## Rock River Recovery: A Basinwide Total Maximum Daily Load (TMDL) for Water Quality Improvement

There are over 40 waterbodies in the basin that are on the 303(d) list of impaired waters. The Total Maximum Daily Load (TMDL) focuses on the waters that are impaired by excessive sediment and phosphorus. These pollutants can cause low dissolved oxygen, degraded habitat and excessive turbidity in waterways, resulting in harm to fish and aquatic life, water quality, recreation and even navigation. The TMDL provides a quantitative analysis of the amount of sediment and/or phosphorus that the waterbodies can receive from both point and nonpoint sources and still meet water quality standards. Please also visit our partner's site [The Rock River Coalition](#).
