Epizootic Hemorrhagic Disease (EHD) surveillance in Wisconsin white-tailed deer
August, September & October 2012

Legend

- **= County with confirmed EHD case**
- **1** = # of deer confirmed positive for EHD *Wildlife Health has received positive EHD test results*
- **1** = # of deer suspect for EHD* sick/dead deer reports are consistent with EHD but no samples were available for testing

*After a county receives a positive EHD result no additional tissues will be collected from that county but suspects will continue to be tallied*

*Reports of dead deer not consistent with EHD as the cause of death are not included on map.*
