

Wisconsin Department of Natural Resources SWIMS Project Summary

General Project Information

Project ID: ARRA_Project13 WTDM
Name: ARRA 13 Sauk Co. LCD Dept. Clark Creek Grant 2P-00E73201
Type: Grant Project
Subtype: ARRA Pass Through Project
Status: ACTIVE
Start Date: 12/17/2009
End Date: 03/31/2011
Purpose: Clark Creek Contract ¿ Assess flooding and sedimentation impacts to Clark Creek
Objective: Clark Creek is a tributary of the Baraboo River located in the Town of Greenfield, Sauk County. The stream is typical of streams that drain the Baraboo Range in that it has very good water quality and actually supports a population of wild Brook Trout.

Hydrologic conditions and stream geomorphology have been radically altered as a result of the flooding of 2008. Sedimentation has greatly impacted habitat in the stream channel and there is a need for a comprehensive planning effort which would guide restoration efforts. The flow dynamics, stream geomorphology, chemical parameters, and biological indices need to be assessed and recommendations developed in conjunction with a comprehensive watershed assessment and planning report. Planning efforts and documentation would emphasize sustainable a sustainable management process that focuses on enhancing water quality, habitat restoration, and floodplain/riparian corridor management.

In June of 2008, storm water run-off from heavy rains deposited four to five feet of sediment in the channel and the floodplain of this reach of Clark Creek. The base flow is flowing on top of the deposited sediment, which saturates the sediment deposits and causes hydrostatic pressures on the basement walls of the residences. Also, since the floodway is full of sediment, there is no flood conveyance capacity for this reach of Clark Creek.

 CCR#: _____
 30,000

Outcome: Water quality and resource assessment including flow, hydrology, geomorphology, chemistry, habitat and biotic indices. Report with water resource planning recommendations.

1. Watershed Assessment and Monitoring - In conjunction with the watershed project committee a watershed assessment and monitoring effort will be conducted to determine and pinpoint problem areas with regard to sedimentation and habitat impairment. Included in this assessment will be a hydrologic and geomorphological analysis. Time Period: 4 months
2. Develop and Evaluate Feasibility of a Range of Planning Recommendations and Restoration Alternatives - This will focus on sustainable habitat restoration alternatives that emphasize water quality improvements and sustainability and recognize changing hydrologic, flow and climatic changes. Time Period: 4 months
3. Facilitation and Coordination of Planning Recommendations - Once a set of water quality/resource management alternatives have been developed, the project committee will then work with local entities to review and develop a course of implementation for those alternatives. These recommendations would be incorporated into the WDNR Basin Plan, the Sauk County Land and Water Plan, and local planning documents. Time Period 2 months
4. Outreach and Education - After planning recommendations have been developed and adopted, an outreach and education effort will be implemented to carry out the recommendations of the project. Time Period 2 Months

Total project award: \$30,000

			the scope of the grant will be developed after this initial meeting.
08/05/2010	JAMES MORTON	Active	The invitation to the meeting has been uploaded. Sauk County land conservation has met with landowners and officials to address hydrology problems. They are still trying to contract with an engineer to complete the analysis.
11/01/2010	JAMES MORTON	Active	Sauk County is in the process of awarding a project to a consulting firm to do an analysis of the watershed that would analyze the hydrology and flow characteristics. This project (approximately \$700,000) will be used to supplement the analysis conducted under the ARRA grant.
02/08/2011	JAMES MORTON	Active	Engineering firm hired to conduct hydrologic analysis and report for watershed.
03/22/2011	LISA HELMUTH	Active	Time extension but will be completed by March 31st. Montgomery & Associates (49K), the 30K will be expended by this date.
04/28/2011	JAMES MORTON	Progress: 75-100% Comp	Report is finalized. Sauk Co may be adding some information. Inter agency assessment of watershed scheduled for 5/10.

Project Status Detail

Question	Answer
1. Reporting Timeframe (Q1 (Oct-Dec), Q2 (Jan-Mar), Q3 (Apr-June), Q4 (July-Sept):	q2
2. Amount expended this time period:	Funds have been expended \$30K
3. Subcontracts or subgrants awarded this period:	Sauk County awarded a grant to an engineering firm to do a hydrologic analysis--report final
4. Number work hours created or maintained to date:	40 hours WDNR 60 hours Sauk County (Estimated)
5. Work accomplished this reporting period:	The awarded a contract to an engineering firm to conduct a hydrologic analysis of the watershed report should be completed.
6. Work goals for coming reporting period:	Report completed
7. Overall project status:	This project will be combined with an additional grant and a comprehensive study will be conducted that also encompasses watershed flow and hydrology. Report completed. Sauk County may conduct supplemental work.
8. WDNR Question: Job equivalent Created
