicator of a cross section of wildlife in Vilas county. My cameras are proof of the predator problem in northern Vilas county. This especially true in the past four years. The predator photos especially wolf photos have risen at an alarming rate. Bobcat and coyote photos have been and up and down. Somewhat a factor of the number one predator. I notified the local DNR office last year of the increase of wolf photos and the decrease of deer especially buck photos. If you want my opinion, the a late opener low buck harvest is a small part of the real problem. This was not only verified by my 2019 photos but also from my observation from my bow stand and time in the woods. Also, I saw very few fawns and twin fawns were the exception. I hope this has helped.

Having hunted in Vilas county for the past 56 years I have seen a dramatic drop in deer density at our camp. The peak deer density was back in the late 90s to early 2000s same as your data reflects. The historical data the department has shows an alarming trend in deer harvest numbers. Based on the data I reviewed the peak harvest occurred in 2000 with 10,077 deer harvested as compared to this season of 1398. This constitutes a 84% drop. In 2007 the total kill was 6175 as compared 2019 of 1398, a 76% drop. Buck harvest total in 2000 was 4706 compared to 1398 this year, a 70% drop in harvest. We have come a long way since the glory years and continue to head in the wrong direction with deer density. If you add in projected wolf kill for Vilas County of 720 you can see its going to be very difficult to grow the herd. Several questions come to mind as one reflects on the numbers, has there been any analysis by the department to see if this downward tend correlates to increase wolf numbers I suspect it does. Some people say the need for doe permits is to prevent high numbers of yearling bucks being harvested. This would then lead to more mature bucks in future seasons. We have always harvested a large number of yearling bucks every season as SKA data supports because they are the easiest target, older bucks are more wary. I believe we are losing a greater number of mature bucks because of their weakened state following the rut to wolf predation and winter severity, not because we do not have doe harvest permits. I have had the opportunity this late winter and early spring to walk many areas of Vilas county forest mainly in Eagle River, Conover and Star Lake regions seeing very few if any tracks or sign even in areas with good woody understory available. The only areas where deer were found was near residential areas. Based on my observations and your data I would like to see no doe permits and a goal to increase the herd! Thank You
This review did not even touch on my biggest concern. Baiting. I believe in the Northern Forest deer sitting go significantly down and the kill numbers will go with it. If controlling numbers is Your biggest concern allowing baiting should be your first step. CWC was introduced through Game Farms. This is a fact. Your average hunters are being penalized because some people are profitting from raising deer. If you want to remove CWC from our state start where the problem is, remove the game farms and allow everyday hunters to see and harvest more deer. I believe if you ban baiting your only hurting the people buying the license and when you talk about poor kill numbers. Please put down one of the main reasons for this to be banned baiting. I’m sure you hear this a lot but I am an avid outdoorsman and have hunted all over the world in many different conditions. Hunting mature bucks in Northern Wi without the ability to attract does is very tough. We’re not hunting in large acres of crops. I hunt public land 90% of the time. I would gladly prove my point if you pick any one person and have them solely hunt Vilas Cty without bait and I’ll hunt private land in the south over large crop fields and we’ll see who claims the trophy. I’m not saying it’s impossible because I’ve shot trophy bucks it in Vilas Cty. But like I said I spend countless hours in the woods. I see dozens of deer just driving around and thru the hunting season and have yet to see a sick deer yet we’re banned from baiting. Please consider the whole picture. If your going to address CWC. Start at the source. To my knowledge there is no cases in the wild in Cikas it and surrounding counties. Only inside game farms. Please ALLOW baiting in Northern Counties. Texas allows baiting and has one of the Largest Healiest herds in North America. Thank you for your consideration.

I have hunted from my deer camp that once had over 8 guys. In the last 5 years our group dwindled to only 2. We haven’t harvest a buck in over 5 years and the last two seasons haven’t seen a deer until about Monday. My 3 sons once hunted from our camp but haven’t hunted since the population crash. I will not bring my two grandsons to Vilas county not wanting to discourage them from hunting so they hunt my farm in Portage County but I remain in the north-woods. This year I brought my horses and on Friday the day before the opener I rode for 10 miles after the fresh snow through my hunting area which is north of Phelps. I only cut about 6 deer tracks non of which was significant in size to indicate a buck and I saw now rubs in the 10 mile route. During the summer I see enough does that I thought the population was up but track evidence from 2018 and 19 indicate they congregate along the highway hence more visibility and near buildings. Drive off the main roads during deer season and you will cut very few if any tracks. This herd needs to grow less than 20 deer per square mile with no mature bucks makes for a disgusting hunt. 2019 was probably my last season in Vilas county until the deer her replenishes. Its a shame because I recently finished building a new cabin. I gave up hunting Michigan for the last 10 years for this very same season. I also see very few hunter in along the roads and I know of another group I spoke with that will not be back next year. Winters have been tough and deer are avoiding predators by hunkering down near residents. I also think that previous doe harvests and bad winters have removed the matriarch does from the herd that once lead deer in my area to the yards now leaving sub family groups to cluster in marginal winter areas making them more vulnerable to predation.
There are far too many antlerless deer in this unit then the CDAC members in this county believe. The CDAC recommendations have done more to hurt deer hunting, forest regeneration, hunter numbers, reducing the future of youth hunters and hunters in general. I've been to couple meetings, they are a waste of time other than the info the WI DNR biologists present. Wisconsin had the best whitetail deer management in the world, not just in the USA. So we went to a committee of non biologists, non wildlife education background people to tell the experts what to do. It's been a disaster in Vilas county. I have so many friends/family that no longer hunt here. Many have stopped deer hunting over the joke that our management has become. It's a sad thing for the future of hunting/outdoor sports in this state. I teach hunter safety which makes it even more frustrating. Please let the DNR manage the deer hunt and follow their recommendations. All my neighbors hit deer w/ their vehicles (3) in December/Jan after our gun deer season. I've left skid marks all over Vilas county but I have not been able to get a doe tag here in 9 years! I can't even shoot one w/ a bow and arrow! I have a very low opinion of most CDAC members in this county. That is based only on their knowledge of what they should know but don't. Please let the scientists and DNR wildlife biologists make all recommendations. It will benefit local business, hunters, landowners, forests so much more. Then enforce the baiting/feeding rules. Cross bows are taking a lot of deer illegally and are being registered in other units if at all. A lot are not being registered (antlerless) That will only get worse w/ this farce if it is allowed to continue.

I appreciate the opportunity to participate in this survey. It was not clear to me earlier in the survey when asked about the number of deer I saw in 2019. I would like to clarify what I saw and when, compared to 2018. In 2018 I saw antlerless deer while hunting during the gun/rifle as well as the muzzleloader season. I also saw antlerless deer during the summer/fall while on our private hunting land. Also in 2018, I captured images of bucks on my trail cameras on private land, mostly at night but a few images in the daytime. Most of the buck pictures were in late September - mid October 2018. I regularly saw antlerless deer on private land throughout 2018. In 2019 I saw antlerless deer during the summer/fall on private land. I also saw antlerless deer on trail cameras throughout 2019, and like 2018, I saw bucks on trail cameras in the fall - late September into early October. The last buck picture I had was October 5th, 2019. I saw no deer during the gun season, and I did not hunt the muzzle loader season in 2019. I have not yet been our private property in 2020 to check the trail cameras, so I don't know (yet) if cameras have captured deer in 2020. I would prefer to see more bucks, and I also know that there are about 1000 factors that go into seeing bucks during the gun season. I am not a professional hunter, but it is an endeavor I do enjoy and hope it continues on for future generations. My deer camp has harvested two bucks in Vilas County since 2009, one shot in 2009 and another in 2010. The deer camp has been hunting our private land and public land around it since the 1950s. We have seen consecutive years without bucks taken previously, but never 10 years, which is where we are now.
I have hunted in Northern Vilas county for 58 years. Only missing for four years while serving my county. I am a Snapshot Wisconsin volunteer and have been placing five personal cameras in the Vilas county forest for nine years. I have witnessed the good years and the bad years. How can we turn this around? What stood out to me is the lack of buck sightings last year from my stand and from my cameras. Some people blame the late gun opener for the poor buck sightings and low buck kill. I knew long before the deer season that it was going to be a poor year for buck hunters in Vilas county. I reported to the DNR last fall the number of wolf sightings from my cameras and wolf tracks has been on the increase for the past four years. The deer have never been under so much pressure in the north woods. The fawn numbers are down and it is very unusual to photograph twins. We cannot control mother nature but we should consider controlling what is controllable. Increasing the regeneration of deer habitat in the county. More trapping incentive's especially coyote. More bear tags. More pressure on the courts to control wolf population. I also think we should allow the experts to make the decisions on deer population and not politicians and other assigned special interest nominees. It is good that the general public has input but I long for the days when we had a chance to see trophy deer in the northern forest of Vilas County. Whatever we are doing is not working. One last comment. Put an end to online registration and baiting. I am not sure the millennials know how good true deer hunting in the north woods use to be. I think with the right leadership and can be again. I just hope it is not too late.

Vilas county and the northwoods in general must maintain some level of antlerless harvest to provide incentives for hunters to travel to our area and maintain the northwoods hunting tradition. The promise of a big buck is gone. I am an avid public land “big woods” hunter and have all but given up on the potential for killing a nice mature 8-10 point buck in Vilas county. My partners and I have spent many hundreds of hours scouting and hunting the National Forest up here over the last 30 years and sightings and sign of bigger bucks have become almost non-existent. I know many life-long locals in the Phelps area that have stopped buying deer licenses for that reason. At my home I am blessed to make 3-20+ deer sightings almost every day of the year yet the largest buck I may see all year will typically be an 11 inch spread 6 pointer usually early season or during the rut. I would support whatever management steps are necessary to restore some “hope for a “nice one” again. I have started hunting Rusk County and am experiencing dramatically more nice buck sightings. I won’t hunt Vilas again until I am able to capture at least one decent buck on camera. (15 inch wide 8 or 10 point). My present theory is that stress from predators is resulting in more buck kills when they are exhausted from the rut. FYI- the last “good old days” of big buck hunting ended about 1995. Two variables after that are baiting and wolves. Check old issues of Vilas County news from rifle seasons in the past. The issue after rifle opener looked like a copy of North American Whitetail magazine.

I think there should be no antlerless harvest this year, and I believe the buck harvest should be only bucks with a minimum of three points on each side. I know this would hurt hunting in Vilas county in the short term but make it better in the future. I travel at least 70 miles a day in Vilas county every day throughout the year and all I ever see is town deer, which are does and maybe a buck once a month. I also hunted the archery and gun seasons and never seen a buck during either season. Also again last year more does harvested then recommended antlerless harvest. Along with a very severe winter are all reasons there should not be a antlerless harvest. The deer I am seeing this spring are very thin with ribs showing and I question whether they will survive. We need more does to build our buck population and protect our small bucks. There are not enough bucks right now to breed the does we have. The youth hunt should not go on all the way till a person turns 18, it should end as far as harvesting a doe after they harvest a couple deer and then follow the same rules as everybody else. The changes made a few years back are destroying deer hunting,(no registration, no back tags, no clear zone boundaries) have all taken away the ability for a person to report a violator. No matter what your decision is good luck trying to enforce any hunting laws. The whole system is ripe for providing distorted information. Good Luck from another hunter who is very disgusted with the current state of deer hunting.
It’s incredibly difficult for me to understand why we have lost the traditional means of registering deer in Wisconsin. What it’s become is an “honor system”, and I absolutely know what I’m talking about, unfortunately I’ve seen it, I hear about it, and it’s being abused- big time! To the degree that I assure you, your harvest numbers are a joke. And it will continue, because it’s that easy to do. To not claim your kill immediately with a metal tag, invites dishonesty, if you don’t believe that, your fools. Absolute fools! The loss of back tags, is another ignorant move I’ll never understand. Why would you prevent honest hunters from identifying dishonest behavior, poaching, trespassing, with a identifiable tag that could be reported to local authorities. WHY? How much revenue have you robbed local deer registration locations, Ma and Pa businesses, taverns, convenience stores, etc, by online registration or 800 numbers? Not to mention the tradition that most every deer hunter 15 years old and older once knew, and very much enjoyed? WHY? If you value accuracy, honesty, economic growth, dump this total B.S. system you’ve implemented in Wisconsin! Go back to what worked well, for everyone, for decades! The dishonesty spawned by the new “regime” is alive, and doing very well. Take it from one who knows absolutely what I’m talking about.

I along with the others in our group that hunt have all concluded that since the wolves were introduced the deer population in the northwoods has decreased dramatically. Some of our group has decided to hunt elsewhere and some of the others have stop hunting altogether because they are so disgusted with not seeing deer. Two years ago we had three of our hunters that were out in the woods hunting for four days. None of them even saw a deer of any gender! That is pathetic. Our group only goes now because of tradition along with the fact that it is the only time when many of us get to see each other during the year. I have considered ending my Wisconsin deer hunting but can’t since our group stay’s at my place for the hunt. The wolves must be dealt with. Have a much larger season and very high harvest rates for them. What makes it even worse is Vilas along with the other counties that border Michigan have to deal with poor policy by their DNR not believing that the wolves are a problem in that state also. Something has to change or deer hunting will become only a memory instead of reality. Guess that’s what the tree huggers, anti gun and anti hunters want. How many businesses that depend on revenues from hunting have to fail before our DNR acknowledges there is a problem? Sincerely, Upset Hunter and Taxpayer

I am basing my opinions on the fact that I have deer hunted in Vilas County for over 50 seasons and I am a resident of Vilas county. Although the season started at its latest this year, opening weekend weather was perfect for hunting. We had enough snow on the ground and the temps were mild. This allowed hunters opening weekend access to their areas and the weather allowed all day sits either on the ground or in a tree. I know a major weather pattern came through mid week, but aren't the majority of bucks harvested in the 1st 3 days of the season? On opening day, I sat in my tree stand from Sunup to Sundown and saw 2 deer all day. Back in the 2000-2006 era, it was common to see 10-20 deer on opening day. Deer sightings have gone down ever since. Comparing this to the 2018 season, I hunted 7 of the 9 day gun season and 5 muzzleloader days and only saw 5 deer the entire hunting season. I think deer season in the Northwoods will never be like it used to be in the past. Gone are the majority of deer camps and the lure of the Northwoods hunting experience that drew all the hunters up here. All you have to do is check out area buck pools to see how hard it is to harvest a buck. Despite everyone’s best efforts to manage the deer herd, we just don’t have the deer herd that you think we do!
The number of deer being poached is ridiculous. Many people “recycling” harvest authorizations. Many people filling out false information when it comes to harvest authorizations. Many people not buying tags at all, with no in person registration it gives poachers a free for all to kill as many deer as they can. Also, the number of deer being taken by Natives is absurd! How is it only 200 antlerless tags given out but one native can go out and shoot 6 in one night? Either you are oblivious to what’s going on or you are ignorant and don’t care! On top of all the poaching and unlawful slaughtering of our deer herd from vehicles in the middle of the night, we now have to worry about the wolf decimating the population. It is already too late, damage that can’t be undone is happening right before our eyes and it is pitiful that our generation simply turns a blind eye! A 6 point minimum on antlered deer would drastically improve the quality of bucks harvested in Wisconsin. Also, sell less out of state licenses for more money! Wi is way to cheap of a state to hunt in there for we attract scum that can not afford to hunt anywhere else. People that exploit our laws and our game! STEP IT UP WI DNR, YOU ARE FAILING OUR STATE!!!

I watched with interest Michelle Woodford’s video on deer metrics and appreciate the impossible task of finding many concrete conclusions on deer populations with so many variables involved. At the same time efforts must be made to manage the deer herd on the best available information, so I would add one suggestion that might be worthy of your consideration: The deer/auto collisions data are sadly lacking anything like the true numbers due to the fact that they are based on REPORTED accidents. Many deer are hit and either stumble off to die later or are not reported at all. I have a suggestion here that could be of some use: As a retired person with the time and in an area with many deer accidents, I would be willing to keep a tally of actual deer carcasses on a stretch of road, say County N from Sayner west to County M in Vilas County. I would record the date, location, sex and size of deer. Perhaps another person could watch State Hwy. 155 from Sayner to St. Germain? I’ll bet with your leadership a network of observers could be organized to help provide a better estimate of deer numbers in those areas? Just a thought.

I would like to see a one deer permit considered that would allow hunters to harvest either an antlerless or antlered deer. This would enable hunter that choose to hunt for meat to harvest a mature doe if they choose. Additionally, it would reduce the number of immature bucks harvested. When the only option for hunters is a buck, too many take the first deer they see with antlers. Way too many immature bucks taken every year. Way too much poaching is occurring by rifle hunters during the archers season. 2019 was extremely bad with the number of rifle shots every dawn and dusk all throughout the archery season. Need to either allow baiting or not allow sale of bait and fully enforce rules. When I grouse hunt, I find a lot of bait piles all throughout the public land I hunt. Additionally, I see/know of a lot of people baiting and with "feeders" on private land. Your only opportunity to harvest a deer without bait is to set up on the paths leading to other people's bait piles. Personally, I am in favor of lifting the baiting ban. The bait ban is in place in Vilas county due to game farms and import of deer. Eliminate the game farms and import of the deer and there would not be CWD in the area!

In the years since the buck only hunting and the reintroduction of wolves without management the deer harvesting has gone down the areas I hunt immensely. I have seen fewer hunters every year. I have seen a plentiful amount of does every year but seeing a buck seems to be like finding gold. There were a few years when all I witnessed the whole year summer included was wolf signs. I scout pretty much year round in the area we have plenty of deer lately it might be time to start allowing for more doe tags on public land. The amount of tags on private vs public seems very disappointing. As an outdoorsman and a hunter for my entire life I feel that paying for licenses every year for a dwindling chance to get a deer is very concerning. I feel that people who don’t pay for the conservation of our wildlife are making things more difficult for hunters and fisherman. I believe baiting should seriously be discussed again because of the unfair advantage private land owners have in both numbers of tags and the ability to plant crops to attract deer away from public land. I hope my voice is heard and hopefully many others that hunt in the area as well as my fellow outdoorsmen and women.
During the 2019 season we hunted out of a camp with 8 hunters over the first 3 days of the season. We saw a total of 6 deer, all does. Most years I personally see 3 to 6 deer per day. I spend a lot of time grouse hunting or working in the woods the entire fall season. I felt there were somewhat more deer based on my observations in 2019. However, based on past years the population is down significantly. The objective, at least for western Vilas should be to increase the herd. I know eastern Vilas members of the CDAC believe there are too many deer so the CDAC probably settles on a maintenance objective. The old deer mgt units addressed this situation better than the current county system! Finally, the DNR should enforce baiting & feeding restrictions on an equal basis. Around Papoose Lake area many residents continue to feed deer. Yet I have not heard of one person being prosecuted for feeding. The deer congregate around the residences during the gun season. On Monday of the season a DNR plane spent at least an hour over the hunting area around Papoose Lake. If this situation continues you are going to lose more hunters & license revenue in Western Vilas County!

Antlerless Harvest & Quota: With a harvest last year of 303 antlerless deer, having a quote of only 200 seems like a disconnect. Current recommendation for 350 tags for private land and 150 for public also go well beyond the quota of 200, though not all hunters fill those tags. During the April 8 meeting, there were comments about lots of does and damage to the forest. Seems like a higher quote would be appropriate, and more antlerless authorizations. Comment was also made about non-local hunters being good for license sales and the local economy. Given that, I think the 350 tags for private land is good, but would suggest a higher number, maybe 200 or so, for public land tags, versus the 150 recommended. Also, re feeding, I think there are still lots of folks in the area that still feed deer. Maybe old habit for them, or they don't think their bit of feeding is making much difference. A little infraction is still an infraction, and all those add up to more than each individual thinks. "Oh, I only put out some corn for 'my' deer." I think better communication is needed to discourage such feeding.

My biggest topic of interest regarding our deer herd is the buck quality. Northern WI is known and loved for it's wilderness. Our bucks should represent the beautiful mature forests that they can thrive in. We teach responsible marksmanship in hunters education. Requiring hunters to know there target and confirm that deer has 3pts on one side before pulling the trigger is not asking to much. It's unfortunate that as a resident of Vilas County, I travel to southern WI to bow hunt 150 inch bucks because it's near impossible to locate and hunt 120 inch bucks in Vilas Co. If our buck herd had time to mature, hunters from all over would buy a non resident license for an increased cost in that license. Instead, our hunters are going elsewhere and I don't blame them. WI is always behind on these topics. Increased size limits and catch and release could and should have been spearheaded by our DNR but musky clubs had to fight for change. Look at the 50 inch class fish our lakes support now. It's time we do the same for our buck herd and give the spikes and forked bucks a chance to become men.

I hunt with a bow. I am probably a couple of steps above the average hunter in knowledge of whitetails. I saw 2, count that 2, deer while hunting in vilas last fall. Two doe, for a month in the woods, unreal. My son and I hunted for a week straight last week in Oct., he saw no deer, I got a glimpse of one. Year before I hunted Vilas at least 100 times, saw 12 deer. Had cameras out for couple of months last year and had one, one picture of a semi decent buck, normally have nice deer where ever I put out a camera. Less and less people in the woods up there. I really thought about not buying a license these last two years, I mean you have that phoney thing about baiting because of cwd in the deer farms, I get by without that, but why don't you shut down the deer farms since that is where the cwd is. But those people have money and money talks and that says it all. And deer registration is different now also, I mean why register a deer when you can take it home and cut it up and keep on hunting? It's like your giving these bums license to violate. I don't get it.
in the past I tried to suggest that a standard number of antlerless tags be available every year. A minimum number should always be available no matter what kind of winter we had or how many car accidents occurred. This number could increase if deer numbers explode. But the number should not drop below the minimum. It could be used during all deer hunting bow or firearm. In the 80's I used my tag as an insurance policy in case I shot a sub legal buck or big doe with her head behind a tree. I believe the tag system was much better than the previous party tag as I only hunt with one other person. I also hunt michigan and found their buck patch a nice way to get deer info from hunters who wanted to register their deer. I also think its foolish to have private and public tags. I think hunters should be able to fill their tag anywhere in the county. It seemed the group(CDAC) only thought that deer numbers were high between eagle river and st germain should there be an area within the county where more tags are available. such as a sub unit where additional deer control is needed.

9553  Thank you for an excellent video presentation on the perceived state of the Vilas county deer herd. My experience and knowledge of the public areas we hunt are that the deer herd is much smaller than what was discussed in the video and getting smaller. Our group of eight hunters is seeing less deer and our success rates are even worse. I would like for Vilas county CDAC to change it's goal from "maintain" to "increase" the herd and do away with all antlerless permits for at least one season and then re-evaluate. Another tool I would like to see available to the CDAC is the old "Party Tag" for antlerless deer. This was a good program in that it allowed groups to harvest a "camp meat" doe to eat throughout the remainder of the week. It required 4 hunters to apply for one permit, as part of the group hunt. There are to many factors that affect the size of the herd and it seems they are taking a toll on the herd size in Vilas county. Let's let more antlerless survive the hunting season and try to increase this herd size. Thanks for allowing me this opportunity.

9554  In order to get the proper management in this area we need to increase the antlerless tags enough to make a significant impact and draw more hunters in the area. This area used to be booming with hunters and deer and then the DNR went overboard with too many antlerless tags and bonus tags and after several good years of killing it greatly impacted the herd. This combined with a couple tough deep snow winters, lack proper predator management (wolves and Coyotes) and other factors, the levels went significantly down which then turned off many longtime Northwoods deer hunters to go elsewhere. Adding this factor with several years of BUCKS ONLY, continued to push hunters away. Now that the population is back, we still need more hunters in the woods to get the deer moving and manage the herd through hunting. This is what will draw more hunters back into the Northwoods. There is so much area of great public land to hunt, but not enough hunters. Again, don't over do it with multiple antlerless tags.

9555  I believe that the harvest and population of deer are centered around the populated areas of the county. I travel from Boulder, Sayner, St. Germain areas routinley. I see deer with in one mile of these areas along the roads until bow season. Then with the exception of the rut it is a dead zone. I have hunted in many places in Vilas Co. near Day Lk., Muskeluge Lk. Whitney Lk., Big Lk. And many more, basically were ever the herd moves. But fore some reason he herd has left the forest for the protection of town and additional food opportunities. Public ground hunters see not so much as a track during gun season and it has been that way for the last ten years. The only way a gun hunter is allowed equal opportunity to harvest a buck is if they are in rut. Please allow gun hunters a equal opportunity by adjusting the opening dates similar to Minn.or other surrounding areas. One other thing, change the cost to out of state lic. Fees to equal the cost of a out of state lic. In the state of the hunter applicant.
I've been hunting primarily in Vilas county for over 50 years. I've watched the deer population be strong in the 70's, drop down in the 80's due to over antlerless deer harvesting, increase in the 90's, struggle to come back in the 2000's. Since then the population of large bucks has decreased considerably due to poaching. Also, increased numbers of predators especially wolves, bears and coyotes and even fox(primarily killing small fawns), snow kills from large storms primarily later in the winter have all had negative impacts on the herd numbers. The number of predator kill carcasses I see in the woods especially while snowmobiling, has increased significantly! In my opinion there are too many negative influencing variables in the northern zone to have antlerless quotas at all. A significant number of "nubbie" and small spiked bucks are also harvested under antlerless permits. I would not recommend antlerless harvest at all in the north. Thank You.

We hunt exclusively on private land. We saw no deer on our 500 acre units in 2019 for the entire gun deer season, much less than the numbers we saw in 2018. We did however see a number of wolves (4-5 over the week), and wolf sign was prevalent. We do not support baiting, and we also are highly opposed deer feeding by residents. We cannot understand why a ban on residential feeding by homeowners and vacation residences are not enforced. If baiting ban discourages the promotion of CWD, why can't the DNR or law enforcement use the same logic for feeding..........yet, it is never enforced. Gas stations and roadside vendors freely sell 50# bags of corn to these residential individuals who have feeders and large yellow piles in their backyards to view deer. This is not helping alleviate the CWD problem and it also does not help the deer populations diet. Why can't the DNR or other law enforcement organizations, stop or cite these violators?

The amount of deer seen in Vilas County, in my opinion and observation, is rising each each. It is not unusual, on lake roads, to see 10-15 (mostly does) in mile stretches. In addition, the online sales of antlerless tags has to be limited. The purchase online method left out hunters that were engaged in morning work activities. The antlerless tags were gone very rapidly. The DNR should have a morning online session for a couple hours and an afternoon/evening online session each session would have limited antlerless tags (divide tags in half). This would bring in the morning hunters, allow them to get home and be involved and not left out. Each session should start on time and not allow hunters to login early to save a spot for their purchase. I tries last year to login at start time and I was ~14,000 in line about one minute into the online purchase. We means many hunters logged in very early. Please consider. Thank you!

When I started hunting in Vilas County I would see 20-30 deer during bow season. Last season I only saw 5 deer all season. Also during my time hunting in Vilas County I’ve noticed the wolf population go up. From seeing little wolf sign to not hunting grouse anymore due to the high amounts of wolves in the area. I strongly believe that we need a wolf season. I also think the wardens really should be checking county land. My dad and I have seen many people hunting from their vehicles. Baiting is another issue we see a lot of. Unless it changed and I never heard but I’m pretty sure baiting is illegal in Vilas County. It’s unfair to the hunters who follow the rules and you see a guy carrying in a 50 pound bag of corn to his stand. Finally guys leaving up their tree stands. I make sure I pull mine every night if I’m hunting county. Just this past week I was up turkey hunting on county land and I found 3 tree stands still up.

I am a passionate sportsmen. I enjoy hunting and fishing he northern Wisconsin lakes and public hunting lands. However, not enough is being done to promote the deer population numbers in the northern counties like Vilas, Oneida, and many others. There are way to many deer seasons. Doe only seasons are killing the populations in the north. The majority of does are only having one fawn due to harsh conditions in winter. Those yearlings are not making it thru these extreme snow conditions and predators. Back 25 years ago the deer did not have to content with the wolf like they do now. The average wolf kills 7-10 deer a year. In 1 square mile that brings the deer herds survival to a very low rate. I am now seeing more wolves and coyotes than deer during the gun deer season. Spending gas money, food, housing, gear, license, and you are up to $500-$600 a year not to see deer is getting old.
Baiting with corn has gotten completely out of hand. Any given weekend you can see huge trailers with hundreds of pounds of corn rolling up Hwy 45 and Hwy 51. This simply must stop. We have 120 acres of private land we hunt and the deer that spend summers on our property are pulled off the land by corn piles. This must be enforced. I understand that there are a number of people who want to watch the deer all winter. I’d suggest a complete ban on corn for the year except January 1 through April 30. This stops the illegal dumping during deer hunting yet allows those who wish to see deer out their window in winter the ability to do so. As part of this, retailers would need to not sell corn during the closed period. Also, if law enforcement sees a loaded trailer, that person must be stopped. Once the word gets out that fines are handed out, many will quit dumping. (apples as well)

I have hunted in the same area since 1971. Last year we had 6 hunters-each hunting sun up to sun down. Our stands are on public land in the Black Jack Wilderness area/Anvil Lake. Total number of deer seen in three days of hunting: 0 Total man hours in the woods over three days with 6 hunters: 162 hours. Number of fresh tracks seen by 6 hunters over three days of hunting walking to stands: 7 sets of deer tracks. Total number of wolves seen in three days of hunting: 12 (different wolves based on color and size). The loss of habitat, the low fawn recruitment rate due to predation from a variety of predators, and heavy wolf predation has decimated the deer herd in most regions of Vilas County. Forty years ago this was the deer meca of the world. Now most hunters no longer venture north. We have lost 4 of our group as they will not return. It is a sad deal.

I have a major concern about the age structure of bucks in the county. We have very few mature, 2+year old, bucks. I base that on observation of actual animals and of rubs/scraps. I also don't believe the private/public antlerless program works, because the intent was to target eastern Vilas; however, the private tags can be used on the extensive parcels of private land in western Vilas as well so while the intent was good the actual result is not as planned. I base my comments on a 30 year career with DNR, over 20 working in Vilas County, and my degree in Natural Resource/Wildlife Mgt. from UW Stevens Point. Antlerless permits here need to be replaced by hunters choice, the county needs to be managed by using the quota units, 25,36,29, etc. Serious consideration needs to be afforded the one buck license per season, regardless of weapon.

The deer population in the Vilas county region, especially in Public land has been decimated. We have been hunting the region since 1949 and our worst 3 years ever were all within the last 10, with 2019 being one of them. I didn't see a single deer. The depopulation of the deer herd is causing less and less people to come up north, causing a severe economic impact on the region. We need to protect the antlerless populations, build the herd size back up, eliminate the ridiculous toll that wolves are having on the area, and hope for some less severe winter weather in order to regrow what once was a proud whitetail area of the state, which now is becoming a wasteland. Wolves need to be controlled or eradicated, they literally followed one of group members out of the woods one evening, he may never hunt again. Its time to make a change!

We / the hunters of Vilas County should all be concerned with the incredible number of predators now proliferating in our woods. What will it take to convince our leaders that we have unmanageable population of bear, wolf and coyote decimating our deer herd? Additionally, we are playing with fire hoping nobody gets hurt or worse yet killed by a predictor. Hunting for over 50 years in Vilas County has taught me a few things. Respect for the woods, danger is always a second away and planning to have fun and enjoyment in the woods also includes being prepared. My wish is I am wrong but it could be only a matter of time before the increased predator population becomes a situation that is going to take drastic measures to correct. Should we not start corrections sooner rather than later? Thank you and best of luck with your planning.
In my "back yard" deer have been kept alive by neighborhood feeding, although appreciative of the deer's survival what this causes is deer that have a limited gene pool, unnatural behavior of the deer, (feed based activity), I find few deer in the woods but all congregate in a circuit of the neighbor feeders, I don't want to hunt these back yard pet deer I want wild deer to chase. we have a herd of approx 10 local deer that are are small and do not develope much in the size of racks, we have bucks that come into the area during rut but are gone soon after (it seems), I understand feeding is banned but what good are laws that are not enforced, but how do you do that with limited funds and field agents? I am totally against this phone in registration, that being the loss of a tradition I suppose but how do you keep anybody honest?

I have hunted the Northwoods (public land) for many years with generally very poor success. Although many antlerless deer are spotted along roads, it is a tall order to see any deer at all deeper into the woods. The only people I've seen who were relatively successful relied on baiting. Although I am not very enthusiastic about baiting in general, I do not think it should be banned unless food plots are also banned. If the excuse given for the elimination of baiting is to prevent close deer to deer contact to prevent the spread of CWD, then food plots and baiting are doing the same thing - artificially attracting deer to a small area. The hunter who does not have a managed piece of land is put at a distinct disadvantage. This will only serve to discourage even more hunters from what appears to be a struggling sport.

I find it interesting the total lack of information presented of the wolf population and the impact on the northern Deer population. The Nineweb Lake wolf pack has changed our hunting experience over the last decade. The DNR stated they wanted a population of 350 in 1999, in 2011 DNR listed the population between 782-824. Today the wolf population is over 1000 which is probably a conservative number. Our group has taken a daily inventory of deer activity in the area we hunt dating back to 1982. Average of 10 hunters in the woods from 1/2 hr before shooting time until close, we stay in the woods the whole day. The data shows far less deer these last 5 years. The bear population also has to be accounted for in the fawn population growth, again no mention of this animal and it relationship to the deer herd.

Not just for this unit but for gun hunting in general I would propose a deer hunting permit period. Not a buck only, not an antlerless deer only, just one deer of either sex for each permit holder. That way it would generate much more interest and those who want to harvest a deer would have a chance and those who want a buck would have a chance and the herd wouldn't be decimated like it is with all the antlerless permits. Until about 15 years ago or so we had to post our land and had to redirect hunters who came up from Milwaukee and Chicago off our land. Since the slaughter years where people could buy as many fawn permits as they wanted the deer herd is down to nearly nothing. I am sure you see just as many deer from your office now as you did then which is zero and now that's what we see in the woods.

Deer almost nonexistent. I have a house in northern Vilas, spend a lot of time there. Haven’t hunted there in over 10 years because of the lack of animals. There are more beaver and otters than deer in the area (seriously) and of course coyotes and wolves. The off Reservation Tribal "harvest" is concerning as well. Every year, between me or one of my neighbors on either side of me, there will be a wolf kill in one of our yards. (3rd year in a row) we need more predator control. Also a 4 point per one side antler point restriction as other states have implemented. My serious deer hunting is conducted in other states now because of the lack of quality and opportunities in Wisconsin. I know alot of other people personally who do/feel the same. We need more deer.

Was very disappointed that I was not able to draw an antlerless tag for 2019. My queue number was very high and all tags were sold long before I could be considered. Wish there was a preference point if you tried the previous year, but didn’t draw. We had a tough winter snow-wise this year, and have just recently seen a lone deer (since gun season). I live here, so am very aware of the critters on my land. In our area you can always tell when gun season is approaching; the deer stop their normal patterns because some folks insist on baiting and feeding. We need to ban baiting and feeding statewide, and I did vote for that on the spring hearing questionnaire. Why can’t we ban the sale of bait in counties that are not allowed to bait? Thanks for listening.
There is lots of deer in Vilas Co. The bucks have good numbers, just hard to shoot, because they move at night, instead of sun light. Deer are very smart in this part. Hide very well with how much forest and land there is. No one go's way back where they are all at. The doe population is growing great. But can't shot them. Lots are getting old, because of no hunting female deer. I have seen lots of female deer. I think with that there should at least be one doe tag per person in the Vilas Co area in the season. The wolf's way to over populations. There so much sign of the and pics I have got. There killing the deer off to much. Even for those old female deer and small fawns. U can't hunt the females like I said. I hope u like what I've said. Thanks

We have a cottage outside Land O Lakes and have hunted there, on the adjacent public land, for many years. I moved back to Wisconsin 16 years ago and in that time we have shot one deer with an average of three hunters in our party. We just don't see that many deer in and around our property. I saw eight deer total this past gun deer season. I was very happy to see five of them in one group. Also, driving home, usually on the first Sunday afternoon of the deer season, It seems like I have seen far fewer deer on trailers or hanging out the back of pick up trucks. It appears to me that in the past few years there are far fewer deer being harvested compared to other years. I don't know if it's predators or hunting but deer numbers seem to be down.

The population in Eastern Vilas is certainly higher than in Western Vilas. Therefore if the county is viewed as a whole (similar throughout) when setting quotas it affects the west part adversely by harvesting too many antlerless deer. Wolves and coyotes were seen very often on our trail cameras in the Town of Winchester. I believe predation is higher (as a per cent of deer population in Western Vilas County. This also adversely affects hunting success in the west. I believe there as illegal feeding going on and this needs better enforcement with some serious fines to stop some of this and reduce the risk of CWD. The rule is there, enforce it. Perhaps Eastern and Western Vilas County should be managed as separate management units.

The wolf population is getting worse every year everyone agrees the numbers are wrong. Everyone is seeing more in person and on trail cam and hearing more at night. How can you be blind by the low number of kills in Vilas? Lack of deer and increased predation is the reason. I hunted 5 days during gun season and saw a doe and fawn opening day. I remember seeing 30 deer opening day when I started hunting in the 90s. All those years of herd control and earn a buck was a horrible idea. Now I'm lucky to see one deer on trailers or hanging out the back of pick up trucks. If you truly care about the population you would get the supreme court to overturn the wolf decision. Look at how fast the quotas were hit when we had a season.

For this unit and the state I would prefer a step back. Archery season is hunting with any bow. Long bow, re-curve, compound or crossbow. Archery is archery and requires skills to be accomplished at it. Gun season is with a firearm. No special hunts for types of guns or populations, just the 9 day hunt. Further I would like to see no baiting of any kind. The true skill of hunting is not sitting over 500lbs of apples and corn, (as I see commonly in the woods as I hunt), but 'still hunting'. I mean Scouting an area, patterning animals and skillfully stalking to within range to put your arrow (or round) in the kill zone. Baiting really throws off the normal patterns deer have. Lets go back to true hunting where skill is used not bait.

First of all bring back big game registration stations. Secondly, junior tags need to be filled by the junior, far to many deer were harvested by non-juniors. I've been keeping records myself of total deer numbers in the same area my family has hunted on public land for over 20 years. I've only hunted it for 17 years and the last 4-5 years I haven't seen an upswing or downswing in deer numbers. I feel predation and lack of food source hurts the population the most. I would like to see a few more public antlerless tags added but I'd also like to see it turn into a draw and have the money for the people who didn't get a tag spent by the Vilas County deer advisory committee in restoring public land. Hope this helps you guys.
Doe permits should be increased to 1,000. And even that amount is very low for a county the size of Vilas. It will reduce the pressure to take a small buck. Balance the ratio of does/bucks (which we believe is about 30-40 doe/1 buck). The deer herd is very healthy, increasing in size and was not impacted by winter weather (which was very mild). Hunters should be encouraged to harvest aging doe as they adversely impact the rut. Also, the deer season should be extended to include 2-3 weeks prior to the traditional opening day. This is in recognition of changing climate patterns, when the rut occurs and the likelihood that a season extension will have a modest impact on the overall deer harvest.

I spend a lot of time in the woods, I hunt from Eagleriver to Saint Germain, the deer population has definitely been decreasing on public land. In years past there were high numbers of deer, maybe to high, but now I can’t even find tracks. Lots of predator sign. Wolves move into areas where I hunt and all I see is poop with deer hair and bones, than no deer, when wolves move on than coyotes move in only shots I heard last gun season were on private land where deer baiting is going on. I hunt border of vilas and oneida co. This spring I’ve yet to see a deer track anywhere I hunt, mostly coyote tracks and one wolf track, I’ve never seen anything like it, probably my last gun season unless something changes.

Generally, I have been hunting this unit since I was 13 years old. When I first started hunting this unit it was not uncommon to see 20-30 deer a day. It progressively got worse and worse each year. We started to notice a rebound in population each year of the buck only seasons. As soon as a antlerless were allowed to be harvested again the amount of deer seen in the field started to decrease again. The 2019 season was one of the worst in regards to deer seen. It is my recommendation that this unit go back to buck only across the board for a minimum 5 years and after the initial 5 years the antler-less harvest should only be allowed for youth hunters.

Generally, I have seen more deer the past 2 years than in the previous few seasons. This goes for both bucks and does. This is true for the private property I am fortunate to hunt on as well as the general area which is a mix of public and private land. For only the second time in the past 22 years no one in our hunting group harvested a deer in 2019. This was by choice, we all saw does, however, they all had fawns and we won’t harvest them. We hunt private land and have DMAP tags. We had a couple young(spike) bucks come in and they got a pass as well. We had tons of trail cam pictures showing 4 mature bucks but they all disappeared about a week before the gun season opened.

More deer need to be harvested on private land and having more private antlerless permits will help. Would be nice to have a chance to take a doe to fill the freezer vs the option of taking a small buck to just fill your tag. I agree with keeping the youth hunts as this is our next group of hunters and if they don't see more deer they won’t want to hunt. Tourism is very important and less quality deer hunting chances mean less dollars and less hunters managing the herd and taking their dollars somewhere else. The Forests of Vilas county are very import for public and private income and the herd needs to be kept under control to make sure the forest stay healthy.

Please implement a draw for non residents and not over the counter tags. The draw would only allow half of the total number purchased in 2019 and also charge draw for non residents double the price of the 2019 season? This would still give the DNR the money and would help the heard population especially on the Northern Forest Zone. Or only allow the amount of tags drawn by half of the non resident harvest from the previous season in that zone. It’s unfair to the residents when we stick are hard earned money and time into the system and non-residents reap the benefits. Most states only have non-residents draw and charge them double the money. Thank you for your time.

You can walk through the northern highland forest and find acorns everywhere. Now, either the acorn crop is more abundant than ever or the deer are over harvested. There is not a piece of public land that should not be HUNTER’S CHOICE. All of Vilas should be HUNTER’S Choice. I grouse hunt Vilas every year. Last year I put on 32 miles in 4 days, never saw a deer in places where back in the 90’s I would kick up 12 to 15 deer a day. It has been this way for 20 years now. There is plenty of natural forage to sustain 30 deer per square mile in Vilas, to say otherwise is a boldface lie. Get out from behind the computer models and put boots on the ground.
Over the course of the past +/- 3-5 years (2015-2019), I have finally been seeing a positive trend in the number of 2-3.5yo bucks reflecting previous management changes, based on my opinion. Doe groups have been healthy too. Overall, I would say the deer population in my greater square-mile area has been steady-to-growing in a positive way, best that it has been in the 17 years of hunting our area. My direct concerns are related to any changes too drastic that would negatively impact these positive trends. Additionally, predator numbers (Coyotes specifically) during the past 3 seasons were the highest they’ve ever been. Thank you for your time and efforts!

From the harvest numbers last year it is clear you need to sell less antlerless tags, hunters shoot 50% higher than the quota, 303 killed for a quota of 200. Where you shot 50% higher 103 exact above your set quota last year you have to reduce this years quota to achieve a maintain, I highly recommend a zero quota for Vilas county with only junior hunters allowed to kill antlerless deer. If you refuse to go to zero quota, at a minimum you must reduce quota to reflect the over quota take from last year, you also have to reduce the number of antlerless tags sold to more closely follow the previous, near 60%, success rate of harvest.

I have been hunting in Conover for many years! Seen more downs than ups! We had 3 good years back around 2004 with big bucks! Then numbers started to decrease due to hunters, tag numbers, wolves and weather! 2019 we saw many more bucks and does on camera but mostly at night! Think baiting is still around even thou illegal!2019 did see more deer sign which felt better! Trying to keep my teen kids interested in hunting to keep family tradition going but very hard! I have noticed deer stay near cabins for food and safety! A lot more sign! Wish state would ban and enforce baiting more! Real hunters don’t need bait

Making gun season longer is not the answer! Family traditions for years, evolved around deer season being the same week as THANKSGIVING. Extra hunts only give more opportunity to poachers. An early mentor hunt for younger hunters is great for the experience, with a mentor. Prepares them for the real deal 9 day. Go back to, over 12 to hunt with adult, 13 hunting alone. Higher prices for lic, only chases away the hungry, who cant afford missing work, and the lic. Perhaps a budget cut in pork barrel spending, and more studies by people who don’t know wildlife is the problem, not the answer.

I believe that the deer herd in the southeast portion of the county has a very out of balance of doe to buck ratio. Especially on private lands. I believe this is do to property owners shooting more and younger bucks due to the lack of anterless tags available. The 350 private tag proposal, in my opinion is a low. I personally would like to see the number closer to the 500 mark or even higher. This is just personal observation mainly due to the fact you can’t drive through any residential area and not have to stop for deer or almost hit one. Looking forward to seeing the final numbers.

Deer distribution is still a problem. While numbers are exploding in residential areas because of a lack of hunting, backyard feeding is also a large problem. The ban on baiting has further shifted the population as there is no enforcement for feeding deer at backyard feeders, yet a hunter hunting in the middle of public land no longer has the ability to pull deer from adjacent backyard feeders. In many cases, the areas where you see multiple car hit deer, there is a feeding station that the deer are going to. I see it in my line of work where I am in the house noticing these feeders.

Deer hunting was terrific in the mid 90’s until around 2005 and then we over harvested the deer with way too many does being killed. Hunting was terrible from 2007 until 2018. We are finally getting reasonable hunting where we have a chance but shooting does is still a problem. I wouldn’t be in favor of that for another 2-3 years. Feeding and baiting was also a huge problem because the deer left the woods and moved into the yards. Keep the ban on feeding and baiting forever. I personally believe this is the greatest change that has occurred to give us a chance on public lands. Thanks.
I take deer hunting very seriously, I scout all year round. I hunt other states and Canada. Vilas County has changed a lot in the last 8 or 10 years. I use to see more mature bucks I mean 4 year old and older and that is what my harvest standards are a mature buck or nothing. I believe part of the problem is wolves and part of the problem is to many young bucks getting harvested over illegal bait piles or out the window at the bird feeder with a crossbow. I would love to see antler restriction I think that’s the only way to get older bucks back and have a very liberal wolf season.

Your antlerless quotas were too low last year. It was obvious that doe numbers were up in 2019. Did not see a buck in bow, gun or muzzleloader seasons. Opening morning of gun a group of 12 does came through. No one in our group had drawn an antlerless tag. I’m losing interest in deer hunting and so are the guys I hunt with. Can’t shoot one of an abundance of does for the freezer and the pressure you continue to put on the bucks is ridiculous. You are ruining the deer hunting experience in Vilas County. Raise the number of antlerless tags. You are being too conservative.

Why there is almost no satisfactory deer hunting in Vilas County: Rampant deer baiting and feeding NOT controlled by the DNR. Too many wolves and other predators. Native harvest. Poor habitat control. Overblown disease reports (wasting disease). Poor government regulation on seasons. The "herd" in Vilas County and much of Northern Wisconsin is reduced to a captive herd that is limited to those areas where they are feed (close to human residences) and valued more for their viewing pleasure than as a hunting resource. There is very little hunt or tradition left in the sport.

In my opinion, the buck only rule seems to be helping a little bit. I would like to see a minimum of 4 points on one side law introduced. Way too many people around here (and tourists) shoot the first buck they see & it’s ridiculous. More often than not, it’s a small, young buck. Some of us are still “trophy hunters” & would like to see the numbers of larger bucks increase. I understand there are still big deer around here, but it’s definitely not what it use to be & those numbers are way down in my opinion. Hopefully this is taken into consideration. Thanks.

I hunt alone & I am a seasonal resident. Last year I did see a lot more deer on the surrounding roads outside of Boulder Jct. While I’ve been hunting basically the same areas where I have had past success, sightings of deer have diminished. The last 6 years I can count on one hand the amount of deer seen while hunting. A good deer hunt isn’t just about harvesting one! It's seeing other forms of nature, but also having more opportunities to see more deer while hunting. In the old (Unit 35) which I hunt, there should be zero doe tags to build the population back up.

You continue to make hunters pay for the years of incompetence you subjected us to. 12$ bonus tags, T-Zone hunts, etc. Predation. How about we take into consideration other states and implement antler restrictions. Why does Montana, Wyoming, Kansas have giant whitetail? Restrictions. Using the same deer season criteria for Waukesha farmland and the swamps of Eagle River? Let’s use the years of fleecing customers out of money promising the deer heard is robust and actually use science to structure our season. 3 on one side for 3 years. Then let’s evaluate the heard.

I have been hunting in Vilas county for more than 30 years. We used to see good numbers of deer. But, in the last 10 years or so, we have seen a steady decrease in deer numbers. Some deer hunting seasons we have not even seen one deer. Many seasons we only see one or two deer. Too many does and fawns being continually killed, hard, long winters, and too many wolves and bears feeding on the deer. We need to do all we can to increase deer numbers - not “maintain” or decrease numbers. I am pleading to stop all doe and fawn kill permits in Vilas county!!
I have noticed with "supposedly" no baiting/feeding that the deer herd has moved from the housing areas into the wooded areas, in my area (nothing worse than sitting out all day in the cold and see 1 baby spike deer, then drive in for the night and see 10 at a feeder in town) Just seems seeing 3 or 4 deer in a 10 day hunt compared to 20 to 30 deer back in the 80's and 90's, that there must be something effecting the deer herd. Wolves, Bears, CWD, over-hunting??? Maybe it's time we consider a "NO Hunt" season and let the north wood herd bounce back.

It sure would be nice to see the number of deer that are killed via predation during the year in this survey. In our area of Vilas County there were 2 to 3 times the number of deer seen 2 weeks prior to the gun season vs. 1 week before the gun season. BUT we also noticed what seemed to be 6 different sets of wolf tracks in the area a week prior to the deer season gun opener and we think the deer vacated the area we have a house in and our hunting area because of the wolf presence in the area the week prior and the first 4 days of the gun season.

Turkeys in the north woods eat too much deer browse, and the large bear population can hurt the deer population every year. Many illnesses come from birds species in our world. With the added turkey population for example, in an area they don't really belong like the north woods, does this contribute to the spread of diseases like CWD. Elimination of special group only hunts. Have all hunting during regular seasons; Youth hunt for example should be eliminated, and teach the youth to follow normal hunting practices in the regular season.

I have hunted vilas county for more than 35 years and am not getting any younger. I hunted years when baiting was allowed and when it has not been allowed. My experience the last few years without bait allowed has been very negative. This non bait rule has made it so difficult. All I ask is if a person could put a coffee can full of corn out and spread it. It would bring back the fun and create optimism which is needed to create excitement of possibly seeing a deer with the chance of making a ethical good clean kill shot on the animal.

As always we saw a large number of antlerless deer during the season, in some ways almost reminiscent of the late '90s and early 2000's. One of the biggest concerns for me this year is making sure hunters are encouraged to come up to Vilas county given the impact that Gov. Evers' handling of the COVID-19 situation is having on the economy. It's already shaping up to be a tough year on local businesses and a strong hunting season would give them a boost. Likewise, the chance for families to put meat in the freezer is important to me.

Support antlerless permits, could be more for private lands, taking one antlerless deer per square mile of deer range would also be conservative. I support 100% allowing youth to take antlerless...but the youth weekend should return to the LAST weekend in October where it was before the bow hunters complained. Most hunters I know hunt for the experience and for the meat, very few hunt for large antlers exclusively. Could have the state discuss adding a second buck tag with antler restrictions and have an earlier opener in the North.

The deer population has been steadily declining for the past few years in the area where we hunt. I have several trail cams set up from Sept. through the gun deer season and I can honestly say, the deer numbers have dropped drastically. We hunted 4 solid days and only saw one small fawn on the morning of day 2. During the gun deer season I had more hunters show up on my trail cams than deer. Also, there was very little shooting during that same time frame, thus resulting in only 4 days of hunting. Very discouraging to say the least.

Please add many more doe tags to 2020 season have not shot a buck in past multiple seasons never see any bucks but see tons of does in woods always Need venison in freezer!! Way too many does everywhere all season They are a pest in yard on highways car accidents etc. They are ever where all the time at minimum add doe tags to archery season both bow and crossbow so I can get a deer for food please If doe tags are not available anymore going to quit hunting Deer hunters have dramatically reduced in vilas county Thx

Leave the Vilas county zone alone. Do not mess with the hunt in that area. From what I have seen the buck population is not the quality it once was which I believe should actually be managed with a size limit. Meaning no spikes 4 points or better, but just my two cents. I would however recommend closing the logging roads by lake Laura are for safety reasons. I hunt this area and felt very unsafe attempting to hunt areas I would normally due to high traffic in and out all day long. Again this is in my mind a huge safety issue.
I hunted more this year than any other year in recent times. I usually hunt 22-24 days per year. In 2019 I hunted about 32 days including 14 days on the pre rut and rut. I saw 3 bucks during the rut and a spike during rifle and none during black powder. The late opener would have no impact on the deer sightings during the rutting periods. Deer populations are down. Predation is up, whether from bear, wolf or coyote. We need to limit doe tags to youth only and implement effective management to grow populations.

I have hunted the same woods for all of my adult life. When you sit in a tree stand for 4 days in a row and not see a single deer for years and years then there should be a 5 year halt on shooting any does for bow or gun. Let the population get back to where it was in the 50’s. My father hunted the same woods and used to always see deer. Northern Wisconsin used to be the best deer hunting in the state. Over the last 20+ years the amount of deer has gone down and the amount of mature bucks is non existent.

It appears that the number of antlerless bow permits that are given out each year for private land are extremely low. I have not hunted in the area since the county limited the number of antlerless deer tags available (10 years or so). If you want to keep tourism up and increase the economic benefits that bow and gun hunting brings to the county, simply increase the number of antlerless permits for bow/gun and have a later start date. That seems to have the greatest impact on the deer herd.

I've been hunting in Vilas county for 22 years or our family cabin was built in the 1930s and we have been watching the population of deer continue to go down I have only shot 2 bucks in 22 years. That gets pretty discouraging. My son is getting into hunting and it is not enjoyable for him whatsoever. I am thinking that we should think about moving the gun deer season up one week to try to hit the rut a little bit more For more enjoyment for our youth Thank you for your time and listening to make comments.

The DNR has lost all credibility with regards to Deer Management. The hunter is the LAST shareholder considered even though hunting has paid the bills for decades. Insurance companies, predators and non-hunting interests drive too many decisions in deer management. It is no wonder that hunter recruitment is declining. How can I get my child interested in the idea of sitting all day in the woods and seeing nothing? The tradition of the Northwoods Deer Camp is gone. Thank you for your incompetence!

We need first of all to slow down the predators for sure especially with the amount of snow we get in Vilas county. Second thing is way to much logging with now vast amounts of open space the deer numbers have really dropped. Third is the off reservation deer hunting , what right do the indians have shooting in the middle of the night from the back of a pick up truck on the road. the doe hunt needs to be dropped totally for 5 years for sure it is taking a toll on th herd we have left

Open up a wolf hunt we need this to help keep things in balance and go back to application point system for doe tags this the best way, it was fare for all hunters. We have to work.we can’t set on the phone or computer at work to apply and some of us don’t have wife’s or kids to set on line to see if we can get one. Can the northern county’s open the gun hunt on Wednesday, eight days be for thanksgiving day And run to the last day in November. Go back to registering deer at a station.

Kill the wolves already. What are you guys doing?! Maintaining the deer population is not enough. There are wolves killing WAY to many deer in Vilas County. I have little faith in the DNR after it has ravaged the northwoods with the introduction of wolves and their boneheaded recommendations to only “maintain” the deer herd. Are you guys even alive? I’ve seen blind umpires make better calls than you. In all seriousness, the deer herd is too small in the northern forests.

Every year the deer heard seems to go down. Our hunting party used to see and shoot bucks every year with bow and gun for the last 28 years. We haven’t seen or shot a buck in the last 4 years. The wdnr is always worried about disease. The 1990s had lots of deer with no disease. Then came t-zones and earn-a-buck. Yes, wolves and a few bad winters didn’t help. The main problem was over harvest. People keep dropping out of our hunting party because it just isn’t worth it anymore.

<td>9617</td>
<td>I think Wisconsin should consider a one deer per year quota with the hunter choosing the hunting method that they desire whether it archery, gun, crossbow, etc. While there seem to be pockets of deer around there are also big areas with very few if any deer so the maintain system for this unit doesn't seem to be aggressive enough when this area needs to try to increase the herd more, there are quite a few predators around. Thanks for this opportunity to express my concerns.</td>
</tr>
<tr>
<td>9618</td>
<td>The trend I have seen in Vilas county is the abundance of does and fawns and few bucks. The bucks we have are year and a half to 2 and a half. There's no age class anymore. With little to no does to harvest all these young bucks are shot because hunters want venison and that's what's available. People can't pass the young buck and use a doe to put meat in the freezer. For me to watch trail cams for 7 months and see a forked horn as my biggest buck, it's very disappointing.</td>
</tr>
<tr>
<td>9619</td>
<td>Where I hunt there have been to many predator sightings, some coyotes, more wolves than in the past. The deer herd looked like it might be in rebound in 2018. 2019 big drop again. Will give it one more year. Will need to decide to break up our deer camp and hunt further south in the state. Seen 2 deer in 2019. hunted 4.5 days morning to close on 4 days. First year my son did not hunt with me since he was able to hunt. Have enough of looking into a woods with no deer.</td>
</tr>
<tr>
<td>9620</td>
<td>For Vilas county. The DNR should double the bear permits for the next few years. Waiting 10-12 years for a bear permit is absurd. I see more bear than deer for the past 7 years. I believe we should bring back a Wolf season as the pack needs to be contained. I also believe that the DNR should close all deer hunting for a season or two. This will bring the numbers back. However, I doubt the DNR would consider that because that is a lot of revenue they will be loosing.</td>
</tr>
<tr>
<td>9621</td>
<td>I spend a far amount of time hunting on Public Land in Vilas County, and feel that No Does should be taken. Between Wolf kills, Spring Bear kills on New fawns, Tribal Kills off Reservation, and Hard Winters, I feel we need all the Does making new Deer as possible! *It would be nice to see more Bear tags Issued to help out the Fawns ** Most hunters would rather see Deer while hunting, and not shoot one - Than have a Doe Tag and not see any Deer</td>
</tr>
<tr>
<td>9622</td>
<td>Very dissatisfied with the antlerless quota system of obtaining a permit. I have personally witnessed people buying permits for everyone in there family after standing in line for an hour only to find out there are none left. Also do you really think people are abiding to the Private/Public thing!!! With only 500 permits available going on line is also a joke. By the time you sign in there are a million people ahead of you. Not a fair system. Go back to the old way!</td>
</tr>
<tr>
<td>9623</td>
<td>I feel the state need to go back to the lottery system for antlerless tags and move away from the online and in person first come first serve system. This makes it difficult for all hunters to be able to have a equal opportunity to obtain a permit. Also eliminate the public and private permit separation. The total number of permits available should be available to all hunters not segregated by land owners and those that hunt public land. Thank you for listening</td>
</tr>
<tr>
<td>9624</td>
<td>Hunted the same area for 56 yrs Have seen a direct correlation between the increase of the Wolf population and the rapid decline of the deer in our area. The stated Wolf numbers are nowhere near the actual numbers in the hunted area. This is noted by deer movement and feeding patterns. They have definitely changed with the increase of the Wolf population. Less deer, less opportunity, less revenue for Northern Businesses. We have seen the pattern. Thank you,</td>
</tr>
<tr>
<td>9625</td>
<td>As I have mentioned in prior surveys, the deer seem to have habituated themselves around urban areas: towns, villages, residential developments, etc either because of the availability of food or to escape predators--probably both. There may be an over-abundance of deer in these areas while areas outside these zones have few to no deer. Unfortunately these non-urban areas tend to be the areas with the public land which is why I see little to no deer there.</td>
</tr>
</tbody>
</table>
The number of deer has decreased every year for many years, over hunting, to many extra permits and a greater population of Wolf and Black bear have taken a big toll. I think the WDNR greatly underestimated the starvation numbers that have happened this winter. I would gladly give up the hunting season completely to see the deer herd increase. Listen to us sportsman and not the insurance companies and maybe gun deer season will return to a great experience.

I spend a lot of time in the woods throughout the year and see an over abundant amount of does. This is on public land. Trying to get a doe tag in Vilas on public land is very hard. with only 150 tags available last year I was unable to get a bonus doe tag. Because of this people opt to shoot younger less mature bucks to put meat in the freezer. I get that does help maintain the population but there is not shortage of them by me. Thats all I ever see.

Stop baiting/feeding on public and private lands. Antlerless harvest quotas for public land hunters seems low. Maybe consider some antlerless permits for early season traditional archery hunters, no crossbows during this hunt. After 50 years of deer hunting, I believe that the DNR has lost its focus of providing a quality deer hunt and may be too focused on making special interest groups happy, don't be timid when faced with an unpopular decision.

I was able to harvest a buck this past gun season but that was the only deer I saw opening weekend. I remember when I first started hunting up in vilas county that we could pick and choose what we shot and the drive into the woods opening morning the roads would be lined with hunters. Because we would have other opportunity. Now it’s not the case. My personal opinion is that vilas should be still classified as wanting to increase the population.

I have hunted deer, grouse and ducks in Vilas county my entire hunting life. It has been very apparent that with the uncontrolled growth of the Wolf population our deer hunting experience has suffered significantly. In some yrs. we see more Wolf sign & Wolves than deer. The last effort to control deer population in Vilas county is thru increased doe harvest. Reduce the Wolf/Bear population and than we can talk about a larger doe harvest.

There should only be BUCK harvests, like it used to be when we HAD big BUCKS to shoot at. Antlerless hunts only lead to " If its brown it's down" and that makes for no nubby bucks to grow up!! Nature did a great job between winter kill and predators to control the herd size. You can't go back to when YOU GUYS sold 1000 doe tags and almost wiped out the herd. Nature brought it back, and the fact that there were no doe tags sold.

I see less and less deer every time deer season comes around, there is less shots fired each year. Last year I counted only 5 shots fired, and that is the opening weekend, the 2nd weekend there is nothing. I love deer hunting however its coming to the point nobody wants to go because there are no deer. The same is with fishing as you talk to the locals nobody is catching anything. The north woods isn’t the way it was.

I hunt the area Highway 51 and County Rd. M to Big Arbor Vitae Lake. Last year I saw lots of wolf tracks, no Bucks and very few doe. About 8 years ago there were lots of deer and the DNR started selling $2.00 doe permits for a few years until there were hardly any doe left. Now because of harsh winters and predators the deer are having a hard time coming back. Very frustrating. Would like to see a few more deer. Thank you.

Over the Past several years of gun deer hunting, what I have seen in my area of hunting (Eagle River area) the buck population is way down. More so antlerless deer everywhere still lower than what it was in say the 80's. The bucks that I have seen and passed has been in the low antler sizes of spikes,forks and small antlers. We need to concentrate on building the buck population up not just control the deer population.

This unit has seen numbers of off reservation poaching during the summer and fall. This is unacceptable as it does affect the numbers of healthy animals in the heard. The rules and regulations for deer management should be universally applied and enforced. This does include, but certainly not limited to, the purchase of hunting licenses, limit of animals harvested, and adherence to the antlerless harvest limits.
Areas of Vilas county have way too many deer and more antlerless permits are needed to help control the population. I see 20-30 deer or more nearly every day in the immediate area where I live. The deer are devastating the forest in this area. I understand the deer population in some areas of the county may be low, but there needs to be more opportunity to harvest does in areas where the population is very high.

our group is getting older and stating to hang it up. This is no real surprise, as it is getting tougher for us. The surprise is that not many of our kids are interested in carrying on the tradition. They say one of the reasons, is that they don't see enough deer. I believe this is true. It seems like 20+ years ago we would see 10 or 12 every day for the opening weekend (gun season), but now 2 or 3 is the norm.

Having hunted this unit. Extensively over the last 40 years. The deer numbers have steadily been on the decline. Predators have been a factor for the last 10 years. I think their impact on the deer numbers need to be considered more seriously than they are now. To return the north woods deer hunting to the way it was will need some serious management efforts on the part of the hunters and CAC. Thanks

I would prefer a permanent ban on baiting deer during the entire season for all forms of hunting. I would only agree to Supplemental feeding on an emergency basis during a severe winter and only if deemed necessary by the WDNR field wardens. I have seen bait dumped by the truck load on both public and private land and believe this practice ruins hunting for all the surrounding landowners that will not bait.

I don’t have the answer but I believe there needs to be a better way of distributing the public land antlerless tags than having to log in to a computer and hope you “get ahead” of enough people. Last year I took off of work so I could log in and I did so 10 minutes before the “start” time and had 12,000 other people in front of me. Then come November and the only thing I saw all week was 3 does.

How about letting veterans shoot antlerless too it’s tough for them to hunt. And instead of bonus tags just give residents of the county a doe tag and a buck tag. The tourists only get a buck tag. Im getting pretty tired of buying tags every year and getting all my venison from car kills cause i cant make a legal harvest due to bogus regulations. Bring back baiting and give residents doe tags.

Baiting, close down or make deer farms put up double fences. Over 50 years of hunting in unit 35. Usually 15-20 guys in deer camp, the last 10 years probably shot about 5 deer. Nobody wants to hunt anymore and I don’t blame them. Way to many wolves in the area, no baiting, your not going to see anything...I know nothing will change, all about the almighty dollar and who is getting paid off.

The Northern Forest Season needs to be changed by starting the gun season one week earlier and end the Sunday after Thanksgiving. This will provide hunters to have the possibility of catching the end of the rut (one week earlier will not impact bow hunters as I am one of them) as well as providing more opportunity days in the field. Many times inclement weather ruins opening weekend. Thanks.

I travel 35 miles a day to work. I travel thru sayner, boulder junction and up along hwy b toward bents camp. I would occasionally see a doe with twins in the town’s but away from the town’s I was lucky to see a doe with one fawn. The late snows in the spring of 2019 did have a big impact. There were at least 10 deer that perished with the late snows at the end of dead man's gulch road.

I have concerns about excessive number of wolves and bears and their impact on the deer herd. I am not against having these animals as part of the over all wildlife habitat but am concerned that they contribute to a high fawn mortality rate. The one thing my family and I have noticed in recent years during late summer and the hunting season is the number of mature does with no offspring.

Please drive around and look at all the deer that are on the landscape in Vilas County throughout the year. To only be looking from your treestand during the opening weekend of gun season is ridiculous and dangerous for our resource. There are many, many deer that are available for harvest. Now more than ever with folks out of work and the food supply chain disrupted. Let people hunt!
We have 10 people in our hunting camp that hunt both public and private land. We saw a combined 0 deer in the woods this season. This is why I support a zero quota antlerless harvest in Vilas county. That being said I do believe that we need to support our youth hunters and get them excited to be in the woods so I am in support of our youth hunters being able to harvest an antlerless deer.

We need to grow the deer population slightly in my opinion. If the predator (wolves mainly) population continues to grow, and we experience another very severe winter like that of 1996 I believe, I fear that it will take a devastating toll on our deer population. If the population was a little higher, there would be benefits to the deer in surviving harsh winters, Yarding areas, etc.

Due to the high pressure from bow hunting, as well as the consequence of predation on the population, I plan to forego the gun season for the first time in my life in order to try harvesting my deer by crossbow hunting. Although I hunt hard, I haven’t harvested a deer with a gun in nine years. Insanity is doing the same thing over and over again while expecting different results.

My only comment pertains to baiting in this zone. Baiting has been banned for a few years now all due to CWD that was found on fenced game farms. As far as I know, no deer from the wild herd have ever tested positive in Vilas County. I feel it is unfair to punish the average outdoorsman who wants to enjoy seeing deer on a regular basis for what is happening in fenced in farms.

Please help get the population numbers back up! I take kids hunting a lot and we just aren’t seeing deer! Also please look at the no baiting issue! We don’t bait because it’s against the law but everyone else is baiting still which hurts us tremendously! There is no enforcement going on! Heck bars in Vilas county are back to feeding! Thank you I’m sure your trying your best!

In the public forest deer numbers are still low, but in the cottage/home areas there are many more deer due to feeding. This draws deer out of the public forest and makes harvest very difficult. We need to stop baiting/feeding during the hunting season at least, but all year even better. Thanks for the nice video (very well done), and the opportunity to provide input.

It’s time for the Dnr to step up and implement antler point restrictions for the entire northern forest zone. Our buck to doe ratio is so out of wack and the bucks we do have don’t have the age structure for a healthy herd. This decision has to made from Madison. The question is if head of deer management in Wisconsin cares more about our herd health or his job.

I believe there should be no antlerless permits. Between bears and wolves and winter severity It’s already tough enough for the deer. Now throw in the Indians hunting. If we care about the economy also having higher deer numbers would increase hunters. The younger hunters that used to come with us no longer do. Guess why they say they don’t see any deer. Very sad.

I hunt both with bow’s and gun, spend a good amount of time in the woods. 2018 Was a better year as seeing deer in the woods, 2019 no so much I would really like to see minimal antlerless takes given out till the heard gets larger. Any thoughts to trapping deer in the farm zones away from cwd and releasing in the northern zones? It worked really well for turkeys.

Overall deer hunting in Vilas just like the rest of the state is very bad I have spent all of my free time hunting since I was 12 yrs old and never seen such pathetic hunting. bottom line is there are no deer left and way to many predators. I also think the cdac committee's should be removed and all people involved in whitetail management should be fired today!!

Strategic timber harvest to promote deer and grouse habitat (browse) is necessary to increase the deer heard in Vilas and Forrest counties. I grew up hunting in Sawyer County (they log a lot there) and as much as I didn't like the rough logging practices there, (disruption to creeks, careless spring logging etc), it definitely helped to support deer.
Why has the baiting ban in Vilas County not been rescinded per the law? The deer that was tested positive for CWD in the town of Crescent (Oneida County) would not have impacted Vilas County as it was farther than 10 miles. In fact, the baiting ban should have been rescinded for the 2019 season as the 2 years had passed since the Three Lakes incident.

I believe that predation numbers for this area are seriously understated. I think that the impact of predation has contributed to a larger drop in the population. If not the overall population then the areas where these deer move and the greater numbers of deer numbers are nearer the population centers where less contact with predators would be likely.

I was on the website to obtain an antlerless tag at 10 minutes after it started and was so far down the list none of my hunting group was able to get one. The DNR needs to try to find a new system of awarding them where the tags are so limited. But as usual the DNR does what it wants, just look at what was asked for last year in Buffalo county

You need to have a 3 point rack minimum on one side! Everyone seems to shoot anything that they can. You'll never get large racked, older Bucks. This shoot anything, including Does will diminish the heard even worse that it is now. I use to see large heards of 70 plus deer back in the 70's. Horrible management has got us to this point!

After 67 years of gun deer hunting and not seeing any deer much less a antlered deer I am thinking of quitting deer hunting period. This would include hunting in Wood County where there also is no deer. When I started hunting 67 years ago we used to see several deer each and every day now one is lucky to see two deer in the entire season.

Predation is not an issue in our area. The few wolves we have are treasures to those of us who live in the north woods. Seeing an occasional wolf is exciting. The deer herd does not see affected. Most wolf sightings are over road kill. Please do not consider wolves the enemy. Lack of education about the value of predation is the problem.

I feel the antlerless quota has been too high. In the last couple of years I believe the early spring snow storms have hurt the herds reproduction. Many of the mature does I have seen in July and August of last year did not have fawns w/ them. I gun hunted for four days and did not see a deer, in areas where I have harvested deer before.

You need to stop allowing people to shoot Does! You need a 3pt minimum on one side, and Buck only north of highway 8! You will never get a healthy Buck population by killing of all the Does and shooting basically any Buck that walks by. Take some pride in harvesting a Buck. Does will eat out of your hand......no skill or sport needed.

Thank you for all your work on deer management. The population, by my view has been very low for several years now. I was the only person in a group of 8 to even see a buck and only saw 12 deer total during three full days hunting. Others in my group saw even less. One 30 plus year hunter didn’t see a single deer while in his stand.

There is a minor problem with over population in the towns of Vilas county but the overall deer numbers are low in most other parts of the county. Given that opportunities for young people to shoot deer are declining in the north woods, I would support allowing youth to take all or most of the antler less harvest in this county.

Please allow more shooting of does people will fill their tags and not shoot as many bucks! Too much pressure on just the bucks in this county. Also with all the pressure from predators and the winters your not really saving deer, let them go to use and go in my freezer! Until you can control those factors it really doesn't matter.

I don't see very few deer when I first moved here I would see 30-40 deer and the last seven years it fell of to nothing 5-6 maybe if you want people to come up north you better have deer and you should have a season on wolves they are killing a lot of deer. I am getting to the point where I am thinking of not purchasing a license.

I spend most of the winter calling and killing coyotes ( been doing it for the last 15 year and put a lot of miles ) I can tell you that the amount of wolf tracks that I cut are more and more every year ! In my opinion the only way you should even consider issuing antlerless tags is when they established another wolf season.
This is the 4th or 5th year that I have not fired my rifle at a legal buck. I have concerns of the number of ag tags that are awarded in the area of Croker Rd. & Deep Lake Rd. There is always a concern on the abundance of wolves, add in bear, coyotes, & bobcats, a lot of predators out there, man is the least of them.

Keep it buck only in northern wisconsin. Only allow antlerless tags to youth hunters. The deer population is way way low. I have not seen a deer during gun hunting the last 3 years. Have a season for wolves they are not helping the deer population. The wolf population has grown tremendously over last 9 years. Not good.

Vilas County is 43% public land. The proposed division of antlerless permits does not seem fair. If the 500 antlerless permits were allocated base on the amount of public/private land The split would be 215 for public and 285 for private. I hunt public and feel a little slighted on the 350/150 split of antlerless tags.

While I recognize that CDAC cannot decide baiting and feeding regulations, the prevalence of illegal baiting and feeding continues to negatively the quality of hunting in Vilas County, and can only contribute to the spread of CWD. The availability of CWD testing kiosks in the county has been a very useful program.

Drive around anywhere in the county and there are a lot of deer on the landscape. This was the same last year. Antlerless permits will allow harvest and keep some pressure of yearling bucks - both good things. I would like to see a few more antlerless tags available this year over last years numbers. thx.

I think there should be more doe tags to public hunters. Private land hunters take the stgs but refuse to shoot doe. I hunt to eat, so more tags to public land hunters would give me a better chance to get a doe tag. In the last 10 plus years I’ve seen alot of does and I could count bucks on 1 hand.

There should be no doe tags for public land in Vilas county. Have a place in Vilas county and the deer hunting around Kentuck lake area is disappointing. The county should be split in Two. The counties on the West side of Vilas and on the East side of Vilas are buck only. There are not many deer.

Antlerless permit numbers should more closely reflect the ratio of public to private land in the county. The current system favors privileged landowners and privatizes the deer herd, especially in areas with a mix of public and private lands where deer routinely cross property boundaries.

There probably pockets of deer.The county is to big to have a one size fits all. There doesn’t seem to have a lot of deer on west side of HWY 45 near conover. But plenty of wolves. Also deer plots on private lands are keeping deer from public lands. This is a problem that should be addressed

I hunt the hole season pretty much all day every day when you see only a couple of deer during this time compared to other years it makes me wonder just how good the herd is. I see no sense in issuing a couple hundred antlerless permits not knowing what the winter is going to bring

We have seen back to back severe Winters and poor critical spring recovery putting a major strain on the deer population. I believe that Vilas County should return to a buck only season for all proposed hunts. I believe this is critical for the health and deer numbers going forward.

Did you ever think with the buck harvest down this that there are not that many deer in the unit as you say. Not because of the late start to the gun season. With another serve winter again if you have any antler less permits in the unit we are not going to have many deer.

I would like to know exactly why finding deer with cwd in a high fence trophy ranch is even a consideration when talking about allowing or disallowing feeding or baiting. My opinion they should be treated desperately!!! Specially when you have 0 positive outside the fences.

<td>9685</td>
<td>Shut down deer farms with CWD not the county and surrounding counties to die tags and baiting, etc. Allow baiting for recreational hunter. If you look at crops the deer don’t spread out and feed, they all feed together in the same area, should we outlaw crops?</td>
</tr>
<tr>
<td>9686</td>
<td>Wolf predation is a SERIOUS issue. There have been at least 5 kills in VERY noticeable areas of human travel (e.g. driveways, main roads). There’s no telling how many kills are happening outside of the highly trafficked areas where evidences are not seen/heard.</td>
</tr>
<tr>
<td>9687</td>
<td>the ban on baiting makes no sense since the CWD positive test were on a game farm, how that relates to the deer in the wild is beyond my comprehension. A 1-2 gallon limit is not going to congregate deer herds and can provide for a much more meaningful hunt.</td>
</tr>
<tr>
<td>9688</td>
<td>Kill the wolves and it might be worth driving 12 hours to hunt and spending $500+ to come back to Wisconsin. I was the only person in a group of 8 to even see a deer last year. You guys need to INCREASE the deer herd dramatically in Vilas county.</td>
</tr>
<tr>
<td>9689</td>
<td>My Grandparents owned a resort on Catfish lake in the 70's. Place was packed. I hunted in the 80's and Eagle River was packed with hunters. Now, there were 3 groups of hunters at the resort we stayed at. We all agree that there is no bucks in the area.</td>
</tr>
<tr>
<td>9691</td>
<td>I was very concerned about the lack of fawns I saw in the 2019 season. I saw several adult Doe with no fawns with them. It has been quite a while since I noticed the lack of fawns in a given year. Overall deer numbers were ok other than the fawn issue.</td>
</tr>
<tr>
<td>9690</td>
<td>I didn’t see a deer in seven days of hunting in vilas county in 2019. I don’t believe enthusiasm can be kept up if things don’t change. Many hunters have been lost in this area over the years because of lack of deer numbers. Please manage the forest!</td>
</tr>
<tr>
<td>9692</td>
<td>Please no antler less at all except Junior Hunters maybe... number of deer seen by the hunters in my area is very low I have seen only two deer in the past 8 years both bucks no antler less at all. West of Starret Lake &amp; Noth of Muskellunge Lake</td>
</tr>
<tr>
<td>9693</td>
<td>The amount of Bucks my hunting party has seen per year these last 8 years have been next to none. Our only Buck harvests have been spike bucks which I feel is a sign that old bucks have been cashed out. We need an Antlerless or earn a buck season.</td>
</tr>
<tr>
<td>9694</td>
<td>I worry about the young nub bucks and small spike bucks being over harvested and not getting a chance to grow past that stage and being able to breed. I am seeing a lot of does in the Phelps area but no bucks. Also finding wolf kill in the woods.</td>
</tr>
<tr>
<td>9695</td>
<td>I would like to see an emphasis on wildlife habitat improvement, especially improving winter browse due to the continuing potential of severe WSI numbers. I also feel predator numbers in the northern portion of the county need to addressed.</td>
</tr>
<tr>
<td>9696</td>
<td>Bring back baiting for bow hunting The area in Vilas county is so large we need something to help the deer come into our stands. Your number of hunters is going to decrease until you do this. Nobody likes to sit all day and not see a deer.</td>
</tr>
<tr>
<td>9697</td>
<td>I saw fewer deer in 2019 than the previous 3 years. I also saw more wolves the last 2 years. I hunted more last year in Vilas county than I did the last 5 years. I think lack of pressure from hunters is also a contributing factor.</td>
</tr>
<tr>
<td>9698</td>
<td>Do NOT change the 9 day gun hunt. Get rid of all the other special seasons. Bow-Rifle- is all that's needed. Use black powder during rifle season if they want. Wolf killing more deer in Vilas now, need to lower wolf population.</td>
</tr>
<tr>
<td>9699</td>
<td>Raise the fine for baiting and feeding deer to an effective amount. Ban baiting and feeding deer statewide. Wolf harvest. Antler restrictions. Note: There is ALOT of people still feeding and baiting deer in Vilas County.</td>
</tr>
</tbody>
</table>
I would like to see protection for yearling bucks. Finding a 2 1/2 year old buck is difficult in the northwoods and I believe that not harvesting these young bucks would give hunters a much better chance at a larger buck.

There needs to be a wolf management plan put back in place. Black bear permits allowed needs to increase as well. The number of predators is WAY higher than it was back in the stronger deer herd years of the 90s.

There are so few deer in Vilas county it has forced me to spend most of my hunting time in Michigan. There are fewer deer now than I've seen since 1953 when I first started hunting in Vilas county. It is a shame.

If a person hunts here when they are growing up and then has to move out of state to find a job. They should still be consider residents and pay the resident price to hunt. I feel more kids would come back and hunt.

Vilas County should be “Buck Only” for 5 years. For both gun and bow. Also encourage letting young spikes and forks go as well. Vilas County could be better than Buffalo County given the right conditions.

There aren’t even enough antlerless tags to get a minimal % to the people that live in this unit. This needs to change. Or provide the option to use a general tag to harvest a doe or buck rather than buck only.

Go back to party permits, especially in the northern part of the state. Taking into consideration all the ways deer are killed or harvested. It’s amazing there are any left in the northern part of the state.

I can honestly say that during a week in September of 2019 I saw no deer in the Plum Lake area. Very few tracks and signs as well. Plenty of new growth for food but no deer. Haven’t seen any wolves either.

Last year I talked to a group of 5 hunters and 4 of the 5 had antlerless tags. I believe that this county should really go back to the old days and allow only 1 anterless tag for any group of 3 or more.

Bring back the old dmu system that takes in forest habitat. Science is our friend. The decline in buck numbers is staggering. Antlerless tags kill to many buck fawns. Shut down the three lakes deer farm.

Why can’t we have a fixed date for opener every year such as nov 15? Eliminate the early late and catch better weather and the rut. I had to quit hunting last year because of the deep snow in Vilas.

Stop extended seasons, youth hunts stopped, hunt regular seasons. No need for parents getting jump start by using children. Ages of first harvest participants amazing. If continued anterless only.

I would just like to say. Where we would normally see deer last year we didn’t see a thing except wolf tracks. And actually saw a wolf on the way back from town about 300 yards where we hunt.

I have seen very few deer in the national forest area. The deer are mostly in areas where there are humans. The predators have kept the deer population very low in the wild areas.

I oppose the current system of obtaining an antlerless permit. I don’t believe everyone has a fair chance. Private/Public Really!!! Do you really think people are being honest???

In Vilas county we don’t see near the deer we used to see in the early 2000’s. We had deer then for a few years until the wolf population took over. We haven’t recovered since.

I would like to see a gun deer season that is tied to a set calendar time frame instead of fluctuating each year based on the Thanksgiving date. For example - Nov. 15 to 30.

Have a 5pt or bigger buck tags for 3 years. (for the northern forests above Hwy 8) That would give the younger bucks a chance up here. Limited doe tags for 3 yrs as well.

The number of deer we have seen continues to drop. I believe it is mostly related to the wolf numbers and bear. I do also believe the winter weather takes its toll.

Don’t kill any does at this time. Also if county is still going to be a no bait county, stop letting landowners have food plots. Spread out the deer to public lands.
We need to harvest more predators (BEAR, WOLF, COYOTE) We do not need all of these PREDATORS. WAY WAY TO MANY OF THEM!!!!!! We have no good reason for Wolfs.

I hunt with a group of thirteen hunters in the Nicolet forest east of Eagle River in Vilas County and each year it seems to be harder and harder to see deer.

Thanks for introducing the wolves - screwed up the entire hunt ever since they were introduced - don’t believe me; talk to the loggers in the area. I have.

IT IS SILLY TO KILL DOES WHEN THE POPULATION IS SO LOW. IT IS LIKE KILLING ALL THE FEMALE FISH IN A LAKE AND THEN WONDERING WHY YOU CAN'T CATCH ANYTHING.

Practice QDM in Vilas so we can see more mature bucks. QDM allows for harvesting Does to make more food available to grow bigger Bucks. Issue more tags

There are a lot of wolves in the Town of Land O lakes which causes the deer numbers to stay low. The wolves really need to be controlled via a harvest.

I am very concerned about the lack of deer on public land in eastern Vilas county. Also very concerned about large number of deer in populated areas.

The predator population is out of control and if there is nothing done about that the deer population and harvest numbers will CONTINUE to plummet

Please take into consideration that the winter will probably end up over 100 WSI we should be looking to increase deer numbers in my opinion

Saw many dead carcus walking through the woods this winter after snowmelt. Seems like increase in 2020 harvest may balance the population

I would like to see all deer harvested in Vilas Co. tested for cwd. All hunters would then have to personally register their deer.

Make it a lot easier for an 82 year old to hunt and harvest one deer for food. Buck or doe, no yearlings. Not much meat on a yearling

Get rid of anterless tags until the population increases and open up wolf hunting without limits. I see more wolves than i do deer now.

way to many predators. Very few fawn recruitment. Hardly any pics of fawns on camera. Hard to replenish deer without fawns surviving.

Saw 2 wolves multiple days, next to no sign of deer. In a party of 10, we saw a single fawn on its own over the 9 day hunting window.

There should Not be juveniles hunting until they are 10 years or older; its not right that people say their 2 year old got a deer!

In eight years of my participating in deer hunting, no one in my party has harvested a deer during rifle season (party of 3-5).

WAY TO MANY bears, wolves and coyotes in Vilas! This is having a far larger effect on deer numbers than we can even imagine!

I enjoy living on private land in the Lac du Flambeau Indian Reservation, but I am concerned that very few deer exist here.

Not closing deer farms but not allowing baiting is a way of telling the public that DNR isn’t really concerned about CWD.
We need to control the exploding deer heard in Vilas county...it will very shortly be uncontrollable if not addressed now!

Need to enforce feeding the same as baiting. Feeding Should be illegal. Feeding should be considered the same as baiting

I would like to see in person registration. We should also go back to using back tags so we know who is hunting legally.

I believe a fair amount of deer that get harvested never get registered. Because of the lenient on line registration.

Baiting is necessary to pull deer away from home feeders and food plots. I would like to see baiting allowed again.

Deer very scarce lately, last three years. Considering selling my cabin and relocating to a unit with more deer.

Very little deer have been seen during the 10 day hunting season. There are way too many wolves in Vilas County

Archery season should go back to years ago of 1 Buck and 1 antlerless tag per hunter per year. No youth hunt.

I have seen more and more does over the last three years and i belief more doe tags should be distributed.

I have hunter in this county on and off for 60 years the deer numbers are the lowest i have ever seen.

Allow hunters choice, for best chance to harvest (1) animal only. Seem to be a great balance to most!!

There are far too few public land antlerless opportunities despite there being an abundance of does.

We always see a ton of does, but very few bucks. I’d love to harvest a couple does for the venison!

Too many predators, no deer seen entire season-three days. Saw a lot of wolves, and wolf tracks.

The amount of wolf sign keeps increasing, while the deer sign is decreasing in the areas I hunt.

Very low deer numbers last year. Fall sightings and deer season both indicated low populations.

Get rid of the wolf population and bring back the wolf season. Why raise deer to feed wolves.

Heavy snows in northern Vilas county and the late opener, saw 0 deer in 9 days of hunting.

Please take actions regarding native’s harvest being unregulated and flashilhht hunting

Need to get wolves off the endangered species protection and allow controlled harvest.

Vilas County could have more public land doe tags, especially in the St Germain area

Enforce the no feeding rules better. Too many deer congregate in populated areas.

We need to control the wolf population to keep deer population at a higher level.

The Wolf Population is out of control in the northeastern corner of Vilas county !

1: predator management! Seemore coyotes and wolves every year. 2: no youth hunt.

Sad when you see and hear more wolves than deer in vilas county when deer hunting

Too many wolves in our area. Afraid to take walks alone with my dog In The woods

I think something needs to be done about the Wolf population in Vilas county.

Restructure crosbow season ,limit usage to age and disabilities as before

Keep up no baiting and feeding. Reduce vehicle access to forest areas.

To many Preditors Bears Coyotes and lots of Wolves increase controls

2019 was the first time in 9 years that we didn't get a single deer.

Way to many predators, no deer= no hunters= no interest/ tourism

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

205 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 143
   - I visit this unit for non-hunting purposes: 34
   - I hunt in this unit: 175
   - General interest in this unit: 33

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 149
   - Bow: 101
   - Crossbow: 77
   - Muzzleloader: 57

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 17.16
   - Maximum: 60

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 73
   - Mostly Private Land: 34
   - Public and Private Land About Equally: 16
   - Mostly Public Land: 8
   - Exclusively Public Land: 44
   - I did not hunt in this unit last year: 0

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 16
   - Not too crowded: 40
   - Neither crowded nor un-crowded: 17
   - Somewhat crowded: 15
   - Very crowded: 12
   - Not applicable: 2

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 28
   - Fewer: 64
   - Same: 75
   - More: 23
   - Many More: 8
   - Unsure: 7

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

- **If a DMU is in a Farmland Zone...**
  - Implement an ANTLERLESS HOLIDAY HUNT: 91 Support, 96 Oppose, 18 Unsure

- **If a Holiday Hunt is held in a Farmland unit...**
  - EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: 135 Support, 62 Oppose, 8 Unsure

- **If the Population Objective is not "Increase"...**
  - Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 22 Support, 168 Oppose, 15 Unsure

- **If a Zero Quota (buck only season) is adopted...**
  - ...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?  
    - VALID 22 Support, 50 Oppose, 18 Unsure
    - NOT VALID 22 Support, 50 Oppose, 18 Unsure

11. How important were each of the following concerns in forming your opinion about the CDAC's recommendations for this unit?

</table>
Deer numbers are suffering from over harvest. Your harvest quota numbers are too high and it's setting this state up terrible hunting. I've already started hunting the western states because my own home state has terrible opportunities. The length of bow season is way too long and starts at a peak time to get them the best opportunities. I do agree with letting bow season start prior to gun based on the ability of each tool but the length of bow season needs to be addressed as well as the regulations associated with it. I fully support the requirement for bow hunters to wear orange. If its necessary for safety reasons during gun season, it should be for bow season as well. I've run into my fair share of bow hunters on public land during squirrel season and without them wearing orange, I feel it compromises their safety. Anything less than that is unacceptable. I don't hunt muzzleloader season but I do believe that they should be given opportunity before general gun season as well, ideally some time mid-October. It will increase interest and popularity in muzzleloaders as well as give them a fair opportunity before the large harvest during the general gun season hits. The idea of "Earn A Buck" should be put in a folder and run through the shredder several times. Even the thought of giving out a doe tag with every license is laughable. With the numbers I've seen personally, and by word of mouth through a large number of hunters I'm familiar with, the amount of deer seen during the season is getting to be not worth going out in Wisconsin in the first place. As stated prior, I've started hunting western states with great success as a joint decision with friends and coworkers that have gotten fed up with hunting in our own state. Non Residents should be subject to much higher license costs and should be restricted from hunting antlerless deer all together. As a popular vote among my hunting friends, family, and coworkers, we will quickly be skipping deer hunting in Wisconsin all together if the population numbers, public land access, and regulations don't get straightened out and go back to benefiting the hunters and conservationists rather than the special interest groups our DNR are trying to please. After all, it is the hunters and conservationists that keep this industry lucrative. Consult Wyoming, Montana, Colorado, and Idaho on their regulations as well as their tag/application processes. Wisconsin needs to be fixed before it's too late.

I think the deer season is fine the way they are. I hunt public land in Walworth and always have. I've been hunting the same area for most of 15 years. I have noticed the first 9 years of my hunting career I would only see deer once a year once a year and if I blew it that was it. I use to only gun hunt. I remember seeing more orange than a pumpkin patch. To the point were I didn't feel safe to hunt on public. I have had a couple bullets wizz past my head. But the last 6 years I got in to bow season and I noticed I started seeing more and more deer. It only took me 15 years to shoot my first buck. Through out my the 15 year I only have seen maby 8 bucks in person and maby 15 on camera. But I hear they want to split the bow season and segregate crossbow and bow. I struggled with bow because I didn't have much time to practice but once crossbow was Legalized I fell in love. Cross bow to me is the same thing as bow hunting and some people consider it to be an advancing with I would disagree. You can't shoot any further or much faster that your Average bow. I think that it would be unfair to turn bow hunters against each other and hope this don't happen. Please don't split the bow seasons.

Deer numbers are low except for small areas where deer are not accessible, examples are near lake homes, close to small towns, and some wooded areas privately owned by non hunters. Gun season on public lands for 2019 had large increases of hunters over the past several years. I would say they were 3 times more than average. As a landowner I have seen a large decline in deer presence over the last 4 years. When turkey hunting on public land over the last 4 years I have yet to see a deer during that week of hunting. There are car kills, but traffic has increased 4 fold over the past 10 years. My wife and I drove frequently towards evening in January February and March in the kettle moraine area and never see deer. The majority of deer are always on private lands. And some fields had 10 to 20 deer on them. But these areas are untouched by hunters due to no hunting allowed.
Walworth County has held some of the lowest deer population numbers ever since earn a buck and bonus deer tag were implemented back in the early 2000s. I understand farmers do not want the deer around as well as motor vehicle insurance companies. But Wisconsin has had a long standing tradition of healthy deer hunting, which in my opinion has been destroyed in Walworth county by over hunting, bonus doe tags, bonus season hunts, and in the past foolish earn a buck requirements. This needs to stop, and is not acceptable or fair to the Wisconsin hunters. Please consider the data and lower population of deer in Walworth county and cut back on all these bonus tags, bonus seasons, extended seasons etc. if there was a serious problem of over population of deer I would agree to such things, but data shows just the opposite. Thank you for your time.

Non-hunters utilizing public lands during the gun-deer season is a big problem. I have often come upon the non-hunting public walking their unleashed dogs, jogging and strolling through a public hunting area. They are never wearing blaze orange and some to be completely unaware of the hunting activity going on and their presence with dogs running free spoils my opportunity to enjoy a southern Wisconsin deer hunt. If the non-hunting public is allowed to utilize public lands during gun-deer season they should be required to keep control of their animals, not allowing them to run loose. For their safety, and the safety of their animals, all should be required to wear blaze orange and face the same penalties hunters face if not wearing appropriate blaze orange.

PLEASE do not consider limiting hunting opportunities by restricting crossbow season length. Recent articles in the Wisconsin Outdoor News suggest members of the NRB are recommending restricting the crossbow season to October 1 to October 31. These efforts seem self-serving and intended for specific special interest groups. I hunt with all weapons but prefer the crossbow even during the gun and muzzle loader season. I am eligible for a disabled permit but do not intend to apply/seek one. The cross bow has become a popular weapon for youth lacking upper body strength needed to use a traditional bow. Limiting their opportunity to hunt by restricting season length will discourage youth to hunt and is counter-productive to our efforts to recruit youth.

I have concerns on cutting underbrush and select harvesting of trees. in the summer of 2019, the area I hunt in Walworth County, which is in the Southern Kettle Moraine Forest, had multiple acres of forest land undergrowth bushwhacked for what appears to be select harvesting of Pine trees. Multiple Pine trees have been tagged with orange spray paint. This work continued thru the archery season which affected my hunt. After my turkey hunt now in 2020, it appears the contractor will be returning to harvest the marked trees. This is occurring all around the property at the same tie, which has affected my groups hunt. It is a shame this apparent harvest could not take place at different intervals where it would not affect the hunt.

Please consider making one antlerless harvest authorization good for the for whole county, public/private shouldn't matter. The authorization should also be good for any county bordering the one you applied for. People hunt private land that borders public land the deer travel between both, the tag should also. A piece of public land might cover multiple counties, sometimes I hunt right on the border of Waukesha and Walworth county on private land that is surrounded by public, in order to cover myself legally I would have to buy 3 extra antlerless tags even though I only want to shoot 1 deer. These rules need to be adjusted as many travel between counties and types of land. Thank you

I have hunted this DMU for 29 years now and, have seen the populations of antlerless deer rise and fall in that time period but, not to the extremes of the years in which "Earn a Buck" was prevalent. It took 3 years before we saw any antlerless deer in the surrounding area and another 3 years before we had the start of any type of family groups of antlerless deer. Although there may be pockets of higher numbers in this DMU on private lands it still does not in my opinion warrant having the number of bonus tags recommended by CDAC and or DNR. I feel that we should only allow 1 antlerless tag per customer per authorized weapon tag for this DMU.
Go back to crossbows for seniors and handicap. Stop all gun seasons except the 9 day. The youth need to learn the traditions of deer hunting. Giving them a doe tag is enough. Getting hunters back in the woods during the 9 day should be more effective at deer harvest. With recent very low hunter numbers during the 9 day. Deer movement is minimal. All the different seasons have limited success on controlling numbers. All it has done is hurt the other hunters who have to wear orange during most of the fall (bow hunters). No youth hunt, antlerless season, holiday hunt, muzzleloader hunt. Muzzleloaders are not primitive weapons anymore.

I hunt the lake Lulu area, all the hunters walk in on the north end, and deer run to the south for the farmers to shoot. Please put parking in different places around the lake to stop this issue. I have a DNR disability permit it is very hard for me to get to the center, off county road J or E. there is no parking areas off Nature Road on the southern end, Or let us park along the road I've been buying a deer licence since 1968 getting real sick and tired of Farmers benefiting from my time in the woods. Crossbows will kill a deer at 100 yrd, there season needs to be limited.

I live, farm, and occasionally hunt in eastern Walworth County and have done so for over 30 years. My observations are that there are more deer in our area now than ever before. We have substantial tree and crop damage on our farm every year. It seems like there are not adequate numbers of hunters as there used to be. There are also a number of landowners that won't allow hunting on their land. I support any actions that would lessen the number of deer in our area. It is not unusual for us to see groups of 6 to 10 deer eating in a group. I fear that CWD is being easily transmitted.

We live in the country surrounded by long term farmers. Who all say that deer numbers in walworth county are incredibly lower then 20 years ago and we agree. Too many sanctuaries that allow no hunting that do show good numbers such as Geneva National, Lake Como, around Lake Geneva, etc. But out in the country, etc numbers are down, tons of coyotes, and every hunter/landowner we speak with agrees. Stop the bonus tags, stop the early and late antlerless hunts. Do not extend archery season please. Let's get the herd numbers up across the whole state and promote predator control.

Go back to the old ways bring back the back tags, green licences, get rid of online check ins, don't pass this stupid 19 day gun season. You guys are going to loose alot of bow hunters and not gain many gun hunters. All your doing is making it more of a headache for everyone I personally will not be buying a deer licence if this crap continues and I can garentee there are many in the same boat as me. Oh and this whole not listening to people with rude comments just proves that you guys really don't care about our opions.

I live, hunt and work in Williams Bay in Walworth county. The deer population is out of control within the village limits. Even with the 3 deer I harvested this year and my neighbor getting one there are a dozen or more that rome my land each day. Just driving from one side of town to the other (3 miles) We counted over 50 separate deer. Within the town most land owners don't have large enough properties to hunt with the current Ordinances. I don't know if this is allowed but a larger harvest tag may be a good thing in village limits

In my opinion the number of deer in walworth county is quite good. This was my first year actually hunting for deer here, but was generally happy with the amount of deer and deer sign observed. I'm general I think the state issues too many antlerless tags and offers too many special seasons. I did hunt one day of the holiday hunt, but really it was the weather was unseasonably warm and I haven't used my rifle for several years and thought I would dust it off.

The antlerless season in our area is a waste of time in my opinion. I don’t know of anyone who actually utilizes the antlerless hunts. The only thing it does is keeps bow hunters out of the woods who haven’t gotten a buck yet. This has caused a lot of frustration for late season hunters like myself and would like to see it removed. If it is not removed I would recommend letting bow hunters wear orange and still be able to harvest a buck during this time.
THE AMOUNT OF BONUS ANTERLESS TAG ISSUED IN THE COUNTY LAST YEAR WAS PERFECT! YOU GENTLEMEN ARE DOING A FINE JOB IN OUR COUNTY!!!! KEEP EVERYTHING THE SAME AS FAR AS THAT THE ONLY THING I WOULD SAY IS NO EXTENSION TO THE GUN SEASON AND NO CHANGE AS FAR AS THE CROSSBOW SEASON WE ACTUALLY HAVE A WAY FOR YOUNGER KIDS TO GET OUT AND HUNT AND I HAVE SEEN A DECENT INCREASE IN THE NUMBER OF YOUTH HUNTERS IN MY PART OF THE COUNTY DONT CHANGE WHATS WORKING.

I agree with most of the proposal but feel that 500 bonus authorizations for public land is too high. The public land deer populations are already very limited yet public land continues to be one of the best opportunities for hunters to get afield. It should be managed as the resource with great potential that it is instead of allowed to be taken advantage of through continued over-harvesting.

In My opinion, the crossbow hunters should have their own season. The trophy quality is what keeps me in the woods, even if I don't get a deer. According to stats half the deer are now taken with crossbows during archery season. Or they shouldn't be allowed to use scopes. There is an ad for a crossbow showing it shooting nearly as accurate as a rifle at 100 yds.

I don't think a holiday hunt is necessary here. The deer numbers are low already. I do like the extended bow season tho. I dont like closing buck hunting if they have the holiday hunt. I saw a really nice buck during last years holiday hunt and couldn't shoot it. If the holiday hunt with gun included bucks, then I wouldn't mind having that season.

Just one comment. I know there has been an issue or big conversation in past years on bow hunting and crossbow hunting. We as hunters need to stop bickering back and forth and come together as one to strengthen the hunting community as a whole. We must band together. Our numbers and voices are fading. Stay all together.

I feel the growing coyote population is a greater impact on the points mentioned then deer and is also impacting the deer population. I feel a formal coyote hunting mentor ship program would be beneficial to help with increasing the number of hunters aware of coyote hunting and their impact on the deer population.

Very disappointed at the number of deer in the southeastern part of the state. Lake LuLu area needs more parking on the southern end off Nature road. Being a disabled hunter with a permit, it's to long of a walk to get to the center were the deer are off hwy J or E or nature road. This issue can be easily fixed.

Just felt like I observed less deer like none before. Never had a chance to look at a deer. Maybe 1200 is high or maybe season should shift maybe? and i know this is about deer. But why private or public. Eliminate this. Deer harvested in Walworth is a deer in Walworth. Please remove this before anything else.

I feel that the deer numbers in Walworth has been managed very well. Some years I see a large number of deer and some years I see less but I always see some. I like an equal amount of bucks to does harvested because it keeps things in balance and well managed. I say keep up the good work.

irresponsible if we are spending funds on majority items listed above. Need to concentrate on purchasing more public access to create opportunity. Also, go back to standard seasons no more holiday hunts. Extending these seasons stresses the herds

Would love to have the extended archery season without having the holiday hunt. As is most of December Has an orange requirement between muzzleloader season and antlerless hunts so let’s get back to a more traditional structured season.

No holiday hunt or doe seasons. No extended seasons! We dont need it open until end of January. If someone cant harvest a deer by Christmas then that's their fault. This county has more deer killed by vehicles than hunters

In general I feel there are too many deer. So I like ideas which provide more opportunity for hunting. But I do not want to lose opportunity to shoot a large buck. So I do not like any earn a buck format.

Suggest that the CDAC has the extended season again this year. No reason not to considering that we are not meeting antlerless goals, and the number of deer harvested in 2019 was less than 30.
Just really wish we would go back to wearing back tags for our safety. Whether good or bad to be able to jot down a tag name if needed we can for our safety & safety of others.

It seems like coyotes numbers are up. Packs are huge around where I live. Coyotes have been getting closer to the cattle more than ever, because their numbers are so high.

'Simplify deer season with one buck tag and one doe tag statewide for public and private. -Keep the lead bullets! -Stop changing stuff! We just want to hunt.

If Holiday hunt is held, limit firearm and crossbow to doe only. Standard archery equipment is enough of a challenge and should include buck harvest.

Biggest issue this year was corn fields left up during hunt. Then farmers cutting them down opening weekend. Messed up the whole week for gun season.

Way too many in my neighborhood. They have destroyed all landscaping. Very expensive. Please remove them from your neighborhood.

For me, just a balance approach and management would be nice, and not radical knee jerk decisions for maintaining deer herds.

Bring back the back tags, no way to identify problem hunters. Reinstate deer registration, not all deer are being phoned in.

As a land owner and a farmer our sightings of deer year round or throughout the year are a lot less then your numbers.

Crossbow hunting during deer running massacres the Bucks and leave little chance for gun Hunters to pursue any

I sure hope you leave bowhunting season the same..do not interfere with the rut time with anymore gun hunting

Can't wait to go deer hunting with a gun in November. A buck or a doe on public land will be fantastic.

Your survey is self governing.... I hate having to choose Public or private for my antlerless tag...

I hunted at least 90 times and only saw 2 does in 4.5 mos. of hunting. I saw more coyotes than does.

Think they should open gun season 1 week earlier and return to 1 deer either sex.

So far so good. A limit of one deer per license of either sex wold be good.

Need more public land to hunt.there is not enough land for public hunting.

Thank you for providing additional hunting opportunities!

GET RID OF THE HOLIDAY HUNT !!!!!!!!!!!!!!!!!!!!

Go back to a five day hunt either sex!!

Keep the Bow/Crossbow Season the same

Have more antlerless tags

Things are fine
Washburn, Northern Forest

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

451 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 159
   - I visit this unit for non-hunting purposes: 127
   - General interest in this unit: 82

   The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 394
   - Bow: 193
   - Crossbow: 159
   - Muzzleloader: 118

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 24.79
   - Maximum: 61

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 137
   - Mostly Private Land: 68
   - Public and Private Land About Equally: 75
   - Mostly Public Land: 51
   - Exclusively Public Land: 88
   - I did not hunt in this unit last year: 0

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 12
   - Not too crowded: 57
   - Neither crowded nor un-crowded: 62
   - Somewhat crowded: 68
   - Very crowded: 77
   - Not applicable: 6

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 112
   - Fewer: 131
   - Same: 153
   - More: 43
   - Many More: 7
   - Unsure: 5

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th>The Antlerless Quota is...</th>
<th>Much Too Low</th>
<th>Too Low</th>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
- Implement an ANTLERLESS HOLIDAY HUNT: Not applicable in this DMU
- EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: Not applicable in this DMU

If a Holiday Hunt is held in a Farmland unit...
- Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 35 385 31

If the Population Objective is not "Increase"...
- If a Zero Quota (buck only season) is adopted...
  - ...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?

<table>
<thead>
<tr>
<th></th>
<th>Support</th>
<th>Oppose</th>
<th>Unsure</th>

Report Generated: Friday, May 01, 2020 Washburn, Northern Forest
I have hunted this area for over 35 years and have deer hunted for 45 years, and have seen the highs and lows in deer numbers. There has been a dramatic fall off in the number of deer seen over the last 5 years. Much of the deer activity has occurred after day light hours based on tracks in the snow that were not there the afternoon before. This is also verified by trail timers. There are also less deer being spotted alongside the roads in at the twilight periods. Many small properties are being sold in the immediate area, area's that had prior hunting pressure now have little to none. Deer have entered those areas and are not leaving during daylight hours. Based on the amount of hunters noted in the area most of the pressure occurs during the opening weekend of the gun season. There is a also a large number of out of state hunters in the area. This at times has limited access to certain areas. I am transitioning into that older hunter and would like to begin to use a cross bow. There are a number of people that think this is a huge advantage over compound bows. I heard the same argument when compound bows increased in popularity over traditional recurve or long bows. There is no real advantage to a cross bow besides the firing method. The ranges are often shorter than the high speed compounds now available. The use of cross bows would add several years to both ends of a hunters career. My 14 year old daughter now wants to try bow hunting if she can use my cross bow. Hopefully she likes that and later transitions to a compound. There is also the question of baiting or feeding. This action has occurred and directly affected the hunting experience. People would argue no different than a harvested crop field. the differences are very simple, finite vs infinite, the bait pile runs dry, refill it. The crop field gets harvested, wait until next year. Mobile vs fixed. Try moving a crop field. Time and effort. Too many people looking for a short cut to success. Don't believe that, how many deer camps are still around? How many deer drives are still being put on? How many less licenses are being sold? There is also too much emphasis put on trophy deer only being harvested. It used to be you were happy to see a buck much less harvest a buck during a given year. Now people have "hit lists" and are not happy unless they take a big buck. I deer hunt for the camaraderie and memories, the chance to fill a freezer with great meals. If I do it with does or a smaller buck, it should make no difference. Thanks for letting me share my thoughts.

Deer numbers have been down for years (they are getting a bit better the last 3-4 years, but not much) and predator numbers are higher than ever before. This is not an opinion, it's a fact that is discussed among all of the hunters around this area and northern Wisconsin. Bear tags are treated like gold, wolf numbers continue to rise and yet the DNR gives out antlerless tags like they are candy. Get some facts from hunters in the northern part of the state and set up a plan to get the deer numbers back up and the predator numbers down. Children and young people do not want to go out to the woods and sit for hours and see 'nothing' in today's age....... -Want to get more kids interested and into hunting??? Make it so they see deer and it's exciting. I grew up in the 90's and the deer herd was incredible. It was a blast to go out in the woods and see multiple deer almost every time out hunting. This was even on county land also. Now, that same county land and other county land in the area hold far less deer. Our family also has a considerable amount of private land with only slightly better results (nothing like it was in the past). While we do have a few deer around, the numbers don't even compare and the experience is not even close to the same for the next generation coming up, which includes my child. Keep the antlerless tags going for the youth, cut down on them for the adults for a year or so, increase the bear tags, fight to bring back wolf hunting and get the predator numbers down in northern Wisconsin. It's not that hard of a plan, I don't understand why it's not getting done, but I do know we're losing the young hunters in the process and I'm afraid once you lose them, they aren't coming back.
2019 deer hunt by the numbers, I have read from different sources that say there are between 1.4 million and 2.2 million deer in the state of Wisconsin. None of them were in the woods I was hunting in, I live in south central Wisconsin, from the time I leave my house and drive north for a (4) to (5) day hunt and back home I travel about 850 miles, from the time I buy my deer tag, oil change in my truck, gas, motel, food, and any other thing that goes along with deer hunting I spend about $850 to $900. This last deer season on opening weekend I heard 10 shots (6) on Sat, and (4) on Sunday, I seen (0) deer. After my hunt was over on Sunday I stopped at the local bar to check the buck board only (1) buck was registered. And it was the same stories from other hunters nobody was seeing any deer and nobody was hearing any shooting, I got back to my motel and talked to (4) hunters from the Milwaukee area. Same story nobody seen any deer and heard very few shots, the more I though about it seems as it was not going to get any better so I packed up and went home on Monday morning. As of right now I don't know if I'm comming back to Washburn county to hunt or if I'm even going to buy a deer tag for 2020, I know that I'm not going to see (15) deer a day, but it would be nice to see a deer once in a while. I have hunted Washburn county for (13) years and things never seem to get any better, a few years ago I went (3) years in a row and never seen a deer, its not only me that don't see any deer. Just read other comments, and its not just Washburn county it is also other northern forest counties; I would like to see the CDAC fix the low deer numbers, and stop wanting to shoot all of these does. The CDAC says it wants to maintain the deer heard, looks like there is very little to maintain. Do the right thing. THANK YOU.

So we rifle hunt on the Namekagen Barrens west of Minong, and I would honestly say that the predation rate that you have figured in this region is incredibly low. In 2017 and earlier rifle seasons we saw more wolf and bear sign than deer sightings. We saw a average of 10 deer all season. In 2018 the wolves must have moved to a different region, and the deer population was an absolute boom, and we didn't see much sign of predators. We saw 53 deer opening weekend and 47 the second weekend. It was amazing! Then, 2019 rifle season it was back to normal. Wolf tracks and scat everywhere, and a total number of deer sightings of 7 deer the entire season. The predation rate is WAY higher than assumed. Next, I bow hunt on both public and private land near Birchwood. Probably a 70% public and 30% private ratio. I did see a fair (appropriate) amount of deer during bow season, but not as many as the past 2 seasons. I ended up shooting a buck on November 9th, but then on November 13th, it was like someone flipped a switch, and the deer were non-existent. We really didn't see many deer at all until after bow season ended. Towards the middle of January. After that, (end of January), they returned like normal. I will say that the winter months of 2017-18, and 2018-19 we were seeing a herd of 25-35 deer visiting our house every day. This past winter that heard was down to 12. The neighbors that I have talked to, didn't have much success hunting this past year, so I can't imagine where those other 13-23 deer went. We do hear wolves and coyotes howling, but I don't know if that is the cause or what? Thank you for bearing with my long "comments"! Good luck with your recommendations!
I have done white tail research myself and believe there is another confound to number of deer seen/shot during rifle season. I have multiple cameras out on multiple properties and noticed that the deer are becoming more nocturnal prior to gun season. I only hunted for a few hours one day during archery season so hunting pressure on my properties was minimal and should not have been a factor, however the number of bowhunters and hours has increased considerably around the county do to crossbow hunters. The additional pressure I hypothesize has created deer behaviors like I used to see post gun season when almost all camera pictures are at night until very cold weather shows up forcing them to move during daylight. I saw two deer during opening weekend but when I pulled the chips from cameras by my stands I had as many as 8 different bucks and as many as 12 different doe/fawns from 7PM to 5 AM. Again this was on multiple properties and I take great effort to make minimal disturbance getting in and out of my stands. Many people I spoke to had similar experiences. I would like to see crossbow seasons be addressed as it is not a primitive weapon like a bow. They are fine for those who have handicap issues or over 65 like in past but for the rest it should be a limited season like muzzle loader. If the main goal is just herd control then this is a mute point but if there is concern with keeping a quality gun hunting season, I believe this needs to be addressed. Thank you, I know this is thankless work because I did it myself in an urban setting.

I've been hunting public and private the past 24 years and mainly private the past four years and deer hunting for the past 54 years. I've seen a steady decline in the deer herd the past ten years especially since the disastrous winter of 2013/2014. The deer have not rebounded much in my opinion. With all the predators (wolves, coyotes, bobcats, etc) and all the antlerless permits available, in my words it is very disgusting. The 2014 gun season I saw one deer and hunted every day. The next year I saw a few more bow hunting and gun hunting. It got somewhat better the next couple of years, but not great by any imagination. Last year was the final straw for me. I hunted very hard during the bow season and saw 4 deer total from Oct.22 up until the Friday before gun season and gun season I saw one deer. I heard nine shots all of gun season and the land I hunt borders public. Opening day there seemed to be a small number of hunters and Sunday very few and the rest of the season the forest seemed deserted of hunters. I realize I'm only one person, but I spend a tremendous amount of time in the forest and realize there are bad years and good years of hunting. The trend I'm seeing is not acceptable from a hunter's point of view. Also the effect on the local economy has been disastrous to say the least. I choose to think if this trend keeps up, deer hunting will be a forgotten tradition in Washburn County. All said and done I truly believe cutting the doe permits significantly will help get hunters back and the deer to a recovery status. Thank you for your time.

I have never responded to any DNR forms?? It is hard I should imagine to try to figure deer management on any scale. We as property owners know our deer up close and personal and most who hunt also do food plots. You see year after year how the deer are affected by changes in the environment, weather and population changes. As deer managers we have the ability to see the over abundance of does at times and see many first time plot builders making doe factories instead of good management decisions. Another factor that makes your job harder is the lack of hunting pressure. Kids don’t hunt like we did, Minnesota people are not as noticeable mainly because of the resentment of them has led to more posting of land. Locals do not drive or have deer camps as in the days of old. Add to that many people have grown up in a more prosperous era and venison has been replaced by beef. I think the economy is going to wreak havoc with some of your projections. Times will get tight and there will be more people looking to supplement with game. Classic example, One week end of Minnesota people coming up to Minong, cleaned out the grocery store. With relatively cheap licenses you may see more Minnesota hunters and locals looking to take advantage of doe tags without the ability to purchase. Now add to that your budget cuts and lack of enforcement ability and you have a real challenge. I, like most quality hunters will do our part to stay out of the way and let you do your job. I suspect this years hunting seasons may pose some stressful moments. Good Luck..
I spend a lot of time in the woods of northern Washburn County. This year was one of the worst falls in recent memory for seeing deer. This is in line with harvest data that shows it was one of the 5 worst years in the last 25 years. Confirmed with results from half a dozen trail cams in use throughout the fall. Our party of 5 hunters saw 3 deer during the gun deer season. Northern Washburn County should be managed like Douglas County with a goal to increase the deer population. Fewer hunters in the woods every year due to low satisfaction with deer numbers. We lost 3 hunters this past season. The private antlerless quota number is too high and doesn't sell out anyway. Hunters are going to tire of paying for antlerless tags they don't have an ability to use. The positive captive CWD test triggering the ban for Washburn County is counter productive to encouraging hunters to be in the woods and helping manage the herd. The enforcement of the bait ban through the use of aerial surveillance was annoying and a waste of resources. More research into the effects of CWD on people and field testing are needed. CWD will likely continue its spread throughout the state and a bait ban will do little to slow the spread but it makes us feel like something is being done. If CWD or mad cow get into the cow population our state will have significant issues. Summary Increase the herd Legislate the end of the bait ban. Eliminate game farms. CWD research to include field testing for CWD and it’s impacts on humans and livestock. Thank you.

WHY ARE Bucks NOT TRACKED ON A PUBLIC-PRIVATE BASIS FOR STATISTICAL PURPOSES? IT WOULD BE NICE TO SEE THOSE STATS WHEN FILLING OUT THIS QUESTIONNAIRE. 3,000 ANTLERLESS AUTHORIZATIONS FOR WASHBURN CO PUBLIC LANDS IS RIDICULOUS. ALL BUT ONE TAG FOR PUBLIC LAND WAS SOLD IN 2019 AND COMES VERY CLOSE TO SELLING OUT EACH YEAR. THE RECOMMENDED DECREASE IN PRIVATE LAND TAGS WAS 500. ANYONE CAN FIGURE OUT THE AIM HERE IS TO INCREASE PUBLIC LAND HARVEST. THE SUCCESS RATES FOR ANTLERLESS HARVEST WAS APPROXIMATELY 24% PRIVATE AND 21% PUBLIC IN 2019 BASED OFF THE PREVIOUS FIGURES. PUBLIC LANDS HAVE LOWER DEER DENSITY OVERALL. I AM SOLELY BASING THIS OFF MY EXPERIENCE OVER THE LAST 16 YEARS OF HUNTING MANY DIFFERENT TRACTS OF PUBLIC AND PRIVATE LANDS IN THE NORTHERN HALF OF THE COUNTY. SEEING 0-2 DEER PER DAY SHOULD NOT BE CONSIDERED A GOOD HUNT TO ANYONE. BETWEEN HUNTER PRESSURE AND PREDATION, PUBLIC LANDS ARE FAR BELOW EXPECTATIONS AND CARRYING CAPACITY. IF YOU TRULY WANT TO MAKE DEER HUNTERS HAPPY, OR AT LEAST LET US KNOW YOU ARE LISTENING, PLEASE RECOMMEND WASHBURN COUNTY BECOME A SPLIT DMU. I'M TIRED OF HEARING THE USUAL CRAP OF IT NOT BEING POSSIBLE GIVEN THE FRAMEWORK OR LAW. WELL, FIGURE OUT HOW TO MAKE IT WORK FOR THE FUTURE IF THESE DEER COUNCILS ARE GOING TO STICK AROUND. HUNTERS DON'T PARTICIPATE IN THESE THINGS UNLESS THEY KNOW OPINIONS ARE BEING HEARD AND WE DON'T SIMPLY ACCEPT ALL RECOMMENDATIONS FROM THE BIOLOGIST. I REALIZE THIS IS A THANKLESS JOB FOR YOU ALL TO DO. THANK YOU FOR YOUR TIME.

I would like to propose a "hunters choice" carcass tag. Minnesota has been using this method for some years and it is nice to allow either a buck or doe be take with the main tag, and bonus antlerless tags are available for purchase. There seem to be enough deer in the area to allow for this practice. Secondly I would propose getting rid of the private and public antlerless tags. My family owns a small portion of land, depending on the day, hunting pressure and winds, we decide whether we hunt on our land or the public land right across the street. The cost for a non resident (but land owner/tax payer) is too high already to even consider buying both a public and private tag in addition to the normal license fee. Finally I would like to propose an antler point restriction program such as my home unit in MN. This has lead to much larger/mature deer in these areas, but more importantly it forces the hunter to study the animal before taking a shot. Last season a hunter was shot in Washburn County by another hunter that shot at movement. There were also a hand full of other shootings across the state including during a deer drive. These are unacceptable consequences and I believe an antler point restriction would help by making hunters slow down and truly identify their target. Thank you for your consideration.
Public Input on CDAC Preliminary Recommendations - Spring 2020

2019 deer kill was down a lot not only in Washburn County but all over the state, a lot of people are saying it is because of the late season. I understand that the winter storm had a lot to do with it. DNR says in other years when we have a late season the harvest is also down, what I don’t understand is that hunters still walk out to their stand no matter if it is early or late season, these deer don’t just vanish before gun season then come back after gun season is over, my feelings are that I don’t think there are the numbers of deer out in the woods that everybody says there is. I have hunted Washburn and Sawyer County for a number of years and I have never had what you would call a great year, don’t get me wrong I love to be in the woods to relax and rest, but it would be nice to see a fee deer now and then. There are times I have sat in different spots for days on end and never see a deer. I would like to ask the CDAC to increase the deer numbers for Washburn County. Thank you.

I’ve visited and deer hunted Washburn County for over 50 years. I enjoyed it a lot, great country!!! I hunt hard, sunup to sundown. I scout, I explore, I practice harvest guidelines above and beyond the required. I hunt on public land. What year was it that the DNR sold unlimited bonus tags at 3, or 4 dollars? Quite a while ago! That was the year the deer hunting ended in Washburn County. The woods were littered with gut piles from deer— even fawns. I had a favorite scenic stretch between two side roads. Started with a beaver dam, then rolling hills, then mixed swamp and hardwoods. My family would spread out and spend days along our favorite deer trails. Now I’ll walk the mile between roads, and be very lucky to see a dozen lone deer tracks throughout…. it’s sad. Very sad. It hasn’t come back at all. I walk it a couple times a year to recall fondly the family hunts, but I won’t invite my nephews to come over, as they would be bored with no deer sign….. in a “dead” county.

I’ve hunted this unit for a long time, and spend more days/hours hunting than anyone I know in my immediate area. Based on trail camera data, my scouting, hunting, and talking with other hunters, I can confidently say the doe:buck ratio in my immediate area is very bad. The ratio seems to be between 8:1 and 12:1, which is not good for the heard and MATURE bucks are exceptionally rare to see (on cameras, in fields, or hunting). Professional studies show us that antler point restrictions do not work on healthy heards, but this is the exact situation where implementing these restrictions for fixed time period (5-10 years) can really help bring the doe:buck ratios back into a health balance and allow some bucks to finally survive to maturity. Also, I would REALLY like to see the muzzle-loader season cover more than 1 weekend, as weekends are the only time average-joe’s like me get to hunt. My preference would be everything after gun-deer up through the end of December. Also, would be really cool if it became a combined muzzleloader/handgun season. Expanding this season could be a tool to help the biologists fine-tune their harvest goals.

This may not be the appropriate channel to voice this, but why not. As a lifetime Wisconsin resident who owns property in Washburn and Polk, I am very frustrated with the amount of non-residents during firearms season. I can’t even sit on my own land without being disturbed daily. I would really like to see a season structure that benefited RESIDENTS at some point. If we were to go to a 2 week season for firearm regardless of the start date, RESIDENTS should get the first week before we allow any non-residents. If we stay with the traditional 9-day hunt, RESIDENTS should get the first 2 days minimum. Currently there is absolutely no perk to be a resident of the state of Wisconsin. I absolutely live for hunting season, but over the last 20 years it has become a joke. I can’t even get my kids to be involved with it anymore due to the amount of people in our area. It is truly sad to see a sport I LOVE being destroyed by Wisconsin allowing everyone to hunt without any preference to an actual resident. I am not the only one who feels this way, so I thought I would speak my peace. Thanks.
I have hunted Washburn county for 26 years my parents property will transfer to me upon their passing. The land is beautiful but no longer contains deer in a huntable number. My 14 year old son is losing or has lost his interest in hunting. He has seen one deer in 3 seasons hunting with his Dad. I will sell the land and find a better experience. I’m so dissatisfied with. The introduction of wolves in the area and bear numbers increasing plus crop damage permits matched with a couple of hard winters has ruined my sons experience hunting. We have gone from seeing 20 plus deer on opening weekend for the gun season to rarely ever seeing a deer. We sit from sunrise to sunset. Congratulations you no longer have crop damage or collision with cars and with your management practices you will soon and already have no reason to hunt. “Dad why are we sitting out here?” “We haven’t seen anything in 3 years.” I know little buddy I’m sorry.

If a quota is going to be given, why can’t a separation from Northern and Southern numbers. I believe the quota is dictated by southern farm numbers and I hunt in the northern forest area close to Douglas County where deer populations just are not as plentiful. We have 11 hunters usually and between us we saw less than 2 dozen deer in 5 days of hunting and we are spread miles apart. Two years in a row we have not even seen a shootable buck. As far as the young buck population, how about tracking how many young bucks are killed as antlerless kills. This is the biggest problem with so many antlerless tags, hunters do not know the difference between young bucks/does and adult does. To be honest, we buy antlerless tags for the sole purpose of not shooting antlerless deer unless one of our hunters is a youth hunter. We will wait to return south to use tags in that area. JUST NOT ENOUGH DEER IN NORTHERN PART OF WASHBASIN COUNTY, PERIOD.

My only comment, and it seems like it is not even a topic for discussion any more, is the baiting ban in Washburn county. It is obvious by analyzing the data that Washburn county does not have any issues with CWD. Also, it is silly to think that deer do not have saliva transmission with each other, other than eating at concentrated food piles. Is there any forum where this issues can be discussed? One of the biggest advantages of putting out small bait piles is not necessarily to draw deer in kill at that moment, but to give a hunter an idea of what deer might be in his hunting area by way of a trail cam. I have done all the surveys and watched all the videos that the DNR has put out and there is nothing regarding the baiting ban. It’s just frustrating as a hunter in the northern section of Washburn county where there aren’t any fields that I can’t put out a little corn with a camera to see what’s out there. Thank you.

I seen nothing in here about extending rifle season, limiting crossbow to October which has been a very controversial subject in the past few months. I have heard nothing but negative feed back on these proposals and I am also highly against these. Our seasons are fine the way they are they have worked for all these years and the addition of crossbows being allowed has put more hunters in the woods during bow season. If somebody feels it isn’t fair that bow hunters always get to hunt the rut then they need to get a bow and put in the work like the rest of us. I hunt all seasons bow, gun and muzzleloader, Its not about the harvest its about enjoying the great outdoors. Extending rifle season and opening it earlier would in the long run be detrimental to our heard and our economy as less out of staters would come here to hunt as the chance of a trophy buck would drastically decrease.

I personally think that there are far too many antlerless tags available! It seems that the DNR’s main goal is to sell as many tags as possible. No single hunter should be able to buy more than 1 antlerless tag. Non resident antlerless tags should be restricted. Many that don’t live here don’t really care about our deer herd, they just want to fill cheap tags! What a joke this deer hunt has turned to. A lot of things the DNR now legally allows, are to me, not considered fair chase. They’ve changed rules to sell more tags. I’ve hunted the same piece of property for close to 50 years and see deer numbers declining. I have gone from seeing several bucks during the rifle season in the past, to not seeing a buck in 2019, the first time this has happened since the mid 1990’s. What a change? I don’t expect deer quotas to change since it’s all about selling tags, so sad!
With crossbows becoming in abundance during the archery season I have noticed way more hunting pressure on both public and private lands. Most noticeably by non residents. I saw a question regarding increasing license fees on the spring hearing survey so I hope that helps. I run a lot of trail cameras on our private property and have notice that our deer numbers are still fairly low. We had standing corn in the immediate area and not a lot of deer. Winter browsing has been minimal compared to 10 years ago. Deer populations on public lands is low and buck age structure above 1.5 years is almost non existent. It would be nice to rebuild a varied buck age structure again. Not necessarily trophy antlers, but varied. Doe weights are also smaller which tell me they are younger. The habitat seems to be very good for deer, bear and Grouse.

From what ive seen during my time in Washburn county, from trail cameras and visual observations of herds; there has been no significant deficit to population. My main issue is the idea of leaving "button " bucks in the same category as antlerless. If people had the discipline to let these young bucks grow to maturity, it would benefit both local, and out of state hunters. This in turn would help county and state revenue, and lead to more desirable deer. But, as far as population, we have good seasons as hunters and bad ones. I would be interested in seeing the input between early season bow hunters and first day rifle. Me personally, I tend to see a lot more deer before guns start to go off. Just because people dont see the deer, that doesnt mean they arent there. Some people are just poor stewards and dont really monitor their herds.

We own a little over 200 acres of timbered land in Springbrook Township, Washburn Co. We adjoin county-owned land along our eastern and southern boundaries. Last year we had a significant acorn crop on our property resulting in deer concentrating here during most of the post-season. The result is extensive over-browsing. Regeneration of tree species preferred by deer has been severely retarded. We saw some recovery when populations were down and probably closer to carrying capacity. Now that the population is rising again, samplings and herbs have been hard hit. My recommendations would be to maintain the deer population near the recent low. Our hunters and most others like to see numerous deer when out but they do not relate the annual differences with habitat quality.

I have land just south of Minong and have very, very low deer numbers. three out of four hunters never saw a deer this past year. Because of the low deer numbers there are no other hunters in the area. Going thru the woods very little under brush was eaten by deer this winter again because of the low numbers. The woodland area of the county needs a low doe deer harvest for a couple of years or more. Another note is about the low number of hunters - We want more hunters but are looking at raising the price of license to non-residents. My son and his 6 kids will be looking at no longer hunting in WI when the kids are older because of the cost. Purpose deer bow and gun license non-resident $200. This would increase revenue and hunters.

Private food plots within forested areas and illegal baiting is too common and the deer herd has adapted to these unnatural habits so that it has changed the natural habits of the herd to these situations. Also, the change in the general population away from the hunting sports has created large tracts of land that have become preserves for the game where they migrate to avoid human interaction. I was successful in my harvest last year but a lot of walking and perseverance is the reason why. This did not involve "stump setting" or sitting in an elevated tree house. It is time the DNR started to promote sportsmanship and "Fair Chase" in this sport. If not hunting and ethics as I was taught growing up will be lost completely.

Hunter satisfaction with the number of deer is of course an indicative scale regarding the general number of deer that should be harvested, but I believe that approach needs to look at a much longer timeline than a (3) year plan. It isn't just the number of deer but the quality of the individual(s) and the quality of the herd(s). Antlerless only seasons allow for bucks to mature while maintaining the deer population numbers. Quality bucks and the chance for younger bucks to add to genetic diversity should be a major focal point in determining numbers. Furthermore, priority should be given in the availability of tags to residence of a county, neighboring counties, non-neighboring counties, and then out of state in that order.
I’ve been hunting this unit for many years. Because of increased numbers of predators I’ve seen less deer. Not allowing baiting last year meant we saw less than previous years. Hunter numbers are down. Deer numbers are down. People are not passing down the tradition of deer hunting anymore. I’ve been hunting deer since I was 12 with my father and am now passing it on to my son. Soon because of the lack of seeing deer and the expense of deer hunting in itself many more will leave the sport and challenges of deer hunting. Banning baiting does absolutely nothing towards eradicating CWD. If you want to eliminate the disease then stop all game farms and private raising of deer in the state. They brought it here in the first place.

It’s easy to blame weather, etc for the reduction in the number of deer taken but the majority of hunters that I know from the area continue to see fewer deer. It’s difficult to keep people involved with hunting especially kids when the deer numbers aren’t there. Ten years ago we always saw a fair number of deer and everyone hunting enjoyed seeing deer, especially the kids. Stop issuing doe tags except to first time hunters for a few years and let the herd increase in size if you want to keep hunters. I know more and more have given upon hunting in Wisconsin due to the way it’s being managed. We can argue all points concerning crop, forest, etc damage by increasing the herd but amazingly it worked in the past.

The DNR needs to understand that the whitetail deer numbers in Wisconsin’s public forest land are horrible! The bear and more so the wolves have decimated the deer herd! Winters can be hard, and even if they luck out one year, they still battle survival from the wolves/coyotes daily! Stop spinning excuses before there are no hunters left who care to enjoy the public lands for deer hunting! I sat for 8 days, and saw 4 ttl deer! It’s not the weather, its the prey on the deer population! The numbers are so low, its hard to justify buying a license anymore and 2 of my kids don’t even hunt anymore because its hard to sell the sport with cold temps to see no deer! wake up please, I’m begging you!!

For the last 5 years what used to be a considerable amount of shooting has decreased to very little. Usually you could see bucks hanging out of the back of trucks by noon on the opener, now it’s rare to see a couple all season. I also am an avid bear hunter and judging from the amount of deer I see over the summer and fall months training and harvest season (right around 70 days in the woods) I feel the deer population has regained slightly but is still to low. I would like to see buck only harvest for at least three more years. Possibly some type of either or the first two days or whole season. I feel the sale of bonus tags should be discontinued till the population rebounds. Thank you

We don’t see any deer in public forest areas that have been clear cut (after the 1st year or so). These areas become dead zones for many, many years. I’m hoping CDAC and/or the forestry division would consider adjusting how they clear cut areas. My recommendation would be to leave uncut forest sections adjacent to clear cut areas (a strip pattern), or leave uncut forest sections along natural structures (lakes, streams, swamps, wetlands) or both. From my perspective, it would help the deer population and they (uncut areas) serve as natural walk ways for hunters, so they can be hunted. I would also consider employment of DMAP for public land. I’m assuming that would make sense.

Having hunted deer for approximately 35 years in NW WI, I’d like to see the number of antlerless tags decreased to increase the overall population between 10-20%. I constantly read about initiatives to increase the number of youth hunters, but how enjoyable is it for a young hunter to sit in the woods all days and see 0-3 deer? Simply seeing deer is incredibly rewarding and enjoyable, and helps hold the attention and interest of young hunters. If there is any truth that the revenue gained by the DNR from antlerless tag sales is vital to decision making, then please just increase the cost of a basic deer license to cover it. Don’t sell more antlerless tags to generate revenue.
Doe tags for public lands still need to shrink! Public lands are over crowded during the 9 day gun season and can become dangerous with people shooting at everything. Should go back a few years and give bow hunters and crossbow hunters doe tags for free and take them away from gun hunters. As properties shrink and force people onto public we need to push our youth into crossbows and bow hunting to increase their opportunity. There are several deer on public properties but people don’t drive deer like they use to. The only way to increase the kill is to eliminate gun deer tags and promote archery hunting. Gun hunting is a dying sport!

My Dad, brother and I hunt about 3 weeks solid in Washburn. We hunt hard and scout harder. The decline in deer numbers the past 10 years is troubling. The sign isn’t there regardless of a late or early gun opener. We scout countless miles of public land and we all struggle to find huntable deer sign. We shoot plenty of deer but it shouldn’t be this difficult. The deer aren’t there. We all have decades of experience in this area. It should be buck only. The wolves and bears are keeping the herd from rebuilding even in mild winters. Hunter numbers in the north are declining and will continue to do so if the numbers don’t improve.

As an avid hunter, the deer population in Northern Washburn county have significantly decreased over the past 3 years. My food plot photos prove it. Surrounding avid hunters agree. Most, including myself, have not harvested a deer in 2 years. There is too much county and state owned land in Northern Washburn county. A program should be started to sell land to private owners, who cannot not develop the property, and will support a healthy deer herd and additional wildlife. Tracks of 60‐100 acres to break up vast amounts of papermill land will substantially aid in successful hunts and future deer management efforts.

The 2019 deer rifle season did not go as expected for deer hunters and a lot of complaining went on. Anybody that bow hunted last year saw quite a few different bucks and a lot of deer because of the late rifle season. Anybody that didn’t bow hunt is assuming there is no deer or lack of bucks which is false. The majority of the bucks were in recovery mode and not moving during the rifle season, my trail cameras on my Farm recorded plenty of deer, mature bucks, small bucks all up on their feet moving after deer season was over and the second rut had already started.

I still think we are trying to manage a deer herd in two different types of habitat in Wasburn county. This makes it difficult for the people that live in the heavily forested area's believe that we have a deer herd that doesn’t need growth in overall numbers. I agree that in the agricultural area's the herd could probably survive a little downsizing. I would like to see a comparison of the type of habitat the antlerless tags are filled in. I believe there are still some people filling antlerless private land antlerless tags on public land.

I think we need to be careful with the amount of public land antlerless tags. It seems that there are plenty of deer at this time and we had a relatively good winter, but I feel that a jump to 3k is alot. Many factors go into hunter success and weather seemed to be a large factor in why last season's numbers went down. I think we could hit the targets with less public land tags. Otherwise I felt that there were plenty of deer on the public land I hunted last year and with harvest numbers and winter, I am very encouraged for this year too.

I recently moved and began doing more deer hunting in Monroe County, Wi. I also hunt only public land in Monroe County and have observed many more deer down there compared to Washburn County. I find that interesting and assume there is a higher deer population in Monroe County. Interesting what drives a larger deer population in Monroe County compared to Washburn County. More predators in Washburn must have a large impact on the deer population. Overall, happy with the work the DNR does and I truly hope the spread of CWD can be slowed.

Thank you so much for the transparency that the DNR and the CDACs have displayed in the past couple years to involve hunters in the entire hunting process. I had never seen numbers as detailed as I was recently able to see and it gave me a better idea of how the CDAC works to make hunting more enjoyable, as well as put any concerns I have to rest. Thank you for all your time and effort to helping me continue to enjoy all the wilderness Wi has to offer. I wish more outdoor organizations were this involved and transparent.
I think we need to go back to where a bow tag is good for a buck or doe and no bonus tags. For rifle hunting we go back to sending in for a doe tag or when you buy your license your tag is good for a buck or doe and no bonus tags. I do think kids under 17 who hunt the youth hunt should be given an extra tag for a doe to keep kids interested in hunting. Also for the muzeloading season sell a separate tag good for a buck or doe. We also need to stop the does hunts and leave the current seasons the way they are.

Antlerless deer should be harvested at a lower level for at least the next two years to rebuild the herd. We have much more predation these days than we did back in the nineties which tends to be down played. I'm sure you will not have to go far to find folks in agreement on that. Let's work on rebuilding the herd (and reducing predator numbers so we can get back to offering people a reasonable chance to see and harvest a deer instead of them selling off their Properties and Hunting Camps in Washburn County.

With the wolf population on the rise there just doesn't seem to be the number of deer sightings there used to be! Not even close! With the wolf population continuing to rise this will only get worse so in order to counter act that I feel the need to harvest less deer in order to have more around! Not that enjoyable to sit and hunt and not see much. I disagree with the “maintain” goal the cdac has recommended and would like to see it grow. Very little vehicle searches and hardly any crop damage...

for the past 30 years i have hunting the Washburn co forest near ole lake. Last year i saw a total of 2 deer after hunting 7 of 9 days. It was one of the worst deer seasons i have ever had. Between a lack of deer numbers, wolves in that section and a real lack of hunters in the woods to go along with the bad weather all contributed to the terrible deer hunting season. I am starting to look for my own land in another county because i don’t think things will improve in Washburn co.

Deer management units should go back to being established by habitat not political boundaries. In Washburn County habitat south of Highway 70 is dominated by farm land and broken forest, and is mostly private land. Deer numbers are way to high. While habitat North of Highway 70 becomes mainly forest with a substantial area of public lands. The same is true in Burnett county and dozens of others around the state. Stop the political BS and get back to science based management.

Rather than an antlerless only season bring back earn a buck. I support the "maintain" the population goal and would like to see that extended for the next 3 year term, next year. Glad to see the public land antlerless quote proposed to increase. I would harvest more antlerless deer on private and/or public land and help utilize more of the antlerless tags if i had somewhere locally in Washburn County to donate the meat. Thank you for the opportunity to provide comment.

Archery hunting is my passion and I spend a lot of time in the woods. I'm selective and don't shoot just to kill a deer. I saw very few does last fall and deer nearly vanished before Rifle season. I believe the population estimates are too high. My number one concern is feeding and baiting should not be allowed for obvious reasons such as spread of CWD. It is very common to see vehicle deer kills near feeding locations. Baiting and feeding needs to be outlawed.

Archery hunting is my passion and I spend a lot of time in the woods. I'm selective and don't shoot just to kill a deer. I saw very few does last fall and deer nearly vanished before Rifle season. I believe the population estimates are too high. My number one concern is feeding and baiting should not be allowed for obvious reasons such as spread of CWD. It is very common to see vehicle deer kills near feeding locations. Baiting and feeding needs to be outlawed.
The CDAC is doing a great job considering many factors - both known and unknown - for this county. I hunt both public and private since my private land adjoins public. I think too many does have been taken the past couple seasons simply because on the public land I hunt I saw a sharp decline in numbers. However, that’s also a small portion of the overall land. And I also saw antlerless deer taken last season and know that makes an impact on a smaller property.

I understand there is a lot that goes into the estimation of deer population. The one that gets me is the vehicle deer kill. I honestly don’t believe that figure should carry much weight into population estimates these days. There is way more to look at than a simple vehicle deer kill. People are not as attentive when they drive and most drive faster than posted speed limits. Not to mention the increase in speed limits.

I think in this DMU, the northern forest area, and southern ag area should be split. There aren’t as many deer in the northern zone, as there is in the southern ag area. Not to mention, the southern area doesn’t have the bear, and wolves to compete with. Also in the northern area, there is a lot more public land, so we get a lot of hunters from other area hunting the public area first, then going back to other zones.

One thing I noticed this year was hunters in my area are still harvesting every deer they see. They have not changed attitudes towards what they are harvesting. Brown is down. I feel that if the DNR gives out more antlerless tags then hunters will continue to take more deer then we will be back to where we were in this until with no deer. I feel things are just starting to get the population back to normal.

Based on an increase in fawn sightings last year, I feel the population of bear has come down but is still high. I also feel the wolf population has gone up and will always be too high. Based on the past winter, I’m excited about an increase in deer population this year. Is there a way to divide the counties up at least by 2? The southern part of Washburn County has far more deer than the northern part.

If you want further history go to the deer camps and review as I know they have a ton of information that they would love to share. Also the number of predator’s is out of control as a group of 5 hunters we seen at least 7 wolves and have video and pictures of some of them as they were bigger then a yellow lab so not a coyote - something needs to be done here as people are taking this into their own hands.

You need to reduce antlerless tags to 0, the deer numbers around Minong Wi. are very low, we hunted east of Minong on private and public property and the numbers were down more than half a year ago, west of Minong the numbers were about 0, 10 of us hunted hard for about 6 days and one hunter shot one doe that’s it. Numbers west of Minong 2018 were pretty good, 2019 they were way off, very low.

I think Washburn county should maintain or slightly increase the deer herd. I hunt north of Hwy 70 and have been fortunate to harvest some antlered and antlerless deer the past few years on public and private land. There are deer out there you just have to put in the effort, however I would like to see a few more deer on the landscape so I could be more selective in what I harvest.

Having 820 private acres managed for ALL wildlife- concentrations of deer vary by available food source - plenty of deer around - but we select harvest only dry (fawnless) does - the goal is a healthy herd - we harvest what we need for meat - not just to control population- however more deer could be taken if there is a need for food - have more thoughts- but that’s about it for now.

Deer population in the Southern portion of Washburn County seems to have a larger deer population than that in the northern part of the county. I think there is often a larger need for a herd decrease in the southern portion of the county with the increased amount of farm land. Even though last season had poor results I think there has been a good herd management balance overall.
Keep things the way they have been for the last few years. 9 day gun is plenty once you add in all the doe seasons/holiday, youth...etc. continue to allow us that are managing our own property to keep doing so, allow us to purchase over the counter doe tags as we have the last few years. If it aint broke dont fix it.....and doing some of the proposed its that is far from fixing.

Overall I feel Washburn ctsys deer herd is in good health based on observation. When in the area I do hunt as hard as I can, often deep in the woods through swamp or difficult terrain. I see deer sign just not as much as I would like or in years past. I can’t say how important it is to maintain timber cutting/active forest management. We have seen deer utilize this in its cycle.

I hope you won't move opening day ahead to two weeks before Thanksgiving. That, and adding a week to the season removes another tradition from the hunt along with the tie to the Holiday. And, how about less chance of tracking snow. Both hunters and deer are scarce in the area I hunt and I don't see how a longer season will change this. Thank you

Many farmers want to lower the deer numbers on private lands, specifically their lands. They are very self centered about this and are only looking at their own monetary interests. This should not be allowed as they are already getting thousands of dollars from federal programs that more than make up for any crop losses they sustain from deer feeding on their crops.

Do not agree with antlerless tags being divided between Private and Public. Private property sits next to public and doe is shot on private and jumps the fence to public...do not have tag for public...reverse scenario-and do not have private. Road kill numbers are way off. These are not being reported. Why should there be a premium for using crossbow?

State needs to raise non-resident license, there's budget issues with the state and I believe when you sell a license for x/ dollars to kill a deer the additional tags should cost the same. I also believe that the state is not hard enough on deer farms with CWD. Your distance from CWD areas don’t seem to support the distance deer travel.

There are too many wolves in this county. My party has hunted this same woods since the 1940's, there had been one wolf sighting between 4 to 10 hunters from the 40's to 2017. In 2018 we saw 2 wolves in 2019 we saw 5. A member of our party saw more wolves then deer in 2019. It might be time to consider a wolf hunt in Wasburn County.

I've hardly seen any deer the past several years. I am consider quitting hunting. Why buy a tag and a bonus tag and not see anything? The age of the youth hunt is too young. They should always have to pass a hunting course regardless of age. I would bet in half of the cases, the adult is shooting the deer and the kid is tagging it.

Too many anterless deer permits reduce the number of bucks that could be born in future harvest years. Wolves are a growing problem as well. Bears are a growing predator also have taken several small new born fawns in prior years. We suggest Buck Only Harvest for two years then return to your quotas that you stated in Section 3.

what happened to splitting the northern half of the county antlerless permits from the southern half of the county where due to farm land there is concern about crop damage. I feel that we are killing to many does in the northern half of Washburn county because you don't have any control over where the does are being killed.

Would like to see a 2 week gun season that can provide more time with my grandchildren. They can’t hunt all week and a couple extra days here and there would really help. I would think this would be great idea to get more youth involved in hunting. COMMON SENSE, WHY DO BOW HUNTERS HAVE 3 MONTHS BUT GUN HUNTERS GET ONE WEEK?

If we want to have our youth continue to participate in our hunting traditions we need to have them see more deer. It’s hard to get the grandkids to be excited about hunting deer when they are lucky to see more than 5 deer over a nine day season. We need to have more deer and allow our youth an opportunity to harvest one
With fewer hunters harvesting fewer deer in 2019, also impacted by the rut being over and gun season heavy snow, I think the quota could be bumped up, especially in light of a mild to moderate winter. Also, I have seen numerous deer when out and about and have had friends tell me they are seeing more deer this spring.

For the last two years of deer hunting for me & my party, we have been seeing a lot less deer on our private land, that is why I would like to see the deer population grow. That way we might be able to harvest more than 1 deer a year. (Our group of hunters consists of 5 people) Thank you for all the work that you do.

Having hunted this unit for 29 years, I feel the last 5 have been the worst in all those years. I feel the deer population is much lower than it has ever been. I base this on the amount of people I know that hunt and recreate in the area. Every one of them agree on this subject in almost all cases.

I hunt the northern part of the county. I have for 40 years. I used to see 20-30 deer per season. I now see only 3-6 deer per rifle season. Last year I saw 2. Very discouraging. Terrible actually. Northern and southern Washburn county are very different. NO bonus tags in northern part.Please!

Deer hunting is my biggest passion but I see so few deer anymore that it is almost not worth going out. I may just give up on Wisconsin hunting and start booking out of state hunts where I will be able to see more deer. I hunt from dawn to dusk and have way too many days where I see no deer!

Would like to see a statewide ban on baiting. Also eliminate some of the seasons for gun hunting. Have a season for a youth gun hunt and muzzleloader season. Forget all these additional seasons hunting does and holiday hunts. Too many seasons for different types of gun hunts.

Saw no deer in the 4 days I hunted. Will likely hunt less or not at all until this turns around. Understand the late season theory but doesn't fit with declining harvest totals for the last several decades. Goal should be to slowly increase the Washburn County dmu herd

I believe there has been an over harvest over the past three years due to the high number of bonus tags available, as well as illegal kills throughout the year. The majority of the yearlings never make it to the following year, and body size has shrunk considerably.

There is no present need for harvesting does. Our local deer population has been over hunter for to many years. If there are no does ,there is no reproduction. There should be no antler less harvest in the Northern Forest units, except for the youth hunt.

I WISH THE STATE OF WISCONSIN WOULD MAKE ALL FEEDING AND BAITING OF DEER ILLEGAL IN THE STATE!! DURING THE 2019 SEASON WE FOUND TREE STANDS WITH BAIT ALL AROUND THEM!! WE HAVE HUNTED THIS AREA FOR 20 YEARS AND ARE SEEING MORE HUNTERS AND ILLEGAL BAITING.

I have witnessed coyote chasing adult does many times in Washburn Co. Evergreen Township.It makes me so angry to see the coyote predation in Wisconsin. No ones fault, but it still angers me. Needless to say, I am a coyote hunter 12 months of the year.

I hunt with only traditional archery equipment. I am thankful that I am allowed to hunt with my bow during gun season. I don't see any reason that this opportunity shouldn't continue even though it seams some people may oppose the activity.

Do not support a longer gun season or any changes to the crossbow regulations. A slightly shorter overall season is fine. I don't think anything is broke. The weathers during the 2019 fun season was the primary difference last season.

I think the public lands should be NO antlerless deer for at least 2 years. We need to get the deer herd numbers back up. I hunted all the deer seasons and saw very few deer. Please stop the antlerless tags in the public lands !!!

Based on one of the last slides you put a deer estimate in. I believe that number is too high. The number of bucks are down. I spend a lot of time in the woods and I feel like I am a good judge of this statistic
One of the big problems where I hunt is the wolves. Every morning while hunting I could hear wolves howling just a few miles away. They either killed a significant amount of deer in the area or chased them away. Seem to be using 2020 suggested numbers of antlerless extra tags as a way to raise revenue and for herd control. I saw no deer during the 4 days I was able to hunt. Worst deer season ever. Increase herd.

Managing our deer herd is all about killing the danged bears, says I. I want to see a BIG GAME license that allows hunters to take one bear, one deer, one wolf. $100, and cull the forest of the fawn killers.

I would like to see harvest authorization be valid for both public and private again. I feel that the current harvest authorizations overly limit hunting opportunity and reduce predictable deer harvest.

I have purchased doe permits in this unit each year they have been available with the intent of not harvesting any. My hope is that by doing this there will be at least one doe left to reproduce.

There are wayyyyy less deer than 10 years ago and it makes hunting and traveling to this unit much less fun. Get rid of the wolves and hunt more bear, the natural predators are the problem here.

More antler less tags available for public land. There's always 6000 private land tags and like 2000 for public and the public always run out yet the private land always has more than half left?

Too many wolves. Too much private land baiting. Need to get a handle on predation. Saw more wolves and wolf tracks than ever before. Believe that baiting makes the deer migrate to private lands.

The DNR needs to work more on eliminating predators such as wolves! It was stupid to reintroduce and then protect them. The deer herd in our area has decreased over 50% since they appeared!

No baiting of any kind private or public. Double the out of state cost for tags. Covid 19 will probably restrict many things come this fall. So perhaps a second plan should be considered.

I seen fewer deer last year than the previous two years. I'm happy to see a slightly lower antlerless quota limit on public lands. The deer that I did see last year were all young deer.

Wolves and bears are a big problem in this area more wolf tags and bear tags are needed to keep these animals down in numbers. I seen 20 bears and 10 wolves in the 2019 bow season.

You need to cut the number of out of state, play some moratorium on them for a year or two. All the public land is hunted by hunters from out of state. Also OPEN A WOLF SEASON.

I did not see any deer while hunting the 2019 season, however, I saw many fresh wolf track. Our group saw a total of 5 wolves on two separate dates running by their deer stand.

Extension of the gun deer season would do more harm than good. It would push it into the rut some years which would be harmful to the buck population. Please don't extend it.

Way to many bear, coyotes, wolves, bobcat. Don’t see the deer like we used to. Will be hunting other states until Wisconsin rebounds. Tired of wasting time not seeing anything.

Deer numbers seem down, possibly giving out too many antlerless tags. Predators seem to also be a problem also, seeing more bears than ever and now seeing some wolves.

Buck harvest is an important consideration in the metric and has been affected by the late season. Shouldn't we consider a 2 week season starting a week earlier?

I've seen and interacted with too many predators, the Wolf population has to be reigned in and the coyote regulations left liberal. Also increase bear kill permits.
Increasing the rifle season by 9 days was not an option I can vote down. Where was that question? And the proposal to stop deer hunting before the gun season?

I used 10-15 sometimes more on opening weekend. Last 3 years I count on 1 hand how many deer I have seen. I don’t have problems seeing bear, wolves or coyotes.

I feel if we continue this trend with providing more bonus anterless tags, we will have significantly less deer population for future years and future hunters.

Split this county to a south and north zones, there are FAR less deer in the north. Seems like no one is listeing. we need no doe tags in the north. Thank you

This area can support a higher density of deer. Between winters and high numbers of predators the antlerless population should be protected a little more.

Felt number of bucks was lower too. In general, deer population seems down and we are outside quite a bit. Feel too many bonus tags would deplete farther.

stop messing with the unit to satisfy a few people. If people want to hunt they will.some years are better than others stop trying to manage mother nature

I not sure many hunters are regersting their deer now that you can do it on-line. Think the deer resistered are a lot less that what is killed.

Something needs to be done with the ever increasing wolf population, people in Madison have no idea what their impact on wildlife is.

I WOULD LOVE TO SEE ANTLER RESTRICTIONS DEVELOPED FOR WISCONSIN AS A GENERAL RULE. MEANING A MINIMUM OF 3 POINTS ON 1 SIDE TO BE A LEGAL BUCK.

I'm sure you have heard it all before, but I will reiterate:not enough deer and too many predators. You have to start listening to hunters.

thanks for recommending more public land tags next season. I'd like to see Washburn Cnty issue a free antlerless tag with each license sold.

thanks for recommending more public land tags next season. I'd like to see Washburn Cnty issue a free antlerless tag with each license sold.

Late season in 2019 resulted in much lower deer movement during the gun season it seemed. We had seen high numbers of deer earlier in 2019.

Hunting public land for the majority of the 9 day season deers sightings from the previous year were a fraction of the year before. 25 to 1

We hire professionals to study the various issues.Listen to public imput and the science from these folks and make decisions.

I think that the unit should be split in two. Because the northern part is mostly public and doesn’t have much farm land

Get rid of the public private split. This has only added confusion and has not served any useful purpose!

We see lots of does and fawns but very few bucks larger than 6 points. Would love to see more "shooter" bucks!

I believe that registration numbers are down because people are not registering deer. Once you make it home...

Consider a point based system for buck harvest (not including Jr. license). At least 4 points on one side

I would hope that in the near future we would return to backtags and physical in person deer regestration.

4 day doe season, no more. youth hunts, no more.get the predators in check. a season on the wolves.

</table>
Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 208
   - I visit this unit for non-hunting purposes: 49
   - I hunt in this unit: 275
   - General interest in this unit: 58

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 234
   - Bow: 165
   - Crossbow: 123
   - Muzzleloader: 93

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 20.19
   - Maximum: 55

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 135
   - Mostly Private Land: 51
   - Public and Private Land About Equally: 31
   - Mostly Public Land: 16
   - Exclusively Public Land: 40
   - I did not hunt in this unit last year: 2

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 38
   - Not too crowded: 45
   - Neither crowded nor un-crowded: 19
   - Somewhat crowded: 23
   - Very crowded: 7
   - Not applicable: 6

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 51
   - Fewer: 86
   - Same: 113
   - More: 28
   - Many More: 12
   - Unsure: 14

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
Implement an ANTLERLESS HOLIDAY HUNT : 148 Support 127 Oppose 29 Unsure

If a Holiday Hunt is held in a Farmland unit...
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: 219 Support 66 Oppose 18 Unsure

If the Population Objective is not "Increase"...
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 26 Support 258 Oppose 20 Unsure

VALID NOT VALID Unsure

If a Zero Quota (buck only season) is adopted...
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit? Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

</table>
I do believe the holiday and doe only hunt are more harmful than they are good. At the time of these hunts somebucks have lost there antlers already and therefore have potential to get shot. Also as the study’s have found thatI have read from the dnr it is about 46% of the deer shot during these hunts are buck fawns or bucks that have lost there antlers. And has turned late season bow hunting into a lost hunt. We have the gun hunt that goes intomuzzleloader season. That leads right into statewide doe hunt. So the long and short of it all there is 23 day gunhunting season. That is very excessive. So now you are in to the second week of December Or third beforelateseason starts. Then in those few areas(which is more and more each year) there is an holiday hunt in whichanother 9 day gun hunt. So in all guys have 32 days of gun hunting it the area. That seems at least to me. Thatthat is very excessive. I have not been seeing as many deer for years now and an absolutely more and morehunters. So in short 32 days of gun hunting in one season i feel is way to much. I do like the extension of bowhunting all the way through January but to the point of earlier so buck have shed. But thank you for theopportunity to voice an opinion and I know that it is very hard to set seasons and not get blow back from people.Thank you for you time.

What ever you do, do not end the January season. It is one of the best times to bowhunt and take a nice buck. Itis weather related, of course, but do not close it,, Not much pressure anyway, and bucks drop antlers well late inthis area, for the most part. The guys I am with, are hard core. At 70 I am hard core. I live and breathe deerhunting year round. This will never happen, but for the Holiday Hunt, why not add a APR. During that time, we take out does, but have had some opportunities on some dandy bucks. I would allow the buck harvest, with alegal tag, 4pts on one side or better, for that period. I do not believe that EAB is needed in this county, eventhough I think that is an effective tool, for my place in Vernon County. Your priority down here is more kisoks, todrop off, for CWD testing. I use the one in Pike Lake. But you should have more. It certainly can not be the cost.Heck any high school shop class will build them for you.... then you take the interns from college programs andhave them work it. Its a win win for everyone. Thanks to everyone for working on the committee. But remember.....I believe in Wildlife Science, not Social Science, not Political Science, but Wildlife Science.

The deer quotas are extremely OFF. I have grown up in the Kettle Moraine and have hunted with family andfriends in a small group for the last 20 years. We all primarily hunt public land, sitting out and make small drives.The forest is swamped with hunters, and there is very few deer. In past years we saw a lot of deer, and had overallsuccessful harvests. We have die hard hunters in the group, and it’s common that we are seeing a significantdecrease in the deer population. You don’t see many out in this northern part of the county, and you don’t hear ofmany people having success. The numbers and results seem very skewed, and there are too many tags given outoverall. The deer population is not what it appears, and I am not sure why? City and metro areas, and someprivate pieces, seem to have larger deer populations because they are safe but on public land that is not the case.There is also a concern in our hunting group, that some people may not be registering their deer as there really isnot any proper monitoring of this like before. This is a great concern for many of us in the northern half of thecounty, as each year we see more tags and more seasons developing.
I would not say the public hunting land in Washington County is over crowded, I think there are too many deer drives on public land. It seems every year we end up giving up and going home early after the drivers show up. I don’t think the groups of drivers even realize how many groups of them come through. You spend the off season scouting out different areas to hunt and even on opening day the drivers come, some quietly walking, some making tons of noise. Some see you and give you space. Some walk right past you, some polite but most rude with a gang like mentality. I have been GUN and BOW hunting for forty three years and every year I say it’s going to be my last for gun season. I am in my fifties and hunt from the ground during gun and bow season and I do NOT feel safe during gun season any longer. It would be nice if the DNR could limit driving for at least part of the gun season, if not this will probably be my last one. I will continue to bow hunt and hope they don’t shorten that season to give more time to the gun hunters.

Deer herd near private subdivisions and private land have exploded. Where I hunt, on certain days, I’d see 40-50 deer a night. I also have seen nearly 75% of all does in 2019 have fawns and not just one but 2-3 at a time. 2019 was the first year in 25 years that I have seen this in Washington County and I hunted all the way until the end in January. The deer population is healthy, the winter was mild, food was available, and we need to manage this area appropriately. The DNR needs to invent better ideas on how to allow Private Land owners to allow hunters to manage the population. Better incentives may do this even if its only bow/cross bow season. I understand landowners skepticism about gun. I’d really like to see more options to hunt private / public in one of the best counties in WI. I personally do not own land and have limited access to my most favorite passion being cross bow hunting. PLEASE DO NOT SUPPORT TAKING CROSSBOW RIGHTS AWAY. IT MAKES SOME OF US GET OUT THERE!

In my 24 years of hunting publicly in this unit I have seen many different contributors to the reduction of deer sightings. The most recent years have been due to 2 primary reasons in my opinion. 1. Trails are open during the hunting seasons and I see a lot of hikers who are not only not wearing orange, but they are walking dogs who bark when they see someone else in the woods hunting. 2. I see 10-12 deer a day on the way to and from my hunting spot, but 0 in the woods. There are a lot of properties that hold deer well around the kettle moraine. The deer can vacate to these properties without being sighted. I have seen the most sign I’ve ever seen in the woods but it appears to be nocturnal. Day in and out of sitting in the woods with nothing to see makes for a dull season. I’m not sure of the correct answer to the problem, but the deer numbers are here but not in the locations that the public are allowed to hunt.

I feel the DNR has done a poor job of supporting hunters in the recent past. I live in Washington County, but also have access to private land in Dodge county. I have public land that I scout in Dodge, Washington, and Ozaukee Counties. I also have friends with properties up north that I would occasionally do. Due to the changes I would not have to buy permits for private and public land in multiple counties. Due to the DNR desire for more money and less hunter satisfaction I can no longer hunt where I want. I have to limit the areas I focus on hunting due to the cost. Scouting and hunting is what I look forward to the most and I feel like it is being taken away from me. I am disappointed with the recent changes made and have not been able to get anyone with logical answers when I called in the past. Please do not continue to strip hunters rights or force them to pay more for what they love.

I feel the CDAC decision to 'MAINTAIN' the current population in Washington county is the correct move, FOR NOW. I expect license sales to once again decrease. I would also expect to see a slight decline in the kill. Primary reason is the CWD issue. Most hunters don’t want to eat diseased deer. The second reason is the population of people who actually 'hunt', that is walk the woods, is aging and declining in numbers. Many 'newer' hunters prefer to hang in trees like monkeys, over bait, and hope someone else moves the deer. 1. No action has been done to date to address CWD. It will continue to spread and decimate our herd and degrade our hunting opportunities. 2. Take action to end baiting statewide NOW! Thanks for allowing us too vent. gk
Not sure I am clear on the goals in Washington County, ie kills by cars are high, AG is high then goal is to harvest more deer, I would increase the public land tags from 400 to at least the same as private land, these are the guys that will get it done. at the same time... archery and crossbow should be treated as one in the same thru out the season and should start Mid Sept as typical and go thru Jan 31 with the only exception being... during gun hunt dates whatever they end up as, orange is required for all, and I am good with a longer gun hunt I read about staring a week end early. the main point all weapons can be used during this time and all tags ( archery/firearm) can be used during this time we want more people to participate in hunting not less

With private land making up 95% of Washington County, it's very difficult for non land-owners to find places to hunt. I hunted exclusively on public land the last two years, and it is extremely frustrating. Too many people and too few deer. I probably encountered several dozen people during gun deer season this year, spent many hours in the woods, and did not see a single deer. As a life-long hunter, and someone who hopes to pass the tradition onto my kids in the future, this is very difficult. I wish I could say I had an easy solution - I don't - but it still makes it very frustrating. I think it makes it tough to grow the sport overall, as many new hunters may likely have to utilize public land and will have very low chances of success.

It is proven that more deer are harvested by firearm then the 2 archery forms combined. Since we're so concerned to lower the population with a Holiday hunt, let's do a separate muzzle loader hunt. Sell a separate Muzzle loader license (same price as gun license) and have a 9 day season starting the last Saturday of October. Make it same as gun season with quota anterless and buck tags both. If unsuccessful, it remains weapon specific but tags could be filled during the regular season. Allow some gun hunters in the woods during the peak of the rut when deer are moving while generating extra revenue for the State of Wisconsin. Why should the firearm hunters harvest 60-70% of the bucks while archery hunters harvest 90% of the year's trophies.

I've been hunting whitetail deer for 22 years now and I've never missed a deer season. The last 5 years I've noticed a huge decline in deer around the Kettle Moraine. Especially the Kettle Moraine State forest. The number of hunters has increased tremendously and with that being said there are fair fewer deer. Places we hunted in the past haven't showed much if any deer sign in them. I personally think the DNR has been over harvesting does for the last 10 years and especially the last 5 years. It’s not uncommon to sit out and not even see a deer while tree stand hunting. Compared to 15 years ago when I would see up to 20 in one evening sit. I sure hope they can get a grip on the Wisconsin deer herd soon before the sport is ruined.

I knew right away I wasn't going to agree with the committees recommendation as soon as I seen the excuse of "It was a late hunt". Stop buying into the DNR excuses and realize the herd isn't as high as what you think. You can stop giving out 3 tags per purchase because hunters aren't dumb. They wont/cant shoot whats not there. This is coming from someone who mostly hunts public and private in the so called "over populated Metro Zone". Giving out more and more wont increase anything if the deer arent there. Hunters dont stop hunting because of time restraints, its because they arent seeing the deer to continue to spend the time out hunting. Last but not least 60 deer per square mile............This is a joke, im done!

Do not get rid of the January hunt. great time to get a nice buck. Deer drop antlers a lot later down here. During the Holiday Hunt, put a APR on, 4 points on one side or better. We pass some nice bucks during the time. Your preaching all the time, about CWD, well the carriers are older bucks, so let us take them, if tag is available. Build and distribute more kiosk for testing. Heck local shop classes can build them for about nothing. A little pr, I could get most of the material donated. College students could work them, for experience in their field or credit....... This county is pretty squared away. However, I believe in Wildlife Science, not Political or Social Science, thanks for all your efforts.
Thanks to all the members of the CDAC for your time and effort. I think the preliminary recommendation is a good one. I believe we are at or close to the maximum antlerless harvest that hunters in Washington County are either able or willing to accomplish. It is also likely we will follow the statewide trend of having fewer hunters. That may result in a lower kill despite a growing deer herd. We may have to accept that or enact measures that would be very unpopular like earn a buck, if it were available, or an antlerless only season across the board. Either one might be effective short term, but long term either one might be counterproductive if hunters get frustrated and quit hunting.

When I completed the April spring hearing survey I was pretty upset that when it came to the deer season structure questions that there was no question that asked if we should keep the season structure as is. Every question was about changing it in some form. It did not ask if we wanted to have the back tag brought back which in my opinion would greatly help in identifying trespassers. It also did not ask if we should bring back in person registration which in my opinion would help get a better herd count because I think a lot of people are not registering there harvest. Thank you for giving me a chance to voice my opinion and the opinion of many of my hunting friends.

I think all forms of deer hunting should be closed on January 2 or the first Monday of the new year. If you did not harvest a deer by this time then you simply did not spend enough time hunting during the ample seasons available. It is very disturbing to me to see a deer being gutted in mid to late January with recognizable fawns in the whom. This also includes the use of agricultural tags which I have witnessed being filled in April. I would also like to see the use of crossbows have a later start to the hunting season, somewhere around the 3rd week of October. Back tags should also be brought back into place to help identify non-ethical hunters.

I think there needs to be a reduction in crossbow season. And it needs to go back to restrictions toward those that are able bodied to use a compound bow. From my experiences on public land which I have many. I am becoming more frightened by some of the people that are hunting these lands. I am glad I don't have to hunt public for gun season as I probably wouldn't from some of the people I have met and safety concerns of those who hunt. I feel that crossbows and guns are too easy to not practice with and just go out being a risk to all those around them. There should maybe be an accuracy review or skills evaluation every 5-10 years.

Increased auto accidents involving deer would suggest an increase in population. A lack of nuisance claims suggests a mild winter leaving plenty to eat in safe cover. Again, suggestion another increase in population. However, on my cameras I did not see an increase in the area I hunt. If anything a saw more buck but less doe. That would be a reason for more auto accidents as the buck need to travel more to locate the doe. It would be a useful tool to have gender differentiated on the auto collisions for that reason. My opinion on my area would be to shot for the same numbers as last year to see how the buck to doe ratio plays out.

What I have seen is a decrease in the number of Mature does from years past. many deer I see are small compared to decades ago. you don't see many 150 lbs does anymore. They are all well under 100 lbs. A lot of bucks are smaller too, body wise. I have seen many on blogs complain about these crossbow hunters, but to me it's the same complaints the recurve hunters had when the compound bows came out. I believe the crossbows have been a long time coming to help those that can't pull back a compound bow anymore and support there use. I still use a compound bow, but gets harder every year.
Please stop making this shit so hard to follow, every year its change is so hard to understand and keep legal. Small tiny change at a time when needed. It has become so complicated your losing hunters. I recommend education of interest in our children and the future of wisconsin hunting. Spend more money on interest of youth and promote more to rid predators such as WOLF, & COYOYE . My best advise after hunting 43 years hard core. Many of my co hunters my age threw in the towel, mainly because of all the politics in wi. Hunting. Thank you for trying to better our resources.

In 2019 I would see anywhere from 6-9 deer over the course of 5-6 hours in the field a day. I speculate due to crops being switched at nearby fields from soybeans in 2018 to corn 2019 less bucks and smaller deer. In 2018 i harvested 3 adult doe and saw many more and one buck. Last year i only took one larger doe and that deer was smaller than any from the previous year. In our area we had a mild winter plus not as many deer taken i think in previous years good deer management would be to get the numbers down especially of the adult doe population.

I have been hunting Southeastern WI for over 20years. Hunting and Fishing are my absolute favorite things to do in life. I believe that the deer population in this part of the state is good overall, but not evenly distributed by any means, which makes establishing harvest quotas very difficult. Public land and lakes need much stricter management than private, and we need to go back to actually registering deer. There are untold amounts of deer being taken on public but registered under private tags, and even more deer not being registered at all.

The whole gun deer hunting season strategy is getting to be all chopped up. Too many specialized hunts with rules that are hard to understand and follow. Why don't we just have a longer gun deer season overall to meet our objectives to manage the deer herd? It seems as if this has become as bureaucratic as the Federal government. I am all for managing the deer population, but doing so with those who are the most avid and dedicated hunters. Get rid of all of these crappy specialized hunts and give us a longer regular deer gun season!

Gun season is cheating. It doesn't need to be any longer. Hunting isn't about killing, it's about the experience and the HUNT. There’s no need to extend or offer more time for people to go be so far away from the deer that they couldn't have a clue they exist and then drop dead. If you want to harvest more deer, offer Bow/crossbow hunters more tags, the ones that go out for days and weeks and sit in the elements to provide for their families. Those are the ones that deserve the additional meat and reward from the sport.

I personally like the holiday hunt a lot because I have more time to hunt during the holidays and then I have a chance at one then when there isnt as much pressure. I only have a crossbow and if it wasn't for a crossbow season I wouldn't bow hunt. I sure hope you plan on leaving the crossbow season as is. If you take it away your going to lose a lot of new people coming in to bow hunt. I would say leave season like last year but if your going to make a change extended the gun season a little bit.

NO antlerless only for wash county. Private land License purchasers should receive one buck and three antlerless authorizations with each license eg 1 buck 3 antlerless for archery and 1 buck and 3 antlerless for gun. I heard things about an early/extended gun season. Please DO NOT implement this. I agree with an extended archery season just as we had in 2019 though. I have seen an increase in predators in multiple properties around the county. Thank you for all your hard work Wisconsin DNR!

Opportunity to see enough deer in Washington County has become difficult from over harvest of does I think 1 doe tag per hunter is plenty. You can use it for your gun or bow tag. Must register where harvest was taken for a good deer count. Then if a person wants another tag for doe , it has to be in a different County . Only so many tags should be issued for extra tag and people should be put in a draw and tag could be used in any county but the unit you chose for your free tag for now or gun.
10027 too many tags issued give em a brake a little to re cover some people want to shoot em all mentality don t have to go along with them. lets protect our wild friends lets not over harvest plenty of food for them in Washington co. just look up north see what over harvesting gets you. takes years for deer to recover. lot of people don t see a deer while hunting talked to many disappointed people. LETS NOT ISSUE CRAZY NUMBER OF TAGS AND HOLIDAY HUNTS

10028 From what I see since our property borders state was no one contributed in last years holiday hunt. Gun hunters are different than bow hunters which is why the interest level keeps them gun hunters. Since we couldn’t shoot bucks during this period with our bows we chose not to hunt like many bow hunters. Your studies account for all the dead wounded deer from crossbows since implementation. Personally I’m sick of finding 3 to 4 a year.

10029 I believe baiting should be allowed in 2020 for Washington County. I personally don't utilize bait but several of my senior friends rely on it for safe, ethical shots. They don't have access to the large tracts of land like I do. They need to hunt small areas typically on 5 acres. There is no way to create food plots, funnels etc. in these urban areas. This is where the deer population is getting out of hand in Washington County.

10030 In my opinion deer harvest was down in 2019 because of the fall rains, not because the season was late in the year. Many corn fields were still standing giving the deer a great hiding spot. The hunting season has always varied in accordance with Thanksgiving. I was hopeful for the 2019 season assuming the corn would have been harvested and possibly snow on the ground but we had neither which made the hunt that much more difficult.

10031 Crossbow season needs to be changed. I favor a limited season unless there is a disability or senior citizen. There are folks who hunt the land I do who use them and majorly overharvest. It is like firing a gun. I oppose the holiday hunt. The regular gun season provides ample opportunity to harvest an antler less deer along with the december antlerless hunt. No need for yet another antlerless hunt over christmas.

10032 I hunt the Metro Washington County area, in the past called the Metro Herd Control Zone. In my humble opinion, there is NO HERD. After the first couple of weeks of the 2019 season, there WERE NO DEER. In general, I oppose shooting "antlerless" deer and specifically oppose giving out BONUS TAGS! The additional hunt for "antlerless" deer a week or so after the regular gun hunt is a STUPID IDEA.

10033 I feel the placement of the deer season needs to be fluid in order to place as much of the season in or near the "rut" as possible. Much of the private land used in this section has less deer activity when the rut is over as opposed to the rest of the year. Hunters are handicapped when the season is primarily after the rut do to limited deer movement.

10034 We need to maintain a healthy deer herd. Most deer bucks or does are harvested at at early age. Best Buck quality and quantity is on privately owned land. Public land should be the most restrictive and best hunting land preserved. Private land ownership is ruining a public owned deer herd not only Wisconsin but across the country.

10035 Many private land owners will give permission to hunt their land to shoot bucks, but not does. There are many hunters like me that knock on doors, these land owners have a big impact on doe harvest on private lands. You can issue all the permits available but if the people giving access to land say bucks only, what can you do?

10036 go back to earn a buck. That will get better results than giving out far more permits than hunters are able to use. I also like the extended season but the chances of getting a kill are extremely low because the deer do not come out in daylight because they are on guard from of all the pressure from the regular season

10037 There is little that we to worry about at the moment for Washington in terms of wolves. But something NEEDS to get done and more need to be removed from Wisconsin. because until then the Northern population of deer will never return to the quality that it used be. I hope that this is not overlooked again and again.

10038 Please stop the holiday antler less only hunt in the Southern Farm Land zone for 2020. Myself and many other hunters that still had a valid archery buck tag will not doe only seasons. If your goal is Doe herd reduction please consider bringing back an earn a buck program. The Holiday hunt is a terrible idea.

<tr>
<th>Public Input on CDAC Preliminary Recommendations - Spring 2020</th>
</tr>
</thead>
</table>

10039 I feel that the state wide gun deer hunt should be extended. I would like to see a gun hunt that covers the last three full weekends of November. For example this year that would be from 14 Nov-29 Nov. This would give those of us with less flexible work schedules more time to get out into the woods.

10040 Please go back to mandatory in person reporting. I see SO MUCH more illegal poaching/ non reporting of harvested deer. The in person reporting holds people more accountable and gets you a more accurate estimate of deer harvests. This isn’t just a Washington County issue, this is state-wise.

10041 There are too many deer. I tried to get rid of buckthorn and grow oak on 60 acres (1000s of trees and $) and it’s impossible. We harvest 7 deer off the property/year and it doesn’t help. We should not maintain, we should decrease. More tags, longer seasons, Bring back Earn-a-Buck!

10042 Stop issuing so many doe tags. You should issue 1 buck tag for now and 1 for gun and 1 doe tag usable at any point. Also shorten the crossbow Season or go back to the old crossbow rules. Young healthy individuals do not need to be using crossbows. It isn’t sporting at all.

10043 Please do not change the length of the 9 day hun season. Also if anything, DO NOT shut down hunting the week before gun deer season is here. That sometimes is the best week of rut and taking that away from families and outdoorsmen would definitely not make them happy.

10044 I’ll start by saying that I mostly bow hunt. I feel there are too many special gun hunts that chew up a majority of late season archery time where blaze orange must be worn. If all of the special gun hunts continue, please continue the extended archery season.

10045 Is there any reason the archery season can't be extended without also having the holiday hunt? I oppose the holiday hunt, but would like to see the archery season extended. I don't see why these things depend on each other and are not mutually exclusive.

10046 Strongly oppose the holiday hunt, puts a burden on landowners adjacent to public lands who want to enjoy the holidays on their land doing other things without worrying about wearing blaze orange or hunters shooting in their direction.

10047 Way to many doe tags in this unit have driven the numbers of deer down so far that I rarely see a deer. Difficult to get kids interested in hunting when they don’t see any deer. Thinking what’s the point in hunting very discouraging

10048 The way Wi determines deer herds size is not very accurate in my opinion... These extra hunts also mess up archery season big time! Would love to have youth hunt super early in September instead of so close to the rut.

10049 if you are going to BAN BAITING the also impose the size of FOOD PLOTS ON PRIVATE LAND!!!! MAKE DEER HUNTING EQUAL FOR EVERYBODY. NOT JUST FOR THOSE WHO ARE RICH!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

10050 Although it wasn’t asked in this questionnaire, I would like to add that I would be opposed to only allowing crossbows for part of the archery season. I feel like that would be a step backwards for Wisconsin.

10051 I see evidence of wolf predation and they need to go, with evidence of their ranges expanding this nuisance animal has too negative effect on deer populations and should be classified as a varmint.

10052 SEPARATE THE BOW AND CROSSBOW QUESTIONS AND SEASONS. THEY ARE SEPARATE GROUPS OF HUNTERS. CROSSBOWS SHOULDN'T HAVE BEEN ALLOWED. OLD RULES WERE JUST FINE. NOW YOU HAVE A HUGE ISSUE ON YOUR HANDS.

10053 I would like to see an overall reduction of deer numbers in the unit, primarily does at this point until population is under control, and a longer opportunity in which to hunt with a firearm.

10054 I believe the DNR is doing a very good job with our deer population. In the future, would you consider setting the gun season on a specific date, and not move around based on Thanksgiving?

**Washington, Southern Farmland**
Allow baiting again
Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 231
   - I visit this unit for non-hunting purposes: 66
   - I hunt in this unit: 280
   - General interest in this unit: 70

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 206
   - Bow: 195
   - Crossbow: 121
   - Muzzleloader: 70

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 17.77
   - Maximum: 55

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 132
   - Mostly Private Land: 35
   - Public and Private Land About Equally: 33
   - Mostly Public Land: 26
   - Exclusively Public Land: 50
   - I did not hunt in this unit last year: 4

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 31
   - Not too crowded: 50
   - Neither crowded nor un-crowded: 18
   - Somewhat crowded: 26
   - Very crowded: 14
   - Not applicable: 5

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 57
   - Fewer: 86
   - Same: 104
   - More: 36
   - Many More: 19
   - Unsure: 10

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
Implement an ANTLERLESS HOLIDAY HUNT: 148 Support 141 Oppose 23 Unsure

If a Holiday Hunt is held in a Farmland unit...
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: 228 VALID 68 NOT VALID 16 Unsure

If the Population Objective is not "Increase"...
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 33 VALID 264 NOT VALID 15 Unsure

If a Zero Quota (buck only season) is adopted...
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC's recommendations for this unit?

</table>
I very much enjoyed the extended archery season (January 31st closure) as I saw a number of deer during this timeframe. In fact I saw more antlered deer in January than any other time including during the rut. Although I was not successful in harvesting a deer, it was a quality hunt. In regards to the holiday hunt, I support this season as well but believe it needs to be revised. I see no need to keep it an antlerless hunt only. I know that it is in law, NR10.01(3)(ex)b. WI Admin Code, but I believe the CDAC committees should propose to the DNR/NRB/Legislature to delete this code from law and let the individual county CDAC committees decide whether it should be antlerless or either sex. The reasons for the change are obvious and highlighted below. - There is much talk about extending the firearm deer season to allow gun hunters more opportunities to harvest deer and antlered deer. By allowing antlered deer during the holiday hunt you are giving them that chance without changing the tradition of the November nine-day hunt. - There are no economical consequences and in fact may increase the number of license dollars as people who cannot hunt the traditional hunt may buy a gun deer license and hunt as they are home or visiting from out of state during the holiday season. - It would increase the hunter-days/hunter-hours. If I am unsuccessful at harvesting an antlered deer during the 9-day hunt, I would surely hunt during the holiday hunt. Inversely, I do not want or cannot hunt antlerless deer because I am bagged out I will not hunt. - Biologically it makes the most sense. If we want the deer herd reduced, any deer regardless of sex, is one less on the landscape. Additionally in CWD units, it makes the most sense to harvest antlered deer as they are statistically more likely to carry the disease. Again I believe it should be up to the CDAC committee and the public to determine whether the holiday hunt should be antlerless or either sex. THANK YOU to the committee members.

So your so concerned about regrowth of the oaks and other (native) trees why don't you implement a damn law saying developers cannot remove certain native trees that won't obstruct development!!! I watched them cut and remove 17 mature oaks with at least a dozen if not more younger oaks that were offshoots of this grove!! Put in their place was 3 flipping pines and a 30'x20' billboard! Someone got their brains up their ass! The public land which I hunted for 40 years has been taken over by your hikers and nature lovers that didn't put a cent in to the property!!! We used to have crops planted on public which sustained wildlife! Provided by farms! Now we have walking paths and groomed trails with brainless hikers wearing brown during hunting season! And you cry about CWD and population!! Well kinda hard to hunt when you have 30 homes that sprung up on property that was excellent wildlife habitat until they came in clear cut every tree! Dozed every fence row and filled the wet lands! Now these city dwellers have corn piles year round to watch the deer and then complain about their flowers being eaten!!! You want to control deer population start by governing development and non hunters!! The greed of money has taken over!! The DNR should of stayed separated from the greedy state of wisc!! How many bonus tags can we sell! Fill in the wet lands cut down the oaks for more tax money and lesser commitment to the hunters funding this whole joke! I can't hunt over bait!!! Well enforce the feeding of deer!! Kinda hard to hunt when you have a 100 pounds of corn 50 feet away on the neighbors property with a dozen deer shoved face to face, (and you talk CWD!) lol!
I think you should consider contacting some of the VACANT Private land owners about providing opportunities to "Qualified" hunters to remove deer from those parcels. Specifically, in Delafield/Waukesha/Pewaukee areas along the expressway and some of the surrounding areas, there are a lot of acres of vacant private land where I see LOTS of deer. In fact, the other night traveling between Home Depot and my house (Town of Genesee) my wife and I counted 35+ deer out and about. Given the fact that this is about a 4 mile distance, that's just under 9 deer per mile. AND that's just the ones we saw while driving. I can't imagine how many actual deer are out there. I think if you approached some of those private land owners, with a proper "Qualifying and Insured" process, you might get their participation, thus allowing you to manage herds of deer that you don't currently have access to. I think a lot of those landowners don't allow people to hunt on their properties because they see it as another hassle to manage. Help them manage that process and I think you might get some participation.

I would like to see the number of tags for use on private land deer harvests increase, especially as I am bow hunting in an area in which the city has been utilizing sharpshooters to control the heard for years. Private land owners want the ability to help control the deer population on our own lands. In turn helping elevate the need to spend tax dollars on such efforts. Restricted numbers of tags for bonus doe tags is unacceptable while the city shoots deer near year round then the tax payer and who has already purchased licenses has to complete during "our" season. Bucks opportunities are being taken away out of "season" with the city's sharp shooter programs. I personally could use the tags am much of the meat I harvest is given away to friends and family and I ration use of the rest until bow season opens again. Private land owners in the cities should be sold 4 tags minimum at time of purchase (buck included) and have the ability to purchase more for late season once those tags are all filled.

I am a bow hunter and also a felon with these new laws they want to imput just are not ok with me I can hunt with a gun so where does that leave all the hunters in my position of all ages and back grounds. I support everything I can with our local lands and dnr i think of its not broke don't fix it. I've hunted my entire life and have never had issues with to many people on one peace of land and if a guy did walk my my stand while I was hunting I have always been ok with that public land is exactly that public. I fully disagree with the new regulations it would rob me of my chances to harvest deer if I'm limited to a time limit I can't everyday I have 2 kid and a wife and a business to run i only get to go out 10‐15 times through out the entire season so if I lose that my chances of filling my 2 tags a year goes down by a ton. Its just not right.!!

Non‐hunters utilizing public lands during the gun‐deer season is a big problem. I have often come upon the non‐hunting public walking their unleashed dogs, jogging and strolling through a public hunting area. They are never wearing blaze orange and some to be completely unaware of the hunting activity going on and their presence with dogs running free spoils my opportunity to enjoy a southern Wisconsin deer hunt. If the non‐hunting public is allowed to utilize public lands during gun‐deer season they should be required to keep control of their animals, not allowing them to run loose. For their safety, and the safety of their animals, all should be required to wear blaze orange and face the same penalties hunters face if not wearing appropriate blaze orange.
Bow hunted over 30 times this county 2019, used (9) different locations miles apart, in sunny, cloudy, rainy, windy and snowy conditions from late September to Late January, 2020. I saw a couple deer during all of those hunts. Many different topographical conditions, in acorn forests, near corn standing, near corn harvested, grassland, and forests with no mast crop. As a deer hunter for over 50 years, I think it is foolish for the DNR to continue to raise the potential quota without learning how to get an accurate deer population count. I’ve attended the CDAC meetings in downtown Waukesha a few times since inception, but realized there isn’t much a small group can do to change what is definitely a much larger statewide issue of deer population count inaccuracy.

Hi, and first let me say thank you for all your hard work. From what I see they want to change the metro sub unit in Waukesha county. Let me say that I live and hunt not far from the border of the current map and there are a lot of deer in this area. I would hope that you leave this area as part of the metro sub unit. I live on a farm and even though I don't farm it (someone else does) there is a ton of crop damage from deer. Changing this would eliminate my chances of harvesting more then one deer. We are meat hunters and I try and get one deer for me and give the meat from a second deer to my daughter. I'm not just a buck hunter but someone that is more then willing to harvest antlerless deer for eating. Thank you again for all your work.

When we have low deer kill numbers based on season dates this never takes into account the amount of crops still standing (corn-beans) I would like to know if there was some type of documentation showing the correlation of standing crops to deer kill. We also never consider the amount of resources there are available to us now vs 20 years ago regarding the heath of the deer that we are harvesting (not the population) so if person "A" believes the deer are bigger and healthier now vs back in the early 2000's and he/she will pass on smaller harvests when they could have shot a deer but decided against it. how will this affect future calculations, especially considering the lack of public land in waukesha cty.

While this addresses Waukesha County southern farmland, there is no input allowed for homeowners in Brookfield, where we live. Our yards are devastated by deer. They browse right up to the house, and it is common to have a herd of 7 come through daily. We can't maintain our yards. I buy plants that they supposedly won't eat...gone. Our alderman states that the area borders a park, so an accurate count isn't possible. The herd lives across the street from our home. NOT HARD TO FIND OR COUNT. It is so frustrating that hunters get to address this, but we homeowners have little voice. We are also in a hot zone for Lyme disease. Where is the DNR for our input? Homeowners need a balance in the deer population, too.

In my opinion we have to many special hunting seasons for deer, I think we should have bow season with crossbow or long bow as usual and also nine day gun season. I personally think we put to much pressure on deer population with all these different hunts. I understand getting youth involved is so important but the age limit for youths hunt should be higher. Seems to me after hunting for over 50 years DNR has done pretty good job of it all except one thing, letting the wolf population explode that was defisating to deer population, sometimes you have to sit in woods to see what going on not behide desk with graphs and tables. d.n.r.

I have been hunting this ground for 20 years. We went from a great amount of deer that fed the family’s of the members of our group to barely getting by. Yes we have deer but not the numbers we should have. I can remember seeing cars and trucks lined up down every road. Not anymore. We need to stop killing off the does. We do not need to extend the season. We do not need holiday hunts. I’m an avid gun and bow hunter. Keep the 9 day gun season. Ever since I was 6 years old I’ve been deer hunting with my father around the same area. 32 years old now and I have noticed a huge decrease in hunters and deer. Kinda saddens me because it’s not the fun Wisconsin 9 day holiday it use to be.
The gun season in Nov. starts basically after the rut. We see bucks before the start of the rut but generally not when the gun season starts. Owning much private land and paying taxes it would be nice to get a buck. Everyone I talk to agree that the gun season should start two weeks earlier so we may see more bucks. I know of some young hunters that are quitting because they never see any deer. I think this should be the biggest concern! We have much trouble with coyotes trying to kill our dogs and chasing and killing fawns and other deer. This issue should be seriously addressed and put a bounty on coyotes. I am 75 and everyone I talk to agree with me about these issues. THANKS

I hunt northern Wi. mostly Price and Iron Co. But live here in Waukesha county. I used to hunt many weekends all over the middle of the state south. Was nice to visit, hunt and have a chance or should I say harvest a doe. Maybe taking a nice buck. DO NOT LIKE THE PUBLIC OR PRIVATE DOE TAGS. No longer hunt much except up north.Want deer shot in southern part of state get rid of public or private doe tags. Want new hunters, same objective. More opportunities. Don't know why it even Started. Texas deer czar. Texas is all private. We are blessed with more deer in this state then others. This state is just getting to complicated.

Don't recommend any Gun season beyond the 9 day gun season. The cwd years with extended gun season severely decimated herds. I used to see deer constantly on public land. Then, after the extended season, I would see less than 5 deer in an entire season. Made me not even want to hunt public anymore, which is something I had always enjoyed. Herd is starting to improve but need years to get to where it used to be. Please keep gun season down to minimum amount of days and allow our herd to increase. Also believe in one buck per season limit. Makes people really choose what they want to harvest.

If CWD is increasing the Waukesha County why are we trying to maintain the deer population level? Is it helpful to look at decreasing the population level as a tool to prevent the spread of CWD? How does it work to maintain the population when the harvest quota for antlerless deer is not meet? I also strongly encourage any option to increase youth hunting opportunities. Allow youth to participate in the October youth hunt until they are 16. There is no better way to get a kid excited about hunting than having them sit out on a nice fall day in October.

I believe that if the DNR were to get rid of all of the special antler less hunts throughout the season there would be more deer for gun season. I know there has been talk of making archery/crossbow season shorter also which I am strongly against. If the state were to keep the same season length for Archery, Muzzle and Gun, I think it would work. I also don't see much difference between Muzzle and Gun so why don't you combine both of those seasons and make the gun season 18 days with either weapon. Just my two cents.......

I believe the holiday hunt over xmas break should allow for the hunting of antlered, buck deer. I have off of work during that time and would love the chance to hunt bucks. I LOVE the extended deer season through Jan in my zone. I shot the biggest buck of my life on Jan 25th, 2020 this year (I'm 49 yrs old). Seems as though the results are coming very close to the targets, although I understand what I believe to be your concern of a mild winter with increasing your target over last year. Keep up the good work.

I hunt in the southern unit of the Kettle Moraine in the Scuppernong Trail area. Recently they logged out many pine trees in that area. The problem I have is that now more sunlight reaches the forest floor and there is now a bumper crop of Sand Burr plants growing in these logged areas. When these burrs get on your clothes, it takes hours to remove them by hand. Is there any way to eliminate or greatly reduce these plants? I can't hunt in areas I used to hunt and harvest deer because of these annoying Sand Burrs.

Crossbow hunting should not be allowed after Oct. 31. Crossbow hunters are ruining bow hunting and traditional gun season. Cross bow hunting during the rut should not be allowed. the crossbows are passed from one family member to the next. No skill involved with the use of a scope. Cross bow season should be shortened. DNR is taking away the opportunity to shoot a trophy in Wisconsin by allowing crossbow hunters same season as bow hunting. Should not be able to use a crossbow between Oct 31 and opening gun.
10106 From the video, it seems you need to have more doe killed as compared to bucks. But we know that the Earn a Buck Program is not liked. How about giving a hunter an incentive to kill both a buck and a doe. Either lower my fee if I shoot one of each, or give me free CWD test, or a free park pass or charge me an extra $50 next year if I failed to shoot one of each this year. That would allow me to decide when I want to shoot the doe and I don't have to pass up a nice buck early if I haven't shot a doe yet.

10107 Impact of Deer spreading invasive plants eg. Garlic Mustard plant and relation to herd sizes in developed areas. Have there been concerns voiced about anti-hunters harassing hunters in public land during the 2019 season? Was there an increase or decrease over the previous years? Spoke with hunters in 2019 season and some had multiple run-ins with people on public handing harassing active hunters to deter deer from the area or disrupt the hunt itself.

10108 Really should limit the doe tags and cancel the holiday hunt. Don't make since to rut October, November does are breed then killed a month later. Also would like to see a restriction on the bucks. To many young bucks being hunted and not enough big bucks out here on public land. A antler restriction would be nice. 6% of waukesha is public is crazy. Kettle moraine be over crowded a d the deer drivers dont help. Very hard to hunt that area!!

10109 I reached out to Jason Roberts about the massive group of deer behind my house, sometimes 50 or more. They destroy our yard and leave so much crap. Our kids have a hard time playing outside without getting full of it. I would be happy to help with any herd control on my property if you ever wanted it. I have some safe elevated spots more then 100 yards away from neighbors.

10110 In the last 40 years there has been an extreme decline in deer seen during the year and especially during the hunting season on Public Hunting areas. I have hunted the Southern Kettle Moraine Forest for 40 years and its discouraging and frustrating when many hours and days are spent in the woods. I speak for quite a few hunters who hunt this area. Its sad. Many of us are reconsidering the purchase of a hunting license.

10111 Would like to see earn a buck brought back for crossbow and bow, would like to see certain areas to bait especially when you have private land too many deer are in small tracked areas around subdivisions population is getting too high. No one can have a garden family members I have no one have three deer hit their vehicles one was a total open up State Parks for bow hunting and crossbow hunting earn a buck thank you.

10112 Like to see the nuisance tags issued again for the Town of Delafield. Like to be able to hold the tag until they run out and actually have a waiting list. Happy to turn it back in to someone waiting if I have not filled it. Not convenient to visit town hall to renew during business hours if haven’t filled in 2 weeks. Not a long time period during bow season. Will do it if necessary, but love the program.

10113 My recommendation would be to pair with neighboring counties and allow the hunter to pick multiple counties to use the free doe tags that come with a farmland zone tag. I.e. I do most of my hunting in Washington county but also hunt in Waukesha and Dodge counties. I would like to be able to designate 1 doe tag for each county instead of having to purchase from the bonus tag pool for the other counties.

10114 I have been deer hunting for 45 years now. With the new registration system calling it in I don't think works well. In my conversations with some other gun deer hunters, they seem to be killers and not hunters. They do not register there deer and they just go back out and shoot more. I liked having to register deer in person which gave the DNR a good herd kill count.

10115 Keeping deer numbers up helps to keep younger hunters interested and involved. Low numbers like that up north are what turns new hunters away. Keep that in mind when setting your goals. Some of us like to bow hunt only and a holiday hunt takes the time we can use to harvest a buck away. It seems every free weekend or time I get coincides with a special hunt time. Thanks for the time.
We only hunted youth season because we only have access to public land. It was lousy. Add the CWD risk on top of impossible to get access to private land to have a good hunt (I have kids, can not afford trophy lease rates). Result after 5 years of trying is that we quit deer hunting. That’s right, CWD+lack of access = 3 less hunters. We’ll find some other way to have fun.

Deer drives are killing the deer herds in southern kettle moraine unit, its not hunting it a massacre of these deer, you don’t even give them a chance when you have two to three drives a day going through an area. For how big this area is, the population of deer is way under we have more hunters then deer in this area. I would like to see more regulations on deer drives.

I hunt public land only in Waukesha County and I live very close to the public land I hunt. I am satisfied with the amount of deer I see and feel there is good potential for harvesting a large buck. Whatever the CDAC/DNR is doing, appears to be working. I do not believe we need to increase the number of antlerless tags, nor do I agree with antlerless only hunts.

The problem in Waukesha county on hunting and deer population is there is not a lot of places to hunt, no hunting in town of Brookfield, Lisbon ,Sussex Pewaukee, little in Menomonee falls, none in lannon etc. you have to look at that also. Yes there is a lot of deer in the county but they are in suburbs that you cant hunt please take a look at that please.

I think all bonus tags should be free! We as hunters are helping out the DNR and state by harvesting all these deer! I also think we should increase the boundaries for the crossbow and archery season. More and more land is being developed in this area. I myself have lost hundreds of acres in the past 5 years of great private land to development.

There seems to be a slight resurgence in the herd, and it has made hunting exciting again as there is a fairly good opportunity to see deer while afield. Doe numbers seem to be up a little bit, which gives a better chance to harvest a mature buck during the rut and has made the last year or so more enjoyable to be in the woods.

There should be a place to donate deer without having a cwd test in the Waukesha area. We have to many does on the property we hunt and would love to remove more does but do not need the additional meat and are turned away from deer donation markets in Washington county. Does not make sense as Washington county has cwd also.

I can’t stand that you are basing a “Holiday Hunt” only with an extension to Jan 31. Why don’t you do a earn a buck tag if you want to maintain doe populations while still giving the average hunter the chance to take a buck during these holiday hunt times. If you want me out in the woods then you better let me take a buck.

Would love to see a buck only for two years. Don’t see as many doe as I used to. As far as doe to fawn I’ve only seen two in the last 4 years, then see them dead on side of road. I keep my cameras out year round. Have more bucks to doe ratio at least in our area. All neighbors see the same. killing way to many doe. Thanks.

The deer herd has been half of what it was years before and needs to be restored to larger numbers. If farmers are concerned about crop damage have deer tags tied to crop damage money so they need to open hunting on their land to non family members. So the more deer taken from their crop land the more money they get.

Deer population in Waukesha co. subdivisions is out of control. In our area we can count anywhere from 12 to 19 deer at dusk & dawn. Of course there is a small creek of water running thru the area, large lots with a lot of trees & other bushes. Our observation has been half of the doe’s have twins.

I would like to see the traditional gun hunt - last week in November and bow hunting season from the beginning September to 1st week in January. Not into the whipping out the deer heard. More into wildlife watching and trophy hunting. Killing of all / most of the deer is not necessary.
I would like option to easily hunt in multiple counties. I live on border between Walworth and Waukesha and would like to hunt in both counties without buying another permit. I would also like to hunt in northern or western Wisconsin without having to buy more permits.

The deer have become more nocturnal due to hunting pressure in this unit. With the deer in the marshland public hunting areas staying in the marshes during the day and only coming out after hunting hours. This makes taking a deer on these public lands very unlikely.

If anything we should go back to earn a buck for a few years. I wouldn't mind seeing a minimum point hunt either (example: 3 points on one side). I think the Holiday Hunt is not needed. Leave the late season for the bowhunters to get out and try to harvest a buck.

The holiday hunt discourages me from going out during this time because where I hunt is archery only. I usually have tags for both gun and archery at this time. If I still have a buck tag available I would like to use it if there was an opportunity.

I know of some cases where people are complaining about many deer in subdivisions near by. I see a lot of feeding and baiting. Have a neighbor who is baiting and shooting off his deck. Feed the wildlife and they will come. Thanks.

A lot of these proposed rule changes are ridiculous and destroy bow hunting in the state. Please keep gun season the way it is. Bow hunting is far more challenging and rewarding, please do not diminish deer hunting by allowing an extended gun season.

In regards to the holiday hunt. The additional stress is ruining the public land hunting opportunities in the areas I hunt. Gun deer drives for antlerless deer in December, on a herd that’s been hunted hard for 4 months is over the top.

You should keep all hunting regulations same as last year Cross bow season should be the same As archery I am for getting rid of muzzle loader and extending gun hunting In the place of muzzle loader so it would be 18 days.

I've noticed an increase in farmers and private land owners renting or charging hunters to hunt there land, with I think they control things that are not natural. They want repeat hunters, year after year.

Might need to consider the earn a buck to increase antlerless harvest, too many sit waiting for a big buck and let does walk. Deer are becoming a varmint in too many communities, not a big game animal.

Thank you for making this presentation available online. I found it very informative and interesting. I would like to suggest making a metro unit county wide for clarity of boundaries if possible.

Need several opportunity to harvest any deer. Very hit\miss as to seeing deer during hunting hours. More opportunity to hunt gives me a better success chance. I have limited hunting opportunities.

For the past two years, Sightings of deer in this unit (private land) has been sparse. In talking with other hunters in this unit, same concern. Hunt all day, see nothing.

Way too many coyotes around. Coyote population is definitely affecting deer survival rates, especially with yearlings. I'm seeing less fawns around every passing year.

Metro tags should be given in any metro unit that hires sharpshooters. The use of bait by these sharpshooters should be prohibited.

Rezone the edge to put Badersscher Preserve in the extended season zone. It would be nice to have through JAN to hunt this area.

Now you as the DNR are just confusing everyone way to much on what we can hunt where we can hunt and what we can hunt with!!!
If you want to keep the total deer population in check for the metro Waukesha zone, I suggest that you allow baiting.

Last season the deer count was very low and so far this year picture evidence is showing even less. We need the does.

Keep cross bow season same as bow season. There is not enough deer on public lands. Too many small bucks are shot.

Public lands are way over hunted. Especially for doe. Metro is worthless because we have no place to hunt!!!!

Deer numbers in the Kettle Moraine Southern Unit have dropped dramatically. I rarely see deer anymore.

I would like to see one doe harvest authorization per hunter in this DMU for the next three years.

Holiday hunt buck or doe as we have been told populations are the same for last hunt of season.

I support the continued use of crossbows for any hunter, not just older or disabled hunters.

Need more programs to encourage private land owners to allow hunters on their properties.

I am not in favor of extending gun season as newly proposed for the 2020/2021 year.

I am in favor of keeping the 9 day gun deer season intact. No changes.

Observing 30 to 50 deer in the evening on our farm in SW waukesha co.

Stop the discussion about crossbow usage and leave the season alone.

If you do Antlerless only hunt for this unit, I simply won’t hunt

Stop catering to gun hunters and do not limit crossbow use.

Get rid of having to choose between public and private tags

Would like to see numbers similar the the mid 90’s.

Baiting should be allowed on private land

Open up more County land for hunting.

Restrict bow season to 3 weeks total.

Nothing is being done with poaching

Approve the holiday hunt!

Leave the season alone.

NO MORE Holiday Hunt
Public Input on CDAC Preliminary Recommendations - Spring 2020

Waupaca, Central Farmland

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

1038 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 415
   - I visit this unit for non-hunting purposes: 183
   - I hunt in this unit: 983
   - General interest in this unit: 130

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 932
   - Bow: 566
   - Crossbow: 472
   - Muzzleloader: 407

3. How many years have you hunted deer in this unit?
   - Minimum: 0
   - Average: 25.2
   - Maximum: 71

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 784
   - Mostly Private Land: 115
   - Public and Private Land About Equally: 36
   - Mostly Public Land: 13
   - Exclusively Public Land: 26
   - I did not hunt in this unit last year: 9

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 43
   - Not too crowded: 58
   - Neither crowded nor un-crowded: 33
   - Somewhat crowded: 25
   - Very crowded: 17
   - Not applicable: 14

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 281
   - Fewer: 342
   - Same: 300
   - More: 59
   - Many More: 32
   - Unsure: 24

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
Implement an ANTLERLESS HOLIDAY HUNT: 414 537 87
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: 517 445 76
If the Population Objective is not "Increase"...
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 144 852 42
If a Zero Quota (buck only season) is adopted...
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?  Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?  

<table>
<thead>
<tr>
<th>Concern</th>
<th>Average Rating</th>

Cross bows are becoming like a gun season, all season long. These weapons are able to fire accurately or two 100 yards now, they have a stock a trigger a scope of safety and a preloaded bolt. Far more like a gun than a bow! You no longer have to worry about that nervous doe seeing you draw, at the buck following her. In most cases with a regular bow you never get a shot! Now with a crossbow all you have to do is raise your arms and pull the trigger. If we can't get rid of crossbows, you need to go to one buck tag only! Use whatever weapon you prefer to hunt with during the appropriate season but when you take that buck, you should be done except if you want to harvest some antlerless deer. With crossbows in rifles now allowed in Waupaca County I’m lucky if I can get a three-year-old into the next season. Years ago on my property I would have at least one five-year-old every year that hasn’t been the case in at least 5 to 6 years now. I also think you should do away with the group hunting. There is so much pressure put on these deer now, is it really any wonder why they are so nocturnal and everybody says they don’t see any deer. People are in the woods far more now than they ever used to be with trail cameras, foodplot and hunting. The number one thing that shot a deer activity down is human pressure secondly weather. If people want to see deer again, the youth hunt should be eliminated in October, should have five days without any hunting prior to gun season and the Friday before gun season should go back to no gun shooting at all. The deer may actually move again after a week without pressure. My Cell Camera’s, Constantly show does looking up into trees as they move along, in my area in Waupaca County, after the first week above season for deer are blowing constantly and are so jumpy they look like they’re going to drop over with heart attacks. When I go to Iowa to hunt, it is so different so much less pressure I can stand up and down with those around me and they never looked up. Wisconsin need to stop thinking with it’s pocketbook and start thinking about the quality of the hunt for a change again. Everybody was complaining about the low deer kill this year, And thinking it was because of the late season. Every five years we have a late season the big difference is the amount of pressure crossbows and too much gun season already. It couldn’t of been much more ideal for weather and opening weekend except for a few areas of the state. It’s time people wake up, the deer are out there start thinking about why deer don’t move, Instead of dreaming up excuses all the time. Back in the 90s when deer harvest were records every year there was more feeding and baiting going on Then there has been for the last 10 years combined. Last year on the last weekend of gun season I saw 67 deer, only five of them were antlered bucks. Between my friends and I we shot nine does during the T-zone and the holiday hunt, my neighbors to the north shop nine as well. I still had counted over 70 deer walking in my woods during January 2018. This year they were slightly fewer but still way too many. They don’t start moving around again for most people until season is over because of all the pressure. The reason I see so many of the second weekend is because I don’t hunt the first seven days on my Waupaca County property.
Deer numbers just north of Ogdensburg has decreased dramatically since earn a buck raising concern for quality hunting. Wolf sightings both personal and via trail cams are common. Late summer scouting of ~7 mile radius as well as hunting more hours each year reveal much less deer density from year to year. Apparently the entire county isn't experiencing the same since the recommendation is to reduce the herd and continue to issue antlerless permits. IMO, we need to reduce or eliminate antlerless permits for a few years. There has also been a proposal to extend gun seasons. Is the primary reason to harvest more deer? Money? Politics? Personal desires? When deer herds were extreme, 30-40 deer sightings were common on opening morning in gun season, year to year (I agree that was too many). The video states that the time period in November last year wasn't optimal, further from the rut and less deer movement. This is false, following the rut, bucks need to replenish what they have exhausted and food intake is necessary for the upcoming winter. Additionally, gun season has been the same time-frame for the 35 years I've been hunting and earn-a-buck was really detrimental on the herd including all the holiday hunts and antlerless tags issued since. Adding crossbows into the archery season hasn't helped. Personal observations have shown that many people in our area are only gun hunting a couple days, disappointed with the lack of deer sightings. How is extending the gun season, attempting to reduce more deer, going to make future years better? In recent years I've bow hunted during gun season. The amount of shooting in our area is extremely down. Last year my wife and dad gun hunted and I bow hunted. We hunted 5 days (at least 6 hrs / day) in different areas and saw 3 deer total. My family owns recreation land and spend a lot of money not only on hunting and fishing, but supporting the economy, gas, grocery, golf, cabin/land improvement. We love the place but are extremely concerned with the decisions that have been implemented regarding deer hunting. Another concern is crossbows. What is the justification for allowing crossbows in archery season? What was wrong with previous regulations for disabled or age requirements allowing the opportunity to use a crossbow. A crossbow is nothing like a bow, has a trigger like a gun, sights like a gun, has a bolt, not arrow, and from what I've seen, changes peoples ethics thinking they can shoot 80 yards. Archery should be challenging and seeing how close you can get, not making it easier. Unfortunately the heritage and traditional beliefs are being pushed aside for personal pleasure and possibly greed. I primarily bring this up since crossbow legislation will also be voted on this year which affects all DMU's. On a positive note, I'm optimistic that County Advisory Board input will improve wildlife management over time. Previously, unit deer density varied greatly as it still may be the case even by going to a much smaller demographic area of just the county, but it should improve deer counts and the necessary harvest in future years. Thank you
It is stated on deer harvest numbers for the year, but do these numbers include ag tags? How many deer are being harvested in Waupaca county from these tags? I support that farmers need to have ag tags to support their crops because this is their income to make a living. However, the number of tags that are put out can be a little absurd. When hunters have numerous farmers around them with ag tags it puts in a considerable dent in the population. Yes, this is the goal but there has been a little over kill in my opinion. My family owns land and we lease land. There has been a year where the land we lease they had an insane amount of ag tags and we weren’t seeing a single deer on there till mid October. At that point it is only fawns. No bucks were seen until November. This was on over 100+ acres of the leased land where maybe only a 40 had ag tags, the exact details I’m not 100% sure on. It also affects our private land. The years that ag tags have been supplied you loose the mature bucks that we all dream of harvesting because of the pressure before hunting season. What probably would have been the most unique and coolest buck I ever would have seen so far got spooked off because of ag tags. Again I think we should have ag tags, but maybe the number of tags given out should be reconsidered. This is something I haven’t looked into, but can anyone see who has ag tags? Should land owners be notified if neighboring or nearby properties are using ag tags? The amount of deer that we have been seeing has drastically reduced over the years. If the goal of reducing the population is to create a healthier herd and for Waupaca county to be able to produce larger and more mature bucks, is an antler restriction out of the question? Allow first time hunters of any age and youth hunters to shoot a buck of any size because we all want them to get hooked in hunting and continue on the tradition that we all love. The holiday hunt has ruined late season bow hunting. The years where we have muzzleloader, late antlerless, and holiday hunt gives bow hunters no time in the woods. With the 9 day gun season and muzzleloader season gives a person more than enough time to harvest a deer to put meat in their freezer. After all these seasons the bucks are sitting tight and gives them no time to give an archery hunter of filling their late season tag. Extending the archery season gives hunters a little more time, but you also have some bucks that already are dropping their antlers earlier during this time frame. Again this is my opinion but talking to fellow hunters who have a passion for bow hunting, I haven’t heard a single person that has enjoyed seeing the holiday hunt. My tradition of sitting in the stand on a cold and hopefully white Christmas morning and going home to spend Christmas morning with the family has been taken away most years now because of this hunt. I want to thank you guys though for putting in the time for gathering info for all of us to see what is happening in the county we hunt in.
I have hunted outside of Scandinavia Wisconsin for roughly 20 years. The private property I hunt is surrounded by many fellow sportsmen and women with many smaller parcels of private ownership broken in to 5-40 acres pieces. With the density of hunters in my immediate area and the current decrease objectives in place for Waupaca County I have seen an extreme decline in deer numbers over the last 5 years. If you take a ride 10 miles down the road deer population may be much higher. In particular this may be the case where large parcels (500+ acres) are owned by single individuals. I have attempted to get permission to hunt 4 separate areas from 6 different land owners where I have seen much higher concentrations of deer compared to my own area. I have been denied 6 times. I wish county boundaries were not used to set antlerless harvest goals. This is decimating the herd in my immediate area while not addressing the larger goal (decrease) at hand. With today’s modern and advancing technology couldn’t a different antlerless harvest tag availability strategy be implemented? Say one that would account for hunter density per square mile? When applying for private land permits require addresses of properties to be used. Then issue doe permits according to hunter participation in these smaller areas? This would not only improve hunting opportunity/satisfaction for situations like mine, but allow the DNR to better hone in a areas where hunting pressure is low and in turn where deer density is high. After talking with my neighbors I know they would not be upset with getting less if not any doe tags from year to year to re stabilize our decimated herd. Likewise in areas with less hunting pressure maybe a land owner who would be issued many does tags (6-10? who knows) would be more likely to invite family/friends to come hunt or give permission to people like me because they would feel less threatened about not having any deer in the future as numbers get adjusted according to past harvest numbers/data in these more specific zones. I understand this possess a technology hurdle, but look at all the advances the DNR has made in the last decade! Online registration, online input, surveys, license sales, etc. Embrace technology and use it to better manage this vital natural resource please. What is the population NUMBER target for Waupaca County? What are the population NUMBERS for all the counties in the state? Please start posting current population targets (actual numbers) along with current population estimates. This would allow hunters to better understand the DNR’s objectives. Thank you for your time and consideration.

Very well done study and presentation. The Waupaca County/ Central Farmland area is quite a bit different from the Northern units where I hunted in past decades prior to buying the 12.5 acres down the road from my house here. " Up North " I always enjoyed the beauty, but the poaching, both by the poachers and the attitudes of acceptance that seem to come with it by even some of the non hunting population is certainly not as bad down here, especially if that poacher is also a trespasser! Also, the predators and winters are not much of a threat in this neck of the woods. As far as vehicle collisions go, people around here are very wary of wildlife and do there best to watch for hazzard,after all, enough domestic farm animals escape as well and some can be bigger than a deer and black, at night, and panic! I would like to see a longer " two week" gun season like in Michigan, and a longer archery season for those folks in lieu of all of the sporadic " Holiday " hunts or " bonus" tags. I'm a disabled veteran and have hunted off and on since 1988 on the land I now own as well as Bayfield and Iron and Price counties, the reason being that my military sustained injuries at times flare up and keep me laid up some years, unfortunately usually during hunting season, and some years (2019) I don't even get a chance to hunt. Other years, if up to it I have gone out on opening day and gotten a deer,OR TWO, within the first couple of hours ( I'm a good hunter). Other years I wasn't up to it until days into the season, and later in the day, but yes, got at least an antlerless deer. What I'd sure like is more DAYS, not more tags. Others who work feel the same way. I'm retired now, but back when I was a correctional officer ( hunted in Sauk County then, got a couple deer) I didn't always have off of work. Only a few hours to hunt. I talk to many who WOULD hunt, but can't get that week off, so they don't hunt. TWO WEEKS would let more hunters harvest one or two deer instead of the ELITE and RETIRED harvesting two or MORE, and it would PRESERVE our hunting HERITAGE for more! Sorry to ramble, (payback for the long but EXCELLENT video) Thank YOU, for YOUR service!
The Waupaca County/ Central Farmlands area doesn't suffer quite nearly from the problems of the Northern units in Iron and Bayfield County (where I previously did more hunting before purchasing 12.5 acres of hunting land about a mile from my house) of the poaching and tolerance and attitudes surrounding it that I witnessed up there, as well as the increasing wolf population that my Son and I witnessed, many tracks and on two occasions the actual wolves. Poachers, especially if trespassing are far more likely to be looked down upon in this neck of the woods, the coyotes and occasional bear are a far cry from an up north type threat, and the winters are comparable to the predator situation difference. On the flip side, where more urban area people might be upset about vehicular incidents with deer, around here we are always aware of not only them but all wildlife AND domestic farm animals that occasionally get loose, some of which are much larger than a deer and can be black and in full panic. In lieu of all of the complicated "special/ bonus " hunts would a two week gun season work with extended bow seasons in areas that need additional population harvest done work? I admittedly ask this partly because as a disabled veteran I have taken some years off (2019) due to injury flare ups, rehab, that often afflict me with the onset of colder weather. I'm a good hunter and have often gotten deer during the early hours of opening day, if first getting out later in the season late in the day I've still gotten at least an antlerless deer, so a longer season could help us retired disabled hunters as well as those who work and can't get off for opening weekend or even that week. People's work schedule is one reason for the drop off in hunter numbers among the younger people that I talk to. Complicated equation for you to work out, but based on your EXCELLENT VIDEO it seems as though you are definitely on top of things! THANK YOU FOR YOUR SERVICE!

I know there are thousands of deer in Waupaca county, public land gets pounded and some hunters have been"hunting here for 25 years "! I drive 80 miles round trip to work and back, there are areas loaded with deer and other areas where you hardly see any even tho it's still good deer habitat. I totally understand that people spend a lot of money on their land ie. i.e. purchasing, mortgage, food plots etc. But between "quality trophy hunters and those who believe the deer are theirs" there's always gonna be more deer in this county than what the land can handle because a lot of land owners in this county don't believe in harvesting antlerless deer. All the antlerless permits in the world will not solve the over population of deer in Waupaca county if the majority of hunters here refrain from harvesting antlerless deer. It's too bad, but the trophy mentality has pitted neighbor against neighbor not only here in Waupaca county but across our state. Deer hunting used to be simple and fun and folks were happy putting some venison in the freezer every year. The solution for harvesting more antlerless deer seems very remote until attitudes change, but that seems highly unlikely in this day and age of so many hunters looking for recognition for harvesting a trophy therefore being very reluctant to harvest antlerless deer or allow anyone on their property to harvest antlerless deer. It's funny how I hear other hunters discuss Quality Deer Management, but say they don't allow anyone to shoot antlerless deer. Quality Deer Management is kinda like religion, instead of following the guidelines set up for Quality deer Management, people like to try and interpret and make up some of their own guidelines. Waupaca county is a great place to live, work and recreate. Good luck with the CDAC recommendations for the upcoming deer season. Thank you for allowing public Input on this matter.
In my opinion we need to go back to what has worked for deer hunting over the ages. Recently the rules are changed every year so that it is confusing and also does not give enough time for a modified rule to be accepted. We also don’t give the rule change enough time to see if the goal that was set was achieved. I am for implementing back tags and in person registration again. Did we benefit from eliminating these practices? These changes have made it easier for violators to violate. It has also taken away from excitement and social gathering at the registration stations. It use to be a build up of excitement for the gun deer season. Now there are so many seasons the gun season does not have the anticipation it once had. Heck last year we bow hunted up to the day before the gun season. Why? We need to understand that hunting is not as important to society today as it was 40 years ago. No matter what changes are made you will have difficulty recruiting new hunters. We need to understand and face this fact. It seems we are looking for a silver bullet answer that will make the interest in hunting what it once was again. Crossbows have changed the hunt that more deer are shot with the crossbow so these hunters are not taking a deer with the gun. The additions of crossbows has only shifted the kill to a different weapon. All the changes in weapons and seasons have taken away from the interest in WI gun deer season. My recommendation is why change the goals and law requirements every year. We had a successful format that worked in the past. If it is critical to kill more dear bring back the earn a buck program. I have been hunting in WI for 50 years.

Stop all the new rules with crossbow restrictions. Here we go with there are to many deer and now we are being told crossbows may not be allowed in November. STOP already. Give us the means and let us take care of the deer. Almost ALL the young hunters I hear about are out using crossbows with their parents. It allows them to get out in the woods without the need to practice, practice, and more practice. Young kids today are losing interest in the outdoors and older hunters are dropping fast. Stop listening to the compound hunters trying to keep crossbows out of the woods during the month of November. To many rules will drive away hunters especially the new young hunters. I love to trout fish but with all the rules, colored streams regulations, reduced bag limits you barely see any trout fisherman. STOP already. Deer hunting numbers will only decline if you continue to add more regulations. The harder you make it the less interest you will have. If a hunter wants to use a muzzleloader, traditional bow, compound bow, shotgun, rifle, or cross bow let them... don’t eliminate the muzzleloader season, extend the gun season, or eliminate crossbows during November. Have you driven around after opening of gun season you barely see any orange out there. Keep messing with the seasons and weapon choices and you will see even less. You hardly hear a shot after opening weekend extending the gun season would accomplish very little. Please stop.

Please consider my recommendation for the waupaca county anterless hunts. Last couple of summers and hunting season. I was shocked with number of deer I saw. While I was out on hunt blind placement search. I pulled up to a possible site. I viewed well over of a herd of 80 plus deer congregated on this farm field. It's not uncommon to see several large herds of deer at a time on different farm fields. We have over 500 acres to hunt a large portion of which is farmland. I also being a friend to the owner of the property and having knowledge of his operation. We’ve had many talks of crop loss due to deer infestation. He feels his average crop loss is around 12% some years it’s been over 15%. We feel that more tags and longer seasons would greatly improve the reduction or keep the deer population under control. After talking to other farmers in the area they also agree with my assessment. Even if we only maintain the current herd levels this doesn’t cure the crop damage problem. We feel that some loss is inevitable but with the size of the herd levels that we’ve noticed. It will only get worse. Under the current crop prices many farmers can not sustain these kind of losses year in and year out. So we are asking for your help in reducing crop loss by either extending or increasing the number of anterless tags issued but we feel an extended hunting season is necessary control this problem.
I hunt on/near Hartman Creek State Park when I hunt in Waupaca County. I have hunted deer in the same geographical area for 30 years. In Fall 2019 I spent 11 days in the field for purposes of gun hunting (two days prior for final scouting and I hunted all 9 days during the regular, nine day gun season) and over 45 days in the field for small game and bow hunting. I have NEVER seen fewer deer than this last season/fall and heard fewer shots during the nine day season. The last couple years (2016-2018) I have seen hunters harvesting 3-5 does per hunter in this area which is decimating the herd. I would be strongly in favor of having an application for a single "hunter's choice" tag (one deer, buck or doe) per season per hunter. Like the seasons used to be when I was a youth. I also hike on the Ice Age Trail, at Hartman Creek, and around the Emmons Creek Fishery Area (plus more but they are in Portage County) and found the same lack of sign and lack of visual sightings for deer throughout most of last year. At one point in February 2019 I hiked the perimeter of the Emmons Creek Fishery Area (yes, I know it’s mainly in Portage County) and quartered it when there was fresh snow. I encountered only 4 sets of deer tracks. Quite the stark contrast from even 10 years ago. Please strongly consider reducing the antlerless harvest. I believe the current rates are decimating the herd.

A lot of the changes being considered have to do with increasing hunting interest. I am an avid hunter for the past 26 years, but in the last several years I have considered quitting hunting to to the lack of deer populations in my area. I used to see 50+ deer almost everytime I hunted; now I’m lucky to see two. It’s very difficult to get people interested in hunting when there is very little to see, much less shoot at. Due to this massive decrease in population, I feel there should be no antlerless only season of any kind. From my experience in speaking with other hunters in the area is that there are “pockets” of larger deer herds, but the majority of hunters are seeing much fewer deer. I’m not sure if the 19 days gun season is still a consideration...but I believe it is a horrible notion; especially if it involves getting rid of muzzleloader season. For work, I do a lot of driving during the dawn and dusk hours, and have noticed in the last five years there are significantly fewer deer crossing the roads. Nobody wants to see vehicle/deer accidents, but is a probability for vehicles to hit any animal on roads if we are expected to still have an animal population at all. As far as crop damage, isn’t it already a rule that farmers can get crop damage tags. People are continually encroaching on the natural environment; but we still need a thriving population of all creatures!

Wisconsin needs a bow and gun season with bucks. Especially when people could really be struggling to eat with the prolonged coronavirus crises, this could be extremely important. It also would give folks a break from the uncertainty of covid 19 and something to look forward too as there isn’t a lot to look forward to right now. I saw significantly less deer in 2019 and I hunted very hard. I saw only a few bucks and many many days without seeing even 1 buck. No one in my hunting party got a buck with gun or bow in 2019. Please don’t ruin the economy of Waupaca county with an antlerless season. You would be taking the one thing away that I truly look forward too...especially right now. I fully support a holiday hunt as well as an extended bow season. I can say with 100% certainty that myself, my family, friends and neighbors will not buy a tag for bow or gun season if you implement an antler less season. Thanks and please rely on the current pandemic and allowing us to enjoy nature and hunting when there is so much uncertainty about literally everything else. This is an unprecedented time and people need something to look forward to...hunting is that something we need. We need it for food, mental wellness, an escape from coronavirus...having an antler less season would be devastating to all of us who enjoy the outdoors.
Overall I have been pleased with the management of the herd in Waupaca county. With that said, I am still a proponent of an antlerless only season for a few reasons. 1) The deer population is too high to be sustained by natural products alone. Should any of the larger farms experience fallout from the COVID-19 economic response a localized collapse of the population could occur. 2) Recruitment of deer, as per the biologist's report, is maintaining well over the last several years. The goal for the county is to decrease the herd. This can only be done through an increased harvest, disease, starvation, predation, or deadly accident (i.e. car collision, fall through ice, broken leg, etc). The only controlled method we have is to increase antlerless harvest, anything else would be disastrous considering the percentage of private to public owned lands that we can actively manage. 3) Though it has not been a big issue in Waupaca county there is research showing the increased harvest of trophy deer results in a decrease percentage of trophy sized animals each generation. Basically, by harvesting the best, we allow the animals with poor genetics (runts, sickly, small stature, etc) to breed and produce the next generation. From an economic stand point, wouldn't it make sense to encourage a surge of trophy animals for future hunting opportunity?

Regarding impacts to plant species, the forest has been impacted tremendously on our hunting population due to invasive species. I'm not sure the vegetation mix could ever be the same as 1900 even if all deer are gone. The data regarding deer kill is compelling, noting that more deer are harvested now as compared to the 1970s and 1980s. However, I don't understand it. It doesn't pass my gut test. Maybe hunters are more efficient due to food plots and baiting. However, the number of deer in the 1970s in Waupaca was much, much greater in the 1970s by an order of magnitude. In the same hay fields in 2019 I would see 3 - 4 deer. In the same field in the 1970s I would see over 100! I personally believe the value of more deer is greater is more important than all the other factors (ag damage, auto accidents, etc.). On the property I hunt, the number of deer is less each year for the last dozen deer. That is an absolute fact. This fact may be associated with only the parcel that I hunt, but if you tell me more deer exist on our property, you are a liar. I don't think the 1970s level of deer is healthy, but if 1970s on a scale of 1 - 10 was a 10, and 2019 was a 1, I would like to see a 3 or a 4 and we're a long way from there.

I have lived in the area for thirty plus years. While I realize the herd numbers were unhealthy in the late eighties and early nineties, I believe the numbers to be far lower than what is sustainable. I also realize that as deer habitat is destroyed, they adapt to the new surroundings and can become a nuisance. I'm certain that there are ways of dealing with these issues as needed by locale. I believe the greatest detriment to our deer herd, as well as all animal life, is over predation. This comes in the form of increasing numbers of bears, coyotes/wolves, and also the over harvesting of the resource. I remember as a young hunter seeing very few deer and having one "Party Tag" for every four people. I'm certain if we manage the herd well, it can find a healthy balance between too many and not enough. It is usually human greed that causes the most trouble. We need not look any further than some of the atrocious "deer farms" across the nation whose animals live in squalor and have caused many of the diseases and outbreaks in recent years. I'm all for private business, but doing a better job of regulating some of these throughout the country may be a good place to start.

I have hunted on private land in Waupaca County my whole life. For some time it was considered our particular area was some of the best in Waupaca County. I used to see 12-16 deer per sit, every sit! In the last 3 years combined I haven’t seen 15 deer in the whole bow and gun season combined. In 2020 I had saw 6 deer bow season and 9 deer during gun season. I usually average 2 sits per week bow season and 6-7 sits gun season. The land owners around us are experiencing the same and some of them have actually given up hunting as the numbers are the lowest anyone has ever seen. I would like to see a year where there aren’t any free antlerless tags. You get one tag per season and it’s the hunters choice to take an antlered or antlerless deer. I know this will never happen due to politics and money and insurance companies but it’s what needs to be done to support the sport and pastime of hunting so we can engage the youth in this sport. It’s not always about the harvest but more about the people you hunt with and the memories made but when you see the same amount of deer in one season as you used to see in one sit then we have a problem. Thanks for your time.
I feel deer management is a very difficult task for large areas of land. There are places where doe populations are too high and there are areas where deer populations are too low all in the same unit. So how are you supposed to generalize manage a management zone correctly? We have seen a tremendous change in our deer herd in the past 3 years and I attribute most of it to wolves that have moved into the area. I am finding dead deer mangled in our woods for the past 3 years. We used to have a very healthy deer herd and now we hardly see a deer. I also know that giving out these extra doe tags does not help matters when the herd is wiped out. I used to take a doe for meat every year and have now not shot a doe in 3 years running. I refuse to shoot any doe until this situation is resolved. In fact no one in our group of 5 hunters has shot a doe recently. Almost all our neighbors are not shooting doe as the hunting has gone downhill very quickly. I don't know what the answers are for managing big sections of land. Micro managing is the only solution. You do not have enough people to do this so I don't see anything getting better anytime soon. Thank you.

My comments are based on talking to neighbors who are fellow land owners, hunters who have permission to hunt these same private private lands, and just friends and coworkers who hunt other private properties all over the county. No one I've talked likes anything to do with extending the gun season a 2nd week, the antlerless holiday hunt, creating a separate xbow season excluding Nov, extending the archery/xbow seasons though Jan. Thanks to the mismanagement of the DNR's mandatory EAB practices of years past the majority of hunters I know have developed their own personal management of their local deer herds. It's not going matter much how many tags you hand out or how many antlerless seasons you have, hunters of private lands will manage appropriately for their area. Implementing a antlerless only season will only make some land owners sit out the season causing large parcels of land for deer to hide where the hunters that are participating wont be able harvest. I hope the DNR considers all the possible ramifications of any future antlerless only or EAB season.

I believe that the goal of deer management is to provide a quality hunt, control the population and stop the spread of disease. This can be accomplished by thinning the herd. To do that you need hunters hunting and to do that they need to feel that they have a chance to harvest a deer. I feel that it is the wrong move to completely ban baiting. Hunters who bait are more successful and can balance work, family and hunting better. I think the answer can be found somewhere in the middle. Allow small amounts of bait in and around CWD effected areas. I also feel that the fall youth hunt disrupts the rest of the season, it should be ended. It could be added to the holiday hunt. In counties with high deer populations I recommend extending the muzzle loader season from 2 weeks to the end of the year. Allow Bow and muzzle loader hunters to use small amounts of bait. Consider requiring Bow hunters to shoot a doe to earn a buck tag. However if they do shoot a buck before shooting a doe than they must shoot a doe before they can get a buck tag for the next season.

I hunt in northern Waupaca county. I have hunted this land during archery and firearm season since 2003. We have had success in the past but seems that we see far less deer than we used to in previous years. Actually this year during firearm season I never saw a single deer while hunting. That has not happened before. This is very concerning to me as I have children who are getting into hunting and last year was very frustrating for them. My son will hunt this year, but not sure about my daughter. I know people that hunt in the central part of the county and would agree that they need to thin out the herd, but feel it would be unfair for the people that do not see that much deer to ask them to do a doe only or earn a buck season. I don’t know what the right answer is for this and how you could tell some people to shoot more deer and others not too, but putting everyone in the same category I feel is a mistake. I’m really trying to keep my kids interested in hunting. Not seeing deer is making it difficult. Thanks for taking the time to read.
My thoughts, If the goal is to reduce the deer population and to do so in a way that doesn't impact the hunters' perceived success of the season because of regulations. Meaning we want to reduce population while keeping the hunters happy (not an easy feat). In DMUs where there needs to be a larger reduction in population. I propose (on private land) letting the land owner decide the type of weapon used to harvest deer. Open the season Sept - Dec (or a little later) and allow the hunters to use whatever weapon the landowner approves (bow or gun). To prevent hunters on adjacent lands from being shot accidentally a rule that hunters must wear some sort of orange while on the ground or in a ground blind. Once in a stand where the floor is over 8’ off the ground you may wear camo while bow hunting. If hunting with a gun you must wear the standard 50% orange on the upper body. The standard 9 day gun season would stand as such. This idea would allow landowners to harvest deer to meet desired population with a low impact style of hunting.

We do not need wolves to influence the deer heard ... shame on you. We do not need so many deer [does] being harvested for tourists to re-enter our state. We do not need so many hunters killing huge volumes of does. We should never listen to the insurance companies telling the DNR to kill more deer. this is their home and we travel through their home. Accidents happen and the insurance compines just have to pay out....sorry it is why we buy insurance. You the DNR must not bend over to the money the insurance companies give out to you... our DNR. We want lots of deer to see and some to harvest....you are our DNR not your own DNR. WE WANT DEER...LOTS OF DEER! Accidents happen and deer lives and sometimes peoples are lost in those accidents. Ouch! We tourist dollars back in the north once again! We need tourists dollars back in the bars due to deer registrations! We need tourists dollars back into the restaurants because tourists came here to hunt the LARGE Deer we used to have! Get back to the old ways that worked! it brought in hunting tourists!

I think the main concern should be the health of our ecosystems, all flora and fauna, including but not limited to just deer. A healthy environment will insure hunting opportunities not only for the current generation of outdoor enthusiasts but also for many generations to come. We should be using the best science available to try and achieve this goal. The educational video in this survey did an excellent job showing current and past trends. Getting this information out to the general public should be a high priority! Infomercials or radio ads might be an option. Obviously this all costs money, with declining license sales I strongly feel an additional/alternate funding source is a high priority. Lastly and most difficult is hunter satisfaction, everyone has their own idea on what makes a quality hunt. More options such as online input and questionnaires/surveys may give a better insight to this problem. I think a lot of people may have very good ideas, but they aren’t comfortable presenting them in front of a group of people. Thank you!

I do agree with the decision that for many reasons, the deer herd needs to decrease in Waupaca county. Not only do we have a high deer population, but based on my observations and many others that I have talked with in the area, there are too many does. In the original WIDNR survey that was sent out a couple weeks ago, I thought it was excellent to see that there was maybe some talk of bringing back Earn-A-Buck. It’s a great management tool for the biologists and in areas like Waupaca, should be utilized if the biologists also see fit. Anecdotally, I know that when EAB was instituted in our area in Waupaca county, the deer hunting was better. The sex ratio of the herd seemed to be more balanced, there were more bucks (maturely aged bucks), rutting activity was much more observable which is something I look forward to more than anything every year, and there were still plenty of deer. So even though I oppose an antler-less only 2020 deer season, I would be strongly in favor of a reinstitution of earn a buck.
In my lifetime I have seen a lot. My early years saw plenty of deer to many does, that was the years of the party permits. We trophy hunted for the biggest doe then! Then came one of the better ideas HUNTERS CHOICE !!!! Which is what we have today. The hunters and the DNR GREATLY reduced the deer herd, by choice. then came EARN A BUCK a forced option. It forced unethical practices by many. Things that skewed all the numbers! Now days its something different EVERY YEAR! its big money, jealousy and special interests. Its urban sprawl, insurance companies, wolves, crop damage or winter kill (mother nature) not so manageable. Management is leading the people where you want them to go. not a fan of the CDAC FOR MANY REASONS . The WDNR needs to lead with stern guidelines. We don’t need a 19 day gun hunt it already is! don’t need changing dates. As hunter you adapt, whinning doesn’t help. The WDNR needs to guide the people. Everyone now days has a better or different idea, trouble is its usually for their benefit.

We had 5 hunters hunting on 110 acres that we have hunted for the last 30 years. It is private land and I would say a normal day for seeing deer during the season would be an average of 10 per person. This last year for a 9 day season the most seen per person for the season was 22 by one person 13 by me and 0 deer seen by the other 3 people. If your objective is to totally eliminate the deer herd in Waupaca County continue on because you are doing a great job. The way you are managing the deer herd should probably have one of us seeing a deer in the next 5 years. You have totally butchered the deer herds in Waupaca County and if I mismanaged my job as bad as you have I would have been fired years ago. You people are a disgrace to the deer hunting and deer management groups of Wisconsin. What did you do in your last life manage dinosaurs. Your committee is a joke.

With the buck kill down in 2019 due to the late gun season (not actual buck population), the SAK population estimate has the total population estimate lower, that coupled with the low mortality from a relatively easy winter should lead us to believe that the population IS actually higher than reported estimates. Cutting both the antlerless tags per hunter and the bonus tags available is not a move in the right direction, however these have minimal impact on actual harvest of antlerless deer. Recommending the holiday hunt for antlerless will provide additional opportunities to harvest antlerless deer, especially if gun season weather is not favorable, leading to decreased harvest. Listening in to the preliminary meeting, it sure seems that the Waupaca County CDAC is in a "maintain population" mind-set based on several comments, despite having a reduce goal, and excessive deer browse reported in the county. I support the holiday hunt, and hope it becomes the final recommendation.

CDAC’s are a neat idea but Waupaca County differs greatly in deer numbers depending on where you are the county. The eastern and southern parts of the county have plenty of deer but in the northwestern part of the county numbers are down considerably. We have not harvested more than a deer a year in the past 5 years on our property (240ac) as well as intensive management to try to get deer numbers back up and it has not worked. all neighbors in the area are witnessing the same thing. killing more deer or expanding season dates will not help the hunter satisfaction in all areas. More deer will be what helps that, and with more deer comes the opportunity to kill bigger bucks due to the fact that more deer from each age class survive. if there were to be any changes to make I would consider looking into a 1-buck-a-year strategy or getting rid of party hunting. just my 2 cents from someone who works for a state game agency and has a wildlife biology degree. Best of luck.

I feel that it is difficult for the DCACs to get a good "hold" on the number of deer going by the harvest for the past two years. I can hunt in both Outagamie and Waupaca Counties, and the last two years the land has been very wet. Last year especially. The Waupaca County property especially so. It has been basically under water the past two years and we can’t get in until everything freezes up, therefore limiting our own harvest quotas. With conditions what they were, it is difficult for hunters to get out and both get a deer and report their personal sightings and the amount of deer on their property. I know for certain that neighbors to our property weren’t even out. The deer ARE there, but when only a few people are hunting on a specific property, it makes it difficult for one or two hunters to cover 40 or 50 acres. Just an offering from my experiences. The CDACs have no idea about specific locations’ deer quantities for every hunter.
I hunted quite a bit during bow from October up to the gun season and then I hunted a good 50 hours in 5-6 days of the gun season that I hunted. All that time in the woods and I think combined I might have seen 30-40 deer. Which is considerably low from back a few years. I used to be able to sit and see at least 5-6 deer per morning or evening hunt let alone sitting all day during gun. This past year was the absolute worst season in my 24 years of hunting. Each of the last 5 years the amount of deer seen in the stand keeps dropping. I honestly do not think there are the amount of deer in this county that the DNR thinks there is. We have plenty of predators that hunt the deer and with some of the past few winter being bad, probably too a toll on the numbers. Each of the last two years getting 3 for tags per season I think was a joke. I’d rather see one buck tag and one doe tag per season the next 2 years to let the population grow.

The deer population I have witnessed over the last couple of years leads me to believe the numbers are finally at a decent place. I believe the earn a buck implemented in the past (15-20 years ago) really decimated the population and for a number of years I only saw one or two deer and some years I did not even see a deer hunting. This was a very different hunting experience than I have ever had hunting on private land and was not enjoyable. I am finally seeing deer and harvested one this last season. I am glad to see it where it is (2019) and in my opinion the population is fine where it is and could even be allowed to get a little better instead of bringing the population down. If you look at the numbers people are still not getting the deer that the CDAC has hoped they would to bring the numbers down. Not many people practice QDM in our area so I know they're not purposely passing up deer, they're just not seeing them.

In my opinion, an antlerless buck (nub buck) should be counted as a buck, not "antlerless". I realize that nub bucks are shot accidentally in many situations, but a better way to monitor the sex ratio of the harvest would be to report on the actual sex of the deer. Not just whether it had antlers. This would slightly change the registration process. Our doe harvest (not "antlerless") should be at a 1 to 1 ratio with the buck harvest, or slightly more (when attempting to decrease the population) as deer are born in this same ratio. However, reporting an "antlerless" kill is, likely VERY different than reporting the actual sex ratio of harvest. I would support some form of antler restriction. Whether it be 3-4 points on one side, minimum spread, etc... I think ANY buck killed needs to be reported, and tagged (when possible) as a buck. Anyone killing a nub buck should be forced to use their buck tag, if available.

My thoughts on the spring hearing questions pertaining to crossbows was that it was maybe to stringent. I think women and children should still be able to use because most women the most they can pull back for a compound bow is 45 lbs. What a nice way to level the playing field for women if they so chose and what a nice weapon to mentor a young child. 55 might not be to much to ask for men also. This brings me to muzzleloader hunting. They seem to be forgotten. I think they earned the right to have there own season.If you want to extend gun maybe it should be with the muzzleloader. Lastly if there is so much fighting about buck harvest maybe we need to adopt hunting like some other states where your issued only one buck tag and 2 does. Harvest your animal however you like in the prospective season. Just some thoughts. Realize it will always be hard to make everyone happy. Thank you for your time.

I would like to see in person registration brought back for the sole purpose of many that do not call in their correct deer harvest and take too many bucks, I have been hearing 2nd hand talking about some that say it is too hard for DNR officials to catch them. I like the current way, but it makes me mad when people do not follow the rules when some years I fail to even harvest a mature deer. I would like to see baiting back for us that the deer only pass through the property to get to neighbor farm fields. The deer have zero reason to come by if the corn crops are still on during the gun hunt, which has been my case the last 2 years. I am apposed of deer season extending past December, you have had over 3 months to hunt already. It would be nice if every other year the gun season could start a week early to allow the hunter to get into the better part of the rut, which may increase harvest numbers.
I believe the DNR should bring back Backtags and deer registration. I believe this will give the DNR a better reading on the deer numbers. I don't think other hunters are being truthful in their hunts. I also believe the DNR should open a wolf season in the northern counties. I have personally seen multiple wolves in Vilas county while grouse hunting. I think wolves are an important part of the ecology system, but they need to be managed. Make up a number for wolf tags and treat the wolves like you do bear hunting. I also think if the DNR would change the rules on what is a legal buck would benefit the deer numbers and make Wisconsin more of a destination hunting State. I believe 3" tines on a buck is too small to shoot. Let's do what other states do and have it be 4 points minimum. That would give so many deer a chance to mature. Thank you for the opportunity to express my opinions.

NO ON THE HOLIDAY HUNT!!! You say opportunity, what about the opportunity you take away from people? A lot of people enjoy to small game hunt (rabbits, grouse, etc.) during that time period. At that time of year a lot of trappers get to go on private land, now they can't with Holiday hunt going on. Maybe some years the snowmobile trails are not open yet, but what about all the clubs that go out to mark & clear the trails? A lot of it is done at that time after the crops are off. Plus what about the archery people that want to hunt bucks? Did any of you get the total number of deer taken in the holiday hunt in 2017? Compare it to the total harvest and you will see that the number is not significant. Did any of you get last years results from other Counties to see how that compared to the total harvest? We have a long enough deer season to harvest deer WITHOUT THE HOLIDAY HUNT!

I hunt often by bow and gun and understand the deer heard on my property well and the number of deer in my area are not as high as the DNR estimates. In the video it was admitted that the numbers lost from predators and winter lose is not understood for an accurate count. In the last three years before the 2019 season we had a large winter kill, I watch the heard lose weight by showing their ribs at times. The past couple years I have found more predator sign than ever before with an increase of deer carcasses. Its interesting data in the video but I truly believe not taking into consideration predator counts and winter kills our DNR is asking us to kill more deer than what's needed depleting our heard. Thank you for this opportunity to voice by my observations, I chose not to shoot a single deer the last two years because of my findings ad talking with my hunting neighbor.

My impression is that the deer numbers are substantially lower than what they have been in the past. The age group of the bucks has become much younger. Based on my personal observations the buck/doe ratio also seems off. Along with the overall lower deer count, there are also fewer bucks, and they are younger. I noticed this drop off when rifles became legal to use in Waupaca county. Hunters became much more successful hunting more mature bucks, thus the apparent drop off of the age group and the bigger bucks being seen on our property. In conclusion, I would advocate for a 1 buck a year bag limit, regardless of weapon used. This way, hunters would be more apt to pass on a buck and at the same time be more willing to harvest a doe - if they want venison. I think this would solve 2 problems at the same time, reduce the herd size where it is needed, and improve the buck/doe ratio.

Predator control measures need to be revisited. Wolf sightings have become common. Deer densities appear to vary greatly throughout the county. Personally I have difficulty filling 1 gun tag or any archery tags due to the lack of deer sightings/opportunities. That's not to mention the 3 antlerless tags that come additional with each license. Additionally, my time spent in the woods has increased significantly, which typically increases the odds of harvesting but that hasn't been the case for me. If cwd hasn't been detected in the county, why isn't baiting allowed? When legal, my sightings and opportunities were much more frequent. Since baiting isn't allowed in Waupaca county, why are the majority of outdoor stores/gas stations in the county able to sell corn/bait, including powdered food / attractants? Seems to be a conflict of interest unless your in it for profit.
My brother and I along with kids & grandkids have hunted for over 60 yrs on private land in Waupaca. Although Waupaca is among the largest kill counties, I've seen a significant decline in the # of deer seen, and taken. We usually only hunt the first 3 days of gun season. Last year I saw 2 deer-no shots. I'm sure the farmer getting crop damage permits 10? years ago definitely affected our #’s. I think coyotes have recently added to the decline. 15 yrs ago I would see 75 deer opening weekend, declined to 30’s , now 5 or so. A neighbor hunter who organized Quality Deer Mgt for our area reported this was the first yr in over 50 yrs hunting that he did not see a deer opening weekend. The tree damage from the July sheer winds had an affect. Finally I would like to see the Oct doe only season return to reduce the herd. At 74 yrs old I’m not going out in the weather for the Holiday hunt.

Waupaca Co clearly has too many deer for hardwood forest regeneration; however, it is unlikely that the number of permits will have much impact given the traditional gun season structure. Waupaca has deer densities 5-8X Menominee Co, the county with healthy forest regeneration. While these low numbers are likely unachievable, there needs to be a change in attitudes toward incentivizing hunters to harvest does and broaden the gun season over a month earlier to get peak rut and maximize deer movement. It seems deer movement during recent gun seasons just doesn’t happen. There are many private parcels closed to hunting and the deer just lay low. As a forestland owner and a hunter, I would not mind seeing increasing wolf predation of deer if that’s what it takes. FYI. I have a success streak of 40 years harvesting 1 (or often 2 or 3) deer. I wouldn’t mind seeing my streak broken.

Way fewer deer out there in Waupaca and Sawyer counties were I have hunted for 30 years. Not even close....I’m in the woods constantly and see fewer deer and pass fewer & few bucks every year.....why, because they are not there to see. Furthermore as a high school teacher and the parent of a 13 year boy I can tell you unequivocally it is much more difficult to interest “the next generation” of hunters in hunting and woodsmanship when there is no game to interact with. Hunting has been my passion for all of my life and my son is interested, as it’s in his dna but he has made comments about the lack of deer sighting and how it makes him want or not want to hunt. Our fin @ feather club at school has proven this when students exchange notes....poor deer sighting equals less interest in hunting when so many other activities are out there for kids...mostly virtual endeavors.

THE ONE THING THAT WAS NOT ADDRESSED WAS BAITING IN THE COUNTY. BAITING IS SUSPENDED IN WAUPACA COUNTY AND THE PURCHASE OF CORN AND APPLES ARE AVAILABLE AT SEVERAL BUSINESSES IN THE COUNTY. I KNOW THAT IT NOT ILLEGAL TO SELL THESE ITEMS. HOW MANY TIMES DO YOU HEAR SOMEONE SAY THAT THAT NEIGHBOR IS BAITING OR I PUT A LITTLE CORN DOWN WHEN TALKING HUNTING. THIS WOULD NOT BE INVESTIGATED IF REPORTED. IT IS AMAZING THAT A GAS STATION HAS 50 BAGS OF CORN AND 20 BAGS OF APPLES ON THE FRIDAY BEFORE GUN HUNTING. THEN DRIVE BY ON THE FRIDAY AFTER THANKS GIVING AN THERE ARE 4 BAGS OF CORN AND NO APPLES. ON APRIL 16, 2020 I DROVE TO MY HUNTING LAND AND THAT SAME GAS STATION HAS AT LEAST 50 BAGS OUT IN FRONT GETTING READY FOR TURKEY HUNTING? I AM NOT AN EXPERT OR HAVE A DEGREE IN DEER MANAGEMENT BUT IF IT LOOKS LIKE BAIT AND POURS LIKE BAIT IT IS BAIT.

I would support an every other year doe only season. We would have some huge bucks around and finally reduce the doe herd. Giving out 6 tags when you buy a bow and gun license is a joke. How many families can actually eat 6 deer in a year? My family can consume a maximum of 3; there are 3 of us. More than that and my Dr. would not approve of that much red meat. Our reason for seeing less deer during the 2019 season was in large part based on 2 facts IMO. Too much water, our woods was underwater, deer avoided it. 2nd is all the standing corn. There was plenty of standing corn yet this spring. People forget about that. This was not due to a lack of deer. I have camera pictures this spring with 17 deer on a small clover plot and that is just what is in the cameras view! Good luck, you guys have your work cut out for you. Dammed if you do, dammed if you don’t.
Keep gun season same as it is. Creating a longer/earlier gun season essentially lowers the amount of deer that will be taken. In Waupaca county if you don't harvest a deer on opening day you are pretty much done for after that. The amount of activity and gun shots on opening day is substantial and if you had a longer gun season that is just how much longer after that one day opening day of gun that you would have it be quiet and deer bedded down and much more cautious. Keep same crossbow season or extend it. As a female crossbow is my choice of weapon as it is much easier to handle than a compound bow. In support of ethical hunting and making sure you have a good shot for a good kill I think you would find more bad shots and wounded deer by making kids, women, and elderly etc. have to use a compound bow for more hunting during the archery season.

We could definitely support at least three antlerless tags per gun tag in Waupaca County. Many people will be recovering from the economic damage caused by the Covid-19 virus and the stay-at-home orders, and will be depending more on venison to feed their families. There is no shortage of deer in our county! The goal is to reduce the herd, so if you are serious about that goal, increase the number of antlerless tags to at least three. You also should support extending the bow/crossbow season through Jan. 31. This provides more opportunities for everyone, especially those with unfilled licenses. It is cold during that month, so there is no danger of killing too many deer. Very few will take advantage of this extension, but why not work to increase opportunities? Again, we have plenty of deer! Thank you!

The deer population and harvest numbers all appear to be trending down so at this point I do not understand the thought behind depleting the resource more than it currently is. I have been hunting the same land for over 35 years....every year we see less and less deer and have a lower success rate. if the trends continue, we will eventually ruin a resource and a tradition that has been in place for many years. I think that one thing that was missed in this is hunter safety.....I know there have been times myself where I have not felt safe as a hunter due to the willingness of careless others to shoot at movement because they have tags to fill. I do understand the difficulty in managing this resource and appreciate everyone's hard work...please be open minded and listen to the sportsman that are in the woods hunting.

The deer sightings and harvest has been lower the last 5 years. Our area hunters have noticed less deer and they are younger deer. The deer are so small now. I do not like the multiple deer seasons. The hunting season is way to long. We do not need the T-zone, muzzle hunt, youth hunt, and holiday hunts etc. The bow and crossbow season and 9 day gun season is enough and long enough. There is talk among the hunters here to only shoot bucks and at the same time knowing others are shooting at everything that crosses their path. They are getting disappointed with the hunting season as it is now. The earn a buck years hunters were shooting anything so they could shoot a buck. They left many deer in the woods where they shot them. What a waste for many reasons. What kind of hunters have we become to be so selfish!
The current framework that is in place in Waupaca County and most other historically high deer-density counties seems to be working, albeit this is a large change from previous decades. Nothing really sticks out here as unusual, however, the decision not to extend the archery/crossbow season really doesn't make sense, given the fact that Waupaca County is still one of the most populated counties in the state. The extra deer harvested during a January hunt would help some areas with their urban-deer problems (the city of Waupaca specifically -- which has an urban cull program in place). One other minor concern is why the 2,000-ish fewer antlerless tags in the quota when the CDAC's recommendation is to reduce the deer herd? Yes, completely understand the quota and the actual harvest are nowhere near comparable, but ...

For three years I have completed this form and stated that the DNR needs to get rid of all the extra doe only seasons and holiday hunts. The majority of people do NOT go back out hunting after the 9 day gun deer season. Make all hunters harvest deer during the 9 day hunt. By doing this more people will remain in the woods and on stand thus moving more deer around. I can't say this enough! People are Not coming back after opening weekend. I live in the country and own land, I see what the neighbors and people from out of town are doing and they are not hunting after opening weekend anymore. Please note that if the state pushes for a doe only hunting season you will lose 40-50% of the hunting population including myself. I will hunt out of state for a buck and not harvest any deer locally.

25 years ago you would see 50 deer opening weekend on the 80 ac we hunt. that was when kids get doe tags and limited other where given out. then it went to 2 doe tags for everyone. took 7 years to drop it down to 25 opening weekend. then they gave out 10 doe tags. well in less than 5 years the opening deer crossing land went down to 7. now well see 7 all week. so yes i am not happy about only having 7 deer on the property verse the 40 from 25 years ago. every year we would get 3 year old buck 150 plus class . now lucky to get a 130 class every 3 years, LUCKY i said. so still need to build up heard and kill them wolves please. that idea sucked and is killing deer hunting in some areas, killing it i say !! thanks hope this helps and make smart choices please. killing the deer hunt in wis.

Last year’s hunt was the worst in our 40+ year history. Weather played a huge part in that thanksgiving was later than most other years. I would consider most data collected from last year to be skewed by the weather. Second point, Waupaca County had CWD IMPORTED into it by a game farm. That same game farm continues to have multiple tests per year that are positive, yet, they continue to operate. I urge the DNR and other agencies to force this place to increase their security by added a double fence around the place. The mere fact that they are operating as business/usual tells all of us that the DNR is not serious when it comes to CWD in this County, and they should be. This place continues to sell hunts even though they are supposedly quarantined. Fix this NOW please.

I think Waupaca County does not need an extended gun season to meet quotas. If people complain that they are seeing less deer and so it’s harder to harvest an animal, don’t extend opportunities to harvest. Give less opportunities and let the deer population grow. I think an extended gun season would be the final straw for a lot of hunters and people I know. I understand you may sell a few more tags to people that aren’t that interested in hunting. But by extending gun season, you would be ruining it for a lot of avid bow hunters. I think the best thing that could happen for the Wisconsin deer season or more specifically, Waupaca County, is to reintroduce earn-a-buck. Have people need to harvest a die before they can harvest a buck, but still give people 2 antlerless tags.

I have hunted in the same unit (was 63A) Central Farmland for approx. 40yrs on private land. I realize deer sightings vary w/weather, standing corn, etc. I am an avid archery & gun deer hunter and 20 + years ago, it was not uncommon to see 50 + deer on opening day gun, as they would really start to group together by Sat afternoon and thereafter. Seems the last 5 + years, we see fewer and fewer deer, both during rut and opening day gun. Not unusual now to see only a couple deer opening day. I am not "anti DNR" by any means and usually support most of your recommendations, however the deer #s are definitely way down over what we used to have to have and it may be time to issue say 1 antlerless tag only - with each buck license. Thanks for your understanding.
Trying to decrease the deer population more than it already is, is very inconsiderate to the future hunting generations. It’s not the deer population fault more and more of the land is being runtimes into housing/roads. I’m a very avid hunter and outdoorsman. What needs to happen is a 4 point restriction on one side of antler. Very common law in states around Wisconsin to help keep healthy deer numbers and a good balance. To keep does in check 1 tag per liensence (1 for gun, 1 for archery) would be more then acceptable. The proper buck to doe ration on a 40 acre parcel is 2:1. I hope the dnr get the point that a lot of us avid outdoorsman/hunters would be more then happy to see a 4 point minimum antler restriction. Sincerely a worried outdoorsman.

The last couple of years my deer sightings have fallen drastically. I have kept a diary of every bow hunt I have been on since 1978. I personally believe that the future of our deer hunting heritage is in dire straights. Young hunters need too see potential targets on a regular basis to remain interested. The last two years we have not seen a deer on opening day of gun season. 30 years ago if some one had told me that 2018-19 I wouldn’t see a deer on the opener I would have said they were nuts. I realize there are pockets of deer where numbers are high however I don't think this is county wide. I wish we could find the proper solution i.e smaller size management units or something. Good Luck CDAC you don’t have an envious job. Thank You Guys and Gals.

I believe if you looking to down size the deer population of does then you should have earn a buck. Another thing I believe in is if I buy my tags, I should be able to hunt any county I want for my first doe tag not being told I have to pick where I hunt for a doe. I will purchase tags for my county. I enjoy this state and I enjoy different areas of this state and for me to buy a doe tag for each county I travel that limits me. I have bought different county doe tags and did not see a deer. With me traveling stimulates the economy. I purchase a hotel room, eat at restaurants, purchase groceries, consume gas. We hunters do a lot of traveling but for us to decide where to hunt and purchase tags for each county I go to is ludicrous.

it is my opinion that proposals with high numbers of antlerless tags promotes unreasonable killing and poaching........ if there are so many deer lets just kill them I am an avid bow hunter and I feel like extended gun seasons interfere with my chance to harvest a deer with a bow........the constant chase to get more deer with guns makes it hard for deer to settle into natural movements that bow hunters need to really hunt........I like the peace in the woods for bow hunting and with one gun season upon another the woods don’t settle down......with multiple tags many hunters take the attitude shoot anything simply because they have a tag.......second season bow hunting is difficult with gun hunters in the woods all the time.

This past year I could have taken many deer. I had shots each and every time I bow hunted or gun hunted. I chose not to take as many as I could have because I did not require that much meat. As far as moving the gun season leave it as it is. The season was 1 week later and the rut was over. The bucks were resting, the ground was too noisy and the bucks were bedded. That being said I still saw several bucks and does any one of them could have been taken. Must hunters exp. Gun are only out there the first 2 days. Hardly anyone hunts after Thanksgiving. This year we will be right back to normal and maybe the things will be a little bit quieter in the woods. Giving more of the ones that only hunt 2 days out of the year a chance.

Although Waupaca county is very large in size does not mean the herd population is substantial in all areas of the county. Going back to individual management units (i.e. 62b or 62a) was a far better measure of managing the heard across the county. Also allowing any "bow" hunter to use a crossbow is absolutely absurd. Crossbows are essentially rifles which in turn increases the buck kill long before the traditional 9 day gun hunt. This not only decreases license sales for the gun season due to hunters not seeing the buck or deer numbers in general, but it also extremely increases the overall kill numbers of harvested deer and wounded deer. I have noticed a large increase of caucuses on private land due to crossbow wounds.
Predators in Waupaca county are affecting deer numbers at a greater level. The number of wolves hanging out in this county is increasing, and sightings are happening more and more. The number of coyotes is almost out of control at this point. Until we have a way of controlling wolf predation, deer numbers will continue to decrease. I also believe that the number of antlerless deer killed in 2018 had a large effect on total number of deer seen last season. It is time to cut back on antlerless tags now, limit of 1 antlerless tag per license to build herd back up to proper levels. I am also in favor of limiting buck harvest to only 1 buck per season period, no matter what weapon is used. It is high time for this.

CDAC council, Waupaca County has 2 active CWD positive captive deer operations near its boarder. One in Marathon county has reported 104 cases of CWD. One in southwestern Shawano County has reported 31 cases. Marathon County has reported their first case of CWD in the wild. This was less than 10 miles from the Waupaca County line. Waupaca County will be dealing with CWD in the wild shortly. Given the disease concerns, agricultural crop damage, and damage to forest habitat and lack of forest regeneration, please use all the tools possible to put as many tags in the hands of those that will use them. Extending seasons when possible will give needed time to use this opportunity. Thank you.

don't want the long bow season can't get in the woods for snowmobiling even if the land owner does not bow hunt !! they will not let us open up till all hunting is over!! I wish it was all done by Jan 31 of each year !! I mark trails and work with the snowmobile clubs and I groom for Marion winter wanderers snowmobile club. just to get in to take care of trees that went down over the trails. after hunting reg. gun hunt is over is the time to move in and get the trails marked!! cant get it all done in one day!! snowmobiling season is so short now when the bow goes till end of Jan sucks for clubs. let the snowmobilers ride for what pay for !

The units are far-too large. In the past having three units for the county was better than this. There is an over-abundance of deer in some area, but not many in others. I have kept track of my deer-sightings for the last 10 years and can share this is interested. Providing 3 additional tags was ridiculous for my, specific area. I am open to having a longer season, or special holiday hunt, etc, to allow those that maybe didn't harvest a deer to have additional opportunity. However, giving one person 4 tags doesn't make sense to me. Perhaps give 1 additional tag, and allow the additional holiday hunts, extended archery season, etc. Thank you for the opportunity to provide feedback.

I have hunted deer both with bow, crossbow, and firearms in the east central area of Waupaca county for the last 53 years. In the approximate last 20 years I have seen a steady decline in deer numbers, with much of the surrounding residents agreeing. The antlered harvest declines and the antlerless harvest increases every year. You can not keep harvesting an excessive amount of antlerless deer without decimating the overall population. The carrying capacity and deer per square mile estimate are a joke beyond laughing. Why is the gun season harvest numbers way down and why so many hunters complaining? A number of reasons, but number one, "You can't shoot deer that are not there".

It's pretty simple!! Bring back EAB! At least use this as a tool, not every year but something like every other year?? You'd also have to bring back registration stations which helped small businesses and gave a more accurate count, I'm sure some people fake a registered deer on line or just forgot, it could easily happen. Ban BAITING state wide, keep gun season where it is, get rid of the non-traditional gun season totally, go to one buck only state wide, and get rid of the crossbows or open that season same as gun. They have a stock a tigger and a scope come on they even advocate to shoot 100 yards!! Sounds like a gun to me and you don't even have to draw the thing back!!
The deer population in this unit has been going down and staying down for a number of years due to over extending permits and predator kills, number of wolves seen has gone up. The party system from a number of years ago worked and kept deer in check and still provided a good hunt. Things now are distressed, the enjoyment gone. My grandsons only hunted two days and then quit when no deer were seen. I hunted 9 days and saw no deer. I really look forward to deer hunting and this year I am seriously considering not going, as I have heard from other hunters. Things need to change or the number hunters are going will fall also and number of new hunters will drop also.

I would like to see you consider implementing a policy where we can as a county have an antler size limits for hunters over the age of 18, we have some good genetics in the area and most area residents are trying to implement QDM strategies. I think you would see the private land owners try harder to reduce the herd size if they would have some assistance throughout the county with a size limit on the bucks. I think a great way to do this would be to work with a QDM specialist to give recommendations. Maybe like fishing you come up with a slot limit where you can shoot small spikes or forks but need to pass bucks until they reach 100" or some other criteria.

As a hunter, Husband, Son, Dad, Grandpa, Bow Hunter Preferably, Outdoors Enthusiast, I am greatly saddened by how people that no longer have to hone a somewhat primitive skill to shoot a bow. Today, there are crossbows that are reliable at 100 yards. What a shame that archery is no longer a skill as a result. My first deer was a 5pt buck with a PSE compound bow. If a person is handicapped or over age 60, I have a totally different view. The crossbow has made it easy for poachers to shoot many respectable deer from the herd. I would like to see the use of crossbows to be as it used to be. Handicapped or over age 65. Otherwise it is no longer archery. Thank you.

Please understand that not only the wolf river drainage basin, but low land in general has been underwater for the last three years. This has forced the normal deer herd out of these areas to higher ground. This might make deer numbers suddenly increase on these higher grounds, but keep in mind, a large portion of the county will have absolutely no deer. After seeing one deer the entire 2019 gun season, I truly believe the deer herd is far below a reasonable number. By continuing to over harvest the deer herd, you are making many of us quit the sport altogether. Remember, if more and more of us hunters stop participating, your deer management will be hampered.

I have been hunting in the Big Falls area for about 35 years. During the 2019 year I had a trail camera almost the entire year. I'm amazed at the number of pictures that I got of predators. Bears wolves and coyotes. Including many many pictures of coyote pups. During the 2019 bow and gun hunting season I only saw one fawn. I'm kind of a die-hard hunter and capable of putting a lot of hours in the stand each day. During the 2019 hunting seasons I saw a lot fewer deer than I did in 2018. This really makes me think that predators are having a bigger effect on our deer population Waupaca County then previously thought. Just something pretty to consider.

I have hunted Waupaca for 35 years. This past gun season ( and I hunted the entire week) I saw one deer opening morning a small doe. That was my grand total for week. Also true from neighbors I talked to. Deer numbers in the Ogdenburgs area are extremely low. Many people feel that predators may be the reason for low numbers. And hunter high number of deer taken. I have also hear that there are deer hunter clubs that may be bringing in CWD animals. I would like to think the DNR are on top of this and are diligent to monitor these clubs if it it true and adequate fencing is keeping these animals separated from the wild herds.Thanks for this forum.

Gun hunters need to stop the bickering. Only a fraction are upset about crossbow hunters. The majority is the bow, crossbow, and gun hunters that don't have a problem with anyone else. The minority is a handful of gun hunters that aren't having success. Odds are it doesn't have anything to do with anyone other than themselves. Either the don't have the land type or haven't made it the best for deer habitat or they are flat out just not good at hunting. For once we need to just leave things be for a bit. Always changing and always trying something under the sun. That’s turning more people away than anything. Concerned all seasons hunter
If there was ever a time to simplify things and look at the bigger picture of the world we are living in today it is now. Mother nature is always the best herd manager. 2nd best is hunters deciding on their own private land what is to much or to little and doing what is best for their land. The more the DNR and all these other groups get overly involved every year with ever changing ways they think they can play deer gods the worse they make it by turning people away. Lets get it together. Another thing that should never be a deciding factor is what a Wisconsin politician thinks of the herd based on his or hers lack of hunting skill.

In over 30 years of hunting this DMU, I have never seen so few deer. This has been the experience of virtually every hunter I have spoken to in the area. Deer and deer sign are disappearing. I believe that we are severely over-estimating the deer population in the Waupaca DMU and/or have set the target population too low. I now have young nephews that aren't developing an interest in hunting because they will sit all weekend and not even see a deer, anywhere, at anytime. We are currently managing ourselves out of a sport and an entire generation of hunters- and the wildlife management funds that come along with them.

Please do not ever consider instituting antlerless only seasons. It is my opinion that many hunters will forego buying a license. I would also expect hunter recruitment to suffer. Whether they admit it or not, everyone wants to shoot a big giant buck. When a smaller buck or doe walks by, many hunters will opt to fill the freezer. An antlerless only season will reduce the number of hunters in the woods, and therefore reduce the number of these opportunistic harvests. I would suspect the number of antlerless deer kills would not significantly increase and possibly even decrease if an antlerless season is implemented.

I am landowner who owns land in this county for the purpose of feeding my family and having the opportunity at harvesting a mature buck. I would like to see more bucks get to maturity as well as a more balanced sex ratio. This could be accomplished by continuing to shoot does and protecting young bucks. All of this would have a positive impact on recruiting new hunters since quality/size of the bucks seems to be very important to getting and keeping hunters interested in the sport. A doe only season would get this process started while allowing us to still enjoy the sport by doe hunting. Thanks for considering this.

The number of deer is decreasing each year. Many people I know have quit hunting because of that. It is very frustrating to sit all day(s) and see only 1 or 2 deer . . .and sometimes NONE. I can sit in the woods for gun season and hear very few shots any more. SAD! Doesn’t it show from 2019 that there were 5000 antlerless tags available and only about 600 were sold, that hunters DO NOT want to kill any more does!! And now that wolves have been introduced to the area, more deer will be disappear. I am NOT of fan of a Holiday hunt or extending the bow season . . .and that is someone who loves to hunt!

In Waupaca County, the public land available is abysmal. Some public land parcels are tiny; I wager the size of a football field or smaller. These areas are bordered by private land and seeing a deer in one is up to chance. In this survey, when reviewing the number of deer harvested, the fact that there were less than 400 harvested on public land vs thousands on private should paint a clear enough picture. Every public hunter is crammed into Hartman Creek or the patchy other areas. For a long time it’s felt like a waste of time to hunt out there on the public land. I appreciate you taking the time to read this.

Not as many deer like there use to be. We practice quality deer management. Would like to see more bigger bucks. We take a few does every year. Don’t want to take to many. Because there aren’t that many. Plus predators do kill a lot of fawns. Private land should be the owner’s choice to manage the deer. You should promote deer management. Plus I heard that you want make a crossbow season separate from bow season. I’m 52 and can’t hold back a bow as good so I use a crossbow. Not fair to separate the season. Private land you should be able to use what you want. Public is different. Thanks.
After 35 years of hunting our private land, I have realized that land management is just as important as managing the number of deer, on and around the property. Most people do not realize how much a single deer eats, and how several deer can eat a forest floor clean, over years. As the trees mature, and food is eaten, the deer travel somewhere else. Select cuts, and knowledge, and some patience is the key to keeping deer on your property. There are many who do not understand this, and blame the wrong reasons for not seeing deer “like they used to”. Food and cover draw deer in. Managing the forest is key.

I feel that the number of larger bucks has declined over the past 5 to 10 years due to the amount of smaller bucks taken. It is my opinion that if a no buck season or two, we would have some bigger bucks around. Or if the state put a minimum antler size (for 2-3 years) it would help to raise larger animals in the area. This could be done in the entire state as well. The hunters that are in favor of larger racks would no doubt be in favor of this idea. Also, people that want larger racks or trophy's might be willing to pay a higher price for a license if they knew the larger animals are here. Thank you.

Our family hunts public land in Waupaca County. As with most public land in NE Wisconsin it is heavily pressured. I have observed hunters from neighboring private property hunting the public land we hunt because they are not observing deer on their tracts of private land. I feel the number of antlerless tags available for public land is too high. It may seem counter-intuitive, but would reducing the number of antlerless tags for public land actually increase the total harvest? - or at least maintain the current harvest levels, by reducing the number of individuals pressuring deer on public lands.

I do not feel an "antlerless only" season would be very beneficial to thinning the herd...if that would be the case I know myself and many of my neighbors would not even purchase a license I’d rather see earn a buck come back and that's saying ALOT..that program decimated the deer population! I know lots of people really look forward to chasing that big buck(especially in these tough times) I fully support holiday hunts and extending the archery season but PLEASE do not limit us to what we CAN shoot. I hope you hear our voices and thank you for the opportunity to give our input.

I hunt all seasons and often. The deer population has been on steady decline. The abundance of antlerless tags issued and does killed have taken its toll on the population. My grandson who is 15 years old has lost interest in deer hunting and says it is "pointless and boring" due to lack of deer sightings. He bow hunted 9 times saw 1 buck and 7 doe. He gun hunted 5 days and saw 0 bucks and 4 doe. We have 60 acres of wooded land adjacent to ag fields. You will never convince him that the deer are in our woods, you just can’t see them! How stupid do you think we are.

Over the last 21 years the deer population in my area has reduced significantly. Currently during a gun hunting season I may see 324 deer total. I think is a management unit more emphasis needs to be put on areas that have 4260 deer per square mile which includes the farms in the central Wisconsin area. Many of the areas outside of most farmlands are managed fairly well by QDM. However there are some areas that will not shoot a doe no matter what. If you would like to transport deer we’re to my area where I’m a harvest them that would be greatly appreciated

If you look at the browse lines in Waupaca county you can tell there are to many deer. the problem is people want to see the deer they did in the late 90’s and early 2000’s. But the way people hunt have changed. not many deer drives, heated stands, sneak in sneak out, area no one is allowed to hunt, smaller tracks of land ect. The deer just avoid hunters that don't want to change how they hunt. Do what is best for the deer and the land, not for the people that just like to complain. keep up the good work, thank you for giving up your time and STAY SAFE
other states have early muzzleloader seasons. Wisconsin definitely could use one in certain high deer density counties. Waupaca County still has way too many deer on some properties because people refuse to kill does anymore. Because most people only go antler hunting. An October weekend or 4 day muzzleloader season is what I want to see happen in Wisconsin. After the youth hunt weekend. CWD will just spread faster and more car accidents will happen if hunters don’t shoot more deer. I try killing 6 to 8 every year. With bow and gun, so does my friend.

If the goal is to decrease the deer herd, I don’t see any reason to not have the holiday hunt and extend the archery season to January 31st. The only bad thing about the holiday hunt is that it takes away more time from the bow season. I can take the kids hunting for does during the holiday hunt and still bow hunt to the end of January. Doing the holiday hunt but not extending the bow hunt makes no sense at all. What does it hurt to give us more time in the woods? Extend the bow season to January 31st.

I enjoyed and appreciated Jake Friese’s presentation. I also believe that with the objective to decrease the current population, the archery/crossbow seasons should be extended even further than January. The data supports the effectiveness and the popularity is increasing. Maybe create an additional youth hunt for late season archery/crossbow or other incentives but start focusing on utilizing the archery seasons as a resource. Maybe create separate tag sets for both archery and crossbow. Thank you for the opportunity and your time.

No changes to archery/crossbow seasons—even if I don’t agree with 16-45 year olds using them (without a disability) they have every right to do so during the normal archery seasons. Keep the gun hunt to 9 days, then one week of muzzle loader. Too many wolves. Not the biggest fan of earning a buck but wouldn’t mind seeing it once every 7 years or so. Double fencing of all game farms. Make baiting legal and only limited to corn or apples only. No in store growth hormone enhancers, mineral blocks, additive junk that is probably causing the CWD.

Providing extra tags just promotes people to shoot recklessly to fill tags. In the last years I have found numerous dead deer after rifle season and mostly fawns. Deer numbers have really dropped in my area and most notably mature bucks. Extra tags result in nub bucks being shot as antlerless which results in fewer buck sightings which result in people shooting any buck in future years to fill freezer. Also, if extra tags are available, why wouldn’t the state generate money by selling the tags? Thanks for reading...your job is not easy.

The DNR needs to start listening to hunters out in the field and quit using their models which are flawed. My deer numbers have been decreasing for years. The reason for decreased hunter participation and decreased youth involvement is deer numbers pure and simple. We need to go back to applying for a doe tag and limit buck kills to one buck per hunter either bow or gun. I think the DNR has grossly overestimated the deer herd which with the exception of a few areas I believe is on the verge of collapse. I see about 20% of what I used to see.

Thank you for doing what you believe is best for our deer populations. I believe something has to be done to affect a change so that we see deer during rifle season. I was in a group text with 12 people on private land for the entire season and 1 person shot a deer, considering that person saw a deer to shoot, any deer, 2 others saw fawns, so 3 of 12 people saw deer in 10 days of sitting. The problem wasn’t that there wasn’t a deer population on the properties, the problem was they didn’t move at all and pressure wasn’t a huge factor.

I see lots of deer in the spring and summer but come hunting season they just disappear. Why? No one is hunting any more no one is moving them every year you see fewer hunters and their time hunting is decreased not many years ago opening Sunday would sound like Saturday now you may see an occasional hunter or hear an occasional shot come Monday it’s dead quiet and remains that way for the remainder of the season. Extending the season is useless because no one is hunting. Trying to get kids involved is futile if they see nothing.

I have been to CDA meetings there agenda is to fill there needs not what the public wants. A total waste of time. The forester wants all the deer shot for over brows along with agriculture. The tourism guy wants all seasons available which leads the hunter by himself. Every year they try along with the DNR to improve hunting and it gets worse. Simple fix more deer people see the more kids and people will hunt! If they don’t see deer they will quit kinda like fishing most people like catching not fishing. We want to see deer!
My suggestions would include allowing a person to purchase 2 buck tags a year and use them for any season (archery, gun, etc). I would also put an antler restriction of a minimum of 4 per side in place. The main cause for most of the crop damage is the farmers leaving their corn up until December instead of harvesting it in October like they should, so crop damage should not impact the decision on deer kill numbers. Last year was by far the worst year I have ever seen hunting wise out there. It was a struggle to kill a deer.

There should not be any special hunts, once the guns come out the deer gather in larger groups and denser cover so thoughts of us owning farm land do not see them except on cameras as they seem to only show after dark. As far as vehicle kills that should be the responsibility of the driver not the Deer if they'd pay attention and stay off their phones and quit putting makeup on while driving they wouldn't be hitting as many deer as they do. I have been driving in the country for 40 plus years and I have yet to hit a deer.

Please issue one tag for central farm land that us not county specific. It is hard to hunt public land in Wisconsin without being restricted by tags. All farmland zone give out tag anyway. Would help with hunter happiness and easier use. Antler point restrictions would also help remove some of the die population. Guys would have to shoot a doe for meat in freezer instead of the spike or fork horn. 3 point or more on one side. Would also help with safety because people would have to verify what there shooting.

I fthe advisory is to reduce deer numbers why are permit numbers less? I always count the number of shots from 1-9 opening morning and then the second day. This year was average opener but after that it was awful. I have not seen the deer in the Lebanon swamp that we have seen in the decade earlier. The number of shots does not suggest that many deer were taken this year in that area. I would suggest keeping the number of permits the same or decreasing them. The weather certainly played a part in the kill in our area.

Why does almost every other state promote Quality deer management with Antler restrictions or One buck only or Texas 1) one unbranched antler, 2) a minimum 13-inch inside spread, or 3) at least six points on one side? Wi does nothing but falsely overhype the herd size in an attempt to kill more deer and sell more licenses. Hunters would embrace change - the WI DNR has no problem raising the size limit for Musky try it for deer and hunter satisfaction might go up. As it currently stands its better to hunt out of State!

If ever need to consider an anterless only hunt, I would like to see it as "earn a buck" option. When we had that, we were harvesting the anterless deer but still had option to shot a buck after that, if we wanted. I saw more and larger bucks during those years as I think a lot of hunters stop hunting once they get their 1 anterless deer for the freezer, and that allowed the bucks to survive and grow. This process helped reduce anterless numbers, but still allowed those hunters that wanted bucks to go after them.

Extending the gun season and taking more does out isn’t going to get more people to hunt. People aren’t seeing the amount of deer that they used to and the reason people aren’t hunting and kids are not getting into it anymore is because they don’t want to sit in a tree and stare into a blank woods and not see a deer all day. If you’re looking to boost the numbers stop eliminating all the deer. We see no where near the amount we used to. There needs to be more work on getting more accurate numbers for the herd.

The amount of Wolves and Bobcats in Waupaca County is way out of balance. There were no wolves in our block 4 years ago. Now there are no deer as all trail cam photos are of wolves (Even Collared Wolves) A Collared wolf did not move in - It was placed there by the DNR to reduce deer herds and congratulations as it did. I will contribute water levels was poor for our hunting area and shell ice - but the predators are the main factor of low deer in our block and its a big block between Marion and Clintonville.

You say that the deer numbers were down due to the late season. What I’ve seen in Waupaca county was a continuation of seeing less deer. 5 years ago I could pick and choose what deer I wanted to shoot, now its not a guaranteed to even see a deer. I’ve been keeping a log since 2010 on when and what I see. I can spend hours and hours of hunting an not see a deer. Some friends of mine hunt north of Antigo and he seen more deer Than I did this past year. Oh wait...that’s because of the last deer season.
I believe that the amount of corn left in the fields at the time of the gun season has dramatically decreased the amount of deer I see each year. Farmers have been leaving their corn on later and later in order to save fuel costs paid for drying. Last year was extremely wet forcing some farmers around me to abandon their crops because they couldn’t out on the field to take it off, which in turn changed the deer’s natural area to living strictly in the corn field, and is why I see less deer year over year.

2019 was the first year in 30 years that we observed the supposed ‘gold’ standard of the 1:1 buck to doe ratio on our private 200 acre parcel. We consciously make an effort to shoot and manage the antlerless deer on our land. We are in the middle of a large logging project, to improve and regenerate wildlife habitat. I believe the 2018 winter was harder on the deer than most (most does had a single fawn, some had no fawns.) I believe all three of these factors influenced the deer herd in our specific area.

every year the hunting gets worse and worse, we did used to have way to many deer and now i can hunt 8 days all day during gun and see 3 deer if that, and that’s hunting farm fields. the farmers around us kill everything that moves and we have nothing. opening day in our area we did not hear a gunshot until after 8AM. during bow season we saw more deer but 90% were yearling bucks and if you saw a doe it was very small, we just have no doe left in the area after years of everything that moves being shot

I wish I could explain why I’m seeing less and less deer every year since I started hunting on my property. Last yr I didn’t see a deer during the gun season and only a couple during bow. We had a couple pictures during the bow season but none during the gun season. None! That’s so hard to believe hunting in Clintonville. It’s just frustrating putting in the time I do. But I am a outdoorsman and live for the challenge. I’m just concerned that our herd is healthily but not wiped out either. Thanks.

the problem in my area is that it is made of small private farms and the neighbors are all trophy hunters and don’t seem concern with health issue in there being too many does. I have talked to them about at least shoot some does for the food pantry if anything. right now we are seeing 20 to 30 deer a night in the hay field next to our home & buildings and there seem no change for the past 10 years. I at least shoot 3 to 4 per year and the excess goes to the pantry or my elderly parents for use.

It makes me so sad that kids go hunting g and don’t see deer like we used to due to the wolf population. We have more wolves on camera than deer 😥. Every reason we got rid of wolves years ago shines through today. Every person who lives in town and thinks they are beautiful have never spent time in nature, never seen how violent of a predator they are. So sad. So many people have lost faith in the Dnr due to walkers inaction in cwd, we are so far behind other states on testing. Again, so sad.

CDAC has a three year goal of DECREASING the number of deer and should stick to that goal. Please follow the facts and science and don’t succumb to the pressure of hunters’ emotions. Their voice carries due to quantity, not quality. We (myself included) have a hunting representative on CDAC. All of the other representatives have a duty to do what is right, not what is popular. If you don’t want to support ecologically sound practices, please step aside and let someone else fill your place.

The over population of deer in this unit threatens to exacerbate the concerns Hunter’s and landowners already have about this states failure to control CWD. More family members are questioning the wisdom of eating the venison harvested by Hunter’s. Future land values will undoubtedly be negatively impacted if the threat of CWD continues escalating. High populations are damaging forests and future income from managed timber land. Earn a Buck is needed here despite political opposition.

I dont agree with any antlerless holiday hunt. If I have a chance to hunt that time if year I want the option to kill a buck or a doe. There are pockets of higher deer populations within the county. I hunt land that is 3 to 10 miles apart and the deer populations from 1 to the other is completely different. May see 7 different deer on 1 property and only see 3 different deer on another all season. The deer population per square mile isn’t the same throughout the whole county.
I know in the early 2000-2005 seasons the area's I hunted would see many more deer on the landscape. Early bow season would be common to see 20-30 deer in ag. fields. Now we see 8-9 maybe. Gun seasons in the same early years would see 15 or so on opening day. Now we see maybe 4-5. This past season I only saw 1 deer opening day. I know the population was too high back in the early 2000's but now I think is too low. Thank-you for your time in this forum to get some in-put.

I feel 2 antlerless tags per weapon season is reasonable, with bonus tags available for public and private hunters who feel they need more can purchase, My honest opinion with the way 2019 went, with the unusual weather pattern we had I feel todays hunting styles hurt hunters success (no drives/group hunts pushing deer) Too many worry about pushing that “trophy” off their parcel. Im not sure if these info things will make a difference but Id like to think they do, Thanks

Do not extend the 9 day gun deer season to 19. Do not support an antlerless only hunt or extra antlerless tags in the area. Some parts yes but this county may need to be broken down more. I live near the shawano county line and we've had a very large decrease in deer population over the last few years. I don't know where the DNR gets their numbers but I can say they are very far off for this area. I would like to see the DNR do their part in increasing deer herd numbers

What I see so much more now a days is slot more turkey's in groups of 20 or more and coyotes in group of 7 or more. I have watched turkey destroy corn fields worse than deer. I set out 10 trail cams and in 2019 I could not believe just how many turkey groups and how many coyote groups there was and just how big they have gotten. I think the best thing you have done is make it okay to use cross bows. I feel there is a lot less wounded deer and slot less tracking.

I would love to see the regular deer gun season opened a week earlier, and have the season last for two weeks. That is because if we have a horrible weather week, or the river bottoms (Wolf River) are flooded as in the last two years, or River freezes over early, as in the last four years, hunters are unable to access their hunting areas, which really minimizes their chances of harvesting anything. Lands covered in shell ice are just about impossible to hunt.

I grew up in Waupaca county and have owned 40 acres in Waupaca county since 1971. I feel the deer population has increased lately and I hunt with a muzzle loader only. Personally I feel that the bow hunters have enough time to hunt, they don't need additional hunting time. Please don't eliminate the muzzle loader season for additional days for regular shotgun/rifle. I only wish that the muzzle loader hunters could take advantage of the rut season.

Deer numbers seem to be down in many areas of WAUPACA county. Higher number of deer seem to be in small clumps in the northern part of WAUPACA, Iola, Big Falls. The rest of the county numbers are low. We cannot continue to only focus on the high number in a few areas and not the low numbers in the majority of the county. I think that we need to simply have bow/crossbow, gun, and youth seasons. The rest of the seasons should be dropped this year.

If you take care of the deer herd the hunter success will Follow. I recommend putting another question on the deer registration process. Ask how many hours the hunter has spent scouting and preparing for their hunt? I think too many people expect to just show up and shoot a huge buck and the NRB proposals regarding deer season length and crossbow use reflect that. That is not how it works. It’s called deer hunting not deer killing for a reason.

I have noticed in the last 10 years or so that there are way to many anterless deer. My father's land is just being over run and the deer kill off all saplings and marsh grass has choked everything else out and his woods are just dying. I believe people are just worried about shooting a buck and nothing else instead of taking care of the herd. I really think earn a buck was a good idea and still is. So I really think we should bring this back.
10294 I advocate 1 buck per year. It would solve the population problem in some areas, and in others would have a positive effect on the quality of the hunt. Too many mature bucks have been harvested with the advent of rifle hunting in Waupaca Co. It has had too big of an impact on the quality of deer. Additionally the crossbow has had this same effect, and has seriously drawn down the overall number of deer, and the numbers of more mature bucks.

10295 In the last five years I've watched wintering numbers decline drastically. Maybe this is due to the use of crossbows during the archery season. Hunting is a great sport and we are passionate about the hunt. Extending hunts and use of crossbows is killing this sport. Future generations will not get to experience the thrill of the hunt if we continue down this path of destruction. I'm not just talking about one county but all counties alike.

10296 If there is crop damage and farmers are being paid or reimbursed for crop damage then those deer numbers that need to be removed should be offered to the public on a first come first serve basis but with safety in mind. The land owner shouldn't be able to deny a hunter who is trying to secure a crop tag. Too often those landowners save the crop tags for friends. If you save the tags for friends, then you don't get crop tags or compensation.

10297 During the entire 2019 hunting season, I saw less deer than I did on some DAYS in past years. Hunting and increasing bag limits/quotas, I believe, are a direct cause of this realization. Stop asking how to reduce (eliminate?) the deer population and the number of insurance claims and start asking how we can insure our future generations can truly enjoy their time in the Waupaca County woods (and the state of Wisconsin, for that matter).

10298 Crossbows during archery season is what’s killing the gun season. What was it? Over 42% of bucks taken last season were gone before the one week gun season!!! That’s unacceptable. You need to either stop crossbows during archery or just open it all up to whatever weapons but only issue one tag for all of deer season. I’m also tired of reading everywhere all these bogus reasons of the low gun deer kill. It’s crossbows. End of story!

10299 I don’t believe that the number of antlerless tags issued with licenses in this DMU has a significant impact on the number of antlerless deer removed. In my opinion, the majority of hunters are not interested in killing a large number of deer. I don't believe that with the current system of online registration, that DNR has the same accuracy assessment of the harvest as it had with the tag/registration station system of the past.

10300 Regulations are getting too complicated with the private/public, zone/county separation of tags. I believe regulation should be done by county and that is it. No more zones, and public/private separation. Also, baiting should be the same state wide. One should not have to buy or rent additional property in a different county to bait. Additionally, stop raising the cost on WI residents and raise them for out of state hunters.

10301 I’ve been deer hunting since 1954 and it used to be fun and entertaining. But the effects of the 'quality deer hunting' that started about the year 2000 has really taken a lot of the fun out of it. I have had a lot of success with bow and gun and last year was the first year not seeing a single deer in prime deer location that I own. Need to go back to some of the same rules and type of season we used to have 15 - 20 years ago.

10302 I very MUCH oppose extending the gun season. I believe educating hunters on reading sign, playing the wind, and scouting techniques will enhance their hunting experience. You get out of it what you put into it. Please leave season design the same. Crossbow, bow, gun, and muzzleloader ALL have a place and offer great opportunity as it exists. No changes are needed!!! Sorry, but frankly people are becoming lazy hunters!!!

10303 One thing that I TRULY would like to see would be a return to having back tags, and deer registration stations. I feel that many deer harvests are not being reported and believe that would make a difference. I also feel that the archery/crossbow season should remain as it was in 2019. I wouldn't mind having a cool down period of a couple of days at least, for ALL hunting prior to the opening of the deer gun season. Thank you
Don’t take away the crossbow option. I really enjoy my crossbow and I’m better at it than a compound bow. I feel using the crossbow increases my chances of a kill and it keeps me in the woods where as if I had to use a compound, I’d spend less time in the woods and likely not even make a shot. I’m over 50, if that factors into the equation at all. Thank you for your time and giving me this opportunity to provide feedback.

I find that the regular 9-day gun hunt is always a week too late. The rut is long over, and the deer have retreated well back into the non-accessible swamps. We see numerous deer during the fall archery season, but very few deer during the gun hunt. My recommendation would be to move that season to a week earlier in the calendar. The rut would still be mostly over, but the deer haven’t yet vanished from the landscape.

I enjoy Wis. hunting and always will, at 68 years old I’ve seen the deer population of years gone by and it was fun seeing a lot of deer. I don’t see the numbers now and it seems the amount of hunters are less and don’t hunt as hard. I think every hunter listens for gun shots close or far away and shooting is definitely less. Maybe if dnr could bring back bounting on coyotes that would help fawn population. Thanks

In 2019 I hunted many hours on private land and never saw a deer. On stand early in morning and stayed until quitting time four days in a row starting on opening day during gun deer season. I am going to quit hunting because of your poor deer management in Wisconsin. I will hunt Wyoming again where I do see deer. Look at your 2019 deer kill results. It does indicate that the herd has been mismanaged.

We used to have a bunch of big bucks running around and the deer population is going down. What I would like to see is an antlerless only year because people are starting to shoot smaller and smaller bucks because they are not seeing big bucks. One year would help tremendously and I believe if we just take out some more does it would help decrease the population and get it managed between buck to doe ratio.

I would like to see the bow season start when it normally does in Sept and end on January 31st of the following year. I would also support the use of crossbows for people over 50 or who have a legitimate disability. I would like to see the traditional gun hunt of 9 days continue and would not be opposed to a black powder season to begin after the traditional gun hunt and last through December 31st.

The deer herd in central waupaca county sucks. The populations are much lower than the 80's when hunting was fun. You continue to over harvest which leads to less deer to see and lack of interest. The sport is seeing declining participation due to low hunter satisfaction. I think northern waupaca county has huge populations and skew the data for the entire state. Please wake up and save out sport.

Please consider strongly maintaining the deer herd or slightly increasing for 2020 and going forward. Your decrease plan and vision is wrong and incorrect based on my experience and observations. I spend a lot of time in the woods and have made my own deer counts year to year. Please use the feedback and listen to the hunters like myself making deer herd decisions for 2020 and beyond. Thank you.

I've been hunting private land in this county for 14 years and my family has hunted it for over 30 and each and every year the deer numbers go down. Due to over shooting of doe in the area and the constant rise of coyotes and wolves. We saw 2 deer all bow and gun season in 2019 on 100 acres of timber with 6 guys hunting all season. Licenses need to be reduced and predators need to be managed.

I personally believe that an anterless only season would force the citizens of this county to hunt elsewhere. I know that in our household we love the meat and will take an anterless deer early, then hunt for a wallhanger. If we get one, fine, if not there's always next year. With just 2 in the household we really don't need the meat from more than 2 animals. I feel that is doing my part.

When will small baiting amounts be brought back. This will help bring the deer herd down since everyone would be able to bait slightly and bring the harvest up. This would give everyone a fair chance rather than just the hunters who are breaking the current baiting laws. Also I heard the CWD was found on game farms not wild deer. If this is true baiting at minimal level should be fine.
Now that we have wolves in Waupaca County you need to include all the deer they are killing far exceeds the number accepted when talking bonus permits crop damage, and youth hunt. I’m finding far more wolf tracks in my swamp than deer tracks last winter. The number of deer that I see is down dramatically to the point of seeing 3-6 deer a night four years ago to some days 0-1 deer a day!

The numbers in this unit do not accurately reflect the entire unit. There are higher numbers in the Iola area that are far from the numbers of deer in the northern portion of the unit. It also does not take into account the proximity to the very large areas of private lands such as the Tigerton lumber company lands that hold large numbers of deer but are closed to public hunting.

I think u people want to kill hunting. There is not as many deer as u people think. U dont know how you count the deer but however u guys do it your wrong. You must be TRANSPARENT ON HOW U COUNT. Otherwise you will NEVER BE TRUSTED. Next year if you make us kill a doe first I will not get a license and many others will do the same. Not that u people care what anybody says

Issuing more tags does nothing as private land owners will not kill does- It is a vey sensitive subject I still do not understand but hunting Forest county and then Waupaca county and hearing land owners down here get worried when you shoot 5 doe off the property is concerning when you see 20 plus a day.. same ones or not. Up north seeing one a day was big deal.

We used to see a lot of deer then a wolf showed up and that didn’t seem to affect the deer herd to much but the last couple of years multiple wolves have been seen. In my area it’s getting harder to get a deer much less see some. I understand certain areas are over populated but even driving around the county I just don’t see the deer that are supposed to be there.

Waupaca County has an abundance of deer , problem is some areas are over populated while others have near target goals . The county needs to have sub zones . I live in Helvetia township in the northeast corner , more deer than you can shake a stick at , I hunt in St. Lawrence township, saw 0 deer bow hunting and gun season . I shot my deer on the neighbors farm.

If they are going to have doe tags, make people purchase them at $12 a piece. Too many people in the woods that think brown is down because they have free tags in there’re pocket. Also extending the season to 19 days is ridiculous! I hunted every single day during gun season and I never saw a deer. That is insane! Deer sightings are getting lower every year.

Too many Hunters are not seeing anything and are losing interest in hunting My son and Grandson stop coming up because we hunt public land and see nothing but Orange I feel if you would give out less tags more people would at least see a deer and have an opportunity to harvest In 2018 one person hunting shot for deer and in return three of us see nothing

Where I hunt near Iola my uncle has counted herds of 70-80 deer in his 40 acre field at a time. There are so many deer in Iola it is impossible to plant new trees and there are so many deer ticks with Lymes disease. My father and I have gotten Lymes multiple times and it's disappointing we can't use our woods during the summer in fear of getting sick.

If you kill off the deer population the deer hunting tradition will die. Many young hunters don’t want to participate if they aren’t seeing anything. I am speaking from experience, as you thinned the herd and we didn’t see deer my sons lost interest in hunting deer and the rules are so complicated youths can't understand them and they keep changing.
Just driving to and from work constantly stopping for deer. Neighborhood field had 121 deer feeding in it on 4/17/2020. The winter was very easy on the deer and the health they are in there will be an abundance of fawns produced. With that said we are going to create the risk of CWD more in our area and I want my grand kids to enjoy what I had.

I heard some talk about limiting the cross bow season in November. I do not like that idea at all. Why should we be limited y the amount of time to hunt during the best time of the season. It took forever for older people to be able to use a crossbow and know when we have some time somebody wants to take that away. Doesn’t make any sense.

As a father of four who wants to get my kids interested in picking up a passion of mine, it’s almost impossible to keep their interest when you you bring them out for a 1/2 day hunt and don’t see anything. I know there are a lot of factors that go into pursuing deer, but in my opinion there have been too many harvested, decreasing the herd too far.

get rid of crossbow hunting for anyone under the age of 70. Or give them a very limited season. They are destroying the great hunting tradition in the state. Also, I do a lot of walking all winter long and can count on hand the number of dead deer I find. I think that shows that the deer numbers haven’t exceeded the carrying capacity of my area.

Farms should allow hunting if the have crop damage. They get the best of both worlds currently. I see a lot few deer hunting than when I started hunting in 1982. Why own land for hunting if there are not enough deer to see and keep your interest. For the cost of land management and taxes you could hunt in Iowa or Kansas and see quality deer.

In 2017 an in 2018 the winter killed a lot more deer than people know. I live an hunt on forty acres an found at least 6 dead deer both years. An that’s only on forty acres. An I leave crops on the fields for the deer I don’t harvest my corn or my beans it’s all for wild life, 14 acres. I’m getting tired of the slaughter year after year

Please consider implementing a 4 point antler restriction to: 1. Increase the overall age structure of the deer herd. 2. Encourage hunters who strictly to hunt for meat to harvest a doe, thus aiding the CDAC goal of reducing the number of deer in Waupaca County. 3. Attract hunters to the county to hunt “trophy class” whitetail. Thank you!

age structure in deer herd is way off, too many old does and not enough mature bucks. buck to doe ratio is way off. rifles and crossbows have reduced the number of bucks to the point where i am thinking about quitting hunting. shorten seasons and go back to shotgun only and crossbows for disabled and elderly. need to harvest more does.

I’ve been hunting my property in Waupaca County for over 40 years. It is getting so bad that if I don’t shoot the first deer I see I’ll probably not get a chance at another one. I saw 4 deer last year on opening day and nothing the rest of the season. The year before I saw 1 deer. I can’t rationalize the deer count that you provide.

On my private land that I hunt I see very few doe a year maybe 5 sightings all year and they may be the same doe, I personally do not agree with trying to decrease the deer population in this county I feel like it should stay the same or slightly increase. I do not see nearly as many deer in the fields like I have in years past

Give 1 permit for each licensed season and allow the hunter to decide what to shoot, buck or doe. Sell bonus tags if you want. If a person wants to hunt with bow or gun, they would have a chance to shoot 2 deer of any sex. Stop all special hunts except for a youth/first time hunting season around the same time as you do now.

My land is in Mukwa on the river bottoms of the Wolf River. This was flooded much of 2019. This affected how many deer I see. I understand this is a micro-ecosystem in Waupaca County but wish it was managed this way. We have seen fewer deer since Earn a Buck. While it has been wetter, the population hasn’t rebounded.

<tr>
<td>10338</td>
<td>I don't think Insurance companies have a clue how many deer get killed or does the DNR. There is a lot of deer that get killed along roads that walk or crawl into the woods and die that never get counted. So I think there are a lot more deer dead every year from that and other animals killing them that don't get counted.</td>
</tr>
<tr>
<td>10339</td>
<td>I think the DNR is killing hunting season by issuing so many Doe tags. I own my own land and the number of deer are way down. If it keeps up, I'll stop hunting and let the deer stay safe on the land. Wolves are killing more deer around us or chasing them out of the area. Start having some guts and put on a wolf hunt.</td>
</tr>
<tr>
<td>10340</td>
<td>In our area we have seen a sharp decline of deer. The past two years we have not taken an deer because we did not see them. There are many acres of corn and soybeans and no deer. Neighbors are also frustrated with no deer. This few of deer has us reconsidering hunting. A longer season will not fix not having any deer.</td>
</tr>
<tr>
<td>10341</td>
<td>The Wisconsin DNR has done absolutely nothing to &quot;manage&quot; wildlife in this state... You don't manage or improve any public land. Their are no deer left period!!!! I will never buy a license or permit or anything for Wisconsin again until things change..... which we all know will be never......</td>
</tr>
<tr>
<td>10342</td>
<td>Between archery and gun season in 2019 I sat 63 days and only saw 7 deer total. I have been hunting private land the last 6 years, and every year I see less deer. Even during the gun season there has been less shooting. Not sure if it's in the area I am in, but numbers have definitely been dropping every year.</td>
</tr>
<tr>
<td>10343</td>
<td>There are many public hunting spots in this county that the DNR could be better utilizing the land for additional crops to create a stronger heard. Why give out two tags with every license for doe, one should be enough, let the heard get built up again like it was 10 yrs. ago or consider an antler size limit.</td>
</tr>
<tr>
<td>10344</td>
<td>I definitely don't think there are as many deer as you say there are. The number has declined tremendously since I started hunting. I quit hunting for a number of years because it was a waste of money. I only hunt now for my sons sake but his interest is declining as well with the amount of deer we see.</td>
</tr>
<tr>
<td>10345</td>
<td>The deer population density in Waupaca county is very high. When CWD arrives, it will spread very quickly. Therefore, it is my opinion that real progress should be made to reduce the deer population density to mitigate this risk. Anything to encourage the harvesting of antler-less should be employed.</td>
</tr>
<tr>
<td>10346</td>
<td>Over the past three years, deer numbers in our area have decreased dramatically. Example in the past two deer seasons, we have seen very few deer and haven't had the opportunity to harvest any meat for our freezers. We used to see herds in the fields in the evening. Now it's less than 10 deer if that.</td>
</tr>
<tr>
<td>10347</td>
<td>As a Snowmobile enthusiast, I am against these extended hunts as it is causing landowners to close their Wooded property to trails. I will not allow hunting on my property during these times. There is no reason to allow hunting during the winter time for sole purpose of controlling herd numbers.</td>
</tr>
<tr>
<td>10349</td>
<td>The number of deer I see over the years has gone down significantly. Being a landowner and what it cost to purchase land and paying taxes, it doesn't seem to be worth hunting any more. And you say you want to keep hunting going. I don't see that happening with the decreasing deer herd every year.</td>
</tr>
<tr>
<td>10348</td>
<td>I've said this for the last 4 years, 1 buck only. People would shoot more doe and still have the opportunity for a buck. If I harvest a buck with bow and buck with gun there is no need to shoot a doe no matter how many tags are issued. However with 1 buck tag I would definitely shoot doe for meat.</td>
</tr>
<tr>
<td>10350</td>
<td>I am against having a holiday hunt. With offering less doe tags per license and less bonus tags, I see no reason for a holiday hunt. No one I've talked to is in favor of this. If the objective for 2020 is less does (less tags available) then there is no reason for more seasons to hunt does.</td>
</tr>
<tr>
<td>10351</td>
<td>I hunted on average 4 days a week during bow, gun and muzzle loader seasons this year and I can honestly say I saw more bucks than does on the two private properties. My family is always trying to harvest more does and we noticed the buck to doe ratio was more to the buck side than doe.</td>
</tr>
</tbody>
</table>
I would like to see the use of shotguns included in the muzzleloader season. Since going to rifle statewide, I'm guessing many people have shotguns not being used. This would give more opportunity to hunt for those who don't bow hunt, or may not be able to afford a muzzleloader. Thank you.

I hope to enjoy the hunt, many people think buck harvest is everything, at my age I hope to just hunt, but we have lost the youth, keep trying to offer more youth hunts, people have lost the traditions I loved, sad days ahead, hope we can survive, stay safe, God bless, Tom King

Just one comment. I hope proposals are carried out based on best science rather than popular opinion. Scientists know what needs to be done. Hunters are tools to help this happen. I will do what is decided regardless of my opinions. I only want what is best for the herd and ecosystem.

We have seen way less deer since we had severe storm damage last year in our woods. My self and many of my friends would like to see a legal buck be 8 points or more. I think this would increase the doe harvest. Lets make baiting legal again this would also increase the doe harvest.

Many hunters are losing interest in our area during the gun season. Extended seasons seem to force deer to only move at night. Last year I hunted 60 acres that always had deer movement, I seen 5 deer over 10 long days. I do not foresee hunting deer in state much longer at this rate.

Crossbow hunting should be limited to individuals who are over 55 yrs old an/or disabled. Muzzle loader hunting should be limited to the gun deer season with no special week. Waupaca County should go back to shotgun only hunting with muzzleloader happening during that same time.

We need to increase the deer population in Waupaca County,... not decrease. There should be a hold on shooting bucks, decrease in doe tags to increase the population as well allowing bucks to mature more. Allow the youth hunt to occur after regular season if so applicable.

I bowhunt, gun hunt, and muzzleloader hunt. I saw the fewest number of deer throughout the season that I have in a very long time. Very concerning considering how many tags were issued. We live in the woods and haven't seen many deer all winter and spring. Very concerning.

2x as many deer are harvested on public land versus private land on a percentage basis. Lower deer populations on public land versus private is very noticeable to those hunting the limited amount of public land. There should be separate approach for managing public land.

What is the most effective method of deer count? Are there any signs that deer move outside their habitat? What is the cost of crop damage due to deer? Other means? Where are the open pantries for deer drop off? Will firearm of choice be used during the gun deer season?

I wish deer harvests were averaged / graphed over a 5 year period, as deer life span in the unit only average 1 - 2.5 years. giving a population density over 2 generations would provide a look at trending growth more inline with weather, preditory, environmental effects.

Stop killing off all the does/nub bucks before my grand kids loose interest in hunting altogether, their interest is fading. I am tired of hearing the Wisconsin Bowhunters trumping up their sightings so they can keep killing deer and stay in the woods all season.

The holiday hunt severely reduces the amount of late season bow hunting that can take place for hunting a buck. I understand it is a "projected" tool for reducing population by means of eliminating does, but i support moving it back some or shortening this hunt.

There should be a limit on how many hunters are allowed to hunt public land during gun season at one specific time. I have witnessed an unsafe amount of hunters on public land. They are too close together and therefore start pushing boundaries into public land.
I would like to express my support for a full crossbow season. Having invested over $1,000 in equipment and having sold my compound now, I would be giving up a dramatic amount of time in the woods! Please keep the crossbow season as is. Thanks for listening.

There are deer in abundance in certain areas. Harvesting does is not as easy with numbers changing across the county. There is also a large number impact on the deer with our rapidly growing wolf populations. Areas where deer where plentiful are now very thin.

Some areas have good deer numbers but a lot area are dropping. The fawn production is very low. I hunt Waupaca and Shawano. I see more deer on 15 acres in Shawano than 160 in Waupaca. The county is drying up and doesn’t look good. I’m not the one thinking this.

My son, grandchildren, and I hunted my property north of Iola and we saw ONE deer total during the gun season in 2019. And we hunted many days. That was the worst season we’ve ever had. My grandchildren are not sure they want to hunt anymore. That’s sad.

When deer numbers go up, hunter numbers will go up! This will bring FUN back to the idea of hunting!! Each year you are on a decrease path, hunter numbers will fall. Yes, as all things are in a political environment, my opinion will go in the barrel.

I think that if you couldn’t harvest a buck unless it had 3 or more points on one side not counting the brow tine people would be more app to shoot a doe and we would also have a better chance of shooting a mature buck. I think more does would get shot.

I appreciate your hard work and efforts in this manner and thank you for the opportunity to provide input! I think that the crossbow seasons have made a positive impact on deer hunting. I would oppose any restrictions on crossbow hunting seasons.

It is the responsibility of landowners to maintain healthy habitat and populations in private property and the DNR to aggressively manage and create quality hunting opportunities on public lands. Science must take precedence over emotional antics!

Bring back baiting. I own a small piece of property and only have deer travel through it. Without baiting, my kids and I have very little chance of harvesting a deer in Wisconsin. That is why we travel to Wyoming for our hunting season.

I would love to see earn a buck put back in. Also limit crossbow season. I would also like to see some discussion on only one buck per year any weapon per person. Thank you.

The buck to doe ratio is way out of wack. Seeing 25-40 deer in multiple fields in a 5 mile drive is cool, but shows there is a problem with hunters NOT harvesting enough deer, particularly antlerless. These are not healthy populations.

Deer kill down due to delay with crop harvest providing cover in standing corn. More car kills due to increased traffic and not paying attention then to increased deer population. Extended season hurts other tourism such as snowmobiling.

I thought it was wrong to not have a holiday hunt in 2019 when the gun season was as late as possible. They deer weren’t there during gun season, and if the goal is to decrease numbers, opportunity to harvest deer would have helped.

Bring back earn-a-buck. Keep our gun season at 9 days as it is now during Thanksgiving week. Try to develop a more balanced herd. Bring back registration to lessen the poaching. Have a one buck per year limit across all weapon types.

Let’s try one buck per person per year and get rid of party hunting. Make Waupaca county people want to hunt in again. It’s worse now than many public “up north” locations. Your ruining hunting and taking the people out of it.
10381 I think that we should consider not using crossbows during the bow season unless you are 55 and older. I use both but would do without for during the bow season. Still allow to use during the gun season and holiday hunt.

10382 I personally do not agree on extending the archery season. I am a avid hunter and snowmobiler, our trails can not open on most the trails we have until the seasons over and thats late the way it is already on some years

10383 Over abundance of fawns. Use to be able to see adult does on a regular basis but not no more.Noticed the same thing in Trempeleau County. More bucks seen than adult does this has been going on for last ten or more years.

10384 I donot think that you should change the bow and crossbow hunting season structure  if you need more deer taken let the people hunt with the weapon they chose or you will lose even more hunters than you already did !!!!!

10385 I’d like to see antler restrictions. Hunters should be harvesting mature bucks 3 yrs and older. 4 points or more on one side. I know this doesn't always necessarily mean an 8 pointer is a mature buck, but it would help.

10386 I think there should be an earn a buck season for private land only we shoot some does, but many of our neighbors don’t, if you want to decrease the population, have earn a buck, i know it is not popular, but it works

10387 I strongly oppose adding on another week to the gun deer season. I do not think More people would hunt just because there is more time to hunt. I also think it would take valuable time away from the bow season.

10388 An earn a buck season would be much more beneficial to population control than a doe only season. A doe only season would likely discourage a good majority of already lowering hunter numbers for that season.

10389 Numbers lower, and thats saying something cause 2018 was poor as well! Old registration system needs to return in some capacity. Your numbers are way off because many don’t register, forget, ignore, etc.

10390 I strongly believe the deer are over hunted making them very nocturnal, I have seen evidence in this by how the deer react to opening day of gun and by trail cams and monitoring my property year round.

10391 I would support antler point restrictions. 1 buck per hunter. Also not opposed to some form of earn a buck all to help increase the antlerless numbers and to increase the age structure of the herd.

10392 I think late season( Dec -January ) antlerless only gun seasons would productive in allowing hunters to fill in unused tags as well as help in controlling the abundant deer herd in Waupaca co.

10393 Give out all the doe tags you want but hunters only want to shoot big bucks. Maybe the dnr should take a different approach to improve hunter numbers. Look at what Iowa does and follow suit.

10394 Suggest to increase the nine day deer season. Keep the hunting season no later than December so the hunt season does not affect other activities that bring tourists and money into the state.

10395 deer hunting is less fun due to taking traditions away. Registration stations need to come back and go back to back tags. if all these changes keep up I would consider getting out of hunting.

10396 We own 40 aces, 3 people in hunting party, we saw 6 deer between us opening weekend, no bucks, did not shoot any. I hunted every day to shoot the one buck I saw on wed, on a leased property.

10397 Im trying to get my young sons interested in hunting. Seeing very few deer doesn’t help. Also we need to find a way to establish a better age class of all deer but especially mature bucks.

10398 Seemed to be far less shots than normal during gun season. Far less sightings as well. I am concerned with poachers and the wild turkey population as well. Zero gobbles this entire spring.

10399 Introducing an antler point restriction to have a positive impact on herd age structure and herd health. And to propose the shooting of a doe to help aid in your herd reduction goals.

10400 Way too many deer around. Let's get the state back to an earn a buck program again. Would also like to see a shortened crossbow season, since it is basically a gun as far as accuracy.
Definitely up the fine and loss of license for many years if caught baiting deer. Make it a major offense. Make it so people do not even toy with the ban. Seriously it has to stop!

I think Muzzleloader hunting should be in January, because I see deer the first two days of Gun hunting, and then the deer go nocturnal. Then I don't see deer until after Christmas.

Deer herd needs to be significantly reduced for forest health, regeneration and for the deer herd health. The doe to buck ratio is way too high, need to reduce doe numbers 50%.

All these regulations and changes each year is adding to the decline of hunters, including decline of deer population for the interest of the young hunter. (Not seeing any deer)

If needed, I would support an earn a buck framework for both bow and gun hunting... allowing a bow hunter that harvests 2 antlerless deer to earn a buck tag for gun season.

I feel the last 5 deer seasons have been consistent and they seasons should be left alone. The number of tags provided with each license should be the same also. Thanks

Start the deer gun season earlier- November 15, at least! It just makes sense because there are more deer moving. Keep archery season all the same. Thank you.

To many doe seasons. Way to many special seasons. Don’t like crossbow season, makes it to easy. Would like to see 1 buck per hunter per season no matter the weapon.

Too many deer. Deer browse is a huge problem in woods all over the county and they set back regeneration for decades with constant pressure. Shoot more deer.

Do not have a Antlerless only season. It would really hurt the hunters that go out to hunt and maybe even discourage them to even hunt hurting you even more.

We only need one doe tag and one buck tag people are giving up on hunting because they are not seeing any deer because you keep giving out so many doe tags.

I’m sure that I’m not the best deer hunter but when you can spend three days in the woods and not see more than one deer, overpopulation can’t be an issue.

I believe there are too many deer being shot with the crossbows, they should not be allowed to use during the month of November unless you are disabled.

Just for not see as many deer and very boring for a kid to sit and see no deer or very little they loose interest in hunting when there are no animals.

Baiting should be allowed on private land and should be considered a harvest tool also. Perfect shots placed in the vitals helps the harvest numbers.

Bring back the 4-day "T-zone" antlerless only hunt during the end of October like you used to do. This 4-day hunt greatly increased harvest numbers.

Many hunters I know would like to see antler size restrictions put in place in order to increase their chances of harvesting a more mature buck.

There are far too many antlerless deer in Waupaca and Shawano counties. Bring back earn a buck! Antler quality and high buck ages are way down!

At present I do not use a crossbow, but in the near future I will. I do believe that it should be treated as regular archery tackle. Period.

Waupaca County should go back to having shotgun only season. Cross Bow should be limited to people who are disabled or over 65 years old.
There are too many deer in some parts of the county and other parts hardly any. I don't have a good answer how to normalize the population.

Deer season needs to be extended and we need to remove antler-less hunt. no reason why there was 300 some odd deer shot on public land

One of the main reasons for reduced Waupaca deer harvest in 2019 was that many corn fields were not picked until after the deer season.

Deer population numbers are exceeding carrying capacity of the land. To achieve a reasonable population doe numbers must be reduced!

The CDAC seems to have pre determined that our unit has too many deer and the questions are designed to arrive at that premise.

There needs to be a coyote, wolf, and big cat season. I see more bobcats than deer. Also have seen Mountain lions on occasion.

I feel the estimation of deer populations are way too high in Waupaca County, and also too many anterless kill tags given out.

You can give out all the free tags you want but if people don't go back to group deer drives you will never get your quotas.

Without baiting and unfriendly neighbors I seen one deer all of both seasons last year. Tons of deer and wolves on cameras.

Stop decreasing deer heard numbers because someone's flower bed was eaten. Or because of motor vehicle accidents.

Don't like all the special seasons. Stop shooting all the does. Make it 1 buck per year only, not one per weapon. Thanks

Over the last 2-3 archery and gun seasons, I have noticed a decline in the number of deer seen, even during the rut.

Wolves in Waupaca county need to be eradicated. Go back to in-person registration. Too many undocumented deer kills.

No holiday hunt or extended archery! If u want more does shot, only give out one buck tag to be used for bow or gun.

If you are reducing the number of doe tags there is no reason for a holiday hunt. I am against the holiday hunt.

I only oppose the holiday antlerless hunt, because as a bowhunter that is an opportunity to hunt late season.

Please do not go antlerless only for all seasons. We will end up worse off because many will not hunt at all.

no change of the crossbow season maybe go back to the senior only can hunt with a crossbow not everyone.

Continue to work on earn a buck as a tool to reduce doe populations, very effective but controversial

if bow season is open crossbow should be always as well no shorter season for crossbow senior hunters

I believe the estimate of deer mortality due to predation is difficult to assess but underestimated.

If hunting public land in Waupaca county is your only option you may want to consider hanging it up

Way too many deer being hit by cars in this area. Seems to be over population of deer in this area.

No longer seasons! The deer movements only happen at night. No bucks for one year sounds great!!!

Do not change the crossbow season. Many of us are not going to hunt if we can’t hunt the rut.

Public Input on CDAC Preliminary Recommendations - Spring 2020

Waushara, Central Farmland

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

752 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 266
   - I visit this unit for non-hunting purposes: 198
   - I hunt in this unit: 698
   - General interest in this unit: 141

The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 666
   - Bow: 417
   - Crossbow: 330
   - Muzzleloader: 245

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 23.47
   - Maximum: 66

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 470
   - Mostly Private Land: 113
   - Public and Private Land About Equally: 58
   - Mostly Public Land: 21
   - Exclusively Public Land: 33
   - I did not hunt in this unit last year: 3

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 33
   - Not too crowded: 78
   - Neither crowded nor un-crowded: 44
   - Somewhat crowded: 33
   - Very crowded: 22
   - Not applicable: 15

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 161
   - Fewer: 242
   - Same: 251
   - More: 69
   - Many More: 14
   - Unsure: 15

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th>The Antlerless Quota is...</th>

</tr>
</tbody>
</table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...

Implement an ANTLERLESS HOLIDAY HUNT:

Support: 262
Oppose: 424
Unsure: 66

If a Holiday Hunt is held in a Farmland unit...

EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021:

Support: 396
Oppose: 293
Unsure: 63

If the Population Objective is not "Increase"...

Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons:

Support: 77
Oppose: 632
Unsure: 43

If a Zero Quota (buck only season) is adopted...

...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?

VALID: 177
NOT VALID: 632
Unsure: 27

Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?

*Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very*

<table>

Report Generated: Friday, May 01, 2020

Waushara, Central Farmland
In regard to the statements above any answer could be taken in any desired way... the results of that survey are not valid without allowing for explanation after each question. This is the reason why I answered "Not at all" for each statement. From a dedicated and serious hunter in Waushara county: First of all, I would like to take a moment to thank you for the time, mental energy, and commitment to our county and state’s deer population and overall health of our herd. Deer hunting in Wisconsin is not only my passion, but it also impacts me daily in my property management decisions, food plot designs, strategy scheming, and even my, nearly daily, food eaten with my family. I am 32 years old. This past season was my 21st year hunting in the state. I have killed a buck all but one year out of the last twelve years and for every one buck I’ve killed, I kill an average of 1.3 does. I say this to communicate that I am not just a trophy hunter. I have killed some very nice deer, does included, over the years but I can tell you with complete confidence, not one of the many deer I have killed were by accident. I work hard for and earn every deer I kill. Many opportunities are there for those who are willing to work for them! I have heard the whining and complaining from many fellow hunters about low deer numbers and not seeing deer. Personally, I don’t buy it and I don’t sympathize. Sure, they may be putting in the time during the season sitting in their stands but they aren’t putting in the time outside of the season. For those who own land or have access to private property, which is the vast majority, they aren’t doing the property management projects to improve habitat or food sources, they aren’t putting in the time for off-season scouting, contemplating new strategies or stand sites, or creating mental back-up plans and strategies. But, I will tell you, they are talking. They are exerting mental energy by complaining that their stale efforts aren’t producing impressive results. Do not sacrifice tradition to attempt to appease these lazy hunters. No one is entitled to a deer or a trophy, and true success only comes to those to work for it. At the conclusion of last season, I was mailed the end-of-season hunting survey. In the survey, I was asked the question to the effect of, “At the beginning of the season, how confident were you that you would successfully harvest a buck?”. I answered this question with the greatest confidence allowed. In fact, I can confidently say right now that I will kill a buck this coming fall. This confidence comes not in the properties I hunt but in my preparation. By the way, I killed a buck last year on public land. Let me get to the point. As a true deer manager in the state of Wisconsin here are my recommendations to my county and state decision makers: Keep it simple, stick to tradition, be open and honest-informed hunters are happy hunters. - Don’t cater to the squeaky wheels by fundamentally changing what has worked. - Don’t be afraid to allow deer numbers to increase - hunters who see deer and experience success will keep coming back - Accurately and honestly communicate estimated deer numbers - these numbers must match what hunters experience in the field or skepticism will ensue - Be open and honest with the reasons and motivations behind management plans - this will build trust, buy-in, and compliance - Continue supporting hunter recruitment strategies such as discounted fees for first-time buyers, and continue with the youth hunt season - this will promote license sales and a new generation of hunters - Keep phone-in registration but require backtags with licenses visible - convenience with accountability (this is appreciated by those who operate honestly) - Do not change the 9-day hunting season structure - don’t change tradition, keep it special - Do not add a holiday hunt - at minimum a four-day doe hunt is acceptable but by this time serious hunters already have their freezer full - Do not extend the bow season through the month of January - again tradition, risk of killing shed bucks, added stress on deer during a crucial month, and finding a dead fetus inside does leaves a bad taste. Thank you for your time, - Luke
Despite the low perceived population of deer during the gun season 2019, before season, this winter and this spring are showing some of the largest herd sizes I've seen in 20+ years. While not as bad as it was prior to earn-a-buck, it is headed there in a hurry. I don't feel that adding addition anterless-only seasons, nor extending the 9 day gun season is going to drive any significant change. People don't utilize the full 9 day season as it is. The second weekend is just as quiet as mid-week for the last several years. The multitude of anterless-only seasons have little participation locally and tend to drive the bow-hunters out of the woods during those times. Are we even getting enough of a net gain of hunters/kills during those seasons to be worth the dis-engagement they create with the bow hunters? I know multiple farms with ag-tags and the volume of requests for people to come fulfill those is very low and half of those calls are apparently tire-kickers that are not respectful of the farmer's time. There's plenty of accessibility, but a lack of hunters. Wisconsin needs to work on recruitment of additional hunters rather than focusing on making a season every other weekend. Without adding to the hunting population, the addition of extra seasons and tags is going to continue to drive diminishing returns and further devalue the tradition of deer hunting in Wisconsin. What is Wisconsin doing to connect with current non-hunters? As society becomes more and more health conscience and demanding to know where their food comes from, the virtues of venison in the freezer would be sought after by many if they understood it. This is likely not the audience the DNR knows how to connect with at scale and will require segmenting the population of Wisconsin by interests and learning how to communicate directly with each of those segments. Figuring out where venison, small game and waterfowl fit in freezers that have never seen it and then showing those segments of folks why they 'need to have it' & showing them how to access it and then what to do with it once you have it (because preparing a lean cut of venison like a well marbled ribeye from the butcher shop is a sure-fire way to convince people that venison is inedible) is what will address this. I've read about some amazing mentorship programs going on, but those programs, while extremely good, aren’t recruiting at the same rate as the hunting population is declining. Asking the same traditional audience to kill more deer isn't the answer, and in many cases is turning them off which just makes the problem worse. Getting more people out there by engaging new audiences is. The traditional audience can only do so much recruiting and when it 'feels' like the DNR is on a 'slaughtering mission' gun deer seasons with low deer traffic due to weather and low hunter movement (from a lack of hunters and more rural segmented land owned by non-hunters), it's easy for the traditional audience to not be excited about deer hunting because it felt like the cards were stacked against them. When you're not excited, you don't do a good job at recruiting and you might even quit. Adding seasons I suspect is hurting hunting population numbers. Hunters are going to fill their freezers and that's their threshold. Once the population of freezers are filled, the hunting is done for the year, regardless of how many huntable days there are. Get the hunting population back to where it once was so there's more freezers to fill and quit worrying about the minimal incremental gains to be had by adding a messier schedule to navigate that is disengaging the foundation of the hunting population. The revenue then generated by the increased sales of tags and equipment certainly wouldn't hurt the efforts of conservation either!
Thank you for the opportunity to submit my comments. In this survey I actually opposed holding the Holiday Hunt ONLY because of the way the question was worded. I am not totally against the hunt, but believe you could satisfy a much bigger % of hunters AND get closer to accomplishing YOUR main goal, which is to ("harvest more deer") IF you approve the extension for bow and crossbow hunters until 1/31/21 along with holding the Holiday Hunt. I see no reason why you couldn't allow both. I know the snow mobilers and their season are a concern come January, but lets all be reminded this would be bow hunting not firearm hunting. Private land owners may have to make a decision and determine which would be more important to them at the time, bow hunting or snowmobiling??

Let's be honest, those private lands where there are snowmobiles racing around are certainly not going to be a #1 choice for deer to be hanging out, so the risk for a snow mobiler to be shot by an arrow would be VERY, VERY low! So with that said how bout we try to please the majority and make it a win win for most everyone, all in an attempt to shoot more deer. As for the Holiday hunt on its own, I would certainly be curious to know what the deer harvest numbers were by year for Waushara County, when we DID hold those previous hunts, as I know we have in prior years. My last comments will be on the proposed "Quota" increase for 2020. I own two parcels of land in Waushara Co., one in the Town of Leon (62 acres) and the other in the Town of Saxeville (20 acres.) I have six hunters in my hunting party and we rotate each season hunting between the two properties. I can only comment on the deer numbers seen on my properties. I personally hunted all day seven of the nine days of gun season only because health wise I am still able to so at 67 yrs. old, and I love to be out there. I saw 2 deer, both bucks. My 12 yr old granddaughter shot the only one we saw sitting together on opening day at 3:45 in the afternoon. I then saw a very small fork horn Sunday morning of opening weekend and that was the last deer I saw for the season. As for the rest of the group there were two small fawn does seen. Others in my party hunted half days on and off throughout the remainder of the season but finally gave up, very discouraged. When I am told that the County is being over run by deer and that the browse lines are 4 foot high in a big percentage of the County, I just cannot confirm that where I own land. I agree, the County has numerous deer in SOME areas, but that is NOT the case in the majority of the 71% huntable acreage throughout. If it was, car kills would be up, deer and harvest numbers would up because nearly everyone would be having the same opportunity to harvest a deer. With all of that said, that is why I voted to not increase the quota goals. Thank you again for the opportunity to comment.

I have owned quality deer habitat in Waushara County and hunted it for 25 years. The last 6 years we have seen fewer and fewer deer and turkeys on our property and in 2019 I did not see a single deer during the gun season despite hunting for 6 of the 9 days. I attribute this decrease to predation, mainly coyotes. Prior to 2014, we had not heard, seen or had deer camera pictures of coyotes on our property. Now, we hear them every night and our deer cams have just as many coyote pictures as deer. In addition, the last three years few if any fawn pictures. Most does are alone. The video said that predation rates are considered when determining the overall deer population for the county. However, the fawn survival summary used to calculate that number is from 2011-2013. I believe this is flawed as the true population of coyotes has greatly increased since 2013 which would cause fawn survival to decrease, hence why we are getting hardly any fawn pictures. I also believe this is why we rarely see turkeys. 10 years ago they were abundant, now if we see one we take note. Newly hatched turkeys are easy prey for a coyote or any predator. I used to hunt turkeys each spring but gave it up 5 years ago due to low numbers. The lack of deer is a cause for the decrease of hunters. I currently have a nephew and a son-in-law who gun hunt with us that are new to the sport. Neither of them have seen a deer the last two years and I am afraid they are losing interest and will look for something else to do. As I stated above, I did not see a deer during gun season this year, the first time this has happened since we bought our property in 1995. I do not believe that this is entirely due to a late opener either, last year I saw 2 deer in 8 days of hunting with an early opener. My neighbors are having the same issues we are. There may be areas of the county where deer numbers are higher but that is certainly not the norm. I am completely against the "Decrease" designation for Waushara County. People want to see a few deer when they hunt, continued years of fewer and fewer sightings will further erode the base of hunters and also decrease the amount of much needed dollars spent in our county by the hunting public.
For so many of the most recent years the DNR in general has complained from the decrease in license sales. I can say from a personal observation as well as from communication with other outdoors men and women thru out this entire state, the number one reason is the lack of a deer population. Now some of the college educated the state has to estimate numbers of any animals population will most likely disagree but the deer are not here, and if they believe they are I openly offer them the chance to come with me on every one of my outings to walk in my shoes see the mile I put on in search. The amount of funding installing food plots endless hours afield. Growing up in a hunting and fishing family I have been hunting for decades most deer hunting was done within 2 miles of where I have lease(s) today and within 5 miles of the public I hunt today. and can remember a time years ago well before the un-needed earn a buck of being able to see 25 plus deer a day. As a kid I fondly remember not needing any technology or other form of toy to keep me in the woods while hunting with my father and family. Now a days kids don’t even like going.... reason being is what’s the point. I personally hunted all 9 days of the gun season plus 6 evenings of muzzleloader season not to mention 30 plus outings wether morning or afternoon during bow season. And I know gun season I seen less than 5 deer all season of which only 2 at the same time. Muzzleloader season I know was only 7 deer 3 at one time and maybe 25 total deer thru out bow season. If you truly care about the sportsmen and women in this state please listen to this so hopefully in a couple more years my own 6 year old daughter will be able to shoot a deer here. Quit trying to eradicate the deer. Stop handing out endless doe tags. Stop trying to change Wisconsin’s traditions. Let the deer herd grow. License sales will rise. Hunters will be happier and enjoy there time afield more. And the next generation will get hooked as well. Common sense says if the animal your pursuing is scarce you will stop spending time and money in your pursuit of that animal.

I have lived here in Waushara County for 15 years. Now I live in the near the ski hill in Mount Morris. Now in the past 12 to 13 years us neighbors have had very little luck with in 30 acres of land next to each other. NOW the Main reason is, 1, OUR neighbors leave there corn in until Jan or Feb of every year. NOW we have cameras set up all over our lands. IT seems strange that just before deer hunting starts there is a very large decrease in the whole area. NOW after the season starts there is nothing on our cams or any trails of any source from any where. NOW we have deer plots 6ez, at least 10 apple trees or more, OAK & MAPLE TREES WITH PLENTY OF ACRONS. to OUR SURPRISE NO DEER AT ALL. we DON’T SEE ANY DEER OR ANY THING UNTIL AT LEAST UNTIL March or April. Also when we clean our lots up every spring we find loads of acorn nuts our food plots not touched and plenty of rotten Apples all around. NOW we have contacted the DNR about poachers in our area. ALSO its seems our famers do not get there bumper crops out of the fields in enough time, RIGHT??? US neighbors want to start a Petition to get the farmers to get the Corn out of the field in enough time, Would this be possible??? Also it has been done before we should have a PARTY PERMIT FOR ALL DOES. it WAS 5 HUNTERS WOULD BE ALLOWED 1 DOE FOR THERE PARTY. IN THE LAST 5 YEARS OR SO I STOP AT ONE OF THE DEER STATIONS AND ALL YOU SEE IS BAMBIES IN THE PARKING LOT. WHY, WHY, WHY??? EVEN THE BUCTERS ARE SAYING WHAT IS GOING ON WITH THE CRAZY HUNTERS. THERE IS A VERY LARGE DECLINE IN THIS AREA AS FAR AS DOES SINCE YOU GIVE OUT MORE DOE TAGS THAN ANY THING ELSE, RIGHT??? I THINK US DECENT HUNTERS HAVE GIVEN UP SINCE THIS AREA DOES NOT HAVE ANY DEER OF EITHER SEX DUE TO THE CORN FIELDS AND OVER HUNTING OF BAMBIES. IT HAS BEEN SAID BEFORE TO START THE DEER SEASON A LITTLE LATER, WE KNOW THAT WOULD BE GREAT. IT COULD START THE WEEK OF THANKSGIVING and GO THE 10 DAYS.
We have land in this county for the past 6 yrs and I can say there are not that many deer in this side of the county nor any wheres in this county. If we don’t get our deer by the beginning of gun season we will not see anything. I’m not sure just when buck was just for gun only season. I thought you could shoot them at any season. I do not favor an earn a buck because if you see a buck during bow but can’t shoot it because you have to shoot a doe you will not probably have that chance again guaranteed!! I’m not sure where you get all your deer you say we have in this county. You have be looking at certain pockets where there are deer. But as a whole there are not that many deer. How do you know that they are not the same deer you see all the time. Can you tell them all apart?? I know we have the same deer on our property all the time and that is only about 15 if that and not many buck. Issuing 3 tags is ridiculous. Two tags is too much. If nothing else issue one and if a hunter wants more they can purchase one. Plus it will create revenue for you. Our deer population in this county is not that plentiful. Visitors are not going to hunt here if you keep trying to kill the hunt in this county. Also this new season you are looking at is stupid. We have already 20 days of hunting. This new idea just doesn’t make sense. The 9 day hunt has always been the weekend before Thanksgiving and ending the sunday after Thanksgiving. After that you don’t see hunters out anymore. We’ve driven around this county after the 9 day gun and there is nothing. At that time people are not interested in hunting. Ice fishing is then the thing plus the holidays are happening. Leave the season’s as there are for bow and crossbow and gun.

I oppose extending the 9 day gun deer season. There is no good reason for this. I would like to see back tags come back so when I see someone trespassing I can easily get there info without confrontation! Crossbows should remain as archery equipment and should not have it’s own season if you single out crossbows single out compounds also it’s not traditional equipment I think that adding a point system like alot of the surrounding states would be nice have a 4point limit on 1 side this would help with seeing more mature deer I think it the minimum age for hunting big game/deer should be 8 to 10 I’ve seen pictures where 2 and 3 year olds supposedly shot deer do you really believe this? I’ve seen adults that cant hit a deer a 30yards but a 3 year old did this is just being abused by parents for a second buck tag I’m all for getting kids out and into hunting but they need to start on realistic game like squirrels and rabbits and not big game I would like to see doe tags that can be used in a bigger zone I grew up hunting all of southern Wisconsin green,rock,walworth,Jefferson,dodge,colubia county’s now I limit my self to 2 county’s due to having to buy doe tags for every county you want to hunt you should recieve 1 doe for the lower half of the state or the upper along with your state wide buck tag and if there are bonus tags for the county you selected you get those tags for that county I miss driving all over the state hunting all the different public but I’m not going to spend $50 extra to get tags to hunt in other county’s

I SAY LEAVE WELL ENOUGH ALONE. DEER QRE FINELY COMING BACK AFTER YOU DESTROY IT WITH THE EARN A BUCK. I KNOW YOU ARE TRYING TO GET THE DOE KILL UP BUT NO MATTER HOW MANY FREE TAGS YOU GIVE YOU WONT GET HUNTERS TO DO IT AND IF YOU TRY THE DOE ONLY SEASON YOUR LICENSE SALES WILL TANK. WE ALL KNOW THAT THE DEER HAVE BEEN CHANGING THEIR HABITS BUT YOU NEED TO ALSO KNOW SO HAVE HUNTERS. THE DAYS OF THE MEAT HUNTERS ARE OVER. ITS ALL ABOUT THE BIG BUCKS NOW. WITH ALL THE TV SHOWS AND ADS AND STORY’S ON BIG BUCK THE INDUSTRY HAS EXPLODED WITH NOTHING BUT PRODUCTS AND ATTRACTANTS AND FOOD PLOT SEEDS THAT MOST PRIVATE LAND OWNERS ARE CREATING A HAVEN FOR BIG BUCK WITH A FOOD SOURCE AND WATER HOLES AND IT ALL ADDS UP TO BIG BUCKS AND ALL THE DOE’S RUN FREE. AGAIN YOU CANT MAKE THEM SHOOT THEM NO MATTER HOW MANY FREE TAGS YOU GIVE. ALSO. PLEASE DO NOT HAVE A HOLIDAY HUNT AS THIS TIME IN A LOT OF BOW HUNTERS IS ONE OF THE BETTER TIMES TO HUNT ESPECIALLY BIGGER BUCKS AND YES I SAY BIGGER BUCKS AND I DONT WANT TO HEARS THESE GUYS CRYING THAT THE GUN SEASON IS TOO LATE TO FIND BUCKS Trust ME THERE ARE SOME BEAUTIFUL BUCKS STILL THERE THE KEY IS YOU CANT SHOOT A BUCK IN THE HOUSE WATCHING TV YOU NEED TO BE IN THE WOODS PERIOD. I DO KNOW EVEN WITH THE 9 DAY GUN SEASON AFTER OPENING WEEKEND THE NUMBER OF HUNTERS OUT IN THE WOODS DROP AND EVEN YOUR ANTLERLESS SEASON IN DECEMBER THERE ARE HARDLY ANY HUNTERS OUT PLEASE LEAVE THE SEASONS THE WAY THEY ARE THANK YOU
Every Fall I spend a lot of time in the deer woods. I’ve hunted the same general area for nearly 40 years. There are far fewer deer in my area than ever before. Yet you continue to add more seasons, more extra deer permits and anything else you can get passed to kill more deer. Deer damaging backyard gardens doesn’t cut it with me. People choose to live out of town and have moved into areas where they should have been smart enough to understand that wild animals will eat their plants. Deer car accidents are even less of an argument for reducing the deer numbers. Again, people choose to live in populated deer areas and drive 70 miles per hour in the dark on county roads and hit deer. Come on! Who should be paying for those accidents? If people were fined $500 for killing a deer (valued natural resource) with their car driving irresponsibly, I think there would be far fewer deer car accidents. The majority of car deer accidents are caused by poor judgement of the driver. Maybe the insurance companies should stop paying those claims and enabling that behavior. There are lots of accidents caused by alcohol, yet nobody is calling for fewer liquor companies! Why should Wisconsin’s resources be limited because people make poor driving decisions about how to drive and where to build their home? Think about it!!

Waushara Cty get linked in with Counties like Green Lake where deer populations are very high. For years Waushara has had declining deer numbers because of all the extra tags given to reduce numbers. I’m all for having antlerless tags to give hunters a chance to harvest game and put meat in the freezer but I think the tag numbers may be a bit high for Waushara Cty. As far as a State wide ban on baiting I’m 100% against it. Baiting deer is causing less harm than small food plots or large crop fields. CWD started in Deer farms and is a main contributor to This problem. Until Deer Farms are closed and illegal to operate I think it’s absurd to take away the rights of the hunters buying a licence. If they want to bait. I believe they have the right to do just that. Many States allow baiting and have very healthy deer herds just like we do in Wisconsin. These states also have some cases of CWD, just like ours. My personal belief is CWD has been around a lot longer than we think and our herds are still strong. We would have larger herds in Southern Wisconsin if we wouldn’t have decimated every healthy deer to try and eliminate so few affected deer. Please remove the ban For every County. Especially the Northern Forest.

We bow hunt a lot through October and November and see good numbers of deer, bucks and does. There just simply isn’t enough hunting pressure for the gun season. The deer are usually ending the rut and have locked down and are resting. At this point the only way the deer are going to move is if they are pushed and theirs not enough people in the woods to make this happen. So the hunters sit and do the deer. Years ago when hunters we up we would hear hundreds of shots a day and now I can pretty much count them on one hand. The 600 acre parcel that I hunt only has about 10 people on it and its not enough to make them move. This is why we spend more time bow hunting rather than gun hunting. While bow hunting I can see 10-15 deer a day and usually during the gun season I see one or two. Another issue is all the small parcels of land that has been bought up and isnt hunted and the hunters can hunt it so the deer go to a quite space and bed down where there isn’t any pressure. Years ago people hunted everything and worked together and this is why the deer were forced to get up off bedding areas and gave hunters a better chance at harvesting a deer.

When we agreed as hunters that we would allow anyone to use crossbows that was an agreement that should stand. Its an individuals choice whether to use a crossbow or conventional type bows. With the recent opprotunity to allow mentorship hunting for our youth some have opted to bush the crossbow for our young hubters to keep them interested in the sport. To have the possibility to only allow hunting with a crossbow for the month of October is insane. This would only allow the weekends for my child to hunt pending on my work schedule. This could not only be determent to succeeding the hunting culture but also discourage our youth from wantingbto hunt at all due to limited time to do so. If this ideology passes i will be one to step up and create a sanctuary on my many acres of land that will have no hunting and will allow the deer to populate as much as they want as long as i live. I will also make it known that we will no longer participate with huntingbin the state any longer and will take our money to out of state locations to continue our hunting ambitions.
10493 1. I have talked to private land owners that only hunt antler-less deer on public land to try and maintain deer numbers on their own property. 2. Farmers that have are having crop issues should open there land up to the public to help reduce the problem. trying to get access to private land is nearly impossible. 3. More people are putting stands on public land and leaving them up and not removing them each night. Trying to claim areas as theirs this need to be enforced much better. I have had a few bad encounters the past few years with this. 4. I have seen less deer each year which I attribute to more people hunting and more pressure on public lands in the area. I hunt a lot of public land in central Wisconsin and hunting pressure has definitely increased due to the following. Allowing crossbows hunting to anyone not just older or handicapped and deer numbers being so low in the northern county's. Bad winter kills and predators have significantly reduced the herd so people are looking for new areas to hunt.

10494 I have hunted this unit exclusively for 42 years. It used to be that I would always see some deer. In the last 4 years I once saw a doe with her (? 2 fawns. This maybe due to the amount of standing corn during the season. There is still a fair amount unpicked. That and 1/3 of my land has been underwater for the last 2 seasons. We did have Earn a Buck twice, and that seemed to lower our herd count. Plus I feel that there are some wolves about based on scat found. We do have a lot of coyotes. 2 years ago 3 neighbors combined trapped about 35 of them. Yet they are out howling on clear nights. No one in our group would willing way shoot a doe unless it is a cripple. Our younger hunters are exempt from this. We refer to the does we see as brood mates. Before baiting rules were enacted, there was a guy with a job of hauling away waste from vegetable canneries. One year deer ate 2 loads of carrots at approximately 25 tons per load. The first load was cleaned up in less than a month.

10495 I think that the seasons should stay the exact same dates that they have been and that crossbows and compound bows should be allowed consecutively as they have been the last few seasons. I appose any sort of earn a buck or antlerless season other than the Holiday Hunt. I would also be willing to pay substantially more money for the tags and registration to go back to the way it always was. I personally talk to many hunters in Waushara County that feel the same as I do about tags and registration stations. I’m certain there are thousands of deer a year in the state that hunters are accidentally forgetting to call in. I hear about it several times a year about a hunter shooting a deer or turkey and forgetting to call it in for days. Once several days pass and then they remember, they are scared to call in for fear of repercussions. The old way of notching a plastic type tag ensures that one cannot just reprint a tag at home and also makes you go to a registration station immediately to have it registered.

10496 I believe everyone would like to have a larger, healthier herd. There is no reason to give away more then 1 antlerless tag. If people want to buy an extra that is fine. Most of the people that are over harvesting aren’t even eating the deer personally. All of my years growing up hunting was hunters choice and we saw plenty of deer and everyone was able to harvest deer. I am an avid hunter and will be able to harvest as many deer as I have tags for but for the people who don’t have opportunity like I do to get into the woods I’m sure are very upset with the numbers. I have two young kids, I bring them with me hunting and they weren’t able to even see a deer sitting all day quietly. We need the numbers up so that everyone can enjoy being in the outdoors and seeing deer. For anyone over the age of 30 it’s about counting deer not killing deer. Keep the tag numbers down! Create a better herd! Help young people become interested! I used to see 60 deer a day. Now I see 0-4. Please help the heard grow.
Do not impose a Holiday hunt into archery season please. If you were to do this make it early in the season, such as in September, that way the rut is not affected by this Holiday Hunt. Also keep it strictly bow because I don't know how that would work if u had it as gun. I am assuming it would be archery but I just wanted to clarify that if it were to be a gun holiday hunt that would have a significant impact on the deer herds and would force them to go nocturnal which will ultimately end in less deer harvested. Also do not enforce an antler-less only season because that will affect the people that want to harvest bucks. Obviously the goal isn't to harvest a buck but people will harvest does as well during the late season. Again if you were to do an antler-less only season do it early like in September because I know a lot of people that won't shoot a doe late season because they are afraid that they will kill a doe that is carrying their monster bucks blood inside.

Bow hunting in this unit has been very good with many deer encounters and chances to harvest a deer if one chooses to. Gun hunting on the other had has been very low deer sightings the last few years, in 2018 I hunted 5 days and saw a spike, 2019 hunted 3 days and saw a doe and two fawns early opening day, did not come back for second weekend. Our group has (4) hunters and the years mention above we believe we saw the same deer at each of our stands. (2) members of the group hunt on 33 acres, (1) on 20 acres and (1) on 4 acre plots that are all connected. We have made comments to find some other hunting opportunities in place of our gun season, but we do not, due to (1) older and (1) younger member of the group. I hope this information helps! keep up the good work, I don't know how you stay positive with all the opinions out there. I love being in nature, harvesting an animal is a bonus for me, there is a lot of other things to see while on stand.

There are spots in Waushara county Like North Central (Springwater) where there are more than 100 deer seen per square mile and it is 100% private land where NO does are shot. The land owners do not and will not shoot does and will not allow anyone on their land to harvest any. A mile or 2 away where there is Public land where sightings of deer are rare, but have a lot of pressure from hunters. When bonus antlerless tags are giving out in these areas, it just drops an already low population lower. These type of areas are more common in Waushara county and represent a more realistic heard numbers. When the population numbers of example Springwater, are added into the overall population it makes it look like Waushara County is way over populated, when I believe it is the complete opposite. I do not have a good idea how to change this. You can not force someone to shoot a doe if they don not want to.

First, let me say thank you for not recommending an extended bow season. I hunt every year-- with a gun, sometimes with black powder, and sometimes with a bow. I am able to get my deer during the regular hunting seasons. My freezer is full. It is too cold to hunt in late December and early January. I also snowmobile and enjoy the winter. I realize that for the last 2 years, the snow has come later (Feb or March). However, when the snow does come, it only lasts about 4 weeks. If next year, the snow comes in December, we will miss the entire season if it only lasts for 4 weeks. Snowmobiling supports our local economy. Snowmobilers spend an average of $200/day/person when they come to use our trails. Make the gun season longer in November if the herd needs to be reduced (which I question) but don't interfere with the other sports: snowmobiling, cross country skiing, and snowshoeing.

Giving 3 tags out this year is ridiculous. Two has even been to many. Reason, think about it. When you have 2 or 3 people hunting from one home and I'd they were lucky enough to fill those tags that is 6 to 9 deer just for gun!!! Who needs that many deer???? No one!!!! Then you put the bow season on that and it's even more out ravenous. Deer in this county are not that plentiful. Maybe by Poygan and a couple other little pockets but the western part of the county is pretty dry. I can only think that you got your data of so many deer from the Poyan and the other couple pockets. And I'm sure they are the same deer. Treat the whole county as one instead of looking at just a couple of areas that have a big herd. All you guys are doing is making people to not want to hunt. The DNR is screwing things up more and more to the point were hunting will no longer be a thing of enjoyment.
I don't think that the number of antlerless tags that we put with the purchase of a license matters to the number of antlerless tags that are filled. That is because of a bias of the hunters. Last year we had many deer on our property. But our heuristics were to shoot bucks only if we could. As we got our first buck we said the second buck had to be a big buck, then the third buck had to be a trophy. Well we ended up with three bucks and all the venison we wanted. But we ended up with a great deal of antlerless tags. We started to hunt public land at that time. But I am suggesting many hunters use these heuristics so the antlerless harvest is not what we expect. To change this I think a couple weeks of antlerless only hunting would increase the antlerless kill numbers. I would NOT enjoy the hunt as much then, but my love of hunting would have me out hunting antlerless deer.

I have hunted on my 100 acre property located in the Town of Saxeville for the past 30 years. In the early years the deer herd was plentiful and I was very selective of the deer that I harvested. As time goes on I continue to see the number of deer decrease due to an excessive number of antlerless deer taken each year. Last year was the worst hunting I have ever encountered. I sat for many days during the archery and firearms seasons and never saw a deer yet all I continue to hear about is all the deer the DNR says are out there. We have taken so many antlerless deer it is to the point where the deer herd has been nearly wiped out. Stop handing out all the antlerless and bonus tags and let the herd rebuild itself. I also oppose a holiday hunt. Most of the deer are taken in the archery and 9 day firearms season. If you dont have a deer by then your chances are not very good.

CWD must be the number one priority in herd management. We need more testing of harvested deer, and more aggressive measures to slow the spread of CWD. I recommend a limit of one buck per year for all weapon seasons combined, but then offer the ability to obtain a second buck tag (again for all seasons combined) if two doe are harvested. This will reduce population and likely be more popular with the masses than the traditional earn a buck season. We should also consider antler restrictions such as a minimum of 4 points on one side. This will help create more hunter interest because hunters like big bucks and it will result in more big buck opportunities. Adding hunters will ultimately help with harvesting more deer. In the meantime, killing older bucks instead of younger bucks helps to slow the spread of CWD because older bucks are more likely to have CWD.

As a whole, and after 38+ years hunting this area, I'm having a hard time keeping the next generation's level of enthusiasm for the season as I experienced at their age. My Dad introduced me to bow hunting in this area and it never disappointed with the amount of action we were able to experience together. Even as bumbling novices, we saw plenty and even brought venison home just about every public land we tried. These past years are a far cry in deer sightings and harvesting. I make it a point now to talk to every hunter I encounter just to see if it's just my poor skills in not seeing the amount of deer in years past. The consensus is unanimous; the "good ole days" are over. Until they really listen to the hunters, the licenses will decline along with the funding. Time to part ways with the insurance companies DNR executives!

I have private land and did not see a deer during the gun season on my land or a vast amount of public land, with little visible signs of deer. I do not believe enacting a longer gun season or giving Additional additional antlerless tags is the answer. I have seen few deer during bow season recently and have attributed it to too many earlier enacted gun hunt opportunities (youth hunt/ antlerless). Why is the DNR opening gun seasons so early and allowing So many non-traditional gun hunt seasons? In my opinion it needs to return to the old season schedule and allow additional antlerless tags be available during the traditional 9 day gun season and eliminate the youth hunt and antlerless hunts. I would rather see a holiday hunt added in December than the impact I've seen throughout multiple units on hunting by adding youth hunts and earlier antlerless hunts.
I'm very involved with my oak savanna and prairie restoration project. I spend many hours closely watching plant and tree health and growth. I've become keenly aware of the staggering amount of deer browse damage to white and bur oak. It's almost impossible to even find new oak growth and virtually all young oak is heavily browsed. Between invasive buckthorn and a deer population that's more than double what it should be will we even have hardwood forests in the future? Given the declining number of hunters and inadequate number of natural predators can our DNR policy even hold the deer population steady? In 2019 in Waushara County hunters didn't request all available bonus antlerless tags. How will offering even more in 2020 help. Soon deer may need to be managed as pests rather than game. Thank you and best wishes.

I have hunted in Waushara for the better part of half century. I have seen ups and downs in the deer population. Hunting practices have changed with more hunters just sitting in their stands/blinds and very few looking for trails, bedding areas, feeding areas, and rutting areas. Very few hunters are involved in deer drives and most depend on baiting for deer. Today hunters are lazy. If the deer do not approach the hunter where the bait is planted they do not even see it. They also contribute to the deer going nocturnal after opening day of the rifle season. Crossbows were once only used by persons over 65, or with some injury which required the use of that weapon. The same argument was used when compound bows arrived on the scene. Most compounds are accurate to extreme yardage along with the crossbows.

I do not think that adding more antlerless licenses to the general deer tag will result in more antlerless deer shot. Most hunters are only going to shoot one (or maybe two) deer anyway. If someone wants to shoot 4, 5, or 6 deer, let them, but make them pay for the extra tags so that wildlife management can benefit from the increased revenue. Also, I would like to see some antler restrictions implemented. Encouraging antlerless harvest by default increases harvest of buck fawns leaving that many fewer bucks that can reach 3-4 years of age. The least that you can do for someone that wants to harvest a nicer buck is to let the yearling bucks pass through the system. Yeah, that probably screws up the SAK models, but the reality is that many people are already passing up bucks so it should be incorporated anyway.

It seems important to the DNR to issue antlerless tags per licence to allow the population to be decreased in the Waushara farmland region and many other regions with similar conditions. I hunt with my son and his three sons. That makes five in our party. We hunt on a portion of a 150 acre private land shared with two other hunters. Our party of 5 all bow hunt and gun so that means that we received or would receive 3 extra antlerless tags per license as is proposed and was I believe issued in the past. That comes to a total, for all licenses, of 30 does to be shot on this 150 acres. REALLY! Last year we harvested 5 bucks and no does even though we readily hunted for both. The year before we harvested 3 bucks and 3 does. Our numbers are much more in line with what really happens in the field and yours should also.

My wife only gun hunts and in ten years of hunting she's only seen 2 bucks. She has seen two does a season in that 10 years. My son hunted with me for the 1st time this year for gun and we never saw a deer. I am a avid bow hunter and when I was 5 years old out in the stand with my Dad we used to see an average of 25 to 30 deer in a morning or evening sit. Now between my brother inlaw, Dad, and I we are lucky if we see one deer a weekend now. We have 5 cameras set up on 40 acres and in one weeks time are lucky to have 5 pictures of deer. We see more wolves, coyotes, lynx, bobcat, and prey birds than deer, turkeys, squirrels, rabbits, pheasants, and partridge. No bucks should be shot under 6points and ear width, and no does for gun season. And no special hunts, one doe tag for bow.
I understand that the DNR states that the deer herd needs to be decreased, but in my opinion, the deer herd is already way too low. I am sick and tired of going deer hunting, both bow and gun, and not seeing any deer. I am trying to introduce my son and daughter to hunting, but I am not having much success. My son and daughter have both went gun hunting for the last three years and each of them have see zero deer. Zero deer in three years for both of my kids. I always keep hearing how the number of deer hunters is declining and how we need to get our kids involved in hunting. Well, I am trying, but my kids are not going to want to go hunting if they aren't going to see any deer. The deer population is way, way too low. The deer population need to INCREASE!!!

Despite 2 packs of wolves in the area based on observation our deer numbers in the far north west corner of the county seem to be stable over the last few years. Approximately 12 years ago we over harvested the area, filling most of the tags we had available. For the next 5 years seeing deer during the season was rare. We have since learned to manage the herd in our area on our own along with QDM we have quality hunts with 1 or 2 trophy bucks coming out of our area every season (archery and gun). One additional thing I have noticed is how the deer herd correlates to the turkey population in our area. More turkeys/ less deer. We seem to have a good balance at this time, but it has fluctuated over the years. I hope this information helps in your study.

Here we go again. Another year of commenting about trying to keep our snowmobile trails open through the Christmas and New Year's week. The holiday hunt should be abolished once and for all. As a snowmobile club member, we spend eight months of the year going to meetings. Many things are discussed including trail maintenance, budgets and fundraisers. We spend many hours maintaining the trails by cleaning out fallen trees and branches, repairing bridges and putting up and taking down trail markers. Many hours are spent on groomer maintenance and grooming the trails when we have snow. A lot of time is spent behind the scenes preparing for the snowmobile season. Please do not cut it short. It's our time to ride and enjoy the great outdoors!

The deer population is getting bigger where i live because of 1 landowner buying all the land he can. Only his close family hunts on 1000 acres On my land my family is shooting all the tags we get. Been doing that for a while now. It's not that easy to do. Holiday hunt will help that. If you have a holiday hunt I can't figure out why you wouldn't extend the archery season also. I bow hunt and harvested several deer late season. Deer are deer no matter how they are killed. You are taking days away from the bow hunters without giving something in return. It can't hurt nothing but the population. NO matter what NO earn a buck! with the laws as they are now anyone could call a doe in. who do you need to show? you don't need proof!

Why not impose antler restrictions to 4 on one side? This could force people to shoot more does instead of bucks. Also giving hunters more chance to shoot deer is another way to get rid of does. Extend the archery out even longer. Holiday hunts are a waste of time, and take away from snowmobiling. If they extend the rifle season, I don't see any need for additional doe only seasons. There would be ample time to fill all your doe tags over 16 or 19 days and extend archery seasons. Giving out more doe tags is not the answer either. Alternating every other year of doe only season through the whole year I think would be something to try. It would also make bucks bigger and make waushara county a go to county for big bucks.

I don't see why your goal is to reduced the herd. I see far less deer now than I did 15 years ago. You say it is to stop cwd but the only way to stop that completely is no deer. You stopped baiting etc. that is a good step now let the heard grow some. Stop letting the insurance companies influence your decision on deer numbers. There is more cars on the road than ever and the amount of cars on the road is increasing every year and therefore the number of deer car collisions will naturaly increase. If people don't want to worry about hitting deer they should stay in town. We need more deer not less. There should be less antlerless deer tags. People are giving it away or wasting it so let it live in the woods.
I strongly oppose the current crossbow hunting season and rules. What was wrong with the old way where ONLY disabled hunters or 65 years or older could use them? Opening it up to anyone like it is now has created an unfair advantage for the crossbow hunters and makes traditional and compound bowhunting much less enjoyable. I’ve seen a lot more hunting pressure due to that. If you want more deer harvested or more interest in hunting I recommend going back to the old way of crossbow hunting and possibly extending some of the other seasons. This new way has definitely seemed to do more harm than good in the hunting community! Thank you for your time!

The deer herd in this unit tends to be more abundant near ag fields. Away from them the density of the heard is far less. Your numbers are taken strictly by ag fields. While no data is collected away from these areas. The insurance companies pad the pocket books of the politicians pressing for more deer to be killed. This is the major cause of anger by archery hunters and gun deer hunters alike. Instead of listening to the insurance companies. Start listening to the real hunters out there. And not the ones that hunt over corn fields and 5 acre food plots. Not everyone has access to those sources and those people see far fewer deer while hunting.

I find it very puzzling that you complain you want more deer killed in farmland zones yet you continue to handicap the hunters. I hunt my brothers land in Waushara county so I designate private land on my license. He owns 28 acres of land. So now I am limited to killing a doe in your farmland unit to those 28 acres. Doesn’t seem logical to me. I used to hunt public land in Waupaca and Outagamie counties and still can. Maybe I could kill a doe for you in one of those farmland units but I’ll be damned if I’ll buy more tags. Once again , do you want more deer killed or not ? Then quit tying the hunters hands.

Earn a buck ruined the traditional hunt and it has not been the same since. Society wants hunters to take kids hunting but if there is very few deer that doesn’t work. When you see more Wolves and Coyotes than deer its not good and it keeps growing in numbers every year. ( pictures to prove) This site talked on mortality rates on the deer but they are from 2011-2014 right after that is when the wolf population around here started to increase. You have your counts of deer and I have mine with over a 20 year study and numerous camera’s. I would like to believe I'm not being lied to but I know what I know in a scientifical study of my own.

Leave things the way they are. Do not try to add more hunts that hinder the ability to harvest a buck or a doe throughout the season. If the counsel wants to make things better in waushara county and increase the harvest numbers, then ban shining and food plots so the deer go back to natural patterns. Waushara county has a perfect deer herd, but are driven to be primarily nocturnal because of shining. Also there is no baiting in the county, which should include food plots, they are both made to attract deer to a certain location. It's time that you guys start acting like the smart people that you are and that I have faith in.

I have 3 comments; not being able to cross bow hunt in the month of November would take the rut away from a lot of guys which I believe is completely unfair. Second the phone reporting is throwing your numbers WAY off. I know lots hunters and have talked with even more that "forgot" or didn't bother calling in their deer harvest. It's not a viable choice for tracking the numbers of deer harvested. And finally, a gun season longer than what it is now, would be ridiculous. You'd have more hunter accidents and even more deer NOT being reported. Thank you for all you do to keep us hunting and enjoying the outdoors!

A holiday hunt would eliminate the snowmobile season for December. The one season in the past several years where there was enough snow in December to open the trails there was a holiday hunt and the trails could not be opened. With the current economic environment I believe that bars and restaurants will be looking for all the business they can get. Snowmobiling brings them a lot of business. Also, I believe gas stations do well when the snowmobile season is good. Snowmobiling is good for the local economy. I can’t speak for hunting’s contribution to the economy but from what I’ve heard it doesn’t help much.
Please go back to a 4 party system for antlerless deer along with a 9 day season, cut out all the other hunts ie: holiday hunt, youth hunt, etc. etc. etc. Bottom line leave the does alone it does not take rocket science to figure out that they are the one’s that produce future deer! I have hunted many years and am disgusted totally with the DNR and how they use tax payer money to fund things over the years to ask for input only to do what they want anyway! I am seriously considering retiring from hunting or not even purchasing a license and take my chances.

Please consider a one buck limit per year per hunter. I would hope this would accomplish a few things which I feel are vital to the future of Wisconsin deer hunting. First, additional opportunities for all hunters to harvest an antlered deer. Second, once a hunter harvests her or his buck they then could solely focus on harvesting antlerless deer, thus reducing deer numbers. Third, I believe it would be much more agreeable than an antlerless only season or earn a buck. Fourth, it could lead to an increase in the quality of antlered bucks, thus increasing the economic value of our deer.

As a hunter, I spend a lot of time preparing and scouting. Deer hunting is my biggest hobby. Deer numbers on my land still haven’t recovered from pre-Earnabuck levels. 50-75% of people gun hunting in my group the last four years did not see a deer in 3 days of hunting. It’s very frustrating and takes the fun out of it. Many of my friends are thinking about quitting. With hunting in decline across the U.S., we need to make hunting appealing and not keep dragging down the deer numbers. Seeing deer makes it fun, so if we aren’t seeing any deer, there’s no reason to keep doing it.

the comments of one of the advisors shows his ignorance, when asked why the kill rate was down he came up with the excuse that the rut was early and the gun deer season was late. That dose not explain why deer hunters cant kill enough deer in 3 plus months to reach their quota, but he stated that it was ok to take away the possability for snowmobile trails to open in December because there's been no snow. YOU CANT KILL ENOUGH DEER IN 3 PLUS MONTHS SO LETS TAKE AWAY THE SNOWMOBILE TRAILS OPENING EARLY, IF THEY SHOULD GET SNOW. NO TO ANY ADDITIONAL GUN OR BOW SEASONS, NO HOLIDAY HUNT!

I have lived in the same house for 40 years. I have never seen so many deer. Every night there are a minimum of six or more deer in my garden. My landscaping is ruined. Every single shrub has been destroyed by deer. Driving between my farms I see deer at all hours of the day and night. Max speed is now about 20 miles per hour-unless you want to run the risk of hitting one of these animals-and wrecking your vehicle. Deer shouldn't be protected-landowners should be free to shoot deer all year long until such time as the herd is brought down to a reasonable level.

Regardless of what the "experts" are expecting us to believe, there are far fewer deer within our county than there have been in the past. This condition likely derives from several factors, including the number of antlerless animals that are harvested and predation that the Department steadfastly refuses to acknowledge is occurring. If the Department is serious about its incessant efforts to develop the next generation of responsible, ethical hunters then it should be more conscious about having an adequate availability of game for the young hunter to pursue.

Studies cannot be anywhere near accurate when they’re performed in an open field and "guessing" on the amount of deer there is per square mile. One field might have 100 deer and the next 10 miles of woods has nothing. I have seen opening day deer hunts where we would see 50 deer a day. I am not suggesting we have to go back to that but now we’re getting lucky to see 1. I can't even get my kids interested when we continually go out and see 0 deer. This is absolutely the wrong thing to do to add more doe tags and to continue bringing the fun out of hunting.
For years, my family and myself have enjoyed the winter sports of snowmobiling and cross country skiing in Waushara County. Many of our trips have occurred during the month of January, year after year. I do not agree with this change, as it would take the whole month off the calendar. It would not be to our benefit to purchase WI snowmobile passes for such a short season. We would also no longer be spending our money on hotels, restaurants, and bars in the area. I do not support the additional deer hunting season proposed for the month of January.

I, as many others, have discussed how we miss being able to take day trips throughout the state during deer season and hunt other areas that have say different topography, for the fun of the deer hunt season. Now that we have the current structure we can’t have a spontaneous day hunts because we have to obtain a specific county tag (private or public) for an antler-less. Which isn’t always easy to get during the season. Its too bad, like the buck tag, that a state wide antlerless tag isn’t sold. Just a thought outside of the current structure. Thank you.

I would like us to not have youth hunts period most adults are taking their young children out during the gun deer season anyways maybe offer an additional tag during the normal gun deer season. Having the extra youth hunt I believe dampers the deer movement during the gun deer season and let’s face it the adults are the ones harvesting the deer for their children. Have the youth hunts be on wildlife preserves not public or private properties an they should be supported by a DNR representative of some type that is watching the child harvest the deer.

Lots of traditional and compound bow hunters are losing interest because of the surge of crossbow hunters and the unfair advantage. I propose going back to the old way where only people disabled or 65 and older could use a crossbow. There was absolutely nothing wrong with that. If you want more deer harvested you can change the amount of tags handed out or lengthen seasons if needed. I think the current way for people allowed to use crossbows is slowing going to decrease the amount of people that hunt deer because of the unfair advantage.

We have few deer in the county. Hunters left the woods because of it. Your public land hunting is a joke. Private lands only do well with large acres. That way they can manage their own land and not be to effected by how bad the deer are being managed. Why do you think quality deer management has taken a hold in so much land in Wisconsin. A lot of people are tired with the way wisconsin runs it’s deer herd. It’s time to go back to the old ways. Run it like the 70’ and 80’s and you will do well. You have the records from them now use them.

I listened to the CDAC call. There are not too many deer. The deer/car accidents have decreased for the last two years. It seems like this group was trying to justify high deer numbers, when the data showed they had remained steady or declined (the deer/car incidents and the lower deer kill). You could give 100 antlerless tags free with every buck tag and it would not increase the antlerless kill much. I have talked to many of our neighbors that have hunted here longer than I. The population is in a pretty good place right now.

If hunters aren’t getting enough time to get out and kill a deer then more season needs to be added. Make the season a 16 day season. The hunting season being open during Christmas is not necessary. The argument of needing a separate muzzleloader season is also unnecessary as that weapon can be used at any time during gun season. Also, people are going to have to get used to the earn a buck program for a few years until the population gets in line. I realize it requires legislative action but that is what needs to happen. PERIOD!

We have 100 acres of land for great deer retention including non disturbed areas for bedding, ponds for water, and plenty of natural food growth. Over the last ten years we have seen a steady decline in deer numbers. The early special hunts put the deer on alert and most go nocturnal movements. We stay away as not to disturb them hoping they aren’t bothered and feel they can stay on our land. Once the nine day season starts we do expect to see deer. We ask for no more special seasons prior to the traditional nine day hunt.
You'll never reduce the herd by extending hunting time in the woods. Time in the woods is not the solution to the problem of excessive deer herd. The solution is hunter access to where the deer are. We now have most hunters with 5-10 acre small parcels they’ve bought or have access to for a place to hunt. Those hunters push deer into area's where hunters aren't. Big tracts of land, where pressure is low and hunter selectivity is high (trophy). Want to reduce the herd? Solve the hunter access to good huntable land problem.

I cannot believe that they want to increase the kill in Waushara County has anybody ever drove around at night and looked in the fields there isn't any or barely any go to other counties you will see a lot more deer quit letting the insurance companies tell you what to do I know this because of the deer in my backyard has decreased to a point where I barely see any deer anymore used to see 6 to 8 deer now I see one maybe two not good do not shoot any antlerless deer is in with Waushara County For at least three years

I believe more than enough antlerless permits are given out, but only certain individuals or groups fill their antlerless tages and hunters will need to be incentivized to use a antlerless tage. Earn A buck is effective but a lot of hunters are against it. You could say that one antlerless would Earn a buck for your both your archery and firearms buck for those hunters that do not believe in shooting antlerless deer. In my opinion without Earn A Buck there is no way to get certain individuals to harvest antlerless deer.

I feel the deer herd does need to be decreased for keeping CWD out of county and reducing deer/car accidents. 2 antlerliss tags is enough as for myself seldom fill those with a harvest. As I have recently, 2 yrs purchase non-resident license I only purchase the bow/crossbow license because of expense, and now harvest one less deer per year. So if this helps my last 3 season's included 3 bow and 1 gun license = 4 buck / 8 antlerliss tagging options 12 total and I used 2 buck and 2 antlerliss tags, so 8 tags never used

If you want more Deer Harvested, Brig back the 2 gallon limit of baiting. If you are worried about CWD, Shut down the penned Deer farms, statistically, in my opinion, that's where CWD comes from in the first place. If you make baiting illegal, then shut it down in the whole State. Or open it in the whole state. Bring back the tagging system and registration stations. You will see a better harvest. I believe a lot of kills go unreported with the call-in system as people forget to report it within 24 hours.

In general I believe that the number of doe harvested has negatively impacted the deer herd. Most of the farms in the area are corporate, carry insurance against crop loss and therefore loss is negligible. I am on my land frequently outside of hunting seasons. If I see deer 6-10 times a year that is a lot. Yes there are some road kills, but I don't think insurance companies should have any impact on harvest numbers. Additionally, with online registration, it is my belief that numbers are being under reported.

We have been hunting the same 400 private acres with the same guys (more or less) for 40 years. Initially the harvest was poor but a few decades ago it improved. The past several years have been a disaster. The great majority of our group buy nonresident licenses and don't get their moneys worth from hunting 5 days in ideal habitat and not seeing a deer. An earlier hunt might help, but would conflict with Michigan’s gun hunt. I frequently walk the land and I'm not seeing a lot of deer on a regular basis.

I have hunted here for 41 years and the number of deer on our farm and surrounding farms is similar in the 41 years if you look at the deer numbers in cycles...we have had more deer than what we have now we have had less and most of this depends on the Winter. My own feeling is most people are responsible enough to handle this on their own without instituting these crazy ideas like earn a buck or some of the proposals being mentioned here...I also do not believe that hunters are registering their deer...

I don’t believe we need to change anything with the deer regulations, I think things are fine the way they are. People who want to harvest a deer will, For myself and others I want the opportunity to harvest a nice animal each year, does that mean it will happen absolutely not that is why its called hunting. I hope we leave the bow and gun regulations the way they are I personally have not seen a lot of does that past 2 years. For the people who are in charge please leave things the way they are.
Deer are becoming concentrated due to owners having bigger tracks of lands like 100 or more acres and with food plots on them. And they limited the amounts of hunters on them. I own multiple smaller tracks/parcels in Waushara county and this is the truth some groups see on the average of 15-20 deer per day and at least 5-6 bucks per day in which I observe luckily too see 1-2 deer per 9 day gun season. And after the 9 day gun season it is still the same till the end of the deer season.

Private land owners vary so much on acreage. Large tracts commonly use quality management. Therefore harvesting "Quality deer" (large bucks, less does). You then have smaller tracts that are usually "meat hunters". How can the state handle these two totally different hunting philosophies?? Is education on "Herd management" for all property owners, large and small help? I don't live in the county but have hunted there my whole life. Personally the last 3 seasons gun hunting have been awful.

From my observation, the deer population in eastern Waushara County is severely diminished. The opportunity to see, let alone harvest a deer during the firearms season has steadily declined scenes the earn-a-buck era. It makes it extremely difficult to introduce young hunter to the sport when seeing a deer, let alone having the opportunity to harvest one is nearly non existent. I would like to see the doe tags reduce one per person per year to be used with either archery or a firearm.

My own experience and survey of family, friends, relatives, and casual conversations with strangers have shown that there is a significant discrepancy between the number of deer in the deer herd to what the CDAC is leading the hunting population to believe. Sit in the woods, hunt year over year in the same location, and you will come to the conclusion that the biggest problem is over harvesting, deer baiting, and blocks of forest being bought and developed for executive country homes.

The number of hunters crowded onto the public land moves deer into the private land. The ratio of actual hunters per acre of public land vs Hunter per acre of private land causes the deer to move off the public land onto private land. I believe the best way to control the deer population is to create opportunity by opening private land by programs that reward land owners for opening their land. Tax breaks for private land not open is creating large tracts of deer sanctuaries.

The deer population is finally coming back from a number of years ago when the DNR's choices destroyed the deer population. It's sad when you have 35 acres of woods in the midsts of hundreds of acres of woods in full county blocks, sit 9 days, and maybe see 1 or 2 deer, means the population is too low!! use to be able to see 6-12 deer a day, just had to wait for a buck, Now you have to shoot the first thing you see just to fill your tag! Quit screwing with the populations!

I have hunted this DMU for 50 years and have seen the decline in the deer population for the last 20 years, yet more and more permits and desired harvest number keep going up. I think the models or counting methods are out of date, as they don't reflect reality. I've hunted the same area and have gone from seeing 20-30 deer on opening day to seeing 4-5 for the whole season. I'm not seeing what the projected harvest should be and I live here and I'm in the woods daily.

Herd is healthy, but predators are healthier. In Mount Morris we have an over abundance of coyotes/coywolf that decimate fawns. On 150 acres we have 2 known coyote kills of adult deer over winter. Competition with coyotes and wolves make it difficult for a successful harvest for hunters. No opinion on baiting, as I had better success in 2015 and 2016 when we concentrated on food plots, and are going back to food plots as a priority for a successful hunt.

I feel deer numbers are finally beginning to return to where they should be. ‘d earn a buck was to come back that would be a serious detriment to deer hunting. Earn a buck was the worse thing to ever happen to hunting. The antlerless hunt needs to stop as well. In regards to crossbows todays compound bows are equally comparable so there should be no change to use of them. I would like to see the muzzleloader season move to the week before Christmas.
I strongly oppose cross bow use during archery season! It has a stock, forearm, a trigger mechanism, and a scope! This gives cross bow hunters an unfair advantage to kill antlered deer during the extended "archery" season. Cross bow season should have been combined with Muzzleloader for Antlered permit and use in any gun season (general 9-day, muzzleloader and any holiday "antler less" season). It makes sense and it would be more fair in my opinion.

I have observed in the last three seasons that Waushara county’s deer heard is on a gradual rise from the vast over harvest that took place in the early years of antlerless only season and earn a buck practices. The deer heard does not have near the number of deer it did 15 years ago but there are more deer then 8 years ago. I strongly feel the heard is around a healthy population and the county’s goal should be to maintain, not reduce the population.

Please do not take out more deer out of the woods. We see much fewer deer in the woods then we did in the past. It is difficult to keep the young hunters interested when they see just a few deer in the 9 days of gun season. We saw many more deer years ago. We have hunted and shined the same land for decades and no matter what people say...(the way you hunt has changed or weather or timing of seasons), there are much less deer in the woods. Thank you

I hunt other countries of the Taylor county and the Mauston area, I have bow and gun hunted the area north of Wautoma for 45 years and over the last 5 years I have never seen fewer deer. Between the bears and coyotes the fawns don’t stand a chance. 25-30 years ago opening day Morning of sounded like war with all the gun shots, now it’s quite. Talk to the same neighbors I have always had and their grand kids, they all see and shoot fewer deer

I am a hunter in Waushara County and I oppose the recommended Holiday Hunt. I feel that the State is hurting opportunities for other types of outdoor recreation such as snowmobiling and cross-country skiing during the week of Christmas. Please try to come up with an alternative to the Holiday Hunt such as a longer regular season ending by December 15. I don't think that the Holiday Hunt has effectively helped reduce the herd in our area.

Overall hunting numbers are on the decline. These anterless only hunts take away from the people that are truly working to manage the harvest and let small bucks pass. Putting all these anterless tags out there allows these people who will harvest "anything" to continue to not help the overall population or sport! Try looking for a better way to get more hunters, younger hunters, interested in being in the field.

I would like to inform the panel that 2019 was by far our worst deer season ever. Our group hunts exclusively on private land during the gun season that is both farm field and woods. I personally saw only 2 deer during the season and hunted all 8 out of the 9 days. Typically i would see 10+ deer a day. The rest of our group had similar results on the 800 acre farm. The numbers in our area were very low last year.

I think the rain and wet land influenced the hunt in our area of the County. Hunters to the east of our land weren’t able to hunt because of the level of water on their property. If an anterless only hunt Is established my family will not be hunting. We did not see the typical number of deer this past year and would not contribute to decreasing the deer population further by harvesting only anterless deer.

Too many hunters on public land and too few deer has been the recurring issue every year since I purchased a home in the area and hunt. Without private land the chances are a lottery statistic that you'll see a deer and get a shot. Sitting in my stand before day light to have the sound of what you think is a deer only to be hunters walking into the woods during early daylight ruins the hunt every year.

I have a concern about more relating to hunting. Over the past several years hunting in this area I have seen fewer and fewer deer that we thinking about skipping years from hunting to allow the deer to populate a bit more. 4 years ago, there was a decent opportunity to harvest a nice sized deer. Over the past few years the opportunity is less forcing hunters to take smaller deer.
As in the past, I continue to oppose a holiday hunt in Waushara County (and all other counties). I believe you are provided plenty of time to hunt before that period of time. Businesses are suffering enough right now with COVID-19. We need to give them every opportunity to try and catch up over the holiday season. More tourism from snowmobilers means more support for businesses.

Money invested in snowmobiling is a lot. Snowmobiles, trailers, clothes, gas, lodging, registration and trail passes. With this kind of money invested in the sport I do not want my season cut short with a holiday hunt. Do what you need to do out of the snowmobile season. My family is all together Christmas through New year's and we look forward to snowmobiling during that time.

Our deer sightings have decreased significantly over the last decade. We are still planting food plots and improving habitat, but it's not helping. In my opinion does have been over harvested during that time period. We can now grow white pine trees, so the deer are not being stressed over winter. My vote is for 1 doe permit per hunting license. Thank you for your time.

Our deer sightings have decreased significantly over the last decade. We are still planting food plots and improving habitat, but it's not helping. In my opinion does have been over harvested during that time period. We can now grow white pine trees, so the deer are not being stressed over winter. My vote is for 1 doe permit per hunting license. Thank you for your time.

I hunt on the very eastern side of the county and have seen less and less deer each season I've been out there. I hunt private land that borders public. This area does not have the deer numbers the rest of the county must. I do not support a holiday hunt. I would support Earn A Buck before any other measure. Silly to get rid of it and its proved time and time again.

The proposes brought forth are glaring examples of why hunter participation (aka- revenue) is down. People want deer numbers increased. The special hunts and ridiculous rules are an annoyance at best and "over kill" at its worst. The DNR and CDAC have to start asking how much longer before A- hunters stop buying licenses or B- hunters stop buying licenses and still hunt.

The registration reports on per hour sightings seems absurd. Sightings by myself, my father and cousins on the adjacent parcels, drop drastically after opening day of the gun season. Zero-sighting days for the last 7 days of the gun season are not uncommon. I am not saying the data is incorrect, but that the point attempting to be made with it is not actually supported.

If the dnr believes what it says about the late gun opener and wet areas that were unhuntable resulting in lower harvest numbers then why are they always trying to change the season format. The only season to be looked at is the crossbow season, leave traditional seasons the way they are in regards to archery and gun/muzzleloader and drop the doe only and holiday hunts.

I personally hope the gun deer season is not extended and there is no change to crossbow season. If the big concern was a low number of deer harvested with gun then stop giving out so many tags which depletes the herd. I understand the herd needs to be managed but you can't have so many hunts and tags available yet expect hunters to see ample deer when in the woods.

I own 127 acres in this deer management and enjoy hunting. I am also an avid snowmobiler. If the Board decides to hold a holiday hunt, it will keep snowmobilers off the trails even longer. Like hunting, snowmobiling brings a lot of revenue to our community and others along the trail. Please do not force me to trail my sleds farther north.

Completely get rid of the entire council of ???. That make up these crazy registrations, from 1971 to last year, 2019, I use to see 10-15 deer a day during bow hunting and gun hunting, last 2 years I saw “0” for 9 days during gun season!!!! You guys ruined the entire bow and gun season!!! And you bozos wonder why nobody is buying a license?? Fix it!!!!

Strongly oppose extending the deer season through the month of January. Snowmobiling is vital to the area. Short season to begin with. One of the main reasons I own a house in this area is because of the snowmobiling and easy access to the trail system. I am a member of a snowmobiling club as well. Please do not force me to trail my sleds farther north.
I like to see ample numbers of deer available to harvest. I think if you add that many antlerless permits people will abused it and it will reduce The herd too far just like we did with the earn a buck back in the 2000s.I also have three kids that are going to be hunting soon I want them to be able to have the opportunity to harvest deer. for a freezer

If Wisconsin has extended gun and bow seasons it will ruin the population and won't bounce back. A lot of people are greedy and will shoot any deer that moves and don't participate in QDM. We can't just take and take some more. That's not how it works. It's is our job as hunters to preserve the wildlife we have, not dwindle it down to nothing.

I have thoughts on state hunting seasons. Where can I comment on them. I did go to the next page and found out there are no opportunities to talk about state regulations. I would like to abolish the muzzleloader season and just make the total gun season two weeks long and you can use muzzleloader or rifle or shotgun during the whole time.

Well I'm very upset that all the changes that DNR has made in the last four years, stop all these extra hunts have bow, gun, and late season bow. And for baiting it needs to be legal during the winter months after hunting seasons to help deer make it through harsh winters, food plots are the same as putting food on the ground period!!!!!

I am not happy with the number of deer I’ve seen in the past several years during the gun hunt. I see fewer deer each year. For the 2017 hunt I saw 1 deer. For 2018 3 and for 2019 4. For many years I used to see multiple groups of multiple deer but this has not happened in a long, long time. Deer hunting is fast losing its appeal for me.

Why can't the archery season be extended w/out there ALSO being a holiday hunt? If the goal is to reduce the deer herd, there is ample opportunity to do so before the holiday hunt which overall participation is pretty low. Many people also have some days off of work during that time that they could use to get out and archery hunt.

Eliminate any antler-less hunts statewide. No T-zone, no holiday hunt, and no earn-a-buck. Issue one buck tag and one doe tag that is useable statewide on public or private land and allow residents to purchase one bonus tag. If the DNR is adamant on having an antler-less hunt, designate the youth hunt to an antler-less only hunt.

Archery season. Gun season. Muzzleloader. Late archery. 1 BUCK TAG gun and archery 1DOE TAG For gun and archery No doe hunts. No holiday hunts and stop giving out so many doe tags. It doesn’t make sense. Deer numbers are down so we put out more tags? That’s ridiculous. 9 days for a gun hunt is MORE than enough time to hunt.

I am opposed to a holiday hunt. Winter sports such as cross country skiing and snowmobiling already have a short season and are unable to be enjoyed during gun season. Number of hunters participating in a holiday hunt would be minimal and their contribution to the local economy would be less than winter sports could provide.

I would like to see an extended archery season come back to Waushara county. Overall I think it is a fun time of the season for hunting and if our overall goal is to decrease the population, I don’t see why we wouldn’t have this season. Thank you for the opportunity for the public to weigh in on these topics and regulations.

I would wonder why, with a 3rd year objective of reducing the deer herd in Waushara county, a recommendation to hold a Holliday hunt, but not extend the archery season?? The objective is to reduce the size of the herd! But, not allowing all the tools available to hunters, is not in alignment with CDAC recommendations!

Bottom line is there are a lot of people around me that don’t shoot does. That’s what they believe is right witch I don’t believe that it actually hurts the herd with to much does. I think putting baiting back in the county and the surrounding county’s will help with your objective on getting the herd under control

I disagree with the objective to lower the population. I have talked to several neighbors and all agree the deer numbers have improved but are not too high. The lower buck kill and deer-car accidents show this. We need to take some more antlerless deer but it is against the culture of those I talk to take does.

<td>1778</td>
<td>I am totally against trying to increase the harvest. Deer populations are way too low in this area. Something needs to be done to increase the numbers. I am so disappointed not seeing deer during the season or for that matter out of season. It is to the point where I may not even buy a license at least for 2020.</td>
</tr>
<tr>
<td>1779</td>
<td>Deer numbers in the area/land we hunt are finally getting to levels I as a landowner we feel are finally comfortable with. We don’t see any ag damage or overbrowsing compared to other areas/counties. We are hoping the CDAC doesn’t do anything to mess this up with non-essential holiday hunts or doe only hunts.</td>

<td>1780</td>
<td>I really like the idea of a 19 day hunt. It would be nice if the gun season could start a little sooner. Rut is mostly over by the time gun season starts. Is there anyway to make it possible to use tags in different counties? Like maybe login into DNR with tag # and inputting county you want to switch to?</td>
</tr>
<tr>
<td>1781</td>
<td>Please do not have an antlerless only hunt for all seasons because I believe that this will greatly effect the decrease of hunters that will go hunting. I for one will not go hunting if this is the case. I can also assure you that all others in my hunting party agree with me on this point.</td>
</tr>
<tr>
<td>1782</td>
<td>It is time for you to stop believing everything the DNR is telling you. WE DON'T HAVE TO MANY DEER IN THE COUNTY!!!!!!! We had way more deer 10 to 30 years ago. It was easier to get new hunters excited about hunting when they could actual see some deer. STOP KILLING ALL THE DOES!!!!!!!</td>
</tr>
<tr>
<td>1783</td>
<td>You are destroying the deer population in Wisconsin for the hunters with small pieces of land. I cant hunt deer if there are less and i only have access to 10 acres of private land. The public land is over crowded and people are shady. Please dont kill the whitetail in Wisconsin.</td>
</tr>
<tr>
<td>1784</td>
<td>Set the date for opening firearms closest to the 15th of Nov. run the traditional 9 day hunt. followed by 10 day black Powder. PROHIBIT any hunting 5 days prior to the start of the Firearms Season. Let the woods and deer calm down before everyone stomps through their yards!</td>
</tr>
<tr>
<td>1785</td>
<td>When I was younger hunting with my father and grand father I used to see a lot more deer while I was hunting to now I hardly see any and I believe it is hard to get people into hunting when they don’t see a deer or get the chance to shoot one their first two years hunting.</td>
</tr>
<tr>
<td>1786</td>
<td>I realize some areas have high deer populations, but for the past five years I have seen a total of three deer. If the deer are around they must be nocturnal as our party is lucky to see one deer a season. (We hunt hard, but only have a limited amount of land to hunt on.)</td>
</tr>
<tr>
<td>1787</td>
<td>Simpler and inexpensive CWD testing is imperative to assess true prevalence in the state and thereby direct control measures. Education of the public and hunter population will serve to keep the herd and hunters safe and maintain the strong hunting tradition in Wisconsin.</td>
</tr>
<tr>
<td>1788</td>
<td>I believe we should not worry about what the insurance companies are complaining about i.e deer vs car accidents. The insurance companies do not reimburse anyone for harvesting them. In my opinion it should be up to the hunters as they are the ones paying for the tags.</td>
</tr>
<tr>
<td>10558</td>
<td>EVERY SEASON I SEEM TO SEE LESS DEER,BUT I FEEL WITH HARVEST RULE CHANGES,QUALITY DEER MGT.RULES AND MORE HUNTERS NOT DRIVING COULD AFFECT MY THOUGHTS,I HAVE ENJOYED WISCONSIN DEER HUNTING SINCE 1962 AND WANT TO THANK OUR DNR PROFESSIONALS FOR THE FANTASTIC JOURNEY</td>
</tr>
<tr>
<td>10559</td>
<td>I don’t believe you will solve the deer population without an earn a buck season. extra tags might seem to be a good idea but you cannot make anyone pull the trigger on an antlerless deer unless they’re legislated to do so history and the statistics support this.</td>
</tr>
<tr>
<td>10560</td>
<td>I am not sure where you are getting these deer numbers, but we do not need to shoot more deer in this zone. I am seeing fewer and fewer deer every year on a property that has traditionally held high deer numbers. Please reconsider decreasing the deer population.</td>
</tr>
</tbody>
</table>
Please allow use of antlered gun tags during archery season. I no longer hunt deer with firearms. I realize I can hunt with my bow during the firearms season but I'd rather have the opportunity to tag an additional buck without firearm hunters in the woods.

I tried to take my son this year he is 10 there was just too many people for me to feel comfortable having him in the woods even though he was right next To me. Public hunting lands are overrun with people and steering me away from hunting in Wisconsin.

You do not have a good estimate of deer populations in the county. I can show you 10 years of trail camera history to prove the herd is no where near your estimates. You should adapt one deer per person, you choose gun, bow or black powder.

I do not agree with holiday hunts at all. Bring back baiting so I can get a deer. I'm a poor hunter. I need to bait. Also, I do not believe CWD is a threat to any deer heard. Prion's are everywhere. Ever here of Survival of the heard?

With the lack of new Hunters I would propose to get rid of the youth hunt and let these hunters shoot a deer on Private land with any Weapon of Choice. Once Archery season opens. The hunters that hunt Public would have a youth hunt.

STOP CUTTING ALL THE TREES OUT OF PUBLIC LAND! NO ONE WANTS TO HUNT IN THE MIDDLE OF A FIELD AND THE DEER DONT LIVE THERE EITHER. THEY ALL GO TO PRIVATE LAND - AND THEY GET ALL THE TAGS. THANKS FOR RUINING THE STATE HUNTING LAND.

Hunting rules change to much. Would like to see more constant. Also CWD needs more attention on cure, less emphasize on repeated testing. Give 1 buck tag and 3 antlerless tags out per season. Allow hunter to choose weapon type.

Many of the deer taken from the private land I hunt on were either injured day of or in earlier event i.e. car accidents and non-fatal gunshots. I would like to see a discussion about harvesting injured deer over healthy ones.

Just leave the season alone. There are few deer now than ever so why do we keep wanting to give more tags out. If you lengthen the season how do landowners police it. Seems like DNR will not be happy until every deer is dead.

Hunters can't harvest deer that aren't there. No I do not believe the deer population numbers. People thinking crossbows are the reason they aren't seeing deer is ridiculous. Same people probably hunt over a corn pile.

The deer population numbers are way down. There are pockets of deer in the county, but the deer population itself has gone down. How are we going to encourage youth hunters in the future, if there are no deer to hunt?

Deer numbers are rebounding from EAB slaughter, but not at level on my land that they were in the past. Don't support Holiday Hunt. Would like to see a bounty on coyotes as incentive to reduce coyote population.

I hunted on 100 acres of private land in Waushara County for seven days of 2019 gun season and only saw three deer and none presented a shot. This is the very LEAST deer I've seen in 50 years of hunting this property.

Move holiday hunt later so people off for Christmas can pursue bucks. Then also when holiday's are over it would allow for maybe a 2 to 4 day hunt after the first of the year. May be a better buy in from hunters.

If we can't bait deer we will not be hunting. Deer will not be on land we hunt with the water table being high and nothing to eat. Didn't purchase licenses in 2019 for this reason. Can't plant food plots in water.

Quit giving out so many doe tags and crop damage tags. Do not extend season property owners cannot police their land that long. If you can't shoot one in 9 days to bad. The hunting is getting worse by the year!!!!

should try the deer gun season a week earlier in November this would help the deer harvest numbers and hunter satisfaction of seeing more deer (in end of rut yet) two weeks before Thanksgiving not one week before
This last year our hunting party did not shoot a buck on opening weekend. This is the first time in 57 years that we did this. After 3 years of earning a buck the deer herd has not come back on our end of the county.

I would strongly support an extended gun season beyond 9 days. Sometimes bad weather ruins opening weekend so having more time is important to me. Also would have more opportunity to take my children hunting.

I have been hunting the same private land for 29 years in Waushara County and this last season one of worst for seeing deer. We need to stop giving away so many antlerless tags to get the numbers back up again.

I’m fine with the extra authorizations, etc. However, I don’t think there should be a Holiday Hunt. The seasons are long enough already. Let’s let some of the other outdoor users have their time as well.

We have owned a parcel of land south of Coloma, on hwy ch since 1984, and have kept a log of every season, and the deer numbers have consistently, gone down, with the number harvested, and the number seen.

I am impressed with the very scientific approach taken to measure and manage the deer herd in Waushara County. We have a quality hunt every year and highly value your successful management efforts.

Ever since you started issuing free bonus permits, the number of deer seen during the season has decreased drastically. I do not think that you have made the proper decisions in managing the herd.

Ever since you started issuing free bonus permits, the number of deer seen during the season has decreased drastically. I do not think that you have made the proper decisions in managing the herd.

My main concern is a healthy buck to doe ratio, and having a strong and healthy deer heard. This is a very important aspect of having a trophy buck population. Please bring back earn-a-buck!

I did see more deer on the property I hunt in the 2019 season over 2018 season even though my Father harvested a doe both seasons 2018 and 2019 and said he seen quite a few this past winter.

Please stop all of the extra add on hunts, leave bow-crossbow alone, move the gun season up if that w appease the gun hunters. Too many early youth hunts trains the deer to go nocturnal.

Remove no baiting in the state. Go after the game farms because that’s where your problems rise from. You want less deer in the state but you tie our hands but not allowing us to bait!!!!

Where I hunt in waushara county it’s not uncommon for me to see 15-20 deer on public land in the 9 day gun season. I personally wouldn’t change much if anything to the current regulations.

Keep current season framework. Providing more tags doesn’t mean more deer killed. I don’t believe in over harvesting that what my family needs. Takes time and money to process a deer.

Deer hunting is going well, I want to continue to see deer in the same numbers but I am concerned about CWD and other environmental impacts the deer are having on the surrounding area.

Stop all these special hunts, they just make the deer more skittish and they don’t move around a lot. With less pressure they are more likely to be moving more during daylight hours.

I hunt on three different parcels in Waushara county and the last 6 years we see fewer and fewer deer. Combined bow and gun hunting. stop giving out so many Doe tags!!!!!!!

The last few years hunting, I’m seeing More wounded and dead deer in the woods. Wondering if more education is necessary for some hunters. I hunt on private land. Thank You.

Very important issue in this area is predators on the deer population (Coyotes). Has become a huge problem on numbers. Also farmers clearing habitat has become an issue.

Just moved out of state and the out of state license cost is so prohibitive for hunting in Wisconsin. The DNR should review this and consider lowering the OOS cost.
To many extra Doe tags given out, leads to less population of deer. There’s no need for someone to shoot 2 or 3 does the deer population just simply isn’t there.

Would support lowering the number of deer more if regulations would lean more toward increasing buck age structure. Increase Doe harvest and reduce buck harvest.

Put in place a 4 points one side antler requirement. Increase out of state prices to match what it costs that specific state. Get rid of all these holiday hunts.

Eliminate all forms of baiting. There are many violations in my unit. 55 # bags. Really? There are wardens citations. How about like $1000 Think you can.

It would be nice to be able to leave two marked tree stands in woods like northern county do on public land. This would help get the deer numbers done.

Crossbows will likely be a tool that continually takes more deer so I see a time in the near future when their season needs to be shortened or adjusted.

Deer seen on cam and in person have been about the same as last 3 years coyote tracks and cam pics have also been high number of deer with no fawns.

More car per family. Living farther away from school and work mean more time on road equals higher chance of car deer acidents not more deer!!!!

Excited to hunt the unit this year with my new crossbow! Always make it a priority to get to Waushara county for early November whitetail hunting.

Strongly against ending crossbow use for all hunters and only letting crossbow hunters hunt limited archery seasons. As these were ideas I heard.

I think we as a state need to look at friends to the west in Iowa and how they are using deer management I think this would work in this state.

The amount of female deer harvest rates are declining number of deer and bucks. Our population on my 185 acres farm is severely down 60%.

Out of state licenses should be raised significantly. We by deer tags in Iowa, we are charged close to 600$ we give away tags way to cheap!

Judging by the number of deer in the fields this spring we will be way over in surviving numbers this year with out an increase of harvest.

Please do not extend, as this will significantly impact the snowmobile season, which is sporadic and short in the best conditions.

I hunt almost every day of the bow season and gun season on 160 acres we have 6 people hunting that property we do not see deer.

During the last 3 deer seasons my party of 5 people hunting on 50 acres of private land have seen 3 deer in those 3 years.

Wisconsin should have a minimum point rack on bucks so we can grow them bigger. We harvest way to many small deer.

The gun season should be moved to an earlier date. Weather plays too much of a role in such a short 9 day season.

I would suggest no antlerless seasons, having a 19 day gun deer season and expanding the bow season till January 31.

I do not support a holiday hunt in Waushara County due to the negative effects on the snowmobile opportunities.
<p>| 10620 | Thank you for your service in wildlife management. Thank you for seeking public input to your decision. |
| 10619 | Bring back EAB or implement antler restrictions. I'm good with no back tag but I do miss registration stations. |
| 10621 | Hunting is getting to be too political with all the regulations and restrictions being imposed, thank you |
| 10622 | I hunted the entire gun season and did not see a single deer. Population is at an all-time low by me. |
| 10623 | The gun season should not take place during the rut. I liked the timing of everything last year (2019). |
| 10624 | I have spoken to you guys personally on a few issue's in the past. I think your doing a great job. |
| 10625 | Agricultural deer damage is my number one concern. Deer population has to be decreased—period! |
| 10627 | I saw some deer, the late start to the season had some impact but everything else seems fine. |
| 10626 | I have seen less deer this past year than previous years and I live on the land that I hunt. |
| 10628 | Extra hunting after November is bad for tourism during the SHORT snowmobiling season. |
| 10629 | Do away with public and private harvest authorization and just have unit specific tags. |
| 10630 | Would strongly disagree with extending the gun season beyond the typical 9-day season. |
| 10631 | Need to put a bounty on coyotes. Wolves are here now need to open the season on them! |
| 10632 | I have not seen a deer on my property while deer hunting (GUN) in the past 2 years. |
| 10633 | Open a wolf hunt or wolf tags. They are very over populated and need to be managed. |
| 10634 | I think we should have an earlier gun deer season that runs longer like 16 days. |
| 10635 | I think the last two years the rut was later and the gun season was too soon. |
| 10636 | Ask for an extended archery hunt to go along with the Holiday Hunt, please. |
| 10637 | When you only see 1 deer in 9 days of gun season it is very depressing. |
| 10638 | Too many deer! A recipe for disaster for disease to spread in the herd. |
| 10639 | My only input is that everyone has enough etiquette for the everyone. |
| 10640 | Deer population in my area is low. The area has been Over harvested. |
| 10641 | I would like to see coyote hunting added to small game licenses. |
| 10642 | We need to re-introduce earn a buck policies for Waushara county. |
| 10643 | We are just starting to see deer like we used to 30 years ago. |
| 10644 | Please consider a gun season that is not over Thanksgiving. |
| 10645 | I have noticed an increase in the coyote population.... |
| 10646 | Don't change anything. It is fine the way it is now! |
| 10647 | Deer population in the Poy Sippi area is way down. |
| 10648 | Limit the size of antlered deer on public lands. |
| 10649 | Needs to be an earn a buck zone for 2-3 years. |
| 10650 | I think in all hunting has been ok in my zone. |
| 10651 | No other recommendations. Thank you everyone. |
| 10652 | There are not enough deer for all these tags. |
| 10653 | Too few deer. Too many antler-less permits. |
| 10654 | Limit doe tags Limit one buck per season. |</p>

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

243 forms were submitted for this unit.

**Section 1: Information about who provided the input.**

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 178
   - I visit this unit for non-hunting purposes: 39
   - I hunt in this unit: 204
   - General interest in this unit: 46

   The following questions (numbers 2 to 5) were only asked of individuals who indicated that they hunt in this unit.

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 178
   - Bow: 107
   - Crossbow: 98
   - Muzzleloader: 76

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 22.77
   - Maximum: 62

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 124
   - Mostly Private Land: 38
   - Public and Private Land About Equally: 18
   - Mostly Public Land: 8
   - Exclusively Public Land: 16
   - I did not hunt in this unit last year: 0

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 17
   - Not too crowded: 28
   - Neither crowded nor un-crowded: 14
   - Somewhat crowded: 10
   - Very crowded: 9
   - Not applicable: 2

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 64
   - Fewer: 82
   - Same: 75
   - More: 18
   - Many More: 3
   - Unsure: 1

**Section 2: Perceptions about the number of deer in the unit.**

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
- Implement an ANTLERLESS HOLIDAY HUNT: Support 66 Oppose 162 Unsure 15
- EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: Support 110 Oppose 118 Unsure 15
- If the Population Objective is not "Increase"...
  - Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: Support 26 Oppose 205 Unsure 12

If a Zero Quota (buck only season) is adopted...
- If a Holiday Hunt is held in a Farmland unit...
- If a Zero Quota (buck only season) is adopted...
  - Should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit? Valid Not applicable in this DMU

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?

Comments for  Winnebago, Central Farmland

**Note:** the comments presented in this report are the unfiltered opinions of individuals who responded to an online public input form. The viewpoints expressed do not represent the views of the state of Wisconsin, the Department of Natural Resources, or its employees.

10661 If you sold 250 antlerless tags for public land last year, why would you recommend only selling 225 this year? Your quota for this year is quite a bit lower as well, yet you want to "maintain" the population. I'd like to see at least 250 antlerless tags offered for public land this year considering you sold 250 last year. That way anybody who wants one doesn't get turned away. With the pandemic, people want to put more meat in the freezer and many will look to public land. Why punish them by not offering enough tags? You can still maintain or grow the population by setting a lower quota this year and not turning away hunters from buying an antlerless public tag. Less deer were harvested last year because of poor weather, high water, a late gun season opener, etc. The population is not decreasing. It's actually increasing after less deer being harvested last year. Realistically, you should still offer the same amount of tags as last year because you won't sell them all anyways. I'd like to see a Holiday hunt as well. I can only hunt weekends and get off between Christmas Eve and New Years Day so I would love to take advantage of that. Most people won't take advantage of hunting the Holiday Hunt anyways so why not offer it to the few die hard deer hunters like me? If you do offer a holiday hunt, then just offer 250 public tags then so you are close to your quota. I know the council did not offer a holiday hunt last year because of snowmobilers concerns, which is fine. The snowmobilers had last year of no holiday hunt, this year it should be available to be fair to few hunters who want to take advantage of it. The CDAC is supposed to consider all stakeholders. By listening solely to the snowmobilers and not holding a holiday hunt it is not fair to everyone else. Please take this into strong consideration when deciding whether to hold the holiday hunt.

10662 You need to provide enough tags on private and public land for people to have a chance to harvest a deer. 500 private land tags is the right amount to not sell out compared to last year. Public land tags there needs to be at least 250 since that is the number of people that purchased them last year, as a reminder, just because someone purchases a tag it does not mean they will harvest a deer. It just provides the opportunity to go out to try to harvest a deer. If you want the tags on public and private to remain the same, then consider giving two farmland zone tags with a license. Then you are less likely to run out of bonus tags with the current numbers to ensure every hunter has tags needed to harvest deer, but not go overboard by offering 3, 4, or 5 free tags. The CDAC needs to seriously reconsider the Holiday Hunt. In past years, the CDAC has recommended a holiday hunt in the preliminary recommendation, but then never follows through because of concerns for snowmobilers. It is the responsibility of the CDAC to not cater to a specific stakeholder. I have seen other counties compromise with snowmobilers and allow a holiday hunt, but no extended archery season. I would be in favor of this, but to outright not allow both additional season options because of one stakeholder group is not what the CDAC is intended for.
My main concern is the amount of bonus tags and doe tags in general that are being given with every license purchase. Allowing folks to purchase multiple upon multiple antler-less tags when we already have a harder time seeing deer is ridiculous. We own our own land and the deer population is not what it once was. I like that we are taking this county by county now, I commend you all for that. In our portion of Winnebago county, we do not have an abundant population of deer. They are here, but it's definitely effected even worse when multiple doe tags per hunter are granted, and up the road public land becomes a war zone...not a deer stands a chance. It creates a wasteful mentality, just shoot... if we get it great, if not. oh well. We have more tags. We find gut shot deer all the time, or see deer with holes on the cams every single season... Broken legs, etc. Just after gun season. Lets tone down the KILL numbers and the harvest numbers rhetoric... and focus on getting the herd in shape. Getting the herd in shape will attract more hunters... killing all the deer, causing most weekend warriors not to see anything... will negatively effect your numbers of license sales in the end... not help. Thanks for hearing me out.

Please give deer in Winnebago county a chance to rebound to what we once had. A herd that actually still had family structure, a herd that wasn't left with almost every other fawn family without its mother. The young bucks aren't chased away because of not having a mother, which is bad for the gene pool. The majority of deer living in this county are so overly pressured by all of the seasons that they have to endure, it makes hunting, especially with younger people almost unenjoyable because deer sightings are so few and far between. Our family has hunted our land near Rush lake for over fifty years, deer hunting was great for so many years, but now most of us don't even go there anymore because it's so bad. The habitat is there, the food is there, but the deer are not. If it was up to me there shouldn't even be a deer season in Winnebago county this year. All of the crop damage tags from a few years ago, all the doe seasons, earn a buck have just ruined it. I feel sorry for my son that he can't even go hunt Grandpa's old blind and see a deer, to connect with his past.

In the town of Winneconne, where I live, there is close to 100 deer per square mile. My 10 acres are over-browsed, and nothing can be grown without fencing. I fear deer disease in the herd, tick disease among people, and over-browsing of woods and agriculture. Due to high deer numbers I do NOT shoot coyotes anymore. I know this is not true in other areas, and certainly not in the public areas. We need tools to help reduce numbers in the private "hot" zones within counties. Lengthening seasons is key, as increasing daily hunting pressure causes deer to become nocturnal and greatly reduces harvest potential. Expanding the season allows for cooling periods to relax deer and increase daylight movement. In addition, banning of baiting and feeding would greatly increase daylight movement and harvest potential. I have many neighbors who increase feeding during the hunting season to keep "their" deer safe. I know this is a difficult situation for the DNR and CDAC's, and appreciate the opportunity to provide input. Also, I very much enjoyed the video provided by the biologist. Thank you.

In my opinion, the deer numbers are much lower than the DNR numbers suggest. I'm not against doe harvest, I just believe some hunters will harvest to many does just because they have the doe tags. I have trail cams out year round and had some pics in the spring of coyotes with deer fawns in their mouth. I suspect with the time I spend in the fall of the year bow hunting the number of adult doe without twin fawns or single fawns have declined by minimal 25%. Every year it seems to me that number increases. I don't believe at least in the area that I hunt there is alot crop damage. I've seen raccoon in a corn field pull one stalk of corn down take two bites of corn and travel to the next stalk, and the raccoon numbers are very high in this area. I usually take time off of work to hunt the rut but every year the rut activity decreases not only seeing deer but not seeing any rut sign at all. I enjoy spending time in the woods I don't need to see deer every time I hunt, But every year the numbers seem to declining, this year will be my 42nd year bow and gun hunting.
I hunt on a farm but I am not a farmer. The farmers have a pretty old school mentality of hunting and managing the herd. They come from the methodology that we need to get numbers like they were in the 80's by not harvesting antlerless deer and only harvesting bucks. I would recommend getting information out to these landowners that managing a deer herd is similar to pruning an apple tree. You need to thin it out so what's remaining has enough to not only survive but to thrive. In areas that have a heavier deer herd maybe talk to them individually and offer them QDMA material to shift the old school pattern of thinking. If you can change the thought process, maybe we can not only have a sustainable herd but also equalize the buck-to-doe ratio as well. I have a journal of everything I've seen in the last 11 years and I am seeing 10 to 15 times as many antlerless but the land owner doesn't want antlerless taken. I hope this is read and it at least discussed. Thank you for your time reading this and stay safe.

I have observed fewer deer year after year. As technology has improved the success rate of hunters has also improved. I am concerned with the numbers of the deer in this county. I have observed very little antlered deer, especially, mature ones. Most of the deer I observe are antlerless. I think one major flaw in trying to look at deer numbers is our harvest authorization system. Many hunters get away with shooting a deer and not reporting it or worse yet harvesting more then one deer with one tag. Our system is solely based on the honor system. At the end of all of the seasons they should send a mandatory survey to each hunter like they do for ducks/geese asking us how many deer we harvested/seen for each season(bow, gun, muzzleloader , antlerless). I also do not support the earnabuck framework or 19 day gun season proposal.

I typically hunt the rat river. I walk in, use hip boots to cross water, and take a jon boat in so I can get away from people. I see good bucks, but limited does. They are there, but I would expect to see more. I have been hunting since 1982. My youngest daughter is starting this year. We only archery hunt. With all of the special hunts, youth, early doe/late doe, it seems that after the first week, everything goes nocturnal or close to it. I hunt mobile. Bounce around, get close to beds. The deer don’t get up in lots of spots until 5-10min before last light. I feel most of this is due to the extra gun pressure. My thoughts are go back to the traditional archery season, standard 9 day gun, muzzle loader, and a non interrupted late archery season. Every time I have taken my kids out, we see nothing.

I really hate the way the Antlerless is set up county to country/public/private. I feel you are just trying as your normal to make us spend more if we hunt in different counties and both private and private. I always buy a patrons but I am changing to only a small game next year. I have hunted for 38 years and have seen the DNR wreck it. Impose any regs. They want if big money is baking it. Food plots seeds and equipment cost and make rich people richer by selling it. Bait is cheep and cost a lot less. What I’m getting at is over the years I have spent a lot of money on deer hunting and fishing I stopped fishing 5 years ago and am going to do the same with hunting. Stop catering to politics and big money!!! You wonder why sale have fallen!!!

We have lived and owned property in Winnebago county for over 40 years. I currently own a farm in Winnebago county. The lack of mature antlered deer in the area is concerning. I basically have a deer refuge on rush lake that is managed for mature deer. We did not get a single picture of a mature buck in five months of having trail cameras out. Coyotes are now a major issue around rush lake. Considering we are seeing the fewest mature bucks on record, is it possible that disease is decreasing the buck population? Something is definitely out of the ordinary. The best years of our hunting were during the earn a buck years. I personally think it was an effective management tool. Lets make some drastic efforts to return Wisconsin back to quality deer hunting. Please.
The lack of bucks over two years old is getting rare. Crossbows with baiting in back yards, shooting after hours because lack of noise associated shooting out your windows or garage. Riffles in my opinion are becoming more dangerous as building continues in the country. The amount of pressure put on deer with extended dates and baiting has caused deer to become nocturnal and crossbow shooting after hours is becoming a real problem with the lack of DNR wardens to enforce. Hunters have changed tactics and sit longer in stands on private land, and rarely push deer anymore. Private land owners have become protective of the deer and rarely let you hunt their properties.

In my personal opinion, there should be a limit on antlerless deer. In 2020, we shouldn’t be allowed to hunt doe’s. I believe that allowing for does to live and reproduce for another year or two, will allow for higher populations of deer. I personally did not see many does this last year compared to many years prior. Also, the wolf population in the northern woods is getting out of hand. I have friends and relatives that hunt there and they didn’t see anything during the gun deer season. I personally don’t know if Wolfs are the route cause but they did tell me they saw more wolfs than deer. What is the states plan for managing the WOLF population?

I have a DNR camera and recorded nine different bucks traveling thorough my backyard. I'm sure there are at least that many does also. I hit one on the road in front of my house. The deer look in our bedroom window at night. There are too many deer. We have a seven foot fence around our garden, but a deer jumped that fence this spring. We have various fences around all my wife's flowers. I am surprised that she has not resorted to a life of poaching. Our yard is covered with deer droppings every spring. My backyard habitat can not support this many deer. I'd like to rent a wolf, or a pack! "Maintain" your herd somewhere else.

I see many deer killed from vehicle collisions between December and March on the roads I travel in Winnebago County. This number is significant if factored in to population goals along with hunter harvest, predation, recruitment, and natural mortality. Especially since each doe killed during this time frame potentially has one or more fawns. I have killed several deer the last few deer seasons that were obviously crippled from vehicle collisions. I would like WDNR to more accurately record the number of vehicle-killed deer or maimed deer and apply it to population goals for each county.

I believe that in certain areas the deer herd needs attention and action taken, I’ve always had to hunt public land and once they have a early hunt in the areas for antlerless I notice the lack of deer sitting in the same areas that I have seen deer. I get it cause deer I very smart animals I always wonder if the private land owners that have food plots year around have an impact on any amount of pressure on public lands. I wonder cause of food plots if that’s why nobody sees deer during hunting hours, plus what ever happened to the height a tree stand or blind can be. Wasn’t it always 12ft.

In the fall the deer numbers during bow season, were extremely down, and this was also my first gun hunting season, I did not see one single deer, and it carried into the entire season, zero deer seen on private and public lands, my younger son was thinking of starting hunting, and to be quite honest, after this season I am considering wrapping it up, the doe slaughter seasons, forced me personally by choice to shoot antlered only because of the diminished herd, I have not filled a tag in a few years, this season, not seeing a single deer, during gun, was (is) the icing on the cake.

you need to do control burns on much of the Rat river as the cattails have taken over much of the march grass which gives the deer way to much cover & no way for a hunter to push a deer out of the cattail into the march grass for a chance at a shot. Control burning would help out wildlife as was seen back in the 70 when it burned There was great duck hunting pheasant hunting & deer hunting, Now it just a sea of cattails All over 6ft tall & no way to push deer out into a opening when you jump them all you see are the cattails wiggle & there gone
Lengthen the "gun" deer season. Consolidate all shoulder fired weapons (rifles, shotguns, muzzle loaders, crossbows) into the "gun" deer season. Lengthen the archery season to include all of January. Eliminate all baiting and feeding of wildlife, recommend that if people want to feed "wild" animals that they plant and protect a preferred tree or shrub species e.g. white oaks, Canadian yew, white cedar, etc. And fertilize and/or water existing preferred deer food species. Close and sterilize all captive cervid facilities statewide.

I would be interested to see a separate antlerless season from the normal week. Seeing both buck and antlerless moved a week ahead or behind from the normal time would be more interesting yet. I've talked to a lot of people in our area that seemed to think the deer mostly shut off during the normal week around here. It's been many years we've been hunted that same week maybe try something different. Animals adapt two changes and I can only guess after a hundred some years maybe we're seeing a little something funny there.

Public land west of Winneconne and Omro, Winnebago CO are productive for about the 1st two weeks of archery season. By week 3 deer and most game are driven off. I dislike having to buy tags for private and public, hate buying tags for everywhere I hunt. Sell me a doe tag, I will tell you how I filled it, shut down unit season when quota is reached...like sturgeon spearing. January, if there's places over populated yet, I will go there. If my unit is closed early, less late hunting pressure, better shape herd is.

We need to modify the youth hunt. When I was growing up I went deer hunting with my parents starting at age 10 only to observe. This was a great chance to learn about hunting the proper way. Letting a parent buy a youth tag for a 5 year old just so they can get out a week before fun deer season is ludicrous! Children should go out with their parents but should not have a special hunt. The age also has to be limited back to 12 after hunter safety. No child should be hunting without the safety course.

Restructuring of the gun hunting season needed. Hunting days during the “rut” should always be included in the 9 day season. The deer move through out the day. The hunters technique has changed. Hunter’s sit on deer stands most of their hunting hours. No movement to encourage deer moving. The trespassing law made private land ownership deer refuges. I have a relative who has given me permission to hunt on 58 acres. I usually harvest my deer opening day.

I oppose extending the deer hunting season by any means because it is too stressful for the deer population. Then when gun season occurs, they have already become nocturnal because of the added pressure during the daytime. The chances of harvesting a deer, in return, goes way down. In addition, no animal should be put under constant stress for extended time by continued hunting through varied means. It is unethical.

There are high variations in deer populations on private parcels versus the public land available in Winnebago County. Take a drive around western Winnebago County and you will see boatloads of deer on private land, but hardly any on public land – even during unpressured times of the year. Please do not support any extension of the gun deer season to 19 days. This proposal is unwarranted and unnecessary.

‘- nonearn a buck, just created violators - if you extend the gun season into the rut, you should open archery a month earlier in pre season - if it’s money your looking for, just raise the price of a tag - did you notice last year about 80% if he corn fields were still standing... - and finally, not all properties have too many deer, connect hunters with land owners to cull the deer population -

We see fewer deer every year as a general trend over the last 20 years. I know populations will vary over time. I believe between the youth hunt, the antlerless hunts, the regular season and crop damage tags there are too many hunts. It would be great to go back to just early archery, gun followed by muzzle loader and late archery season. No earn a buck - no doe only hunts.

I know there is talk about changing up the use or seasons of the cross bow. I ask that this does not happen. Please keep the regulations the same. The crossbow for many reasons is why people hunt and it should not change because of a few others that think it is cheating. The only people that can say that are the ones that use an old fashion recurve.
Stop separating the public and private tags!! Some of us only get an opportunity to go private for a day or two. Why should we have to buy extra tags? And the other states charge way higher costs for out of state hunters. We should do that. Yet residents keep getting the costs increased. That needs to stop.

Not holding an antlerless only season in this DMU is a good thing for both private and public land hunters. Not holding a holiday hunt or bonus archery/crossbow time would also be a win for the DMU. We need more deer to make the hunt enjoyable for the next generation.

I have been hunting the same area for over thirty years and could always go out and see numerous deer any night. In the past five years I have been lucky to see one or two. Stop counting the the deer at the dump and assume that’s the way it is all over the county!

I am happy to see what the county has recommended and the quota set. As a longtime hunter, we need to up our deer numbers in this area. We have not had deer since earn a buck wiped them out. Please continue in this manner. we could even SHORTEN the bow season!

I feel we should keep the crossbow season, because it lets a lot if people hunt that couldn’t otherwise. Extending the gun season is ridiculous. If you can't shoot a deer in 9 days with a gun, you don't belong in the woods!

I hunt around the Rat river. And have seen 1 deer in 3 years.I use to lots of other hunters.In 2019 I saw 2 hunters.There use to be cars up and down the road.Lucky if I see 2 or 3 each season.where did all the hunters go.

I think the department is doing a good job of managing the population. I think that the down turn in deer kill numbers is due to lack of hunter activity and the lack of new young hunters becoming involved in the sport.

I still believe the numbers are much too low in our county. We need to let more population happen. I strongly disagree with antlerless only season. We should keep it as one buck one doe tag for each season.

I think there are too many does around eveyrwhere. The winnebago dump area along side 41 is full of deer, I saw 40 plus many times. I think a special bow season to thin the herd there would be beneficial.

I've seen more deer this spring (2020) than any year in recent memory. Easy winter and food supply will enable strong deer numbers in Winnebago county. This is why I stated Bonus tag quotas are too low.

The deer management in Winnebago county has maintained a healthy and abundant herd. I own and hunt my 168 acre tree farm. I am pleased overall with the last 45 years of deer management.

All in all I would say the deer management has been good in this area the past few years. I really oppose having a holiday hunt and extending the archery season any farther.

Increase the deer numbers so that people actually want to go out hunting. It is difficult to get kids and new hunters to enjoy the sport if they don’t see any or many deer.

I am all for extending gun season. I think we need an antler restriction of 4 points on one side . Hunters under the age of 18 and over the age of 65 would be exempt

Help Winnebago co hunter access private land that’s annexed into the city’s that have more than 5 acres of farmland to bow hunt.
No reason to participate in this activity anymore. It's total mismanagement has led to lost revenue and traditional activity lost among fellow hunters.

limit the crossbow permits for youth, let them learn archery first! Put the crossbow season back to an older age limit or handicap individuals.

I live here and crossbow hunt here. There are not as many deer as 10 years ago. In my opinion the whole state's deer population is low.

Should be able to harvest white deer now only way to harvest is with motor vehicle bruising to much meat and vehicle

Open the season on the closest Saturday to the 15th. If that doesn't work open it the 1st Saturday in November.

We are very concerned about the number of coyotes and their impact on the herd and fawn survival

Too many hunting seasons and rules each year. Keep it simple, couple seasons, not broken up

I would support an extended gun deer season if it started a week earlier than normal.

I would like to see a two buck limit similar to what Illinois has for bow hunting.

Nice survey - questions and available responses covered the area that I hunt. Thx

Conservation efforts in Winnebago county have maintained a good herd

Please consider having a gun season that is not over Thanksgiving

Get rid of public or private option. Go back to both.

Good job everyone this is a sound recommendation

Deer populations are much lower than you think

Stop. The deer population isn't that high

I thought this was a good questionnaire.

Great Job. Thank you.
The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

271 forms were submitted for this unit.

**Section 1: Information about who provided the input.**

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 166
   - I visit this unit for non-hunting purposes: 52
   - I hunt in this unit: 243
   - General interest in this unit: 52

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 233
   - Bow: 135
   - Crossbow: 110
   - Muzzleloader: 87

3. How many years have you hunted deer in this unit?
   - Minimum: 1
   - Average: 24.22
   - Maximum: 70

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 163
   - Mostly Private Land: 40
   - Public and Private Land About Equally: 20
   - Mostly Public Land: 11
   - Exclusively Public Land: 6
   - I did not hunt in this unit last year: 3

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 8
   - Not too crowded: 17
   - Neither crowded nor un-crowded: 22
   - Somewhat crowded: 11
   - Very crowded: 12
   - Not applicable: 7

**Section 2: Perceptions about the number of deer in the unit.**

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 48
   - Fewer: 94
   - Same: 92
   - More: 22
   - Many More: 11
   - Unsure: 4

**Section 3: Feedback on the CDAC’s 2020 preliminary recommendations**

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>
<thead>
<tr>
<th></th>
<th>Much Too Low</th>
<th>Too Low</th>
<th>About Right</th>
<th>Too High</th>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
Implement an ANTLERLESS HOLIDAY HUNT: 64 Support, 177 Oppose, 30 Unsure

If a Holiday Hunt is held in a Farmland unit...
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: 104 Support, 139 Oppose, 28 Unsure

If the Population Objective is not "Increase"...
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons: 30 Support, 220 Oppose, 21 Unsure

If a Zero Quota (buck only season) is adopted...
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?
VALID Not applicable in this DMU
NOT VALID
Unsure

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit?

<table>
<thead>
<tr>
<th>Concern</th>
<th>Average Rating</th>
</tr>
</thead>
<tbody>
<tr>
<td>Amount of deer mortality during an average year...</td>

</table>
Wisconsin could be the best trophy buck state in the union. We could have great hunting for all who want to shoot a trophy on public or private. 1. Stop shooting non-mounter bucks. But in a size limit or stop the buck harvest for three years. Then start on a draw system for each deer zone. 2. Stop shooting the does on public land. Start to put deer plots in on public land to draw the deer off private land. Burn and manage the forests for good new growth. Plant food trees and crops. 3. Stop allowing the deer drives on public land. Large groups are killing our deer and then hunting their own private land. They have good hunting after raping our land. They have a place to go on private land the rest of us sit where they drove and shot everything out. That is why people are stopping hunting. No one wants to sit in the woods and see song birds with no deer. 4. Kill the wolves. There is more of a predation problem than you know. Wolves move up to 50 miles a day to feed on their primary food source which is deer. They also kill deer just for fun. Wolves were exterminated years ago by our forefathers who knew why they needed to be eliminated. 5. I used to o in the woods in the 70's and see 50 plus deer a day with trophies a good potential. Now if I sit all day I might see three deer. Two fawns and maybe a doe if I'm lucky. You will loose me too soon if you don't make the changes suggested. If you do make the changes you won't believe the large bucks you will see and all the hunters will apply for a tag and come back. Wisconsin will again be the state to trophy hunt. If not you will continue to ruin it and I and others will stop hunting. Please listen and make those changes..... Thank you

I have hunted on my 10 acres, in Wood county, for the last 28 years. It has become more difficult to fill even one doe tag because my neighbor's 70 acres wraps around the side of mine. He won't let me get a deer I shot on my own land if it died on his land. I try talking to him and he tells me we have nothing to talk about and walks away. This is poor sportsmanship when it comes to hunting. I could go on about this but I won't. My family and I enjoy deer hunting, but getting a buck doesn't happen most years. We like venison and don't mind shooting does, but this has become difficult, also, because our neighbor won't work with us. We have to be sure to kill that deer on our own land. I don't see why after December 1st if you have left over doe tags from the gun season, hunters can't use the whole month of December to fill those tags. Bow hunters have September, October, part of November, December, and now all January, too. It is disheartening when I see others getting two deer with a gun, plus two with a bow, when I can barely get one. What should it matter anymore to shoot a deer with a gun, bow, or muzzle? We should have a right to shoot deer on our own land. I'm loosing interest in deer hunting when we can't even get 2 doe tags filled because of neighbors being poor sportsman, and not having all of December to hunt with a gun. Thank you for your time.

taking this opportunity to make note that we need to start removing the white deer on the landscape. It is a mistake to protect these deer. Years ago when there was one or two white ones around (possibly true albinos) I understood it, but now there are way to many. It is not a novelty to see a white deer now. When hunting, I am just hoping to see some brown on one so that I can do something to limit the explosion of white deer. In the last couple of years, I have even seen what I call 'color phase'. They may have a swat of cream/tan somewhere on them or just be not quite white all over. One I had on camera last year looked white, until I got a shot of it looking at the camera and you could see true white rings around the eyes and the rest of its head and neck were actually more of a cream or dirty white. I have had several mature white bucks on my property - spreading the defective gene. Mature, protected bucks impregnating all the does that they can... what should we expect???? MORE WHITE DEER. Time to slow them down. If the DNR wants harvest info on them, limit the legal harvest to landowners only or private property only, require a special registration or whatever you need, but don't let the propagation continue. thanks.
Hello, thank you for giving us an opportunity to share an opinion. I really like the direction the dnr has been going the last couple years. That said, we need more tags! There are way too many deer in wood co. Please make more farmland tags available for purchase. the people who have a deer problem can buy them. The people who don’t see many deer don’t have to but them. Also my family hunts together, and If the crossbow season gets cut down or modified we feel it will directly effect the family oriented sector of the bowhunting wisconsinites.

Wounding deer is not ok. Its not fair to the landowner, or the animal. The crossbow lets the hunting husbands of Wisconsin go afield with the family and not worry about a young hunter or wife pulling back 40lbs (or less, I think 32lbs is legal) with a compound and wounding deer. As the crossbow law sits in Wisconsin it creates family opportunities for people who would normally be watching from the sidelines. I wouldn’t want my wife hunting with a compound. Please please don’t change it. Thank you for taking time to read my input. I hope my wife does not have to watch from the sidelines this season.

Many hunters in general blame the return of the Gray Wolf when few if any deer are seen during a hunting season. I am not one of those. Perhaps the biggest predator in any area are the agricultural practices. Dairies are harvesting forage crops in middle to late May each year and destroy many whitetail fawns. One such dairy admitted to "running through the hay-bine" twenty fawns and we are not done making hay. These dairies also destroy countless ground nesting birds (huge decline in turkey numbers) while harvesting hay at an early time. Farmers need to remain competitive and profitable to stay in business. At my age, sixty nine, I would like to be able to use a rifle to hunt deer in warmer months. I find it unfair for bow hunters to hunt for months in decent weather and I am confined to the cold months. I don’t want to take up another sport at my age. I would gladly give up a doe tag for a buck only tag while hunting on my own property if I could use it during September or October. I have attempted to make my property more wildlife friendly, planting trees on some areas. Food plots are planted most years.

Hi, I am a landowner in this unit. Although I only recently purchased this plot of land, myself and a friend have had exclusive hunting rights to it for the past 13 years. I would consider us above average as relates to knowledge of deer management. The amount of trail camera AND physical sightings of wolves on our land has skyrocketed in the past 5 years. Our immediate neighbors have had similar experiences. I know this is something currently restricted on a federal level; is there an avenue to provide empirical data of wolf over population to the USFWS? Myself and my fellow land-owning neighbors would be happy to participate as our quality of deer hunting has significantly decreased over the above listed period of time.

With every year we get these “quotas” but really we need to follow more and more input from us the hunters. Why are we not implementing a 4x4 rule on all buck harvesting? Why can’t we go back to an application for a doe harvest like we did in the past? Online registration of deer is also skewed, because you can’t tell me ever person is registering their kill. I have only been hunting since 1995, but have noticed a steady decline in our local population since some of these new license approvals have been implemented. The 2 questions I have posted above I have asked a lot of hunters and I can tell you there is an overwhelming agreement on both questions. Other states have implemented the 4x4 rule on buck harvest and has seen a lot of success and a more robust population. It also teaches better selective harvest.

I live near a farmer that continuously applies for deer damage permits. Since my land is so near, my hunting land is rendered near useless as the neighbor cleans out the local area. The averages do not represent the results of the local deer hunting experience. The farmer has repeatedly had multiple permits, thus taking many deer. At the same time this farmer does not allow others to hunt on his property. It seems that there may be a better way to control the deer damage permits. The following should be considered: 1) limit the deer damage permit to only 1 permit per year . 2) reduce the number of deer that a permit allows to be taken. 3) contact local neighbors within a 2 mile radius of the crop damage area in question, and offer the local neighbors the opportunity to be issued extra individual deer permits.
I would like to see a program like we had before with earn a buck but instead have earn a doe or possibly 2 buck permits. I think our deer population is fair compared to other areas however I think the population could use a break from any antlerless tags given out. I am a hunter that goes to fill my freezer by in my opinion we need to let the deer population grow for 3 years. I also hunt private primarily but help on deer drives on public and the deer population is not what it once was and I would love to see it back where it was even if that means sacrificing filling the freezer once or twice. A lot of hunters I know feel close to the same way with regard to the deer population. I sincerely hope you consider my opinion to help preserve a Wisconsin holiday that most consider more of a holiday than thanksgiving.

Where I hunt the neighbor has 800 acres of land. He plants 40 acres of food plots as far south on his land as he can. This pulls all the deer away from all the adjoining land. Then he puts a claim in too the Dnr that he is being overbroused. He and the other big land owner neighbor form a co-op and get 25 to 60 doe tags. There group of about ten hunters then go about slaughtering the doe herd at there will and displeasure of all the neighbors who are not seeing deer because they are grouped up around the food source. This has been going on for a quite a few years now. They also try put there high and mighty big buck strategy down every body’s throat. It is a shame that a rich person can control the deer herd in our area. It causes a lot of hard feelings in the neighborhood.

the count of white deer is increasing in this area. It is (beyond) time to allow harvest of these animals. If there is concern over clear documentation of this harvest, the DNR could easily restrict harvest to private lands or even landowners only. along with that restriction, require additional registration requirements with samples for DNR testing or photographs or whatever the DNR needs to better monitor the white deer count. These are not albino deer, they are white deer. I have even seen "color phase" deer with light tan shading in some cases. There are several white bucks per year on my property each year and as they age, they are becoming the dominant deer in the area and are certainly getting their share of breeding done spreading the genetics to more and more does.

I feel the late start to Gun Deer season really affected harvest. The bucks were already holed up with does and we seen very little movement hunting for all 9 days from daylight till sundown. Also the weather affected some of these days as well. We have also seen a decrease in population since the no baiting ban has been in effect. The wet spring and summer made it hard for area farmers to get in the fields to plant and some choose to not plant at all creating less food available for the deer population. The deer harvested in the last few years have been considerably skinnier even though they are mature adult deer. In my opinion again this is due to the lack of food availability. I feel these issues all need to be considered if we want to maintain our deer population.

We noticed if you have that regular season to late. The deer are gone from here. Wood Co. The rut is done with and from that point on we see very-very few deer if any at all. And around here that rut is early Nov. to mid Nov. Like last year the rut around here was mid Nov. When your season started in late Nov. The deer around here where pretty well gone. For the rest of the season. It was slim pickings. If you bring it up to early Nov. We think you will have alot more happy campers out there. Because then they might at least see more deer to shoot. Thank You for letting me put my personal response here.

Having the rifle season over Thanksgiving is a very important part of our hunting history that we wish to keep. Some farmers may complain about too many deer. They should be told to allow more hunters on their land and the population will drop over time. We land owners like having antlerless permits for all in our group. If there are a lot of does, we can try to fill most of the tags. If a sparse population we can leave more unfilled. Foodplotting has helped my small area a lot and it takes some pressure off the nearby farm fields.

I think the recommendations are good for this unit. I wish all of the private lands were allowed to be managed like this. Give everyone a buck and doe tag and let the landowners decide if they have enough deer in their local areas throughout the county to harvest what deer they want. If they have to many they can invite their friends over to hunt and if they have to few they can pass on taking a doe. We also need to harvest some of the white deer. they are getting way to populated. Pretty soon this is all we will have.
I understand that the DNR might close cross bow hunting to end at the month of Oct. I usually do not get a close shot until Nov. If you would close cross bow after Oct. I might as well not hunt. I'm not saying that I wouldn't hunt, but would lessen the chance of a sure shot. I tell my 2 sons and grandson to make sure they have a good shot. I thank you for the opportunity to express my view. Just don't like to have a deer not found and suffer.

Would love to see people actually listen to the sportsmen and women, I can't speak for everyone but from what I have heard people all over the state are saying the same thing they just aren't seeing deer at all. I would like to see a 3 year trial of one either or tag for the entire state Or go to a buck only, that has to have a certain number of points to be shootable. I know other states have done similar and from what I have heard it's worked great.

In my opinion it's real simple you buy Deer license weapon of your choice harvest 2 antlered deer 2 Doe from October 1 to January 1 making 14 days rifle season end of November. Throwing a wolf tag along with it won't hurt that published one bit. I think county management of deer is a poor idea too small of Area it should be more of a region I believe you'll get better results. we do not need to Harvest every living deer that they see.

I have hunted since I was 10 years old, now 59. I see the change in hunters, I raised two boys who shot their 1st deer at 12. no they were not monster bucks but they were proud to take there small bucks home to mom. What have we done, now we teach them to only shoot monster bucks? Were losing our young hard core hunters to the game qdm. Very sad to see this happen, seems now its all about wall hangers and not the hunt.

I would like to see more deer population, I'm a land owner for forty five years and we've progressively seen less deer year after year here in Wood county. Look at your stats from 2008 for the number of deer shot as to recent years. We need less doe permits or no permits for a couple of years to get the herd back up. If you want a holiday season make it limited to bucks and make it a shorter season.

The same answers I answered for Wood county apply to Adams county which I hunt as well and very very few deer the population is not what u think it it way way less and it is making the youth keep interested when out!!!!!!!! Making family's give up and not want to hunt and the damage from wolves are high but is never corrected just keep hearing numbers are up but that's lies

I prefer simple straight forward seasons, dates, and zones. The antlerless zoning is too complex as is in my opinion. I understand the need to get more precise local data, but it is very annoying having to purchase different for tags to hunt land 1 mile north vs 1 mile south. Licenses are expensive enough without having to buy 3 or 4 different doe tags.

There seems to be more and more white deer around the countryside in Wood/Portage counties. At some point, a lot of brown deer will be breeding with the white deer and it will start to effect the overall hunt ability of any deer. It wouldn't be a terrible thing to see the white deer become a target, even if it had to be a special tag applied for.

Private land issues are really concentrating the deer. During the hunting season deer concentrate in certain areas and are not evenly distributed across the deer range. Without giving tags to those individuals with all the deer it will be hard to maintain deer numbers. This problem is not going away and the deer are adopting to this quite well.

I would like to create hunting experiences closer resembling childhood with the ability to see deer and choose the deer that you would like to harvest rather than just settling to see a deer. I believe that we need to control the predators of the deer population to elevate the deer hunting experience.

The wolf population needs to be brought under serious control. Also the social aspect of Wisconsin deer hunting has been lost with the removal of local registration stations. Which also has hurt the local economy. Please bring back the traditional deer season the way it was.
In order to improve the chances of harvesting a buck for any given hunter, the DNR needs to stop looking at the various methods of harvesting deer as separate hunts. There needs to be a limit of one buck per year per hunter, regardless of how the hunter kills the animal.

46 deer per square mile of deer range? No Way. Lived on my land for 25 years, tell me the population has stayed relatively the same? No Way. The deer numbers may be close to where they should be, but they are not as many as you say. My opinion is to slightly increase.

Would like to see a change to the county specific antlerless Private or public tags and change it to central farmland or central forest private or public. The Mead wildlife area is encompasses 3 counties. Marathon, wood, and portage.

Issue one Buck tag per year, per person, to be use on any season. 4-point minimum on one side for 18+ years old. Raise the cost of non-resident tags. Eliminate general crossbow use during archery season.

White deer should be removed from the protected list in Wood County. The population of white deer has been growing dramatically. I saw white deer every day that I hunted during the 2019 gun deer season.

We need to get rid of wolves. If you want more hunters you need more deer. The only way to pursue that is to get rid of the wolves. Plain and simple, make hunting in Wisconsin Great again.

We are seeing about 50% white deer. There are way to many crop damage tags given out in the area. I hunt north of hwy dd off of hwy o. Thank You.

The deer population is too low. The majority of the deer are last year's fawns. That tells me that too many adults are getting killed off! Too many permits are being given out.

The board appears to not be examining the data that shows the deer numbers are declining. though continue to issue the same number of tags which is poor judgement.

Too many white deer in this county. Hunt near Auburndale and Sherry and both areas have an abundance of white deer. and there is getting to be more every year.

Think a point limit for bucks would help the deer herd. Also would avoid people shooting at anything brown. When they perform drives on public land.

I feel that the current management regulations are prudent and reasonably effective. I don’t feel that drastic changes are necessary at this time.

I have noticed a steady decline in the number of deer in the years I have been hunting on this. The last few years, I saw few to no deer at all.

I would like to see an option for white deer. I have see many out of my stand and there are becoming herds of white deer pushing brown ones out.

Harvesting white deer (not albino) needs to be addressed. They are very popular and in the future they will be dominate color. Thank you

Open a month long wolf season in 2020 with no limits. Limit one deer tag per person per season. Stop killing does for 3-4 years.

Allow feeding on Wood county. I’d like to use a bait pile to eliminate garden damage and eating of my very expensive bird feed.

Why not issue a deer damage license. The farmer could use it control damage. You use it as a "take a kid hunting" bonus tag.

2019 was the worst year to date for deer seen. I can't bring myself to kill a doe knowing I'm most likely killing 3 deer.

The online public comment form is the primary means by which CDACs receive feedback on their preliminary recommendations. While many of the responses can be aggregated, the results should not be treated as representative of the general population. In most cases, results are skewed towards more avid hunters. Furthermore, small sample sizes within each county preclude statistical inference. Rather, this input should be regarded similarly to that of in-person or written testimonies given at a CDAC meeting.

223 forms were submitted for this unit.

Section 1: Information about who provided the input.

1. Why have you chosen to provide feedback about this Deer Management Unit? (Check all that apply)
   - I live in this unit: 93
   - I visit this unit for non-hunting purposes: 54
   - I hunt in this unit: 207
   - General interest in this unit: 40

2. In this DMU, what type of deer hunting do you do? (Check all that apply)
   - Gun: 198
   - Bow: 119
   - Crossbow: 76
   - Muzzleloader: 71

3. How many years have you hunted deer in this unit?
   - Minimum: 0
   - Average: 25.84
   - Maximum: 63

4. Which statement best describes where you deer hunted in this unit last season?
   - Exclusively Private Land: 72
   - Mostly Private Land: 42
   - Public and Private Land About Equally: 25
   - Mostly Public Land: 18
   - Exclusively Public Land: 50
   - I did not hunt in this unit last year: 0

5. How crowded with other hunters did you feel while hunting on public land in this deer management unit?
   - Not at all crowded: 4
   - Not too crowded: 27
   - Neither crowded nor un-crowded: 27
   - Somewhat crowded: 28
   - Very crowded: 45
   - Not applicable: 4

Section 2: Perceptions about the number of deer in the unit.

6. Based on your observations throughout the summer and fall of 2019, how does the deer population in this DMU compare to the year before (since summer/fall 2018)?
   - Many Fewer: 42
   - Fewer: 60
   - Same: 62
   - More: 42
   - Many More: 16
   - Unsure: 1

Section 3: Feedback on the CDAC’s 2020 preliminary recommendations

7. In your opinion, how would you rate the antlerless quota recommended by the CDAC for the 2020 season in this unit?

<table>

10. Depending on their location, their population objective, and their antlerless quota, CDACs may also recommend some additional season framework options.

If a DMU is in a Farmland Zone...
Implement an ANTLERLESS HOLIDAY HUNT: Not applicable in this DMU

If a Holiday Hunt is held in a Farmland unit...
EXTEND the ARCHERY/CROSSBOW SEASON to Jan 31, 2021: Not applicable in this DMU

If the Population Objective is not "Increase"
Adopt an ANTLERLESS ONLY SEASON FRAMEWORK for ALL Deer Seasons:
24 | 174 | 25

If a Zero Quota (buck only season) is adopted...
...should JUNIOR ANTLERLESS HARV. AUTH. be VALID or NOT VALID in the unit?
106 | 94 | 23

11. How important were each of the following concerns in forming your opinion about the CDAC’s recommendations for this unit? Scale: 1 = Not-at-all; 2 = Slightly; 3 = Moderately; 4 = Very

Report Generated: Friday, May 01, 2020
Wood, Central Forest
Since 2007, the post hunt estimate number of deer in the Central Forest has fallen from 12,400 in 2007 to 9,000 in 2012 to 7,900 in 2015 to 7,000 in 2019. As you can see, the number of deer has steadily decreased. However in the corridor of property that lies between Hwy 73 and Hwy 54 there has been a substantial increase in the number of deer seen. This area is principally private land and the landowners there have been unable to harvest the increasing number of antlerless animals because the area is in the Central Forest Zone and the harvest of antlerless has been restricted. This corridor includes a substantial amount of agricultural land. Most of the deer living in that strip are capable of eating agricultural forage. Because the deer harvested in that area of the Central Forest, where the population is much too high, are included in the general counts for the Central Forest, the total population estimates for the Central Forest are skewed toward a higher total number of deer in that zone.

However the number of deer south of Hwy 54 to the county line have continued to show a decrease in numbers as represented by the harvest as well as reduced sightings particularly along the roads in the area. The Wood County CDAC has requested the DNR realign the zone and move the property north of Hwy 54 into the farmland zone. This request has been denied each year. The deer population in the corridor are eating their homes literally, as well as increasing the opportunity for CWD to pass into the Central Forest and then into the Wood County portion of Central Farmland. The dnr biologist for the area does not feel there is a shortage of winter browse to explain the loss of deer numbers since 2007. I suspect the combination of predators, bobcat, bear, coyote, wolf and our hunting has contributed to the overall decrease in numbers of deer available for seeing or harvesting. The combined archery totals, (bow and xbow) for 2019 reflected a 19 percent decrease in harvest from the 2018 season. This represents to me, a general decline in the availability of animals for harvest. The archery season is not dependent on two weekends where weather may skew the harvest. If they are not there for over three months of the season you can’t reasonably blame the weather. Fawn to doe ratio from 2014 to 2019 indicate the survival in the Central Forest is significantly less than in Central Farmland. Using the deer metric information provided, the average ratio for the farmland zone is 0.95 for those six years while the central zone is 0.82. Multiply those by 100 and you will see 13 fewer fawns in the forest. If the fawns are half does and half bucks there are six or seven fewer does per hundred adult does to replenish the herd in the forest zone. Across the six year time frame that is 36 - 42 fewer does. Our plan to maintain or increase has failed miserably, in my opinion, in the Forest Zone. In the Farmland Zone in Wood County in 2007, the post hunt estimate was 9,900, in 2012 10,900, in 2015 9,900 and in 2019 12,900. We have managed to increase the post hunt herd estimate by 3,000 in Farmland and decrease by 5,400 in the Central Forest. Something has gone seriously wrong. I would prefer to see a deer I can’t harvest to not seeing a deer. I understand the problem of boredom for a young hunter and the disappointment from the lack of an opportunity to harvest their first deer. Unless, or until, we can determine why the Central Forest herd is declining, and initiate a working remedy, in my opinion, we cannot recommend antlerless harvest in the Wood County portion of the Central Forest.
I’ve been hunting the Wood County forest unit for approximately 10 years now including the 2020 season. In that time span I’ve hunted only public land and have hunted just about every chunk of available piece of public land I can find, I’ve bow hunted it and gun hunted it. In I would say the past 4-5 years I’ve been seeing less and less deer harvested. I base this off of talking with friends and family from the area and what I see on the back of people’s trucks during the seasons. I watched the video and observed the numbers and I do understand there are a lot of things to take into account when making a season but I can also tell you that I’m seeing a lot of people disgusted. I know of many hunters who have hunted their entire lives they are now in their 50-60s and they say it’s just not worth it anymore. To me that’s horrible. I grew up hunting in the southern part of the state before I relocated to Wood county. It’s a totally different way of hunting up here compared to there! It’s a challenge but it makes for a thrill! I would say about 8-10 years ago on average I would see maybe 100 deer during the deer seasons. That number maybe a little shy but not much. I walk a lot and cover a lot of ground while out hunting. The amount of deer sign and deer I’ve seen in the last couple years is dwindling. Last year alone I saw 2 deer during the gun season (9 day) and they were racing across a ridge line while I was getting ready to pack it in for the afternoon. (Had spouse obligations to attend to) I’ve seen some super nice bucks in the years I’ve hunted in Wood county and I used to see some phenomenal bucks on the back of truck beds, but the last couple of years it’s empty truck beds and hunters going home empty handed. The amount of Illinois hunters I have seen the last couple of years seems to have increased. I propose a season or a time where residents get a chance at the big bucks that still linger in the county before someone who is a non resident comes and takes the big buck because he crowds you out of your spot. Hunting to me was always about the time with family and friends and the stories! With the lack of deer being harvested people are “throwing in the towel” sort to speak. The little dinners and bars are seeing less people. I do believe that getting rid of deer registration stations was a huge mistake on the states part! I lost count of how many people I’ve talked to about how they miss pulling into the gas station to gather around a truck with the monster booner someone shot and the story that went with it. That to me was hunting, it was something you looked forward to! I know it says to stay to the topics of the county but it is part of my comments. I hope in the seasons to come I can see things turning around. The numbers coming back the deer population growing and the true spirit of the Wisconsin hunter as I like to call it come back alive! Thank you for your time and consideration!

In the last 5 to 7+ years, the hunting in the Forest Cropland area west of Pittsville has changed dramatically. The number of deer sightings are way down. This seems to somewhat match up when we first began to hear and observe wolves in the woods. Every year we now regularly see wolves in the woods while hunting, and saw our first cougar last bow-hunting season. Personally, I have had wolves cross my stand 3 of the last 5 years on opening morning - - the kiss of death in having any expectation of a deer coming through with the wolf scent prevailing in the area! The deer are either less in number or have taken a very nocturnal approach, other than during the very brief period of the rut. It is fairly rare to sight fawns in the woods. Due to the boredom of hunting day upon day of not seeing deer, the number of hunters during the rifle season has decreased dramatically. The younger hunters, which is the future generation of hunter, are losing interest - - understandably.

As a former Wisconsin resident now living in another state, over the past two years I enjoyed hunted on my relatives private land in Wood county. This past year hunted both bow and deer. Noticed a large increase of antlerless deer from 2018 to 2019. I usually saw over 10 antlerless deer a day under and around my stand. No bucks. Neighbors corn field was tore apart from the deer. If Wisconsin’s past winter was mild and with very little hunting pressure I believe Wood county will have a serious over population of antlerless deer. Most of the hunters I saw were over 60 years old and hunt less while most of the younger generation is not interested in hunting. Because of the coronavirus the state will have less hunters this fall so I believe the hunter who purchases a deer bow or gun permit license should include both antler and antlerless deer. If not I believe the antlerless deer population will exploded. Thanks for your time and opportunity to provide feedback.
It would be nice to bring back baiting. It gives people a better chance at seeing deer, along with getting youth more involved and keeping them interested. Back when I started hunting, we seen WAY more deer than now. Why is there the need to keep coming up with these plans for the deer herd? Let's go back to the way it was, when you used to go out and see 10+ deer nightly. I miss those days and my kids do not believe that is true. There are weeks where I go and only see 1 or no deer, and I'm not the only one. Let go back to either-or tags, applying for them, it was tradition. Get rid of these doe only hunts, that's what got us in the position we are in. I would like hunting to go back to "providing for our family" or "a ways of food" instead of how it is now, all for sport. If your like me, I don't care how big the buck is, i just want venison in my freezer to enjoy. I want things to go back to how it was, 15-20 years ago.

I've hunted this area all my life. There was a time when deer were numerous and hurting the habitat. However, several years of overabundant harvests decimated the herd to the point where the population is so low now that depredation seems to be wiping out most of the fawn crop. I see very few deer and almost no fawns. It is common to hear wolves howling. One evening last year, I saw a group of five wolves and could hear at least two more howling in the distance. A pack that size can devour 150 deer annually. It's no wonder deer have become so scarce. I'd like to teach my two grandsons to hunt but I'm afraid there wouldn't be enough deer sightings to even make it interesting. I've been fortunate enough to get a buck each of the last two years but in both cases, it happened during the rut and they were the only bucks I had a chance at all season. To be honest, expectations are now so low, it's getting boring.

I stay well informed on data. Antlerlerless permits had a direct effect on my hunting. In recent years it was a competition to get online to get a permit.I am a disabled hunter and receive an antlerless permit every year. I rarely harvest a deer because of the states ignorance against disabled hunters. Juneau county forest director says he doesn't care if I use my handicap scooter. Wood county forest director won't let me use anything. There is no consistency. The state of Wisconsin makes you fill out a form to use an atv to hunt the area you want to hunt in and you are limited to that specific area. Anybody that hunts knows that you set up different areas to weather conditions. These factors have a direct effect on my deer harvest. Sandhills basically told me that old people shouldn't be in the woods. Although I have obstacles to overcome and shall overcome. Thank You all for what you do.

Never see such terrible hunting in wood county in the 90s when we drove to our hunting area it's was nothing to see a free hundred deer in the 2.5 hr trip now on the same trip if u see 6 it was alot,on opening day it was pretty typical to see 15-25 deer on public land now on opening day I hope to see 3 deer.also shooting on the opener used to sound like a war zone now maybe 20 shots on opener.still plenty of orange in the woods just no deer.i honestly think everyone involved in deer management should no longer have a job.it seems no one listens to hunters only animal rights activists and insurance companies.i fear the rest of my life hunting will never be as fun as I was 25 yrs ago.i also think that youth hunters should only get a doe tag their 1st year,why should my neighbor with 4 kids be able to shoot 8 does a yr and I can't even get a tag....... rediculous

I know the overall kill was down this year but I still believe there is at least a stable if not growing population of deer out on the public lands in southern wood county. We had a late opener this year and the marshes were so wet it was almost impossible to access places that you typically could. The population is not unreasonably high or to high either, but I would sure think after countless warm winters in a row and essentially no doe hunting on our public lands for several seasons there would be enough deer out there to allow a few doe tags. There is roughly 60000 acres of public land in this part of the county and not a single doe tag? Other than a terrible winter scenario that kills many deer I cant imagine how giving out a few hundred doe tags would hurt the population across this huge area of land. Thank You for your consideration.
During the 2019 season, I saw more white deer than I did ones that were brown and legal to harvest. While I saw an ample amount of deer, there were plenty that were not able to be harvested. I believe the DNR needs to reconsider allowing hunters to take white deer as the population is increasing in Wood county and other counties as well. If the population of white deer is allowed to continue to grow it will affect quota numbers in the future as there will be more deer but less available to harvest. As this is a genetically recessive and inferior trait found in the deer, allowing it to be this widespread affects the population as a whole. There are many hunters in this area that are also frustrated with how the white deer population is being handled, along with how the wolf population is also being handled.

500 antlerless bonus tags for private land and none for public is unreasonable. I see a lot of deer North of hwy 54 and south of hwy 73 which about the northern 1/3 of the Central Forest Zone. Wood CDAC wants to have the Farmland zone border moved South to Hwv 54 but that is not the reality we are dealing with for the 2020 deer season. For the 2020 deer season this area between hwy 54 and hwy 73 will be Central Forest Zone and needs to have antlerless bonus tags available to the public. The Public land in Wood County Central Forest Zone North of hwy 54 contains roughly 33 square miles. The Public land in Wood County Central Forest Zone South of hwy 54 contain roughly 63 square miles. The public land in the upper 1/3 of the Unit which contains a lot of deer can't be ignored. How about opening a season on wolves, kill more bears and coyotes. Deer numbers are not growing...at least not in the area I hunt. I listened to the helicopter report that was done near Sandhills. A lot of that area has been logged, so there is probably more food during February. I think these deer may concentrated because of this. I hunt these areas during the fall and am lucky to see a deer. Gun season was great, weather wise, and the bucks were still rutting. I was fortunate to shoot a buck, but the deer I saw were extremely concentrated. When I hunted away from that concentrated area, deer sign diminished greatly and I saw no deer. My opinion is based on boots on the ground, not helicopters in the sky. The deer numbers are hurting! Don’t shoot any does please.

The north and east edges of the current Central Forest Zone are heavy to private land ownership and have a different deer demographic than the public lands. There are more deer on these private lands than on the public lands. To properly manage the herd, the number of antlerless permits should be increased and the overall kill should be increased. The easiest way to do better manage this zone, and the statewide herd, would be to give us a longer deer gun hunt, starting the first week in November and ending the Sunday after Thanksgiving. That will give gun hunters a more fair chance to get a deer. This means the bow hunters will have to share the rut season that has always been exclusively theirs. It's time they shared the prime time.

The percentage of available antlerless harvest authorization for Wood County Central Forest Zone should match the Public land 28% vs Private land 72% percentage. Which is 360 for private and 140 public. Wisconsin’s wildlife is for all the residents to enjoy not solely the private landowners. The US and specifically Wisconsin is steeped in tradition and statutes insuring public access to land. A few examples are County Forest Lands, State of WI lands, Wisconsin’s Navigable Waterway statutes, Tax laws such as Forest Crop Law and Managed Forest Land Open. Don’t hamstring those hard fought access opportunities by such a severe allocation discrepancy of 500 private to 0 public antlerless harvest authorization.

I continue to see a dramatic increase in deer population in and around our property in Wood County. Last evening, for example, there were 22 deer in the field to the northeast of my property, 15 deer in the field behind my property, and several (I was too far away to count them, but likely 7-12) in the field across the road from my property. Over 40 deer in an 80 acre area is excessive. We see very large groups of deer in many of the fields in the area. The herd is simply too dense to sustain a healthy population, there has been significant crop damage and landscape damage, and the population is soaring. There needs to be some reductions in the herd to maintain a healthy, sustainable habitat for all to enjoy.
The DNR has to wipe out the wolves or you will never gain a herd back. The DNR wiped out the deer herd 20 plus years ago. With no deer, no hunters, no business for local communities. This has definitely ruined the economy for the people in small business trying to make a living in the area. From Bars to restaurants, convenience stores, motels, you name it. We hunt and live in Crawford County. over the years we made lots of friends in the area. We go up for a kind of a vacation, but we would still like a chance to see a deer and maybe even shoot one, but i bet it's been 10 or more since we have bag one and we are thinking of stopping the tradition because of the lack of deer.

In terms of deer population, last year was one of the worst I have experienced in the recent past. I had many more trips lead to seeing no deer this past year, in comparison to recent years. The buck population was non existent. I never even pulled my bow back last year or even considered pulling it back. Gun deer season was about the same. There was never an opportunity for a deer bigger than a spike, in the bow season. There were even trips when I would see more wolves than deer. For context of my comments, I am not a "trophy" hunter, but also spend more time in the woods than most. I just want to see more deer. Thus, I would really like goals on increasing the deer population. Thank you!

Ive been hunting in this unit for 27 years and its the worst ive ever seen that is seeing nothing. Ive got 5 hunters in our hunting party 49,20,26,16,15 And no one has had a chance to harvest a deer . Old hunters have no doe tags . Only 50 offered. and young hunters just like us are just not seeing deer . Going to be hard to keep them interested in deer hunting. What we all have in common is wolf watching. We all had wolves running around below our stands . Wish i had all the answers , for wood county forest out on Seneca rd its hit a rough patch . I would like to see back tags and in person registration reinstated. Good luck youve got your work cut out for you.

We have 20 acres, Metro management had been here the last five plus years but only harvested one deer and rarely decide to hunt. In the last two years it has become the norm to see dozens of deer on our field and the neighboring 20 each day. As I understand herd health, it appears there are too many in this location. I don't know if it's because it's in the Village and the metro management is simply not sufficient, but our apple orchard, soy bean fields and surrounding area seem to be very over populated and under hunted. We have asked for nuisance tags, which gets circled back to metro, who don't show up, and on and on it goes.

I as long time hunter of this area am very concerned about the deer numbers with the c d a c committee giving a low number of anterless permits herd population seems to be just holding on not gaining any more deer it is apparently that there is a severe predator problem here as the amount of tracks and scat with deer hair in it. I'm very concerned about the future of hunting it's no wonder hunter numbers are down and also you don't see many younger hunters can you blame them I often think about what it used be like while I'm hunting seeing very few deer. We need better predator control. Thank you

I live in Marathon County and drive through Wood County daily to get to work. I've been doing this commute for 10+ years. I saw more vehicle caused deer deaths in 2019 than I have in the five years preceding it. I also saw more anterless deer opening day (rifle) than I have in years. If anything, I suggest an earn a buck program one of these years to keep the anterless deer herd in check. I also believe the rifle harvest numbers were down in 2019 due to the rifle season being too late in the month of November, e.g. the majority of the rut occured outside of the rifle season window.

I just wanted to say though I'm not a man good with numbers I trust in you the DNR research team that you will put the right management into play! I want to thank you all for what you do! Thank You Scott D Dye  P.S. If there is any like watch and give numbers activities you have going on I am not just an avid hunter I spend numerous hours in the woods watching all wildlife and teaching my children about how to properly treat the woods and wildlife I would love to help out where I could!
Regarding baiting restrictions where it is not allowed and the continued disregard for this ruling by many puts the legitimate hunters at a substantial disadvantage. The fact that the local gas stations sell “deer corn” in an area where baiting is not allowed demonstrates the lack of regard for the restrictions by the community as a whole. A couple of well timed visits to the establishments with follow up would set the tone that the restrictions will be enforced and that the DNR is serious about enforcing their rulings.

Go back to crossbows for seniors and handicap. Stop all gun seasons except the 9 day. The youth need to learn the traditions of deer hunting. Giving them a doe tag is enough. Getting hunters back in the woods during the 9 day should be more effective at deer harvest. With recent very low hunter number during the 9 day. Deer movement is minimal. All the different seasons have limited success on controlling numbers. All it has done is hurt the other hunters who have to wear orange during most of the fall (bow hunters).

The herd estimate for the state was WAY OFF! I remember in 2000 I believe the herd was estimated at 1.5 million deer. The farm fields were full of deer. Hundreds of deer before dark and dusk and hunting in Wood County central farmland (57C at the time) was awesome we had doe tags and bonus tags and there were a lot of deer and we got a lot of deer. There was no way there was 2 million deer in Wisconsin last year, not even a million. Those same fields had maybe 5 or 10 deer in them not hundreds like in 2000!

The presence of wolves and their impact on the deer population is ruining deer hunting in central Wisconsin. If wolves benefit the ecosystem please introduce them in Buffalo County and see what hunters have to say. I personally have seen the impact having hunted since I was 12 years old in the same area and to see 1 to 2 deer all season means there are no deer around, but seeing multiple wolves tells me why. Mistakes were made reintroducing the wolves, do something about it if you want to keep people hunting.

Please do SOMETHING about the EXCESSIVE numbers of WOLVES in the State. In Wood County while Bobcat hunting in the Dexterville and surrounding areas, there is much evidence of excessive numbers of Wolf tracks and Wolf deer kills. The Wolf numbers have gotten way out of line compared to what was originally suggested, in numbers of packs that are around. They need to be controlled better. They are also causing a number of excessive kills on dogs and other farm animals. Thank you for considering this...

Should we also be Concerned about quality deer management. How about we put some antler restrictions in place. Six points or better for a buck. Or how about we do an either or tag, were you can harvest a doe or a buck but only one. That way a guy has the ability to choose if he wants to harvest a doe or up on if the numbers work out. But I would really like to see some sort of quality management increasing.

The central Forest is loaded with antlerless deer on both public and private, the quota or lack of has decimated the buck population forcing hunters to take only bucks. The crossbow seasons is way to long and needs to be adjusted and brought into line with gun hunting. I own 80 acres and can see 20 deer a night all antlerless. We need to get the politics out of management and realize how losing hunters will hurt our economy and the wildlife population.

I feel as if the CDAC is on the right path with getting the Wood County Forest Zone back to where it needs to be. I’m seeing efforts and ideas come alive from year to year. There are a lot of predators in this zone and that has an enormous effect when trying to bring the deer herd back. We still have work to do, but I am happy with the results that I am starting to see. Keep up the good work and lets all make the deer population get better together!

Used to see in Wood County in earlier years 4 or 5 in a group. I have not seen more than 10 deer per season in the last few years. The idea of seeing 1 deer per hour would be a dream come true. I normally hunt from daybreak to shortly after 4:00 PM 8 days out of the 9 day gun hunt. I hunt alone and do not take mid-day breaks. Lunch is in my stand. Am 77 and plan on giving it a go in 2020 as well the next coming years if able.

The bad thing is your zone lines why would you make farm land into forests zone and than give out ag tags to farmers the deer don’t just come on that land To eat My thoughts are the country line between wood and Jackson. Jackson forest zone all wood ag zone and give less ag tags years farmers let you hunt now they get ag tags and tell you that all for buddy’s That is if you need ag tags than it farm land not forest land
2018 archery and gun season was great where I hunted in wood county. Would see deer every time we went out. 2019 was completely different story. Cross around didn’t change and hunting pressure was the same. But the deer weren’t there. Me and other hunters in the area are shrugging our shoulders. Do not split up the crossbow season. Should be no reason guys who can’t pull compounds back should have to take a back seat.

I feel like the wolf population is getting out of hand in this DMU. This is directly affecting the amount of deer not being seen or harvested during the hunting season. I have gone two seasons now without seeing any deer at all. I hunt in a group of seven and in the past three years, we have seen a total of 5 deer, harvested one. I believe that this is because of the ever-growing wolf population in the area.

We have been buck only for 5 plus years now and no one see's bucks year after year but we see plenty of doe's. You guys have RUINED deer hunting for everyone and we are all sick and tired of the Wisconsin DNR. It's obvious why younger generations are on the decline because you dont give anyone a chance to harvest a deer anymore during the gun season. MAKE IT SO WE CAN HARVEST DOE'S AGAIN!!!

Thanks, In my personal opinion the bow season is too long, the traditional gun season fluctuates per Thanksgiving week. I’ve personally only used my muzzleloader during all of gun seasons for over 5 years. I would like to see an opening day early to mid November for gun season, no matter what day it falls on. Give the option of longer seasons to firearms hunter’s not just bow hunters.

I saw only 1 deer last year on opening day and that was the 4 point buck I got and I hunt on 160 acres of private land. I would like to see baiting allowed on a limited basis. I hunt only with my brother-in-law now and I understand that if u get a deer u cant be in the woods to help out the fellow hunters in your group. Tried finding that rule in the rule book but was unable.

After hunting central forest public lands for years, its gone from bad to worse. So much land which is nice, but so few deer. Very little hunting pressure because people know it’s hard to shoot a deer in this area. Also been very wet last few years which makes it harder. Should be no does shot in this area for a few years in my opinion. Thanks for letting us comment!

You are proposing 0 public tags and 500 private tags. As a person who hunts with her family on public land in the unit I feel that is grossly unfair and unreasonable. 28% of the land is public, so 28% of the tags should be public. I do not have any connections to be able to hunt private land. I would ask that you make 140 of these tags public. Thank you for your time.

The predators are keeping the deer population in check in the Wood County Central Forest. No question there are fewer deer than in the 1990s, but the quality of the deer is better in my opinion. Make the antlerless harvest for young people to encourage them it get out and hunt and help put food on the table. Give more tags for public land and less for private land.

The wolf population / predation really needs to be addressed in Wood Cty - Central Forest region. I've captured wolf pics on my trail cameras multiple times (private property) and have witnessed deer kill sites (3). Also, friends have shown pics taken on iPhones of packs of wolves standing underneath their tree stands during hunting sits. Verrrrryyyy un-nerving.

It’s time to get deer numbers up on public land. Let’s start by putting physical tags on the deer. Let’s lower the Doe permits issued. I take my children hunting and it is hard to impress them with out seeing any deer. If you want to recruit new hunters, keep old hunters, and make hunting fun again it’s as simple as putting deer back in the woods.

Ten years ago antlerless quota was too high. It brought too many hunters to the unit and then the wolves moved in and destroyed the deer herd. Going from seeing 20 to 25 deer in three days of hunting to seeing none tells me that an over kill of antlerless deer and wolf predation has drastically reduced the deer population in southern wood county.

<tbody>
<tr>
<td>10825</td>
<td>I live in the forest zone. North of HWY 54. I have way too many doe on my property and can never get a doe tag. I will not pay $12 for a bonus tag. I think HWY 54 should be the new boundary line between the forest and farmland. You should check the herd population in this area as it is high. Also way too many WHITE deer populating this area.</td>
</tr>
<tr>
<td>10826</td>
<td>The crop tags for this unit, specifically those granted to cranberry farmers has become a problem. The means of hunting for these tags is not policed, and there remains no direct analysis of the damage done to cranberry fields, and the overall negative impact of removing that deer from the population as it relates to other hunters.</td>
</tr>
<tr>
<td>10827</td>
<td>make deer management central forest zone1 central farm land zone 2 and central farmland zone 2 ALL ONE ZONE the way it is now is not working no one wants to hunt and the older people are not hunting because they have a hard time figuring where the line is and if they shoot a deer and goes in the other zone do'nt know what to do</td>
</tr>
<tr>
<td>10828</td>
<td>Stop issuing tags for does the population is decreasing and is against the maintenance objective. I can only imagine what will happen after a severe winter as the deer population is decreasing during good to moderate years. Yet the board continues to issue the same number of tags. This is not s good practice stop the tags on doe.</td>
</tr>
<tr>
<td>10829</td>
<td>More doe tags for public land and get them in the hands of the young people so we encourage young people to hunt and put some food in the freezer. The wolves have thinned the herd compared to the '80s and '90s. There are fewer deer but the quality of the deer is better in my opinion.</td>
</tr>
<tr>
<td>10830</td>
<td>We are seeing way more deer than ever. Thankfully we had a mild winter or we would have seen a lot of starvation. We have been hunting the same land for over 40 years. We practice QDMA and are stewards of the land. The state/DNR need to allow hunters to harvest more antlerless deer.</td>
</tr>
<tr>
<td>10831</td>
<td>I would like to see more deer on the land. Then you will have more young hunters and more hunters period. We can't shoot alot of Doe's and expect to have the number of hunters. Deer numbers are not there period. And making the seasons longer is not the answer I don't like that at all.</td>
</tr>
<tr>
<td>10832</td>
<td>It is very hard to regenerate a young forest with the amount of deer browse present in the wood county forest zone. I think they should be giving out more antlerless tags for public land in this zone to try to promote the regeneration of young forests.</td>
</tr>
<tr>
<td>10833</td>
<td>With cross‐bow hunting becoming more popular and accounting for higher numbers of deer harvested by bows, I believe that some adjustment may be necessary, in the future, to the length of the bow season. I hunt in the Central Forest, zone 1.</td>
</tr>
<tr>
<td>10834</td>
<td>Older landowners who can’t figure out how to get a tag online are always out of luck we never have a chance to get a tag and we are feeding these deer. There should be something like years ago when we could go to the dnr office and get a tag</td>
</tr>
<tr>
<td>10835</td>
<td>Zero antlerless public land tags is ridiculous. For the low success rate across the twenty five 2019 antlerless tags issued, you can afford to provide 25 for 2020. Cut back on the private tags with the higher harvest percentage.</td>
</tr>
<tr>
<td>10836</td>
<td>How can it possibly be justified to propose all of the antlerless tags going to private land and none to public land? The antlerless tag distribution should match the hunting land available: about 1/4 public and 3/4 private.</td>
</tr>
<tr>
<td>10837</td>
<td>I have observed a lot of Wolf sign/activity, and less deer sign/activity on my property in the Central Forest Zone. Please consider more research in order to more closely establish REAL deer predation by wolves.</td>
</tr>
<tr>
<td>10838</td>
<td>The public vs. private land tags are ridiculous. I can have a private land tag and kill a doe, but not kill that same doe on public land 400 yards away. It's nonsense, and it happens a lot in the forest zone.</td>
</tr>
<tr>
<td>10839</td>
<td>The number of antlerless tags available for private and public land should match the amount hunting acreage available. Why would there be 0 antlerless tags available for public land? That is ridiculous.</td>
</tr>
</tbody>
</table>
Baiting deer should be all or non, not amu specific, sometimes not baiting does not allow any deer sightings at all, better to have off ground baiting so they are not investing fecal matter while eating.

Why can cranberry company shoot all the deer they want and let them spoil and rot and those of us who pay for a license can't even see a deer because there at are none left? I don't think that's fair.

With tens of thousands of acres of public land a small quota on public land will not impact the deer herd. Not providing a quota only impacts the number of hunters and takes away opportunity.

My group of 6 to 8 hunters makes deer drives in the Wood County central forest unit at least three days out of each gun deer season. We very rarely see fewer than 20 antlerless deer per day.

I believe we need to regulate the number of non-residents we allow and up the cost of a tag. I do a lot of out of state hunting and tags cost way more and there are limits on non-residents.

The wolves, coyotes and bear have had a major impact in the Juneau and Wood counties! The fawns don't have a chance to survive. I don't see heavy hunting pressure after opening weekend.

The doe to buck ratio favors the doe's by an extreme amount. There are very few shoot-able bucks. Would like to see you bring back a doe tag for this area for a one or two year period.

The amount of white deer in this unit has tripled in the last year. Why are we protecting a genetic mutation? We need to get rid of them not protect them.

I hunt on both private and public land in the Wood County Forest Zone. I think there should be some antlerless tags available for public land.

After several years of low number of tags the deer population is not responding. What is the problem?? I think it is too many predators.

I would like wardens to check the area around the hemlock creek, as there is a lot of people hunting, with no regard for the law.

There are plenty of antlerless deer that could be harvested. Make more bonus permits available for more hunting opportunities.

1 buck tag and 1 doe. Buy a tag for rifle get 1 doe tag just for rifle. Buy one for bow get 1 doe tag for that. Simple as that.

There is a lot of predators in the hemlock bottoms and the owl creek basin. Also a lot of illegal activity.

Thank you for your hard work and detailed understanding of the population. And giving us a voice. Great presentation!

With the amount of public lands acreage in this zone the proposed antlerless quota (zero) is a disappointing misstep.

Stop the doe hunts and let's get the population to grow. Sick of not seeing deer like I did when I was a kid.

This unit is a difficult one for sure. I see plenty of does on private land around the casino.

There are lots of does in this zone not a problem see 10 plus does in a sit and very few bucks.

In my opinion the antlerless permits for wood county central forest zone is way too low.

Overall saw more deer in 2019 than 2018 and prior years so i feel herd is doing well.
way to many predators seen bobcat coyotes wolf and bear more predators than deer

I've been seeing less and less deer every year and more big predators in my areas.

Thank you for allowing outdoor enthusiasts to voice an opinion.

Wolves and bears have to be part of the problem.

Leave the hunting seasons as they are.

Limit crossbow harvest!

to many predators

None at this time.
