

Cedar Creek at Covered Bridge Rd

Road Salt Monitoring Data Summary February – December 2011

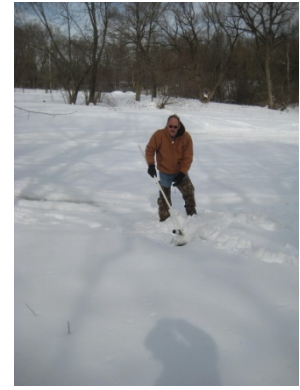

Photo by Jim Gennrich

Volunteers: Jim Engstrom and Jim Gennrich

Specific conductance summary:

- 12 measurements taken
- Minimum: 620 $\mu\text{S}/\text{cm}$ on 4/10/2011
- Maximum: 1190 $\mu\text{S}/\text{cm}$ on 2/17/2011
- Mean: 837 $\mu\text{S}/\text{cm}$

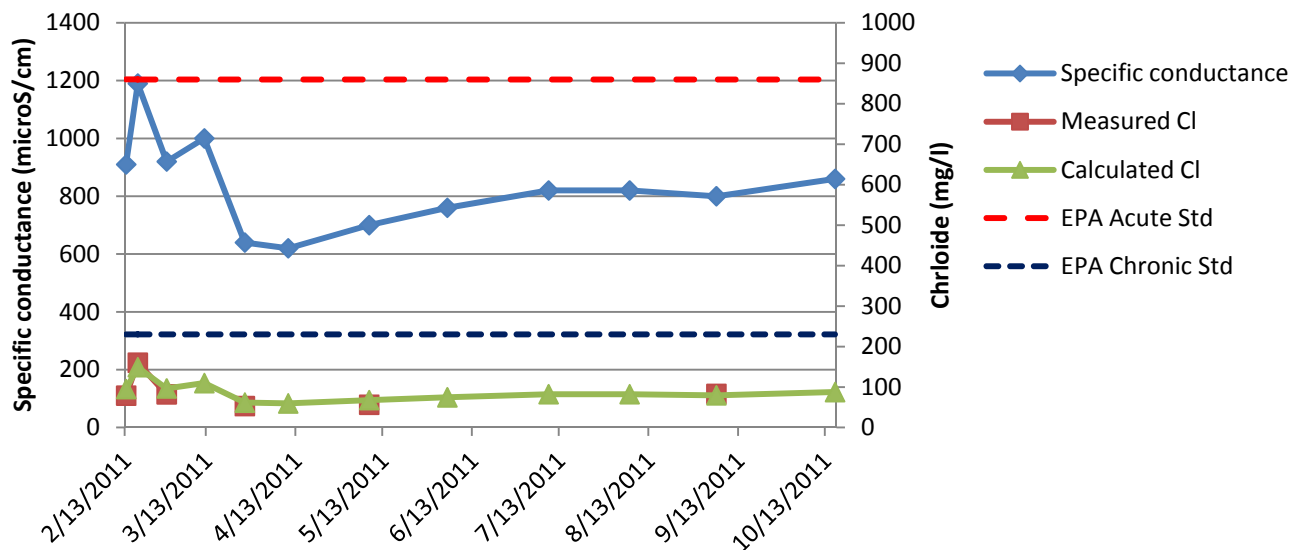

Chloride (Cl⁻) summary:

- 6 samples collected
- Minimum: 52.9 mg/L 3/26/2011
- Maximum: 160 mg/L 2/17/2011
- Mean: 85 mg/L

EPA Acute and Chronic Standard Exceedences for Chloride¹:

Neither the EPA acute chloride standard of 860 mg/L nor the chronic chloride standard of 230 mg/L was exceeded at this site based on volunteer monitoring in 2011.

Results Over Time²:

¹ Acute standard: The one-hour average should not exceed 860 mg/L more than once every three years. Chronic standard: The four day average should not exceed 230 mg/L more than once every three years. Source: EPA. 1988. Ambient Water Quality Criteria for Chloride. EPA 440/6-88-001.

² Calculated chloride: When $\text{SC} > 1540 \mu\text{S}/\text{cm}$ was $\text{Cl} = 0.3441 * \text{SC} - 291$, $\text{adjR}^2 = 0.98$; when $\text{SC} \leq 1540 \mu\text{S}/\text{cm}$ was $\text{Cl} = 1.044 * (\exp(0.001609 * \text{SC} + 3.046))$, $\text{adjR}^2 = 0.65$. Equations based on data from both Madison and Milwaukee.
