Jon, nice job on removing the EWM from Mission Lake. Will a full survey be conducted this year?

DNR staff – want to put a note in SWIMS that removal has taken place and potentially has worked? Or wait several years to make sure nothing comes back. I would think we need to wait to delist, but some note might be appropriate.

Okay.

I went to the field today. It was a slow day. ;)

1. I got a partnership established with a village to treat a riparian stand of Japanese knotweed. We'll be treating close to 0.5 acres in the late summer/fall.
2. I stopped by Mission Lake. We did a thorough walk-in and through of the littoral area searching for EWM. We had found 3 plants last summer during the early detection surveys. All plants were hand-pulled and sent as vouchers last summer. NO EWM was located this afternoon. YEAH!! Paul's methods work!
3. I did a walkthrough of the Policeman's helmet site. The hand pulling project in 2012 cut the population by 90%. We will be able to handpull the scattered plants in about a month with a work crew of about 10 in one day.
4. I topped purple loosestrife flowers along the Shawano Lake Channel with a volunteer for an hour. We prevented a 100 yard stretch from flowering this year.
5. I identified three unknown shoreland plants as Marsh Skull Cap, American water horehound, and red elderberry (never seen the berries in a shoreland area before).

I'm going to go take a day off tomorrow before I have to go before a grant ranking committee on Friday morning. I have to give a brief presentation on why the Shawano County ATC's funds

should be awarded to do shoreland restoration projects.

I have the paper and the glue has been ordered. I do not have an issue doing this, just need a bit of time. I have the time allotted today, so I will get it 95% done today (100% if the glue comes in). Besides I need you out in the field doing great things :)

I will deliver the plants to the herbarium early next week as I have to be down there Monday through Wednesday.

Thanks for the offer.

Laura,

I have the paper, but not the special mounting glue used by the Herbariums. This is typically an acid free glue. I will be in Antigo on Tuesday for a lunch meeting. I'd be willing to meet there to mount them with spray adhesive. I had printed labels that were paperclipped to either the newspaper or minimal mounting paper to provide additional support to the plant.

I have some plants sitting on my desk. They were not put on mounting paper and I have not had time to do so. I will also have to make labels. I am holding up the show. I will

make a list of what I have tomorrow as I am cleaning lamprey today.

Brenda, Jenny, and Laura,

In preparing for spiny water flea/zebra mussel veliger sample collection, I looked at the list of plant voucher samples needed in Shawano County. Many of the listed specimens were collected and submitted within the last two years. How do I discover if the samples have been processed by the Freckman Herbarium as of today. If necessary, I will recollect them as I am out and about. I'd like to avoid having to re-collect samples if they've already been verified. Thanks.

Jon
